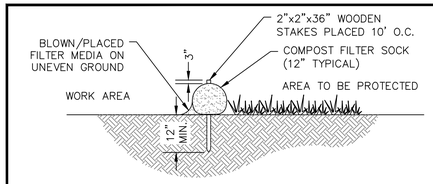
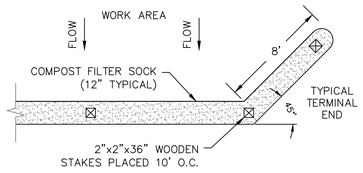
Attachment: SP-2020-14A drawings 011322 (25066 : Sp-2020-14A)



SECTION



PLAN

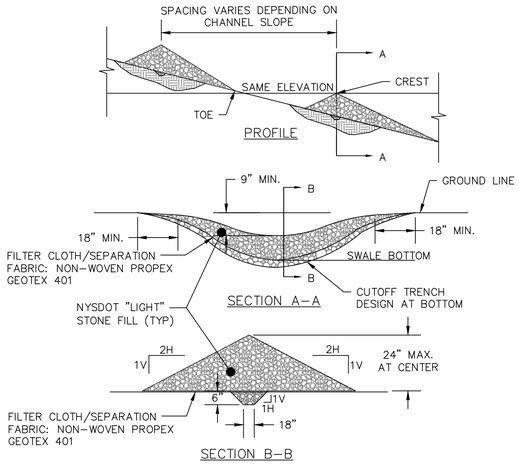
NOTES:

1. COMPOST FILTER SOCKS SHALL BE FILTREXX SILTSOXX OR EQUIVALENT.
2. THE COMPOST FILTER SOCK SHALL MEET THE REQUIREMENTS IN THE NEW YORK STANDARD SPECIFICATIONS FOR EROSION AND SEDIMENT CONTROL (MOST RECENT EDITION).
3. THE COMPOST INFILL SHALL MEET THE PHYSICAL PARAMETERS IN TABLE 5.3–COMPOST STANDARDS TABLE.
4. SOCKS MAY BE FILLED AFTER PLACEMENT BY BLOWING COMPOST INTO THE TUBE PNEUMATICALLY, OR FILLED AT A STAGING LOCATION AND MOVED INTO THE DESIGNED LOCATION.
5. MAINTENANCE SHALL BE PERFORMED AS NEEDED AND ACCUMULATED SEDIMENT REMOVED WHEN IT REACHES HALF THE ABOVE GROUND HEIGHT.
6. COMPOST FILTER SOCKS SHALL BE USED WHERE EROSION COULD OCCUR IN THE FORM OF SHEET EROSION.
7. UPON STABILIZATION OF THE CONTRIBUTING AREA, THE STAKES SHALL BE REMOVED. THE SOCKS SHALL BE REMOVED BY CUTTING THE MESH AND THE COMPOST SPREAD AS AN ADDITIONAL MULCH TO ACT AS A SOIL SUPPLEMENT.
8. MAXIMUM ALLOWABLE SLOPE LENGTHS CONTRIBUTING RUN–OFF TO A 12" COMPOST FILTER SOCK ARE:

% SLOPE	MAXIMUM SLOPE LENGTH(FT)
2	250
5	225
10	125
20	65
25	50
33	40
50	25

1 C-510 COMPOST FILTER SOCK INSTALLATION

SCALE: NOT TO SCALE

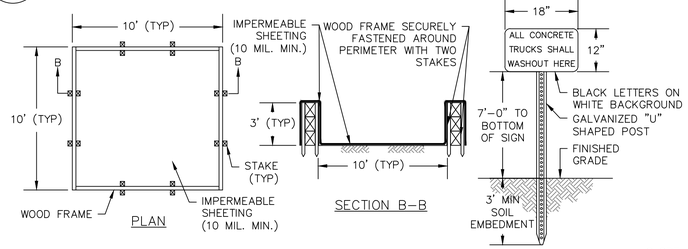


CONSTRUCTION SPECIFICATIONS:

1. MATERIALS AND METHODS OF CONSTRUCTION SHALL BE IN CONFORMANCE WITH THE NEW YORK STATE STANDARDS AND SPECIFICATIONS FOR EROSION AND SEDIMENT CONTROL, DATED NOVEMBER 2016.
2. STONE SHALL BE PLACED ON A FILTER FABRIC FOUNDATION TO THE LINES, GRADES AND LOCATIONS SHOWN ON THE PLAN.
3. SET SPACING OF CHECK DAMS SUCH THAT THE ELEVATIONS OF THE CREST OF THE DOWNSTREAM DAM ARE AT THE SAME ELEVATION OF THE TOE OF THE UPSTREAM DAM.
4. EXTEND THE STONE A MINIMUM OF 18" BEYOND THE SWALE BANKS TO PREVENT CUTTING AROUND THE DAM.
5. PROTECT THE CHANNEL DOWNSTREAM OF THE LOWEST CHECK DAM FROM SCOUR AND EROSION WITH STONE OR LINER AS APPROPRIATE.
6. ENSURE THAT CHANNEL APPURTENANCES SUCH AS CULVERT ENTRANCES BELOW CHECK DAM ARE NOT SUBJECT TO DAMAGE OR BLOCKAGE FROM DISPLACED STONE.

2 C-510 STONE CHECK DAM DETAIL

SCALE: NOT TO SCALE

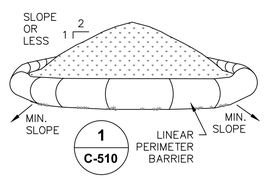


WASHOUT SPECIFICATIONS:

1. LOCATE WASHOUT STRUCTURE A MINIMUM OF 50 FEET AWAY FROM OPEN CHANNELS, STORM DRAIN INLETS, SENSITIVE AREAS, WETLANDS, BUFFERS AND WATER COURSES AND AWAY FROM CONSTRUCTION TRAFFIC.
2. SIZE WASHOUT STRUCTURE FOR VOLUME NECESSARY TO CONTAIN WASH WATER AND SOLIDS AND MAINTAIN AT LEAST 4 INCHES OF FREEBOARD. TYPICAL DIMENSIONS ARE 10 FEET X 10 FEET X 3 FEET DEEP.
3. PREPARE SOIL BASE FREE OF ROCKS OR OTHER DEBRIS THAT MAY CAUSE TEARS OR HOLES IN THE LINER. FOR LINER, USE 10 MIL OR THICKER UV RESISTANT, IMPERMEABLE SHEETING, FREE OF HOLES AND TEARS OR OTHER DEFECTS THAT COMPROMISE IMPERMEABILITY OF THE MATERIAL.
4. PROVIDE A SIGN FOR THE WASHOUT IN CLOSE PROXIMITY TO THE FACILITY.
5. KEEP CONCRETE WASHOUT STRUCTURE WATER TIGHT. REPLACE IMPERMEABLE LINER IF DAMAGED (E.G., RIPPED OR PUNCTURED). EMPTY OR REPLACE WASHOUT STRUCTURE THAT IS 75 PERCENT FULL, AND DISPOSE OF ACCUMULATED MATERIAL PROPERLY. DO NOT REUSE PLASTIC LINER. WET–VACUUM STORED LIQUIDS THAT HAVE NOT EVAPORATED AND DISPOSE OF IN AN APPROVED MANNER. PRIOR TO FORECASTED RAINSTORMS, REMOVE LIQUIDS OR COVER STRUCTURE TO PREVENT OVERFLOWS. REMOVE HARDENED SOLIDS, WHOLE OR BROKEN UP, FOR DISPOSAL OR RECYCLING. MAINTAIN RUNOFF DIVERSION AROUND EXCAVATED WASHOUT STRUCTURE UNTIL STRUCTURE IS REMOVED.

3 C-510 TEMPORARY CONCRETE WASHOUT STRUCTURE WITH WOODEN PLANKS

SCALE: NOT TO SCALE



NOTES:

1. AREA CHOSEN FOR STOCKPILING OPERATIONS SHALL BE DRY AND STABLE.
2. MAXIMUM SLOPE OF STOCKPILE SHALL BE 1V:2H.
3. UPON COMPLETION OF SOIL STOCKPILING, EACH PILE SHALL BE SURROUNDED WITH A LINEAR PERIMETER BARRIER, THEN STABILIZED WITH VEGETATION OR COVERED.
4. SEE SPECIFICATIONS FOR INSTALLATION OF LINEAR BARRIER.

4 C-510 TEMPORARY SOIL STOCKPILE

SCALE: NOT TO SCALE

GENERAL EROSION AND SEDIMENT CONTROL NOTES:

1. ALL EROSION AND SEDIMENT CONTROL MEASURES ARE TO BE IN STRICT COMPLIANCE WITH "NEW YORK STATE STANDARDS AND SPECIFICATIONS FOR EROSION AND SEDIMENT CONTROL", NOVEMBER 2016.
2. EXCESS SOIL TO BE STOCKPILED WITHIN THE LIMITS OF SITE DISTURBANCE IF NOT USED IMMEDIATELY FOR GRADING PURPOSES. INSTALL SEDIMENT BARRIER AROUND SOIL STOCKPILES.
3. APPLY SURFACE STABILIZATION AND RESTORATION MEASURES. AREAS UNDERGOING CLEARING OR GRADING AND ANY AREAS DISTURBED BY CONSTRUCTION ACTIVITIES WHERE WORK IS DELAYED, SUSPENDED, OR INCOMPLETE AND WILL NOT BE REDISTURBED FOR 21 DAYS OR MORE SHALL BE STABILIZED WITH TEMPORARY VEGETATIVE COVER WITHIN 14 DAYS AFTER CONSTRUCTION ACTIVITY IN THAT PORTION OF THE SITE HAS CEASED. AREAS UNDERGOING CLEARING OR GRADING AND ANY AREAS DISTURBED BY CONSTRUCTION ACTIVITIES WHERE WORK IS COMPLETE AND WILL NOT BE REDISTURBED SHALL BE STABILIZED AND RESTORED WITH PERMANENT VEGETATIVE COVER AS SOON AS SITE AREAS ARE AVAILABLE AND WITHIN 14 DAYS AFTER WORK IS COMPLETE. (SEE SPECIFICATIONS FOR PERMANENT VEGETATIVE COVER). SEEDING FOR PERMANENT VEGETATIVE COVER SHALL BE WITHIN THE SEASONAL LIMITATIONS. PROVIDE STABILIZATION WITH TEMPORARY VEGETATIVE COVER WITHIN 14 DAYS AFTER WORK IS COMPLETE, FOR SEEDING OUTSIDE PERMITTED SEEDING PERIODS.
4. SEEDED AREAS TO BE MULCHED WITH STRAW OR HAY MULCH IN ACCORDANCE WITH VEGETATIVE COVER SPECIFICATIONS.
5. THE CONTRACTOR IS RESPONSIBLE FOR THE INSTALLATION AND MAINTENANCE OF ALL EROSION AND SEDIMENT CONTROL MEASURES THROUGHOUT THE COURSE OF CONSTRUCTION.
6. THE CONTRACTOR IS RESPONSIBLE FOR CONTROLLING DUST BY SPRINKLING EXPOSED SOIL AREAS PERIODICALLY WITH WATER AS REQUIRED. THE CONTRACTOR IS TO SUPPLY ALL EQUIPMENT AND WATER.
7. WHEN ALL DISTURBED AREAS ARE STABLE, ALL TEMPORARY EROSION AND SEDIMENT CONTROL MEASURES SHALL BE REMOVED.
8. FOR ADDITIONAL WINTER STABILIZATION REQUIREMENTS SEE "NEW YORK STATE STANDARDS AND SPECIFICATIONS FOR EROSION AND SEDIMENT CONTROL", NOVEMBER 2016.

EROSION & SEDIMENT INSPECTION & MAINTENANCE SCHEDULE

STRUCTURE	DAILY	WEEKLY	AFTER RAINFALL	NECESSARY TO MAINTAIN FUNCTION	AFTER COMPLETION OF CONSTRUCTION

SPDES GENERAL PERMIT GP-0-20-001 COMPLIANCE NOTES:

THE CONTRACTOR SHALL BE RESPONSIBLE FOR COMPLYING WITH THE FOLLOWING:

1. THE CONTRACTOR AND HIS/HER SUBCONTRACTORS SHALL READ AND UNDERSTAND THE CONDITIONS OF THE "NEW YORK STATE DEPARTMENT OF ENVIRONMENTAL CONSERVATION (NYSDEC) STATE POLLUTANT DISCHARGE ELIMINATION (SPDES) GENERAL PERMIT FOR STORM WATER DISCHARGES FROM CONSTRUCTION ACTIVITIES", GP–0–20–001 FOR THIS PROJECT.
2. THE CONTRACTOR AND HIS/HER SUBCONTRACTORS SHALL SIGN A COPY OF THE GENERAL PERMIT, GP–0–20–001, CERTIFICATION STATEMENT AS IDENTIFIED IN THE APPENDICES OF THE STORM WATER POLLUTION PREVENTION PLAN.
3. THE CONTRACTOR SHALL OBTAIN ALL REQUIRED PERMITS NECESSARY FOR THE WORK OUTLINED HEREIN.
4. THE CONTRACTOR SHALL BE RESPONSIBLE FOR IMPLEMENTATION OF ALL STORM WATER POLLUTION PREVENTION MEASURES OUTLINED IN THE STORM WATER POLLUTION PREVENTION PLAN AND SITE PLANS.
5. THE CONTRACTOR SHALL HOLD A PRECONSTRUCTION CONFERENCE WITH THE OWNER'S REPRESENTATIVES AT LEAST ONE WEEK PRIOR TO COMMENCEMENT OF CONSTRUCTION.
6. THE CONTRACTOR/OWNER SHALL HAVE A QUALIFIED INSPECTOR, AS DEFINED WITHIN THE NYSDEC SPDES GENERAL PERMIT FOR STORMWATER DISCHARGES FROM CONSTRUCTION ACTIVITY PERMIT NO. GP–0–20–001, CONDUCT AN INITIAL SITE ASSESSMENT PRIOR TO CONSTRUCTION, FOLLOWING THE COMMENCEMENT OF CONSTRUCTION, THE QUALIFIED INSPECTOR SHALL CONDUCT AT LEAST ONE (1) SITE INSPECTION EVERY SEVEN (7) CALENDAR DAYS. REFER TO SWPPP FOR INSPECTION GUIDELINES.
7. PRIOR TO COMMENCEMENT OF CONSTRUCTION, A QUALIFIED INSPECTOR IN EROSION AND SEDIMENT CONTROL (HIRED BY CONTRACTOR/OWNER) SHALL CONDUCT AN ASSESSMENT OF THE SITE AND CERTIFY THAT THE APPROPRIATE EROSION AND SEDIMENT CONTROL STRUCTURES AS DEPICTED ON THE PLANS HAVE BEEN ADEQUATELY INSTALLED AND IMPLEMENTED. CONTRACTOR SHALL CONTACT THE PROJECT ENGINEER ONCE THE EROSION AND SEDIMENT CONTROL STRUCTURES HAVE BEEN INSTALLED. REFER TO STORMWATER POLLUTION PREVENTION PLAN FOR INSPECTION GUIDELINES.
8. THE OWNER/OPERATOR SHALL MAINTAIN A RECORD OF ALL EROSION AND SEDIMENT CONTROL INSPECTION REPORTS AT THE SITE IN A LOG BOOK. THE SITE LOG BOOK SHALL BE MAINTAINED ON–SITE AND BE MADE AVAILABLE TO THE PERMITTING AUTHORITY. THE OWNER/CONTRACTOR SHALL POST AT THE SITE, IN A PUBLICLY–ACCESSIBLE LOCATION, A SUMMARY OF THE SITE INSPECTION ACTIVITIES ON A MONTHLY BASIS.
9. THE OWNER/OPERATOR SHALL FILE A NOTICE OF INTENT (NOI) WITH THE NYSDEC AND MS4 ACCEPTANCE FORM WITH THE TOWN OF EAST GREENBUSH, NY PRIOR TO COMMENCING CONSTRUCTION ACTIVITIES AND A NOTICE OF TERMINATION (NOT) WITH NYSDEC FOLLOWING CONSTRUCTION ACTIVITIES.

EROSION AND SEDIMENT CONTROL MEASURES:

GENERAL MEASURES:

1. DAMAGE TO SURFACE WATERS RESULTING FROM EROSION AND SEDIMENTATION SHALL BE MINIMIZED BY STABILIZING DISTURBED AREAS AND BY REMOVING SEDIMENT FROM CONSTRUCTION SITE DISCHARGES.
2. AS MUCH AS IS PRACTICAL, EXISTING VEGETATION SHALL BE PRESERVED. FOLLOWING THE COMPLETION OF CONSTRUCTION ACTIVITIES IN ANY PORTION OF THE SITE, PERMANENT VEGETATION SHALL BE ESTABLISHED ON ALL EXPOSED SOILS.
3. SITE PREPARATION ACTIVITIES SHALL BE PLANNED TO MINIMIZE THE SCOPE AND DURATION OF SOIL DISRUPTION.
4. PERMANENT TRAFFIC CORRIDORS SHALL BE ESTABLISHED AND "ROUTES OF CONVENIENCE" SHALL BE AVOIDED. STABILIZED CONSTRUCTION ENTRANCES SHALL BE INSTALLED AT ALL POINTS OF ENTRY ONTO THE PROJECT SITE.

PARTICULAR MEASURES:

1. STABILIZED CONSTRUCTION ENTRANCE, UTILIZED DURING CONSTRUCTION, SHALL BE MAINTAINED IN A CONDITION THAT SHALL PREVENT TRACKING OR FLOWING OF SEDIMENT ONTO PUBLIC RIGHTS–OF–WAY. THIS MAY REQUIRE PERIODIC TOP DRESSING WITH ADDITIONAL STONE AS CONDITIONS DEMAND AND REPAIR AND/OR CLEANOUT OF ANY MEASURES USED TO TRAP SEDIMENT. ALL SEDIMENT SPILLED, DROPPED, WASHED, OR TRACKED ONTO PUBLIC RIGHTS–OF–WAY MUST BE REMOVED IMMEDIATELY. WHEELS SHALL BE CLEANED TO REMOVE SEDIMENT PRIOR TO ENTRANCE ONTO PUBLIC RIGHTS–OF–WAY. WHEN WASHING IS REQUIRED, IT SHALL BE DONE ON AN AREA STABILIZED WITH STONE AND WHICH DRAINS INTO AN APPROVED SEDIMENT TRAPPING DEVICE. PERIODIC INSPECTIONS AND NEEDED MAINTENANCE SHALL BE PROVIDED AFTER EACH RAIN.
2. SOIL STOCKPILES: SEDIMENT BARRIERS SHALL BE CONSTRUCTED AROUND ALL STOCKPILES OF FILL, TOPSOIL, AND EXCAVATED OVERBURDEN THAT ARE TO REMAIN EXPOSED FOR PERIODS LESS THAN 21 DAYS. SEDIMENT BARRIERS SHALL BE ANCHORED AND MAINTAINED IN GOOD CONDITION UNTIL SUCH TIME AS SAID STOCKPILES ARE REMOVED AND STOCKPILING AREAS ARE BROUGHT TO FINAL GRADE AND PERMANENTLY STABILIZED. TOPSOIL AND FILL THAT IS TO REMAIN STOCKPILED ON–SITE FOR PERIODS GREATER THAN 21 DAYS SHALL BE STABILIZED BY SEEDING. PRIOR TO THE SEEDING OPERATION, THE STOCKPILED MATERIAL SHALL BE GRADED AS NEEDED AND FEASIBLE TO PERMIT THE USE OF CONVENTIONAL EQUIPMENT FOR SEEDBED PREPARATION, SEEDING, MULCH APPLICATION, AND MULCH ANCHORING. IN NO CASE SHALL ERODIBLE MATERIALS BE STOCKPILED WITHIN 25 FEET OF ANY DITCH, STREAM, OR OTHER SURFACE WATER BODY.
3. STONE CHECK DAMS: UNTIL SUCH TIME AS FINAL SITE STABILIZATION IS COMPLETED, DITCHES SHALL RECEIVE TREATMENT WITH STONE CHECK DAMS TO EFFECTIVELY TRAP SEDIMENT AND MINIMIZE ITS RELEASE OFF–SITE. STONE CHECK DAMS SHALL BE CONSTRUCTED WITHIN EACH DITCH BEGINNING AT ITS DOWNSTREAM TERMINUS AND SHOULD BE PLACED AT INTERVALS INDICATED ON THE DRAWINGS.
4. CONCRETE TRUCK WASHOUT: WASHOUT FACILITIES SHALL BE PROVIDED FOR EVERY PROJECT WHERE CONCRETE WILL BE POURED OR FORMED ON SITE. THIS FACILITY WILL RECEIVE HIGHLY ALKALINE WASH WATER FROM THE CLEANING OF CHUTES, MIXERS, HOPPERS, VIBRATORS, PLACING EQUIPMENT, TROWELS AND SCREEDS. THE FACILITY MUST BE LOCATED A MINIMUM OF 100 FEET FROM DRAINAGE SWALES, STORM DRAIN INLETS, WETLANDS, STREAMS, AND OTHER SURFACE WATERS. ALL WASHOUT FACILITIES WILL BE LINED TO PREVENT LEACHING OF LIQUIDS INTO THE GROUND. THE LINER SHALL BE PLASTIC SHEETING WITH A MINIMUM THICKNESS OF 10 MILS WITH NO HOLES OR TEARS AND ANCHORED BEYOND THE TOP OF THE PIT WITH AND EARTHEN BERM, SAND BAGS, STONE, OR OTHER STRUCTURAL APPURTENANCE EXCEPT AT THE ACCESS POINT.

MAINTENANCE OF EROSION AND SEDIMENT CONTROL MEASURES:

PERMANENT AND TEMPORARY VEGETATION:

INSPECT ALL AREAS THAT HAVE RECEIVED VEGETATION EVERY SEVEN DAYS. ALL AREAS DAMAGED BY EROSION OR WHERE SEED HAS NOT ESTABLISHED SHALL BE REPAIRED AND RESTABILIZED IMMEDIATELY.

STABILIZED CONSTRUCTION ENTRANCE:

INSPECT THE ENTRANCE PAD EVERY SEVEN DAYS. CHECK FOR MUD, SEDIMENT BUILD–UP AND PAD INTEGRITY. MAKE DAILY INSPECTIONS DURING WET WEATHER. RESHAPE PAD AS NEEDED FOR DRAINAGE AND RUNOFF CONTROL. WASH AND REPLACE STONE AS NEEDED. THE STONE IN THE ENTRANCE SHOULD BE WASHED OR REPLACED WHENEVER THE ENTRANCE FAILS TO REDUCE MUD BEING CARRIED OFF–SITE BY VEHICLES. IMMEDIATELY REMOVE MUD AND SEDIMENT TRACKED OR WASHED ONTO PUBLIC ROADS BY BRUSHING OR SWEEPING. REMOVE TEMPORARY CONSTRUCTION ENTRANCE AS SOON AS THEY ARE NO LONGER NEEDED TO PROVIDE ACCESS TO THE SITE.

SEDIMENT CONTROL BARRIERS:

INSPECT FOR DAMAGE EVERY SEVEN DAYS. MAKE ALL REPAIRS IMMEDIATELY. REMOVE SEDIMENT FROM THE UP–SLOPE FACE OF THE BARRIER BEFORE IT ACCUMULATES TO A HEIGHT EQUAL TO 1/3 THE HEIGHT OF THE BARRIER. IF BARRIER FABRIC TEARS, BEGINS TO DECOMPOSE, OR IN ANY WAY BECOMES INEFFECTIVE, REPLACE THE AFFECTED SECTION OF BARRIER IMMEDIATELY.

SOIL STOCKPILE:

INSPECT SEDIMENT CONTROL BARRIERS (SILT FENCE OR COMPOST FILTER SOCK) AND VEGETATION FOR DAMAGE EVERY SEVEN DAYS. MAKE ALL REPAIRS IMMEDIATELY. REMOVE SEDIMENT FROM THE UP–SLOPE FACE OF THE SEDIMENT CONTROL BARRIER BEFORE IT ACCUMULATES TO A HEIGHT EQUAL TO 1/3 THE HEIGHT OF THE SEDIMENT CONTROL BARRIER. IF SEDIMENT CONTROL BARRIER TEARS, BEGINS TO DECOMPOSE, OR IN ANYWAY BECOMES INEFFECTIVE, REPLACE THE AFFECTED SECTION OF SEDIMENT CONTROL BARRIER IMMEDIATELY. REVEGETATE DISTURBED AREA TO STABILIZE SOIL STOCK PILE. REMOVE THE SEDIMENT CONTROL BARRIER WHEN THE SOIL STOCKPILE HAS BEEN REMOVED.

DUST CONTROL:

SCHEDULE CONSTRUCTION OPERATIONS TO MINIMIZE THE AMOUNT OF DISTURBED AREAS AT ANY ONE TIME DURING THE COURSE OF WORK. APPLY TEMPORARY SOIL STABILIZATION PRACTICES SUCH AS MULCHING, SEEDING, AND SPRAYING (WATER). STRUCTURAL MEASURES (MULCH, SEEDING) SHALL BE INSTALLED IN DISTURBED AREAS BEFORE SIGNIFICANT BLOWING PROBLEMS DEVELOP. WATER SHALL BE SPRAYED AS NEEDED. REPEAT AS NEEDED, BUT AVOID EXCESSIVE SPRAYING, WHICH COULD CREATE RUNOFF AND EROSION PROBLEMS.

CHECK DAM:

INSPECT CHECK DAMS EVERY SEVEN DAYS. IF SIGNIFICANT EROSION HAS OCCURRED BETWEEN STRUCTURES A LINER OF STONE OR OTHER SUITABLE MATERIAL SHOULD BE INSTALLED IN THAT PORTION OF THE CHANNEL. REMOVE SEDIMENT ACCUMULATED BEHIND THE DAM AS NEEDED TO ALLOW CHANNEL TO DRAIN THROUGH THE STONE CHECK DAM AND PREVENT LARGE FLOWS FROM CARRYING SEDIMENT OVER THE DAM. STONE CHECK DAM FAILURES SHALL BE REPLACED/REPAIRED WITHIN 2 CALENDAR DAYS OF IDENTIFICATION. REPLACE STONES AS NEEDED TO MAINTAIN THE DESIGN CROSS SECTION OF THE STRUCTURES. REMOVE CHECK DAMS AS PER APPROVAL OF TOWN ENGINEER AND PROJECT ENGINEER.

CONCRETE TRUCK WASHOUT:

CONCRETE WASHOUT FACILITIES SHALL BE INSPECTED DAILY. DAMAGED OR LEAKING FACILITIES SHALL BE DEACTIVATED AND REPAIRED OR REPLACED IMMEDIATELY. EXCESS RAINWATER THAT HAS ACCUMULATED OVER THE HARDENED CONCRETE SHOULD BE PUMPED TO A STABILIZED AREA, SUCH AS A GRASS FILTER STRIP. ACCUMULATED HARDENED MATERIAL SHALL BE REMOVED WHEN 75% OF THE STORAGE CAPACITY OF THE STRUCTURE IS FILLED. ANY EXCESS WASH WATER SHALL BE PUMPED INTO A CONTAINMENT VESSEL AND PROPERLY DISPOSED OF OFF SITE. DISPOSE OF THE HARDENED MATERIAL OFF SITE IN A CONSTRUCTION/DEMOLITION LANDFILL. ON SITE DISPOSAL MAY BE ALLOWED IF THIS HAS BEEN APPROVED AND ACCEPTED AS PART OF THE PROJECTS SWPPP. IN THAT CASE, THE MATERIAL SHOULD BE RECYCLED AS SPECIFIED, OR BURIED AND COVERED WITH A MINIMUM 2 FEET OF CLEAN COMPACTED EARTH FILL THAT IS PERMANENTLY STABILIZED TO PREVENT EROSION. THE PLASTIC LINER SHALL BE PLACED WITH EACH CLEANING OF THE WASHOUT FACILITY. INSPECT THE PROJECT SITE FREQUENTLY TO ENSURE THAT NO CONCRETE DISCHARGED ARE TAKING PLACE IN NON–DESIGINATED AREAS.

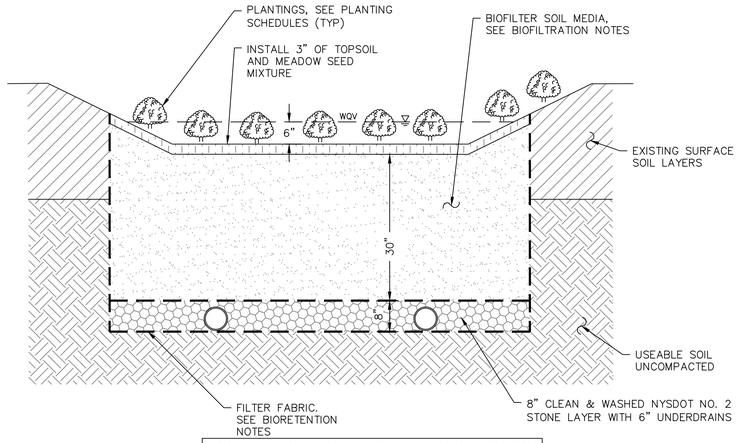
THE ALTERATION OF THIS DOCUMENT IN ANY WAY, UNLESS UNDER THE DIRECTION OF A PROFESSIONAL ENGINEER, IS A VIOLATION OF THE NEW YORK STATE EDUCATION LAW.



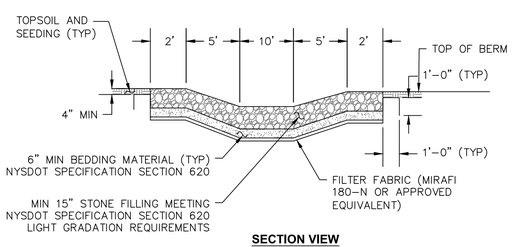
BIORETENTION SOIL MEDIA CHARACTERISTICS	
PARAMETER	VALUE
PH RANGE	5.5 TO 7.5
ORGANIC MATTER	3% TO 5%
SOIL FINES	8% TO 12%
SAND	85% TO 88%
PHOSPHORUS (P_2O_5)	10 TO 30 PPM
CATIONIC EXCHANGE CAPACITY (CEC)	>10 meq/100 g

BIORETENTION NOTES:

1. THE BIORETENTION AREAS MAY NOT RECEIVE RUN-OFF UNTIL THE ENTIRE CONTRIBUTING DRAINAGE AREA TO THE BIORETENTION AREA HAS RECEIVED FINAL STABILIZATION. PROVIDE TEMPORARY BYPASS FOR STORMWATER RUNOFF.
2. THE SOIL SHOULD BE FREE OF STONES, STUMPS, ROOTS, OR OTHER WOODY MATERIAL OVER 1" IN DIAMETER, BRUSH OR SEEDS FROM NOXIOUS WEEDS. PLACEMENT OF THE SOIL MEDIA SHOULD BE IN LIFTS OF 12" TO 18", LOOSELY COMPACTED BY TAMPING LIGHTLY WITH A DOZER OR BACKHOE BUCKET. SEE TABLE BELOW FOR PLANTING SOIL CHARACTERISTICS.
3. THE NON-WOVEN FILTER FABRIC SHALL BE MIRAFI 180-N, AMOCO 4552, WEBTEC N70, GEOLON N70, CARTHAGE FX-80S OR APPROVED EQUIVALENT. WHEN OVERLAPS ARE REQUIRED BETWEEN ROLLS, THE UPHILL ROLL SHOULD OVERLAP A MINIMUM 2' OVER THE DOWNHILL ROLL IN ORDER TO PROVIDE A SHINGLE EFFECT.
4. THE TOPSOIL SHALL MEET THE SPECIFICATIONS ON SHEET C-505. THE TOPSOIL SHALL BE APPLIED TO A MAXIMUM DEPTH OF THREE INCHES.
5. THE CONTRACTOR SHALL SUBMIT SHOP DRAWINGS FOR SOIL MEDIA SHOWING THE USDA SOIL CLASSIFICATION AND GRADATION, FILTER FABRIC, TOPSOIL AND DRAINAGE STONE.
6. A PERCOLATION TEST WITNESSED BY THE ENGINEER SHALL BE COMPLETED UPON FINAL CONSTRUCTION OF THE BIORETENTION PRACTICE TO CONFIRM PERFORMANCE.
7. BIORETENTION SEED MIX:
   - A. STANDARD OF QUALITY FOR BIORETENTION MIX SHALL BE ERNST RAIN GARDEN SEED MIX – ERNMX-180 AS MANUFACTURED BY ERNST CONSERVATION SEEDS BROADCAST AT A RATE OF 20 LBS/ACRE (OR APPROVED EQUIVALENT).
     ERNST CONSERVATION SEEDS
     8884 MERCER PIKE
     MEADVILLE, PA 16335
     800.873.3321
     WWW.ERNSTSEED.COM
   - B. CONTRACTOR TO PLACE EROSION CONTROL BLANKET OVER THE SEEDED AREA. STANDARD OF QUALITY SHALL BE EAST COAST EROSION CONTROL ECS-1D.
   - C. MAINTENANCE: DURING THE FIRST SEASON OF GROWTH THE BIORETENTION AREA SHALL BE BRUSH HOGGED TWICE (ONCE MID-WAY THROUGH THE GROWING SEASON AND ONCE IN THE LATE FALL). IN SUBSEQUENT YEARS BRUSH HOGGING SHALL BE SHALL BE PERFORMED ONCE ANNUALLY IN THE LATE FALL.

1 C-515 BIORETENTION TYPICAL SECTION

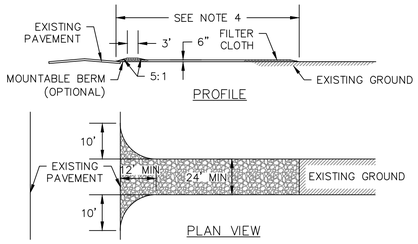
SCALE: 1"=10'



SECTION VIEW

2 C-515 BIORETENTION OVERFLOW WEIR

SCALE: NOT TO SCALE

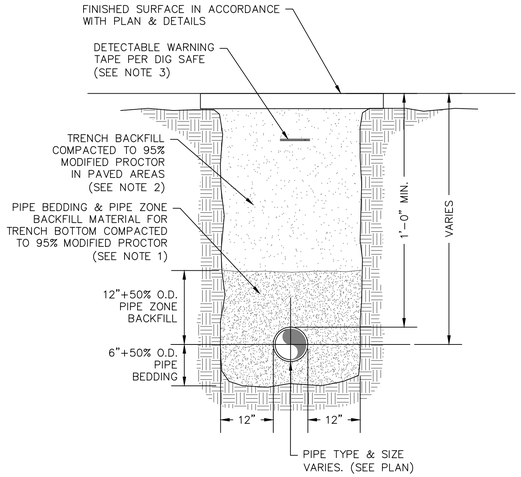


CONSTRUCTION ENTRANCE SPECIFICATIONS:

1. STONE SIZE – USE 2" STONE, OR RECLAIMED OR RECYCLED CONCRETE EQUIVALENT.
2. THICKNESS – NOT LESS THAN SIX (6) INCHES.
3. WIDTH – TWELVE (12) FOOT MINIMUM, BUT NOT LESS THAN THE FULL WIDTH AT POINTS WHERE INGRESS OR EGRESS OCCURS. TWENTY FOUR FEET (24) FOOT IF SINGLE ENTRANCE TO SITE.
4. LENGTH – NOT LESS THAN 50' (EXCEPT ON A SINGLE RESIDENCE LOT WHERE A 30' MINIMUM LENGTH WOULD APPLY).
5. FILTER CLOTH – WILL BE PLACED OVER THE ENTIRE AREA PRIOR TO PLACING OF STONE.
6. SURFACE WATER – ALL SURFACE WATER FLOWING OR DIVERTED TOWARD CONSTRUCTION ENTRANCES SHALL BE PIPED ACROSS THE ENTRANCE. IF PIPING IS IMPRACTICAL, A MOUNTABLE BERM WITH 5:1 SLOPES WILL BE PERMITTED.
7. MAINTENANCE – THE ENTRANCE SHALL BE MAINTAINED IN A CONDITION WHICH WILL PREVENT TRACKING OR FLOWING OF SEDIMENT ONTO PUBLIC RIGHTS-OF-WAY. THIS MAY REQUIRE PERIODIC TOP DRESSING WITH ADDITIONAL STONE AS CONDITIONS DEMAND AND REPAIR AND/OR CLEANOUT OF ANY MEASURES USED TO TRAP SEDIMENT. ALL SEDIMENT SPILLED, DROPPED, WASHED OR TRACKED ONTO PUBLIC RIGHTS-OF-WAY MUST BE REMOVED IMMEDIATELY.
8. WASHING – WHEELS SHALL BE CLEANED TO REMOVE SEDIMENT PRIOR TO ENTRANCE ONTO PUBLIC RIGHTS-OF-WAY. WHEN WASHING IS REQUIRED, IT SHALL BE DONE ON AN AREA STABILIZED WITH STONE AND WHICH DRAINS INTO AN APPROVED SEDIMENT TRAPPING DEVICE.
9. PERIODIC INSPECTION AND NEEDED MAINTENANCE SHALL BE PROVIDED AFTER EACH RAIN.

3 C-515 STABILIZED CONSTRUCTION ACCESS

SCALE: NOT TO SCALE



4 C-515 PIPE TRENCH DETAIL (TYPICAL)

SCALE: NOT TO SCALE

NOTES:

1. PIPE BEDDING & PIPE ZONE BACKFILL SHALL BE A NATURAL RUN-OF-BANK (R.O.B.) SAND OR A MIXTURE OF CRUSHED STONE AND GRAVEL, FREE OF SOFT, NONDURABLE PARTICLES, ORGANIC MATERIALS AND ELONGATED PARTICLES, AND SHALL BE WELL GRADED FROM FINE TO COARSE PARTICLES. BEDDING GRADATIONS SHALL BE APPROVED BY THE ENGINEER AND SHALL MEET THE FOLLOWING GRADATION REQUIREMENTS:

SIEVE DESIGNATION	% PASSING
3/4"	100%
NO. 40	0-70%
NO. 200	0-10%

2. TRENCH BACKFILL SHALL BE A NATURAL RUN-OF-BANK (R.O.B.) OR PROCESSED GRAVEL, OR EXCAVATED MATERIAL FREE OF SOFT, NONDURABLE PARTICLES, ORGANIC MATERIALS AND ELONGATED PARTICLES, AND SHALL BE WELL GRADED FROM FINE TO COARSE PARTICLES. TRENCH BACKFILL GRADATIONS SHALL BE APPROVED BY THE ENGINEER AND SHALL MEET THE FOLLOWING GRADATION REQUIREMENTS:

SIEVE DESIGNATION	% PASSING
4"	100%
NO. 40	0-70%
NO. 200	0-10%

   IN UNPAVED AREAS TRENCH BACKFILL CAN BE MATERIALS EXCAVATED FROM THE TRENCH AS APPROVED BY THE ENGINEER.
3. INSTALL CONTINUOUS DETECTABLE MARKING TAPE DURING BACKFILLING OF TRENCH FOR UNDERGROUND PIPING. LOCATE TAPE 12" BELOW FINISHED GRADE, DIRECTLY OVER PIPING, EXCEPT 6" BELOW SUBGRADE UNDER PAVEMENTS & SLAB.
4. TRENCHING SHALL BE IMPLEMENTED IN ACCORDANCE WITH O.S.H.A. STANDARDS.

NOTICE OF DETERMINATION OF NON-SIGNIFICANCE

Lead Agency: Town of Amherst Planning Board

Project: SP-2020-14A

Address: 5583 Main Street
Williamsville, NY 14221
(716) 631-7051

Date:

This notice is issued pursuant to Part 617 and Local Law #3-82, as amended, of the implementing regulations pertaining to Article 8 (State Environmental Quality Review) of the Environmental Conservation Law.

The Lead Agency has determined that the proposed action described below will not have a significant adverse effect on the environment.

Title of Action: Site Plan Review

SEQR Status: Unlisted Action

Description of Action: Amendments to the originally approved site plan include modifications to the fence layout a the northwest corner, installation of a temporary stone access road, relocation of equipment pads from the north side to the west side of the compound within the fenced area; and elimination of proposed central culvert crossing to accommodate the change in array configuration. The project is a 15± acre solar energy development consisting of a maximum of 13,260 solar panels with a potential output of 3.5 – 4 mw of energy. Amendments include a 75 ft. paved access driveway to be located at the west end of the frontage along Schoelles Road. A 6 ft. tall fence enclosure with high impact landscape screening on all four sides of the enclosed area. Work will include the site improvements not specifically stated above, including, stormwater, utilities, grading, lighting, paving, and landscaping.

Location: 595 Schoelles Road, Amherst, Erie County

Petitioner: Amherst Community Solar LLC

Attachment: SP-2020-14_A_draft neg dec_011322 (25066 : Sp-2020-14A)

Reasons Supporting This Determination

Based on information submitted by the applicant including a Full Environmental Assessment Form (EAF) - Part I, (as amended) and a complete site plan application, a preliminary staff analysis was undertaken. Compared to the criteria listed in Section 617.7, all indications are that this action will not have a significant impact on the environment, as follows:

1. The project is not expected to cause a substantial adverse change in existing air quality, ground or surface water quality or quantity, or noise levels; a substantial increase in solid waste production; or a substantial increase in the potential for erosion, flooding, leaching or drainage problems. The Engineering Department on November 24, 2021 reviewed the Grading, Drainage and Utility Plans, the Erosion Control Plan and Engineer's Report submitted on November 15, 2021.

   The Stormwater Pollution Prevention Plan (SWPPP) submitted on November 15, 2021 was also reviewed. Based on its review of these documents, the Department has determined that the project has or will have met all applicable requirements and has no objection to its approval.

2. The project will not result in the removal or destruction of large quantities of vegetation or fauna; or in significant adverse impacts to fish or wildlife species, habitats or other natural resources. The Planning Department reviewed a Landscape Plan submitted on November 15, 2021 and determined that it meets or exceeds Zoning Ordinance requirements for greenspace. The Landscape Plan has or will have met all Zoning Ordinance and Town requirements for landscaping.

3. The project is not expected to create any material conflict with the Town Comprehensive Plan. The Building Department in their review of November 18, 2021 and the Planning Department in their review of December 6, 2021 has reviewed the application documents and determined that the subject project has or will have met all International Building Code – 2015 and Zoning Ordinance regulations.

4. The project is within an area identified by the State as having potential archaeological or historical significance. A report prepared by Panamerican Consultants, Inc. and received by the Planning Department in January 2021 concluded that the project will not have a significant impact on historical or cultural resources.

5. The project will not impair the character or quality of important aesthetic resources or of existing community or neighborhood character. The project is located in the Suburban Agriculture (SA) zoning district; neighboring uses are agricultural uses and single family homes and zoned Suburban Agriculture (SA); therefore, the project is consistent with surrounding land uses and complies with the Town's local laws that strongly emphasize mitigation measures (e.g. landscaping, inclusion of agricultural uses) that allow renewable energy developments to be compatible with the surrounding rural character in the area.

Attachment: SP-2020-14_A_draft neg dec_011322 (25066 : Sp-2020-14A)

6. The proposed subject development will include amendments to the originally approved site plan including modifications to the fence layout, installation of a temporary stone access road, relocation of equipment pads and the elimination of the central culvert which will increase the energy output at this location.

7. The project will not create any hazard to human health. The Fire Chief's Association on December 6, 2021, has reviewed the project and has no objection to the approval of the site plan, as all requirements of this agency has or will have been met.

8. The project will change the use, and intensity of use, of land at this location, from open farmland to a field of solar arrays, however, the proposed amendments will include a co-located agricultural use and will be consistent with the scale of surrounding land uses.

9. The function of the proposed amendments to the site plan will not significantly increase the number of people using the site over its previous level of use. A maintenance plan will provide the minimum access by individuals needed to maintain the equipment and agricultural uses on the site.

10. Review by the Town Traffic/Safety Board dated November 30, 2021, and NYSDOT dated January 3, 2022 indicate that significant negative traffic impacts are not expected to result from the proposed project.

11. A coordinated review of the project has been undertaken by Town Departments including, in addition to those mentioned above, Highway on November 30, 2021, Assessor on December 9, 2021, Plumbing Division on November 18, 2021, and Right-of-Way Agent on November 17, 2021. These reviews did not identify any potential significant adverse environmental issues and indicated that the proposal will not have a significant damaging impact on the environment.

12. Issues not specifically mentioned above and/or those not specifically reviewed were not raised by Town departments, outside agencies or the public and are not determined to cause significant negative environmental impacts.

PROPERTY LOCATION

595 Schoelles Road

WHEREAS, the Town of Amherst Planning Board on Thursday, January 13, 2021 held a public hearing on a Site Plan for an amendment to the approved site plan including modifications to the fence layout, installation of a temporary stone access road, relocation of equipment pads and the elimination of the central culvert, and

WHEREAS, the Planning Board reviewed the plans and specifications for the proposed project, and

WHEREAS, the Site Plan was referred to the Town's various review agencies, and

WHEREAS, in accordance with Section 8-7-9 of the Zoning Ordinance, the Planning Board finds that:

A. The proposed site plan is consistent with the development plan if one is required.

B. The proposed site plan is consistent with the purpose and specific requirements of the Zoning Ordinance and generally consistent with the policies of the Comprehensive Plan.

C. Adequate services and utilities will be available prior to occupancy.

D. The site plan is consistent with all other applicable laws.

E. Pursuant to Local Law #3-82, as amended, the Planning Board has determined that the requirements of SEQR are complete and that the subject proposal is not expected to have a significant adverse effect on the environment.

F. Review by the US Army Corps of Engineers under Section 404 of the Clean Water Act is required since hydric / potentially hydric soils have been identified on the parcel.

NOW THEREFORE BE IT RESOLVED that in accordance with 6 NYCRR, Part 617 and Local Law #3-82, as amended, the Planning Board has issued a Negative Declaration attached hereto, and

NOW THEREFORE BE IT FURTHER RESOLOVED that the Planning Board, in accordance with Part II, Chapter 83, Part IX, Section 1-1.2 of Town Law Schoelles Road is considered a rural-character arterial or collector street and sidewalks are not required, and

NOW THEREFORE BE IT FURTHER RESOLVED that the Planning Board, in accordance with Section 8-7 of the Zoning Ordinance **approves** said Site Plan subject to the following conditions:

1. That the consideration of signs is specifically excluded from this approval as they require a separate review and approval by the Town.

2. That all dumpsters/trash containers and all mechanical equipment, utility structures, multiple meter boards, generators, and similar appurtenances, including those which are mounted on any part of a primary structure shall be appropriately screened with a fence, wall, and/or landscaping. Provide gate on dumpster enclosure that shall be closed whenever dumpster is not being serviced, enclosure shall be high enough to screen the dumpster(s) within.

3. That as-built record drawings, including location of utilities, be provided to the Engineering Department prior to issuance of a Certificate of Occupancy by the Building Department.

4. That the comments in the review by the Zoning Enforcement Officer dated January 4, 2022 be met.

REASONS SUPPORTING THIS DETERMINATION

Based on information submitted by the applicant including a Full Environmental Assessment Form (EAF) - Part I, (as amended) and a complete site plan application, a preliminary staff analysis was undertaken. Compared to the criteria listed in Section 617.7, all indications are that this action will not have a significant impact on the environment, as follows:

1. The project is not expected to cause a substantial adverse change in existing air quality, ground or surface water quality or quantity, or noise levels; a substantial increase in solid waste production; or a substantial increase in the potential for erosion, flooding, leaching or drainage problems. The Engineering Department on November 24, 2021 reviewed the Grading, Drainage and Utility Plans, the Erosion Control Plan and Engineer's Report submitted on November 15, 2021.

   The Stormwater Pollution Prevention Plan (SWPPP) submitted on November 15, 2021 was also reviewed. Based on its review of these documents, the Department has determined that the project has or will have met all applicable requirements and has no objection to its approval.

2. The project will not result in the removal or destruction of large quantities of vegetation or fauna; or in significant adverse impacts to fish or wildlife species, habitats or other natural resources. The Planning Department reviewed a Landscape Plan submitted on January 11, 2022 and determined that it meets or exceeds Zoning Ordinance requirements for greenspace. The Landscape Plan has or will have met all Zoning Ordinance and Town requirements for landscaping.

3. The project is not expected to create any material conflict with the Town Comprehensive Plan. The Building Department in their review of November 18, 2021 and the Planning Department in their review of January 5, 2022 has reviewed the application documents and determined that the subject project has or will have met all International Building Code – 2015 and Zoning Ordinance regulations.

4. The project is within an area identified by the State as having potential archaeological or historical significance. A report prepared by Panamerican Consultants, Inc. and received by the Planning Department in January 2021 concluded that the project will not have a significant impact on historical or cultural resources.

5. The project will not impair the character or quality of important aesthetic resources or of existing community or neighborhood character. The project is located in the Suburban Agriculture (SA) zoning district; neighboring uses are agricultural uses and single family homes and zoned Suburban Agriculture (SA); therefore, the project is consistent with surrounding land uses and complies with the Town's local laws that strongly emphasize mitigation measures (e.g. landscaping, inclusion of agricultural uses) that allow renewable energy developments to be compatible with the surrounding rural character in the area.

Attachment: SP-2020-14A_signed_Neg_Declaration_011322 (25066 : Sp-2020-14A)

JAN21'22 PM 1:12 RCVD

6. The proposed subject development will include amendments to the originally approved site plan including modifications to the fence layout, installation of a temporary stone access road, relocation of equipment pads and the elimination of the central culvert which will increase the energy output at this location.

7. The project will not create any hazard to human health. The Fire Chief's Association on December 6, 2021, has reviewed the project and has no objection to the approval of the site plan, as all requirements of this agency has or will have been met.

8. The project will change the use, and intensity of use, of land at this location, from open farmland to a field of solar arrays, however, the proposed amendments will include a co-located agricultural use and will be consistent with the scale of surrounding land uses.

9. The function of the proposed amendments to the site plan will not significantly increase the number of people using the site over its previous level of use. A maintenance plan will provide the minimum access by individuals needed to maintain the equipment and agricultural uses on the site.

10. Review by the Town Traffic/Safety Board dated November 30, 2021, and NYSDOT dated January 3, 2022 indicate that significant negative traffic impacts are not expected to result from the proposed project.

11. A coordinated review of the project has been undertaken by Town Departments including, in addition to those mentioned above, Highway on November 30, 2021, Assessor on December 9, 2021, Plumbing Division on November 18, 2021, and Right-of-Way Agent on November 17, 2021. These reviews did not identify any potential significant adverse environmental issues and indicated that the proposal will not have a significant damaging impact on the environment.

12. Issues not specifically mentioned above and/or those not specifically reviewed were not raised by Town departments, outside agencies or the public and are not determined to cause significant negative environmental impacts.

TABLED

PLANNING BOARD ITEM (ID # 25067)

Proposed Office Building and Roadway, SP-2021-23

Property located at 2190 & 2220 Wehrle Drive
Acquest Wehrle LLC, Petitioner

Proposed in the northwest portion of the subject area a secured compound containing an 84,375 sq. ft. three-story office building, a 24,750 single story garage / maintenance / storage building, a 72,072 sq. ft. two-story parking garage and a one-story security booth are proposed along with 228 parking spaces (including those in the parking ramp) and having site access via a proposed 1,750± lineal foot roadway. Secondary emergency access to the site is proposed via a gated vehicular access to the Limestone Office Park building located at 17-20 Limestone Drive off of Main Street. The proposed public cul-de-sac roadway, public utilities and stormwater facilities are located on the eastern portion of the site and are intended to serve full build out of the entire development of the 2190 & 2200 Wehrle Drive parcels. Plans additionally show a possible future building which is not part of the current request in the southwest portion of the subject parcel.

Jason Utzig, C & S Engineers, represented the petitioner, explained the proposal and was available to answer questions from the Board. Michael Huntress, Acquest Wehrle LLC, was also present.

In response to the Board's questions, Mr. Utzig stated the clouds drawn on the plans indicate revisions that have been made, he doesn't have the distance of the green space and eastern boundary of the site with him, the roadway was developed in accordance with Town Code, the Fire Chiefs' comments have been addressed and submitted, and the roadway was designed to be public. Mr. Huntress stated the project is speculative and they would like a shovel ready site, the national development level shows a need for vehicle storage for potential users, and he is open to conditions on an approval of presenting uses to the Planning Department, Fire Chiefs' and ATSB comments.

Bruce Wisbaum spoke regarding concerns of the proposal. Mr. Huntress stated he will discuss with Mr. Wisbaum.

No further comments were heard on this proposal.

Following discussion, Mr. Giuliani moved to adjourn the proposal. The motion was seconded by Mr. Gill and carried. Ayes 4, Noes 0, Absent 3 (Chmiel, Gelber, Raffaele).

	existing	proposed	total
Gross Floor Area (non-residential):	0	181,197 sq.ft.	181,197 sq.ft.
Gross Floor Area Residential:	N/A	N/A	N/A
Number of Residential Units:	N/A	N/A	N/A
Number of Parking Spaces:	0	228	228

Acreage of Parcel: 5.77 acres (2190 Wehrle Drive)

(list each parcel separately) 18.83 acres (2220 Wehrle Drive)

Frontage on Public Roads: 150 feet (2190 Wehrle Drive)

(list each road separately) 498 feet (2220 Wehrle Drive)

Existing Zoning District(s) OB (Office Building District)

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

Site Plan Submittal Requirements and Checklist

The following checklist outlines the information required by the Planning Department to accept a Site Plan application for review. ***It is strongly recommended that you make an appointment with Planning Staff to determine which items apply to your application***.

Item No.	Item	Submitted	Official use
I Basic Drawing Information			
1.0	**Drawing size not to exceed 24" x 36"**		
2.0	**Title of Drawing**		
3.0	**Name and address of Applicant**		
4.0	**Name of person preparing drawing**		
5.0	**Wet seal/raised seal and signature of NYS licensed architect, engineer, landscape architect, or surveyor (as applicable)**		
6.0	**Project address**		
7.0	**Zoning of subject property and adjacent parcels**		
8.0	**North point, scale, date, and revision date(s)**		
9.0	**4" x 6" reserved area in lower right hand corner for official Town use**		
II Structures, Paved Areas, & Open Space			
1.0	**Existing and Proposed Streets**		
1.1	Names of all existing and proposed streets		
1.2	Width and radii of proposed curb-cuts		
1.3	Existing curb-cuts on adjacent and opposite properties		
1.4	Show ROW width, pavement dimensions, lane widths, pavement markings, and proposed signage on proposed streets		
1.5	Show proposed ROW consistent with planned NYSDOT, Erie County, or Town road projects (if applicable)		
1.6	Show location of proposed cross access to adjacent parcels along with a draft easement		
1.7	Designation of Fire Lanes (if applicable)		
1.8	Fire apparatus access roads		
1.9	Label any proposed roads as public or private		
1.10	Location and dimensions of sidewalks		
1.11	Typical cross sections and profiles of proposed streets, pedestrian walkways, and bikeways		
2.0	**Proposed Structures**		
2.1	Location and complete dimensions of proposed structures		
2.2	Setback dimensions of structure(s) to all property lines		
2.3	Proposed use of structures		
2.4	Gross square feet area of each structure		
2.5	Location of all building entrances		
2.6	Indicate type of roof construction/materials		
2.7	Location, height, and design detail of existing and proposed fences and walls		
2.8	Location of light standards and building mounted lights		
2.9	Location of dumpster and detail of dumpster enclosure with gate		
2.10	Layout and dimensions of the lot(s) proposed for development		

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

Town of Amherst Planning Department 5583 Main Street Williamsville-NY-14221
(716) 631-7051- Fax: (716) 631-7153

Item No.	Item	Submitted	Official use
II Structures, Paved Areas, & Open Space (cont'd)			
3.0	**Floor Plans with individual rooms and spaces labeled** (fully dimensioned)		
4.0	**Building elevations with height dimensions from finished grade to the highest point of the roof and to midpoint of gable or hip of a pitched roof.** (fully dimensioned)		
4.1	Show screening of mechanical equipment		
5.0	**Parking/Loading/Stacking Areas**		
5.1	Location and complete dimensions of all paved areas		
5.2	Setback dimensions of all paved areas to property lines		
5.3	Dimension of typical parking space and drive aisles		
5.4	Location and layout of handicapped parking spaces & access aisles		
5.5	Detail of vertical signage for handicapped parking and access aisles		
5.6	Indicate minimum parking requirement & number of spaces provided		
5.7	Proposed signage for directing and guiding traffic		
5.8	Curb cut permits from NYS, Erie County, or Town (if applicable)		
5.9	Pedestrian connections (from proposed structures to public sidewalk network)		
6.0	**Location and proposed development of all open spaces, including parks, playgrounds, and open reservations**		
III Utilities and Drainage			
1.0	**Engineers Report** (bound separately from the Stormwater Pollution Prevention Plan [SWPPP])		
1.1	Stamped/sealed and signed by NYS licensed architect or professional engineer		
1.2	Proposed water service sizing, RPZ pressure and fire safety flow and pressure calculations		
1.3	Proposed sanitary sewer facility load calculations (avg. & peak flows) including calculation of the peaking factor		
1.4	Proposed storm drainage facility calculations (see information included with this application)		
2.0	**Grading Plan**		
2.1	Existing and proposed grades indicated (proposed grades may not exceed 1 on 3)		
3.0	**Water Service**		
3.1	Location, size and material of existing and proposed facilities		
3.2	Location of existing and proposed fire hydrant location(s)		
3.3	Indicate use of sprinklers, location of Fire Department connection, and proposed fire protection systems		
3.4	Existing and proposed meter/RPZ size and location		
3.5	Applicable construction details		
4.0	**Sanitary Sewers**		
4.1	Locations, sizes, slopes, inverts, and materials of all existing and proposed facilities		

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

Town of Amherst Planning Department 5583 Main Street Williamsville-NY-14221
(716) 631-7051- Fax: (716) 631-7153

Item No.		Submitted	Official use
III Utilities and Drainage (cont'd)			
4.2	Applicable construction details		
4.3	Proposed water/oil/grease interceptor sizing calculations by a professional engineer (if applicable)		
5.0	**Storm Drainage**		
5.1	Locations, sizes, slopes, inverts, and materials of existing and proposed storm drainage facilities		
5.2	Connection of roof drains to proposed drainage system		
5.3	Applicable Town Standard construction details		
5.4	Existing and proposed swales and ditches		
5.5	Detention area cross-section and high-level elevations		
5.6	County and State approval for tie-in to existing sewers		
6.0	**Stormwater Pollution Prevention Plan (SWPPP) as applicable** (bound separately from the Engineer's Report) **See attached checklist.**		
7.0	**Natural Gas Service**		
8.0	**Location of transformers, generators and other mechanical equipment; include detail drawings (if applicable)**		
9.0	**Downstream Sanitary Capacity Analysis (DSCA) Report** (must be submitted if proposed average flows are greater than 2,500 gallons per day)		
9.1	The DSCA Report must include a detailed downstream sewer capacity analysis and the calculations of and commitment to (via Developer commitment letter) the required financial contribution to the Town's I/I mitigation fund based on peak flow conditions. The contribution must be based on $250 per gallon per minute of mitigated flow		
IV Lighting Plan			
1.0	**Photometric plan showing light spread in foot candles at property lines**		
1.1	Detail of all light standards, including dimension of height from finished grade		
1.2	Detail of all exterior lighting fixtures		
V Landscape Plan			
1.0	**Wet/raised seal and signature of a licensed Landscape Architect**		
2.0	**Provide a calculation of the total Parking area and a calculation of interior parking area in square feet and as a percentage**		
3.0	**Indicate location, size, number and type of proposed landscape materials**		
4.0	**Indicate location, type and size of <u>all</u> existing trees 4" caliper or larger and indicate which will be removed or retained**		
VI Other Required Information/General Requirements			
1.0	**Complete boundary survey that includes all existing structures, acreage, legal description with reference to a property line, street, or other known feature, and easements plotted to scale by a NYS licensed land surveyor**		

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

Town of Amherst Planning Department 5583 Main Street Williamsville-NY-14221
(716) 631-7051- Fax: (716) 631-7153

Item No.		Submitted	Official Use
VI Other Required Information/General Requirements (cont'd)			
1.1	Copies of all easements, reciprocal access agreement or similar leag documents		
2.0	**Topographic Survey with a 30 ft. buffer outside all property lines by a NYS licensed land surveyor**		
3.0	**Draft of any deed restrictions, covenants, provisions for home associations and common ownership, and reciprocal easement agreements (as applicable).**		
4.0	**For assessment purposes, state intent to apply for condominium status (if applicable).**		
5.0	**Completed and signed Environmental Assessment Form**		
5.1	Soil boring report and geotechnical report prepared by a qualified Professional Engineer (if applicable)		
5.2	Traffic Impact Study (if applicable)		
5.3	Archaeological survey (if applicable		
5.4	Wetland Delineation report (if applicable)		
6.0	**Show existing zoning(s) of both the subject property and adjacent parcels on the Site Plan and the Landscape Plan**		
7.0	**Location of NYSDEC wetlands (including buffer area) and/or federal wetlands; indicate jurisdictional status**		
8.0	**Location of Floodway and floodplain** (if applicable)		
9.0	**Documentation pertaining to any conditions of zonings, including copies of required deed restrictions; indicate date of rezoning and the parcel address under which it was rezoned (if applicable)**		
10.0	**Documentation related to any required variances granted by the ZBA**		
11.0	**For residential site plans, provide a statement from the appropriate school district that adequate school sites and facilities are available.**		
12.0	**8 1/2" X 11" reduction of primary site plan drawing (see appendix "B" of application package for specifications)**		
13.0	**A CD containing a PDF of all site plan drawings (Must also be provided with revised drawings)**		
VII Additional Required Information for Projects in the Mixed Use Districts			
1.0	**Design Advisory Board Application**		
1.1	Required for Major Site Plan		
1.2	Required at the Planning Directors Discretion for Minor Site Plans		
2.0	**Block & Street Network Plan**		
2.1	Designation of Core, Local & Alley streets		
2.2	Dimensions of Blocks		
3.0	**Block Usage Plan (as applicable)**		
3.1	Designation of site usage for each block including open space areas		
4.0	**Phasing Plan**

TOWN OF AMHERST
State Environmental Quality Review
ENVIRONMENTAL ASSESSMENT FORM
-- ADDENDUM --

1. For each applicable category of proposed <u>new</u> structures, including additions to existing structures, provide the following information for all soil types on the project site (*according to Soil Survey of Erie County, NY; Table 11, Building Site Development, pp 294-305):*

Soil Name	Shallow excavations	Dwellings without basements	Dwellings with basements	Small commercial buildings	Local roads and streets
Ilion silt loam (In)	severe	severe	severe	severe	severe
Lima loam (LmB)	severe	moderate	severe	moderate	moderate
Newstead loam (Ne)	severe	severe	severe	severe	severe
Ovid silt loam (OvA)	severe	severe	severe	severe	severe

2. If the Soil survey indicates either "severe" or "moderate" suitability for the proposed types of construction, a geotechnical and hydrological analysis based on one test per 3.5 acres of project area must be provided (per Town Board resolution, 3/17/03, amended 6/16/03).

   __X__ Geotechnical report attached _____ Not applicable

3. Is your property located: On Youngs Road between Dodge and Klein Roads? □ Yes ☒ No
   On Wehrle Dr. between Spindrift Dr. and Oakwood Rd? ☒ Yes □ No

   If so, the property may be within an area of the Town that is affected by a moratorium on connections to the sanitary sewer system. See attached Town Board Resolution 2018-1301

4. Are there alternative locations on the site for this project? □ Yes ☒ No

5. Location and size of real property owned by petitioner within one (1) mile of subject proposal:
   N/A

6. Are you aware of current or future plans or intentions by others in the Town of Amherst to develop property within 1000± ft. of the present project request: □ Yes ☒ No

   Describe_____

   (Potential environmental impacts from adjacent or nearby projects undergoing the approval process will receive a coordinated environmental review to determine cumulative effects on common receivers (e.g. traffic and drainage corridors) and other relevant environmental concerns.)

7. Maximum number of vehicular trips to be generated per peak hour upon completion of project_____
   Source: 75, per attached Traffic Impact Study (by SRF Associates)

8. Will blasting occur during construction? □ Yes ☒ No

9. Does the project propose to connect and be tributary to the public sanitary sewer system? ☒ Yes □ No

10. Proposed net additional gallons per day (gpd) of sanitary sewer discharge upon completion of project:
    5,244 gpd average flow 11,775 gpd peak flow.

    (Average flows of 2,500 gpd or greater will require an Engineer's Report that includes a detailed downstream sewer capacity analysis and the identification of and commitment to required I/I offset work during peak wastewater flow conditions.)

11. Based on the Town's *2011 Reconnaissance Level Survey of Historic Resources,* is your property 'blue-rated' for historic significance? □ Yes ☒ No

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

Full Environmental Assessment Form
Part 1 - Project and Setting

Instructions for Completing Part 1

Part 1 is to be completed by the applicant or project sponsor. Responses become part of the application for approval or funding, are subject to public review, and may be subject to further verification.

Complete Part 1 based on information currently available. If additional research or investigation would be needed to fully respond to any item, please answer as thoroughly as possible based on current information; indicate whether missing information does not exist, or is not reasonably available to the sponsor; and, when possible, generally describe work or studies which would be necessary to update or fully develop that information.

Applicants/sponsors must complete all items in Sections A & B. In Sections C, D & E, most items contain an initial question that must be answered either "Yes" or "No". If the answer to the initial question is "Yes", complete the sub-questions that follow. If the answer to the initial question is "No", proceed to the next question. Section F allows the project sponsor to identify and attach any additional information. Section G requires the name and signature of the applicant or project sponsor to verify that the information contained in Part 1is accurate and complete.

A. Project and Applicant/Sponsor Information.

Name of Action or Project: Proposed Office & Proposed Road		
Project Location (describe, and attach a general location map): 2190 & 2220 Wehrle Drive, Amherst, New York 14221		
Brief Description of Proposed Action (include purpose or need): Development will consist of the construction of a 84,375 sq. ft., three-story office building, a 24,750 sq. ft., single-story storage garage/maintenance facility, a 72,072 sq. ft., two-story parking garage, along with associated parking, sidewalks, landscaping, lighting and associated utility infrastructure. Utility infrastructure to include stormwater management, sanitary, water, cable, electric and gas utilities. In addition to the site development, a new public road built to the Town of Amherst standards for a local road, along with a public watermain, public sewer, and electric and gas mains.		
Name of Applicant/Sponsor: Omar M. Abu-Sitta, (Acquest Wehrle LLC)	Telephone: (716) 204-3570 E-Mail: omar@acquestdevelopment.com	
Address: 5554 Main Street		
City/PO: Williamsville	State: New York	Zip Code: 14221
Project Contact (if not same as sponsor; give name and title/role):	Telephone: E-Mail:	
Address:		
City/PO:	State:	Zip Code:
Property Owner (if not same as sponsor):	Telephone: E-Mail:	
Address:		
City/PO:	State:	Zip Code:

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

B. Government Approvals

B. Government Approvals, Funding, or Sponsorship. ("Funding" includes grants, loans, tax relief, and any other forms of financial assistance.)

Government Entity	If Yes: Identify Agency and Approval(s) Required	Application Date (Actual or projected)
a. City Counsel, Town Board, or Village Board of Trustees ☑Yes ☐No	Town of Amherst Town Board - Rezone portion of property	(Previously done)
b. City, Town or Village Planning Board or Commission ☑Yes ☐No	Town of Amherst Planning Board - Site Plan Approval	January 2022
c. City, Town or Village Zoning Board of Appeals ☐Yes ☐No		
d. Other local agencies ☑Yes ☐No	Erie County Water Authority - New Watermain & backflow prevention approval	January 2022
e. County agencies ☑Yes ☐No	Erie County Dept. of Health - Sewer & Watermain Erie County DPW - intersection at Wehrle	January 2022 January 2022
f. Regional agencies ☐Yes ☑No		
g. State agencies ☑Yes ☐No	NYSDEC - SPDES Permit (Stormwater)	January 2022
h. Federal agencies ☑Yes ☐No	FAA - Proximity to BNIA (airport)	January 2022

i. Coastal Resources.

i. Is the project site within a Coastal Area, or the waterfront area of a Designated Inland Waterway? ☐Yes ☑No

ii. Is the project site located in a community with an approved Local Waterfront Revitalization Program? ☐Yes ☑No

iii. Is the project site within a Coastal Erosion Hazard Area? ☐Yes ☑No

C. Planning and Zoning

C.1. Planning and zoning actions.

Will administrative or legislative adoption, or amendment of a plan, local law, ordinance, rule or regulation be the only approval(s) which must be granted to enable the proposed action to proceed? ☐Yes ☑No

- **If Yes,** complete sections C, F and G.
- **If No,** proceed to question C.2 and complete all remaining sections and questions in Part 1

C.2. Adopted land use plans.

a. Do any municipally- adopted (city, town, village or county) comprehensive land use plan(s) include the site where the proposed action would be located? ☐Yes ☑No

If Yes, does the comprehensive plan include specific recommendations for the site where the proposed action would be located? ☐Yes ☑No

b. Is the site of the proposed action within any local or regional special planning district (for example: Greenway; Brownfield Opportunity Area (BOA); designated State or Federal heritage area; watershed management plan; or other?) ☑Yes ☐No

If Yes, identify the plan(s):

NYS Heritage Areas:West Erie Canal Corridor

c. Is the proposed action located wholly or partially within an area listed in an adopted municipal open space plan, or an adopted municipal farmland protection plan? ☐Yes ☑No

If Yes, identify the plan(s):

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

C.3. Zoning

a. Is the site of the proposed action located in a municipality with an adopted zoning law or ordinance. ☑ Yes ☐ No
If Yes, what is the zoning classification(s) including any applicable overlay district?
Office Building District (OB)

b. Is the use permitted or allowed by a special or conditional use permit? ☐ Yes ☑ No

c. Is a zoning change requested as part of the proposed action? ☐ Yes ☑ No
If Yes,
i. What is the proposed new zoning for the site? _____

C.4. Existing community services.

a. In what school district is the project site located? Williamsville Central School District

b. What police or other public protection forces serve the project site?
Town of Amherst Police Department

c. Which fire protection and emergency medical services serve the project site?
Main-Transit Fire Department

d. What parks serve the project site?
Wehrle FAA Recreation Park

D. Project Details

D.1. Proposed and Potential Development

a. What is the general nature of the proposed action (e.g., residential, industrial, commercial, recreational; if mixed, include all components)? Office Building

b. a. Total acreage of the site of the proposed action? 24.91 acres
b. Total acreage to be physically disturbed? 17.5 acres
c. Total acreage (project site and any contiguous properties) owned or controlled by the applicant or project sponsor? 24.91 acres

c. Is the proposed action an expansion of an existing project or use? ☐ Yes ☑ No
i. If Yes, what is the approximate percentage of the proposed expansion and identify the units (e.g., acres, miles, housing units, square feet)? % _____ Units: _____

d. Is the proposed action a subdivision, or does it include a subdivision? ☐ Yes ☑ No
If Yes,
i. Purpose or type of subdivision? (e.g., residential, industrial, commercial; if mixed, specify types)
ii. Is a cluster/conservation layout proposed? ☐ Yes ☐ No
iii. Number of lots proposed? _____
iv. Minimum and maximum proposed lot sizes? Minimum _____ Maximum _____

e. Will the proposed action be constructed in multiple phases? ☐ Yes ☑ No
i. If No, anticipated period of construction: 12 months
ii. If Yes:
- Total number of phases anticipated _____
- Anticipated commencement date of phase 1 (including demolition) _____ month _____ year
- Anticipated completion date of final phase _____ month _____year
- Generally describe connections or relationships among phases, including any contingencies where progress of one phase may determine timing or duration of future phases: _____

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

f. Does the project include new residential uses? ☐ Yes ☑ No

3.a

If Yes, show numbers of units proposed.

	One Family	Two Family	Three Family	Multiple Family (four or more)
Initial Phase				
At completion of all phases				

g. Does the proposed action include new non-residential construction (including expansions)? ☑ Yes ☐ No

If Yes,

i. Total number of structures 4

ii. Dimensions (in feet) of largest proposed structure: 46' height; 125' width; and 225' length

iii. Approximate extent of building space to be heated or cooled: 212,625 square feet

h. Does the proposed action include construction or other activities that will result in the impoundment of any liquids, such as creation of a water supply, reservoir, pond, lake, waste lagoon or other storage? ☐ Yes ☑ No

If Yes,

i. Purpose of the impoundment: _____

ii. If a water impoundment, the principal source of the water: ☐ Ground water ☐ Surface water streams ☐ Other specify:

_____

iii. If other than water, identify the type of impounded/contained liquids and their source.

_____

iv. Approximate size of the proposed impoundment. Volume: _____ million gallons; surface area: _____ acres

v. Dimensions of the proposed dam or impounding structure: _____ height; _____ length

vi. Construction method/materials for the proposed dam or impounding structure (e.g., earth fill, rock, wood, concrete):

_____

D.2. Project Operations

a. Does the proposed action include any excavation, mining, or dredging, during construction, operations, or both? (Not including general site preparation, grading or installation of utilities or foundations where all excavated materials will remain onsite) ☐ Yes ☑ No

If Yes:

i .What is the purpose of the excavation or dredging? _____

ii. How much material (including rock, earth, sediments, etc.) is proposed to be removed from the site?

- Volume (specify tons or cubic yards): _____
- Over what duration of time? _____

iii. Describe nature and characteristics of materials to be excavated or dredged, and plans to use, manage or dispose of them.

_____

_____

iv. Will there be onsite dewatering or processing of excavated materials? ☐ Yes ☐ No

If yes, describe. _____

_____

v. What is the total area to be dredged or excavated? _____acres

vi. What is the maximum area to be worked at any one time? _____ acres

vii. What would be the maximum depth of excavation or dredging? _____ feet

viii. Will the excavation require blasting? ☐ Yes ☐ No

ix. Summarize site reclamation goals and plan: _____

_____

_____

b. Would the proposed action cause or result in alteration of, increase or decrease in size of, or encroachment into any existing wetland, waterbody, shoreline, beach or adjacent area? ☑ Yes ☐ No

If Yes:

i. Identify the wetland or waterbody which would be affected (by name, water index number, wetland map number or geographic description): Development will remove the (5) wetland and (2) ditches on site. As per the USACE letter dated January 22, 2021, the USACE has issued an Approved Jurisdictional Determination that these features are excluded and not regulated under Section 404 of the Clean Water Act

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

ii. Describe how the proposed action would affect that waterbody or wetland, e.g. excavation, fill, placement of structures, or alteration of channels, banks and shorelines. Indicate extent of activities, alterations and additions in square feet or acres:
Non-Jurisdictional Wetlands 1-5 and Ditches 1 and 2 will be removed. See item i above.

iii. Will the proposed action cause or result in disturbance to bottom sediments? ☐ Yes ☑ No
If Yes, describe: Non-Jurisdictional wetlands and ditches will be removed

iv. Will the proposed action cause or result in the destruction or removal of aquatic vegetation? ☑ Yes ☐ No
If Yes:

- acres of aquatic vegetation proposed to be removed: 0.70 acres
- expected acreage of aquatic vegetation remaining after project completion: 0.0 acres
- purpose of proposed removal (e.g. beach clearing, invasive species control, boat access): Commercial construction
- proposed method of plant removal: clearing
- if chemical/herbicide treatment will be used, specify product(s): N/A

v. Describe any proposed reclamation/mitigation following disturbance: None required

c. Will the proposed action use, or create a new demand for water? ☑ Yes ☐ No
If Yes:

i. Total anticipated water usage/demand per day: 5,244 gallons/day

ii. Will the proposed action obtain water from an existing public water supply? ☑ Yes ☐ No
If Yes:

- Name of district or service area: Erie County Water Authority
- Does the existing public water supply have capacity to serve the proposal? ☑ Yes ☐ No
- Is the project site in the existing district? ☑ Yes ☐ No
- Is expansion of the district needed? ☐ Yes ☑ No
- Do existing lines serve the project site? ☑ Yes ☐ No

iii. Will line extension within an existing district be necessary to supply the project? ☑ Yes ☐ No
If Yes:

- Describe extensions or capacity expansions proposed to serve this project: a proposed 8-inch watermain will be extended from existing 12-inch on Wehrle Drive to existing 6-inch on Bellingham Drive
- Source(s) of supply for the district: Erie County Water Authority

iv. Is a new water supply district or service area proposed to be formed to serve the project site? ☐ Yes ☑ No
If, Yes:

- Applicant/sponsor for new district:
- Date application submitted or anticipated:
- Proposed source(s) of supply for new district:

v. If a public water supply will not be used, describe plans to provide water supply for the project:

vi. If water supply will be from wells (public or private), what is the maximum pumping capacity: N/A gallons/minute.

d. Will the proposed action generate liquid wastes? ☑ Yes ☐ No
If Yes:

i. Total anticipated liquid waste generation per day: 5,244 gallons/day

ii. Nature of liquid wastes to be generated (e.g., sanitary wastewater, industrial; if combination, describe all components and approximate volumes or proportions of each):
sanitary wastewater

iii. Will the proposed action use any existing public wastewater treatment facilities? ☑ Yes ☐ No
If Yes:

- Name of wastewater treatment plant to be used: Town of Amherst WWTP
- Name of district: Town of Amherst
- Does the existing wastewater treatment plant have capacity to serve the project? ☑ Yes ☐ No
- Is the project site in the existing district? ☑ Yes ☐ No
- Is expansion of the district needed? ☐ Yes ☑ No

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

- Do existing sewer lines serve the project site? ☑ Yes ☐ No
- Will a line extension within an existing district be necessary to serve the project? ☑ Yes ☐ No

If Yes:

- Describe extensions or capacity expansions proposed to serve this project: a public 8-inch sanitary sewer extension is proposed from the project site, to tie into the existing 8-inch public sewer on Bellingham Drive

iv. Will a new wastewater (sewage) treatment district be formed to serve the project site? ☐ Yes ☑ No

If Yes:

- Applicant/sponsor for new district: _____
- Date application submitted or anticipated: _____
- What is the receiving water for the wastewater discharge? _____

v. If public facilities will not be used, describe plans to provide wastewater treatment for the project, including specifying proposed receiving water (name and classification if surface discharge or describe subsurface disposal plans):

_____

vi. Describe any plans or designs to capture, recycle or reuse liquid waste: _____

e. Will the proposed action disturb more than one acre and create stormwater runoff, either from new point sources (i.e. ditches, pipes, swales, curbs, gutters or other concentrated flows of stormwater) or non-point source (i.e. sheet flow) during construction or post construction? ☑ Yes ☐ No

If Yes:

i. How much impervious surface will the project create in relation to total size of project parcel?

_____ Square feet or 6.56 acres (impervious surface)

_____ Square feet or 24.9 acres (parcel size)

ii. Describe types of new point sources. storm sewer pipe discharge to Wehrle Drive drainage system

iii. Where will the stormwater runoff be directed (i.e. on-site stormwater management facility/structures, adjacent properties, groundwater, on-site surface water or off-site surface waters)?

on-site stormwater management systems (bioretention basins, dry swale and dry detention basin)

- If to surface waters, identify receiving water bodies or wetlands: eventually connects to Ellicott Creek
- Will stormwater runoff flow to adjacent properties? ☐ Yes ☑ No

iv. Does the proposed plan minimize impervious surfaces, use pervious materials or collect and re-use stormwater? ☑ Yes ☐ No

f. Does the proposed action include, or will it use on-site, one or more sources of air emissions, including fuel combustion, waste incineration, or other processes or operations? ☐ Yes ☑ No

If Yes, identify:

i. Mobile sources during project operations (e.g., heavy equipment, fleet or delivery vehicles)

ii. Stationary sources during construction (e.g., power generation, structural heating, batch plant, crushers)

iii. Stationary sources during operations (e.g., process emissions, large boilers, electric generation)

g. Will any air emission sources named in D.2.f (above), require a NY State Air Registration, Air Facility Permit, or Federal Clean Air Act Title IV or Title V Permit? ☐ Yes ☑ No

If Yes:

i. Is the project site located in an Air quality non-attainment area? (Area routinely or periodically fails to meet ambient air quality standards for all or some parts of the year) ☐ Yes ☐ No

ii. In addition to emissions as calculated in the application, the project will generate:

- _____Tons/year (short tons) of Carbon Dioxide (CO_2)
- _____Tons/year (short tons) of Nitrous Oxide (N_2O)
- _____Tons/year (short tons) of Perfluorocarbons (PFCs)
- _____Tons/year (short tons) of Sulfur Hexafluoride (SF_6)
- _____Tons/year (short tons) of Carbon Dioxide equivalent of Hydroflourocarbons (HFCs)
- _____Tons/year (short tons) of Hazardous Air Pollutants (HAPs)

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

h. Will the proposed action generate or emit methane (including, but not limited to, sewage treatment plants, landfills, composting facilities)? ☐Yes ☑No

If Yes:

i. Estimate methane generation in tons/year (metric): _____

ii. Describe any methane capture, control or elimination measures included in project design (e.g., combustion to generate heat or electricity, flaring): _____

i. Will the proposed action result in the release of air pollutants from open-air operations or processes, such as quarry or landfill operations? ☐Yes ☑No

If Yes: Describe operations and nature of emissions (e.g., diesel exhaust, rock particulates/dust):

j. Will the proposed action result in a substantial increase in traffic above present levels or generate substantial new demand for transportation facilities or services? ☑Yes ☐No

If Yes:

i. When is the peak traffic expected (Check all that apply): ☑ Morning ☐ Evening ☐Weekend ☑ Randomly between hours of 7 am to 9 am.

ii. For commercial activities only, projected number of truck trips/day and type (e.g., semi trailers and dump trucks): 0

iii. Parking spaces: Existing 0 Proposed 228 Net increase/decrease +228

iv. Does the proposed action include any shared use parking? ☐Yes ☑No

v. If the proposed action includes any modification of existing roads, creation of new roads or change in existing access, describe: new public road to be built as part of this development

vi. Are public/private transportation service(s) or facilities available within ½ mile of the proposed site? ☑Yes ☐No

vii Will the proposed action include access to public transportation or accommodations for use of hybrid, electric or other alternative fueled vehicles? ☑Yes ☐No

viii. Will the proposed action include plans for pedestrian or bicycle accommodations for connections to existing pedestrian or bicycle routes? ☑Yes ☐No

k. Will the proposed action (for commercial or industrial projects only) generate new or additional demand for energy? ☑Yes ☐No

If Yes:

i. Estimate annual electricity demand during operation of the proposed action: Unknown

ii. Anticipated sources/suppliers of electricity for the project (e.g., on-site combustion, on-site renewable, via grid/local utility, or other): via grid/local utility

iii. Will the proposed action require a new, or an upgrade, to an existing substation? ☐Yes ☑No

l. Hours of operation. Answer all items which apply.

i. During Construction:

- Monday - Friday: 7am-5pm
- Saturday: 7am-5pm
- Sunday: N/A
- Holidays: N/A

ii. During Operations:

- Monday - Friday: 8am-5pm
- Saturday: N/A
- Sunday: N/A
- Holidays: N/A

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

m. Will the proposed action produce noise that will exceed existing ambient noise levels during construction, operation, or both? ☐ Yes ☑ No

If yes:

i. Provide details including sources, time of day and duration:

ii. Will the proposed action remove existing natural barriers that could act as a noise barrier or screen? ☐ Yes ☑ No

Describe:

n. Will the proposed action have outdoor lighting? ☑ Yes ☐ No

If yes:

i. Describe source(s), location(s), height of fixture(s), direction/aim, and proximity to nearest occupied structures:

pole mounted and building mounted fixtures in accordance with Town of Amherst Town Code

ii. Will proposed action remove existing natural barriers that could act as a light barrier or screen? ☐ Yes ☑ No

Describe:

o. Does the proposed action have the potential to produce odors for more than one hour per day? ☐ Yes ☑ No

If Yes, describe possible sources, potential frequency and duration of odor emissions, and proximity to nearest occupied structures:

p. Will the proposed action include any bulk storage of petroleum (combined capacity of over 1,100 gallons) or chemical products 185 gallons in above ground storage or any amount in underground storage? ☐ Yes ☑ No

If Yes:

i. Product(s) to be stored

ii. Volume(s) _____ per unit time _____ (e.g., month, year)

iii. Generally, describe the proposed storage facilities:

q. Will the proposed action (commercial, industrial and recreational projects only) use pesticides (i.e., herbicides, insecticides) during construction or operation? ☐ Yes ☑ No

If Yes:

i. Describe proposed treatment(s):

ii. Will the proposed action use Integrated Pest Management Practices? ☐ Yes ☐ No

r. Will the proposed action (commercial or industrial projects only) involve or require the management or disposal of solid waste (excluding hazardous materials)? ☑ Yes ☐ No

If Yes:

i. Describe any solid waste(s) to be generated during construction or operation of the facility:

- Construction: To be determined tons per _____ (unit of time)
- Operation : To be determined tons per _____ (unit of time)

ii. Describe any proposals for on-site minimization, recycling or reuse of materials to avoid disposal as solid waste:

- Construction: Recycling of salvageable construction items.
- Operation: Recycling programs by use.

iii. Proposed disposal methods/facilities for solid waste generated on-site:

- Construction: Via agreement with waste disposal company.
- Operation: Via agreement with waste disposal company.

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

s. Does the proposed action include construction or modification of a solid waste management facility? ☐ Yes ☑ No

If Yes:

i. Type of management or handling of waste proposed for the site (e.g., recycling or transfer station, composting, landfill, or other disposal activities): _____

ii. Anticipated rate of disposal/processing:

- _____ Tons/month, if transfer or other non-combustion/thermal treatment, or
- _____ Tons/hour, if combustion or thermal treatment

iii. If landfill, anticipated site life: _____ years

t. Will the proposed action at the site involve the commercial generation, treatment, storage, or disposal of hazardous waste? ☐ Yes ☑ No

If Yes:

i. Name(s) of all hazardous wastes or constituents to be generated, handled or managed at facility: _____

ii. Generally describe processes or activities involving hazardous wastes or constituents: _____

iii. Specify amount to be handled or generated _____ tons/month

iv. Describe any proposals for on-site minimization, recycling or reuse of hazardous constituents: _____

v. Will any hazardous wastes be disposed at an existing offsite hazardous waste facility? ☐ Yes ☐ No

If Yes: provide name and location of facility: _____

If No: describe proposed management of any hazardous wastes which will not be sent to a hazardous waste facility:

E. Site and Setting of Proposed Action

E.1. Land uses on and surrounding the project site

a. Existing land uses.

i. Check all uses that occur on, adjoining and near the project site.

☐ Urban ☐ Industrial ☑ Commercial ☑ Residential (suburban) ☐ Rural (non-farm)
☐ Forest ☐ Agriculture ☐ Aquatic ☐ Other (specify): _____

ii. If mix of uses, generally describe:

residential neighborhoods to the east and west, commercial uses to the north, south, southeast and west.

b. Land uses and covertypes on the project site.

Land use or Covertype	Current Acreage	Acreage After Project Completion	Change (Acres +/-)
• Roads, buildings, and other paved or impervious surfaces	0	6.56	+ 6.56
• Forested			
• Meadows, grasslands or brushlands (non-agricultural, including abandoned agricultural)			
• Agricultural (includes active orchards, field, greenhouse etc.)			
• Surface water features (lakes, ponds, streams, rivers, etc.)			
• Wetlands (freshwater or tidal)			
• Non-vegetated (bare rock, earth or fill)			
• Other Describe: lawn/landscaping	24.91	18.35	-6.56

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

c. Is the project site presently used by members of the community for public recreation? ☐ Yes ☑ No
i. If Yes: explain: _____

d. Are there any facilities serving children, the elderly, people with disabilities (e.g., schools, hospitals, licensed day care centers, or group homes) within 1500 feet of the project site? ☑ Yes ☐ No
If Yes,
i. Identify Facilities:
Brierwood Child Care Center

e. Does the project site contain an existing dam? ☐ Yes ☑ No
If Yes:
i. Dimensions of the dam and impoundment:
- Dam height: _____ feet
- Dam length: _____ feet
- Surface area: _____ acres
- Volume impounded: _____ gallons OR acre-feet

ii. Dam's existing hazard classification: _____
iii. Provide date and summarize results of last inspection:

f. Has the project site ever been used as a municipal, commercial or industrial solid waste management facility, or does the project site adjoin property which is now, or was at one time, used as a solid waste management facility? ☐ Yes ☑ No
If Yes:
i. Has the facility been formally closed? ☐ Yes ☐ No
- If yes, cite sources/documentation: _____

ii. Describe the location of the project site relative to the boundaries of the solid waste management facility:
iii. Describe any development constraints due to the prior solid waste activities: _____

g. Have hazardous wastes been generated, treated and/or disposed of at the site, or does the project site adjoin property which is now or was at one time used to commercially treat, store and/or dispose of hazardous waste? ☐ Yes ☑ No
If Yes:
i. Describe waste(s) handled and waste management activities, including approximate time when activities occurred:

h. Potential contamination history. Has there been a reported spill at the proposed project site, or have any remedial actions been conducted at or adjacent to the proposed site? ☐ Yes ☑ No
If Yes:
i. Is any portion of the site listed on the NYSDEC Spills Incidents database or Environmental Site Remediation database? Check all that apply: ☐ Yes ☐ No
☐ Yes – Spills Incidents database — Provide DEC ID number(s): _____
☐ Yes – Environmental Site Remediation database — Provide DEC ID number(s): _____
☐ Neither database

ii. If site has been subject of RCRA corrective activities, describe control measures:_____

iii. Is the project within 2000 feet of any site in the NYSDEC Environmental Site Remediation database? ☐ Yes ☑ No
If yes, provide DEC ID number(s): _____

iv. If yes to (i), (ii) or (iii) above, describe current status of site(s):

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

v. Is the project site subject to an institutional control limiting property uses? ☐ Yes ☑ No

- If yes, DEC site ID number: _____
- Describe the type of institutional control (e.g., deed restriction or easement): _____
- Describe any use limitations: _____
- Describe any engineering controls: _____
- Will the project affect the institutional or engineering controls in place? ☐ Yes ☐ No
- Explain: _____

E.2. Natural Resources On or Near Project Site

a. What is the average depth to bedrock on the project site? 3 - 4 feet

b. Are there bedrock outcroppings on the project site? ☐ Yes ☑ No
If Yes, what proportion of the site is comprised of bedrock outcroppings? _____%

c. Predominant soil type(s) present on project site:
Ilion silt loam 34.1 %
Lima loam 11 %
Ovid silt loam 44.2% Newstead loam 10.6 %

d. What is the average depth to the water table on the project site? Average: 0.5 - 2 feet

e. Drainage status of project site soils:
☐ Well Drained: _____% of site
☐ Moderately Well Drained: _____% of site
☑ Poorly Drained 100 % of site

f. Approximate proportion of proposed action site with slopes:
☑ 0-10%: 100 % of site
☐ 10-15%: _____% of site
☐ 15% or greater: _____% of site

g. Are there any unique geologic features on the project site? ☐ Yes ☑ No
If Yes, describe: _____

h. Surface water features.
i. Does any portion of the project site contain wetlands or other waterbodies (including streams, rivers, ponds or lakes)? ☑ Yes ☐ No
ii. Do any wetlands or other waterbodies adjoin the project site? ☑ Yes ☐ No
If Yes to either *i* or *ii*, continue. If No, skip to E.2.i.
iii. Are any of the wetlands or waterbodies within or adjoining the project site regulated by any federal, state or local agency? ☑ Yes ☐ No
iv. For each identified regulated wetland and waterbody on the project site, provide the following information:

- Streams: Name _____ Classification _____
- Lakes or Ponds: Name _____ Classification _____
- Wetlands: Name Federal Waters Approximate Size _____
- Wetland No. (if regulated by DEC) _____

v. Are any of the above water bodies listed in the most recent compilation of NYS water quality-impaired waterbodies? ☐ Yes ☑ No
See attached USACE Approved Jurisdictional Determination
If yes, name of impaired water body/bodies and basis for listing as impaired: _____

i. Is the project site in a designated Floodway? ☐ Yes ☑ No

j. Is the project site in the 100-year Floodplain? ☐ Yes ☑ No

k. Is the project site in the 500-year Floodplain? ☐ Yes ☑ No

l. Is the project site located over, or immediately adjoining, a primary, principal or sole source aquifer? ☐ Yes ☑ No
If Yes:
i. Name of aquifer: _____

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

m. Identify the predominant wildlife species that occupy or use the project site:

White tailed deer	raccoon	squirrel
eastern chipmunk	skunk	woodchuck
field mice	common garter snake	red fox

n. Does the project site contain a designated significant natural community? ☐ Yes ☑ No

If Yes:

i. Describe the habitat/community (composition, function, and basis for designation): _____

ii. Source(s) of description or evaluation: _____

iii. Extent of community/habitat:

- Currently: _____ acres
- Following completion of project as proposed: _____ acres
- Gain or loss (indicate + or -): _____ acres

o. Does project site contain any species of plant or animal that is listed by the federal government or NYS as endangered or threatened, or does it contain any areas identified as habitat for an endangered or threatened species? ☐ Yes ☑ No

If Yes:

i. Species and listing (endangered or threatened): _____

p. Does the project site contain any species of plant or animal that is listed by NYS as rare, or as a species of special concern? ☐ Yes ☑ No

If Yes:

i. Species and listing: _____

q. Is the project site or adjoining area currently used for hunting, trapping, fishing or shell fishing? ☐ Yes ☑ No

If yes, give a brief description of how the proposed action may affect that use: _____

E.3. Designated Public Resources On or Near Project Site

a. Is the project site, or any portion of it, located in a designated agricultural district certified pursuant to Agriculture and Markets Law, Article 25-AA, Section 303 and 304? ☐ Yes ☑ No

If Yes, provide county plus district name/number: _____

b. Are agricultural lands consisting of highly productive soils present? ☐ Yes ☑ No

i. If Yes: acreage(s) on project site? _____

ii. Source(s) of soil rating(s): _____

c. Does the project site contain all or part of, or is it substantially contiguous to, a registered National Natural Landmark? ☐ Yes ☑ No

If Yes:

i. Nature of the natural landmark: ☐ Biological Community ☐ Geological Feature

ii. Provide brief description of landmark, including values behind designation and approximate size/extent: _____

d. Is the project site located in or does it adjoin a state listed Critical Environmental Area? ☐ Yes ☑ No

If Yes:

i. CEA name: _____

ii. Basis for designation: _____

iii. Designating agency and date: _____

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

e. Does the project site contain, or is it substantially contiguous to, a building, archaeological site, or district which is listed on the National or State Register of Historic Places, or that has been determined by the Commissioner of the NYS Office of Parks, Recreation and Historic Preservation to be eligible for listing on the State Register of Historic Places? ☐ Yes ☑ No

If Yes:

i. Nature of historic/archaeological resource: ☐ Archaeological Site ☐ Historic Building or District

ii. Name: _____

iii. Brief description of attributes on which listing is based:

_____

f. Is the project site, or any portion of it, located in or adjacent to an area designated as sensitive for archaeological sites on the NY State Historic Preservation Office (SHPO) archaeological site inventory? ☑ Yes ☐ No

g. Have additional archaeological or historic site(s) or resources been identified on the project site? ☐ Yes ☑ No

If Yes:

i. Describe possible resource(s): _____

ii. Basis for identification: _____

h. Is the project site within fives miles of any officially designated and publicly accessible federal, state, or local scenic or aesthetic resource? ☐ Yes ☑ No

If Yes:

i. Identify resource: _____

ii. Nature of, or basis for, designation (e.g., established highway overlook, state or local park, state historic trail or scenic byway, etc.): _____

iii. Distance between project and resource: _____ miles.

i. Is the project site located within a designated river corridor under the Wild, Scenic and Recreational Rivers Program 6 NYCRR 666? ☐ Yes ☑ No

If Yes:

i. Identify the name of the river and its designation: _____

ii. Is the activity consistent with development restrictions contained in 6NYCRR Part 666? ☐ Yes ☐ No

F. Additional Information

Attach any additional information which may be needed to clarify your project.

If you have identified any adverse impacts which could be associated with your proposal, please describe those impacts plus any measures which you propose to avoid or minimize them.

G. Verification

I certify that the information provided is true to the best of my knowledge.

Applicant/Sponsor Name Jason Utzig, P.E. (on behalf of applicant) Date 11-09-2021

Signature _____ Title Senior Project Engineer

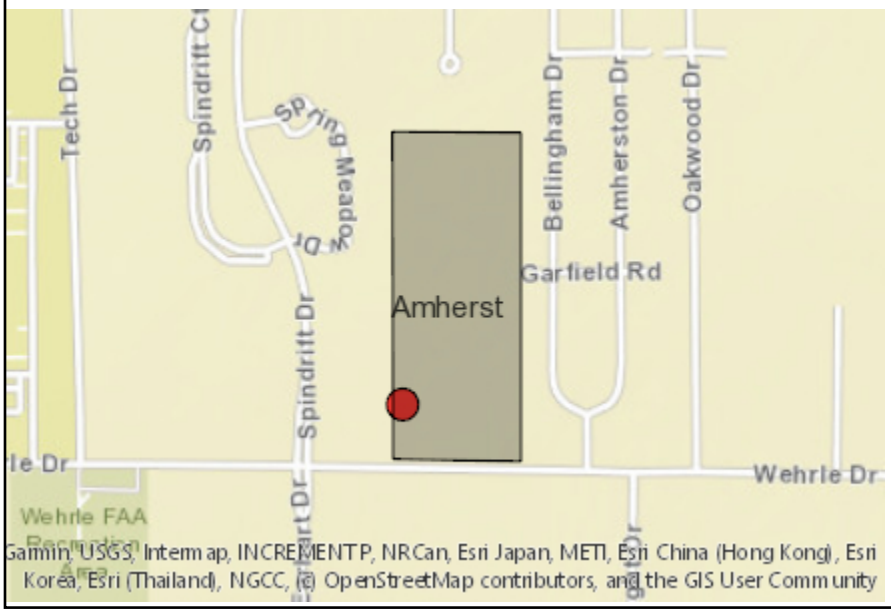
EAF Mapper Summary Report

Thursday, January 28, 2021 3:10 PM



Disclaimer: The EAF Mapper is a screening tool intended to assist project sponsors and reviewing agencies in preparing an environmental assessment form (EAF). Not all questions asked in the EAF are answered by the EAF Mapper. Additional information on any EAF question can be obtained by consulting the EAF Workbooks. Although the EAF Mapper provides the most up-to-date digital data available to DEC, you may also need to contact local or other data sources in order to obtain data not provided by the Mapper. Digital data is not a substitute for agency determinations.

B.i.i [Coastal or Waterfront Area]	No
B.i.ii [Local Waterfront Revitalization Area]	No
C.2.b. [Special Planning District]	Yes - Digital mapping data are not available for all Special Planning Districts. Refer to EAF Workbook.
C.2.b. [Special Planning District - Name]	NYS Heritage Areas:West Erie Canal Corridor
E.1.h [DEC Spills or Remediation Site - Potential Contamination History]	Digital mapping data are not available or are incomplete. Refer to EAF Workbook.
E.1.h.i [DEC Spills or Remediation Site - Listed]	Digital mapping data are not available or are incomplete. Refer to EAF Workbook.
E.1.h.i [DEC Spills or Remediation Site - Environmental Site Remediation Database]	Digital mapping data are not available or are incomplete. Refer to EAF Workbook.
E.1.h.iii [Within 2,000' of DEC Remediation Site]	No
E.2.g [Unique Geologic Features]	No
E.2.h.i [Surface Water Features]	Yes
E.2.h.ii [Surface Water Features]	Yes
E.2.h.iii [Surface Water Features]	Yes - Digital mapping information on local and federal wetlands and waterbodies is known to be incomplete. Refer to EAF Workbook.
E.2.h.iv [Surface Water Features - Wetlands Name]	Federal Waters
E.2.h.v [Impaired Water Bodies]	No
E.2.i. [Floodway]	No
E.2.j. [100 Year Floodplain]	No
E.2.k. [500 Year Floodplain]	No
E.2.l. [Aquifers]	No
E.2.n. [Natural Communities]	No

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

E.2.o. [Endangered or Threatened Species]	No
E.2.p. [Rare Plants or Animals]	No
E.3.a. [Agricultural District]	No
E.3.c. [National Natural Landmark]	No
E.3.d [Critical Environmental Area]	No
E.3.e. [National or State Register of Historic Places or State Eligible Sites]	Digital mapping data are not available or are incomplete. Refer to EAF Workbook.
E.3.f. [Archeological Sites]	Yes
E.3.i. [Designated River Corridor]	No

RECEIVED
OCT 12 2005
PROJECT MANAGEMENT

Steven Doleski
Regional Permit Administrator
NYSDEC
270 Michigan Avenue
Buffalo, NY 14203-2999

Dear Mr. Doleski:

Re: DEC, CORPS 2000-00680 (1)
Proposed Acquest Office Park Development
2190 & 2220 Wehrle Drive/
2459 Hopkins Road Wetland Mitigation Site
Town of Amherst, Erie County
05PR3845

Thank you for requesting the comments of the State Historic Preservation Office (SHPO). The SHPO has reviewed this project in accordance with Section 106 of the National Historic Preservation Act of 1966, as amended.

A review of SHPO records indicates that No Impact determinations were issued for 2190 Wehrle Drive in 2001, for 2220 Wehrle Drive in 1993 and for 2459 Hopkins Road in 2001. Therefore, it is the SHPO's opinion that project 05PR3845 will have **No Effect** upon historic properties in or eligible for inclusion in the State and National Registers of Historic Places.

The SHPO appreciates the opportunity to comment on this information. It should be noted that further consultation with the SHPO will be necessary if there are any changes to the project. Please telephone me at ext. 3280 with any questions you may have. Please also refer to the PR# above in any future correspondences for this project.

Sincerely,

Nancy Herter

1. Coordinates

Provide the Geographic Coordinates for the project site. The two methods are:
- Navigate to the project location on the map (below) and click to place a marker and obtain the XY coordinates.
- The "Find Me" button will provide the lat/long for the person filling out this form. Then pan the map to the correct location and click the map to place a marker and obtain the XY coordinates.

Navigate to your location and click on the map to get the X,Y coordinates

Project Details

2. What is the nature of this project?
New Construction

3. Select the predominant land use for both pre and post development conditions.

Pre-Development Existing Landuse
Pasture/Open Land

Post-Development Future Land Use
Commercial

3a. If Single Family Subdivision was selected in question 3, enter the number of subdivision lots.
NONE PROVIDED

4. In accordance with the larger common plan of development or sale, enter the total project site acreage, the acreage to be disturbed and the future impervious area (acreage)within the disturbed area.

*** ROUND TO THE NEAREST TENTH OF AN ACRE. ***

Total Site Area (acres)
24.9

Total Area to be Disturbed (acres)
17.5

Existing Impervious Area to be Disturbed (acres)
0

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

Future Impervious Area Within Disturbed Area (acres)
6.56

5. Do you plan to disturb more than 5 acres of soil at any one time?
Yes

---

6. Indicate the percentage (%) of each Hydrologic Soil Group(HSG) at the site.

A (%)
0

B (%)
0

C (%)
0

D (%)
100

7. Is this a phased project?
No

8. Enter the planned start and end dates of the disturbance activities.

Start Date
4/1/2022

End Date
4/1/2023

9. Identify the nearest surface waterbody(ies) to which construction site runoff will discharge.
Ellicott Creek

9a. Type of waterbody identified in question 9?
Stream/Creek Off Site

Other Waterbody Type Off Site Description
NONE PROVIDED

9b. If "wetland" was selected in 9A, how was the wetland identified?
NONE PROVIDED

10. Has the surface waterbody(ies in question 9 been identified as a 303(d) segment in Appendix E of GP-0-20-001?
Yes

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

11. Is this project located in one of the Watersheds identified in Appendix C of GP-0-20-001?
No

12. Is the project located in one of the watershed areas associated with AA and AA-S classified waters?
No

If No, skip question 13.

13. Does this construction activity disturb land with no existing impervious cover and where the Soil Slope Phase is identified as an E or F on the USDA Soil Survey?
NONE PROVIDED

If Yes, what is the acreage to be disturbed?
NONE PROVIDED

14. Will the project disturb soils within a State regulated wetland or the protected 100 foot adjacent area?
No

15. Does the site runoff enter a separate storm sewer system (including roadside drains, swales, ditches, culverts, etc)?
Yes

16. What is the name of the municipality/entity that owns the separate storm sewer system?
Erie County Dept. of Public Works

17. Does any runoff from the site enter a sewer classified as a Combined Sewer?
No

18. Will future use of this site be an agricultural property as defined by the NYS Agriculture and Markets Law?
No

19. Is this property owned by a state authority, state agency, federal government or local government?
No

20. Is this a remediation project being done under a Department approved work plan? (i.e. CERCLA, RCRA, Voluntary Cleanup Agreement, etc.)
No

Required SWPPP Components

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

21. Has the required Erosion and Sediment Control component of the SWPPP been developed in conformance with the current NYS Standards and Specifications for Erosion and Sediment Control (aka Blue Book)?
Yes

22. Does this construction activity require the development of a SWPPP that includes the post-construction stormwater management practice component (i.e. Runoff Reduction, Water Quality and Quantity Control practices/techniques)?
Yes

If you answered No in question 22, skip question 23 and the Post-construction Criteria and Post-construction SMP Identification sections.

23. Has the post-construction stormwater management practice component of the SWPPP been developed in conformance with the current NYS Stormwater Management Design Manual?
Yes

24. The Stormwater Pollution Prevention Plan (SWPPP) was prepared by:

Erosion & Sediment Control Criteria

25. Has a construction sequence schedule for the planned management practices been prepared?
Yes

26. Select all of the erosion and sediment control practices that will be employed on the project site:

Temporary Structural
Silt Fence
Stabilized Construction Entrance
Storm Drain Inlet Protection

Biotechnical
None

Vegetative Measures
Mulching
Seeding
Topsoiling

Permanent Structural
Rock Outlet Protection

Other
NONE PROVIDED

Post-Construction Criteria

*** IMPORTANT: Completion of Questions 27-39 is not required if response to Question 22 is No.**

27. Identify all site planning practices that were used to prepare the final site plan/layout for the project.
Preservation of Undisturbed Area
Reduction of Clearing and Grading

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

27a. Indicate which of the following soil restoration criteria was used to address the requirements in Section 5.1.6("Soil Restoration") of the Design Manual (2010 version).
All disturbed areas will be restored in accordance with the Soil Restoration requirements in Table 5.3 of the Design Manual (see page 5-22).

28. Provide the total Water Quality Volume (WQv) required for this project (based on final site plan/layout). (Acre-feet)
0.559

29. Post-construction SMP Identification
Use the Post-construction SMP Identification section to identify the RR techniques (Area Reduction), RR techniques(Volume Reduction) and Standard SMPs with RRv Capacity that were used to reduce the Total WQv Required (#28).

Identify the SMPs to be used by providing the total impervious area that contributes runoff to each technique/practice selected. For the Area Reduction Techniques, provide the total contributing area (includes pervious area) and, if applicable, the total impervious area that contributes runoff to the technique/practice.

Note: Redevelopment projects shall use the Post-Construction SMP Identification section to identify the SMPs used to treat and/or reduce the WQv required. If runoff reduction techniques will not be used to reduce the required WQv, skip to question 33a after identifying the SMPs.

30. Indicate the Total RRv provided by the RR techniques (Area/Volume Reduction) and Standard SMPs with RRv capacity identified in question 29. (acre-feet)
0.238

31. Is the Total RRv provided (#30) greater than or equal to the total WQv required (#28)?
No

If Yes, go to question 36. If No, go to question 32.

32. Provide the Minimum RRv required based on HSG. [Minimum RRv Required = (P) (0.95) (Ai) / 12, Ai=(s) (Aic)] (acre-feet)
0.104

32a. Is the Total RRv provided (#30) greater than or equal to the Minimum RRv Required (#32)?
Yes

If Yes, go to question 33.
Note: Use the space provided in question #39 to summarize the specific site limitations and justification for not reducing 100% of WQv required (#28). A detailed evaluation of the specific site limitations and justification for not reducing 100% of the WQv required (#28) must also be included in the SWPPP.

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

If No, sizing criteria has not been met; therefore, NOI can not be processed. SWPPP preparer must modify design to meet sizing criteria.

33. SMPs
Use the Post-construction SMP Identification section to identify the Standard SMPs and, if applicable, the Alternative SMPs to be used to treat the remaining total WQv (=Total WQv Required in #28 - Total RRv Provided in #30).

Also, provide the total impervious area that contributes runoff to each practice selected.

NOTE: Use the Post-construction SMP Identification section to identify the SMPs used on Redevelopment projects.

33a. Indicate the Total WQv provided (i.e. WQv treated) by the SMPs identified in question #33 and Standard SMPs with RRv Capacity identified in question #29. (acre-feet)
0.321

Note: For the standard SMPs with RRv capacity, the WQv provided by each practice = the WQv calculated using the contributing drainage area to the practice - provided by the practice. (See Table 3.5 in Design Manual)

34. Provide the sum of the Total RRv provided (#30) and the WQv provided (#33a).
0.559

35. Is the sum of the RRv provided (#30) and the WQv provided (#33a) greater than or equal to the total WQv required (#28)?
Yes

If Yes, go to question 36.

If No, sizing criteria has not been met; therefore, NOI can not be processed. SWPPP preparer must modify design to meet sizing criteria.

36. Provide the total Channel Protection Storage Volume (CPv required and provided or select waiver (#36a), if applicable.

CPv Required (acre-feet)
1.643

CPv Provided (acre-feet)
1.643

36a. The need to provide channel protection has been waived because:
NONE PROVIDED

37. Provide the Overbank Flood (Qp) and Extreme Flood (Qf) control criteria or select waiver (#37a), if applicable.

Overbank Flood Control Criteria (Qp)

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

Pre-Development (CFS)
11.59

Post-Development (CFS)
5.20

Total Extreme Flood Control Criteria (Qf)

EXECUTIVE SUMMARY

OVERVIEW

The purpose of this report is to evaluate the potential traffic impacts associated with the proposed Wehrle Drive Office Development in the Town of Amherst, Erie County, New York. Within this report, the operating characteristics of the proposed access drives and impacts to the adjacent roadway network are identified, and mitigating measures, if needed, are provided to minimize capacity or safety concerns.

In an effort to define traffic impact, this analysis establishes existing traffic conditions, projects background traffic flow including area growth, and determines the traffic operations that would result from the proposed project.

The project site is located at 2190-2220 Wehrle Drive in the Town of Amherst, New York. The site is bounded by Medical Office Buildings to the north, Bellingham Drive to the east, Spindrift Drive to the west, and Wehrle Drive to the south. Land uses within the study area generally consist of residential, recreational, office, and school uses. The project site is currently undeveloped land. The study area consists of the following existing intersections:

1. Wehrle Drive/Spindrift/Earhart Drive
2. Wehrle Drive/Youngs Road

The proposed development will be constructed in phases over the next three (3) years. The Phase 1 proposal consists of a three-story 84,375 SF office building, a one-story 24,750 SF storage garage/maintenance facility, and a two-story parking garage. Future phases include a one-story 11,400 SF office building, a one-story 17,250 SF office building, and a three-story 103,500 SF medical office building.

Access to the site will be provided via one new driveway along Wehrle Drive at the easterly end of the property. An emergency access only connection will be provided to the existing Limestone Drive to the north.

The Town of Amherst was contacted to discuss any other specific developments that are currently approved or under construction that would generate additional traffic in the study area. Four projects were identified including a 38 townhome project at 6286-6300 Main St, a 4,200 SF office building along Main St, a four-story mixed use building located at 6842 Main St, and the Big Ditch Brewery and Banquet Facility. Traffic generated by the Big Ditch Brewery and Banquet Facility was added to the study area intersections. Traffic expected to be generated by the 6286-6300 Main Street townhome project, the Main Street office development, and the four-story mixed use building at 6842 Main Street were considered and included in the background growth rate. To account for normal increases in background traffic growth, including any unforeseen developments in the project study area aside from the projects already identified, and given the length of time (1.5 years/3 years) associated with phase 1/full build-out of the proposed project, a growth rate of 2.0% has been applied to the existing traffic volumes in the study area.

Both Phase 1 and Full Build conditions are analyzed in this study.

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

CONCLUSIONS & RECOMMENDATIONS

This study identifies and evaluates the potential traffic impacts that can be expected from the proposed office development project in the Town of Amherst, Erie County, New York. The results of this study determine that the existing transportation network can adequately accommodate the projected traffic volumes and resulting impacts to study area intersections with the recommended mitigation in place. The following sets forth the conclusions and recommendations based upon the results of the analyses:

1. The proposed project is expected to generate approximately 137 entering/26 exiting vehicle trips during the AM peak hour and 23 entering/109 exiting vehicle trips during the PM peak hour under the Phase 1 development and 386 entering/88 exiting vehicle trips during the AM peak hour and 127 entering/393 exiting vehicle trips during the PM peak hour at full build out.

2. The intersection of Wehrle Drive/Spindrift Drive/Earhart Dr will experience minor impacts on peak hour operations as a result of traffic added due to the proposed development. Minor signal timing adjustments will likely occur as a result of the increased traffic and actuated traffic control. This intersection should be monitored as development continues in this corridor to determine if changes in timings could improve operating conditions. No mitigation is recommended or required at this intersection as a result of the proposed development.

3. The Wehrle Drive/Youngs Road intersection will experience minor impacts on peak hour operations as a result of traffic added due to the proposed development. Minor signal timing adjustments will likely occur as a result of the increased traffic and actuated traffic control. This intersection should be monitored as development continues in this corridor to determine if changes in timings could improve operating conditions. No mitigation is recommended or required at this intersection as a result of the proposed development.

4. The proposed driveway should consist of one entering and two exiting lanes and should be stop-controlled at its intersection with Wehrle Drive.

5. Based on the expected delays under Phase 1 and full development conditions and the results of the Traffic Signal Warrant Analysis, a three-colored traffic signal is not recommended under Phase 1 conditions. The future development phases are speculative at this time, therefore it is recommended that an updated traffic analysis is performed at the Wehrle Drive/Site Driveway intersection after Phase 1 is completed and occupied.

6. No significant adverse traffic impacts are anticipated as a result of Phase 1 of the proposed project.

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

I. INTRODUCTION

The purpose of this report is to evaluate the potential traffic impacts associated with the proposed Wehrle Drive Office Development in the Town of Amherst, Erie County, New York. Within this report, the operating characteristics of the proposed access drives and impacts to the adjacent roadway network are identified, and mitigating measures, if needed, are provided to minimize capacity or safety concerns.

In an effort to define traffic impact, this analysis establishes existing traffic conditions, projects background traffic flow including area growth, and determines the traffic operations that would result from the proposed project.

II. LOCATION

The project site is located at 2190-2220 Wehrle Drive in the Town of Amherst, New York. The site is bounded by Medical Office Buildings to the north, Bellingham Drive to the east, Spindrift Drive to the west, and Wehrle Drive to the south. Land uses within the study area generally consist of residential, recreational, office, and school uses. The project site is currently undeveloped land. The study area consists of the following existing intersections:

1. Wehrle Drive/Spindrift/Earhart Drive
2. Wehrle Drive/Youngs Road

The site location and study area are illustrated in **Figure 1** (all Figures are included at the end of this report).

III. EXISTING HIGHWAY SYSTEM

A. Vehicular Network Description

The following information outlined in **Table I** provides a description of the existing roadway network within project study area. **Figure 2** illustrates the lane geometry at each of the study intersections and the Annual Average Daily Traffic (AADT) volumes on the study roadways. The AADTs reflect the most recently collected data obtained from the New York State Department of Transportation (NYSDOT).

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

TABLE I: EXISTING HIGHWAY SYSTEM

ROADWAY[1]	CLASS[2]	AGENCY[3]	SPEED LIMIT[4]	# OF TRAVEL LANES[5]	TRAVEL PATTERN/ DIRECTION	EST. AADT[6] & SOURCE[7]
Wehrle Dr (CR-290)	16	ECDPW	45	4	Two-way/ East-West	16,639 NYSDOT (2017)
Youngs Rd (CR-554)	16	ECDPW	35	2	Two-way/ North-South	16,692 NYSDOT (2017)

Notes:
1. Route Name/Number: "NY" = New York, "CR" = County Road.
2. State Functional Classification of Roadway (All are Urban): 14 = Principal Arterial, 16 = Minor Arterial
3. Jurisdictional Agency of Roadway. "NYSDOT" = New York State Department of Transportation, "ECDPW" = Erie County Department of Public Works.
4. Posted or Statewide Limit in Miles per Hour (mph).
5. Excludes turning/auxiliary lanes developed at intersections.
6. Estimated AADT in Vehicles per Day (vpd).
7. AADT Source (Year).

B. Multi-Modal Network Description

This evaluation reviewed the study area's pedestrian, bicycle, and transit network via field and aerial reconnaissance. A description of the multi-modal infrastructure is described hereafter.

PEDESTRIAN AND BICYCLE FACILITIES

There are sidewalks along the north and south sides of Wehrle Drive between Transit Road and Garrison Road within the study area. In addition, the signals at Wehrle Drive/Youngs Road and Wehrle Drive/Spindrift Drive both provide signalized pedestrian crossings on all four legs of the intersections. There are no dedicated bicycle facilities within the study area, however, bicyclists are permitted to share the road with motorists on all roadways and utilize the existing shoulder space, when available, within the study area.

TRANSIT FACILITIES

The Niagara Frontier Transportation Authority (NFTA) provides transit service along Wehrle Drive in the vicinity of the site via Routes 47 & 48. These routes overlap from Youngs Road to Spindrift Drive where they split and Route 48 turns to the north along Spindrift Drive and Route 48 turns to the south along Earhart Drive – see transit routes shown in the image to the right. There are no transit routes immediately adjacent to the site.

Wehrle Drive Transit Routes

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

IV. EXISTING TRAFFIC CONDITIONS

A. *Peak Intervals for Analysis*

Given the functional characteristics of the corridors, adjacent land uses, and the proposed land uses for the project site (office), the peak hours selected for analysis are the weekday commuter AM and PM peak periods. The combination of site traffic and adjacent through traffic produces the greatest demand during these time periods.

B. *Existing Traffic Volume Data*

Turning movement traffic counts were collected on Thursday, September 13, 2018 by SRF Associates (SRF) at the Wehrle Dr/Spindrift Dr/Earhart Dr intersection and on Thursday, August 15, 2019 by the Greater Buffalo Niagara Regional Transportation Council (GBNRTC) at the Wehrle Dr/Youngs Rd intersection. Traffic counts were conducted between 7:00-9:00 AM during the morning peak period and 4:00-6:00 PM during the evening peak period. The peak hour traffic periods occurred between 7:45-8:45 AM and 4:30-5:30 PM. All turning movement count data was collected on a typical weekday prior to any traffic changes resulting from the Covid-19 Pandemic. The base weekday AM and PM peak hour volumes are reflected in **Figure 3**.

V. FUTURE AREA DEVELOPMENT AND LOCAL GROWTH

The proposed development will be constructed in phases. Phase 1 will be completed in approximately 18 months with full build-out in approximately 3 years. The Town of Amherst was contacted to discuss any other specific developments that are currently approved or under construction that would generate additional traffic in the study area. Four projects were identified including a 38 townhome project at 6286-6300 Main St, a 4,200 SF office building along Main St, a four-story mixed use building located at 6842 Main St, and the Big Ditch Brewery and Banquet Facility. Traffic generated by the Big Ditch Brewery and Banquet Facility was added to the study area intersections. Traffic expected to be generated by the 6286-6300 Main Street townhome project, the Main Street office development, and the four-story mixed use building at 6842 Main Street were considered and included in the background growth rate.

To account for normal increases in background traffic growth, including any unforeseen developments in the project study area aside from the projects already identified, and given the length of time (1.5 years/3 years) associated with phase 1/full build-out of the proposed project, a growth rate of 2.0% has been applied to the existing traffic volumes in the study area. The background traffic volumes are depicted in **Figure 4**.

VI. PROPOSED DEVELOPMENT

A. *Description*

The proposed development will be constructed in phases over the next three (3) years. The Phase 1 proposal consists of a three-story 84,375 SF office building, a one-story 24,750 SF storage garage/maintenance facility, and a two-story parking garage. Future phases include a one-story 11,400 SF office building, a one-story 17,250 SF office building, and a three-story 103,500 SF medical office building. Access to the site will be provided via one new driveway

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

along Wehrle Drive at the easterly end of the property. An emergency access only connection will be provided to the existing Limestone Drive to the north. **Figure 5** illustrates the proposed concept plan.

Construction of the proposed project is anticipated to reach full build-out in approximately 3 years with Phase 1 being completed in approximately 18 months. Both Phase 1 and Full Build conditions are analyzed in this study.

B. Site Traffic

The volume of traffic generated by a site is dependent on the intended land use and size of the development. Trip generation is an estimate of the number of trips generated by a specific building or land use. These trips represent the volume of traffic entering and exiting the development. Trip Generation, 11th Edition (2021) published by the Institute of Transportation Engineers (ITE) is used as a reference for this information. The trip rate for the peak hour of the generator may or may not coincide in time or volume with the trip rate for the peak hour of adjacent street traffic. Volumes generated during the peak hour of the adjacent street traffic and proposed land uses, in this case the weekday commuter AM and PM peaks, represent a more critical volume when analyzing the capacity of the system; those intervals will provide the basis of this analysis.

Table II shows the total site generated trips for the weekday commuter AM and PM peak hours for Phase 1 and Full Build out of the proposed project. All trip generation information has been included in the Appendices.

TABLE II: SITE GENERATED TRIPS

DESCRIPTION	ITE LAND USE CODE	SIZE[1]	AM PEAK HOUR		PM PEAK HOUR	
			ENTER	EXIT	ENTER	EXIT
General Office Building	710	84,375 SF	91	15	16	81
Utility	170	24,750 SF	46	11	7	28
Phase 1 Site Generated Trips			**137**	**26**	**23**	**109**
General Office Building	710	17,250 SF	37	6	3	18
General Office Building	710	11,400 SF	32	5	2	12
Medical-Dental Office Building	720	103,500 SF	180	51	99	254
Total Site Generated Trips (Full Build)			**386**	**88**	**127**	**393**

Notes:
1. SF = Square Feet

The proposed project is expected to generate approximately 137 entering/26 exiting vehicle trips during the AM peak hour and 23 entering/109 exiting vehicle trips during the PM peak hour under the Phase 1 development and 386 entering/88 exiting vehicle trips during the AM peak hour and 127 entering/393 exiting vehicle trips during the PM peak hour at full build out.

C. Site Traffic Distribution

The cumulative effect of site-generated traffic on the transportation network is dependent on the origins and destinations of that traffic and the location of the access drives serving the site. The proposed arrival/departure distribution of traffic generated by the proposed development is considered a function of several parameters, including:

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

- Residential developments in the area;
- Location of the proposed driveways;
- Existing traffic patterns; and
- Existing traffic conditions and controls

Figure 6 shows the anticipated trip distribution pattern percentages for the traffic from the proposed project. **Figures 7A & 7B** illustrate the peak hour total site-generated traffic based on those percentages for the Phase 1 and full build conditions respectively.

VII. FULL DEVELOPMENT VOLUMES

The projected design hour traffic volumes were developed for the AM and PM peak hours by combining the background traffic conditions (Figure 4) and the new site-generated traffic volumes (Figures 7A & 7B) to yield the total traffic conditions expected at full development. The resulting design hour volumes for the proposed project are illustrated in **Figure 8A & 8B** under Phase 1 and full build-out conditions respectively.

VIII. CAPACITY ANALYSIS

A. Description of Capacity Analysis

A capacity analysis is a technique used for determining a measure of effectiveness for a section of roadway and/or intersection based on the number of vehicles during a specific time period. The measure of effectiveness used for the capacity analysis is referred to as a Level of Service (LOS). Levels of Service are calculated to provide an indication of the amount of delay that a motorist experiences while traveling along a roadway or through an intersection. Since the most amount of delay to motorists usually occurs at intersections, capacity analysis focuses on intersections, as opposed to highway segments.

Six Levels of Service are defined for analysis purposes. They are assigned letter designations, from "A" to "F", with LOS "A" representing the conditions with little to no delay, and LOS "F" conditions with very long delays. Suggested ranges of service capacity and an explanation of Levels of Service are included in the Appendix.

The standard procedure for capacity analysis of signalized and un-signalized intersections is outlined in the Highway Capacity Manual (HCM 2016) published by the Transportation Research Board. Traffic analysis software, Synchro 11, which is based on procedures and methodologies contained in the HCM, was used to analyze operating conditions at study area intersections. The procedure yields a Level of Service based on the HCM as an indicator of how well intersections operate.

B. Capacity Analysis Results

Existing and background operating conditions during the peak study periods are evaluated to determine a basis for comparison with the projected future conditions. The projected future traffic volumes generated by the proposed Wehrle Drive Office Development were analyzed to assess the operations of the intersections in the study area.

Capacity results for existing 2021 base, 2023 background, 2023 Phase 1, and 2024 full build conditions are listed in **Table III**. The discussion following the table summarizes capacity conditions. All capacity analysis calculations are included in the Appendices.

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

Notes:

1. A(2.8) = Level of Service (Delay in seconds per vehicle)
2. EB = Eastbound, WB = Westbound, NB = Northbound, SB = Southbound
3. (S) = Signalized; (U) = Unsignalized
4. N/A = Approach does not exist and/or was not analyzed during this condition
5. Green shaded cells indicate low delays, yellow shaded cells indicate moderate delays, red shaded cells indicate long delays.
6. The v/c ratio, also referred to as degree of saturation, represents the sufficiency of an intersection to accommodate the vehicular demand. A v/c ratio less than 0.85 generally indicates that adequate capacity is available and vehicles are not expected to experience significant queues and delays. A v/c ratio between 0.85 and 0.95 generally indicates an intersection is nearing capacity. Intersections with a v/c ratio of 1.0 or greater generally indicate conditions at or above capacity.

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

Spindrift Drive/Earhart Drive/Wehrle Drive

All approaches are projected to operate at an acceptable LOS "C" or better during all peak hours under all conditions except for the northbound approach and the southbound left turn movement. Between background and Phase 1 development conditions, the northbound approach changes from LOS "C" to "D" during the PM peak period. Additionally, between Phase 1 and full development conditions, the southbound left turn movement changes from LOS "C" to "D" during the PM peak period. Minor signal timing adjustments return all movements to LOS "C" or better. These adjustments may on their own occur given the actuated signal control at the intersection. Signal timings at the intersection of Spindrift Drive/Earhart Drive/Wehrle Drive should be monitored as development continues in this corridor to determine if changes in timings could improve operating conditions. No mitigation is recommended or required at this intersection as a result of the proposed development.

Youngs Road/Wehrle Drive

All approaches are projected to operate at LOS "D" or better during all peak hours under existing conditions, and LOS "E" or better under background conditions during both peak hours. There are no changes in levels of service as a result of the Phase 1 development. Under full development conditions, all approaches are projected to operate at LOS "D" or better during both peak hours with the exception of the WB left turn movement that is projected to operate at LOS "F" during the PM peak hour. Minor signal timing adjustments result in all approaches operating at LOS "E" better similar to background conditions. These adjustments may on their own occur given the actuated signal control at the intersection. Signal timings at the intersection of Youngs Road/Wehrle Drive should be monitored as development continues in this corridor to determine if changes in timings could improve operating conditions. No mitigation is recommended or required at this intersection as a result of the proposed development.

Proposed Driveway/Wehrle Drive

All approaches at the proposed driveway/Wehrle Drive intersection operate at LOS "D" or better during both peak hours under Phase 1 conditions. Under full development conditions, the southbound left turn movement is anticipated to operate at LOS "F" during both peak hours. A signal warrant investigation, included in Section IX: Signal Warrant Investigation, indicates that warrants relating to traffic volumes are met under full development conditions. No mitigation is recommended or required for Phase 1 development conditions. As a result of the poor levels of service, long delays, and high peak hour traffic volumes, under full build out conditions installation of a new three-color fully actuated traffic signal should be considered. An updated traffic analysis should be prepared prior to progressing development beyond Phase 1 to determine if/when a traffic signal may be needed.

IX. SIGNAL WARRANT INVESTIGATION

A traffic signal warrant analysis was completed at the Wehrle Drive/Proposed Site Driveway intersection under both Phase 1 and Full Build Conditions as part of this report. The need for a traffic signal is determined by comprehensive investigation of existing and projected traffic conditions and physical characteristics at the location. The Standard Specifications Update for the adoption of the National MUTCD (FHWA) and the New York State Supplement were reviewed to investigate the need for a traffic control signal at this location. There are nine (9) warrants and they are as follows:

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

Warrant 1	Eight-Hour vehicular volume
Warrant 2	Four-Hour vehicular volume
Warrant 3	Peak Hour
Warrant 4	Pedestrian Volume
Warrant 5	School Crossing
Warrant 6	Coordinated Signal System
Warrant 7	Crash Experience
Warrant 8	Roadway Network
Warrant 9	Intersection Near a Grade Crossing

Detailed signal warrant calculations are attached. Prior to applying warrants, the MUTCD suggests consideration of the effects of right-turn volumes on the minor street approach, and a reduction taken in the number of right turning vehicles, where appropriate. A certain number of right-turn vehicles will execute a right-turn on the red indication without actuating a traffic signal (if one were in place). For purposes of this analysis, it is assumed that 20% of the southbound right-turning vehicles exiting the proposed driveway will execute a right-turn on red maneuver and should, therefore be subtracted for the purposes of the warrant analysis. This figure is established based on the signal cycle length and resulting change intervals, and approximate number of right-turns on red estimated during the peak hour. The posted speed limit on Wehrle Drive at the proposed site driveway is 45 MPH and therefore, 70 percent thresholds in Table 4C-1, Figure 4C-2 and Figure 4C-4 are used as a basis for analysis.

Warrant 1 is subdivided into Condition A and Condition B. The Minimum Vehicular Volume, Condition A, is intended for application at locations where a large volume of intersecting traffic is the principal reason to consider installing a traffic control signal. The Interruption of Continuous Traffic, Condition B, is intended for application at locations where Condition A is not satisfied and where the traffic volume on a major street is so heavy that traffic on a minor intersecting street suffers excessive delay or conflict in entering or crossing the major street. These conditions are satisfied when, for each of any eight hours of an average day, anticipated volumes on the artery and side road are in excess of the minimum values presented in Tables 4C-1 in the MUTCD. **Under Phase 1 development conditions, Condition A is not met at all and Condition B is only met for three hours. Condition A is met for six hours and Condition B is met for more than eight hours under the full development conditions.**

Warrant 2, the Four-Hour Vehicular Volume signal warrant conditions, are intended to be applied where the volume of intersecting traffic is the principal reason to consider installing a traffic control signal. This warrant stipulates that for any four hours of a day, minimum threshold volumes are met on the artery and side road. **This warrant is not met under Phase 1 conditions and is met under the full development conditions for more than four hours.**

Warrant 3 is intended for application where minor street traffic suffers undue delay in entering or crossing the major street for one hour of the day. It stipulates that the warrant shall be applied in unusual cases (high-occupancy vehicle facilities – i.e., shopping centers) where a large number of vehicles discharge over a short period of time. Based on the proposed development, this warrant may be applicable. **This warrant is met under both Phase 1 and full build conditions.**

Warrant 4 is met when pedestrians experience excessive delay in crossing the major street (Main St) because the traffic volumes are so heavy. The intersection currently has low pedestrian activity. This warrant is not met.

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

Warrant 5 is met when a sufficient number of gaps in traffic do not exist for certain size and frequency of school children to cross the major roadway. Based on the proposed condition, this warrant is not applicable at this location and is not met.

Warrant 6 is met when a traffic signal is needed to maintain progressive movement and vehicle platooning in a coordinated signal system. Based on the current signal system along Wehrle Drive, this warrant is not met.

Warrant 7 is met when the severity, frequency, and types of crashes are such that it is a condition susceptible to correction by a traffic signal. Crash data is not available as the intersection does not currently exist.

Warrant 8 is met when a traffic signal might encourage concentration and organization of traffic flow on a roadway network. This warrant primarily focuses on two major intersecting roadways, which is not the case at the study intersection. Therefore, this warrant is not met.

Warrant 9 is applicable when an intersection is located near an at-grade rail crossing. This warrant is not applicable at this location.

TABLE IV: TRAFFIC SIGNAL WARRANT SUMMARY

WARRANT	SATISFACTION OF WARRANTS PHASE 1	SATISFACTION OF WARRANTS FULL BUILD
1A – Eight-Hour Condition A	NOT SATISFIED	NOT SATISFIED
1B – Eight-Hour Condition B	NOT SATISFIED	SATISFIED
2 – Four-Hour	NOT SATISFIED	SATISFIED
3 – Peak-Hour	SATISFIED	SATISFIED
4 – Pedestrian Volume	N/A	N/A
5 – School Crossing	N/A	N/A
6 – Coordinated Signal System	N/A	N/A
7 – Crash Experience	N/A	N/A
8 – Roadway Network	N/A	N/A
9 – Intersection Near a Grade Crossing	N/A	N/A

Table IV summarizes each warrant and the result of the investigation. Based on the expected delays under Phase 1 and full development conditions and the results of the Traffic Signal Warrant Analysis, a three-colored traffic signal is not recommended under Phase 1 conditions. The future development phases are speculative at this time, therefore it is recommended that an updated traffic analysis is performed at the Wehrle Drive/Site Driveway intersection after Phase 1 is completed and occupied.

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

X. CONCLUSIONS & RECOMMENDATIONS

This study identifies and evaluates the potential traffic impacts that can be expected from the proposed office development project in the Town of Amherst, Erie County, New York. The results of this study determine that the existing transportation network can adequately accommodate the projected traffic volumes and resulting impacts to study area intersections with the recommended mitigation in place. The following sets forth the conclusions and recommendations based upon the results of the analyses:

1. The proposed project is expected to generate approximately 137 entering/26 exiting vehicle trips during the AM peak hour and 23 entering/109 exiting vehicle trips during the PM peak hour under the Phase 1 development and 386 entering/88 exiting vehicle trips during the AM peak hour and 127 entering/393 exiting vehicle trips during the PM peak hour at full build out.

2. The intersection of Wehrle Drive/Spindrift Drive/Earhart Dr will experience minor impacts on peak hour operations as a result of traffic added due to the proposed development. Minor signal timing adjustments will likely occur as a result of the increased traffic and actuated traffic control. This intersection should be monitored as development continues in this corridor to determine if changes in timings could improve operating conditions. No mitigation is recommended or required at this intersection as a result of the proposed development.

3. The Wehrle Drive/Youngs Road intersection will experience minor impacts on peak hour operations as a result of traffic added due to the proposed development. Minor signal timing adjustments will likely occur as a result of the increased traffic and actuated traffic control. This intersection should be monitored as development continues in this corridor to determine if changes in timings could improve operating conditions. No mitigation is recommended or required at this intersection as a result of the proposed development.

4. The proposed driveway should consist of one entering and two exiting lanes and should be stop-controlled at its intersection with Wehrle Drive.

5. Based on the expected delays under Phase 1 and full development conditions and the results of the Traffic Signal Warrant Analysis, a three-colored traffic signal is not recommended under Phase 1 conditions. The future development phases are speculative at this time, therefore it is recommended that an updated traffic analysis is performed at the Wehrle Drive/Site Driveway intersection after Phase 1 is completed and occupied.

6. No significant adverse traffic impacts are anticipated as a result of Phase 1 of the proposed project.

A3

Level of Service: Criteria and Definitions

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

Level of Service Criteria

Highway Capacity Manual 2016

SIGNALIZED INTERSECTIONS

Level of Service is a qualitative measure describing operational conditions within a traffic stream, based on service measures such as speed and travel time, freedom to maneuver, traffic interruptions, comfort, and convenience. Level of Service for signalized intersections is defined in terms of delay specifically, average total delay per vehicle for a 15 minute analysis period. The ranges are as follows:

Level of Service	Control Delay per vehicle (seconds)
A	< 10
B	10 – 20
C	20 – 35
D	35 – 55
E	55 – 80
F	>80

UNSIGNALIZED INTERSECTIONS

Level of Service for unsignalized intersections is also defined in terms of delay. However, the delay criteria are different from a signalized intersection. The primary reason for this is driver expectation that a signalized intersection is designed to carry higher volumes than an unsignalized intersection. The total delay threshold for any given Level of Service is less for an unsignalized intersection than for a signalized intersection. The ranges are as follows:

Level of Service	Control Delay per vehicle (seconds)
A	< 10
B	10 – 15
C	15 – 25
D	25 – 35
E	35 - 50
F	>50

1.0 INTRODUCTION

1.1 SCOPE

This report provides subsurface exploration data and geotechnical recommendations for the proposed development of the property located at 2190–2220 Wehrle Drive in the Town of Amherst, New York. Specifically, Glynn Group Engineering & Architecture, PLLC (GGEA) has provided the following scope of services:

1. Performed a site visit and established fourteen (14) soil borings in accordance with the plan provided by Aquest Development Company, LLC (Aquest).
2. Cleared underground utilities with Dig Safely New York.
3. Mobilized drilling subcontractor, Earth Dimensions, Inc. (EDI), with a track mounted ATV drill rig and crew.
4. Performed SPT sampling in accordance with ASTM D-1586 "Standard Method for Penetration Test and Split Barrel Sampling of Soils" to auger refusal at each boring location.
5. Provided soil boring logs, prepared by EDI, to include SPT data, N values, soil classification, refusal depth and groundwater conditions.
6. Prepared a geotechnical report to address suitability of construction, foundation recommendations and construction recommendations.

1.2 CONTRACT

GGEA performed this study in accordance with a written contract/proposal to Aquest dated March 4, 2021, for which GGEA received the notice to proceed via signed contract by Mr. Omar Abu-Sitta on the same day. All services provided by GGEA are subject to the Standard Terms and Conditions included in the contract.

1.3 EXCLUSIONS

The project efforts exercised by GGEA include geotechnical analysis, design recommendations and the preparation of this report. The scope of this report specifically excludes any review of former site use, in particular, environmental or pollution related concerns.

2.0 PROJECT BACKGROUND

2.1 SITE DESCRIPTION AND PROPOSED IMPROVEMENTS

The site encompasses two properties, specifically address 2190 (5.8 acres) and address 2220 (19.7 acres), providing for a total of 25.5 acres combined. The site is located in the north side of Wehrle Drive approximately 0.75 miles west of Transit Road (Route 78). The property is flat, open and covered by mowed grass with a few large deciduous trees located throughout and occasional pools of seasonal surface water. A Project Location Plan has been included in Appendix B.

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

The proposed site development plans were not provided to GGEA, however future development is presumed to consist of multiple buildings supported by shallow foundation systems with slab on grade first floors and associated roadways and parking areas.

2.2 GEOLOGIC SETTING

The underlying surficial geological conditions at the site are the result of the last glacial coverage of the Pleistocene Epoch, referred to as the Wisconsinan Glacial Stage, which ended approximately 12,000 years ago. As the glacier advanced across Western New York, the massive weight carved and crushed the underlying soil and rock to form glacial till, which typically consists of a dense matrix of silt, sand, rock and clay. Sediment was transported and deposited by the ice and meltwater, forming stratified soils commonly referred to as glacial drift. As the climate warmed and the glacier melted, vast quantities of meltwater were generated, which became impounded by the receding glacier and local topography to create proglacial pools throughout much of the area. The subsurface conditions encountered at the Wehrle Road site consist of slackwater deposits, glacial drift and glacial till overlying shallow limestone bedrock of the Middle Devonian Onondaga Formation. The bedrock typically has a high compressive strength and contains numerous chert nodules. Surficial geology maps identify bedrock at a depth of less than 10 feet from the ground surface in the vicinity of the Wehrle site. Soil borings revealed bedrock depth to vary from 3.0 to 10.6 feet below existing grade.

3.0 FIELD INVESTIGATION

3.1 METHODOLOGY

The subsurface exploration consisted of a total of fourteen (14) soil borings performed at locations selected by Aquest to provide a minimum of one boring per 3.5 acres of property. GGEA performed a site visit on March 11, 2021 to establish soil boring locations and assess drill rig access. Utility clearance was performed by EDI through Dig Safely New York.

EDI mobilized a tracked mounted ATV drill rig to the site on March 18, 2021 to perform the subsurface exploration on March 18 and 19, 2021. Soil boring and sampling operations were performed using hollow stem augers to advance through overburden materials in accordance with the Standard Penetration Test Method ASTM D-1586. Resistance values, or blow counts, were recorded for each six-inch advancement of a twenty-four inch long, two inch diameter split spoon sampler. The sum of the resistance values for the 6/12 and 12/18 inch intervals constitutes the N value, which provides an indication of the in-situ relative density and strength of encountered soils. All data recorded during drilling operations can be found on the soil boring logs included in Appendix A.

Retrieved soil samples were logged and visually classified by EDI in accordance with the ASEE System of Definition for Visual Identification of Soils (Burmister Classification System) and ASTM D-2488 "Standard Practice for Description and Identification of Soils (Visual – Manual Procedure)". Recovered soil samples were visually examined by GGEA to establish Unified Soil Classification System (USCS) classifications in accordance with ASTM D-2488 "Description and Identification of Soils (Visual-Manual Procedure)". Discrepancies observed between classifications noted on the EDI soil boring logs and those

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

identified in this report are due examination in the GGEA laboratory, which allows for the collection of specific gradation and index property data that was not discerned from visual classification in the field.

3.2 SUBSURFACE CONDITIONS

All soil borings were advanced to auger refusal, which was encountered on presumed limestone bedrock at depths ranging from a minimum of 3.0 feet at boring B-12 to a maximum of 10.6 feet at boring B-9. Overburden soils were found to be variable throughout the site, however subsurface conditions typically consisted of a thin layer of topsoil overlying firm to stiff slackwater sediment and stiff cohesive glacial till. Ground surface elevations were estimated at the soil boring locations from the topographic survey provided by Aquest. Soil boring locations are identified on the Subsurface Exploration Plan included in Appendix C and specific subsurface conditions can be found on the Subsurface Exploration Logs included in Appendix A. Subsurface conditions for each boring location have been summarized as follows:

B-1	Elevation 695.8
0.0 – 0.7 ft	Topsoil.
0.7 – 1.7 ft	Brown, extremely moist, soft, sandy silty clay (CL-ML), trace of gravel. N value of 5.
1.7 – 3.4 ft	Brown, faintly mottled, extremely moist, stiff, sandy silty clay with gravel (CL-ML). N value of > 10.
> 3.4 ft	Presumed limestone bedrock.
B-2	Elevation 698.5
0.0 – 0.4 ft	Topsoil.
0.4 – 4.4 ft	Brown, extremely moist, firm to very stiff, sandy silty clay with gravel (CL-ML). N values range from 9 to 22.
4.4 – 4.9 ft	Fractured limestone rock.
> 4.9 ft	Presumed limestone bedrock.
B-3	Elevation 698.0
0.0 – 0.9 ft	Topsoil.
0.9 – 1.8 ft	Brown, extremely moist, soft, sandy silty clay (CL-ML). N value of 4.
1.8 – 5.0 ft	Brown, extremely moist, very stiff, sandy silty clay with gravel (CL-ML). N value of 20.
5.0 – 6.6 ft	Brown to grayish brown, moist, hard, sandy silty clay with gravel (CL-ML). N value of 59.
> 6.6 ft	Presumed limestone bedrock.

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

B-4	Elevation 697.6
0.0 – 0.7 ft	Topsoil.
0.7 – 1.8 ft	Brown, faintly mottled, extremely moist, very soft, sandy silty clay (CL-ML). N value of 2.
1.8 – 6.3 ft	Brown, faintly mottled, moist, stiff to very stiff, lean clay (CL). N values range from 15 to 17.
6.3 – 6.8 ft	Gray, extremely moist to wet, very dense, sandy silty with gravel (ML).
> 6.8 ft	Presumed limestone bedrock.

B-5	Elevation 696.6
0.0 – 0.8 ft	Topsoil.
0.8 – 2.5 ft	Brown, faintly mottled, extremely moist, firm, sandy silty clay (CL-ML). N value of 8.
2.5 – 5.0 ft	Brown, extremely moist, very stiff, lean clay (CL). N value of 21.
5.0 – 7.1 ft	Brown to brownish gray, moist, very stiff, sandy silty clay with gravel (CL-ML). N value of 21.
> 7.1 ft	Presumed limestone bedrock.

B-6	Elevation 696.4
0.0 – 0.8 ft	Topsoil.
0.8 – 2.2 ft	Brown, faintly mottled, extremely moist, soft, lean clay (CL). N value of 4.
2.2 – 5.8 ft	Brown, moist, stiff to very stiff, lean clay (CL). N values range from 13 to 19.
5.8 – 6.6 ft	Brown, extremely moist, very stiff, sandy silty clay with gravel (CL-ML).
> 6.6 ft	Presumed limestone bedrock.

B-7	Elevation 695.9
0.0 – 0.8 ft	Topsoil.
0.8 – 2.0 ft	Brown, faintly mottled, extremely moist, soft, lean clay (CL). N value of 4.
2.0 – 4.9 ft	Brown, faintly mottled, extremely moist, stiff, sandy silty clay (CL-ML). N value of 12.
4.9 – 9.5 ft	Brown, extremely moist, very stiff to hard, sandy silty clay with gravel (CL-ML). N values range from 27 to 36.
9.5 – 10.2 ft	Gray, extremely moist, very dense, silty sand with gravel (SM).
10.2 – 10.4 ft	Fractured limestone rock.
> 10.4 ft	Presumed limestone bedrock.

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

B-8	Elevation 694.8
0.0 – 0.8 ft	Topsoil.
0.8 – 1.5 ft	Brown, extremely moist, very loose, sandy silt (ML). N value of 4.
1.5 – 7.2 ft	Brown, faintly mottled, moist, stiff to very stiff, lean clay (CL). N values range from 11 to 22.
7.2 – 8.5 ft	Grayish brown, moist, very stiff, lean clay (CL), trace of gravel. N value of 19.
8.5 – 9.3 ft	Light gray, extremely moist, very dense, sandy silt with gravel (ML).
> 9.3 ft	Presumed limestone bedrock.

B-9	Elevation 694.8
0.0 – 1.2 ft	Topsoil.
1.2 – 2.7 ft	Brown, faintly mottled, extremely moist, soft, lean clay (CL). N value of 4.
2.7 – 6.0 ft	Brown, extremely moist, stiff, lean clay (CL). N value of 10.
6.0 – 10.6 ft	Grayish brown, extremely moist, hard, sandy silty clay with gravel (CL-ML). N values range from 37 to 35.
> 10.6 ft	Presumed limestone bedrock.

B-10	Elevation 694.2
0.0 – 0.6 ft	Topsoil.
0.6 – 3.0 ft	Brownish gray, extremely moist, loose, sandy silt (ML). N value of 5.
3.0 – 7.0 ft	Grayish brown, moist, stiff to very stiff, lean clay (CL). N values range from 14 to 16.
7.0 – 9.7 ft	Grayish brown, extremely moist, very stiff to hard, sandy silty clay with gravel (CL-ML). N values range from 15 to 34.
9.7 – 9.9 ft	Gray, wet, fractured limestone.
> 9.9 ft	Presumed limestone bedrock.

B-11	Elevation 697.2
0.0 – 0.7 ft	Topsoil.
0.7 – 1.4 ft	Brown, extremely moist, stiff, lean clay (CL). N value of 11.
1.4 – 5.0 ft	Brown, extremely moist, very stiff, silty clay with gravel (CL-ML). N value of 21.
> 5.0 ft	Presumed limestone bedrock.

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

B-12	Elevation 695.6
0.0 – 0.7 ft	Topsoil.
0.7 – 3.0 ft	Brown, faintly mottled, extremely moist, firm, sandy silty clay with gravel (CL-ML). N value of 5.
> 3.0 ft	Presumed limestone bedrock.

B-13	Elevation 696.3
0.0 – 1.8 ft	Topsoil.
1.8 – 2.5 ft	Brown, faintly mottled, extremely moist, stiff, lean clay (CL).
2.5 – 4.3 ft	Grayish brown, moist, very stiff, sandy silty clay with gravel (CL-ML). N value of 18.
> 4.3 ft	Presumed limestone bedrock.

B-14	Elevation 694.7
0.0 – 0.6 ft	Topsoil.
0.6 – 1.7 ft	Brown, extremely moist, soft, lean clay (CL). N value of 4.
1.7 – 3.1 ft	Brown, extremely moist, hard, sandy silty clay with gravel (CL-ML). N value > 50.
> 3.1 ft	Presumed limestone bedrock.

It is GGEA's opinion the extent of this investigation was sufficient to accurately characterize the subsurface conditions and provide information necessary for the preparation of this report. The soil borings portray the subsurface conditions encountered at the soil boring locations at the time of investigation. The stratification lines shown on the soil boring logs are approximate, whereas in-situ the changes between strata may be more gradual. Ground surface elevations and corresponding bedrock elevations have been summarized in the following table:

Boring No.	Surface El. (ft)	Depth (ft)	Bedrock El. (ft)
B-1	695.8	3.4	692.4
B-2	698.5	4.9	693.6
B-3	698.0	6.6	691.4
B-4	697.6	6.8	690.8
B-5	696.6	7.1	689.5
B-6	696.4	6.6	689.8
B-7	695.9	10.4	685.5

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

B-8	694.8	9.3	685.5
B-9	694.8	10.6	684.2
B-10	694.2	9.9	684.3
B-11	697.2	5.0	692.2
B-12	695.6	3.0	692.6
B-13	696.3	4.3	692.0
B-14	694.7	3.1	691.6

3.3 GROUNDWATER

Groundwater was not encountered in the augers upon the completion of drilling efforts at the majority of the subsurface exploration locations. The augers did not remain in the ground for an extended period of time to allow for groundwater to migrate through the soils and stabilize within the augers, nor where groundwater monitoring wells or piezometers installed to obtain accurate groundwater elevation data. However, groundwater was measured at a depth of 9.6 feet in the augers upon the completion of drilling efforts at boring B-10. Rock was initially encountered at a depth of 9.7 feet at boring B-10 and auger refusal was encountered at 9.9 feet. Based on the moisture content of recovered soil samples, the stabilized groundwater elevation is estimated to be within the limestone bedrock below the exploration depth of this project. Notwithstanding, seasonal perched groundwater should be anticipated in areas where the bedrock surface is of lower elevation, specifically in areas where granular overburden soils are present. Seasonal perched groundwater depth is anticipated to vary depending upon precipitation, frost depth and soil percolation characteristics.

4.0 GEOTECHNICAL EVALUATION AND RECOMMENDATIONS

4.1 FOUNDATIONS

The subsurface conditions at this site are of good structural quality and will provide for the construction of shallow foundation systems consisting of strip footings with frost walls or spread footings with columns to support future buildings. Considering the depth to bedrock varies from a minimum of 3.0 feet to a maximum of 10.6 feet, subgrade composition at the design bearing elevation may vary from limestone bedrock to stiff lean clay (CL) native soil. GGEA provides design and construction recommendations as follows:

1. Where practical, foundations should be advanced through native soils to bear on bedrock. Limestone bedrock will provide for a net allowable bearing capacity of > 10,000 psf.
2. In areas where the design foundation bearing elevation is significantly above that of the bedrock elevation, foundations may be constructed over undisturbed native soil. Compacted in-situ native soil will provide for a net allowable bearing capacity of 3,000 psf.

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

3. Depending on the size and footprint of proposed buildings, the foundation subgrade may be composed partially of undisturbed native soil and partially of limestone bedrock in some areas. All soil subgrade soil should be thoroughly compacted with a reversible plate tamper (Bomag BPR 50/60 or equivalent) to maximize the relative density of the subgrade soil, minimize variable bearing capacity and minimize settlement potential.
4. Foundations should be constructed at a depth of greater than 3.5 feet below final grade to provide frost protection in accordance with regional frost depth regulations. However, this does not apply to foundations constructed directly over bedrock per section 1809.5 of the 2020 NYS Building Code.

4.2 SLAB ON GRADE

Building interior concrete slabs should be designed and constructed in accordance with the following recommendations:

1. All slabs should be designed using a recognized standard procedure, such as identified in the text "Designing Floor Slabs on Grade" by Ringo and Anderson (ISBN 0-924659-34-3). The floor slab should be designed to properly support the intended load, which may include fork truck traffic or rack posts.
2. Remove topsoil and expose competent, undisturbed native soil subgrade. Based on conditions encountered at the soil boring locations, excavation to a depth of 1.0 to 2.0 feet below existing grade is anticipated.
3. Compact the exposed soil thoroughly with a smooth drum vibratory roller to produce a uniform density throughout the subgrade.
4. Proof roll the exposed subgrade with a fully loaded 10-wheel dump truck weighing at least 30 tons or a smooth drum roller having an effective force of at least 600 pounds per linear inch of roller width. Any area exhibiting weaving, yielding, rutting or boiling should be reworked and compacted to produce an acceptable response *or* over excavated and replaced with Structural Fill. The depth of the undercut and type of Structural Fill will depend on the soil material encountered, weather conditions at the time of construction and the bearing conditions at the base of the undercut. The top surface of the subgrade should be pitched to drain to prevent ponding of stormwater.
5. Separation geotextile is not required for design, but is suggested to prevent contamination of the granular stone base from underlying soil subgrade as a result of repeated traffic during construction. Any granular stone base that becomes contaminated with soil during construction should be removed and replaced prior to pouring concrete. GGEA recommends US Fabrics US 250 or equivalent.
6. Place Select Structural Fill granular base. The thickness of the Select Structural Fill should be dependent upon the intended slab usage. At a minimum, GGEA recommends the granular base thickness be equivalent to that of the thickness of the slab. Heavily loaded slabs may require additional thickness.
7. Install subsurface utilities.

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

8. Install the concrete slab, the design of which should be based on a modulus of subgrade reaction of 150 pci. The installation of a vapor barrier and specification of the concrete finish technique is at the discretion of the architect.
9. Proper joint spacing and reinforcing steel spacing/placement will be critical to the long term performance of slab. The Portland Cement Association recommends joint spacing in feet should be two to three times the slab thickness in inches.

4.3 FLEXIBLE PAVEMENT

GGEA provides design and construction recommendations for flexible pavement as follows:

1. Remove existing topsoil to expose competent, undisturbed native subgrade soil. Based on conditions encountered at the soil boring locations, excavation to a depth of 1.0 to 2.0 feet below existing grade is anticipated.
2. Compact the exposed soil thoroughly with a smooth drum vibratory roller to produce a uniform density throughout the subgrade.
3. After the exposed subgrade is thoroughly densified, proof roll the subgrade with a fully loaded 10-wheel dump truck weighing at least 30 tons or a smooth drum roller having an effective force of at least 600 pounds per linear inch of roller width. Any area exhibiting weaving, yielding, rutting or boiling should be reworked and compacted to produce an acceptable response *or* over excavated and replaced with Structural Fill. The depth of the undercut and type of Structural Fill will depend on the soil material encountered, weather conditions at the time of construction and the bearing conditions at the base of the undercut. The top surface of the subgrade should be pitched to drain to prevent ponding of stormwater.
4. Install a granular base layer composed of properly placed and compacted Select Structural Fill. GGEA recommends a minimum granular base thickness of 10 inches for automobile traffic and 12 inches for bus or truck traffic.
5. If catch basins are installed, special attention should be directed at the compaction of stone around the catch basins and the pipes. Failure to properly compact the stone will result in pavement settlement around the catch basins and ponding of water.
6. If the design dictates, install ditches, lateral drains, weeps and storm drainage piping.
7. Construct a flexible pavement system consisting of asphalt binder followed by asphalt top. GGEA provides recommended pavement sections as follows:

Light Duty (primarily car traffic)
- 10 inches Select Structural Fill
- 2.5 inches of asphalt concrete binder (2008 NYSDOT item number 403.138902)
- 1.0 inch of asphalt concrete top (2008 NYSDOT item number 403.178902 or 403.198902)

Heavy Duty (mixed truck/bus and car traffic)
- 12 inches Select Structural Fill

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

3.0 inches of asphalt concrete binder (2008 NYSDOT item number 403.138902)
1.5 inch of asphalt concrete top (2008 NYSDOT item number 403.178902 or 403.198902)

The native slack water soils may become soft if exposed to moisture, which will contaminate the overlying Select Structural Fill over time through repeated loading. The installation of a woven separation geotextile will provide additional support and should be considered, especially if the granular base will be used as a working surface during construction. GGEA recommends US 200 (or equivalent) beneath light duty pavement and US 250 (or equivalent) beneath heavy duty pavement.

All site contractors should be notified that roadways and parking areas will not support repeated travel by construction loads. Pavement and subgrade failure can be anticipated in areas that receive a high volume of heavy construction traffic. To preclude the overstressing of the pavement system it is recommended that haul roads be located in non-critical areas. As an option, the base course of stone can be overbuilt to a total thickness of 20 inches to serve as a haul route. The additional thickness of stone should be removed prior to paving along with any areas of stone that have been contaminated with soil. Failure to remove fine-grained soils from the stone base may cause pavement distress in the form of heaving resulting from freeze thaw effects.

In the event the binder layer is used as a working surface during construction or there is a prolonged time period between binder and top placement such that daily activities occur over the binder surface, the surface must be power washed, not just swept, and a tack coat should be applied prior to installation of the top course. In addition, any yielding area of pavement binder should be removed and replaced prior to application of the top course.

Design and construction of the pavement system should take care to provide adequate drainage to prevent saturation of the subgrade soil, which may have a high silt content in some areas and provide a high potential for frost heave if exposed to water and freezing temperatures.

4.4 · EXCAVATION AND BACKFILL

Excavation through the overburden soil and fill materials is anticipated to require minimal effort from standard excavation equipment. Excavation into the limestone bedrock will require significant effort and the use of a heavy duty hydraulic breaker (rock hammer) with an impact energy of greater than 10,000 foot pounds.

Construction of stormwater detention ponds, associated piping and various underground utilities will likely require the removal of bedrock in some areas. Stormwater detention ponds should be lined with compacted low permeability cohesive soils or geosynthetic material if percolation of detained stormwater into the underlying bedrock is undesirable.

The soil encountered at this site should be classified by an OSHA competent person in accordance with 29 CFR, Part 1926, OSHA Subpart P, "Excavations and Trenches" prior to and during excavation. GGEA has classified the soils as Type C. However, this classification may change depending on other site

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

criteria and moisture conditions at the time of construction. An OSHA competent person should judge the potential need for excavation bracing and excavation geometry in the field.

Engineered Fill is defined as Structural Fill, Select Structural Fill or Flowable Fill (CLSM). Composition, placement and compaction specifications for Engineered Fill materials have been included in Appendix E.

The foundations should be backfilled once the frost wall concrete has achieved a nominal compressive strength. The initial lift of backfill placement should be on the outside of the wall, with subsequent lifts balanced along the interior and exterior of the wall perimeter. Foundations should be backfilled with properly placed and compacted Select Structural Fill in structurally loaded areas (pavement, sidewalk, interior backfill) and Common Fill in non-structural landscaped areas. In place density testing should be performed at a rate of one test per 50 feet of trench or 2500 square feet of area per lift with a minimum of one test per day of placement.

Engineering properties for compacted native soils and Select Structural Fill have been estimated as follows:

Native Silt (ML), compacted

moist unit weight = 125 pcf

friction angle = 31^0

Rankine theory
- at rest pressure coefficient (Ko) = 0.48
- active pressure coefficient (Ka) = 0.32
- passive pressure coefficient (Kp) = 3.12

2015 IBC Table 1610.1 Lateral Soil Load
- at rest pressure = 100 psf/ft of depth
- active pressure = 45 psf/ft of depth

Native Lean Clay (CL), compacted

moist unit weight = 120 pcf

friction angle = 0^0 undrained, 25^0 drained

cohesion = 2000 psf undrained, 0 drained

Rankine theory (based on drained condition)
- at rest pressure coefficient (Ko) = 0.57
- active pressure coefficient (Ka) = 0.41
- passive pressure coefficient (Kp) = 2.46

2015 IBC Table 1610.1 Lateral Soil Load
- at rest pressure = 100 psf/ft of depth
- active pressure = 60 psf/ft of depth

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

Select Structural Fill (GW)

moist unit weight = 145 pcf

friction angle = 40 degrees

Rankine theory

at rest pressure coefficient (Ko) = 0.36
active pressure coefficient (Ka) = 0.22
passive pressure coefficient (Kp) = 4.60

2015 IBC Table 1610.1 Lateral Soil Load

at rest pressure = 60 psf/ft of depth
active pressure = 30 psf/ft of depth

4.5 EXPANSIVE SOIL MITIGATION

Some cohesive soils undergo volumetric change (shrinkage and swelling) with changes in moisture content and degree of saturation, which are commonly referred to as expansive soils. This condition primarily occurs with fat clay (CH) soil, which is a cohesive soil that exhibits a liquid limit of 50 or greater. The liquid limit is the water content, in percent, of a soil that defines the boundary between the plastic and viscous fluid states.

Laboratory testing of recovered soil samples was not included in the scope of GGEA's services, however previous laboratory test results in the general area identified soils with a low potential for volumetric change.

4.6 LIQUEFACTION MITIGATION

Liquefaction is the process where saturated cohesionless (granular) soils, specifically, loose sands and silts, transform from a solid into a liquid as a result of an increase in the pore water pressure caused by repeated disturbance such as experienced during seismic events. Liquefaction results in an immediate loss of shear strength and bearing capacity, causing total and differential settling of the overlying structure.

The native soils encountered at this site exhibit a high in place density and do not provide concern for liquefaction.

4.7 SETTLEMENT

Foundations designed and constructed in accordance with the recommendations of this report will provide for estimated total settlement of less than 1.0 inch. Differential settlement is estimated to be less than 0.5 inches.

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

4.8 SEISMIC SITE CLASS AND DESIGN CATEGORY

In accordance with Section 1613 (Earthquake Loads) of the 2020 NYS Building Code, GGEA has classified the site as Seismic Site Class D. The site classification is based on the summation of N values for the upper 100 feet of boring B-9 in accordance with ASCE 7-16 Equation 20.4-2. The design spectral response accelerations have been calculated as 0.183 g for the short period design spectral response acceleration (S_{DS}) and 0.072 g for the one second design spectral response acceleration (S_{D1}). In accordance with tables 1613.2.5(1) and 1613.2.5(2), using Risk Category II, the site is classified as Seismic Design Category B (refer to Appendix D).

4.9 GENERAL CONSTRUCTION RECOMMENDATIONS

GGEA provides general construction recommendations as follows:

1. The exposed subgrade grade should not be allowed to become saturated or inundated with standing water. No fill material or concrete shall be placed in water, over saturated subgrade or over frozen subgrade. Soils may lose considerable strength and bearing capacity if subject to saturation. The foundation subgrade should be pitched to drain and provided with a temporary sump(s), located outside of the structure footprint, to prevent the accumulation of stormwater in the excavation and subsequent deterioration of the foundation subgrade during construction. Likewise, stormwater should not be permitted to remain in the excavation adjacent to foundations after construction and prior to backfill.
2. Backfill foundations prior to applying load.
3. Upon completion of the excavation for shallow foundations, the exposed foundation subgrade should be compacted to densify soil loosened by the excavation process. Proper subgrade preparation will assure the development of the anticipated bearing strength and reduce settlement potential.
4. If additional undercut is necessary, the excavation bottom should be graded to a uniform elevation and gradually sloped back to design elevation. Undercut "pockets" should be avoided.
5. Conformance to OSHA standards is mandatory during excavation and trench work.
6. Topsoil and organic soils should be removed from all load bearing areas.
7. Footing sizes should be proportioned to create nearly equal contact pressures under all foundations, which will serve to minimize differential settlement.
8. Foundation bearing grades should not be allowed to freeze prior to or after placement of concrete. Insulating blankets should be used to cover bearing grades plus a one foot perimeter outside of the forms or completed footings until backfill is placed.
9. The fill placed at grade elevation should be sloped to drain away from the foundation walls to eliminate the potential for standing water to accumulate along the foundation

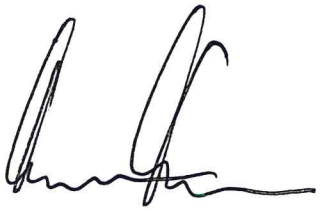
Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

10. During the excavation process, if encountered soils or moisture contents are found to be different than those identified on the soil boring logs and represented within this report, the allowable bearing capacity and associated design recommendations may need to be reevaluated by a qualified geotechnical engineer to account for varying bearing capacity.

4.10 CONCLUSION

This completes the geotechnical evaluation for the proposed development of the property at 2190 – 2220 Wehrle Drive in the Town of Amherst, New York. The subsurface conditions are of good structural quality and will provide for the construction of shallow foundation systems designed in accordance with the recommendations presented herein. This report has been prepared based on the encountered subsurface conditions at the soil boring locations and pertinent data supplied by Aquest. Supplemental geotechnical exploration and evaluation may be necessary once site development plans are finalized. Please contact GGEA if major project changes are made or if encountered soils differ from conditions identified in this report.

Sincerely,



G. Edward Lover, P.G.
Senior Geologist

Mark W. Glynn, P.E.
Consulting Engineer, Principal

LITH

DESCRIPTION AND CLASSIFICATION

Wet to extremely moist (SANDY-SILT) topsoil with little sand and organic matter, very loose, granluar soil structure, (ML). 0.6

Extremely moist to moist light brownish gray (SANDY-SILT) with little mostly fine size sand, trace clay, loose, blocky soil structure becoming thinly laminated with very thin coarse silt lenses and nearly vertical gray desiccation cracks below 1.7 feet, (ML).

grades downward to 3.0

Moist brown to grayish brown (CLAYEY-SILT) with some clay, trace sand, stiff and very stiff, thinly laminated with very thin coarse silt lenses and nearly vertical gray desiccation cracks, (CL).

clear transition to 7.0

Extremely moist grayish brown (SAND-SILT-CLAY) with 5 to 15% gravel, little to some clay, trace to little sand, very stiff, (ML-CL) tending toward (CL).

clear transition to 9.7

Wet gray stone fragments, hard. 9.9

Boring completed at 9.9 feet.

WATER TABLE AND REMARKS

WH: Sampler penetration with weight of rods and hammer.

Coarse silty topsoil with little sand and organic matter to 0.6 feet over coarse silty slackwater sediment with little sand, trace clay to 3.0 feet over clayey slackwater sediment with trace clay to 7.0 feet over silty glacial till with little to some clay, little sand, trace to little gravel to 9.5 feet over apparent limestone bedrock to end of boring.

▼ Water level at 9.6 feet below ground surface at completion.

Note: Advanced bore hole with 3 1/4" ID x 7" OD hollow stem auger casing with continuous split spoon sampling to auger refusal at 9.9 feet. Bore hole was backfilled with cuttings to ground surface upon completion.

Common Fill

All soil and/or crushed rock material with the exception
of those with USCS classifications of
CH, MH, OH, and OL.

Place material in 12 inch lifts (loose) and compact to 90 % of modified proctor (ASTM D-1557) maximum dry density within 2 % of optimum moisture content.

The material should be compacted using a smooth drum vibratory roller (for large applications) or a reversible vibratory plate tamper (for smaller applications) such as a Bomag BPR 35/60 or similar (weight > 400 lbs).

Structural Fill

All soil and/or crushed rock material with the exception
of those with USCS classifications of
CH, MH, OH, OL, ML and CL-ML.

Place material in 9 inch lifts (loose) and compact to 95 % of modified proctor (ASTM D-1557) maximum dry density within 2 % of optimum moisture content.

The material should be compacted using a smooth drum vibratory roller (for large applications) or a reversible vibratory plate tamper (for smaller applications) such as a Bomag BPR 35/60 or similar (weight > 400 lbs).

Flowable Fill

Controlled Low Strength Material (CLSM).

Typically a fly ash based pozzolanic fill manufactured by local concrete plants.

Minimum 28 day compressive strength = 100 psi.

May include fine aggregate.

The material should be placed in separate lifts not to exceed 30 inches in depth and each lift should be allowed to fully cure (monitor for shrinkage and/or desiccation) prior to placing subsequent lifts or applying load.

CLSM should not be used within 42 inches of final grade due to potential freeze/thaw susceptibility and should not be used if the excavation contains standing water or is subject to groundwater infiltration.

A. GENERAL

1. Existing Site Conditions:

The project site is located at 2190-2220 Wehrle Drive, in Willamsville, New York. See location map in Appendix A. The project site is 24.91 acres, rectangular shaped with approximately 648 feet of frontage along the north side of Wehrle Drive. The existing site consists primarily of maintained lawn areas with a few brush/wooded areas along the eastern property line, and a couple brush areas along the west property line. Under existing conditions, there are five (5) drainage areas, all of which eventually drain to/are conveyed to the drainage system along Wehrle Drive. Drainage area #1 consists of the eastern and northeastern portion of the site. Stormwater runoff from drainage area #1 flows to a drainage ditch located along the east property line and flows south towards Wehrle Drive. Drainage area #2 consists of a small portion along the west property line and the northwest corner of the parcel. Stormwater runoff from drainage area #2 flows to a drainage ditch located along the west property line and flows south towards Wehrle Drive. Drainage area #3 consists of a small portion of the parcel near the middle of the site. Stormwater runoff from drainage area #3 flows to a low spot, pools and then eventually discharges to the drainage ditch located along the west property line and flows south towards Wehrle Drive. Drainage area #4 consists of a small portion of the parcel at the southwest corner of the site. Stormwater runoff from drainage area #4 travels by sheet flow towards Wehrle Drive. Drainage area #5 consists of a small portion of the parcel along the Wehrle Drive frontage. Stormwater runoff from drainage area #5 travels by sheet flow is conveyed to an existing yard drain along the Wehrle Drive frontage. As per the Erie County DPW Division of Highways "Plans for the Reconstruction of Wehrle Drive C.R. 290 Ellicott Creek to Harding Road", there are two (2) yard drain structures shown on the plans for this parcel. It is understood that the two yard drains were installed to collect stormwater runoff from this parcel and convey it to the Wehrle Drive storm drainage system.

Per the USDA NRCS Web Soil Survey for the site, the existing soils on site consist of Lima loam (HSG 'B/D'), Ilion silt loam (HSG 'C/D'), Newstead loam (HSG 'C/D') and Ovid silt loam (HSG 'C/D'). For soils assigned to a dual hydrologic group, the first letter is for drained areas and the second letter is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

2. Proposed Site Conditions:

Development will consist of both the development of the northwest portion of the this parcel along with development of a new, public road off of Wehrle Drive and terminating in a cul-de-sac at the northern portion of the site.

Development of the northwest portion of the parcel will consist of the following:

- One (1) three-story, 84,375 square-foot, office building
- One (1) single-story security booth
- One (1) single-story, 24,750 square foot storage garage/maintenance facility

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

- One (1) two-story, 72,072 square foot parking garage
- Associated site improvements

Site improvements include asphalt paved parking lots to accommodate 100 parking spaces including 4 handicap accessible spaces, concrete loading docks, security fencing, sidewalks, landscaping, and site utilities. Site utilities include a stormwater management system, bioretention basins, sanitary sewer and water service laterals.

Development of the new public road will consist of the construction of a new 28-foot wide public road, within a 52-foot wide right-of-way, designed to the Town of Amherst's standards and will eventually be dedicated to the Town of Amherst. Construction of the public road will include the following public utilities, water, sanitary sewer, storm sewer, electric and gas.

Upon completion, the proposed project will add 6.56 acres of new impervious cover in total. The total anticipated ground disturbance during construction of this project will be approximately 17.5 acres. Due to the increase in impervious areas, stormwater detention is required. Additionally, since the construction of this site will disturb more than one acre, a Storm Water Pollution Prevention Plan (SWPPP), in accordance with the New York State Department of Environmental Conservation (NYSDEC) standards must be prepared and a Notice of Intent (NOI) must be filed prior to beginning construction.

B. PROPOSED FACILITIES

1. Stormwater Management

a. Conveyance

Under proposed conditions, there will be four drainage areas with two bioretention facilities, one dry swale and a large dry detention basin. The Northwest Drainage Area consists of the office building, storage garage/maintenance facility and parking areas. Stormwater runoff from the Northwest Drainage Area will be collected and treated in a bioretention basin, then discharge to the dry detention basin. The Northeast Drainage Area consists of the parking garage and the northern portion of the proposed road. Stormwater runoff from the Northeast Drainage Area will be collected and treated in a bioretention basin, then discharge to the dry detention basin. The East Drainage Area will consist of southern portion of the proposed road, the dry swale and dry detention basin. Stormwater runoff from the East Drainage Area will be collected in an enclosed drainage system, piped to the dry swale and then flow to the dry detention basin. The South Drainage Area consists of the future development of medical office. Stormwater runoff from the existing conditions of the South Drainage Area will be collected and piped to the dry detention basin. The dry detention basin will have an outlet structure with a piped discharge to the storm drainage system on Wehrle Drive. The West

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

Drainage Area consists of a small strip of lawn area along the north, west and south property lines. Stormwater runoff along the north and west property lines will be collected in a French drain/underdrain and tie directly into the storm sewer system on Wehrle Drive.

b. Quantity Control

New York State Department of Environmental Conservation regulations require design of stormwater detention facilities to limit the peak discharge produced by the 10-year and 100-year storm events to the pre-developed runoff rates, as well as provide extended detention of the 1-YR, 24-HR storm event (channel protection volume). Additionally, the Town of Amherst regulations require the peak discharge from the 25-year post-developed storm event to be limited to the 10-year pre-developed storm runoff rate.

Water quantity control will be provided through the combination of bioretention basins, a dry swale, dry detention basin and an outlet control structure that will consist of a manhole with a weir plate, 6-inch diameter orifice and a 15-inch diameter HDPE outlet pipe.

Each bioretention basin will utilize one 24" x 24" catch basin with an 18-inch diameter HDPE pipe to control the stormwater discharge from each facility.

The dry detention basin is designed to accept stormwater runoff from all the drainage areas, under developed conditions, as shown on the Proposed Drainage Analysis Map.

The dry detention basin will utilize a precast concrete manhole as a control structure. The stormwater runoff rates will be controlled through a combination of a 6-inch diameter orifice and a weir. The 15-inch diameter HDPE outlet pipe will convey the stormwater discharges from the dry detention basin to the existing storm sewer system on Wehrle Drive.

The stormwater discharge rates for the 10-year and 25-year storm events under developed conditions, will be below the stormwater discharge rates for the 10-year storm event under pre-developed conditions. The stormwater discharge rates for the 100-year storm event under developed conditions, will be below the stormwater discharge rate for the 100-year storm event under pre-developed conditions. The Channel Protection Volume (CPv) requirement will be met by the use of the 6-inch diameter orifice.

The stormwater detention calculations were completed using HYDROCAD, version 10 software. Following is a summary of the pre and post development discharge rates and associated detention volumes and water surface elevations:

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

East Discharge to Wehrle Drive Storm Sewer:

Storm Event	Pre-Development Discharge (cfs)	Post-Development Discharge (cfs)	Dry Detention Basin Volume (cf)	Dry Detention Basin Water Surface Elevation (ft)
10-YR	5.40	4.29	82,942	693.05
25-YR	11.59	5.20	114,117	693.37
100-YR	24.49	6.39	183,906	694.00

West Discharge to Wehrle Drive Storm Sewer:

Storm Event	Pre-Development Discharge (cfs)	Post-Development Discharge (cfs)
10-YR	3.64	1.93
25-YR	5.22	2.77
100-YR	8.48	4.49

Quality Control:

Chapters 3-5 of the NYSDEC Stormwater Management Design Manual (SMDM) provides a green infrastructure approach to stormwater management to reduce a site's impact on the aquatic ecosystem through the use of site planning techniques, runoff reduction techniques, and standard SMP's. Runoff Reduction Volume (RRv) is the reduction of the total Water Quality Volume (WQv) by application of green infrastructure techniques and SMP's to replicate pre-development hydrology.

The NYSDEC SMDM's intent is for projects to meet 100% of runoff reduction volume through the use of green infrastructure techniques. Projects that do not achieve runoff reduction to pre-construction condition must, at a minimum, provide the minimum RRv as well as provide the remaining WQv in standard SMPs.

Two (2) bioretention basins will be used to treat 100% of the new impervious area from the proposed office building, storage garage/maintenance building, parking garage and parking lots, along with the northern portion of the proposed road. A dry swale will be used to treat 100% of the new impervious area from the southern portion of the proposed road.

Water Quality Volume and RRv has not been designed for the future development site along the south of the parcel.

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

Both the minimum RRv requirement and the water quality volume requirement has been attained through the use of the bioretention basin and open swale.

Below is a summary of the water quality volume and runoff reduction volumes attained on site:

Total Water Quality Volume Required (WQv):	**24,350 cf**
Minimum Runoff Reduction Volume Required (RRv, min)	**4,524 cf**
Bioretention Basin (from Northwest Drainage Area):	
WQ_v Required	13,195 cf
WQ_v Provided	7,917 cf
RR_v Provided (Standard SMP with Runoff Reduction Volume) – due to HSG C/D soils, RRv = 40% WQv for that practice (typical all bioretention facilities)	5,278 cf
Total WQ_v Provided	13,195 cf
Bioretention Basin (from Northeast Drainage Area):	
WQ_v Required	5,797 cf
WQ_v Provided	3,478 cf
RR_v Provided (Standard SMP with Runoff Reduction Volume) – due to HSG C/D soils, RRv = 40% WQv for that practice (typical all bioretention facilities)	2,319 cf
Total WQ_v Provided	5,797 cf
Dry Swale:	
WQ_v Required	5,360 cf
WQ_v Provided	4,288 cf
RR_v Provided (Standard SMP with Runoff Reduction Volume) – due to HSG C/D soils, RRv = 20% WQv for that practice (with underdrain)	1,072 cf
Total WQ_v Provided	5,360 cf
Total RRv Provided:	**8,669 cf**
Total WQv Provided (WQv provided + RRv provided):	**24,352 cf**

Stormwater calculations are included in Appendix B.

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

2. Sanitary Sewer

Both the office building and the Storage Garage/Maintenance Facility will be serviced by a 6-inch diameter, SDR-35 PVC, private, sanitary sewer lateral. The 6-inch lateral will connect to a proposed 8-inch, PVC, public sanitary main along the proposed public road. The proposed 8-inch, PVC, public sanitary sewer will be sloped at a minimum slope of 0.40% and will run along a portion of the proposed road to service both the office building, storage garage/maintenance facility and the future development along the southwest corner of the parcel. The proposed 8-inch, PVC, public sanitary sewer main will run along the proposed road, then flow east through the west end of Garfield Street, then connect into the existing 8-inch public sanitary sewer main on Bellingham Drive.

All of the private sanitary work is to be performed per the Town of Amherst standards. All of the proposed, public sanitary sewer main will be performed to both the Town of Amherst and Erie County Department of Health standards. Sanitary sewer flow calculations for the proposed office and the storage garage/maintenance facility are shown below and are also included in Appendix C.

Design Parameters (Appendix C) –

1) Hydraulic Loading Rate per "Design Standard for Intermediate Sized Wastewater Treatment Works", March 5, 2014 NYSDEC.
2) Table B-3 Typical Per-Unit Hydraulic Loading Rates
   Office = 15 gpd/employee
   Storage Garage/Maintenance Facility = 15 gpd/employee
3) Building Matrix:
   Office = 232 employees
   Maintenance Facility = 5 employees
4) Average Daily Design Flow = (0.80 water saving reduction factor)
   [(232 employees)(15 gpd/employee) +
   (5 employees)(15 gpd/employee)]
   = 2,844 gpd
5) Peak Hourly Flow = (2,844 gpd) (4.36 peak factor)
   = 12,400 gpd = 0.012 mgd = 8.6 gpm

Downstream Sanitary Sewer Capacity Analysis

As the average daily design flow is greater than 2,500 gpd, the sanitary sewage is considered a sewer extension in accordance with the NYSDEC's regulations. Accordingly, a downstream sanitary capacity analysis was conducted and is detailed below.

All sanitary sewage from the proposed development will flow through a proposed 8-inch public PVC sewer main and connect into the existing 8-inch gravity sewer on Bellingham Drive. The 8-inch sewer flows north on Bellingham Drive to Lyndhurst Road and then flows east along Lyndhurst Road and into a lift station. From the lift station, sewage

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

flows north along Amherston Drive within a 4-inch forcemain to Ridge Court North, where it continues to flow north, until it reaches Main Street. At Main Street, the 4-inch forcemain ties into a 15-inch PVC sewer and flows west along Main Street to a manhole located just east of Limestone Drive. There, sewage flows north within a 15-inch PVC sewer and crosses Main Street and ties into an existing manhole located between 6470 and 6500 Main Street. From there, sewage flows north within an 18-inch PVC sewer and ties into the 18-inch Youngs Road sewer. The 18-inch Youngs Road sewer flows north on Youngs Road until it reaches Maple Road. At Maple Road, sewage flows west along Maple Road within an 18-inch sewer until it reaches Hopkins Road. At Hopkins Road, the 18-inch Maple Road sewer connects to an 18-inch sewer on Hopkins Road and flows north. Along this route, the 18-inch sewer increases to a 30-inch sewer. The 30-inch sewer continues to flow north until it reaches the Town of Amherst Peanut Line Sewer. There, the 30-inch sewer ties into the 54-inch Peanut Line Sewer. The 54-inch Peanut Line sewer flows west and then increases to a 60-inch sewer and then a 66-inch sewer within the Peanut Line sewer route. The 66-inch Peanut Line sewer continues to flow west until it ties into the 84-inch West Side Interceptor sewer. The 84-inch West Side Interceptor sewer flows north and discharges into the Town of Amherst Wastewater Treatment Plant, located at 455 Tonawanda Creek Road. (Included in Appendix D is the Town of Amherst Downstream Sewer – Amherst Peanut Line & West Side Interceptor Map)

The Town of Amherst Engineering Department requested flow monitoring of both the 15-inch PVC sanitary sewer located at 6543-6551 Main Street and the 18-inch PVC sanitary sewer located at 6470 Main Street. TECSmith, Inc. was hired to perform flow monitoring on both sewers. Included in Appendix D is the full report from TECSmith, Inc. Below is a summary of the downstream sanitary sewer capacity analysis study:

Sewer	Peak Flows without Office Project (mgd)	Proposed Peak Flow from Office Project (mgd)	Total Flow (mgd)	Theoretical Capacity (mgd)	Available Capacity (Y/N)
15" PVC sewer at 6543-6551 Main Street	0.998*	0.012	1.01	1.92**	Y
18" PVC sewer at 6470 Main Street	1.886*	0.012	1.898	2.79***	Y
54" Amherst Peanut Line	18.50****	0.012	18.512	36.0****	Y
54" Amherst Peanut Line	19.15****	0.012	19.162	36.0****	Y
60" Amherst Peanut Line	26.45****	0.012	26.464	44.60****	Y
66" Amherst	36.50****	0.012	36.512	57.40****	Y

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

Peanut Line					
84" Amherst West Side Interceptor	92.00****	0.012	92.012	104.10****	Y

* Information obtained from the flow study performed by TECSmith, Inc. Peak flow occurred on 10/3/2021 with a total daily rainfall of 1.84 inches.

** Theoretical capacity of a 15-inch PVC sewer, with a slope of 0.15% (0.15% is the minimum slope per 10 States Standards), and a manning's 'n' of 0.011:
$Q_{capacity}$ = 1.92 mgd

*** Theoretical capacity of an 18-inch PVC sewer, with a slope of 0.12% (0.12% is the minimum slope per 10 States Standards), and a manning's 'n' of 0.011:
$Q_{capacity}$ = 2.79 mgd

**** Information obtained from Town of Amherst Engineering Department Sewer Maintenance Division, Main Sanitary Sewer Interceptors, Downstream Sewer – Amherst Peanut Line & West Side Interceptor Map, for Proposed Site 2190-2220 Wehrle Drive, with flows updated February 4, 2020. The 2-YR, 6-HR Flow and Capacity values were used.

From the information above under wet weather flows, the 15-inch PVC sewer on Main Street, the 18-inch PVC sewer on Main Street, the 54-inch, 60-inch and 66-inch Town of Amherst Peanut Line Sewers and the 84-inch West Side Interceptor Sewer, have sufficient capacity to handle the additional peak flow generated from the proposed office building and future development.

According to the Town of Amherst Infiltration and Inflow (I/I) offset program and to NYSDEC's I/I Flow Offset requirements, wet weather flows are to be offset by a factor of 4:1 of the peak hourly flow by replacing sewer system components. The Erie County Division of Sewerage Management Contribution Removal Values by Source identifies that replacing a deficient residential lateral allows an offset value of 30 gpm.

For the Office Building, the Town of Amherst's requirements for I/I mitigation is $250/gpm of mitigated flow. Accordingly, the flat fee for this project is calculated as follows:

Office Building:

Peak Hourly Design Flow:	= 12,400 gpd = 8.6 gpm
4:1 offset value:	= 8.6 x 4 = 34.4 gpm
Flat Fee:	= $250/gpm x 34.4 gpm
	= $8,600.00

Per the Town of Amherst's current regulations, the owner is required to pay a flat fee of $8,600.00 to mitigate the 4:1 ratio of peak hourly flow.

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

3. Water System

A new, public, 8-inch PVC watermain will be tapped off of the existing 12-inch watermain within Wehrle Drive. During the previous reconstruction of Wehrle Drive (in approximately 2011), a previous design for this site called for a 10-inch water service to the site. At that time, a 12x10 tee, a 10-inch stub pipe and a 10-inch line valve were installed and the 10-inch line was plugged. Additionally, a 20" casing pipe was installed to cross Wehrle Drive. The proposed 8-inch public watermain will tie into the existing 10-inch line with a 10x8 reducer and the proposed 8-inch watermain will reuse the existing 20-inch casing pipe to cross Wehrle Drive. Once the 8-inch public watermain crosses Wehrle Drive, it will run along the frontage of 2190-2220 Wehrle Drive within a proposed, 15-foot wide easement, until it reaches the proposed public road. The proposed 8-inch watermain will run north, along the west side of the proposed public road, within a 30-foot wide easement for approximately 1,070 linear feet. There, the proposed 8-inch public watermain will cross the proposed road, run along the south side of Garfield Road, then tie into the existing 6-inch public watermain on Bellingham Drive.

For the proposed development, a 6-inch ductile iron water service will be tapped off of the 8-inch public watermain with an 8x6 tapping sleeve and valve. The 6-inch service will be split at the property line into a 6-inch ductile iron, private fire service and a 4-inch ductile iron, domestic water service. Both services will be backflow protected within a Hotbox located on site. The 6-inch private fire service will connect to the fire sprinkler system within the building and also service a private fire hydrant on site. The 4-inch service will provide domestic water service to the building. The 4-inch service will reduce down to a 2-inch service within the Hotbox enclosure for both metering and backflow prevention. The fire sprinkler design and calculations will be provided by the mechanical engineer.

Domestic:

1)	Domestic Peak Operating Demand:	14 gpm
2)	Static Pressure in watermain:	42 psi
3)	Friction Loss through 4" domestic service	0 psi
4)	Friction Loss due to elevation	2.6 psi
5)	Friction Loss through fittings	1 psi
6)	Friction Loss through 2" Neptune T-10 Meter	0.5 psi
7)	Friction Loss through 2" Watts LF009 RPZ	13 psi
8)	Residual Pressure @ building for domestic service:	24.9 psi

Fire:

1)	Friction Loss through 6" fire service:	9.3 psi
2)	Friction Loss through fittings	1 psi
3)	Friction Loss due to elevation	2.6 psi
4)	Friction Loss through 6" Watts LF 957RPDA	9 psi

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

5) Available fire flow with 20 psi residual pressure @ building 850 gpm

(Static pressure at the main was provided by the Erie County Water Authority) – See Appendix E

Disinfection of water services following construction will be continuous feed, in accordance with AWWA C-651, latest revision requirements. Water demand calculations are included in Appendix E.

4. 100-YR Floodplain Information

Neither the proposed development nor the proposed public road is located within the 100-year floodplain, as per FEMA Firm Panel 360290C0229H.

Respectfully Submitted,

C&S ENGINEERS, INC.

Jason Utzig, P.E.
Senior Project Engineer

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:15,800.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Erie County, New York
Survey Area Data: Version 20, Jun 11, 2020

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Jul 4, 2020—Jul 10, 2020

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Totals for Area of Interest			**23.8**	**100.0%**

Description

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

DATE: November 2021
PROJECT NAME: 2190-2220 WEHRLE DRIVE
(PROPOSED DEV. & PROPOSED ROAD)

Stormwater Quality Calculations

Impervious Areas (refer to Existing & Proposed Drainage Analysis Maps)

$I_{Existing} := 0$ — $I_{Existing}$ = Existing Impervious Area (acres) per Existing Drainage Analysis Map

$I_{Proposed} := 6.56$ — $I_{Proposed}$ = Proposed Impervious Area (acres) per Proposed Drainage Analysis Map

$I_{New} := I_{Proposed} - I_{Existing}$ — I_{New} = New Impervious Area (acres)

$I_{New} = 6.56$

Minimum Runoff Reduction Volume (RR_v Min)

The minimum RRv is calculated by applying a reduction factor (S) (based on the HSG on site) to the area of new impervious coverage.

$P := 1.0$ — *90% Rainfall Event (inches)*

$Rv := 0.95$ — **0.05 + 0.009(I) where I is 100% impervious**

$Aic := I_{New}$ — *Total Area of New Impervious Area (acres)*

$Aic = 6.56$

$S := 0.20$ — *Hydrologic Soil Group (HSG) Specific Reduction Factor (S)*
The site is 100% HSG D. Therefore, S = 0.20

$RR_{vmin} := \frac{P \cdot Rv \cdot Aic \cdot S}{12} = 0.104$ — *Runoff Reduction Volume Minimum (acre-feet)*

$RR_{vmin} \cdot 43560 = 4524$ — *Runoff Reduction Volume Minimum (cubic-feet)*

SANITARY SEWER FLOW FOR 2190-2220 Wehrle Drive

References:

- "Design Standards for Wastewater Treatment Works Intermediate Sized Sewerage Facilities - March 5, 2014) by New York State Department of Environmental Conservation Division of Water Bureau of Wastewater Facilities Design (NYSDEC Design Standards)

Sanitary sewer loading is taken from the sanitary expected hydraulic loading rates listed in Table B-3:

Typical Per-Unit Hydralic Loading Rates

Office Building = 15 GPD per employee
Storage Garage/Maintenance Facility = 15 GPD per employee

$$LR_{Office} := 15 \ \frac{\frac{gal}{day}}{employee}$$

$$LR_{Maint} := 15 \ \frac{\frac{gal}{day}}{employee}$$

Building Matrix:

Building 'A' is a 3-story office building, 28,125 sf/floor, 84,375 sf. total

Building 'B' is a 1-story security booth

Building 'C' is a 1-story storage garage/maintenance facility, 24,750 sf. total

Building 'D' is a 3-story parking garage

Building 'E' is a "Future" 3-story medical office building, 34,500 sf/floor, 103,500 sf. total

Assumptions:

Office space:

15% of total is for common areas (hallways, bathrooms)

30% of total is for corridors/circulation areas

55% of total is for office space

Use 200 sf/employee for office space

Office = 0.55 x 84,375 sf x 1 employee/200 sf

$Office := 232 \ employees$

Storage Garage/Maintenance Facility: Assume 5 employees

$Maint := 5 \ employees$

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

Average Daily Flow for Proposed Development:

Average Daily $Flow_{PropDev} = Q_{AvgDailyPropDev}$

= (0.80 water saving reduction factor) x (Office) x (LR_{Office})

+(0.80 water saving reduction factor) x (Maint) x (LR_{Maint}) +

$$Q_{AvgDailyPropDev} := (0.80)(Office)\left(LR_{Office}\right) + (0.80)(Maint)LR_{Maint}$$

$$Q_{AvgDailyPropDev} = 2844 \ \frac{gal}{day}$$

Average Daily Flowrate for Proposed Development= 2,844 gpd

Peak Factor for Proposed Development:

Per Ten States Standards (2014 Edition), Figure 1:

$$\frac{\text{Q Peak Hourly}}{\text{Q Daily Average}} = \frac{18 + P^{1/2}}{4 + P^{1/2}} = \text{Peak Factor}$$

where P = population in thousands

$$P_{PropDev} := \frac{2844}{100} \ \frac{gpd}{\frac{gpd}{person}}$$

$$P_{PropDev} = 28$$

Population to be in thousands

$$P_{PropDev2} := \frac{P_{PropDev}}{1000}$$

$$P_{PropDev2} = 0.028$$

$PF_{PropDev}$ = Peak factor

$$PF_{PropDev} := \frac{18 + P_{PropDev2}^{\frac{1}{2}}}{4 + P_{PropDev2}^{\frac{1}{2}}}$$

$$PF_{PropDev} = 4.36$$

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

Peak Hourly Flow for Proposed Development:

$$Q\ Peak\ Hourly_{PropDev} = (Q\ Daily\ Average_{PropDev})(PF_{PropDev})$$

$$Q_{PeakHourlyPropDev} := Q_{AvgDailyPropDev} \cdot PF_{PropDev}$$

$$Q_{PeakHourlyPropDev} = 12395 \ \frac{gal}{day}$$

Q Peak Hourly for Proposed Development = 12,400 gpd

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

Williamsville, NY 14221

Re: I/I Commitment Letter
Site Plan Application [SP-2021-23]
Proposed Office Building w/ Parking Garage at
2190 & 2220 Wehrle Drive
Applicant/Project Sponsor: Acquest Wehrle LLC

This letter is being submitted on behalf of Acquest Wehrle LLC ("Project Sponsor") to serve as the Project Sponsor's commitment to make the required contribution to the Town's Sewer Remediation Trust Fund pursuant to Chapter 160 of the Town Code of the Town of Amherst ("Sanitary Sewer Law").

Per the sanitary sewer calculations prepared by C&S Engineers, the required payment into the Town's Sewer Remediation Trust Fund is $8,600.00 and such payment will be provided to the Engineering Department prior to the issuance of a Final Certificate of Occupancy for the proposed office building at 2190 & 2220 Wehrle Drive.

The relevant sanitary sewer calculations prepared by C&S Engineers to determine the payment amount are summarized below as follows:

- Peak flow = 12,400 gpd = 8.6 gpm
- 4:1 offset of peak flow = 8.6 gpm x 4 peak factor = 34.4 gpm
- I/I Payment — $250/gpm x 34.4 gpm = $8,600.00

SANITARY SEWER FLOW CAPACITY STUDY – Summary Review

Prepared For: 2190-2220 Wehrle Drive Capacity Analysis

Jason Utzig PE
C&S Companies
141 Elm Street, Suite 100
Buffalo, NY 140203

Project Name: 2190-2220 Wehrle Drive Capacity Analysis

Flow Monitoring Period: September 27, 2021 to October 25, 2021

Rain Events (> 0.5-inches) Monitored: October 3 (1.84”), and October 15 (0.75”)

Number of Monitoring Nodes: Two (2) downstream manholes

Node Locations and Descriptions:

- Node 1 6543 Main St (15")
- Node 2 6470 Main St (18")

Summary Conclusion:

Based on the data presented in this report, specifically the flow depth measurements recorded (see graphs below)

- At no time did the flow depth exceed pipe diameter at any of the downstream monitoring points during the wet weather vents monitored.
- At no time during the monitoring period did the flow at any point slow or stall which would have caused a backup or flooding at the manhole.
- It appears that the sanitary sewer sections monitored have available capacity.

Depth of Flow Capacity Summary:

Depth of flow capacity is based on diameter of pipe. See graphs below.

- At no time during the monitoring period did depth of flow exceed pipe diameter at Node 1.

WATER CALCULATIONS

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

WATER LOADING CALCULATIONS FOR:
2190 - 2220 Wehrle Drive

Hydrant Flow Test information from the Erie County Water Authority, dated 4/5/2021, for 12-inch PVC watermain on Wehrle Drive

Static Pressure = 50 psi

Residual Pressure = 42 psi with total flow of 1,712 gpm

$Pressure_{static} := 50 \quad psi$

$Pressure_{residual} := 42 \quad psi$

Domestic Service to Proposed Development

Assume 120% of the sewer design flow

Water demand = 1.20 x sanitary demand

$Q_{water} := 1.20(2844)$

$Q_{water} = 3413 \quad \frac{gal}{day}$

Peak Operating Demand = $\frac{\text{Water Demand}}{\text{(Usage in hr/day) (60 min/hr)}}$ x peak rate

Peak rate can be found on page 10-6 of the Recommended Standards for Wastewater Facilities (Ten States Standards), 2004 Edition.

$Usage := 8 \quad \frac{hr}{day}$

$Peak := 1.96$

$$Q_{waterpeak} := \frac{(Q_{water})(Peak)}{(Usage)\cdot(60)}$$

$Q_{waterpeak} = 13.9 \quad gpm$

The peak demand is 14 gpm.

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

Calculate headloss in domestic service to determine residual pressure at building:

Peak Domestic Flow = 14 gpm

$Q_{Domestic} := 14 \quad gpm$

Determine headloss in proposed domestic water service:

Length of 4-inch domestic water service from tap location to the Maint. Garage = 450 ft

$L_{Dom} := 450 \quad feet$

$D_{Dom} := 4 \quad inches$

$C_p := 140$

$$h_{LDomPipe} := \frac{10.44 \cdot L_{Dom} \cdot Q_{Domestic}^{1.85}}{C_p^{1.85} \cdot D_{Dom}^{4.87}}$$

$h_{LDomPipe} = 0 \, feet$

$h_{LDomPipepsi} := 0.433 \cdot h_{LDomPipe}$

$h_{LDomPipepsi} = 0 \quad psi$

Determine headloss due to elevation:

$h_{LDomElevationft} := 6 \, feet$

$h_{LDomElevationpsi} := 0.433 \cdot h_{LDomElevationft}$

$h_{LDomElevationpsi} = 2.6 \quad psi$

Determine headloss due to fittings:

$h_{LDomFittings} := 1 \quad psi$

Determine headloss through 2-inch Neptune T-10 Meter:
- refer to attached cut sheet w/ 14 gpm domestic flow

$h_{LMeter} := 0.50 \quad psi$

Determine headloss through 2-inch Watts LF009 RPZ:
- refer to attached cut sheet w/ 14 gpm domestic flow

$h_{LDomRPZ} := 1$ psi

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

Calculate the sum of the headlosses in domestic service:

$h_{LDomSum} := h_{LDomPipepsi} + h_{LDomElevationpsi} + h_{LDomFittings} + h_{LDomRPZ} + h_{LMeter}$

$h_{LDomSum} = 17.1 \quad psi$

Calculate residual pressure at building using peak domestic flow:

Residual Pressure = Residual at watermain - Sum of headloss

$Pressure_{Domresidualbldg} := Pressure_{residual} - h_{LDomSum}$

$Pressure_{Domresidualbldg} = 24.8 \ psi$

A 4-inch domestic service can provide the 14 gpm peak domestic flow with a 24.8 psi residual pressure at the building.

Fire Protection Service

Available Fire Flow = 850 gpm

$Q_{fireflow} := 850 \quad gpm$

Determine headloss in proposed fire protection service:

Length of 6-inch PVC fire protection service from tap location to Maint. Garage = 450 ft

$L_w := 450 \quad feet$

$D := 6 \quad inches$

$C_p := 140$

$$h_{LFirePipe} := \frac{10.44 \cdot L_w \cdot Q_{fireflow}^{1.85}}{C_p^{1.85} \cdot D^{4.87}}$$

$h_{LFirePipe} = 21.4 \quad feet$

$h_{LFirePipepsi} := 0.433 \cdot h_{LFirePipe}$

$h_{LFirePipepsi} = 9.3 \quad psi$

Determine headloss due to fittings:

$h_{LFireFittings} := 1 \quad psi$

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

Determine headloss due to elevation:

$h_{LFireElevationft} := 6 \ feet$

$h_{LFireElevationpsi} := 0.433 \cdot h_{LFireElevationft}$

$h_{LFireElevationpsi} = 2.6 \ psi$

Determine headloss through 6-inch Watts LF957 RPDA:
- refer to attached cut sheet w/ 850 gpm fire flow

$h_{LFireRPDA} := 9 \ psi$

Calculate the sum of the headlosses in fire protection service:

$h_{LFireSum} := h_{LFirePipepsi} + h_{LFireFittings} + h_{LFireElevationpsi} + h_{LFireRPDA}$

$h_{LFireSum} = 21.9 \ psi$

Calculate residual pressure at building using required fire flow:

Residual Pressure = Residual at watermain - Sum of headloss

$Pressure_{residualbldg} := Pressure_{residual} - h_{LFireSum}$

$Pressure_{residualbldg} = 20.1 \ psi$

A 6-inch fire protection service can provide the 850 gpm required fire flow with 20.1 psi residual pressure at the building.

A PRODUCT SHEET OF NEPTUNE TECHNOLOGY GROUP

T-10® METER

SIZES: 1 ½" and 2"

Construction

Every Neptune® T-10® water meter meets or exceeds the latest AWWA C700 Standard. Its nutating disc, positive displacement principle has been time-proven for accuracy and dependability since 1892, ensuring maximum utility revenue.

The T-10 water meter consists of three major assemblies: a register, a lead free, high-copper alloy maincase, and a nutating disc measuring chamber.

The T-10 meter is available with a variety of register types. For reading convenience, the register can be mounted in one of four positions on the meter.

The corrosion-resistant, lead-free, high-copper alloy maincase will withstand most service conditions: internal water pressure, rough handling, and in-line piping stress.

The innovative floating chamber design of the nutating disc measuring element protects the chamber from frost damage while the unique chamber seal extends the low-flow accuracy by sealing the chamber outlet port to the maincase outlet port. The nutating disc measuring element utilizes corrosion-resistant materials throughout and a thrust roller to minimize wear.

Warranty

Neptune provides a limited warranty for performance, materials and workmanship. See warranty statement for details.

KEY FEATURES

Register

- Magnetic-driven, low-torque registration ensures accuracy
- Impact-resistant register
- High-resolution, low-flow leak detection
- Bayonet-style register mount allows in-line serviceability
- Tamperproof seal pin deters theft
- Date of manufacture, size, and model stamped on dial face

Lead Free Maincase

- Made from lead free, high-copper alloy
- NSF/ANSI 61 Certified
- NSF/ANSI 372 Certified
- Lifetime guarantee
- Resists internal pressure stresses and external damage
- Handles in-line piping variations and stresses
- Lead free, high-copper alloy provides residual value vs. plastic
- Electrical grounding continuity

Nutating Disc Measuring Chamber

- Positive displacement
- Widest effective flow range for maximum revenue
- Proprietary polymer materials maximize long-term accuracy
- Floating chamber design is unaffected by meter position or in-line piping stresses

Guaranteed Systems Compatibility

All T-10 meters are guaranteed adaptable to our ARB®V, ProRead™ (ARB VI), ProCoder™, E-CODER® (ARB VII), E-CODER®)R900*i*™, E-CODER®)R450*i*™, ProCoder™)R900*i*™, TRICON®/S, TRICON/E®3, and Neptune ARB® Utility Systems™ without removing the meter from service.

Specifications

Certification

• NSF/ANSI 61, NSF/ANSI 372

Application

• Cold water measurement of flow in one direction

Maximum Operating Water Pressure

• 150 psi (1,034 kPa)

Maximum Operating Water Temperature

• 80°F

Measuring Chamber

• Nutating disc technology design made from proprietary synthetic polymer

Series 009
Reduced Pressure Zone Assemblies

Sizes: ¼" – 2"

Series 009 Reduced Pressure Zone Assemblies are designed to protect potable water supplies in accordance with national plumbing codes and water authority requirements. This series is designed to protect drinking water supplies from dangerous cross-connections in accordance with national plumbing codes and water authority requirements for non-potable service applications such as irrigation, fireline, or industrial processing.

This series features two in-line, independent check valves, captured springs and replaceable check seats with an intermediate relief valve. Its compact modular design facilitates easy maintenance and assembly access. Sizes ¼" – 1" shutoffs have tee handles.

Features

- Single access cover and modular check construction for ease of maintenance
- Top entry - all internals immediately accessible
- Captured springs for safe maintenance
- Internal relief valve for reduced installation clearances
- Replaceable seats for economical repair
- Bronze body construction for durability ¼" – 2"
- Ball valve test cocks — screwdriver slotted ¼" – 2"
- Large body passages provides low pressure drop
- Compact, space saving design
- No special tools required for servicing

Specifications

A Reduced Pressure Zone Assembly shall be installed at each potential health hazard location to prevent backflow due to back-siphonage and/or backpressure. The assembly shall consist of an internal pressure differential relief valve located in a zone between two positive seating check modules with captured springs and silicone seat discs. Seats and seat discs shall be replaceable in both check modules and the relief valve. There shall be no threads or screws in the waterway exposed to line fluids. Service of all internal components shall be through a single access bronze cover secured with stainless steel bolts. The assembly shall also include two resilient seated isolation valves, four resilient seated test cocks and an air gap drain fitting. The assembly shall meet the requirements of: USC; ASSE Std. 1013; AWWA Std. C511-92; CSA B64.4. Shall be a Watts Series 009.

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

Available Models: ¼" – 2"

Suffix:

QT – quarter-turn ball valves
S – bronze strainer
LF – without shutoff valves
AQT – elbow fittings for 360° rotation ¾" – 2" only
PC – internal Polymer Coating
SH – stainless steel ball valve handles
HC – 2½" inlet/outlet fire hydrant fitting (2" valve)

Prefix:

C – clean and check strainer ¾" – 1" only
U – union connections (see ES-U009)

Materials: ¼" – 2"

Bronze body construction, silicone rubber disc material in the first and second check plus the relief valve. Replaceable polymer check seats for first and second checks. Removable Relief valve seats. Stainless steel cover bolts.

Standardly furnished with NPT body connections. For optional bronze union inlet and outlet connections, specify prefix U (½" – 2"). Series 009QT furnished with quarter turn, full port, resilient seated, bronze ball valve shutoffs.

Pressure / Temperature

Series 009 ¼" – 2" Suitable for supply pressure up to 175psi (12.1 bar). Water temperature: 33°F – 180°F (0.5°C – 75°C).

Series 957RPDA, 957NRPDA, 957ZRPDA

Reduced Pressure Detector Assemblies

Sizes: 2½" – 10"

Series 957RPDA, 957NRPDA, 957ZRPDA Reduced Pressure Detector Assemblies provide protection to the potable water system from contamination in accordance with national plumbing codes. The 957RPDA, 957NRPDA, 957ZRPDA are normally used in health hazard applications to protect against backsiphonage and backpressure. The Watts 957RPDA, 957NRPDA, 957ZRPDA are used to monitor unauthorized use of water from the fire protection system.

957NRPDAOSY

Features

- Extremely compact design
- 70% lighter than traditional designs
- 304 (Schedule 40) stainless steel housing & sleeve
- Groove fittings allow integral pipeline adjustment
- Patented torsion spring check provides lowest pressure loss
- Unmatched ease of serviceability
- Replaceable check disc rubber
- Available with grooved butterfly valve shutoffs
- Bottom mounted cast stainless steel relief valve
- Metered bypass to detect leakage or theft of water from the fire sprinkler system

Specifications

The Reduced Pressure Detector Assembly shall consist of two independent torsion spring check modules, a differential pressure relief valve located between and below the two modules, two drip tight shutoff valves, and required torsion spring check modules and relief valve shall be contained within a sleeve accessible single housing constructed from 304 (Sch 40) stainless steel pipe with groove end connections. Torsion spring checks shall have reversible elastomer discs and in operation produce drip tight closure against reverse flow caused by backpressure or backsiphonage. The bypass line shall include a meter, small diameter reduced pressure zone assembly and isolation valves. Assembly shall be Watts Series 957RPDA, 957NRPDA, 957ZRPDA.

⚠ WARNING

It is illegal to use this product in any plumbing system providing water for human consumption, such as drinking or dishwashing, in the United States. Before installing standard material product, consult your local water authority, building and plumbing codes.

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

Capacity

Series 957RPDA, 957NRPDA, 957ZRPDA flow curves as tested by Underwriters Laboratory.

Flow characteristics collected using butterfly shutoff valves

——— Horizontal ——— N-Pattern ------ Z-Pattern

Flow capacity chart identifies valve performance based upon rated water velocity up to 25fps

- Service Flow is typically determined by a rated velocity of 7.5fps based upon schedule 40 pipe.
- Rated Flow identifies maximum continuous duty performance determined by AWWA.
- UL Flow Rate is 150% of Rated Flow and is not recommended for continuous duty.
- AWWA Manual M22 [Appendix C] recommends that the maximum water velocity in services be not more than 10fps.

Appendix I-1 Standards and Specifications for Erosion and Sediment Control

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

1.0 INTRODUCTION

The Clean Water Act states that storm water discharges associated with an industrial activity from a point source, including through a separate municipal storm sewer system, is unlawful unless authorized by a National Pollutant Discharge Elimination System (NPDES) permit. In New York State, the New York State Department of Environmental Conservation (NYSDEC) administers the NPDES through the State Pollution Discharge Elimination System (SPDES) program. According to the SPDES General Permit, construction sites or common plans of development, that result in soil disturbance of one or more acres that are not classified single family residential or agricultural, are subject to permitting requirements.

This plan outlines the manner in which to reduce the potential of storm water runoff pollution and assigns responsibilities to ensure that the contractor and his subcontractors implement the requirements of the Storm Water Pollution Prevention Plan (SWPPP) during construction activities until the site is stabilized. The SWPPP was developed based on the SPDES General Permit for Storm Water Discharges from Construction Activity Permit No. GP-0-20-001, dated January 29, 2020.

2.0 NOTICE OF INTENT REQUIREMENTS

To obtain coverage under a general permit, an electronic Notice of Intent (eNOI) must be submitted using the Department's online NOI. Permit coverage does not begin until five (5) business days following submittal of the eNOI.

A completed copy of the eNOI form has been included in Appendix B-1.

3.0 STORM WATER POLLUTION PREVENTION PLAN

This Storm Water Pollution Prevention Plan (SWPPP) was developed to set operating guidelines during construction activities. A copy of this SWPPP shall be retained at the construction site throughout the duration of this project.

The Contractor shall meet all conditions of this SWPPP and all conditions within the NYSDEC SPDES General Permit for Stormwater discharges from Construction Activities - Permit No. GP-0-20-001 dated January 29, 2020. The contractor shall be responsible for all measures of the SWPPP including being responsible for any subcontractors who may implement the SWPPP.

During the course of the project and upon approval by the owner, the contractor shall amend the plan whenever there is a change in construction, operation, or maintenance, which may have an effect on the potential for the discharge of pollutants. In addition, if a new subcontractor is utilized at the site who will implement tasks included in the plan, the SWPPP shall be amended. Furthermore, should the contractor wish to amend any design aspect of the SWPPP, the SWPPP preparer must be notified and must approve or address the change.

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

3.1 Site Description

The project site is located at 2190-2220 Wehrle Drive, in Willamsville, New York. See location map in Appendix A. The project site is 24.91 acres, rectangular shaped with approximately 648 feet of frontage along the north side of Wehrle Drive. The existing site consists primarily of maintained lawn areas with a few brush/wooded areas along the eastern property line, and a couple brush areas along the west property line. Under existing conditions, there are five (5) drainage areas, all of which eventually drain to/are conveyed to the drainage system along Wehrle Drive. Drainage area #1 consists of the eastern and northeastern portion of the site. Stormwater runoff from drainage area #1 flows to a drainage ditch located along the east property line and flows south towards Wehrle Drive. Drainage area #2 consists of a small portion along the west property line and the northwest corner of the parcel. Stormwater runoff from drainage area #2 flows to a drainage ditch located along the west property line and flows south towards Wehrle Drive. Drainage area #3 consists of a small portion of the parcel near the middle of the site. Stormwater runoff from drainage area #3 flows to a low spot, pools and then eventually discharges to the drainage ditch located along the west property line and flows south towards Wehrle Drive. Drainage area #4 consists of a small portion of the parcel at the southwest corner of the site. Stormwater runoff from drainage area #4 travels by sheet flow towards Wehrle Drive. Drainage area #5 consists of a small portion of the parcel along the Wehrle Drive frontage. Stormwater runoff from drainage area #5 travels by sheet flow is conveyed to an existing yard drain along the Wehrle Drive frontage. As per the Erie County DPW Division of Highways “Plans for the Reconstruction of Wehrle Drive C.R. 290 Ellicott Creek to Harding Road”, there are two (2) yard drain structures shown on the plans for this parcel. It is understood that the two yard drains were installed to collect stormwater runoff from this parcel and convey it to the Wehrle Drive storm drainage system.

Development will consist of both the development of the northwest portion of the this parcel along with development of a new, public road off of Wehrle Drive and terminating in a cul-de-sac at the northern portion of the site.

Development of the northwest portion of the parcel will consist of the following:

- One (1) three-story, 84,375 square-foot, office building
- One (1) single-story security booth
- One (1) single-story, 24,750 square foot storage garage/maintenance facility
- One (1) two-story, 72,072 square foot parking garage
- Associated site improvements

Site improvements include asphalt paved parking lots to accommodate 100 parking spaces including 4 handicap accessible spaces, concrete loading docks, security fencing, sidewalks, landscaping, and site utilities. Site utilities include a stormwater management system, bioretention basins, sanitary sewer and water service laterals.

Development of the new public road will consist of the construction of a new 28-foot

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

wide public road, within a 52-foot wide right-of-way, designed to the Town of Amherst's standards and will eventually be dedicated to the Town of Amherst. Construction of the public road will include the following public utilities, water, sanitary sewer, storm sewer, electric and gas.

Upon completion, the proposed project will add 6.56 acres of new impervious cover in total. The total anticipated ground disturbance during construction of this project will be approximately 17.5 acres. Due to the increase in impervious areas, stormwater detention is required. Additionally, since the construction of this site will disturb more than one acre, a Storm Water Pollution Prevention Plan (SWPPP), in accordance with the New York State Department of Environmental Conservation (NYSDEC) standards must be prepared and a Notice of Intent (NOI) must be filed prior to beginning construction.

Per FEMA FIRMette, panel number 36029C0229H, no portion of the proposed improvements are within a 100-year flood plain.

Per the USDA NRCS Web Soil Survey for the site, the existing soils on site consist of Lima loam (HSG 'B/D'), Ilion silt loam (HSG 'C/D'), Newstead loam (HSG 'C/D') and Ovid silt loam (HSG 'C/D'). For soils assigned to a dual hydrologic group, the first letter is for drained areas and the second letter is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

Upon review of the New York State Historic Preservation Office's GIS for Archeology and National Register online resources tool, and furthermore, per NYS Office of Parks, Recreation and Historic Preservation correspondence letters, neither construction activities nor the stormwater discharge from this site will have an effect upon historic properties in or eligible for inclusion in the State and National Registers of Historic Places.

B. Below is a description of the intended sequence of major construction activities which involve soil disturbance:

- Install silt sock.
- Clear, grub and install temporary erosion and sediment controls simultaneously where possible.
- Remove debris from site. (Debris to be disposed of in a NYSDEC approved landfill approved to accept this type of material.)
- Remove, stockpile and seed any excess topsoil and install temporary erosion and sediment controls simultaneously.
- Excavate and rough grade the construction site and stormwater detention facility.
- Install utilities, construct building, install pavement and pour concrete sidewalks
- Final grade, replace topsoil, seed and mulch all disturbed turf areas outside of pavement limits immediately upon acceptance of the grade.
- Construct bio-retention facilities and all plantings within
- Replace remaining topsoil and seed and mulch all areas disturbed from construction activities.

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

- After stabilization, remove temporary erosion and sediment controls.

C. Plans and details for temporary stormwater controls have been included in Appendix G-1. The plans have been included to indicate grading limits, drainage patterns, grade slopes, and location of erosion and sediment controls and storm water discharge locations.

The owner/operator is: Acquest Wehrle LLC
5554 Main Street
Williamsville, NY 14221

The contact person is: Omar Abu-Sitta
(phone) 716-204-3570
(email) omar@acquestdevelopment.com

3.2 Construction Controls

The Contractor shall be required to construct and maintain the following controls in accordance with this document and the associated Contract Documents for this project. There shall not be more than five (5) acres of disturbed soil at any one time without prior written approval from the NYSDEC and/or the Town of Amherst. Since this project will disturb greater than 5 acres of soil at one time, Town of Amherst approval (MS4 Approval) is required, prior to the start of site disturbance activities.

A. Stabilization Practices.

1. Seeding.
Immediately after completion of grading operations, topsoil shall be replaced and all areas disturbed from grading operations shall be seeded in an effort to stabilize the site. Where land disturbance is necessary, temporary seeding or mulching must be used on areas which will be exposed for more than 14 days. Permanent stabilization should be performed as soon as possible after completion of grading.

2. Mulching.
Directly after seeding, all disturbed areas shall be mulched to prevent surface compaction, reduce runoff and erosion, control weeds and help establish plant cover.

3. Preservation of Vegetation.
The contractor shall make every effort to protect trees, shrubs, ground cover and any other vegetation adjacent to the work areas. The purpose of preserving existing vegetation where obtainable is to reduce soil erosion and enhance water quality.

4. Dust Control.
Dust resulting from land-disturbing activities shall be controlled to prevent surface and air movement of dust from disturbed soil surfaces. Dust control measures are

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

necessary on construction roads, access points and other disturbed areas subject to dust movement.

5. Equipment/Material Storage.
An equipment and material storage area shall be determined by the site contractor prior to any ground disturbance. The location of the storage area may be modified if deemed necessary. The storage area will be graded to insure that any material spillage shall be directed away from the adjacent property. In addition, any identified chemical spills (oil, grease, etc.) shall be addressed immediately, a written log prepared and kept on-site with the SWPPP and appropriate local officials contacted, if necessary.

6. Temporary Soil Stockpiles.
A temporary stockpile area shall be determined by the site contractor prior to any ground disturbance. The shape, size and location of this area may be modified by the site contractor if deemed necessary. The stockpile area shall be perimeter protected with silt fence and seeded as soon as possible to minimize the potential for sediment transport and erosion.

7. Staging Area
The contractor staging area shall be determined by the site contractor prior to any ground disturbance. The shape, size and location of this area may be modified by the site contractor if deemed necessary.

B. Structural Practices.

1. Silt Sock (Temporary)
   - Silt sock is a temporary sediment control practice composed of a degradable geotextile mesh tube filled with compost filter media to filter sediment and other pollutants associated with construction activity.
   - Silt sock is used where erosion will occur in the form of sheet erosion and there is no concentration of water flowing to the sock.
   - Silt sock shall be maintained and accumulated sediment shall be removed when it reaches half the above ground height of the sock and disposed of in accordance with the plan.

2. Storm Drain Inlet Protection (Temporary)
   - A storm drain inlet barrier shall be installed around inlets. The purpose is to prevent sediment - laden water from entering inlets to a storm drain system.
   - Inspect and clean after every storm. Sediment should be removed when 50 percent of the storage volume is achieved. This material should be incorporated in the site in a stabilized manner.

3. Stabilized Construction Entrance (Temporary).
   - A stabilized construction entrance shall be constructed where traffic will be entering or leaving a construction site to or from a street, alley, sidewalk or

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

parking area. The purpose of the stabilized construction entrance is to reduce or eliminate the tracking of sediment onto public streets.

C. Other Pollution Prevention Measures (Chemicals and Debris)

- The Contractor shall be responsible for providing onsite trash receptacles appropriate to store all litter, construction chemicals and construction debris. The contents of the receptacles shall be properly disposed of at a NYSDEC licensed waste facility (or equal).
- Hazardous products shall be maintained in their original containers when possible, and be kept with their original labels and applicable Material Safety Data Sheets (MSDS);
- Fertilizers shall only be applied as recommended by the manufacturer, and once applied shall be worked into the soil to limit exposure to storm water runoff. Storage shall be within an enclosed or covered area.
- Paints, coatings and sealants shall be maintained in a tightly enclosed, leak-proof container at all times. Excess materials shall be disposed of as required by applicable laws and regulations.
- Excess concrete material shall be removed and disposed of off-site in an appropriate manner. Concrete wash water shall not be allowed to discharge to storm water conveyances.
- All petroleum product spills, if such occurs, shall be cleaned up immediately, the source of the spill be repaired or removed, and contained material shall be disposed of as required by applicable law. In the event a spill, the contractor shall contact the NYSDEC Spills Hotline at 1-800-457-7362 to report such spill. Within 2 hours of discovery, except spills which meet all of the following criteria:
    1) The quantity is known to be less than 5 gallons; and
    2) The spill is contained and under the control of the spiller; and
    3) The spill has not and will not reach the State's water or any land; and
    4) The spill is cleaned up within 2 hours of discovery.
    5) A spill is considered to have not impacted land if it occurs on a paved surface such as asphalt or concrete. A spill in a dirt or gravel parking lot is considered to have impacted land and is reportable.

  More details on notification and reporting requirements can be found at the NYSDEC Website (http://www.dec.ny.gov/chemical/8428.html

D. Good Housekeeping and Control of Construction Wastes and Chemicals

1. Good Housekeeping

   It is anticipated that construction materials such as concrete, asphalt, petroleum based products, stone, and fertilizers will be present on-site at various stages during the project. In order to prevent the conveyance to and contamination of any adjacent and/or downstream property, lands or water bodies, good housekeeping practices shall be employed. Such precautions shall include:

   - Storing of only enough materials to complete the project, or active phases of the

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

project;
- Materials stored on-site shall be stored in a neat and orderly manner and in their appropriate containers and, if possible, under a covered area or enclosed structure;
- The manufacturer's recommendations for use and disposal shall be followed at all times;
- The project site superintendent shall inspect the site daily to ensure proper use, storage and disposal of all materials on-site.

2. Hazardous Products
Hazardous products shall be maintained in their original containers when possible, and be kept with their original labels and applicable Material Safety Data Sheets (MSDS);
   - All petroleum product spills, if such occurs, shall be cleaned up immediately, the source of the spill be repaired or removed, and contained material shall be disposed of as required by applicable law.
   - Fertilizers shall only be applied as recommended by the manufacturer, and once applied shall be worked into the soil to limit exposure to storm water runoff. Storage shall be within an enclosed or covered area.
   - Paints, coatings and sealants shall be maintained in a tightly enclosed, leak-proof container at all times. Excess materials shall be disposed of as required by applicable laws and regulations;
   - Excess concrete material shall be removed and disposed of off-site in an appropriate manner. Concrete wash water shall not be allowed to discharge to storm water conveyances.

3.3 Storm Water Management.

The best approach to storm water management for construction activities is through the use of self-designed Storm Water Pollution Prevention Plan (SWPPP). The development of the SWPPP through the use of Best Management Practices (BMP) is to prevent erosion and pollutants from the construction materials mixing with storm water runoff and being discharged from the project site. BMP's should be designed to prevent, or at least control, the pollution of storm water before it has a chance to affect receiving waters. Using BMP's in this way improves the discharge water quality.

Specific requirements for management of storm water and maintaining water quality include, but are not limited to:

A. There shall be no increase in turbidity that will cause a substantial visible contrast to natural condition;
B. There shall be no suspended, colloidal, and settleable solids that will cause deposition or impair the waters for their best usages, and;
C. There shall be no residue from oil and floating substances, visible oil film, globules or grease.

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

In addition, local ordinances may affect these Best Management Practices. Any conditions or specific local ordinances are to be included in the development of the BMP's for the project.

3.4 Post Construction Water Quality & Quantity Controls

A. Chapters 3-5 of the NYSDEC Stormwater Management Design Manual (SMDM) provides a green infrastructure approach to stormwater management to reduce a site's impact on the aquatic ecosystem through the use of site planning techniques, runoff reduction techniques, and standard SMP's. Runoff Reduction Volume (RRv) is the reduction of the total Water Quality Volume (WQv) by application of green infrastructure techniques and SMP's to replicate pre-development hydrology.

Outlined below is the NYSDEC SMDM site planning flowchart in relation to this site.

Step 1: Site Planning – Green Infrastructure Method to Preserve Natural Resources and Reduce Impervious Cover

1. Preservation of Undisturbed Areas
   - Vegetative areas and natural terrain has been retained to the maximum extent practical/possible.

2. Preservation of Buffer
   - Natural vegetative buffer has been retained to the maximum extent practical/possible. As many trees as possible have been saved.
3. Reduction of Clearing and Grading
   - Clearing and grading has been limited to the least amount possible while still allowing for development of the site.
4. Locating Development in Less Sensitive Areas
   - The project will have no effect upon cultural resources in or eligible for inclusion in the National Register of Historic Places.
5. Open Space Design
   - The impervious cover has been minimized to the smallest extent possible that complies with the town code.
6. Soil Restoration
   - Soil restoration will be applied to the proposed "bio-retention" areas and all landscaped areas.
7. Roadway Reduction
   - Roadway widths and lengths have been minimized to the maximum extent possible while still maintaining the intended use of the site.
8. Sidewalk Reduction

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

- Sidewalk widths and lengths have been minimized to the smallest extent possible while still maintaining accessibility to the building.

9. Driveway Reduction
   - Driveways have been minimized as much as possible while still meeting site and fire code requirements.
10. Cul-de-sac Reduction
   - The minimum size for a cul-de-sac, in accordance with the Town Code has been provided.
11. Building Footprint Reduction
   - The smallest possible building footprint has been provided.
12. Parking Reduction
   - Parking areas have been reduced to the maximum extent possible. The Town dictates the minimum required parking spaces.

Step 2: Water Quality Volume

The total water quality volume required is 24,350 c.f.

Step 3: Runoff Reduction by Applying Green Infrastructure Techniques and Standard SMPs with RRv Capacity

1. Conservation of Natural Areas
   - Natural areas and natural terrain have been retained to the maximum extent practical/possible while still allowing for the buildout of the property.
2. Sheet flow to Riparian Buffers or Filter Strips
   - No riprarian buffers are present on site.
3. Vegetated Open Swale
   - A dry swale is proposed to treat a portion of the proposed road.
4. Tree Planting / Tree Box
   - New trees will be planted on-site to enhance the landscaping on-site and meet the Town's Landscaping requirements. Although trees will be planted, RRv credit cannot be used. The planted areas drain to the bio-retention basin. Credit is already given for these areas.
5. Disconnection of Rooftop Runoff
   - Runoff from the new building structure will be directed to bioretention basins, prior to being discharged to the detention system.
6. Stream Daylighting
   - No stream daylighting is proposed.
7. Rain Garden

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

- This method was considered but due to site constraints, a bio-retention basin is more applicable.

8. Green Roof
   - This method was considered but a bioretention basin was more applicable.
9. Stormwater Planters
   - This method was considered but a bioretention basin was more applicable.
10. Rain tanks/Cisterns
    - This method was considered, however, landscape irrigation will not be a concern.
11. Porous Pavement
    - Not applicable – Maintenance issues and the use of salts for parking lot deicing make this option impractical. Impervious soils on site make this option infeasible.
12. Standard SMPs with RRv Capacity
    - Two (2) bioretention basins and one (1) open swale are proposed to treat the proposed impervious area.

Two (2) bioretention basins will be used to treat 100% of the new impervious area from the proposed office building, storage garage/maintenance building, parking garage and parking lots, along with the northern portion of the proposed road. A dry swale will be used to treat 100% of the new impervious area from the southern portion of the proposed road.

Water Quality Volume and RRv has not been designed for the future development site along the south of the parcel.

Both the minimum RRv requirement and the water quality volume requirement has been attained through the use of the bioretention basin and open swale.

Below is a summary of the water quality volume and runoff reduction volumes attained on site:

Total Water Quality Volume Required (WQv):	**24,350 cf**
Minimum Runoff Reduction Volume Required (RRv, min)	**4,524 cf**
Bioretention Basin (from Northwest Drainage Area):	
WQ_v Required	13,195 cf
WQ_v Provided	7,917 cf
RR_v Provided (Standard SMP with Runoff Reduction Volume) – due to HSG C/D soils, RRv = 40% WQv for that practice (typical all bioretention facilities)	5,278 cf
Total WQ_v Provided	13,195 cf

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

Bioretention Basin (from Northeast Drainage Area):

WQ_v Required	5,797 cf
WQ_v Provided	3,478 cf
RR_v Provided (Standard SMP with Runoff Reduction Volume) – due to HSG C/D soils, RRv = 40% WQv for that practice (typical all bioretention facilities)	2,319 cf
Total WQ_v Provided	5,797 cf

Dry Swale:

WQ_v Required	5,360 cf
WQ_v Provided	4,288 cf
RR_v Provided (Standard SMP with Runoff Reduction Volume) – due to HSG C/D soils, RRv = 20% WQv for that practice (with underdrain)	1,072 cf
Total WQ_v Provided	5,360 cf

Total RRv Provided:	**8,669 cf**
Total WQv Provided (WQv provided + RRv provided):	**24,352 cf**

Post construction maintenance of the permanent water quality treatment facilities will be performed by the Owner. For the bioretention basins and dry swale this will include removing any litter, maintaining and replacing plantings as needed and adding/replacing mulch as needed.

B. New York State Department of Environmental Conservation regulations require design of stormwater detention facilities to limit the peak discharge produced by the 10-year and 100-year storm events to the pre-developed runoff rates, as well as provide extended detention of the 1-YR, 24-HR storm event (channel protection volume). Additionally, the Town of Amherst regulations require the peak discharge from the 25-year post-developed storm event to be limited to the 10-year pre-developed storm runoff rate.

Water quantity control will be provided through the combination of bioretention basins, a dry swale, dry detention basin and an outlet control structure that will consist of a manhole with a weir plate, 6-inch diameter orifice and a 15-inch diameter HDPE outlet pipe.

Each bioretention basin will utilize one 24” x 24” catch basin with an 18-inch diameter HDPE pipe to control the stormwater discharge from each facility.

The dry detention basin is designed to accept stormwater runoff from all the drainage areas, under developed conditions, as shown on the Proposed Drainage Analysis Map.

The dry detention basin will utilize a precast concrete manhole as a control structure. The

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

stormwater runoff rates will be controlled through a combination of a 6-inch diameter orifice and a weir. The 15-inch diameter HDPE outlet pipe will convey the stormwater discharges from the dry detention basin to the existing storm sewer system on Wehrle Drive.

The stormwater discharge rates for the 10-year and 25-year storm events under developed conditions, will be below the stormwater discharge rates for the 10-year storm event under pre-developed conditions. The stormwater discharge rates for the 100-year storm event under developed conditions, will be below the stormwater discharge rate for the 100-year storm event under pre-developed conditions. The Channel Protection Volume (CPv) requirement will be met by the use of the 6-inch diameter orifice.

The stormwater detention calculations were completed using HYDROCAD, version 10 software. Following is a summary of the pre and post development discharge rates and associated detention volumes and water surface elevations:

East Discharge to Wehrle Drive Storm Sewer:

Storm Event	Pre-Development Discharge (cfs)	Post-Development Discharge (cfs)	Dry Detention Basin Volume (cf)	Dry Detention Basin Water Surface Elevation (ft)
10-YR	5.40	4.29	82,942	693.05
25-YR	11.59	5.20	114,117	693.37
100-YR	24.49	6.39	183,906	694.00

West Discharge to Wehrle Drive Storm Sewer:

Storm Event	Pre-Development Discharge (cfs)	Post-Development Discharge (cfs)
10-YR	3.64	1.93
25-YR	5.22	2.77
100-YR	8.48	4.49

3.5 Construction and Waste Materials

Some of the construction materials expected to be stored onsite include precast concrete drainage structures, corrugated HDPE pipe, under drain pipe, silt sock, etc. These materials will be stored in the contractor's staging area. The Contractor shall install additional silt fence around the perimeter of both the staging and topsoil stockpile areas, should contaminated runoff flow off the area.

3.6 Other Requirements.

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

A. Any discharges other than storm water must be in compliance with the appropriate SPDES permit (other than this permit).
B. No solid materials including building materials shall be discharged to waters of the United States, except as authorized by a federal or state law.
C. All construction activities shall be in compliance with all federal, state and local laws as required.

3.7 Inspections.

A. Inspections are important for visually evaluating potential storm water runoff pollution sources at the facility. All projects should be inspected periodically to ensure contaminants are not present in the storm water exiting a project site. On projects which apply for coverage under the SPDES General Permit, qualified inspectors of the Owner shall inspect and evaluate the site. Qualified inspectors are persons knowledgeable in the principles and practices of erosion and sediment control such as a licensed professional engineer, Certified Professional in Erosion and Sediment Control (CPESC), or a soil scientist.

B. The Owner shall have a qualified inspector conduct an assessment of the site prior to the commencement of construction and certify in an inspection report that the erosion and sediment controls described in the SWPPP have been installed or implemented. Following the commencement of construction, site inspections shall occur at least once every seven calendar days. For construction sites where soil disturbance activities are on going and the owner or operator has received authorization to disturb greater than five (5) acres of soil at any one time, the qualified inspector shall conduct at least two (2) site inspections every seven (7) calendar days. When performing just two (2) inspections every seven (7) calendar days, the inspections shall be separated by a minimum of two (2) full calendar days.

C. For construction sites where soil disturbance activities have been temporarily suspended (e.g. winter shutdown) and temporary stabilization measures have been applied to all disturbed areas, the qualified inspector shall conduct a site inspection at least once every thirty (30) calendar days. The owner or operator shall notify the Regional Office stormwater contact person in writing prior to reducing the frequency of inspections

D. The owner shall prepare a written summary of the project status with respect to compliance with the Permit at a minimum frequency of every three months during which coverage under the Permit exists. The summary should address the status of achieving each component of the SWPPP. The Owner shall post at the site, in a publicly-accessible location, a summary of the site inspection activities on a monthly basis.

E. For construction sites where soil disturbance activities have been shut down with partial project completion, the qualified inspector can stop conducting inspections if all areas disturbed as of the project shutdown date have achieved final stabilization

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

and all post-construction stormwater management practices required for the completed portion of the project have been constructed in conformance with the SWPPP and are operational. The owner or operator shall notify the Regional Office stormwater contact person in writing prior to the shutdown. If soil disturbance activities are not resumed within 2 years from the date of shutdown, the owner or operator shall have the qualified inspector(s) perform a final inspection and certify that all disturbed areas have achieved final stabilization, and all temporary, structural erosion and sediment control measures have been removed; and that all post-construction stormwater management practices have been constructed in conformance with the SWPPP by signing the "Final Stabilization" and "Post-Construction Stormwater Management Practice" certification statements on the Notice of Termination (N.O.T.). The owner or operator shall then submit the completed N.O.T. form to the address in Part II.A.1 of the permit.

F. Each inspection report shall, at the minimum, include the following:

- Date and time of inspection
- Name and title of person(s) performing inspection.
- A description of the weather and soil conditions (e.g. dry, wet, saturated) at the time of the inspection
- A description of the condition of the runoff at all points of discharge from the construction site. This shall include identification of any discharges of sediment from the construction site. Include discharges from conveyance systems (i.e. pipes, culverts, ditches, etc.) and overland flow.
- On a site map, indicate the extent of all disturbed site areas and drainage pathways. Indicate site areas that are expected to undergo initial disturbance or significant site work within the next 14-day period.
- Indicate on a site map all areas of the site map that have undergone temporary or permanent stabilization.
- Indicate all disturbed site areas that have not undergone active site work during the previous 14-day period.
- Photographs of the site on the day of the inspection, including a date stamp on the photos, showing deficiencies found, shall be included in the report.
- Inspect all sediment control practices and record the approximate degree of sediment accumulation as a percentage of the sediment storage volume.
- Inspect all erosion and sediment control practices and record all maintenance requirements such as verifying the integrity of barrier or diversion systems (silt sock) and containment systems (sediment basins).
- Identification of all erosion and sediment control practices that were not installed properly or are not functioning as designed and need to be reinstalled or replaced
- Identify any evidence of rill or gully erosion occurring on slopes and any loss of stabilizing vegetation or seeding/mulching.
- Document any excessive deposition of sediment or ponding water along barriers or diversion systems. Record the depth of sediment within containment structures, any erosion near outlet and overflow structures, and verify the ability of rock filters around perforated riser pipes to pass water.

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

- Location where vehicles enter or exit the site shall be inspected for evidence of offsite sediment tracking
- Current phase of construction of all post-construction stormwater management practices and identification of all construction that is not in conformance with the SWPPP and technical standards
- Corrective action(s) that must be taken to install, repair, replace or maintain erosion and sediment control practices; and to correct deficiencies identified with the construction of the post-construction stormwater management practice(s).

F. The process for conducting the evaluation shall follow these steps:

- Review the Storm Water Pollution Prevention Plan and draw up a list of any items of concern.
- List all specified control measures and areas covered in the plan.
- Conduct inspections to determine whether all storm water pollution prevention measures are accurately identified in the plan, are in place, and working properly.
- Document findings and inspections in a site log book.
- Modify SWPPP as appropriate. (Note: The plan shall be modified by the contractor and site inspector within 7 days of the inspection).

G. Within one business day of the completion of an inspection, the qualified inspector shall notify the owner or operator and appropriate contractor (or subcontractor) identified in Contractor's Certification Form of any corrective actions that need to be taken. The contractor (or subcontractor) shall begin implementing the corrective actions within one business day of this notification and shall complete the corrective actions in a reasonable time frame.

H. All inspection reports shall be signed by the qualified inspector. A copy of the inspection reports shall be maintained on site with the SWPPP.

A copy of the erosion and sediment control inspection checklist has been included in Appendix D-1.

3.8 Maintenance.

The contractor is required to inspect and maintain all soil erosion and siltation controls throughout the duration of the project and until final stabilization of the site. "Final Stabilization" means that all soil disturbing activities at the site have been completed, and that a uniform, perennial vegetative cover with a density of 80% has been obtained.

Maintenance shall include, but not be limited to, repair or replacement of any existing controls, removal of sediment and any other measures deemed necessary, which would reduce soil erosion and siltation runoff. Sediment shall be removed from sediment traps or sediment basins whenever their capacity has been reduced by fifty (50) percent from the design capacity. Refer to Section 3.2 for maintenance of individual controls.

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

Maintenance of the permanent bioretention basins, dry swale and stormwater detention facility will be provided by the owner. Generally, this consists of inspecting and replacing diseased plants, removing litter and debris, checking for clogging of planting soil and replacing when necessary. Suggested inspection and maintenance checklists are provided in appendix H-1.

3.9 Contractors.

The contractor must sign a SWPPP certification form before undertaking any construction activity at the site identified in the Storm Water Pollution Prevention Plan. The contractor is responsible for any and all subcontractors working on the SWPPP. A copy of the Contractor's Certification Form has been included in Appendix E-1.

4.0 RECORD RETENTION

The owner or operator shall retain a copy of the NOI, NOI Acknowledgment Letter, SWPPP, MS4 SWPPP Acceptance form and any inspection reports that were prepared in conjunction with this permit for a period of at least five (5) years from the date that the site achieves final stabilization. This period may be extended by the Department, in its sole discretion, at any time upon written notification

5.0 NOTICE OF TERMINATION REQUIREMENTS

A. Prior to filing a Notice of Termination (NOT) the Owner shall have a qualified inspector perform a final site inspection. The qualified inspector shall certify that all disturbed areas have achieved final stabilization; and all temporary, structural erosion and sediment control measures have been removed; and that all post-construction stormwater management practices have been constructed in conformance with the SWPPP by signing the “Final Stabilization” and “Post-Construction Stormwater Management Practice” certification statements on the NOT.

B. Post-construction stormwater management practices that are owned by a public or private institution (e.g. school, college, university), or government agency or authority, the owner or operator has policy and procedures in place that ensures operation and maintenance of the practices in accordance with the operation and maintenance plan.

C. Post-construction stormwater management practices that are privately owned, the owner or operator has a deed restriction in place that requires operation and maintenance of the practice(s) in accordance with the operation and maintenance plan.

D. Post-construction stormwater management practices that are privately owned, but will be maintained by a municipality, require an executed maintenance agreement be in place with the municipality that will maintain the post-construction stormwater management practice(s). Any right-of- way(s) needed to maintain such practice(s) must have been deeded to the municipality in which the practice(s) is located.

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

E. Once the project is stabilized, a level 1 inspection for the stormwater management practices shall be performed and signed off by a professional engineer. The report shall be submitted to the Town's stormwater management officer with the NOT form.

In addition, the Owner must certify that the permanent structure(s) have been constructed as described in the SWPPP.

When the project is completed and the site has been stabilized, the Owner must submit a NOT. A copy of the NOT form has been included in Appendix F-1. The NOT form shall be submitted to the following address:

NYS DEC "Notice of Termination"

Owner/Operator Certification Form

SPDES General Permit For Stormwater Discharges From Construction Activity (GP-0-20-001)

Project/Site Name: Proposed Office Building & Proposed Road

eNOI Submission Number: HPD-5WB3-PP8RE

eNOI Submitted by: ☐ Owner/Operator ☑ SWPPP Preparer ☐ Other

Certification Statement - Owner/Operator

I have read or been advised of the permit conditions and believe that I understand them. I also understand that, under the terms of the permit, there may be reporting requirements. I hereby certify that this document and the corresponding documents were prepared under my direction or supervision. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations. I further understand that coverage under the general permit will be identified in the acknowledgment that I will receive as a result of submitting this NOI and can be as long as sixty (60) business days as provided for in the general permit. I also understand that, by submitting this NOI, I am acknowledging that the SWPPP has been developed and will be implemented as the first element of construction, and agreeing to comply with all the terms and conditions of the general permit for which this NOI is being submitted.

PREFACE

Pursuant to Section 402 of the Clean Water Act ("CWA"), stormwater *discharges* from certain *construction activities* are unlawful unless they are authorized by a *National Pollutant Discharge Elimination System ("NPDES")* permit or by a state permit program. New York administers the approved State Pollutant Discharge Elimination System (SPDES) program with permits issued in accordance with the New York State Environmental Conservation Law (ECL) Article 17, Titles 7, 8 and Article 70.

An *owner or operator* of a *construction activity* that is eligible for coverage under this permit must obtain coverage prior to the *commencement of construction activity*. Activities that fit the definition of "*construction activity*", as defined under 40 CFR 122.26(b)(14)(x), (15)(i), and (15)(ii), constitute construction of a *point source* and therefore, pursuant to ECL section 17-0505 and 17-0701, the *owner or operator* must have coverage under a SPDES permit prior to *commencing construction activity*. The *owner or operator* cannot wait until there is an actual *discharge* from the *construction site* to obtain permit coverage.

***Note: The italicized words/phrases within this permit are defined in Appendix A.**

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

Part 1. PERMIT COVERAGE AND LIMITATIONS

A. Permit Application

This permit authorizes stormwater *discharges* to *surface waters of the State* from the following *construction activities* identified within 40 CFR Parts 122.26(b)(14)(x), 122.26(b)(15)(i) and 122.26(b)(15)(ii), provided all of the eligibility provisions of this permit are met:

1. *Construction activities* involving soil disturbances of one (1) or more acres; including disturbances of less than one acre that are part of a *larger common plan of development or sale* that will ultimately disturb one or more acres of land; excluding *routine maintenance activity* that is performed to maintain the original line and grade, hydraulic capacity or original purpose of a facility;

2. *Construction activities* involving soil disturbances of less than one (1) acre where the Department has determined that a *SPDES* permit is required for stormwater *discharges* based on the potential for contribution to a violation of a *water quality standard* or for significant contribution of *pollutants* to *surface waters of the State.*

3. *Construction activities* located in the watershed(s) identified in Appendix D that involve soil disturbances between five thousand (5,000) square feet and one (1) acre of land.

B. Effluent Limitations Applicable to Discharges from Construction Activities

Discharges authorized by this permit must achieve, at a minimum, the effluent limitations in Part I.B.1. (a) – (f) of this permit. These limitations represent the degree of effluent reduction attainable by the application of best practicable technology currently available.

1. Erosion and Sediment Control Requirements - The *owner or operator* must select, design, install, implement and maintain control measures to *minimize* the *discharge* of *pollutants* and prevent a violation of the *water quality standards*. The selection, design, installation, implementation, and maintenance of these control measures must meet the non-numeric effluent limitations in Part I.B.1.(a) – (f) of this permit and be in accordance with the New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016, using sound engineering judgment. Where control measures are not designed in conformance with the design criteria included in the technical standard, the *owner or operator* must include in the *Stormwater Pollution Prevention Plan* ("SWPPP") the reason(s) for the

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

deviation or alternative design and provide information which demonstrates that the deviation or alternative design is *equivalent* to the technical standard.

a. **Erosion and Sediment Controls.** Design, install and maintain effective erosion and sediment controls to *minimize* the *discharge* of *pollutants* and prevent a violation of the *water quality standards*. At a minimum, such controls must be designed, installed and maintained to:

   (i) *Minimize* soil erosion through application of runoff control and soil stabilization control measure to *minimize pollutant discharge*s;

   (ii) Control stormwater *discharge*s, including both peak flowrates and total stormwater volume, to *minimize* channel and *streambank* erosion and scour in the immediate vicinity of the *discharge* points;

   (iii) *Minimize* the amount of soil exposed during *construction activity*;

   (iv) *Minimize* the disturbance of *steep slopes*;

   (v) *Minimize* sediment *discharge*s from the site;

   (vi) Provide and maintain *natural buffer*s around surface waters, direct stormwater to vegetated areas and maximize stormwater infiltration to reduce *pollutant discharge*s, unless *infeasible*;

   (vii) *Minimize* soil compaction. Minimizing soil compaction is not required where the intended function of a specific area of the site dictates that it be compacted;

   (viii) Unless *infeasible*, preserve a sufficient amount of topsoil to complete soil restoration and establish a uniform, dense vegetative cover; and

   (ix) *Minimize* dust. On areas of exposed soil, *minimize* dust through the appropriate application of water or other dust suppression techniques to control the generation of pollutants that could be discharged from the site.

b. **Soil Stabilization**. In areas where soil disturbance activity has temporarily or permanently ceased, the application of soil stabilization measures must be initiated by the end of the next business day and completed within fourteen (14) days from the date the current soil disturbance activity ceased. For construction sites that *directly discharge* to one of the 303(d) segments

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

listed in Appendix E or is located in one of the watersheds listed in Appendix C, the application of soil stabilization measures must be initiated by the end of the next business day and completed within seven (7) days from the date the current soil disturbance activity ceased. See Appendix A for definition of *Temporarily Ceased*.

c. **Dewatering**. *Discharges* from *dewatering* activities, including *discharges* from *dewatering* of trenches and excavations, must be managed by appropriate control measures.

d. **Pollution Prevention Measures**. Design, install, implement, and maintain effective pollution prevention measures to *minimize* the *discharge* of *pollutants* and prevent a violation of the *water quality standards*. At a minimum, such measures must be designed, installed, implemented and maintained to:

(i) *Minimize* the *discharge* of *pollutants* from equipment and vehicle washing, wheel wash water, and other wash waters. This applies to washing operations that use clean water only. Soaps, detergents and solvents cannot be used;

(ii) *Minimize* the exposure of building materials, building products, construction wastes, trash, landscape materials, fertilizers, pesticides, herbicides, detergents, sanitary waste, hazardous and toxic waste, and other materials present on the site to precipitation and to stormwater. Minimization of exposure is not required in cases where the exposure to precipitation and to stormwater will not result in a *discharge* of *pollutants*, or where exposure of a specific material or product poses little risk of stormwater contamination (such as final products and materials intended for outdoor use) ; and

(iii) Prevent the *discharge* of *pollutants* from spills and leaks and implement chemical spill and leak prevention and response procedures.

e. **Prohibited *Discharges*.** The following *discharges* are prohibited:

(i) Wastewater from washout of concrete;

(ii) Wastewater from washout and cleanout of stucco, paint, form release oils, curing compounds and other construction materials;

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

(iii) Fuels, oils, or other *pollutants* used in vehicle and equipment operation and maintenance;

(iv) Soaps or solvents used in vehicle and equipment washing; and

(v) Toxic or hazardous substances from a spill or other release.

f. Surface Outlets. When discharging from basins and impoundments, the outlets shall be designed, constructed and maintained in such a manner that sediment does not leave the basin or impoundment and that erosion at or below the outlet does not occur.

C. Post-construction Stormwater Management Practice Requirements

1. The *owner or operator* of a *construction activity* that requires post-construction stormwater management practices pursuant to Part III.C. of this permit must select, design, install, and maintain the practices to meet the *performance criteria* in the New York State Stormwater Management Design Manual ("Design Manual"), dated January 2015, using sound engineering judgment. Where post-construction stormwater management practices ("SMPs") are not designed in conformance with the *performance criteria* in the Design Manual, the *owner or operator* must include in the SWPPP the reason(s) for the deviation or alternative design and provide information which demonstrates that the deviation or alternative design is *equivalent* to the technical standard.

2. The *owner or operator* of a *construction activity* that requires post-construction stormwater management practices pursuant to Part III.C. of this permit must design the practices to meet the applicable *sizing criteria* in Part I.C.2.a., b., c. or d. of this permit.

a. Sizing Criteria for New Development

(i) Runoff Reduction Volume ("RRv"): Reduce the total Water Quality Volume ("WQv") by application of RR techniques and standard SMPs with RRv capacity. The total WQv shall be calculated in accordance with the criteria in Section 4.2 of the Design Manual.

(ii) Minimum RRv and Treatment of Remaining Total WQv: Construction activities that cannot meet the criteria in Part I.C.2.a.(i) of this permit due to site limitations shall direct runoff from all newly constructed impervious areas to a RR technique or standard SMP with RRv capacity unless infeasible. The specific site limitations that prevent the reduction of 100% of the WQv shall be documented in the SWPPP.

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

For each impervious area that is not directed to a RR technique or standard SMP with RRv capacity, the SWPPP must include documentation which demonstrates that all options were considered and for each option explains why it is considered infeasible.

In no case shall the runoff reduction achieved from the newly constructed impervious areas be less than the Minimum RRv as calculated using the criteria in Section 4.3 of the Design Manual. The remaining portion of the total WQv that cannot be reduced shall be treated by application of standard SMPs.

(iii) Channel Protection Volume ("Cpv"): Provide 24 hour extended detention of the post-developed 1-year, 24-hour storm event; remaining after runoff reduction. The Cpv requirement does not apply when:
(1) Reduction of the entire Cpv is achieved by application of runoff reduction techniques or infiltration systems, or
(2) The site discharges directly to tidal waters, or fifth order or larger streams.

(iv) *Overbank* Flood Control Criteria ("Qp"): Requires storage to attenuate the post-development 10-year, 24-hour peak discharge rate (Qp) to predevelopment rates. The Qp requirement does not apply when:
(1) the site discharges directly to tidal waters or fifth order or larger streams, or
(2) A downstream analysis reveals that *overbank* control is not required.

(v) Extreme Flood Control Criteria ("Qf"): Requires storage to attenuate the post-development 100-year, 24-hour peak discharge rate (Qf) to predevelopment rates. The Qf requirement does not apply when:
(1) the site discharges directly to tidal waters or fifth order or larger streams, or
(2) A downstream analysis reveals that *overbank* control is not required.

b. *Sizing Criteria* for *New Development* in Enhanced Phosphorus Removal Watershed

(i) Runoff Reduction Volume (RRv): Reduce the total Water Quality Volume (WQv) by application of RR techniques and standard SMPs with RRv capacity. The total WQv is the runoff volume from the 1-year, 24 hour design storm over the post-developed watershed and shall be

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

calculated in accordance with the criteria in Section 10.3 of the Design Manual.

(ii) Minimum RRv and Treatment of Remaining Total WQv: *Construction activities* that cannot meet the criteria in Part I.C.2.b.(i) of this permit due to *site limitations* shall direct runoff from all newly constructed *impervious areas* to a RR technique or standard SMP with RRv capacity unless *infeasible*. The specific *site limitations* that prevent the reduction of 100% of the WQv shall be documented in the SWPPP. For each *impervious area* that is not directed to a RR technique or standard SMP with RRv capacity, the SWPPP must include documentation which demonstrates that all options were considered and for each option explains why it is considered *infeasible.*

In no case shall the runoff reduction achieved from the newly constructed *impervious areas* be less than the Minimum RRv as calculated using the criteria in Section 10.3 of the Design Manual. The remaining portion of the total WQv that cannot be reduced shall be treated by application of standard SMPs.

(iii) Channel Protection Volume (Cpv): Provide 24 hour extended detention of the post-developed 1-year, 24-hour storm event; remaining after runoff reduction. The Cpv requirement does not apply when:
(1) Reduction of the entire Cpv is achieved by application of runoff reduction techniques or infiltration systems, or
(2) The site *discharge*s directly to tidal waters, or fifth order or larger streams.

(iv) *Overbank* Flood Control Criteria (Qp): Requires storage to attenuate the post-development 10-year, 24-hour peak *discharge* rate (Qp) to predevelopment rates. The Qp requirement does not apply when:
(1) the site *discharge*s directly to tidal waters or fifth order or larger streams, or
(2) A downstream analysis reveals that *overbank* control is not required.

(v) Extreme Flood Control Criteria (Qf): Requires storage to attenuate the post-development 100-year, 24-hour peak *discharge* rate (Qf) to predevelopment rates. The Qf requirement does not apply when:
(1) the site *discharge*s directly to tidal waters or fifth order or larger streams, or
(2) A downstream analysis reveals that *overbank* control is not required.

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

(Part I.C.2.c)

c. Sizing Criteria for Redevelopment Activity

(i) Water Quality Volume (WQv): The WQv treatment objective for *redevelopment activity* shall be addressed by one of the following options. *Redevelopment activities* located in an Enhanced Phosphorus Removal Watershed (see Part III.B.3. and Appendix C of this permit) shall calculate the WQv in accordance with Section 10.3 of the Design Manual. All other *redevelopment activities* shall calculate the WQv in accordance with Section 4.2 of the Design Manual.

(1) Reduce the existing *impervious cover* by a minimum of 25% of the total disturbed, *impervious area*. The Soil Restoration criteria in Section 5.1.6 of the Design Manual must be applied to all newly created pervious areas, or

(2) Capture and treat a minimum of 25% of the WQv from the disturbed, *impervious area* by the application of standard SMPs; or reduce 25% of the WQv from the disturbed, *impervious area* by the application of RR techniques or standard SMPs with RRv capacity., or

(3) Capture and treat a minimum of 75% of the WQv from the disturbed, *impervious area* as well as any additional runoff from tributary areas by application of the alternative practices discussed in Sections 9.3 and 9.4 of the Design Manual., or

(4) Application of a combination of 1, 2 and 3 above that provide a weighted average of at least two of the above methods. Application of this method shall be in accordance with the criteria in Section 9.2.1(B) (IV) of the Design Manual.

If there is an existing post-construction stormwater management practice located on the site that captures and treats runoff from the *impervious area* that is being disturbed, the WQv treatment option selected must, at a minimum, provide treatment equal to the treatment that was being provided by the existing practice(s) if that treatment is greater than the treatment required by options 1 – 4 above.

(ii) Channel Protection Volume (Cpv): Not required if there are no changes to hydrology that increase the *discharge* rate from the project site.

(iii) *Overbank* Flood Control Criteria (Qp): Not required if there are no changes to hydrology that increase the *discharge* rate from the project site.

(iv) Extreme Flood Control Criteria (Qf): Not required if there are no changes to hydrology that increase the *discharge* rate from the project site

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

d. Sizing Criteria for Combination of Redevelopment Activity and New Development

Construction projects that include both New Development and Redevelopment Activity shall provide post-construction stormwater management controls that meet the sizing criteria calculated as an aggregate of the Sizing Criteria in Part I.C.2.a. or b. of this permit for the New Development portion of the project and Part I.C.2.c of this permit for Redevelopment Activity portion of the project.

D. Maintaining Water Quality

The Department expects that compliance with the conditions of this permit will control *discharge*s necessary to meet applicable *water quality standards*. It shall be a violation of the *ECL* for any discharge to either cause or contribute to a violation of *water quality standards* as contained in Parts 700 through 705 of Title 6 of the Official Compilation of Codes, Rules and Regulations of the State of New York, such as:

1. There shall be no increase in turbidity that will cause a substantial visible contrast to natural conditions;

2. There shall be no increase in suspended, colloidal or settleable solids that will cause deposition or impair the waters for their best usages; and

3. There shall be no residue from oil and floating substances, nor visible oil film, nor globules of grease.

If there is evidence indicating that the stormwater *discharge*s authorized by this permit are causing, have the reasonable potential to cause, or are contributing to a violation of the *water quality standards*; the *owner or operator* must take appropriate corrective action in accordance with Part IV.C.5. of this general permit and document in accordance with Part IV.C.4. of this general permit. To address the *water quality standard* violation the *owner or operator* may need to provide additional information, include and implement appropriate controls in the SWPPP to correct the problem, or obtain an individual SPDES permit.

If there is evidence indicating that despite compliance with the terms and conditions of this general permit it is demonstrated that the stormwater *discharge*s authorized by this permit are causing or contributing to a violation of *water quality standards*, or if the Department determines that a modification of the permit is necessary to prevent a violation of *water quality standards*, the authorized *discharge*s will no longer be eligible for coverage under this permit. The Department may require the *owner or operator* to obtain an individual SPDES permit to continue discharging.

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

E. Eligibility Under This General Permit

1. This permit may authorize all *discharges* of stormwater from *construction activity* to *surface waters of the State* and *groundwaters* except for ineligible *discharges* identified under subparagraph F. of this Part.

2. Except for non-stormwater *discharges* explicitly listed in the next paragraph, this permit only authorizes stormwater *discharge*s; including stormwater runoff, snowmelt runoff, and surface runoff and drainage, from *construction activities*.

3. Notwithstanding paragraphs E.1 and E.2 above, the following non-stormwater discharges are authorized by this permit: those listed in 6 NYCRR 750-1.2(a)(29)(vi), with the following exception: “Discharges from firefighting activities are authorized only when the firefighting activities are emergencies/unplanned”; waters to which other components have not been added that are used to control dust in accordance with the SWPPP; and uncontaminated *discharge*s from *construction site* de-watering operations. All non-stormwater discharges must be identified in the SWPPP. Under all circumstances, the *owner or operator* must still comply with *water quality standards* in Part I.D of this permit.

4. The *owner or operator* must maintain permit eligibility to *discharge* under this permit. Any *discharges* that are not compliant with the eligibility conditions of this permit are not authorized by the permit and the *owner or operator* must either apply for a separate permit to cover those ineligible *discharges* or take steps necessary to make the *discharge* eligible for coverage.

F. Activities Which Are Ineligible for Coverage Under This General Permit

All of the following are **not** authorized by this permit:

1. *Discharge*s after *construction activities* have been completed and the site has undergone *final stabilization*;

2. *Discharges* that are mixed with sources of non-stormwater other than those expressly authorized under subsection E.3. of this Part and identified in the SWPPP required by this permit;

3. *Discharges* that are required to obtain an individual SPDES permit or another SPDES general permit pursuant to Part VII.K. of this permit;

4. *Construction activities* or *discharges* from *construction activities* that may adversely affect an *endangered or threatened species* unless the *owner or*

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

operator has obtained a permit issued pursuant to 6 NYCRR Part 182 for the project or the Department has issued a letter of non-jurisdiction for the project. All documentation necessary to demonstrate eligibility shall be maintained on site in accordance with Part II.D.2 of this permit;

5. *Discharges* which either cause or contribute to a violation of *water quality standards* adopted pursuant to the *ECL* and its accompanying regulations;

6. *Construction activities* for residential, commercial and institutional projects:

   a. Where the *discharge*s from the *construction activities* are tributary to waters of the state classified as AA or AA-s; and

   b. Which are undertaken on land with no existing *impervious cover*; and

   c. Which disturb one (1) or more acres of land designated on the current United States Department of Agriculture ("USDA") Soil Survey as Soil Slope Phase "D", (provided the map unit name is inclusive of slopes greater than 25%), or Soil Slope Phase "E" or "F" (regardless of the map unit name), or a combination of the three designations.

7. *Construction activities* for linear transportation projects and linear utility projects:

   a. Where the *discharge*s from the *construction activities* are tributary to waters of the state classified as AA or AA-s; and

   b. Which are undertaken on land with no existing *impervious cover*; and

   c. Which disturb two (2) or more acres of land designated on the current USDA Soil Survey as Soil Slope Phase "D" (provided the map unit name is inclusive of slopes greater than 25%), or Soil Slope Phase "E" or "F" (regardless of the map unit name), or a combination of the three designations.

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

8. *Construction activities* that have the potential to affect an *historic property*, unless there is documentation that such impacts have been resolved. The following documentation necessary to demonstrate eligibility with this requirement shall be maintained on site in accordance with Part II.D.2 of this permit and made available to the Department in accordance with Part VII.F of this permit:

   a. Documentation that the *construction activity* is not within an archeologically sensitive area indicated on the sensitivity map, and that the *construction activity* is not located on or immediately adjacent to a property listed or determined to be eligible for listing on the National or State Registers of Historic Places, and that there is no new permanent building on the *construction site* within the following distances from a building, structure, or object that is more than 50 years old, or if there is such a new permanent building on the *construction site* within those parameters that NYS Office of Parks, Recreation and Historic Preservation (OPRHP), a Historic Preservation Commission of a Certified Local Government, or a qualified preservation professional has determined that the building, structure, or object more than 50 years old is not historically/archeologically significant.

      - 1-5 acres of disturbance - 20 feet
      - 5-20 acres of disturbance - 50 feet
      - 20+ acres of disturbance - 100 feet, or

   b. DEC consultation form sent to OPRHP, and copied to the NYS DEC Agency Historic Preservation Officer (APO), and
      (i) the State Environmental Quality Review (SEQR) Environmental Assessment Form (EAF) with a negative declaration or the Findings Statement, with documentation of OPRHP's agreement with the resolution; or
      (ii) documentation from OPRHP that the *construction activity* will result in No Impact; or
      (iii) documentation from OPRHP providing a determination of No Adverse Impact; or
      (iv) a Letter of Resolution signed by the owner/operator, OPRHP and the DEC APO which allows for this *construction activity* to be eligible for coverage under the general permit in terms of the State Historic Preservation Act (SHPA); or

   c. Documentation of satisfactory compliance with Section 106 of the National Historic Preservation Act for a coterminous project area:

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

(i) No Affect
(ii) No Adverse Affect
(iii) Executed Memorandum of Agreement, or

d. Documentation that:

(i) SHPA Section 14.09 has been completed by NYS DEC or another state agency.

9. *Discharge*s from *construction activities* that are subject to an existing SPDES individual or general permit where a SPDES permit for *construction activity* has been terminated or denied; or where the *owner or operator* has failed to renew an expired individual permit.

Part II. PERMIT COVERAGE

A. How to Obtain Coverage

1. An *owner or operator* of a *construction activity* that is not subject to the requirements of a regulated, traditional land use control MS4 must first prepare a SWPPP in accordance with all applicable requirements of this permit and then submit a completed Notice of Intent (NOI) to the Department to be authorized to discharge under this permit.

2. An *owner or operator* of a *construction activity* that is subject to the requirements of a *regulated, traditional land use control MS4* must first prepare a SWPPP in accordance with all applicable requirements of this permit and then have the SWPPP reviewed and accepted by the *regulated, traditional land use control MS4* prior to submitting the NOI to the Department. The *owner or operator* shall have the "MS4 SWPPP Acceptance" form signed in accordance with Part VII.H., and then submit that form along with a completed NOI to the Department.

3. The requirement for an *owner or operator* to have its SWPPP reviewed and accepted by the *regulated, traditional land use control MS4* prior to submitting the NOI to the Department does not apply to an *owner or operator* that is obtaining permit coverage in accordance with the requirements in Part II.F. (Change of *Owner or Operator*) or where the *owner or operator* of the *construction activity* is the *regulated, traditional land use control MS4* . This exemption does not apply to *construction activities* subject to the New York City Administrative Code.

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

B. Notice of Intent (NOI) Submittal

1. Prior to December 21, 2020, an owner or operator shall use either the electronic (eNOI) or paper version of the NOI that the Department prepared. Both versions of the NOI are located on the Department's website (http://www.dec.ny.gov/). The paper version of the NOI shall be signed in accordance with Part VII.H. of this permit and submitted to the following address:

   NOTICE OF INTENT
   NYS DEC, Bureau of Water Permits
   625 Broadway, 4th Floor
   Albany, New York 12233-3505

2. Beginning December 21, 2020 and in accordance with EPA's 2015 NPDES Electronic Reporting Rule (40 CFR Part 127), the *owner or operator* must submit the NOI electronically using the *Department's* online NOI.

3. The *owner or operator* shall have the SWPPP preparer sign the "SWPPP Preparer Certification" statement on the NOI prior to submitting the form to the Department.

4. As of the date the NOI is submitted to the Department, the *owner or operator* shall make the NOI and SWPPP available for review and copying in accordance with the requirements in Part VII.F. of this permit.

C. Permit Authorization

1. An *owner or operator* shall not *commence construction activity* until their authorization to *discharge* under this permit goes into effect.

2. Authorization to *discharge* under this permit will be effective when the *owner or operator* has satisfied all of the following criteria:

   a. project review pursuant to the State Environmental Quality Review Act ("SEQRA") have been satisfied, when SEQRA is applicable. See the Department's website (http://www.dec.ny.gov/) for more information,

   b. where required, all necessary Department permits subject to the *Uniform Procedures Act ("UPA")* (see 6 NYCRR Part 621), or the equivalent from another New York State agency, have been obtained, unless otherwise notified by the Department pursuant to 6 NYCRR 621.3(a)(4). *Owners or operators* of *construction activities* that are required to obtain *UPA* permits

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

must submit a preliminary SWPPP to the appropriate DEC Permit Administrator at the Regional Office listed in Appendix F at the time all other necessary *UPA* permit applications are submitted. The preliminary SWPPP must include sufficient information to demonstrate that the *construction activity* qualifies for authorization under this permit,

c. the final SWPPP has been prepared, and

d. a complete NOI has been submitted to the Department in accordance with the requirements of this permit.

3. An *owner or operator* that has satisfied the requirements of Part II.C.2 above will be authorized to *discharge* stormwater from their *construction activity* in accordance with the following schedule:

   a. For *construction activities* that are not subject to the requirements of a *regulated, traditional land use control MS4*:

      (i) Five (5) business days from the date the Department receives a complete electronic version of the NOI (eNOI) for *construction activities* with a SWPPP that has been prepared in conformance with the design criteria in the technical standard referenced in Part III.B.1 and the *performance criteria* in the technical standard referenced in Parts III.B., 2 or 3, for *construction activities* that require post-construction stormwater management practices pursuant to Part III.C.; or

      (ii) Sixty (60) business days from the date the Department receives a complete NOI (electronic or paper version) for *construction activities* with a SWPPP that has not been prepared in conformance with the design criteria in technical standard referenced in Part III.B.1. or, for *construction activities* that require post-construction stormwater management practices pursuant to Part III.C., the *performance criteria* in the technical standard referenced in Parts III.B., 2 or 3, or;

      (iii) Ten (10) business days from the date the Department receives a complete paper version of the NOI for *construction activities* with a SWPPP that has been prepared in conformance with the design criteria in the technical standard referenced in Part III.B.1 and the *performance criteria* in the technical standard referenced in Parts III.B., 2 or 3, for *construction activities* that require post-construction stormwater management practices pursuant to Part III.C.

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

b. For *construction activities* that are subject to the requirements of a *regulated, traditional land use control MS4*:

(i) Five (5) business days from the date the Department receives both a complete electronic version of the NOI (eNOI) and signed "*MS4* SWPPP Acceptance" form, or

(ii) Ten (10) business days from the date the Department receives both a complete paper version of the NOI and signed "MS4 SWPPP Acceptance" form.

4. Coverage under this permit authorizes stormwater *discharges* from only those areas of disturbance that are identified in the NOI. If an *owner or operator* wishes to have stormwater *discharges* from future or additional areas of disturbance authorized, they must submit a new NOI that addresses that phase of the development, unless otherwise notified by the Department. The *owner or operator* shall not *commence construction activity* on the future or additional areas until their authorization to *discharge* under this permit goes into effect in accordance with Part II.C. of this permit.

D. General Requirements For Owners or Operators With Permit Coverage

1. The *owner or operator* shall ensure that the provisions of the SWPPP are implemented from the *commencement of construction activity* until all areas of disturbance have achieved *final stabilization* and the Notice of Termination ("NOT") has been submitted to the Department in accordance with Part V. of this permit. This includes any changes made to the SWPPP pursuant to Part III.A.4. of this permit.

2. The *owner or operator* shall maintain a copy of the General Permit (GP-0-20-001), NOI, *NOI Acknowledgment Letter*, SWPPP, MS4 SWPPP Acceptance form, inspection reports, responsible contractor's or subcontractor's certification statement (see Part III.A.6.), and all documentation necessary to demonstrate eligibility with this permit at the *construction site* until all disturbed areas have achieved *final stabilization* and the NOT has been submitted to the Department. The documents must be maintained in a secure location, such as a job trailer, on-site construction office, or mailbox with lock. The secure location must be accessible during normal business hours to an individual performing a compliance inspection.

3. The *owner or operator* of a *construction activity* shall not disturb greater than five (5) acres of soil at any one time without prior written authorization from the Department or, in areas under the jurisdiction of a *regulated, traditional land*

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

use control MS4, the *regulated, traditional land use control MS4* (provided the *regulated, traditional land use control MS4* is not the *owner or operator* of the *construction activity*). At a minimum, the *owner or operator* must comply with the following requirements in order to be authorized to disturb greater than five (5) acres of soil at any one time:

a. The *owner or operator* shall have a *qualified inspector* conduct **at least** two (2) site inspections in accordance with Part IV.C. of this permit every seven (7) calendar days, for as long as greater than five (5) acres of soil remain disturbed. The two (2) inspections shall be separated by a minimum of two (2) full calendar days.

b. In areas where soil disturbance activity has temporarily or permanently ceased, the application of soil stabilization measures must be initiated by the end of the next business day and completed within seven (7) days from the date the current soil disturbance activity ceased. The soil stabilization measures selected shall be in conformance with the technical standard, New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016.

c. The *owner or operator* shall prepare a phasing plan that defines maximum disturbed area per phase and shows required cuts and fills.

d. The *owner or operator* shall install any additional site-specific practices needed to protect water quality.

e. The *owner or operator* shall include the requirements above in their SWPPP.

4. In accordance with statute, regulations, and the terms and conditions of this permit, the Department may suspend or revoke an *owner's or operator's* coverage under this permit at any time if the Department determines that the SWPPP does not meet the permit requirements or consistent with Part VII.K..

5. Upon a finding of significant non-compliance with the practices described in the SWPPP or violation of this permit, the Department may order an immediate stop to all activity at the site until the non-compliance is remedied. The stop work order shall be in writing, describe the non-compliance in detail, and be sent to the *owner or operator*.

6. For *construction activities* that are subject to the requirements of a *regulated, traditional land use control MS4*, the *owner or operator* shall notify the

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

regulated, traditional land use control MS4 in writing of any planned amendments or modifications to the post-construction stormwater management practice component of the SWPPP required by Part III.A. 4. and 5. of this permit. Unless otherwise notified by the *regulated, traditional land use control MS4*, the *owner or operator* shall have the SWPPP amendments or modifications reviewed and accepted by the *regulated, traditional land use control MS4* prior to commencing construction of the post-construction stormwater management practice.

E. Permit Coverage for Discharges Authorized Under GP-0-15-002

1. Upon renewal of SPDES General Permit for Stormwater Discharges from *Construction Activity* (Permit No. GP-0-15-002), an *owner or operator* of *a construction activity* with coverage under GP-0-15-002, as of the effective date of GP- 0-20-001, shall be authorized to *discharge* in accordance with GP- 0-20-001, unless otherwise notified by the Department.

   An *owner or operator* may continue to implement the technical/design components of the post-construction stormwater management controls provided that such design was done in conformance with the technical standards in place at the time of initial project authorization. However, they must comply with the other, non-design provisions of GP-0-20-001.

F. Change of Owner or Operator

1. When property ownership changes or when there is a change in operational control over the construction plans and specifications, the original *owner or operator* must notify the new *owner or operator*, in writing, of the requirement to obtain permit coverage by submitting a NOI with the Department. For *construction activities* subject to the requirements of a *regulated, traditional land use control MS4,* the original *owner or operator* must also notify the MS4, in writing, of the change in ownership at least 30 calendar days prior to the change in ownership.

2. Once the new *owner or operator* obtains permit coverage, the original *owner or operator* shall then submit a completed NOT with the name and permit identification number of the new *owner or operator* to the Department at the address in Part II.B.1. of this permit. If the original *owner or operator* maintains ownership of a portion of the *construction activity* and will disturb soil, they must maintain their coverage under the permit.

3. Permit coverage for the new *owner or operator* will be effective as of the date the Department receives a complete NOI, provided the original *owner or*

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

operator was not subject to a sixty (60) business day authorization period that has not expired as of the date the Department receives the NOI from the new *owner or operator*.

Part III. STORMWATER POLLUTION PREVENTION PLAN (SWPPP)

A. General SWPPP Requirements

1. A SWPPP shall be prepared and implemented by the *owner or operator* of each *construction activity* covered by this permit. The SWPPP must document the selection, design, installation, implementation and maintenance of the control measures and practices that will be used to meet the effluent limitations in Part I.B. of this permit and where applicable, the post-construction stormwater management practice requirements in Part I.C. of this permit. The SWPPP shall be prepared prior to the submittal of the NOI. The NOI shall be submitted to the Department prior to the *commencement of construction activity*. A copy of the completed, final NOI shall be included in the SWPPP.

2. The SWPPP shall describe the erosion and sediment control practices and where required, post-construction stormwater management practices that will be used and/or constructed to reduce the *pollutants* in stormwater *discharges* and to assure compliance with the terms and conditions of this permit. In addition, the SWPPP shall identify potential sources of pollution which may reasonably be expected to affect the quality of stormwater *discharges*.

3. All SWPPPs that require the post-construction stormwater management practice component shall be prepared by a *qualified professional* that is knowledgeable in the principles and practices of stormwater management and treatment.

4. The *owner or operator* must keep the SWPPP current so that it at all times accurately documents the erosion and sediment controls practices that are being used or will be used during construction, and all post-construction stormwater management practices that will be constructed on the site. At a minimum, the *owner or operator* shall amend the SWPPP, including construction drawings:

    a. whenever the current provisions prove to be ineffective in minimizing *pollutants* in stormwater *discharges* from the site;

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

b. whenever there is a change in design, construction, or operation at the *construction site* that has or could have an effect on the *discharge* of *pollutants*;

c. to address issues or deficiencies identified during an inspection by the *qualified inspector,* the Department or other regulatory authority; and

d. to document the final construction conditions.

5. The Department may notify the *owner or operator* at any time that the SWPPP does not meet one or more of the minimum requirements of this permit. The notification shall be in writing and identify the provisions of the SWPPP that require modification. Within fourteen (14) calendar days of such notification, or as otherwise indicated by the Department, the *owner or operator* shall make the required changes to the SWPPP and submit written notification to the Department that the changes have been made. If the *owner or operator* does not respond to the Department's comments in the specified time frame, the Department may suspend the *owner's or operator's* coverage under this permit or require the *owner or operator* to obtain coverage under an individual SPDES permit in accordance with Part II.D.4. of this permit.

6. Prior to the *commencement of construction activity*, the *owner or operator* must identify the contractor(s) and subcontractor(s) that will be responsible for installing, constructing, repairing, replacing, inspecting and maintaining the erosion and sediment control practices included in the SWPPP; and the contractor(s) and subcontractor(s) that will be responsible for constructing the post-construction stormwater management practices included in the SWPPP. The *owner or operator* shall have each of the contractors and subcontractors identify at least one person from their company that will be responsible for implementation of the SWPPP. This person shall be known as the *trained contractor.* The *owner or operator* shall ensure that at least one *trained contractor* is on site on a daily basis when soil disturbance activities are being performed.

   The *owner or operator* shall have each of the contractors and subcontractors identified above sign a copy of the following certification statement below before they commence any *construction activity*:

   "I hereby certify under penalty of law that I understand and agree to comply with the terms and conditions of the SWPPP and agree to implement any corrective actions identified by the *qualified inspector* during a site inspection. I also understand that the *owner or operator* must comply with

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

the terms and conditions of the most current version of the New York State Pollutant Discharge Elimination System ("SPDES") general permit for stormwater *discharge*s from *construction activities* and that it is unlawful for any person to cause or contribute to a violation of *water quality standards*. Furthermore, I am aware that there are significant penalties for submitting false information, that I do not believe to be true, including the possibility of fine and imprisonment for knowing violations"

In addition to providing the certification statement above, the certification page must also identify the specific elements of the SWPPP that each contractor and subcontractor will be responsible for and include the name and title of the person providing the signature; the name and title of the *trained contractor* responsible for SWPPP implementation; the name, address and telephone number of the contracting firm; the address (or other identifying description) of the site; and the date the certification statement is signed. The *owner or operator* shall attach the certification statement(s) to the copy of the SWPPP that is maintained at the *construction site*. If new or additional contractors are hired to implement measures identified in the SWPPP after construction has commenced, they must also sign the certification statement and provide the information listed above.

7. For projects where the Department requests a copy of the SWPPP or inspection reports, the *owner or operator* shall submit the documents in both electronic (PDF only) and paper format within five (5) business days, unless otherwise notified by the Department.

B. Required SWPPP Contents

1. Erosion and sediment control component - All SWPPPs prepared pursuant to this permit shall include erosion and sediment control practices designed in conformance with the technical standard, New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016. Where erosion and sediment control practices are not designed in conformance with the design criteria included in the technical standard, the *owner or operator* must demonstrate *equivalence* to the technical standard. At a minimum, the erosion and sediment control component of the SWPPP shall include the following:

    a. Background information about the scope of the project, including the location, type and size of project

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

b. A site map/construction drawing(s) for the project, including a general location map. At a minimum, the site map shall show the total site area; all improvements; areas of disturbance; areas that will not be disturbed; existing vegetation; on-site and adjacent off-site surface water(s); floodplain/floodway boundaries; wetlands and drainage patterns that could be affected by the *construction activity*; existing and final contours ; locations of different soil types with boundaries; material, waste, borrow or equipment storage areas located on adjacent properties; and location(s) of the stormwater *discharge*(s);

c. A description of the soil(s) present at the site, including an identification of the Hydrologic Soil Group (HSG);

d. A construction phasing plan and sequence of operations describing the intended order of *construction activities*, including clearing and grubbing, excavation and grading, utility and infrastructure installation and any other activity at the site that results in soil disturbance;

e. A description of the minimum erosion and sediment control practices to be installed or implemented for each *construction activity* that will result in soil disturbance. Include a schedule that identifies the timing of initial placement or implementation of each erosion and sediment control practice and the minimum time frames that each practice should remain in place or be implemented;

f. A temporary and permanent soil stabilization plan that meets the requirements of this general permit and the technical standard, New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016, for each stage of the project, including initial land clearing and grubbing to project completion and achievement of *final stabilization*;

g. A site map/construction drawing(s) showing the specific location(s), size(s), and length(s) of each erosion and sediment control practice;

h. The dimensions, material specifications, installation details, and operation and maintenance requirements for all erosion and sediment control practices. Include the location and sizing of any temporary sediment basins and structural practices that will be used to divert flows from exposed soils;

i. A maintenance inspection schedule for the contractor(s) identified in Part III.A.6. of this permit, to ensure continuous and effective operation of the erosion and sediment control practices. The maintenance inspection

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

schedule shall be in accordance with the requirements in the technical standard, New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016;

j. A description of the pollution prevention measures that will be used to control litter, construction chemicals and construction debris from becoming a *pollutant* source in the stormwater *discharges*;

k. A description and location of any stormwater *discharges* associated with industrial activity other than construction at the site, including, but not limited to, stormwater *discharges* from asphalt plants and concrete plants located on the *construction site*; and

l. Identification of any elements of the design that are not in conformance with the design criteria in the technical standard, New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016. Include the reason for the deviation or alternative design and provide information which demonstrates that the deviation or alternative design is *equivalent* to the technical standard.

2. Post-construction stormwater management practice component – The *owner or operator* of any construction project identified in Table 2 of Appendix B as needing post-construction stormwater management practices shall prepare a SWPPP that includes practices designed in conformance with the applicable *sizing criteria* in Part I.C.2.a., c. or d. of this permit and the *performance criteria* in the technical standard, New York State Stormwater Management Design Manual dated January 2015

   Where post-construction stormwater management practices are not designed in conformance with the *performance criteria* in the technical standard, the *owner or operator* must include in the SWPPP the reason(s) for the deviation or alternative design and provide information which demonstrates that the deviation or alternative design is *equivalent* to the technical standard.

   The post-construction stormwater management practice component of the SWPPP shall include the following:

   a. Identification of all post-construction stormwater management practices to be constructed as part of the project. Include the dimensions, material specifications and installation details for each post-construction stormwater management practice;

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

b. A site map/construction drawing(s) showing the specific location and size of each post-construction stormwater management practice;

c. A Stormwater Modeling and Analysis Report that includes:
   (i) Map(s) showing pre-development conditions, including watershed/subcatchments boundaries, flow paths/routing, and design points;

   (ii) Map(s) showing post-development conditions, including watershed/subcatchments boundaries, flow paths/routing, design points and post-construction stormwater management practices;

   (iii) Results of stormwater modeling (i.e. hydrology and hydraulic analysis) for the required storm events. Include supporting calculations (model runs), methodology, and a summary table that compares pre and post-development runoff rates and volumes for the different storm events;

   (iv) Summary table, with supporting calculations, which demonstrates that each post-construction stormwater management practice has been designed in conformance with the *sizing criteria* included in the Design Manual;

   (v) Identification of any *sizing criteria* that is not required based on the requirements included in Part I.C. of this permit; and

   (vi) Identification of any elements of the design that are not in conformance with the *performance criteria* in the Design Manual. Include the reason(s) for the deviation or alternative design and provide information which demonstrates that the deviation or alternative design is *equivalent* to the Design Manual;

d. Soil testing results and locations (test pits, borings);

e. Infiltration test results, when required; and

f. An operations and maintenance plan that includes inspection and maintenance schedules and actions to ensure continuous and effective operation of each post-construction stormwater management practice. The plan shall identify the entity that will be responsible for the long term operation and maintenance of each practice.

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

3. Enhanced Phosphorus Removal Standards - All construction projects identified in Table 2 of Appendix B that are located in the watersheds identified in Appendix C shall prepare a SWPPP that includes post-construction stormwater management practices designed in conformance with the applicable *sizing criteria* in Part I.C.2. b., c. or d. of this permit and the *performance criteria,* Enhanced Phosphorus Removal Standards included in the Design Manual. At a minimum, the post-construction stormwater management practice component of the SWPPP shall include items 2.a - 2.f. above.

C. Required SWPPP Components by Project Type

Unless otherwise notified by the Department, *owners or operators* of *construction activities* identified in Table 1 of Appendix B are required to prepare a SWPPP that only includes erosion and sediment control practices designed in conformance with Part III.B.1 of this permit. *Owners or operators* of the *construction activities* identified in Table 2 of Appendix B shall prepare a SWPPP that also includes post-construction stormwater management practices designed in conformance with Part III.B.2 or 3 of this permit.

Part IV. INSPECTION AND MAINTENANCE REQUIREMENTS

A. General Construction Site Inspection and Maintenance Requirements

1. The *owner or operator* must ensure that all erosion and sediment control practices (including pollution prevention measures) and all post-construction stormwater management practices identified in the SWPPP are inspected and maintained in accordance with Part IV.B. and C. of this permit.

2. The terms of this permit shall not be construed to prohibit the State of New York from exercising any authority pursuant to the ECL, common law or federal law, or prohibit New York State from taking any measures, whether civil or criminal, to prevent violations of the laws of the State of New York or protect the public health and safety and/or the environment.

B. Contractor Maintenance Inspection Requirements

1. The *owner or operator* of each *construction activity* identified in Tables 1 and 2 of Appendix B shall have a *trained contractor* inspect the erosion and sediment control practices and pollution prevention measures being implemented within the active work area daily to ensure that they are being maintained in effective operating condition at all times. If deficiencies are identified, the contractor shall

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

begin implementing corrective actions within one business day and shall complete the corrective actions in a reasonable time frame.

2. For construction sites where soil disturbance activities have been temporarily suspended (e.g. winter shutdown) and *temporary stabilization* measures have been applied to all disturbed areas, the *trained contractor* can stop conducting the maintenance inspections. The *trained contractor* shall begin conducting the maintenance inspections in accordance with Part IV.B.1. of this permit as soon as soil disturbance activities resume.

3. For construction sites where soil disturbance activities have been shut down with partial project completion, the *trained contractor* can stop conducting the maintenance inspections if all areas disturbed as of the project shutdown date have achieved *final stabilization* and all post-construction stormwater management practices required for the completed portion of the project have been constructed in conformance with the SWPPP and are operational.

C. Qualified Inspector Inspection Requirements

The *owner or operator* shall have a *qualified inspector* conduct site inspections in conformance with the following requirements:

[Note: The *trained contractor* identified in Part III.A.6. and IV.B. of this permit **cannot** conduct the *qualified inspector* site inspections unless they meet the *qualified inspector* qualifications included in Appendix A. In order to perform these inspections, the *trained contractor* would have to be a:

- licensed Professional Engineer,
- Certified Professional in Erosion and Sediment Control (CPESC),
- New York State Erosion and Sediment Control Certificate Program holder
- Registered Landscape Architect, or
- someone working under the direct supervision of, and at the same company as, the licensed Professional Engineer or Registered Landscape Architect, provided they have received four (4) hours of Department endorsed training in proper erosion and sediment control principles from a Soil and Water Conservation District, or other Department endorsed entity].

1. A *qualified inspector* shall conduct site inspections for all *construction activities* identified in Tables 1 and 2 of Appendix B, with the exception of:

   a. the construction of a single family residential subdivision with 25% or less *impervious cover* at total site build-out that involves a soil disturbance of one (1) or more acres of land but less than five (5) acres and is not located

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

in one of the watersheds listed in Appendix C and not directly discharging to one of the 303(d) segments listed in Appendix E;

b. the construction of a single family home that involves a soil disturbance of one (1) or more acres of land but less than five (5) acres and is not located in one of the watersheds listed in Appendix C and not directly discharging to one of the 303(d) segments listed in Appendix E;

c. construction on agricultural property that involves a soil disturbance of one (1) or more acres of land but less than five (5) acres; and

d. *construction activities* located in the watersheds identified in Appendix D that involve soil disturbances between five thousand (5,000) square feet and one (1) acre of land.

2. Unless otherwise notified by the Department, the *qualified inspector* shall conduct site inspections in accordance with the following timetable:

a. For construction sites where soil disturbance activities are on-going, the *qualified inspector* shall conduct a site inspection at least once every seven (7) calendar days.

b. For construction sites where soil disturbance activities are on-going and the *owner or operator* has received authorization in accordance with Part II.D.3 to disturb greater than five (5) acres of soil at any one time, the *qualified inspector* shall conduct at least two (2) site inspections every seven (7) calendar days. The two (2) inspections shall be separated by a minimum of two (2) full calendar days.

c. For construction sites where soil disturbance activities have been temporarily suspended (e.g. winter shutdown) and *temporary stabilization* measures have been applied to all disturbed areas, the *qualified inspector* shall conduct a site inspection at least once every thirty (30) calendar days. The *owner or operator* shall notify the DOW Water (SPDES) Program contact at the Regional Office (see contact information in Appendix F) or, in areas under the jurisdiction of a *regulated, traditional land use control MS4,* the *regulated, traditional land use control MS4* (provided the *regulated, traditional land use control MS4* is not the *owner or operator* of the *construction activity*) in writing prior to reducing the frequency of inspections.

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

d. For construction sites where soil disturbance activities have been shut down with partial project completion, the *qualified inspector* can stop conducting inspections if all areas disturbed as of the project shutdown date have achieved *final stabilization* and all post-construction stormwater management practices required for the completed portion of the project have been constructed in conformance with the SWPPP and are operational. The *owner or operator* shall notify the DOW Water (SPDES) Program contact at the Regional Office (see contact information in Appendix F) or, in areas under the jurisdiction of a *regulated, traditional land use control MS4,* the *regulated, traditional land use control MS4* (provided the *regulated, traditional land use control MS4* is not the *owner or operator* of the *construction activity*) in writing prior to the shutdown. If soil disturbance activities are not resumed within 2 years from the date of shutdown, the *owner or operator* shall have the *qualified inspector* perform a final inspection and certify that all disturbed areas have achieved *final stabilization,* and all temporary, structural erosion and sediment control measures have been removed*;* and that all post-construction stormwater management practices have been constructed in conformance with the SWPPP by signing the "*Final Stabilization*" and "Post-Construction Stormwater Management Practice" certification statements on the NOT. The *owner or operator* shall then submit the completed NOT form to the address in Part II.B.1 of this permit.

e. For construction sites that directly *discharge* to one of the 303(d) segments listed in Appendix E or is located in one of the watersheds listed in Appendix C, the *qualified inspector* shall conduct at least two (2) site inspections every seven (7) calendar days. The two (2) inspections shall be separated by a minimum of two (2) full calendar days.

3. At a minimum, the *qualified inspector* shall inspect all erosion and sediment control practices and pollution prevention measures to ensure integrity and effectiveness, all post-construction stormwater management practices under construction to ensure that they are constructed in conformance with the SWPPP, all areas of disturbance that have not achieved *final stabilization,* all points of *discharge* to natural surface waterbodies located within, or immediately adjacent to, the property boundaries of the *construction site*, and all points of *discharge* from the *construction site*.

4. The *qualified inspector* shall prepare an inspection report subsequent to each and every inspection. At a minimum, the inspection report shall include and/or address the following:

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

(Part IV.C.4.a)

a. Date and time of inspection;

b. Name and title of person(s) performing inspection;

c. A description of the weather and soil conditions (e.g. dry, wet, saturated) at the time of the inspection;

d. A description of the condition of the runoff at all points of *discharge* from the *construction site*. This shall include identification of any *discharges* of sediment from the *construction site*. Include *discharges* from conveyance systems (i.e. pipes, culverts, ditches, etc.) and overland flow;

e. A description of the condition of all natural surface waterbodies located within, or immediately adjacent to, the property boundaries of the *construction site* which receive runoff from disturbed areas. This shall include identification of any *discharges* of sediment to the surface waterbody;

f. Identification of all erosion and sediment control practices and pollution prevention measures that need repair or maintenance;

g. Identification of all erosion and sediment control practices and pollution prevention measures that were not installed properly or are not functioning as designed and need to be reinstalled or replaced;

h. Description and sketch of areas with active soil disturbance activity, areas that have been disturbed but are inactive at the time of the inspection, and areas that have been stabilized (temporary and/or final) since the last inspection;

i. Current phase of construction of all post-construction stormwater management practices and identification of all construction that is not in conformance with the SWPPP and technical standards;

j. Corrective action(s) that must be taken to install, repair, replace or maintain erosion and sediment control practices and pollution prevention measures; and to correct deficiencies identified with the construction of the post-construction stormwater management practice(s);

k. Identification and status of all corrective actions that were required by previous inspection; and

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

l. Digital photographs, with date stamp, that clearly show the condition of all practices that have been identified as needing corrective actions. The *qualified inspector* shall attach paper color copies of the digital photographs to the inspection report being maintained onsite within seven (7) calendar days of the date of the inspection. The *qualified inspector* shall also take digital photographs, with date stamp, that clearly show the condition of the practice(s) after the corrective action has been completed. The *qualified inspector* shall attach paper color copies of the digital photographs to the inspection report that documents the completion of the corrective action work within seven (7) calendar days of that inspection.

5. Within one business day of the completion of an inspection, the *qualified inspector* shall notify the *owner or operator* and appropriate contractor or subcontractor identified in Part III.A.6. of this permit of any corrective actions that need to be taken. The contractor or subcontractor shall begin implementing the corrective actions within one business day of this notification and shall complete the corrective actions in a reasonable time frame.

6. All inspection reports shall be signed by the *qualified inspector.* Pursuant to Part II.D.2. of this permit, the inspection reports shall be maintained on site with the SWPPP.

Part V. TERMINATION OF PERMIT COVERAGE

A. Termination of Permit Coverage

1. An *owner or operator* that is eligible to terminate coverage under this permit must submit a completed NOT form to the address in Part II.B.1 of this permit. The NOT form shall be one which is associated with this permit, signed in accordance with Part VII.H of this permit.

2. An *owner or operator* may terminate coverage when one or more the following conditions have been met:

   a. Total project completion - All *construction activity* identified in the SWPPP has been completed; and all areas of disturbance have achieved *final stabilization*; and all temporary, structural erosion and sediment control measures have been removed; and all post-construction stormwater management practices have been constructed in conformance with the SWPPP and are operational;

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

b. Planned shutdown with partial project completion - All soil disturbance activities have ceased; and all areas disturbed as of the project shutdown date have achieved *final stabilization*; and all temporary, structural erosion and sediment control measures have been removed; and all post-construction stormwater management practices required for the completed portion of the project have been constructed in conformance with the SWPPP and are operational;

c. A new *owner or operator* has obtained coverage under this permit in accordance with Part II.F. of this permit.

d. The *owner or operator* obtains coverage under an alternative SPDES general permit or an individual SPDES permit.

3. For *construction activities* meeting subdivision 2a. or 2b. of this Part, the *owner or operator* shall have the *qualified inspector* perform a final site inspection prior to submitting the NOT. The *qualified inspector* shall, by signing the "*Final Stabilization*" and "Post-Construction Stormwater Management Practice certification statements on the NOT, certify that all the requirements in Part V.A.2.a. or b. of this permit have been achieved.

4. For *construction activities* that are subject to the requirements of a *regulated, traditional land use control MS4* and meet subdivision 2a. or 2b. of this Part, the *owner or operator* shall have the *regulated, traditional land use control MS4* sign the "MS4 Acceptance" statement on the NOT in accordance with the requirements in Part VII.H. of this permit. The *regulated, traditional land use control MS4* official, by signing this statement, has determined that it is acceptable for the *owner or operator* to submit the NOT in accordance with the requirements of this Part. The *regulated, traditional land use control MS4* can make this determination by performing a final site inspection themselves or by accepting the *qualified inspector*'s final site inspection certification(s) required in Part V.A.3. of this permit.

5. For *construction activities* that require post-construction stormwater management practices and meet subdivision 2a. of this Part, the *owner or operator* must, prior to submitting the NOT, ensure one of the following:

a. the post-construction stormwater management practice(s) and any right-of-way(s) needed to maintain such practice(s) have been deeded to the municipality in which the practice(s) is located,

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

b. an executed maintenance agreement is in place with the municipality that will maintain the post-construction stormwater management practice(s),

c. for post-construction stormwater management practices that are privately owned, the *owner or operator* has a mechanism in place that requires operation and maintenance of the practice(s) in accordance with the operation and maintenance plan, such as a deed covenant in the *owner or operator's* deed of record,

d. for post-construction stormwater management practices that are owned by a public or private institution (e.g. school, university, hospital), government agency or authority, or public utility; the *owner or operator* has policy and procedures in place that ensures operation and maintenance of the practices in accordance with the operation and maintenance plan.

Part VI. REPORTING AND RETENTION RECORDS

A. Record Retention

The *owner or operator* shall retain a copy of the NOI, NOI Acknowledgment Letter, SWPPP, MS4 SWPPP Acceptance form and any inspection reports that were prepared in conjunction with this permit for a period of at least five (5) years from the date that the Department receives a complete NOT submitted in accordance with Part V. of this general permit.

B. Addresses

With the exception of the NOI, NOT, and MS4 SWPPP Acceptance form (which must be submitted to the address referenced in Part II.B.1 of this permit), all written correspondence requested by the Department, including individual permit applications, shall be sent to the address of the appropriate DOW Water (SPDES) Program contact at the Regional Office listed in Appendix F.

Part VII. STANDARD PERMIT CONDITIONS

A. Duty to Comply

The *owner or operator* must comply with all conditions of this permit. All contractors and subcontractors associated with the project must comply with the terms of the SWPPP. Any non-compliance with this permit constitutes a violation of the Clean Water

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

Act (CWA) and the ECL and is grounds for an enforcement action against the *owner or operator* and/or the contractor/subcontractor; permit revocation, suspension or modification; or denial of a permit renewal application. Upon a finding of significant non-compliance with this permit or the applicable SWPPP, the Department may order an immediate stop to all *construction activity* at the site until the non-compliance is remedied. The stop work order shall be in writing, shall describe the non-compliance in detail, and shall be sent to the *owner or operator*.

If any human remains or archaeological remains are encountered during excavation, the *owner or operator* must immediately cease, or cause to cease, all *construction activity* in the area of the remains and notify the appropriate Regional Water Engineer (RWE). *Construction activity* shall not resume until written permission to do so has been received from the RWE.

B. Continuation of the Expired General Permit

This permit expires five (5) years from the effective date. If a new general permit is not issued prior to the expiration of this general permit, an *owner or operator* with coverage under this permit may continue to operate and *discharge* in accordance with the terms and conditions of this general permit, if it is extended pursuant to the State Administrative Procedure Act and 6 NYCRR Part 621, until a new general permit is issued.

C. Enforcement

Failure of the *owner or operator,* its contractors, subcontractors, agents and/or assigns to strictly adhere to any of the permit requirements contained herein shall constitute a violation of this permit. There are substantial criminal, civil, and administrative penalties associated with violating the provisions of this permit. Fines of up to $37,500 per day for each violation and imprisonment for up to fifteen (15) years may be assessed depending upon the nature and degree of the offense.

D. Need to Halt or Reduce Activity Not a Defense

It shall not be a defense for an *owner or operator* in an enforcement action that it would have been necessary to halt or reduce the *construction activity* in order to maintain compliance with the conditions of this permit.

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

E. Duty to Mitigate

The *owner or operator* and its contractors and subcontractors shall take all reasonable steps to *minimize* or prevent any *discharge* in violation of this permit which has a reasonable likelihood of adversely affecting human health or the environment.

F. Duty to Provide Information

The *owner or operator* shall furnish to the Department, within a reasonable specified time period of a written request, all documentation necessary to demonstrate eligibility and any information to determine compliance with this permit or to determine whether cause exists for modifying or revoking this permit, or suspending or denying coverage under this permit, in accordance with the terms and conditions of this permit. The NOI, SWPPP and inspection reports required by this permit are public documents that the *owner or operator* must make available for review and copying by any person within five (5) business days of the *owner or operator* receiving a written request by any such person to review these documents. Copying of documents will be done at the requester's expense.

G. Other Information

When the *owner or operator* becomes aware that they failed to submit any relevant facts, or submitted incorrect information in the NOI or in any of the documents required by this permit , or have made substantive revisions to the SWPPP (e.g. the scope of the project changes significantly, the type of post-construction stormwater management practice(s) changes, there is a reduction in the sizing of the post-construction stormwater management practice, or there is an increase in the disturbance area or *impervious area*), which were not reflected in the original NOI submitted to the Department, they shall promptly submit such facts or information to the Department using the contact information in Part II.A. of this permit. Failure of the *owner or operator* to correct or supplement any relevant facts within five (5) business days of becoming aware of the deficiency shall constitute a violation of this permit.

H. Signatory Requirements

1. All NOIs and NOTs shall be signed as follows:

    a. For a corporation these forms shall be signed by a responsible corporate officer. For the purpose of this section, a responsible corporate officer means:

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

(i) a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision-making functions for the corporation; or

(ii) the manager of one or more manufacturing, production or operating facilities, provided the manager is authorized to make management decisions which govern the operation of the regulated facility including having the explicit or implicit duty of making major capital investment recommendations, and initiating and directing other comprehensive measures to assure long term environmental compliance with environmental laws and regulations; the manager can ensure that the necessary systems are established or actions taken to gather complete and accurate information for permit application requirements; and where authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures;

b. For a partnership or sole proprietorship these forms shall be signed by a general partner or the proprietor, respectively; or

c. For a municipality, State, Federal, or other public agency these forms shall be signed by either a principal executive officer or ranking elected official. For purposes of this section, a principal executive officer of a Federal agency includes:

(i) the chief executive officer of the agency, or

(ii) a senior executive officer having responsibility for the overall operations of a principal geographic unit of the agency (e.g., Regional Administrators of EPA).

2. The SWPPP and other information requested by the Department shall be signed by a person described in Part VII.H.1. of this permit or by a duly authorized representative of that person. A person is a duly authorized representative only if:

a. The authorization is made in writing by a person described in Part VII.H.1. of this permit;

b. The authorization specifies either an individual or a position having responsibility for the overall operation of the regulated facility or activity, such as the position of plant manager, operator of a well or a well field,

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

superintendent, position of *equivalent* responsibility, or an individual or position having overall responsibility for environmental matters for the company. (A duly authorized representative may thus be either a named individual or any individual occupying a named position) and,

c. The written authorization shall include the name, title and signature of the authorized representative and be attached to the SWPPP.

3. All inspection reports shall be signed by the *qualified inspector* that performs the inspection.

4. The MS4 SWPPP Acceptance form shall be signed by the principal executive officer or ranking elected official from the *regulated, traditional land use control MS4,* or by a duly authorized representative of that person.

   It shall constitute a permit violation if an incorrect and/or improper signatory authorizes any required forms, SWPPP and/or inspection reports.

I. Property Rights

The issuance of this permit does not convey any property rights of any sort, nor any exclusive privileges, nor does it authorize any injury to private property nor any invasion of personal rights, nor any infringement of Federal, State or local laws or regulations. *Owners or operators* must obtain any applicable conveyances, easements, licenses and/or access to real property prior to *commencing construction activity*.

J. Severability

The provisions of this permit are severable, and if any provision of this permit, or the application of any provision of this permit to any circumstance, is held invalid, the application of such provision to other circumstances, and the remainder of this permit shall not be affected thereby.

K. Requirement to Obtain Coverage Under an Alternative Permit

1. The Department may require any owner or operator authorized by this permit to apply for and/or obtain either an individual SPDES permit or another SPDES general permit. When the Department requires any discharger authorized by a general permit to apply for an individual SPDES permit, it shall notify the discharger in writing that a permit application is required. This notice shall

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

include a brief statement of the reasons for this decision, an application form, a statement setting a time frame for the owner or operator to file the application for an individual SPDES permit, and a deadline, not sooner than 180 days from owner or operator receipt of the notification letter, whereby the authorization to discharge under this general permit shall be terminated. Applications must be submitted to the appropriate Permit Administrator at the Regional Office. The Department may grant additional time upon demonstration, to the satisfaction of the Department, that additional time to apply for an alternative authorization is necessary or where the Department has not provided a permit determination in accordance with Part 621 of this Title.

2. When an individual SPDES permit is issued to a discharger authorized to *discharge* under a general SPDES permit for the same *discharge*(s), the general permit authorization for outfalls authorized under the individual SPDES permit is automatically terminated on the effective date of the individual permit unless termination is earlier in accordance with 6 NYCRR Part 750.

L. Proper Operation and Maintenance

The *owner or operator* shall at all times properly operate and maintain all facilities and systems of treatment and control (and related appurtenances) which are installed or used by the *owner or operator* to achieve compliance with the conditions of this permit and with the requirements of the SWPPP.

M. Inspection and Entry

The *owner or operator* shall allow an authorized representative of the Department, EPA, applicable county health department, or, in the case of a *construction site* which *discharges* through an *MS4*, an authorized representative of the *MS4* receiving the discharge, upon the presentation of credentials and other documents as may be required by law, to:

1. Enter upon the owner’s or operator's premises where a regulated facility or activity is located or conducted or where records must be kept under the conditions of this permit;

2. Have access to and copy at reasonable times, any records that must be kept under the conditions of this permit; and

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

3. Inspect at reasonable times any facilities or equipment (including monitoring and control equipment), practices or operations regulated or required by this permit.

4. Sample or monitor at reasonable times, for purposes of assuring permit compliance or as otherwise authorized by the Act or ECL, any substances or parameters at any location.

N. Permit Actions

This permit may, at any time, be modified, suspended, revoked, or renewed by the Department in accordance with 6 NYCRR Part 621. The filing of a request by the *owner or operator* for a permit modification, revocation and reissuance, termination, a notification of planned changes or anticipated noncompliance does not limit, diminish and/or stay compliance with any terms of this permit.

O. Definitions

Definitions of key terms are included in Appendix A of this permit.

P. Re-Opener Clause

1. If there is evidence indicating potential or realized impacts on water quality due to any stormwater discharge associated with construction activity covered by this permit, the owner or operator of such discharge may be required to obtain an individual permit or alternative general permit in accordance with Part VII.K. of this permit or the permit may be modified to include different limitations and/or requirements.

2. Any Department initiated permit modification, suspension or revocation will be conducted in accordance with 6 NYCRR Part 621, 6 NYCRR 750-1.18, and 6 NYCRR 750-1.20.

Q. Penalties for Falsification of Forms and Reports

In accordance with 6NYCRR Part 750-2.4 and 750-2.5, any person who knowingly makes any false material statement, representation, or certification in any application, record, report or other document filed or required to be maintained under this permit, including reports of compliance or noncompliance shall, upon conviction, be punished in accordance with ECL §71-1933 and or Articles 175 and 210 of the New York State Penal Law.

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

R. Other Permits

Nothing in this permit relieves the *owner or operator* from a requirement to obtain any other permits required by law.

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

APPENDIX A – Acronyms and Definitions

Acronyms

APO – Agency Preservation Officer
BMP – Best Management Practice
CPESC – Certified Professional in Erosion and Sediment Control
Cpv – Channel Protection Volume
CWA – Clean Water Act (or the Federal Water Pollution Control Act, 33 U.S.C. §1251 et seq)
DOW – Division of Water
EAF – Environmental Assessment Form
ECL - Environmental Conservation Law
EPA – U. S. Environmental Protection Agency
HSG – Hydrologic Soil Group
MS4 – Municipal Separate Storm Sewer System
NOI – Notice of Intent
NOT – Notice of Termination
NPDES – National Pollutant Discharge Elimination System
OPRHP – Office of Parks, Recreation and Historic Places
Qf – Extreme Flood
Qp – Overbank Flood
RRv – Runoff Reduction Volume
RWE – Regional Water Engineer
SEQR – State Environmental Quality Review
SEQRA - State Environmental Quality Review Act
SHPA – State Historic Preservation Act
SPDES – State Pollutant Discharge Elimination System
SWPPP – Stormwater Pollution Prevention Plan
TMDL – Total Maximum Daily Load
UPA – Uniform Procedures Act
USDA – United States Department of Agriculture
WQv – Water Quality Volume

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

Definitions

All definitions in this section are solely for the purposes of this permit.

Agricultural Building – a structure designed and constructed to house farm implements, hay, grain, poultry, livestock or other horticultural products; excluding any structure designed, constructed or used, in whole or in part, for human habitation, as a place of employment where agricultural products are processed, treated or packaged, or as a place used by the public.

Agricultural Property –means the land for construction of a barn, *agricultural building*, silo, stockyard, pen or other structural practices identified in Table II in the "Agricultural Management Practices Catalog for Nonpoint Source Pollution in New York State" prepared by the Department in cooperation with agencies of New York Nonpoint Source Coordinating Committee (dated June 2007).

Alter Hydrology from Pre to Post-Development Conditions - means the post-development peak flow rate(s) has increased by more than 5% of the pre-developed condition for the design storm of interest (e.g. 10 yr and 100 yr).

Combined Sewer - means a sewer that is designed to collect and convey both "sewage" and "stormwater".

Commence (Commencement of) Construction Activities - means the initial disturbance of soils associated with clearing, grading or excavation activities; or other construction related activities that disturb or expose soils such as demolition, stockpiling of fill material, and the initial installation of erosion and sediment control practices required in the SWPPP. See definition for "*Construction Activity(ies)*" also.

Construction Activity(ies) - means any clearing, grading, excavation, filling, demolition or stockpiling activities that result in soil disturbance. Clearing activities can include, but are not limited to, logging equipment operation, the cutting and skidding of trees, stump removal and/or brush root removal. Construction activity does not include routine maintenance that is performed to maintain the original line and grade, hydraulic capacity, or original purpose of a facility.

Construction Site – means the land area where *construction activity(ies)* will occur. See definition for "*Commence (Commencement of) Construction Activities"* and "*Larger Common Plan of Development or Sale" also.*

Dewatering – means the act of draining rainwater and/or groundwater from building foundations, vaults or excavations/trenches.

Direct Discharge (to a specific surface waterbody) - means that runoff flows from a *construction site* by overland flow and the first point of discharge is the specific surface waterbody, or runoff flows from a *construction site* to a separate storm sewer system

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

and the first point of discharge from the separate storm sewer system is the specific surface waterbody.

Discharge(s) - means any addition of any pollutant to waters of the State through an outlet or *point source*.

Embankment –means an earthen or rock slope that supports a road/highway.

Endangered or Threatened Species – see 6 NYCRR Part 182 of the Department's rules and regulations for definition of terms and requirements.

Environmental Conservation Law (ECL) - means chapter 43-B of the Consolidated Laws of the State of New York, entitled the Environmental Conservation Law.

Equivalent (Equivalence) – means that the practice or measure meets all the performance, longevity, maintenance, and safety objectives of the technical standard and will provide an equal or greater degree of water quality protection.

Final Stabilization - means that all soil disturbance activities have ceased and a uniform, perennial vegetative cover with a density of eighty (80) percent over the entire pervious surface has been established; or other equivalent stabilization measures, such as permanent landscape mulches, rock rip-rap or washed/crushed stone have been applied on all disturbed areas that are not covered by permanent structures, concrete or pavement.

General SPDES permit - means a SPDES permit issued pursuant to 6 NYCRR Part 750-1.21 and Section 70-0117 of the ECL authorizing a category of discharges.

Groundwater(s) - means waters in the saturated zone. The saturated zone is a subsurface zone in which all the interstices are filled with water under pressure greater than that of the atmosphere. Although the zone may contain gas-filled interstices or interstices filled with fluids other than water, it is still considered saturated.

Historic Property – means any building, structure, site, object or district that is listed on the State or National Registers of Historic Places or is determined to be eligible for listing on the State or National Registers of Historic Places.

Impervious Area (Cover) - means all impermeable surfaces that cannot effectively infiltrate rainfall. This includes paved, concrete and gravel surfaces (i.e. parking lots, driveways, roads, runways and sidewalks); building rooftops and miscellaneous impermeable structures such as patios, pools, and sheds.

Infeasible – means not technologically possible, or not economically practicable and achievable in light of best industry practices.

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

Larger Common Plan of Development or Sale - means a contiguous area where multiple separate and distinct *construction activities* are occurring, or will occur, under one plan. The term "plan" in "larger common plan of development or sale" is broadly defined as any announcement or piece of documentation (including a sign, public notice or hearing, marketing plan, advertisement, drawing, permit application, State Environmental Quality Review Act (SEQRA) environmental assessment form or other documents, zoning request, computer design, etc.) or physical demarcation (including boundary signs, lot stakes, surveyor markings, etc.) indicating that *construction activities* may occur on a specific plot.

For discrete construction projects that are located within a larger common plan of development or sale that are at least 1/4 mile apart, each project can be treated as a separate plan of development or sale provided any interconnecting road, pipeline or utility project that is part of the same "common plan" is not concurrently being disturbed.

Minimize – means reduce and/or eliminate to the extent achievable using control measures (including best management practices) that are technologically available and economically practicable and achievable in light of best industry practices.

Municipal Separate Storm Sewer (MS4) - a conveyance or system of conveyances (including roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, man-made channels, or storm drains):

(i) Owned or operated by a State, city, town, borough, county, parish, district, association, or other public body (created by or pursuant to State law) having jurisdiction over disposal of sewage, industrial wastes, stormwater, or other wastes, including special districts under State law such as a sewer district, flood control district or drainage district, or similar entity, or an Indian tribe or an authorized Indian tribal organization, or a designated and approved management agency under section 208 of the CWA that discharges to surface waters of the State*;*
(ii) Designed or used for collecting or conveying stormwater;
(iii) Which is not a *combined sewer*; and
(iv) Which is not part of a Publicly Owned Treatment Works (POTW) as defined at 40 CFR 122.2.

National Pollutant Discharge Elimination System (NPDES) - means the national system for the issuance of wastewater and stormwater permits under the Federal Water Pollution Control Act (Clean Water Act).

Natural Buffer –means an undisturbed area with natural cover running along a surface water (e.g. wetland, stream, river, lake, etc.).

New Development – means any land disturbance that does not meet the definition of Redevelopment Activity included in this appendix.

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

New York State Erosion and Sediment Control Certificate Program – a certificate program that establishes and maintains a process to identify and recognize individuals who are capable of developing, designing, inspecting and maintaining erosion and sediment control plans on projects that disturb soils in New York State. The certificate program is administered by the New York State Conservation District Employees Association.

NOI Acknowledgment Letter - means the letter that the Department sends to an owner or operator to acknowledge the Department's receipt and acceptance of a complete Notice of Intent. This letter documents the owner's or operator's authorization to discharge in accordance with the general permit for stormwater discharges from *construction activity*.

Nonpoint Source - means any source of water pollution or pollutants which is not a discrete conveyance or *point source* permitted pursuant to Title 7 or 8 of Article 17 of the Environmental Conservation Law (see ECL Section 17-1403).

Overbank –means flow events that exceed the capacity of the stream channel and spill out into the adjacent floodplain.

Owner or Operator - means the person, persons or legal entity which owns or leases the property on which the *construction activity* is occurring; an entity that has operational control over the construction plans and specifications, including the ability to make modifications to the plans and specifications; and/or an entity that has day-to-day operational control of those activities at a project that are necessary to ensure compliance with the permit conditions.

Performance Criteria – means the design criteria listed under the "Required Elements" sections in Chapters 5, 6 and 10 of the technical standard, New York State Stormwater Management Design Manual, dated January 2015. It does not include the Sizing Criteria (i.e. WQv, RRv, Cpv, Qp and Qf) in Part I.C.2. of the permit.

Point Source - means any discernible, confined and discrete conveyance, including but not limited to any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, vessel or other floating craft, or landfill leachate collection system from which *pollutants* are or may be discharged.

Pollutant - means dredged spoil, filter backwash, solid waste, incinerator residue, sewage, garbage, sewage sludge, munitions, chemical wastes, biological materials, radioactive materials, heat, wrecked or discarded equipment, rock, sand and industrial, municipal, agricultural waste and ballast discharged into water; which may cause or might reasonably be expected to cause pollution of the waters of the state in contravention of the standards or guidance values adopted as provided in 6 NYCRR Parts 700 et seq .

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

Qualified Inspector - means a person that is knowledgeable in the principles and practices of erosion and sediment control, such as a licensed Professional Engineer, Certified Professional in Erosion and Sediment Control (CPESC), Registered Landscape Architect, New York State Erosion and Sediment Control Certificate Program holder or other Department endorsed individual(s).

It can also mean someone working under the direct supervision of, and at the same company as, the licensed Professional Engineer or Registered Landscape Architect, provided that person has training in the principles and practices of erosion and sediment control. Training in the principles and practices of erosion and sediment control means that the individual working under the direct supervision of the licensed Professional Engineer or Registered Landscape Architect has received four (4) hours of Department endorsed training in proper erosion and sediment control principles from a Soil and Water Conservation District, or other Department endorsed entity. After receiving the initial training, the individual working under the direct supervision of the licensed Professional Engineer or Registered Landscape Architect shall receive four (4) hours of training every three (3) years.

It can also mean a person that meets the *Qualified Professional* qualifications in addition to the *Qualified Inspector* qualifications.

Note: Inspections of any post-construction stormwater management practices that include structural components, such as a dam for an impoundment, shall be performed by a licensed Professional Engineer.

Qualified Professional - means a person that is knowledgeable in the principles and practices of stormwater management and treatment, such as a licensed Professional Engineer, Registered Landscape Architect or other Department endorsed individual(s). Individuals preparing SWPPPs that require the post-construction stormwater management practice component must have an understanding of the principles of hydrology, water quality management practice design, water quantity control design, and, in many cases, the principles of hydraulics. All components of the SWPPP that involve the practice of engineering, as defined by the NYS Education Law (see Article 145), shall be prepared by, or under the direct supervision of, a professional engineer licensed to practice in the State of New York.

Redevelopment Activity(ies) – means the disturbance and reconstruction of existing impervious area, including impervious areas that were removed from a project site within five (5) years of preliminary project plan submission to the local government (i.e. site plan, subdivision, etc.).

Regulated, Traditional Land Use Control MS4 - means a city, town or village with land use control authority that is authorized to discharge under New York State DEC's

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

SPDES General Permit For Stormwater Discharges from Municipal Separate Stormwater Sewer Systems (MS4s) or the City of New York's Individual SPDES Permit for their Municipal Separate Storm Sewer Systems (NY-0287890).

Routine Maintenance Activity - means *construction activity* that is performed to maintain the original line and grade, hydraulic capacity, or original purpose of a facility, including, but not limited to:

- Re-grading of gravel roads or parking lots,
- Cleaning and shaping of existing roadside ditches and culverts that maintains the approximate original line and grade, and hydraulic capacity of the ditch,
- Cleaning and shaping of existing roadside ditches that does not maintain the approximate original grade, hydraulic capacity and purpose of the ditch if the changes to the line and grade, hydraulic capacity or purpose of the ditch are installed to improve water quality and quantity controls (e.g. installing grass lined ditch),
- Placement of aggregate shoulder backing that stabilizes the transition between the road shoulder and the ditch or *embankment*,
- Full depth milling and filling of existing asphalt pavements, replacement of concrete pavement slabs, and similar work that does not expose soil or disturb the bottom six (6) inches of subbase material,
- Long-term use of equipment storage areas at or near highway maintenance facilities,
- Removal of sediment from the edge of the highway to restore a previously existing sheet-flow drainage connection from the highway surface to the highway ditch or *embankment*,
- Existing use of Canal Corp owned upland disposal sites for the canal, and
- Replacement of curbs, gutters, sidewalks and guide rail posts.

Site limitations – means site conditions that prevent the use of an infiltration technique and or infiltration of the total WQv. Typical site limitations include: seasonal high groundwater, shallow depth to bedrock, and soils with an infiltration rate less than 0.5 inches/hour. The existence of site limitations shall be confirmed and documented using actual field testing (i.e. test pits, soil borings, and infiltration test) or using information from the most current United States Department of Agriculture (USDA) Soil Survey for the County where the project is located.

Sizing Criteria – means the criteria included in Part I.C.2 of the permit that are used to size post-construction stormwater management control practices. The criteria include; Water Quality Volume (WQv), Runoff Reduction Volume (RRv), Channel Protection Volume (Cpv), *Overbank* Flood (Qp), and Extreme Flood (Qf).

State Pollutant Discharge Elimination System (SPDES) - means the system established pursuant to Article 17 of the ECL and 6 NYCRR Part 750 for issuance of permits authorizing discharges to the waters of the state.

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

Steep Slope – means land area designated on the current United States Department of Agriculture ("USDA") Soil Survey as Soil Slope Phase "D", (provided the map unit name is inclusive of slopes greater than 25%) , or Soil Slope Phase E or F, (regardless of the map unit name), or a combination of the three designations.

Streambank – as used in this permit, means the terrain alongside the bed of a creek or stream. The bank consists of the sides of the channel, between which the flow is confined.

Stormwater Pollution Prevention Plan (SWPPP) – means a project specific report, including construction drawings, that among other things: describes the construction activity(ies), identifies the potential sources of pollution at the *construction site*; describes and shows the stormwater controls that will be used to control the pollutants (i.e. erosion and sediment controls; for many projects, includes post-construction stormwater management controls); and identifies procedures the *owner or operator* will implement to comply with the terms and conditions of the permit. See Part III of the permit for a complete description of the information that must be included in the SWPPP.

Surface Waters of the State - shall be construed to include lakes, bays, sounds, ponds, impounding reservoirs, springs, rivers, streams, creeks, estuaries, marshes, inlets, canals, the Atlantic ocean within the territorial seas of the state of New York and all other bodies of surface water, natural or artificial, inland or coastal, fresh or salt, public or private (except those private waters that do not combine or effect a junction with natural surface waters), which are wholly or partially within or bordering the state or within its jurisdiction. Waters of the state are further defined in 6 NYCRR Parts 800 to 941.

Temporarily Ceased – means that an existing disturbed area will not be disturbed again within 14 calendar days of the previous soil disturbance.

Temporary Stabilization - means that exposed soil has been covered with material(s) as set forth in the technical standard, New York Standards and Specifications for Erosion and Sediment Control, to prevent the exposed soil from eroding. The materials can include, but are not limited to, mulch, seed and mulch, and erosion control mats (e.g. jute twisted yarn, excelsior wood fiber mats).

Total Maximum Daily Loads (TMDLs) - A TMDL is the sum of the allowable loads of a single pollutant from all contributing point and *nonpoint source*s. It is a calculation of the maximum amount of a pollutant that a waterbody can receive on a daily basis and still meet *water quality standards*, and an allocation of that amount to the pollutant's sources. A TMDL stipulates wasteload allocations (WLAs) for *point source* discharges, load allocations (LAs) for *nonpoint source*s, and a margin of safety (MOS).

Trained Contractor - means an employee from the contracting (construction) company, identified in Part III.A.6., that has received four (4) hours of Department endorsed

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

training in proper erosion and sediment control principles from a Soil and Water Conservation District, or other Department endorsed entity. After receiving the initial training, the *trained contractor* shall receive four (4) hours of training every three (3) years.

It can also mean an employee from the contracting (construction) company, identified in Part III.A.6., that meets the *qualified inspector* qualifications (e.g. licensed Professional Engineer, Certified Professional in Erosion and Sediment Control (CPESC), Registered Landscape Architect, New York State Erosion and Sediment Control Certificate Program holder, or someone working under the direct supervision of, and at the same company as, the licensed Professional Engineer or Registered Landscape Architect, provided they have received four (4) hours of Department endorsed training in proper erosion and sediment control principles from a Soil and Water Conservation District, or other Department endorsed entity).

The *trained contractor* is responsible for the day to day implementation of the SWPPP.

Uniform Procedures Act (UPA) Permit - means a permit required under 6 NYCRR Part 621 of the Environmental Conservation Law (ECL), Article 70.

Water Quality Standard - means such measures of purity or quality for any waters in relation to their reasonable and necessary use as promulgated in 6 NYCRR Part 700 et seq.

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

APPENDIX B – Required SWPPP Components by Project Type

Table 1
Construction Activities that Require the Preparation of a SWPPP That Only Includes Erosion and Sediment Controls

The following construction activities that involve soil disturbances of one (1) or more acres of land, but less than five (5) acres:

- Single family home not located in one of the watersheds listed in Appendix C or not *directly discharging* to one of the 303(d) segments listed in Appendix E
- Single family residential subdivisions with 25% or less impervious cover at total site build-out and not located in one of the watersheds listed in Appendix C and not directly discharging to one of the 303(d) segments listed in Appendix E
- Construction of a barn or other *agricultural building*, silo, stock yard or pen.

The following construction activities that involve soil disturbances between five thousand (5000) square feet and one (1) acre of land:

All construction activities located in the watersheds identified in Appendix D that involve soil disturbances between five thousand (5,000) square feet and one (1) acre of land.

The following construction activities that involve soil disturbances of one (1) or more acres of land:

- Installation of underground, linear utilities; such as gas lines, fiber-optic cable, cable TV, electric, telephone, sewer mains, and water mains
- Environmental enhancement projects, such as wetland mitigation projects, stormwater retrofits and stream restoration projects
- Pond construction
- Linear bike paths running through areas with vegetative cover, including bike paths surfaced with an impervious cover
- Cross-country ski trails and walking/hiking trails
- Sidewalk, bike path or walking path projects, surfaced with an impervious cover, that are not part of residential, commercial or institutional development;
- Sidewalk, bike path or walking path projects, surfaced with an impervious cover, that include incidental shoulder or curb work along an existing highway to support construction of the sidewalk, bike path or walking path.
- Slope stabilization projects
- Slope flattening that changes the grade of the site, but does not significantly change the runoff characteristics

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

Table 1 (Continued) CONSTRUCTION ACTIVITIES THAT REQUIRE THE PREPARATION OF A SWPPP THAT ONLY INCLUDES EROSION AND SEDIMENT CONTROLS

The following construction activities that involve soil disturbances of one (1) or more acres of land:

- Spoil areas that will be covered with vegetation
- Vegetated open space projects (i.e. recreational parks, lawns, meadows, fields, downhill ski trails) excluding projects that *alter hydrology from pre to post development* conditions,
- Athletic fields (natural grass) that do not include the construction or reconstruction of *impervious area* and do not *alter hydrology from pre to post development* conditions
- Demolition project where vegetation will be established, and no redevelopment is planned
- Overhead electric transmission line project that does not include the construction of permanent access roads or parking areas surfaced with *impervious cover*
- Structural practices as identified in Table II in the "Agricultural Management Practices Catalog for Nonpoint Source Pollution in New York State", excluding projects that involve soil disturbances of greater than five acres and construction activities that include the construction or reconstruction of impervious area
- Temporary access roads, median crossovers, detour roads, lanes, or other temporary impervious areas that will be restored to pre-construction conditions once the construction activity is complete

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

Table 2
CONSTRUCTION ACTIVITIES THAT REQUIRE THE PREPARATION OF A SWPPP THAT INCLUDES POST-CONSTRUCTION STORMWATER MANAGEMENT PRACTICES

The following construction activities that involve soil disturbances of one (1) or more acres of land:

- Single family home located in one of the watersheds listed in Appendix C or *directly discharging* to one of the 303(d) segments listed in Appendix E
- Single family home that disturbs five (5) or more acres of land
- Single family residential subdivisions located in one of the watersheds listed in Appendix C or *directly discharging* to one of the 303(d) segments listed in Appendix E
- Single family residential subdivisions that involve soil disturbances of between one (1) and five (5) acres of land with greater than 25% impervious cover at total site build-out
- Single family residential subdivisions that involve soil disturbances of five (5) or more acres of land, and single family residential subdivisions that involve soil disturbances of less than five (5) acres that are part of a larger common plan of development or sale that will ultimately disturb five or more acres of land
- Multi-family residential developments; includes duplexes, townhomes, condominiums, senior housing complexes, apartment complexes, and mobile home parks
- Airports
- Amusement parks
- Breweries, cideries, and wineries, including establishments constructed on agricultural land
- Campgrounds
- Cemeteries that include the construction or reconstruction of impervious area (>5% of disturbed area) or *alter the hydrology from pre to post development* conditions
- Commercial developments
- Churches and other places of worship
- Construction of a barn or other *agricultural building* (e.g. silo) and structural practices as identified in Table II in the “Agricultural Management Practices Catalog for Nonpoint Source Pollution in New York State” that include the construction or reconstruction of *impervious area*, excluding projects that involve soil disturbances of less than five acres.
- Golf courses
- Institutional development; includes hospitals, prisons, schools and colleges
- Industrial facilities; includes industrial parks
- Landfills
- Municipal facilities; includes highway garages, transfer stations, office buildings, POTW’s, water treatment plants, and water storage tanks
- Office complexes
- Playgrounds that include the construction or reconstruction of impervious area
- Sports complexes
- Racetracks; includes racetracks with earthen (dirt) surface
- Road construction or reconstruction, including roads constructed as part of the construction activities listed in Table 1

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

Table 2 (Continued)

CONSTRUCTION ACTIVITIES THAT REQUIRE THE PREPARATION OF A SWPPP THAT INCLUDES POST-CONSTRUCTION STORMWATER MANAGEMENT PRACTICES

The following construction activities that involve soil disturbances of one (1) or more acres of land:

- Parking lot construction or reconstruction, including parking lots constructed as part of the construction activities listed in Table 1
- Athletic fields (natural grass) that include the construction or reconstruction of impervious area (>5% of disturbed area) or *alter the hydrology from pre to post development* conditions
- Athletic fields with artificial turf
- Permanent access roads, parking areas, substations, compressor stations and well drilling pads, surfaced with *impervious cover,* and constructed as part of an over-head electric transmission line project, wind-power project, cell tower project, oil or gas well drilling project, sewer or water main project or other linear utility project
- Sidewalk, bike path or walking path projects, surfaced with an impervious cover, that are part of a residential, commercial or institutional development
- Sidewalk, bike path or walking path projects, surfaced with an impervious cover, that are part of a highway construction or reconstruction project
- All other construction activities that include the construction or reconstruction of *impervious area* or *alter the hydrology from pre to post development* conditions, and are not listed in Table 1

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

APPENDIX C – Watersheds Requiring Enhanced Phosphorus Removal

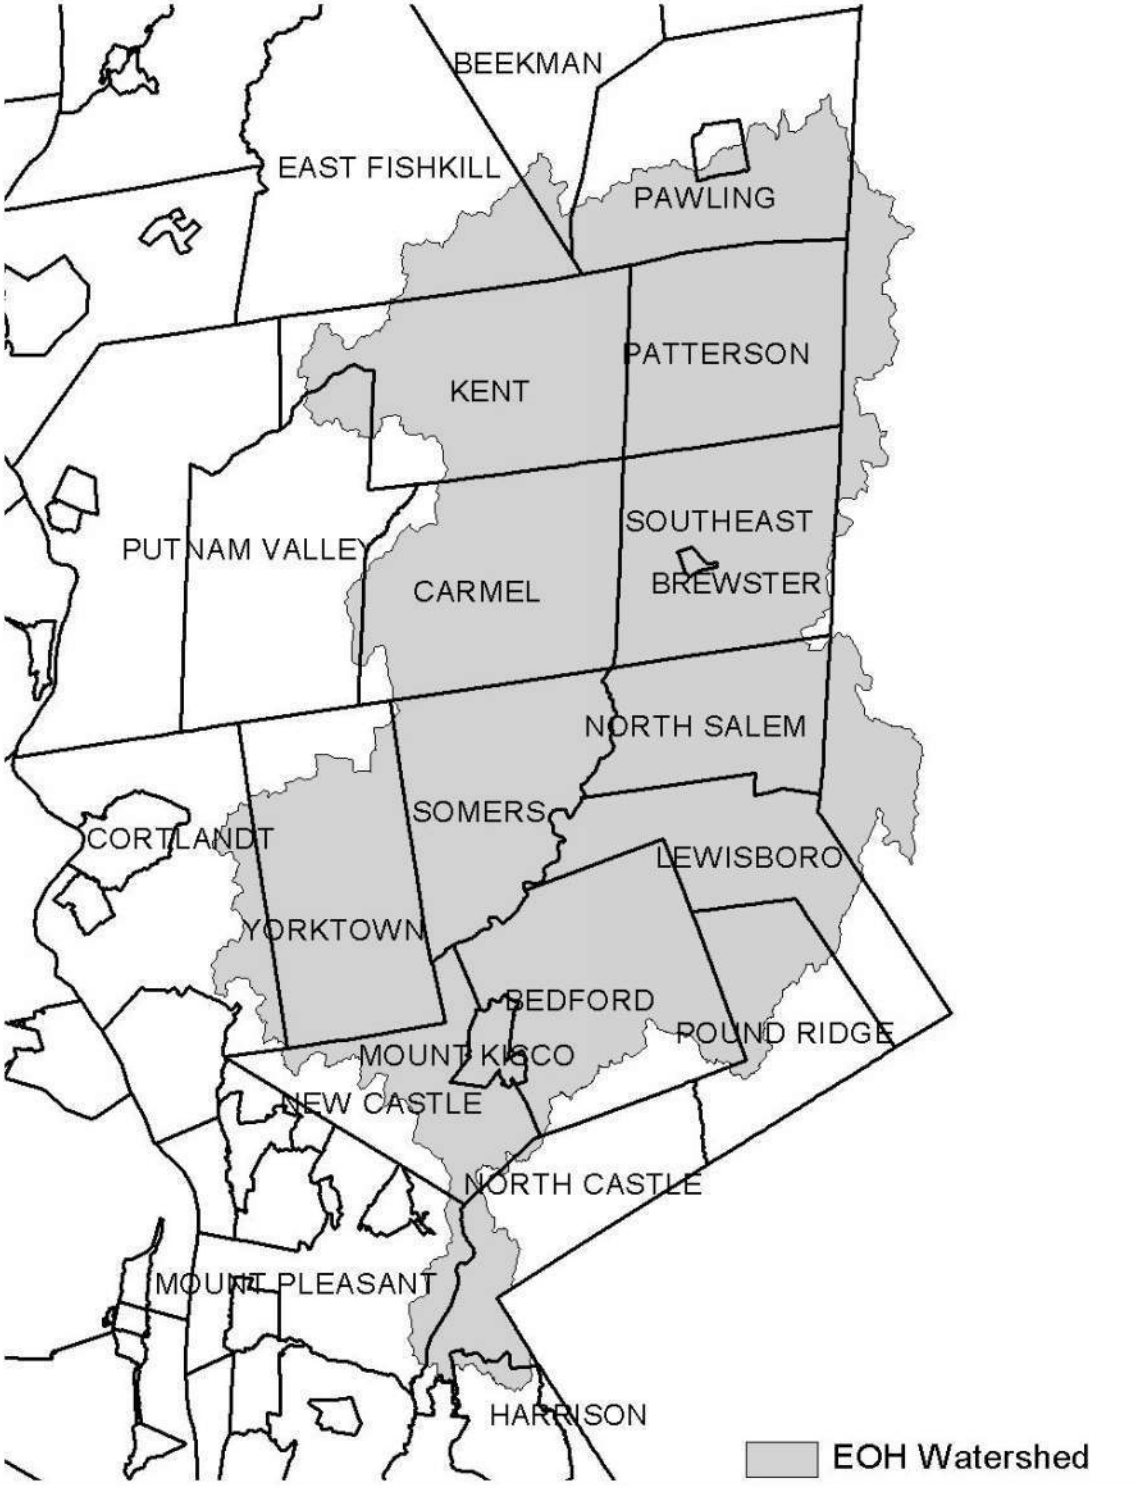
Watersheds where *owners or operators* of construction activities identified in Table 2 of Appendix B must prepare a SWPPP that includes post-construction stormwater management practices designed in conformance with the Enhanced Phosphorus Removal Standards included in the technical standard, New York State Stormwater Management Design Manual ("Design Manual").

- Entire New York City Watershed located east of the Hudson River - Figure 1
- Onondaga Lake Watershed - Figure 2
- Greenwood Lake Watershed -Figure 3
- Oscawana Lake Watershed – Figure 4
- Kinderhook Lake Watershed – Figure 5

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

Appendix C

Figure 1 - New York City Watershed East of the Hudson



Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

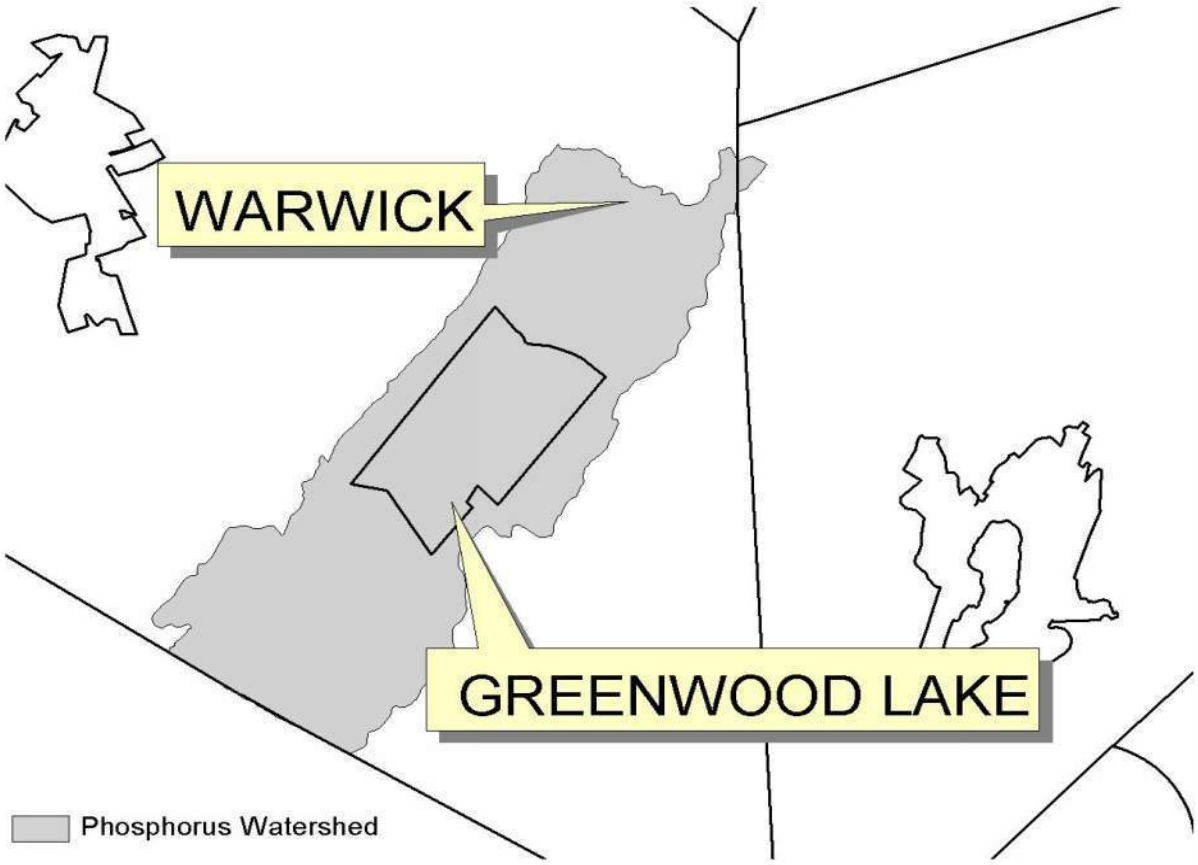
Appendix C

Figure 2 - Onondaga Lake Watershed

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

Appendix C

Figure 3 - Greenwood Lake Watershed



Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

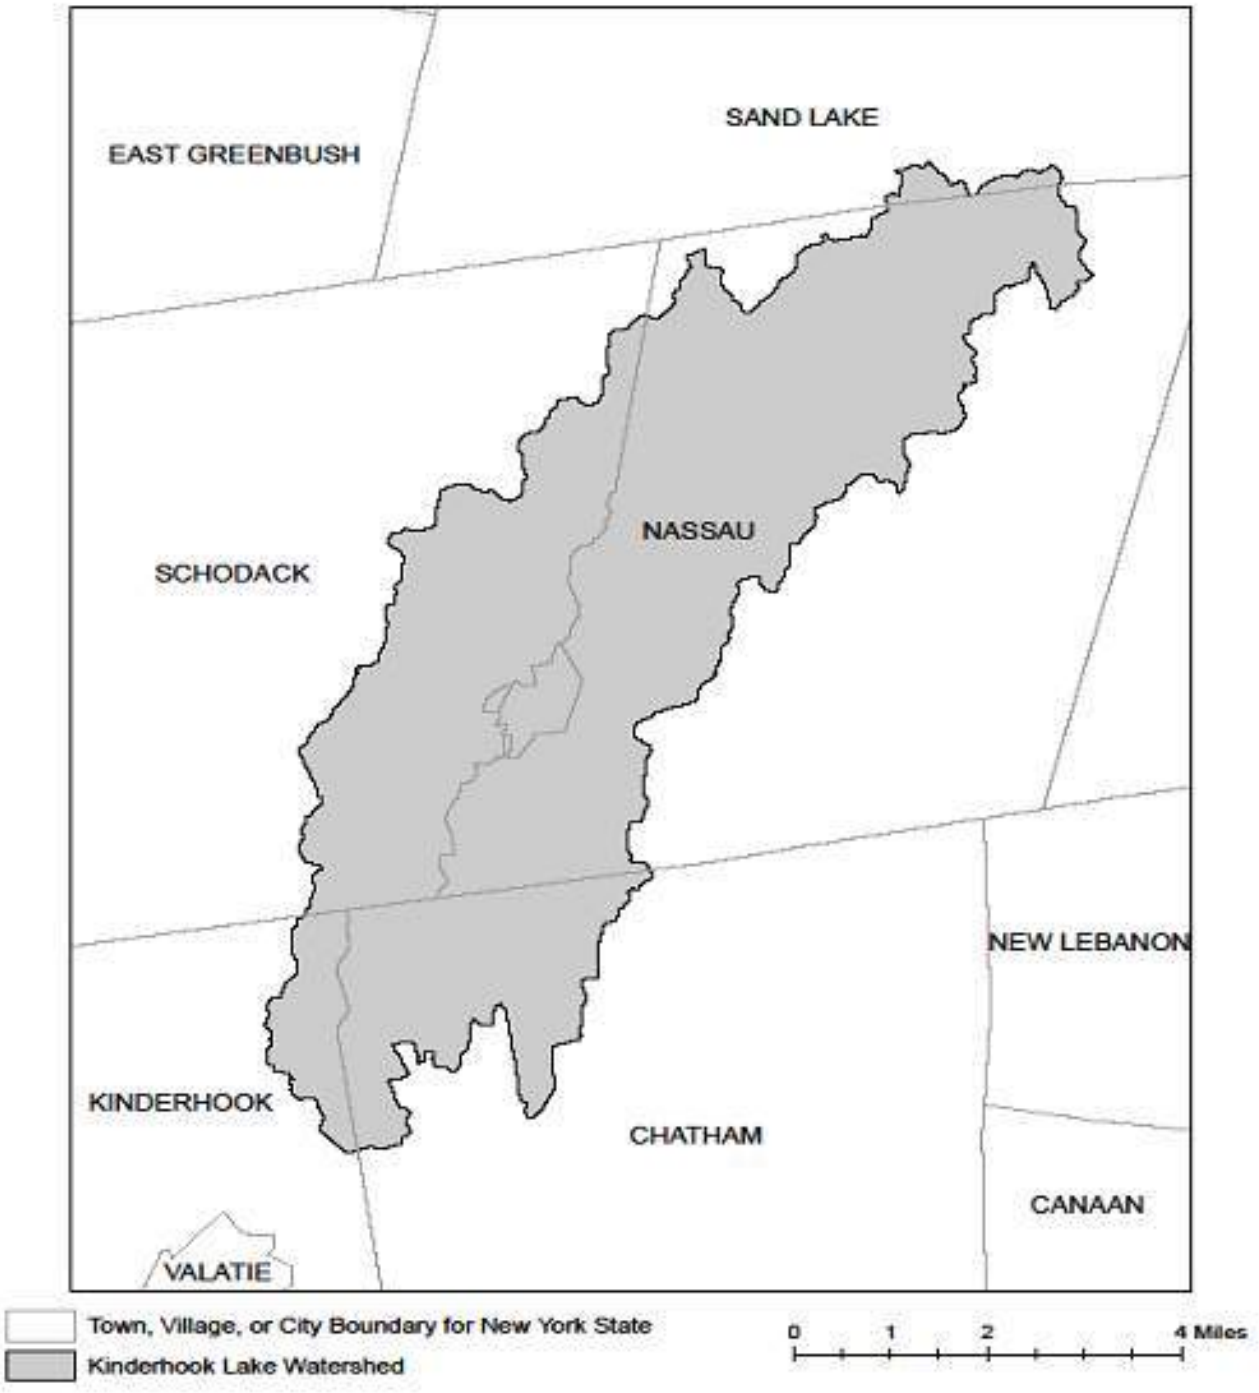
Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

Figure 5 - Kinderhook Lake Watershed



Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

APPENDIX D – Watersheds with Lower Disturbance Threshold

Watersheds where *owners or operators* of construction activities that involve soil disturbances between five thousand (5000) square feet and one (1) acre of land must obtain coverage under this permit.

Entire New York City Watershed that is located east of the Hudson River - See Figure 1 in Appendix C

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

APPENDIX E – 303(d) Segments Impaired by Construction Related Pollutant(s)

List of 303(d) segments impaired by pollutants related to *construction activity* (e.g. silt, sediment or nutrients). The list was developed using "The Final New York State 2016 Section 303(d) List of Impaired Waters Requiring a TMDL/Other Strategy" dated November 2016. *Owners or operators* of single family home and single family residential subdivisions with 25% or less total impervious cover at total site build-out that involve soil disturbances of one or more acres of land, but less than 5 acres, and *directly discharge* to one of the listed segments below shall prepare a SWPPP that includes post-construction stormwater management practices designed in conformance with the New York State Stormwater Management Design Manual ("Design Manual"), dated January 2015.

COUNTY	WATERBODY	POLLUTANT
Albany	Ann Lee (Shakers) Pond, Stump Pond	Nutrients
Albany	Basic Creek Reservoir	Nutrients
Allegany	Amity Lake, Saunders Pond	Nutrients
Bronx	Long Island Sound, Bronx	Nutrients
Bronx	Van Cortlandt Lake	Nutrients
Broome	Fly Pond, Deer Lake, Sky Lake	Nutrients
Broome	Minor Tribs to Lower Susquehanna (north)	Nutrients
Broome	Whitney Point Lake/Reservoir	Nutrients
Cattaraugus	Allegheny River/Reservoir	Nutrients
Cattaraugus	Beaver (Alma) Lake	Nutrients
Cattaraugus	Case Lake	Nutrients
Cattaraugus	Linlyco/Club Pond	Nutrients
Cayuga	Duck Lake	Nutrients
Cayuga	Little Sodus Bay	Nutrients
Chautauqua	Bear Lake	Nutrients
Chautauqua	Chadakoin River and tribs	Nutrients
Chautauqua	Chautauqua Lake, North	Nutrients
Chautauqua	Chautauqua Lake, South	Nutrients
Chautauqua	Findley Lake	Nutrients
Chautauqua	Hulburt/Clymer Pond	Nutrients
Clinton	Great Chazy River, Lower, Main Stem	Silt/Sediment
Clinton	Lake Champlain, Main Lake, Middle	Nutrients
Clinton	Lake Champlain, Main Lake, North	Nutrients
Columbia	Kinderhook Lake	Nutrients
Columbia	Robinson Pond	Nutrients
Cortland	Dean Pond	Nutrients

81.02-1-10 & 11

1. Coordinates

Provide the Geographic Coordinates for the project site. The two methods are:
- Navigate to the project location on the map (below) and click to place a marker and obtain the XY coordinates.
- The "Find Me" button will provide the lat/long for the person filling out this form. Then pan the map to the correct location and click the map to place a marker and obtain the XY coordinates.

Navigate to your location and click on the map to get the X,Y coordinates
42.958340962733494,-78.71217501586915

Project Details

2. What is the nature of this project?
New Construction

3. Select the predominant land use for both pre and post development conditions.

Pre-Development Existing Landuse
Pasture/Open Land

Post-Development Future Land Use
Commercial

3a. If Single Family Subdivision was selected in question 3, enter the number of subdivision lots.
NONE PROVIDED

4. In accordance with the larger common plan of development or sale, enter the total project site acreage, the acreage to be disturbed and the future impervious area (acreage)within the disturbed area.

*** ROUND TO THE NEAREST TENTH OF AN ACRE. ***

Total Site Area (acres)
24.9

Total Area to be Disturbed (acres)
17.5

Existing Impervious Area to be Disturbed (acres)
0

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

Future Impervious Area Within Disturbed Area (acres)
6.56

5. Do you plan to disturb more than 5 acres of soil at any one time?
Yes

---

6. Indicate the percentage (%) of each Hydrologic Soil Group(HSG) at the site.

A (%)
0

B (%)
0

C (%)
0

D (%)
100

7. Is this a phased project?
No

8. Enter the planned start and end dates of the disturbance activities.

Start Date
4/1/2022

End Date
4/1/2023

9. Identify the nearest surface waterbody(ies) to which construction site runoff will discharge.
Ellicott Creek

9a. Type of waterbody identified in question 9?
Stream/Creek Off Site

Other Waterbody Type Off Site Description
NONE PROVIDED

9b. If "wetland" was selected in 9A, how was the wetland identified?
NONE PROVIDED

10. Has the surface waterbody(ies in question 9 been identified as a 303(d) segment in Appendix E of GP-0-20-001?
Yes

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

11. Is this project located in one of the Watersheds identified in Appendix C of GP-0-20-001?
No

12. Is the project located in one of the watershed areas associated with AA and AA-S classified waters?
No

If No, skip question 13.

13. Does this construction activity disturb land with no existing impervious cover and where the Soil Slope Phase is identified as an E or F on the USDA Soil Survey?
NONE PROVIDED

If Yes, what is the acreage to be disturbed?
NONE PROVIDED

14. Will the project disturb soils within a State regulated wetland or the protected 100 foot adjacent area?
No

15. Does the site runoff enter a separate storm sewer system (including roadside drains, swales, ditches, culverts, etc)?
Yes

16. What is the name of the municipality/entity that owns the separate storm sewer system?
Erie County Dept. of Public Works

17. Does any runoff from the site enter a sewer classified as a Combined Sewer?
No

18. Will future use of this site be an agricultural property as defined by the NYS Agriculture and Markets Law?
No

19. Is this property owned by a state authority, state agency, federal government or local government?
No

20. Is this a remediation project being done under a Department approved work plan? (i.e. CERCLA, RCRA, Voluntary Cleanup Agreement, etc.)
No

Required SWPPP Components

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

21. Has the required Erosion and Sediment Control component of the SWPPP been developed in conformance with the current NYS Standards and Specifications for Erosion and Sediment Control (aka Blue Book)?
Yes

22. Does this construction activity require the development of a SWPPP that includes the post-construction stormwater management practice component (i.e. Runoff Reduction, Water Quality and Quantity Control practices/techniques)?
Yes

If you answered No in question 22, skip question 23 and the Post-construction Criteria and Post-construction SMP Identification sections.

23. Has the post-construction stormwater management practice component of the SWPPP been developed in conformance with the current NYS Stormwater Management Design Manual?
Yes

24. The Stormwater Pollution Prevention Plan (SWPPP) was prepared by:
Professional Engineer (P.E.)

SWPPP Preparer
C&S Engineers, Inc.

Contact Name (Last, Space, First)
Utzig, Jason

Comment
NONE PROVIDED

Erosion & Sediment Control Criteria

25. Has a construction sequence schedule for the planned management practices been prepared?
Yes

26. Select all of the erosion and sediment control practices that will be employed on the project site:

Temporary Structural
Silt Fence
Stabilized Construction Entrance
Storm Drain Inlet Protection

Biotechnical
None

Vegetative Measures
Mulching
Seeding
Topsoiling

Permanent Structural
Rock Outlet Protection

Other
NONE PROVIDED

Post-Construction Criteria

*** IMPORTANT: Completion of Questions 27-39 is not required if response to Question 22 is No.**

27. Identify all site planning practices that were used to prepare the final site plan/layout for the project.
Preservation of Undisturbed Area
Reduction of Clearing and Grading

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

27a. Indicate which of the following soil restoration criteria was used to address the requirements in Section 5.1.6("Soil Restoration") of the Design Manual (2010 version).
All disturbed areas will be restored in accordance with the Soil Restoration requirements in Table 5.3 of the Design Manual (see page 5-22).

28. Provide the total Water Quality Volume (WQv) required for this project (based on final site plan/layout). (Acre-feet)
0.559

29. Post-construction SMP Identification
Use the Post-construction SMP Identification section to identify the RR techniques (Area Reduction), RR techniques(Volume Reduction) and Standard SMPs with RRv Capacity that were used to reduce the Total WQv Required (#28).

Identify the SMPs to be used by providing the total impervious area that contributes runoff to each technique/practice selected. For the Area Reduction Techniques, provide the total contributing area (includes pervious area) and, if applicable, the total impervious area that contributes runoff to the technique/practice.

Note: Redevelopment projects shall use the Post-Construction SMP Identification section to identify the SMPs used to treat and/or reduce the WQv required. If runoff reduction techniques will not be used to reduce the required WQv, skip to question 33a after identifying the SMPs.

30. Indicate the Total RRv provided by the RR techniques (Area/Volume Reduction) and Standard SMPs with RRv capacity identified in question 29. (acre-feet)
0.238

31. Is the Total RRv provided (#30) greater than or equal to the total WQv required (#28)?
No

If Yes, go to question 36. If No, go to question 32.

32. Provide the Minimum RRv required based on HSG. [Minimum RRv Required = (P) (0.95) (Ai) / 12, Ai=(s) (Aic)] (acre-feet)
0.104

32a. Is the Total RRv provided (#30) greater than or equal to the Minimum RRv Required (#32)?
Yes

If Yes, go to question 33.
Note: Use the space provided in question #39 to summarize the specific site limitations and justification for not reducing 100% of WQv required (#28). A detailed evaluation of the specific site limitations and justification for not reducing 100% of the WQv required (#28) must also be included in the SWPPP.

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

If No, sizing criteria has not been met; therefore, NOI can not be processed. SWPPP preparer must modify design to meet sizing criteria.

33. SMPs
Use the Post-construction SMP Identification section to identify the Standard SMPs and, if applicable, the Alternative SMPs to be used to treat the remaining total WQv (=Total WQv Required in #28 - Total RRv Provided in #30).

Also, provide the total impervious area that contributes runoff to each practice selected.

NOTE: Use the Post-construction SMP Identification section to identify the SMPs used on Redevelopment projects.

33a. Indicate the Total WQv provided (i.e. WQv treated) by the SMPs identified in question #33 and Standard SMPs with RRv Capacity identified in question #29. (acre-feet)
0.321

Note: For the standard SMPs with RRv capacity, the WQv provided by each practice = the WQv calculated using the contributing drainage area to the practice - provided by the practice. (See Table 3.5 in Design Manual)

34. Provide the sum of the Total RRv provided (#30) and the WQv provided (#33a).
0.559

35. Is the sum of the RRv provided (#30) and the WQv provided (#33a) greater than or equal to the total WQv required (#28)?
Yes

If Yes, go to question 36.

If No, sizing criteria has not been met; therefore, NOI can not be processed. SWPPP preparer must modify design to meet sizing criteria.

36. Provide the total Channel Protection Storage Volume (CPv required and provided or select waiver (#36a), if applicable.

CPv Required (acre-feet)
1.643

CPv Provided (acre-feet)
1.643

36a. The need to provide channel protection has been waived because:
NONE PROVIDED

37. Provide the Overbank Flood (Qp) and Extreme Flood (Qf) control criteria or select waiver (#37a), if applicable.

Overbank Flood Control Criteria (Qp)

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

Pre-Development (CFS)
11.59

Post-Development (CFS)
5.20

Total Extreme Flood Control Criteria (Qf)

Pre-Development (CFS)
24.49

Post-Development (CFS)
6.39

37a. The need to meet the Qp and Qf criteria has been waived because:
NONE PROVIDED

38. Has a long term Operation and Maintenance Plan for the post-construction stormwater management practice(s) been developed?
Yes

If Yes, Identify the entity responsible for the long term Operation and Maintenance
Acquest Wehrle LLC

39. Use this space to summarize the specific site limitations and justification for not reducing 100% of WQv required (#28). (See question #32a) This space can also be used for other pertinent project information.
NONE PROVIDED

Post-Construction SMP Identification

Runoff Reduction (RR) Techniques, Standard Stormwater Management Practices (SMPs) and Alternative SMPs
Identify the Post-construction SMPs to be used by providing the total impervious area that contributes runoff to each technique/practice selected. For the Area Reduction Techniques, provide the total contributing area (includes pervious area) and, if applicable, the total impervious area that contributes runoff to the technique/practice.

RR Techniques (Area Reduction)

Round to the nearest tenth

Total Contributing Acres for Conservation of Natural Area (RR-1)

"Other" Alternative SMP?
NONE PROVIDED

Total Contributing Impervious Area for "Other"
NONE PROVIDED

Provide the name and manufaturer of the alternative SMPs (i.e. proprietary practice(s)) being used for WQv treatment.

Note: Redevelopment projects which do not use RR techniques, shall use questions 28, 29, 33 and 33a to provide SMPs used, total WQv required and total WQv provided for the project.

Manufacturer of Alternative SMP
NONE PROVIDED

Name of Alternative SMP
NONE PROVIDED

Other Permits

40. Identify other DEC permits, existing and new, that are required for this project/facility.
None

If SPDES Multi-Sector GP, then give permit ID
NONE PROVIDED

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

If Other, then identify
NONE PROVIDED

41. Does this project require a US Army Corps of Engineers Wetland Permit?
No

If "Yes," then indicate Size of Impact, in acres, to the nearest tenth
NONE PROVIDED

42. If this NOI is being submitted for the purpose of continuing or transferring coverage under a general permit for stormwater runoff from construction activities, please indicate the former SPDES number assigned.
NONE PROVIDED

MS4 SWPPP Acceptance

43. Is this project subject to the requirements of a regulated, traditional land use control MS4?
NONE PROVIDED

If No, skip question 44

44. Has the "MS4 SWPPP Acceptance" form been signed by the principal executive officer or ranking elected official and submitted along with this NOI?
NONE PROVIDED

MS4 SWPPP Acceptance Form - continued

V. Certification Statement - MS4 Official (principal executive officer or ranking elected official) or Duly Authorized Representative

I hereby certify that the final Stormwater Pollution Prevention Plan (SWPPP) for the construction project identified in question 5 has been reviewed and meets the substantive requirements in the SPDES General Permit For Stormwater Discharges from Municipal Separate Storm Sewer Systems (MS4s). Note: The MS4, through the acceptance of the SWPPP, assumes no responsibility for the accuracy and adequacy of the design included in the SWPPP. In addition, review and acceptance of the SWPPP by the MS4 does not relieve the owner/operator or their SWPPP preparer of responsibility or liability for errors or omissions in the plan.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:15,800.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Erie County, New York
Survey Area Data: Version 20, Jun 11, 2020

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Jul 4, 2020—Jul 10, 2020

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Description

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

DATE: November 2021
PROJECT NAME: 2190-2220 WEHRLE DRIVE
(PROPOSED DEV. & PROPOSED ROAD)

Stormwater Quality Calculations

Impervious Areas (refer to Existing & Proposed Drainage Analysis Maps)

$I_{Existing} := 0$ — $I_{Existing}$ = Existing Impervious Area (acres) per Existing Drainage Analysis Map

$I_{Proposed} := 6.56$ — $I_{Proposed}$ = Proposed Impervious Area (acres) per Proposed Drainage Analysis Map

$I_{New} := I_{Proposed} - I_{Existing}$ — I_{New} = New Impervious Area (acres)

$I_{New} = 6.56$

Minimum Runoff Reduction Volume (RR_v Min)

The minimum RRv is calculated by applying a reduction factor (S) (based on the HSG on site) to the area of new impervious coverage.

$P := 1.0$ — *90% Rainfall Event (inches)*

$Rv := 0.95$ — **0.05 + 0.009(I) where I is 100% impervious**

$Aic := I_{New}$ — *Total Area of New Impervious Area (acres)*

$Aic = 6.56$

$S := 0.20$ — *Hydrologic Soil Group (HSG) Specific Reduction Factor (S)*
The site is 100% HSG D. Therefore, S = 0.20

$RR_{vmin} := \frac{P \cdot Rv \cdot Aic \cdot S}{12} = 0.104$ — *Runoff Reduction Volume Minimum (acre-feet)*

$RR_{vmin} \cdot 43560 = 4524$ — *Runoff Reduction Volume Minimum (cubic-feet)*

WEEKLY SOIL EROSION AND SEDIMENT CONTROL INSPECTION CHECKLIST

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

EROSION AND SEDIMENT CONTROL INSPECTION CHECKLIST

Project Name:	**Date & Time of Inspection:**
Project Title:	**Current Conditions (Temp., etc.):**
Project No.:	**Reason for Inspection:**
Inspector' Name:	**Contractor:**

Project E&SC Inspection Report No. ____

(Date of Last Inspection - _____**)**

The State Pollutant Discharge Elimination System General Permit for Construction Activity (Permit) requires site inspections to be conducted at least every 7 calendar days.

Prior to conducting site inspection, review the previous site inspection report to identify reported deficiencies and the proposed corrective actions to address these deficiencies. During the site inspection, evaluate whether the implemented corrective actions proposed in the previous site inspection adequately addressed reported deficiencies.

Are the SWPPP, NOI, Acknowledgment of NOI, MS4 Acceptance Form and Contractor Certifications on site and available to review?	**Yes** ☐ **No** ☐ **N/A** ☐
Are the weekly SWPPP inspection reports on site and available to review (either in a SWPPP mailbox or job trailer?	**Yes** ☐ **No** ☐ **N/A** ☐
Did you review the previous site inspection report?	**Yes** ☐ **No** ☐ **N/A** ☐
Did the previous site inspection require an update to the Storm Water Pollution Prevention Plan (SWPPP)?	**Yes** ☐ **No** ☐ **N/A** ☐
If so was the SWPPP updated?	**Yes** ☐ **No** ☐ **N/A** ☐

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

Project Site Activities

Provide a description of the construction activities that have occurred on site since the last inspection, what activities are currently occurring, and what activities are planned over the course of the next week. The description should consist of general activities, with specific activities identified where appropriate, and as they relate to the implementation and maintenance of Erosion and Sediment Control Measures.

Prior Activities:
Current Activities:
Planned Activities:

Site Map

The project site map shall be utilized as part of the site inspection process. The site map shall be used to visually depict various construction stages of the site, as well as to identify specific areas requiring attention. The various stages are to be depicted by the use of different color highlighters. The following outlines the color to be used for the selected construction activity:

Blue will indicate all disturbed site areas and drainage pathways that have undergone active site work within last 14 days.

Green will indicate site areas which have been temporarily or permanently stabilized.

Yellow will indicate site areas which have not undergone construction activity within the last 14 days but will within the next seven days.

Pink will indicate site areas which have not undergone construction within the last 14 days and will not undergo construction within the next 7 days. Notify contractor that this site area needs to be temporarily or permanently stabilized.

Approximately how many acres are within the Blue area**?**	_____ Acres
Approximately how many acres are within the Yellow area?	_____ Acres
Approximately how many acres are within the Pink area?	_____ Acres
Add all of the acreage from the three areas	_____ Acres

If the total area is greater than five (5) acres, then the portion of the site in excess of five acres shall be temporarily or permanently stabilized, unless written permission has been obtained from the NYSDEC in advance for any land disturbance of five acres or greater.

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

INSPECTION ITEM	YES	NO	PHOTO #	COMMENTS
a. Is there any evidence of sediment deposition or the discharge of sediment laden water to adjacent properties or drainage facilities?				
b. Is there any evidence of sediment deposition in a sediment trapping device? Record percentage _____% (SPDES permit requires sediment to be removed once it exceeds 50% of the sediment storage volume.)				
Is the sediment trapping device in need of maintenance?				
c. Are protected areas such as wetlands, property boundaries, and vegetation preservation areas, properly delineated?				
d. Is there evidence of erosion at the outlet of pipes, swales or ditches?				
e. Is the construction entrance stabilized and operating correctly?				
f. If Diversion Berms and/or Earth Dikes are required, have they been installed?				
If so, are they in need of maintenance?				
g. If Check Dams are required, have they been installed?				
If so, are they in need of maintenance?				
h. Do catch basins and drainage inlets have proper protection - i.e., filter fabric, stone and block, etc. - inlet protection?				
If so, are they in need of maintenance?				
i. Is there any loss of stabilizing vegetation, or seeding and mulching?				
j. Is there evidence of rill or gully erosion occurring on slopes?				

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

Were the Corrective Action(s) Identified in Last Inspection Report Implemented? Yes ☐ No ☐ N/A ☐ **If yes, Did the Corrective Actions Rectify the Problem? Yes ☐ No ☐ N/A ☐**
Indicate Deficiencies Identified During the Current Site Inspection (which were not already identified in this report):
Who was Notified of Problem(s) and When Were They Notified?
Corrective Actions to be Taken by Whom and When:
Are the Corrective Actions to be taken consistent with the current SWPPP? Yes ☐ No ☐ N/A ☐ **If no, update the SWPPP prior to the next site inspection to reference the inclusion of these corrective actions**

FOR STORM WATER DISCHARGES ASSOCIATED WITH CONSTRUCTION ACTIVITY UNDER THE SPDES GENERAL PERMIT

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

New York State Department of Environmental Conservation
Division of Water
625 Broadway, 4th Floor
Albany, New York 12233-3505
(NOTE: Submit completed form to address above)

NOTICE OF TERMINATION for Storm Water Discharges Authorized under the SPDES General Permit for Construction Activity

Please indicate your permit identification number: NYR ___ ___ ___ ___ ___ ___

I. Owner or Operator Information

1. Owner/Operator Name:

2. Street Address:

3. City/State/Zip:

4. Contact Person: | 4a.Telephone:

4b. Contact Person E-Mail:

II. Project Site Information

5. Project/Site Name:

6. Street Address:

7. City/Zip:

8. County:

III. Reason for Termination

9a. □ All disturbed areas have achieved final stabilization in accordance with the general permit and SWPPP. ***Date final stabilization completed** (month/year): _____

9b. □ Permit coverage has been transferred to new owner/operator. Indicate new owner/operator's permit identification number: NYR ___ ___ ___ ___ ___ ___
(Note: Permit coverage can not be terminated by owner identified in I.1. above until new owner/operator obtains coverage under the general permit)

9c. □ Other (Explain on Page 2)

IV. Final Site Information:

10a. Did this construction activity require the development of a SWPPP that includes post-construction stormwater management practices? □ yes □ no (If no, go to question 10f.)

10b. Have all post-construction stormwater management practices included in the final SWPPP been constructed? □ yes □ no (If no, explain on Page 2)

10c. Identify the entity responsible for long-term operation and maintenance of practice(s)?

_____

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

NOTICE OF TERMINATION for Storm Water Discharges Authorized under the SPDES General Permit for Construction Activity - continued

10d. Has the entity responsible for long-term operation and maintenance been given a copy of the operation and maintenance plan required by the general permit? □ yes □ no

10e. Indicate the method used to ensure long-term operation and maintenance of the post-construction stormwater management practice(s):

□ Post-construction stormwater management practice(s) and any right-of-way(s) needed to maintain practice(s) have been deeded to the municipality.

□ Executed maintenance agreement is in place with the municipality that will maintain the post-construction stormwater management practice(s).

□ For post-construction stormwater management practices that are privately owned, a mechanism is in place that requires operation and maintenance of the practice(s) in accordance with the operation and maintenance plan, such as a deed covenant in the owner or operator's deed of record.

□ For post-construction stormwater management practices that are owned by a public or private institution (e.g. school, university or hospital), government agency or authority, or public utility; policy and procedures are in place that ensures operation and maintenance of the practice(s) in accordance with the operation and maintenance plan.

10f. Provide the total area of impervious surface (i.e. roof, pavement, concrete, gravel, etc.) constructed within the disturbance area? _____ (acres)

11. Is this project subject to the requirements of a regulated, traditional land use control MS4? □ yes □ no

(If Yes, complete section VI - "MS4 Acceptance" statement

V. Additional Information/Explanation:

(Use this section to answer questions 9c. and 10b., if applicable)

VI. MS4 Acceptance - MS4 Official (principal executive officer or ranking elected official) or Duly Authorized Representative (Note: Not required when 9b. is checked -transfer of coverage)

I have determined that it is acceptable for the owner or operator of the construction project identified in question 5 to submit the Notice of Termination at this time.

NOTES:
1. ALL INTERIOR LANDSCAPED AREA SHALL HAVE A MINIMUM PLANTING SOIL DEPTH OF THREE (3) FEET AND BE FREE FROM ALL FORMS OF CONSTRUCTION DEBRIS AND FOREIGN MATERIAL.
2. ALL TREE SAUCERS AND SHRUB BEDS SHALL RECEIVE A MINIMUM OF THREE (3) INCHES DEPTH OF DARK SHREDDED HARDWOOD BARK MULCH.
3. ALL TREES SHALL BE STAKED WITH THREE (3) WOOD STAKES AS SHOWN ON THE TREE PLANTING DETAIL.
4. A ROOT PROTECTION ZONE SHALL BE ESTABLISHED AROUND ANY TREE WHICH IS IDENTIFIED ON THE LANDSCAPE PLAN AS A TREE TO BE PRESERVED. THE ROOT PROTECTION ZONE IS IDENTIFIED BY CREATING A CIRCLE AROUND THE TREE. THE SIZE OF WHICH IS DETERMINED BY PROVIDING ONE FOOT OF RADIUS FOR EVERY INCH DIAMETER OF THE TREE MEASURED AT BREAST HEIGHT (DBH). THE ROOT PROTECTION ZONE SHALL BE MARKED IN THE FIELD WITH A PHYSICAL BARRIER SUCH AS TEMPORARY FENCING OR OTHER MEANS WHICH SHALL PREVENT CONSTRUCTION ACTIVITIES FROM OCCURRING WITH THE TREE ROOT PROTECTION ZONE. METHODS FOR PRESERVING AND PROTECTING EXISTING TREES SHALL BE INCLUDED AS PART OF THE LANDSCAPE PLAN.

SCALE: N.T.S.

C2 BIO-RETENTION CROSS-SECTION
SCALE: N.T.S.

EROSION CONTROL NOTES:

THE FOLLOWING EROSION CONTROL PROCEDURE SHALL BE ADHERED TO BY THE CONTRACTOR:

1. INSTALL TEMPORARY SILT FENCE BARRIERS AS SHOWN ON THE PLAN AND AT ALL EXISTING STORMWATER CATCH BASINS WITHIN THE WORK AREA TO PREVENT SEDIMENT MIGRATION. ALL SILT FENCE/SOCK BARRIERS SHALL BE INSTALLED IN ACCORDANCE WITH THE DETAILS SHOWN ON THE PLANS.

2. THE TOPSOIL SHALL BE STRIPPED & STOCKPILED ON SITE FOR RE-USE AS DIRECTED BY THE OWNER. ALL LOCAL ORDINANCES REGARDING THE SALE AND/OR REMOVAL OF TOPSOIL FROM THE SITE MUST BE FOLLOWED.

3. ALL SILT FENCES/SOCKS SHALL BE REPLACED WHENEVER THEY BECOME CLOGGED OR INOPERABLE.

4. THE CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTENNACE & REMOVAL OF TEMPORARY SEDIMENTATION CONTROLS.

5. THE CONTRACTOR MUST CONTROL DUST DURING CONSTRUCTION. DURING EARTHWORK OPERATIONS, WATER SPREADING EQUIPMENT SHALL BE PROVIDED BY THE CONTRACTOR AND WATER APPLIED AS NECESSARY AND AS DIRECTED BY THE OWNER IN ORDER TO CONTROL DUST.

6. DIRT OR DEBRIS LEFT ON LOCAL PUBLIC ROADS AS A RESULT OF THIS CONSTRUCTION PROJECT SHALL BE REMOVED & ROAD SURFACES CLEANED BY THE CONTRACTOR ON A DAILY BASIS.

7. ALL DISTURBED AREAS (EXCEPT AREAS TO BE PAVED OR BUILT UPON) SHALL BE TOPSOILED TO A MINIMUM 4" DEPTH & SEEDED IMMEDIATELY AFTER FINE GRADING TAKES PLACE & AS SOON AS PHYSICALLY POSSIBLE.

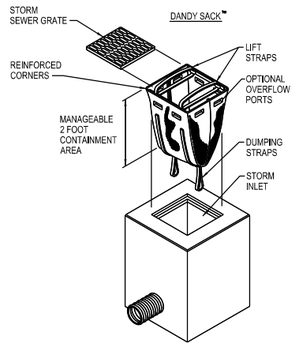
8. THE CONTRACTOR IS RESPONSIBLE FOR THE MAINTENANCE OF DOWNSTREAM STORM SEWERS, DITCHES & CULVERTS. SILT BUILD-UP FOUND TO BE A RESULT OF THIS SITE CONSTRUCTION WORK SHALL BE REMOVED FROM DOWNSTREAM CULVERTS BY THE CONTRACTOR AT NO ADDITIONAL EXPENSE TO THE OWNER OR THE TOWN.

9. IN ADDITION TO STORM WATER DISCHARGES, THE FOLLOWING NON-STORM WATER DISCHARGES MAY CONTRIBUTE TO THE RUN-OFF FROM THE SITE:

- WATER FROM WATER SERVICE FLUSHINGS
- WATER USED TO WASH DOWN CONSTRUCTION VEHICLES (NO DETERGENTS)
- WATER USED FOR DUST CONTROL
- UNCONTAMINATED GROUNDWATER

10. THE ABOVE NON-STORM WATER FLOWS SHALL BE TREATED IN THE SAME MANNER AS STORM WATER FLOWS INDICATED HERIN.

C4 GENERAL NOTES
SCALE: N.T.S.



DANDY SACK™ SPECIFICATIONS

NOTE: THE DANDY SACK™ WILL BE MANUFACTURED IN THE U.S.A. FROM A WOVEN MONOFILAMENT FABRIC THAT MEETS OR EXCEEDS THE FOLLOWING SPECIFICATIONS:

REGULAR FLOW DANDY SACK™ (BLACK)

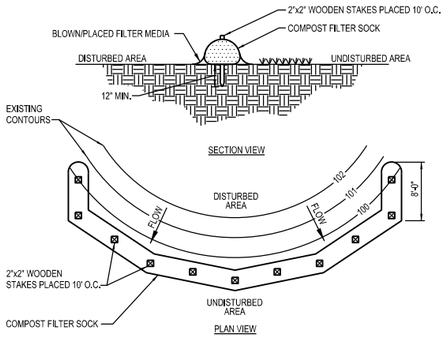
MECHANICAL PROPERTIES	TEST METHOD	UNITS	MARV
GRAB TENSILE STRENGTH	ASTM D 4632	kN (lbs)	1,78 (400) x 1,40 (315)
GRAB TENSILE ELONGATION	ASTM D 4632	%	15 x 15
PUNCTURE STRENGTH	**ASTM D 4833**	kN (lbs)	0,67 (150)
MULLEN BURST STRENGTH	ASTM D 3786	kPa (psi)	5506 (800)
TRAPEZOID TEAR STRENGTH	**ASTM D 4533**	kN (lbs)	0,67 (150) x 0,73 (165)
UV RESISTANCE	**ASTM D 4355**	%	90
APPARENT OPENING SIZE	**ASTM D 4751**	Mm (US Std Sieve)	0,425 (40)
FLOW RATE	**ASTM D 4491**	$l/m/s/m^2$ ($gal/min/ft^2$)	2852 (70)
PERMITTIVITY	ASTM D 4491	Sec^{-1}	0,90

HI-FLOW DANDY SACK™ (SAFETY ORANGE)

MECHANICAL PROPERTIES	TEST METHOD	UNITS	MARV
GRAB TENSILE STRENGTH	ASTM D 4632	kN (lbs)	1,62 (365) X 0,89 (200)
GRAB TENSILE ELONGATION	ASTM D 4632	%	24 X 10
PUNCTURE STRENGTH	**ASTM D 4833**	kN (lbs)	0,40 (90)
MULLEN BURST STRENGTH	ASTM D 3786	kPa (psi)	3097 (450)
TRAPEZOID TEAR STRENGTH	**ASTM D 4533**	kN (lbs)	0,51 (115) X 0,33 (75)
UV RESISTANCE	**ASTM D 4355**	%	90
APPARENT OPENING SIZE	**ASTM D 4751**	Mm (US Std Sieve)	0,425 (40)
FLOW RATE	**ASTM D 4491**	$l/m/s/m^2$ ($gal/min/ft^2$)	5907 (145)
PERMITTIVITY	ASTM D 4491	Sec^{-1}	2,1

*NOTE: DANDY SACKS™ CAN BE ORDERED WITH OUR OPTIONAL OIL ABSORBENT PILLOWS.

A1 FILTER SACK INLET PROTECTION
SCALE: N.T.S.



ADAPTED FROM DETAILS PROVIDED BY: FILTREXX

COMPOST STANDARDS TABLE	
ORGANIC MATTER CONTENT	25% - 100% (DRY WEIGHT)
ORGANIC PORTION	FIBROUS & ELONGATED
PH	6,0 - 8,0
MOISTURE CONTENT	30% - 60%
PARTICLE SIZE	100 % PASSING A 1" SCREEN 10 - 50% PASSING A 3/8" SCREEN
SOLUBLE SALT CONCENTRATION	5,0 ds/M (mmhos/cm) MAXIMUM

1. SOCK FABRIC SHALL MEET STANDARDS OF TABLE 5.1. COMPOST SHALL MEET THE STANDARDS LISTED ON OF TABLE 5.2.

2. COMPOST FILTER SOCK SHALL BE PLACED AT EXISTING LEVEL GRADE. BOTH ENDS OF THE SOCK SHALL BE EXTENDED AT LEAST 8 FEET UP SLOPE AT 45 DEGREES TO THE MAIN SOCK ALIGNMENT (FIGURE 5.2). MAXIMUM SLOPE LENGTH ABOVE ANY SOCK SHALL NOT EXCEED THAT SHOWN ON FIGURE X.X. STAKES MAY BE INSTALLED IMMEDIATELY DOWNSLOPE OF THE SOCK IF SO SPECIFIED BY THE MANUFACTURER.

3. TRAFFIC SHALL NOT BE PERMITTED TO CROSS FILTER SOCKS.

4. ACCUMULATED SEDIMENT SHALL BE REMOVED WHEN IT REACHES HALF THE ABOVE GROUND HEIGHT OF THE SOCK & DISPOSED IN THE MANNER DESCRIBED ELSEWHERE IN THE PLAN.

5. SOCKS SHALL BE INSPECTED WEEKLY AND AFTER EACH RUNOFF EVENT. DAMAGED SOCKS SHALL BE REPAIRED ACCORDING TO MANUFACTURER'S SPECIFICATIONS OR REPLACED WITHIN 24 HOURS OF INSPECTION.

6. BIODEGRADABLE FILTER SOCKS SHALL BE REPLACED AFTER 6 MONTHS; PHOTODEGRADABLE SOCKS AFTER 1 YEAR. POLYPROPYLENE SOCKS SHALL BE REPLACED ACCORDING TO MANUFACTURER'S RECOMMENDATIONS.

7. UPON STABILIZATION OF THE AREA TRIBUTARY TO THE SOCKS, STAKES SHALL BE REMOVED, THE SOCK MAY BE LEFT IN PLACE AND VEGETATED OR REMOVED. IN THE LATTER CASE, THE MESH SHALL BE CUT OPEN AND THE MULCH SPREAD AS A SOIL SUPPLEMENT.

A3 COMPOST FILTER SOCK
SCALE: N.T.S.

STABILIZED CONSTRUCTION ENTRANCE NOTES:

1. STONE SIZE - USE 2" STONE, WASHED, CRUSHED.

2. LENGTH - NOT LESS THAN 50 FEET

3. THICKNESS - NOT LESS THAN SIX (6) INCHES

4. WIDTH - TWELVE (12) FOOT MINIMUM, BU NOT LESS THAN THE FULL WIDTH AT POINTS WHERE INGRESS OR EGRESS OCCURS. TWENTY-FOUR (24) FOOT IF SINGLE ENTRANCE TO SITE.

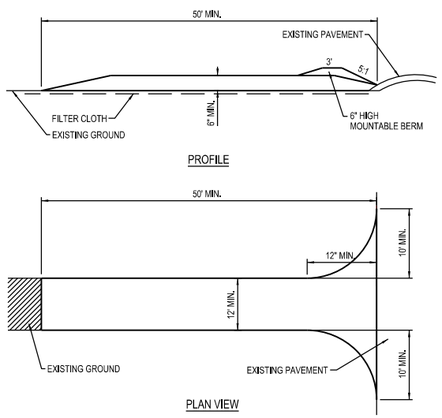
5. FILTER CLOTH - WILL BE PLACED OVER THE ENTIRE AREA PRIOR TO PLACING OF STONE.

6. SURFACE WATER - ALL SURFACE WATER FLOWING OR DIVERTED TOWARD CONSTRUCTION ENTRANCES SHALL BE PIPED ACROSS THE ENTRANCE. IF PIPING IS IMPRACTICAL, A MOUNTABLE BERM WITH 5:1 SLOPES WILL BE PERMITTED.

7. MAINTENANCE - THE ENTRANCE SHALL BE MAINTAINED IN A CONDITION WHICH WILL PREVENT TRACKING OR FLOWING OF SEDIMENT ONTO PUBLIC RIGHTS-OF-WAY. ALL SEDIMENT SPILLED, DROPPED, WASHED OR TRACKED ONTO PUBLIC-RIGHTS-OF-WAY MUST BE REMOVED IMMEDIATELY.

8. WHEN WASHING IS REQUIRED, IT SHALL BE DONE ON AN AREA STABILIZED WITH STONE & WHICH DRAINS INTO AN APPROVED SEDIMENT TRAPPING DEVICE.

9. PERIODIC INSPECTION & NEEDED MAINTENANCE SHALL BE PROVIDED AFTER EACH RAIN.



A4 TEMPORARY STABILIZED CONSTRUCTION ENTRANCE

NOTES:
1. STAKE TREES AS DIRECTED BY THE LANDSCAPE ARCHITECT. STAKING WILL BE REQ'D WHEN ROOT BALLS ARE VERY SANDY OR WET CLAY, WHEN SOIL IS VERY SOFT, OR WHEN PLANTING LOCATIONS ARE WINDY.

2. TIGHTEN ARBORTIE ONLY ENOUGH TO KEEP FROM SLIPPING. ALLOW FOR SOME TRUNK MOVEMENT.

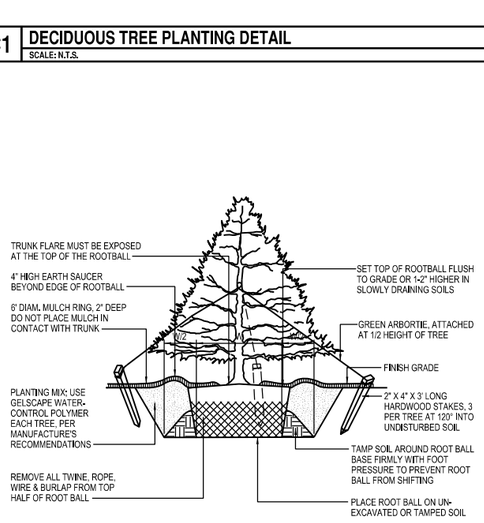
3. PRUNE ONLY CROSSING LIMBS, CO-DOMINANT LEADERS AND BROKEN OR DEAD BRANCHES.

4. TREE WRAP SHOULD BE INSTALLED AT TIME OF PLANTING AND REMOVED 12 MONTHS AFTER PLANTING.

C1 DECIDUOUS TREE PLANTING DETAIL
SCALE: N.T.S.

PLANTING SPECIFICATION

1. SCOPE OF WORK
   A. THIS WORK SHALL CONSIST OF PERFORMING, CLEARING, AND GRUBBING, SOIL PREPARATION, FINISH GRADING, PLANTING, DRAINAGE, INCLUDING ALL LABOR MATERIALS, TOOLS, EQUIPMENT, AND ANY OTHER APPURTENANCES NECESSARY FOR THE COMPLETION OF THIS PROJECT.
2. MATERIALS
   A. PLANTS - ALL PLANTS SHALL BE HEALTHY, OF NORMAL GROWTH, WELL ROOTED FREE FROM DISEASE AND INSECTS, QUALITY AND OF PLANT MATERIAL THAT SHALL CONFORM TO THE AMERICAN STANDARD FOR NURSERY STOCK (ANSI Z60.1) AND BE OF NUMBER ONE GRADE.
   B. VARIETIES AND SIZES OF PLANTS SHALL BE AS SHOWN ON DRAWINGS
3. FERTILIZER
   A. FERTILIZER SHALL BE MILORGANITE (6-2-0) OR APPROVED EQUAL.
4. GENERAL WORK PROCEDURES
   A. LANDSCAPE WORK SHALL BE ACCORDING TO THE WORKMANLIKE STANDARDS ESTABLISHED FOR LANDSCAPE CONSTRUCTION AND PLANTING.
5. WEEDING
   A. BEFORE AND DURING PRELIMINARY GRADING AND FINISH GRADING, ALL WEEDS AND GRASSES SHALL BE DUG OUT BY THE ROOTS AND DISPOSED OF AT THE CONTRACTOR'S EXPENSE.
6. SOIL CONDITIONING
   A. CULTIVATE ALL AREAS TO BE PLANTED TO A DEPTH OF 6". ALL DEBRIS EXPOSED FROM EXCAVATION AND CULTIVATION SHALL BE DISPOSED OF AT THE CONTRACTOR'S EXPENSE.
7. PLANTING
   POSITION TREES AND SHRUBS AT THEIR INTENDED LOCATIONS AS PER THE PLANS AND SECURE THE APPROVAL OF THE LANDSCAPE ARCHITECT BEFORE EXCAVATING PITS, MAKING NECESSARY ADJUSTMENTS AS DIRECTED.
   A. PLANTING PITS SHALL BE DUG WITH LEVEL BOTTOMS, AS SHOWN ON THE PLANTING DETAILS.
      - 3 PARTS TOPSOIL
      - 1 PART PEAT MOSS OR COMPOST
      - 1/3 PART MILORGANITE FERTILIZER
   B. PREPARED SOIL SHALL BE TAMPED FIRMLY AT BOTTOM OF PIT. FILL PREPARED SOIL AROUND BALL OF PLAN & WAY, AND WATER, COMPLETE BACK-FILLING AND WATER THOROUGHLY.
   C. ALL PLANTS SHALL BE SET SO THAT, WHEN SETTLED, THEY BEAR THE SAME RELATION TO THE REQUIRED GRADE AS THEY BORE TO THE NATURAL BEFORE BEING TRANSPLANTED.
   D. IMMEDIATELY AFTER PLANTING, STAKE ALL TREES WITH 3 CEDAR STAKES PER TREE.
   E. PREPARE RAISED EARTH SAUCER AS WIDE AS PLANTING HOLE OF EACH PLANT.
   F. WATER IMMEDIATELY AFTER PLANTING. WATER SHALL BE APPLIED TO EACH TREE AND SHRUB IN SUCH MANNER AS NOT TO DISTURB BACKFILL AND TO THE EXTENT THAT ALL MATERIALS IN THE PLANTING HOLE ARE THOROUGHLY SATURATED.
   G. AFTER SHRUB BEDS AND TREE SAUCERS ARE BACKFILLED AND FINE GRADED, MULCH WITH 3" DEPTH OF DARK, SHREDDED HARDWOOD BARK MULCH.
8. FINISH GRADING
   A. PLUS/MINUS .1 FOOT OF FINISH GRADE.
   B. ALL LAWN AND PLANTING AREAS SHALL BE GRADED TO A SMOOTH, EVEN, UNIFORM PLANE WITH NO ABRUPT CHANGE OF SURFACE. SOIL AREAS ADJACENT TO THE BUILDING SHALL SLOPE AWAY FROM THE BUILDING.
   C. ALL PLANTING AREAS SHALL BE GRADED AND MAINTAINED TO ALLOW FREE FLOW OF SURFACE WATER.
9. GUARANTEE
   A. CONTRACTOR SHALL GUARANTEE ALL PLANTS FOR A PERIOD OF ONE (1) YEAR.
10. CLEAN-UP
   A. UPON THE COMPLETION OF ALL PLANTING WORK AND BEFORE FINAL ACCEPTANCE, THE CONTRACTOR SHALL REMOVE ALL MATERIAL, EQUIPMENT AND DEBRIS RESULTING FROM HIS WORK. ALL ACCEPTABLE CONDITIONS AS APPROVED BY THE OWNERS AUTHORIZED REPRESENTATIVE.
11. MAINTENANCE
   MAINTENANCE PERIOD TO COMMENCE AFTER FINAL INSPECTION.
   A. MAINTENANCE PERIOD FOR THIS CONTRACT SHALL BE 90 CALENDAR DAYS COMMENCING AFTER FINAL INSPECTION OF CONSTRUCTION. MAINTAIN TREES, SHRUBS AND OTHER PLANTS BY PRUNING, CULTIVATING AND WEEDING AS REQUIRED FOR HEALTHY GROWTH, RESTORE PLANTING SAUCERS, TIGHTEN AND REPAIR STAKE AND GUY SUPPORTS AND RESET TREES AND SHRUBS TO PROPER GRADES OR VERTICAL POSITION AS REQUIRED, SPRAY AS REQUIRED TO KEEP TREES AND SHRUBS FREE OF INSECTS AND DISEASE, MAINTAIN LAWNS BY WATERING, FERTILIZING, WEEDING, MOWING, TRIMMING, AND OTHER OPERATIONS SUCH AS ROLLING, REGRADING, AND REPLANTING AS REQUIRED TO ESTABLISH A SMOOTH, ACCEPTABLE LAWN, FREE OF ERODED OR BARE AREAS.



NOTES:
1. STAKE TREES AS WHEN DIRECTED BY THE LANDSCAPE ARCHITECT. STAKING WILL BE REQUIRED WHEN ROOT BALLS HAVE VERY SANDY OR WET CLAY SOIL, WHEN ROOT BALLS ARE PLACED ON VERY SOFT SOIL, OR WHEN TREES ARE LOCATED IN AREAS WITH CONDITIONS.

2. TIGHTEN ARBORTIE ONLY ENOUGH TO KEEP FROM SLIPPING. ALLOW FOR SOME TRUNK MOVEMENT.

3. PRUNE ANY BROKEN OR DEAD BRANCHES.

2. THE TOPSOIL SHALL BE STRIPPED & STOCKPILED ON SITE FOR RE-USE AS DIRECTED BY THE OWNER. ALL LOCAL ORDINANCES REGARDING THE SALE AND/OR REMOVAL OF TOPSOIL FROM THE SITE MUST BE FOLLOWED.

3. ALL SILT FENCES/SOCKS SHALL BE REPLACED WHENEVER THEY BECOME CLOGGED OR INOPERABLE.

4. THE CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTENNACE & REMOVAL OF TEMPORARY SEDIMENTATION CONTROLS.

5. THE CONTRACTOR MUST CONTROL DUST DURING CONSTRUCTION. DURING EARTHWORK OPERATIONS, WATER SPREADING EQUIPMENT SHALL BE PROVIDED BY THE CONTRACTOR AND WATER APPLIED AS NECESSARY AND AS DIRECTED BY THE OWNER IN ORDER TO CONTROL DUST.

6. DIRT OR DEBRIS LEFT ON LOCAL PUBLIC ROADS AS A RESULT OF THIS CONSTRUCTION PROJECT SHALL BE REMOVED & ROAD SURFACES CLEANED BY THE CONTRACTOR ON A DAILY BASIS.

7. ALL DISTURBED AREAS (EXCEPT AREAS TO BE PAVED OR BUILT UPON) SHALL BE TOPSOILED TO A MINIMUM 4" DEPTH & SEEDED IMMEDIATELY AFTER FINE GRADING TAKES PLACE & AS SOON AS PHYSICALLY POSSIBLE.

8. THE CONTRACTOR IS RESPONSIBLE FOR THE MAINTENANCE OF DOWNSTREAM STORM SEWERS, DITCHES, CULVERTS, SILT BUILD-UP FOUND TO BE A RESULT OF THIS SITE CONSTRUCTION WORK SHALL BE REMOVED FROM DOWNSTREAM CULVERTS BY THE CONTRACTOR AT NO ADDITIONAL EXPENSE TO THE OWNER OR THE TOWN.

9. IN ADDITION TO STORM WATER DISCHARGES, THE FOLLOWING NON-STORM WATER DISCHARGES MAY CONTRIBUTE TO THE RUN-OFF FROM THE SITE:

- WATER FROM WATER SERVICE FLUSHINGS
- WATER USED TO WASH DOWN CONSTRUCTION VEHICLES (NO DETERGENTS)
- WATER USED FOR DUST CONTROL
- UNCONTAMINATED GROUNDWATER

10. THE ABOVE NON-STORM WATER FLOWS SHALL BE TREATED IN THE SAME MANNER AS STORM WATER FLOWS INDICATED HERIN.

POST CONSTRUCTION MAINTENANCE SCHEDULE & TOWN OF AMHERST – STORMWATER CONTROL FACILITY MAINTENANCE AGREEMENT

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

STORMWATER CONTROL FACILITY
MAINTENANCE AGREEMENT

Stormwater Management Facility Maintenance Schedule

Post Construction Operation & Maintenance

1. **On a quarterly basis, perform the following:**
    a. **Inspect catch basins, manholes, storm piping and underground detention piping for debris and accumulation of sediment**
    b. **Remove and properly dispose of any collected debris from structures**
    c. **Flush storm sewers with water, if necessary, to remove accumulated sediment**
    d. **Check all rip rap stone for erosion and re-stone, if necessary, to prevent further erosion**
    e. **Inspect grass and landscaped areas for un-vegetated areas or areas with less than 80% healthy stand of grass and reseed and mulch as necessary. Water areas daily if reseeded between July and August.**

2. **Maintain all lawn areas by regular mowing, including the grass slopes of the bio-retention basin. Any eroded areas shall be re-graded, seeded and mulched immediately.**

3. **Inspect the bio-retention basin(s) for debris and sediment accumulation. Debris and sediment accumulation should be removed from the basin. Remove and properly dispose of any collected debris and sediment. Sediment must be removed when accumulation depth exceeds one inch.**

4. **The bio-retention basin is to be maintained as required in the NYSDEC Stormwater Management Design Manual (NYSDEC SMDM) and as a component of the property landscaping and shall be maintained on a regular basis. Mulching, weeding and plant replacement shall occur on a regular basis.**

5. **Inspect the dry detention basin and swales for debris and sediment accumulation. Debris and sediment accumulation should be removed from the basin and swale. Remove and properly dispose of any collected debris and sediment. Sediment must be removed when accumulation depth exceeds six inches.**

6. **The dry detention basin and swale are to be maintained as required in the NYSDEC Stormwater Management Design Manual (NYSDEC SMDM) and as a component of the property landscaping and shall be maintained on a regular basis. Mulching, weeding and plant replacement shall occur on a regular basis.**

STORMWATER CONTROL FACILITY
MAINTENANCE AGREEMENT

Whereas, the Municipality of Amherst ('Municipality") and the ("facility owner") want to enter into an agreement to provide for the long term maintenance and continuation of stormwater control measures approved by the Municipality for the below named project;

Whereas, the Municipality and the facility owner desire that the stomwater control measures be built in accordance with the approved project plans and thereafter maintained, cleaned, repaired, replaced and continued in perpetuity in order to ensure optimum performance of the components. Therefore, the Municipality and the facility owner agree as follows:

1. This agreement binds the Municipality and the facility owner, its successors and assigns, to the maintenance provisions depicted in the approved project plans which are attached as Schedule A of this agreement.

2. The facility owner shall maintain, clean, repaired, replace and continue the stomwater control measures depicted in Schedule A as necessary to ensure optimum performance of the measures to design specifications. The stormwater control measures shall include, but shall not be limited to, the following: drainage ditches, swales, drywells, infiltrators, drop inlets, pipes, culverts, soil absorption devices and retention ponds.

3. In the event that the facility owner ceases operation, it agrees that before ceasing said operation that is shall assure that its obligations under stormwater control maintenance agreement are transferred to a valuable and legal entity which would take over all of such responsibilities.

4. The facility owner shall be responsible for all expenses related to the maintenance of the stomwater control measures and shall establish a means for the collection and distribution of expenses among the parties for any commonly owned facilities.

5. The facility owner shall provide for the periodic inspection of the stormwater control measures, not less than once in every(5)year period, to determine the condition and integrityofthemeasures.Suchinspectorshallbe performed by a Professional Engineer licensed by the State of New York. The inspecting engineer shall prepare and submit to the Municipality within thirty (30) days of the inspection, a written report of the findings including recommendations for those actions necessary for the continuation of the stormwater control measures.

6. The facility owner shall not authorize, undertaken or permit alteration, abandonment, modification or discontinuation of the stormwater control measures except in accordance with written approval of the Municipality.

7. The facility owner shall undertake necessary repairs and replacement of the stormwater control measures at the direction of the Municipality or in accordance with the recommendations of the inspecting engineer.

8. The facility owner shall provide to the Municipality within 30 days of the date of this agreement, a security for the maintenance and continuation of the stormwater control measures in the form of a Bond, letter of credit or escrow account.

9. This agreement shall be recorded in the Office of the County Clerk, County of Erie together with the deed for the common property and shall be included in the offering plan and/or prospectus approved pursuant to _____

10. If ever the Municipality determines that the facility owner has failed to construct or maintain the stormwater control measures in accordance with the project plan or has failed to undertake corrective action specified by the Municipality or by the inspecting engineer, the Municipality is authorized to undertake such steps as reasonably necessary for the preservation, continuation or maintenance of the stormwater control measures and to affix the expenses thereof as lien against the property.

11. Thls agreement is effective _____

Post Construction Stormwater Management

C. Inspection Results

FAIL*

*** If any one item on the inspection form is coded as "Work needed", then the entire BMP fails inspection.**

***If a site has multiple BMPs and on fails inspection, this cover sheet is marked as fail until all items on all BMPs pass inspection.**

NOTE: Applicable BMP Inspection Reports and confirmatory digital photographs summarizing required repairs must be submitted to the Town following completion of the preliminary inspection. A re-inspection and certification must be completed within 30 days of the failed preliminary report.

PASS

NOTE: A passing inspection form should be signed below by the appropriate professional and submitted to the Town on or before the established inspection due date. Attach all applicable BMP Inspection Reports and confirmatory digital photographs accordingly.

D. Professional Certification

To be completed only when all structural BMPs at this site are functional with no outstanding maintenance issues.

I, _____, as a duly registered _____ attest that a thorough inspection has been completed for all structural BMPs that are associated with this particular site. All inspected structural BMPs are performing properly and are in compliance with the terms and conditions of the recorded maintenance agreement for the site.

STANDARDS AND SPECIFICATIONS FOR EROSION AND SEDIMENT CONTROL

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

STANDARD AND SPECIFICATIONS FOR COMPOST FILTER SOCK

Definition & Scope

A **temporary** sediment control practice composed of a degradable geotextile mesh tube filled with compost filter media to filter sediment and other pollutants associated with construction activity to prevent their migration offsite.

Condition Where Practice Applies

Compost filter socks can be used in many construction site applications where erosion will occur in the form of sheet erosion and there is no concentration of water flowing to the sock. In areas with steep slopes and/or rocky terrain, soil conditions must be such that good continuous contact between the sock and the soil is maintained throughout its length. For use on impervious surfaces such as road pavement or parking areas, proper anchorage must be provided to prevent shifting of the sock or separation of the contact between the sock and the pavement. Compost filter socks are utilized both at the site perimeter as well as within the construction areas. These socks may be filled after placement by blowing compost into the tube pneumatically, or filled at a staging location and moved into its designed location.

Design Criteria

1. Compost filter socks will be placed on the contour with both terminal ends of the sock extended 8 feet upslope at a 45 degree angle to prevent bypass flow.
2. Diameters designed for use shall be 12" – 32" except that 8" diameter socks may be used for residential lots to control areas less than 0.25 acres.
3. The flat dimension of the sock shall be at least 1.5 times the nominal diameter.
4. The **Maximum Slope Length** (in feet) above a compost filter sock shall not exceed the following limits:

Dia. (in.)	Slope %						
	2	5	10	20	25	33	50
8	225*	200	100	50	20	—	—
12	250	225	125	65	50	40	25
18	275	250	150	70	55	45	30
24	350	275	200	130	100	60	35
32	450	325	275	150	120	75	50
* Length in feet							

5. The compost infill shall be well decomposed (matured at least 3 months), weed-free, organic matter. It shall be aerobically composted, possess no objectionable odors, and contain less than 1%, by dry weight, of man-made foreign matter. The physical parameters of the compost shall meet the standards listed in Table 5.2 - Compost Standards Table. **Note: All biosolids compost produced in New York State (or approved for importation) must meet NYS DEC's 6 NYCRR Part 360 (Solid Waste Management Facilities) requirements. The Part 360 requirements are equal to or more stringent than 40 CFR Part 503 which ensure safe standards for pathogen reduction and heavy metals content. When using compost filter socks adjacent to surface water, the compost should have a low nutrient value.**
6. The compost filter sock fabric material shall meet the minimum requirements provided in Table 5.1 - Compost Sock Fabric Minimum Specifications Table.

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

7. Compost filter socks shall be anchored in earth with 2" x 2" wooden stakes driven 12" into the soil on 10 foot centers on the centerline of the sock. On uneven terrain, effective ground contact can be enhanced by the placement of a fillet of filter media on the disturbed area side of the compost sock.

8. All specific construction details and material specifications shall appear on the erosion and sediment control constructions drawings when compost filter socks are included in the plan.

Maintenance

1. Traffic shall not be permitted to cross filter socks.

2. Accumulated sediment shall be removed when it reaches half the above ground height of the sock and disposed of in accordance with the plan.

3. Socks shall be inspected weekly and after each runoff event. Damaged socks shall be repaired in the manner required by the manufacturer or replaced within 24 hours of inspection notification.

4. Biodegradable filter socks shall be replaced after 6 months; photodegradable filter socks after 1 year. Polypropylene socks shall be replaced according to the manufacturer's recommendations.

5. Upon stabilization of the area contributory to the sock, stakes shall be removed. The sock may be left in place and vegetated or removed in accordance with the stabilization plan. For removal the mesh can be cut and the compost spread as an additional mulch to act as a soil supplement.

Table 5.1 - Compost Sock Fabric Minimum Specifications Table

Material Type	3 mil HDPE	5 mil HDPE	5 mil HDPE	Multi-Filament Polypropylene (MFPP)	Heavy Duty Multi-Filament Polypropylene (HDMFPP)
Material Characteristics	Photodegradable	Photodegradable	Biodegradable	Photodegradable	Photodegradable

STANDARD AND SPECIFICATIONS FOR STABILIZED CONSTRUCTION ACCESS

Definition & Scope

A stabilized pad of aggregate underlain with geotextile located at any point where traffic will be entering or leaving a construction site to or from a public right-of-way, street, alley, sidewalk, or parking area. The purpose of stabilized construction access is to reduce or eliminate the tracking of sediment onto public rights-of-way or streets.

Conditions Where Practice Applies

A stabilized construction access shall be used at all points of construction ingress and egress.

Design Criteria

See Figure 2.1 on page 2.31 for details.

Aggregate Size: Use a matrix of 1-4 inch stone, or reclaimed or recycled concrete equivalent.

Thickness: Not less than six (6) inches.

Width: 12-foot minimum but not less than the full width of points where ingress or egress occurs. 24-foot minimum if there is only one access to the site.

Length: As required, but not less than 50 feet (except on a single residence lot where a 30 foot minimum would apply).

Geotextile: To be placed over the entire area to be covered with aggregate. Filter cloth will not be required on a single-family residence lot. Piping of surface water under entrance shall be provided as required. If piping is impossible, a mountable berm with 5:1 slopes will be permitted.

Criteria for Geotextile: The geotextile shall be woven or nonwoven fabric consisting only of continuous chain polymeric filaments or yarns of polyester. The fabric shall be inert to commonly encountered chemicals, hydro-carbons, mildew, rot resistant, and conform to the fabric properties as shown:

Fabric Properties[3]	Light Duty[1] Roads Grade Subgrade	Heavy Duty[2] Haul Roads Rough Graded	Test Method
Grab Tensile Strength (lbs)	200	220	ASTM D1682
Elongation at Failure (%)	50	60	ASTM D1682
Mullen Burst Strength (lbs)	190	430	ASTM D3786
Puncture Strength (lbs)	40	125	ASTM D751 Modified
Equivalent	40-80	40-80	US Std Sieve
Opening Size			CW-02215
Aggregate Depth	6	10	-

[1]Light Duty Road: Area sites that have been graded to subgrade and where most travel would be single axle vehicles and an occasional multi-axle truck. Acceptable materials are Trevira Spunbond 1115, Mirafi 100X, Typar 3401, or equivalent.

[2]Heavy Duty Road: Area sites with only rough grading, and where most travel would be multi-axle vehicles. Acceptable materials are Trevira Spunbond 1135, Mirafi 600X, or equivalent.

[3]Fabrics not meeting these specifications may be used only when design procedure and supporting documentation are supplied to determine aggregate depth and fabric strength.

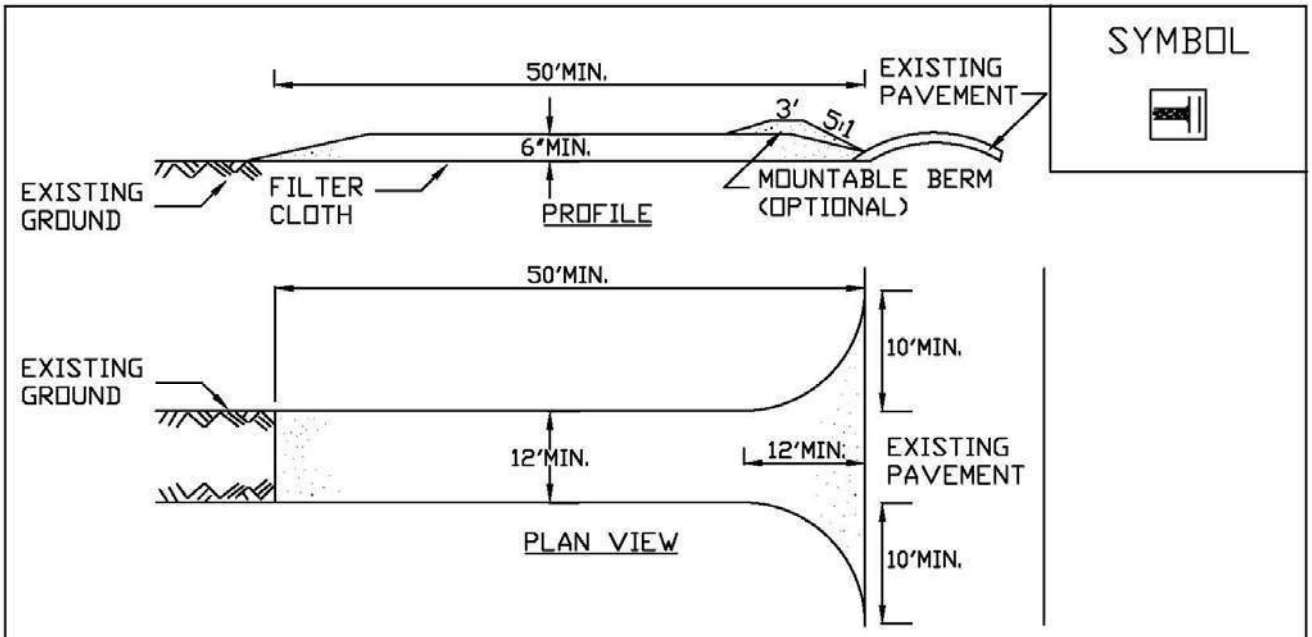
Maintenance

The access shall be maintained in a condition which will prevent tracking of sediment onto public rights-of-way or streets. This may require periodic top dressing with additional aggregate. All sediment spilled, dropped, or washed onto public rights-of-way must be removed immediately.

When necessary, wheels must be cleaned to remove sediment prior to entrance onto public rights-of-way. When washing is required, it shall be done on an area stabilized with aggregate, which drains into an approved sediment-trapping device. All sediment shall be prevented from entering storm drains, ditches, or watercourses.

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

Figure 2.1
Stabilized Construction Access



CONSTRUCTION SPECIFICATIONS

1. STONE SIZE - USE 1-4 INCH STONE, OR RECLAIMED OR RECYCLED CONCRETE EQUIVALENT.
2. LENGTH - NOT LESS THAN 50 FEET (EXCEPT ON A SINGLE RESIDENCE LOT WHERE A 30 FOOT MINIMUM LENGTH WOULD APPLY).
3. THICKNESS - NOT LESS THAN SIX (6) INCHES.
4. WIDTH - TWELVE (12) FOOT MINIMUM, BUT NOT LESS THAN THE FULL WIDTH AT POINTS WHERE INGRESS OR EGRESS OCCURS. TWENTY-FOUR (24) FOOT IF SINGLE ENTRANCE TO SITE.
5. GEOTEXTILE - WILL BE PLACED OVER THE ENTIRE AREA PRIOR TO PLACING OF STONE.
6. SURFACE WATER - ALL SURFACE WATER FLOWING OR DIVERTED TOWARD CONSTRUCTION ACCESS SHALL BE PIPED BENEATH THE ENTRANCE. IF PIPING IS IMPRACTICAL, A MOUNTABLE BERM WITH 5:1 SLOPES WILL BE PERMITTED.
7. MAINTENANCE - THE ENTRANCE SHALL BE MAINTAINED IN A CONDITION WHICH WILL PREVENT TRACKING OR FLOWING OF SEDIMENT ONTO PUBLIC RIGHTS-OF-WAY, ALL SEDIMENT SPILLED, DROPPED, WASHED OR TRACKED ONTO PUBLIC RIGHTS-OF-WAY MUST BE REMOVED IMMEDIATELY.
8. WHEN WASHING IS REQUIRED, IT SHALL BE DONE ON A AREA STABILIZED WITH STONE AND WHICH DRAINS INTO AN APPROVED SEDIMENT TRAPPING DEVICE.
9. PERIODIC INSPECTION AND NEEDED MAINTENANCE SHALL BE PROVIDED AFTER EACH RAIN.

STABILIZED CONSTRUCTION ACCESS

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

STANDARD AND SPECIFICATIONS FOR STORM DRAIN INLET PROTECTION

Definition & Scope

A **temporary** barrier with low permeability, installed around inlets in the form of a fence, berm or excavation around an opening, detaining water and thereby reducing the sediment content of sediment laden water by settling thus preventing heavily sediment laden water from entering a storm drain system.

Conditions Where Practice Applies

This practice shall be used where the drainage area to an inlet is disturbed, it is not possible to temporarily divert the storm drain outfall into a trapping device, and watertight blocking of inlets is not advisable. **It is not to be used in place of sediment trapping devices.** This practice shall be used with an upstream buffer strip if placed at a storm drain inlet on a paved surface. It may be used in conjunction with storm drain diversion to help prevent siltation of pipes installed with low slope angle.

Types of Storm Drain Inlet Practices

There are five (5) specific types of storm drain inlet protection practices that vary according to their function, location, drainage area, and availability of materials:

I. Excavated Drop Inlet Protection
II. Fabric Drop Inlet Protection
III. Stone & Block Drop Inlet Protection
IV. Paved Surface Inlet Protection
V. Manufactured Insert Inlet Protection

Design Criteria

Drainage Area – The drainage area for storm drain inlets shall not exceed one acre. Erosion control/temporary stabilization measures must be implemented on the disturbed drainage area tributary to the inlet. The crest elevations of these practices shall provide storage and minimize bypass flow.

Type I – Excavated Drop Inlet Protection

This practice is generally used during initial overlot grading after the storm drain trunk line is installed.

Limit the drainage area to the inlet device to 1 acre. Excavated side slopes shall be no steeper than 2:1. The minimum depth shall be 1 foot and the maximum depth 2 feet as measured from the crest of the inlet structure. Shape the excavated basin to fit conditions with the longest dimension oriented toward the longest inflow area to provide maximum trap efficiency. The capacity of the excavated basin should be established to contain 900 cubic feet per acre of disturbed area. Weep holes, protected by fabric and stone, should be provided for draining the temporary pool.

Inspect and clean the excavated basin after every storm. Sediment should be removed when 50 percent of the storage volume is achieved This material should be incorporated into the site in a stabilized manner.

Type II – Fabric Drop Inlet Protection

This practice is generally used during final elevation grading phases after the storm drain system is completed.

Limit the drainage area to 1 acre per inlet device. Land area slope immediately surrounding this device should not exceed 1 percent. The maximum height of the fabric above the inlet crest shall not exceed 1.5 feet unless reinforced.

The top of the barrier should be maintained to allow overflow to drop into the drop inlet and not bypass the inlet to

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

unprotected lower areas. Support stakes for fabric shall be a minimum of 3 feet long, spaced a maximum 3 feet apart. They should be driven close to the inlet so any overflow drops into the inlet and not on the unprotected soil. Improved performance and sediment storage volume can be obtained by excavating the area.

Inspect the fabric barrier after each rain event and make repairs as needed. Remove sediment from the pool area as necessary with care not to undercut or damage the filter fabric. Upon stabilization of the drainage area, remove all materials and unstable sediment and dispose of properly. Bring the adjacent area of the drop inlet to grade, smooth and compact and stabilize in the appropriate manner to the site.

Type III – Stone and Block Drop Inlet Protection

This practice is generally used during the initial and intermediate overlot grading of a construction site.

Limit the drainage area to 1 acre at the drop inlet. The stone barrier should have a minimum height of 1 foot and a maximum height of 2 feet. Do not use mortar. The height should be limited to prevent excess ponding and bypass flow.

Recess the first course of blocks at least 2 inches below the crest opening of the storm drain for lateral support. Subsequent courses can be supported laterally if needed by placing a 2x4 inch wood stud through the block openings perpendicular to the course. The bottom row should have a few blocks oriented so flow can drain through the block to dewater the basin area.

The stone should be placed just below the top of the blocks on slopes of 2:1 or flatter. Place hardware cloth of wire mesh with ½ inch openings over all block openings to hold stone in place.

As an optional design, the concrete blocks may be omitted and the entire structure constructed of stone, ringing the outlet ("doughnut"). The stone should be kept at a 3:1 slope toward the inlet to keep it from being washed into the inlet. A level area 1 foot wide and four inches below the crest will further prevent wash. Stone on the slope toward the inlet should be at least 3 inches in size for stability and 1 inch or smaller away from the inlet to control flow rate. The elevation of the top of the stone crest must be maintained 6 inches lower than the ground elevation down slope from the inlet to ensure that all storm flows pass over the stone into the storm drain and not past the structure. Temporary diking should be used as necessary to prevent bypass flow.

The barrier should be inspected after each rain event and repairs made where needed. Remove sediment as necessary to provide for accurate storage volume for subsequent rains. Upon stabilization of contributing drainage area, remove all materials and any unstable soil and dispose of properly.

Bring the disturbed area to proper grade, smooth, compact and stabilize in a manner appropriate to the site.

Type IV – Paved Surface Inlet Protection

This practice is generally used after pavement construction has been done while final grading and soil stabilization is occurring. These practices should be used with upstream buffer strips in linear construction applications, and with temporary surface stabilization for overlot areas, to reduce the sediment load at the practice. This practice includes sand bags, compost filter socks, geo-tubes filled with ballast, and manufactured surface barriers. Pea gravel can also be used in conjunction with these practices to improve performance. When the inlet is not at a low point, and is offset from the pavement or gutter line, protection should be selected and installed so that flows are not diverted around the inlet.

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

The drainage area should be limited to 1 acre at the drain inlet. All practices will be placed at the inlet perimeter or beyond to maximize the flow capacity of the inlet. Practices shall be weighted, braced, tied, or otherwise anchored to prevent movement or shifting of location on paved surfaces. Traffic safety shall be integrated with the use of this practice. All practices should be marked with traffic safety cones as appropriate. Structure height shall not cause flooding or by-pass flow that would cause additional erosion.

The structure should be inspected after every storm event. Any sediment should be removed and disposed of on the site. Any broken or damaged components should be replaced. Check all materials for proper anchorage and secure as necessary.

Type V - Manufactured Insert Inlet Protection

The drainage area shall be limited to 1 acre at the drain inlet. All inserts will be installed and anchored in accordance with the manufacturers recommendations and design details. The fabric portion of the structure will equal or exceed the performance standard for the silt fence fabric. The inserts will be installed to preserve a minimum of 50 percent of the open, unobstructed design flow area of the storm drain inlet opening to maintain capacity for storm events.

CONSTRUCTION SPECIFICATIONS

1. FABRIC SHALL HAVE AN EOS OF 40-85. BURLAP MAY BE USED FOR SHORT TERM APPLICATIONS.
2. CUT FABRIC FROM A CONTINUOUS ROLL TO ELIMINATE JOINTS. IF JOINTS ARE NEEDED THEY WILL BE OVERLAPPED TO THE NEXT STAKE.
3. STAKE MATERIALS WILL BE STANDARD 2" x 4" WOOD OR EQUIVALENT. METAL WITH A MINIMUM LENGTH OF 3 FEET.
4. SPACE STAKES EVENLY AROUND INLET 3 FEET APART AND DRIVE A MINIMUM 18 INCHES DEEP. SPANS GREATER THAN 3 FEET MAY BE BRIDGED WITH THE USE OF WIRE MESH BEHIND THE FILTER FABRIC FOR SUPPORT.
5. FABRIC SHALL BE EMBEDDED 1 FOOT MINIMUM BELOW GROUND AND BACKFILLED. IT SHALL BE SECURELY FASTENED TO THE STAKES AND FRAME.
6. A 2" x 4" WOOD FRAME SHALL BE COMPLETED AROUND THE CREST OF THE FABRIC FOR OVER FLOW STABILITY.

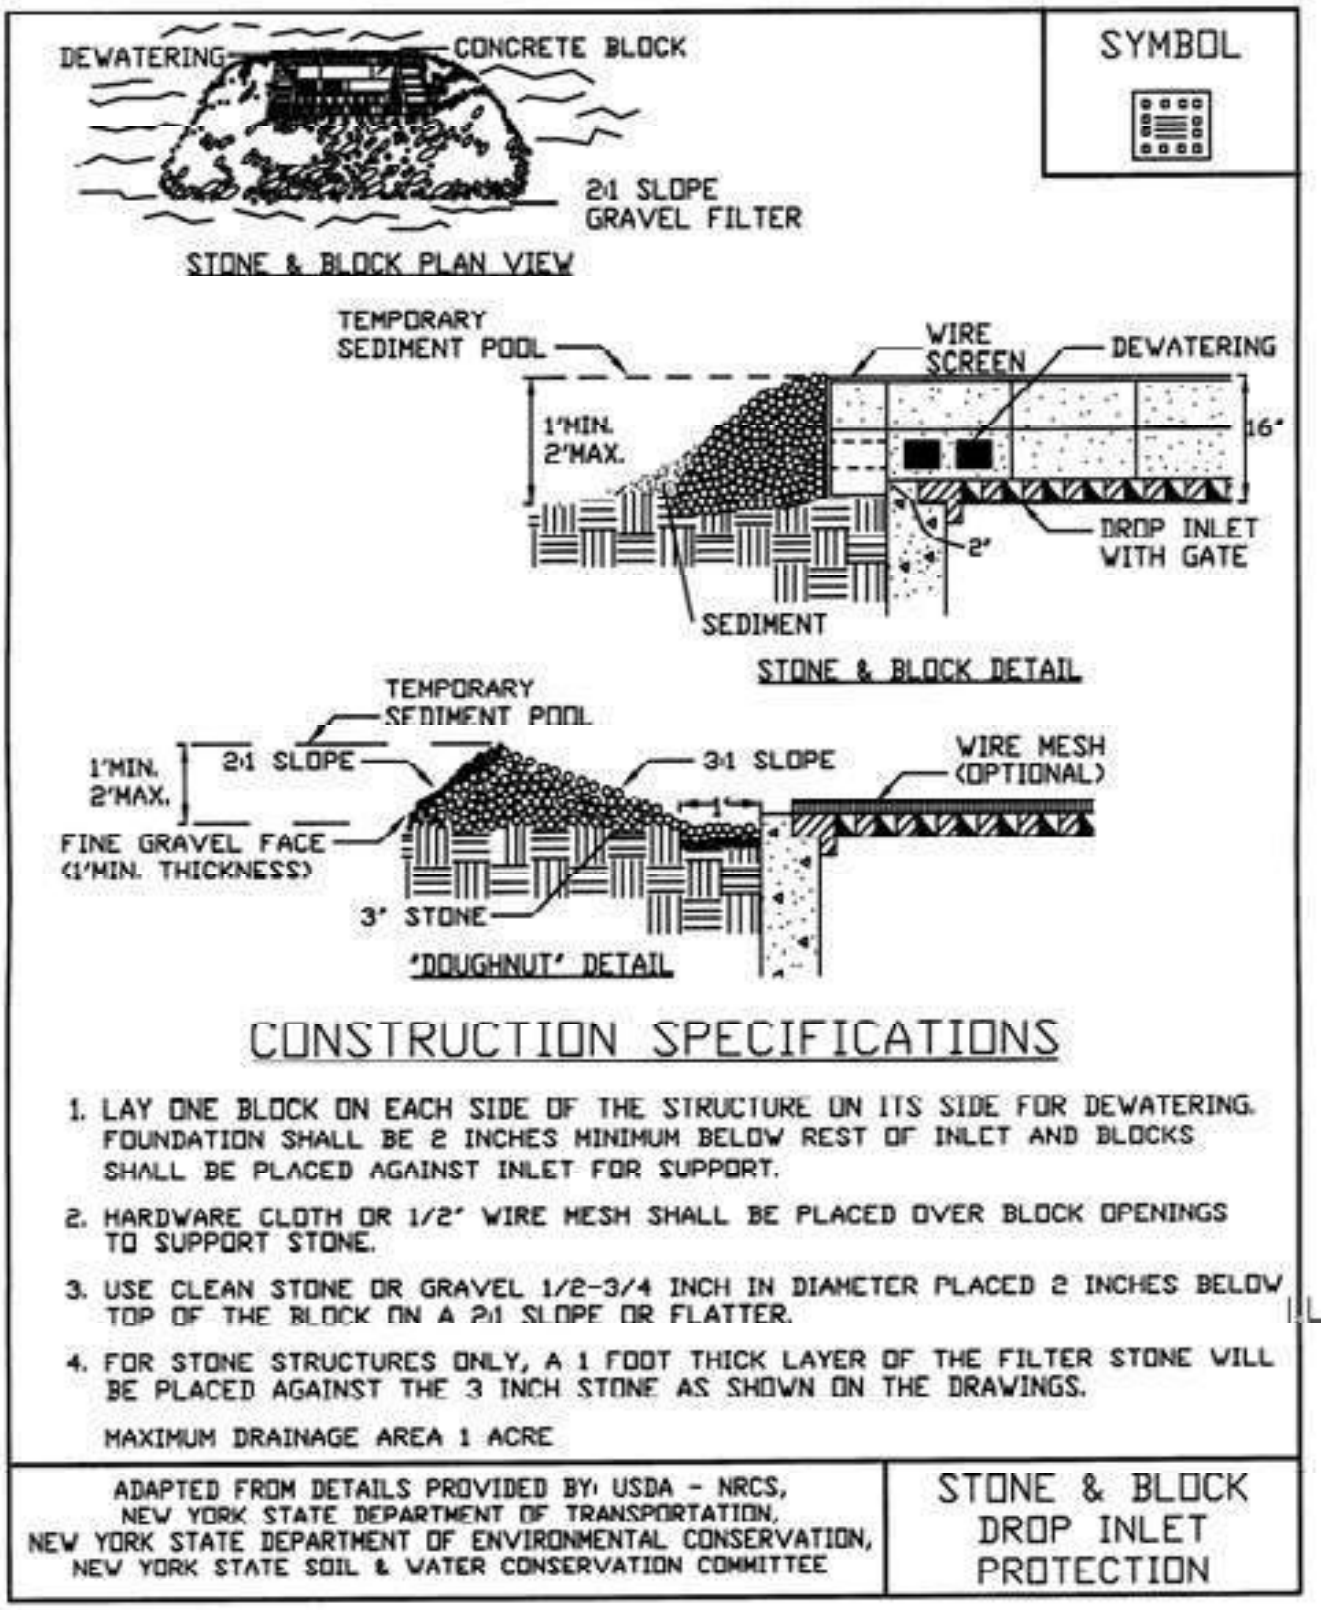
Stone & Block Drop Inlet Protection



CONSTRUCTION SPECIFICATIONS

1. LAY ONE BLOCK ON EACH SIDE OF THE STRUCTURE ON ITS SIDE FOR DEWATERING. FOUNDATION SHALL BE 2 INCHES MINIMUM BELOW REST OF INLET AND BLOCKS SHALL BE PLACED AGAINST INLET FOR SUPPORT.
2. HARDWARE CLOTH OR 1/2" WIRE MESH SHALL BE PLACED OVER BLOCK OPENINGS TO SUPPORT STONE.
3. USE CLEAN STONE OR GRAVEL 1/2-3/4 INCH IN DIAMETER PLACED 2 INCHES BELOW TOP OF THE BLOCK ON A 2:1 SLOPE OR FLATTER.
4. FOR STONE STRUCTURES ONLY, A 1 FOOT THICK LAYER OF THE FILTER STONE WILL BE PLACED AGAINST THE 3 INCH STONE AS SHOWN ON THE DRAWINGS.

2190 Wehrle Drive Rezoning

2nd REVISED
DRAFT RESOLUTION
(06/21/2021)

Adoption of Local Law to Amend the Zoning Map
(2190 Wehrle Drive, Z-2021-01)

RESOLVED, that pursuant to 6NYCRR Part 617 (SEQR) and Town Code Section 104, as amended, that the requirements of SEQR have been completed and the Town Board issues the attached Negative Declaration, and be it further

RESOLVED, that pursuant to NYS Town Law Sec.272-a, the Town Board concurs with the findings of the Planning Board as stated in their resolution of April 15, 2021 that the proposed Office Building District (OB) zoning at 2190 Wehrle Drive is consistent with the adopted Bicentennial Comprehensive Plan, as amended, and be it further

RESOLVED, that to the extent the proposed zoning is not consistent with the adopted Comprehensive Plan, the plan is hereby amended to be consistent with the proposed zoning at this location, and be it further

RESOLVED, that in accordance with Section 203-8-3 of the Town Code (Zoning), the Town Board adopts Local Law (#) to amend the Town Zoning map.

6/07/2021
A motion to open the public hearing was made by Supervisor Kulpa, seconded by Councilmember Bucki and unanimously approved 5-0.

Omar Abu-Sitta, Acquest Development, presented and answered questions.

The following speakers addressed the Town Board:
Ann Tsuchyna, 281 Bellingham Dr. - Concerned for the impact on their quality of life, water, wetlands; better buffer and greenspace
Tom Tsuchyna, 281 Bellingham Dr. - Voiced his concerns with the development of the property

There were no further speakers therefore, Supervisor Kulpa moved to adjourn the hearing until June 21st, seconded by Deputy Supervisor Berger and unanimously approved 5-0. The public hearing was adjourned at 7:42 PM.

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

6/21/2021

A motion to open the public hearing was made by Supervisor Kulpa, seconded by Councilmember Lavin and unanimously approved 5-0. The public hearing was opened at 7:09 PM.

There were no speakers from the public. Supervisor Kulpa motioned to adopt the negative declaration, seconded by Deputy Supervisor Berger and approved 4-1 (nay, Bucki).

Supervisor Kulpa then moved to close the public hearing, seconded by Deputy Supervisor Berger and approved 5-0. The public hearing was closed at 7:15 PM.

A motion to amend the resolution and use the 2nd revised resolution without conditions was made by Supervisor Kulpa, seconded by Deputy Supervisor Berger and approved 4-1 (nay, Bucki). A motion to adopt as amended was made by Supervisor Kulpa, seconded by Deputy Supervisor Berger and approved 4-1 (nay, Bucki).

DOC ID: 19712 **RESOLUTION 2018-1301**

Property Located at 2190 and 2220 Wehrle Drive - Acquest Wehrle

AGENDA ITEM - DECEMBER 10TH, 2018

TO: **Town Board**

FROM: **Stanley J. Sliwa, Esq., Town Attorney**

DATE: **December 5, 2018**

RE: **Property Located At 2190 and 2220 Wehrle Drive (Acquest Wehrle)**

Kindly adopt the following resolution with respect to the above matter:

WHEREAS, in July of 1983, the Town of Amherst accepted a construction grant from the Environmental Protection Agency ("USEPA") and the New York State Department of Environmental Conservation ("NYSDEC") to assist with the construction of the Youngs Road Interceptor and Collector Sewer Project for Southeast Amherst ("Sewer Project"); and

WHEREAS, in furtherance of the Sewer Project and as a condition of receiving the approximate $5.8 million grant, the Town of Amherst entered into a Grant Agreement with the USEPA that contained a 50-year prohibition on sewer hook-ups that would allow wastewater discharge from any development on a parcel of land within any wetland; and

WHEREAS, on approximately July 5, 1983, the Town of Amherst passed a resolution enacting a "fifty-year moratorium on development of properties which are located wholly or partially within state or federal designated wetlands and which are tributary to sanitary sewers in which there will be NYSDEC or USEPA financial participation under this project known as Federal Project Number C-36-1225-02" (the "Moratorium"); and

WHEREAS, the Town of Amherst subsequently failed to record the Grant Agreement or Moratorium in the Town Clerk's Office or other public record as an encumbrance on properties in the Town; and

WHEREAS, in 1997, Acquest (or an affiliate thereof) purchased property in the Town located at 2220 Wehrle Drive (the "Property") without knowledge of the Grant Agreement or Moratorium; and

WHEREAS, over several years that followed, Acquest pursued its project at the Property and obtained from the Town of Amherst, as Lead Agency, several Negative Declarations under the New York State Environmental Quality Review Act ("SEQRA"); and

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

WHEREAS, in June of 2005, Acquest purchased property in the Town of Amherst at 2190 Wehrle Drive located adjacent to 2220 Wehrle Drive; and

WHEREAS, on March 20, 2006, the Town of Amherst held a meeting during which the Town Board voted and passed a resolution terminating Acquest's commercial project; and

WHEREAS, on January 16, 2007, the Town of Amherst passed a resolution reaffirming the Moratorium, specifically identifying 2220 Wehrle Drive as being subject to the Moratorium, and declaring it "the policy of the Town of Amherst to honor and enforce the 50-year moratorium previously approved, adopted and implemented by the Amherst Town Board on July 5, 1983, which applies to all the properties which are located, in part or whole, within State or Federal designated wetlands, which are tributary to sanitary sewers in which construction there was State or Federal financial participation, including the [Sewer Project], which includes the property commonly known as 2220 Wehrle Dr. and to seek no waiver or variance there from,"; and

WHEREAS, in July of 2009, the United States commenced litigation against Acquest Wehrle, LLC (and later Acquest Development, LLC and William L. Huntress) alleging that the USEPA had jurisdiction over the Property and that Acquest had committed alleged violations of the fill and stormwater provisions of Clean Water Act (the "Federal Action"); and

WHEREAS, in August of 2009, Acquest Wehrle, LLC commenced an action in the New York State Supreme Court alleging the Town of Amherst, among other things, committed violations of Acquest's constitutional rights against a taking of property without just compensation, of due process, and of equal protection (the "State Action"); and

WHEREAS, Acquest ultimately obtained a judgment against the Town of Amherst in the amount of $3,941,967.64. The Town of Amherst then paid Acquest $63,220.24 in additional attorneys' fees, costs, and disbursements, resulting in a total payment to Acquest in excess of $4,000,000.00 in the State Action; and

WHEREAS, Acquest vigorously defended the allegations in the Federal Action, at all times disputing that either 2220 or 2190 Wehrle Drive contained any NYSDEC or USEPA regulated wetlands or any Waters of the United States, until, the United States abandoned the Federal Action by voluntarily dismissing it. The Court subsequently entered a Decision and Order on November 1, 2017 dismissing the Federal Action, with prejudice (the "Dismissal Order"); and

WHEREAS, the Dismissal Order made clear that the dismissal of the Federal Action was with prejudice, and that all that was or could have been litigated in the Federal Action was over once and for all; and

WHEREAS, upon information and belief, having taken a hard look at the Property, having considered the results of the State Action and the voluntary dismissal, with prejudice, of the Federal Action, that neither property owned by Acquest Wehrle, LLC (or any affiliate thereof) located in the Town of Amherst at 2190 and 2220 Wehrle Drive contain any New York State or Federal designated or regulated wetlands or Waters of the United States; and

Attachment: SP-2021-23 application 011322 (25067 : Sp-2021-23)

WHEREAS, considering the history of this matter and the history of 2190 and 2220 Wehrle Drive, the Town of Amherst desires to declare that neither 2190 or 2220 Wehrle Drive are any longer subject to the Moratorium or the Grant Agreement; and

NOW THEREFORE, BE IT RSOLVED, that neither 2190 Wehrle Drive nor 2220 Wehrle Drive in the Town of Amherst are subject to the Moratorium, the Resolution passed by the Town on July 5, 1983, nor the Grant Agreement; and

BE IT FURTHER RESOLVED, that the Resolution passed by the Town on March 20, 2006, insofar as it purported to terminate Acquest's commercial project, hereby is rescinded and withdrew, and is null & void. Acquest's property rights shall no longer be encumbered by said Resolution in any way; and

BE IT FURTHER RESOLVED, that neither 2190 Wehrle Drive nor 2220 Wehrle Drive are subject to the Resolution passed by the Town on January 16, 2007, and that to the extent that Resolution purports to state that 2220 Wehrle Drive contains State or Federal designated wetlands, the same no longer holds true.

SJS:nmb
c: Kathleen Cooper, Deputy Town Clerk
(**Agenda Item - December 10, 2018**)

FINANCIAL IMPACT:

None for the purposes of this resolution.

103,500 x 75% = 77,625 SF (NET)		
77,625/150= 518 SPACES	341	228

SITE PLAN NOTES

1. SURVEY INFORMATION WAS PROVIDED BY GPI ENGINEERING, LANDSCAPE, ARCHITECTURE & SURVEYING, LLP DATED 05/29/2018. C&S ENGINEERS, INC. ASSUMES NO RESPONSIBILITY FOR ITS ACCURACY.

2. CONTRACTOR TO VERIFY ALL FIELD CONDITIONS AND UTILITY LOCATIONS PRIOR TO THE START OF CONSTRUCTION. CONTACT THE ENGINEER WITH ANY DISCREPANCIES FOUND IN THE FIELD.

3. ALL DIMENSIONS FROM PROPERTY LINES ARE 90° FROM PROPERTY LINE UNLESS OTHERWISE NOTED.

4. ALL DIMENSIONS ARE FROM FACE OF CURB UNLESS OTHERWISE NOTED.

5. COORDINATE EXACT LOCATION OF SIDEWALKS AT DOORWAYS WITH ARCHITECTURAL PLANS.

6. REFER TO ARCHITECTURAL PLANS FOR BUILDING DIMENSIONS AND LAYOUT.

DSXW1 LED									
Series	**LEDs**	**Drive Current**	**Color temperature**	**Distribution**		**Voltage**	**Mounting**	**Control Options**	
DSXW1 LED	10C 10 LEDs (one engine)	350 350 mA	30K 3000 K	T2S Type II Short	T4M Type IV Medium	MVOLT [1] 277 [1]	**Shipped included**	**Shipped installed**	
	20C 20 LEDs (two engines) [1]	530 530 mA	40K 4000 K	T2M Type II Medium	T4W Type IV Wide	120 [1] 347 [1]	(blank) Surface mounting bracket	PE Photoelectric cell, button type [2]	
		700 700 mA	50K 5000 K	T3S Type III Short	TFTM Forward Throw Medium	208 [1] 480 [1]	BBW Surface-mounted back box (for conduit entry) [3]	DMG 0-10v dimming wires pulled outside fixture (for use with an external control, ordered separately)	
		1000 1000 mA (1 A) [1]	AMBPC Amber phosphor converted	T3M Type III Medium		240 [1]		PIR 180° motion/ambient light sensor, <15' mtg ht [4,5]	
								PIRH 180° motion/ambient light sensor, 15-30' mtg ht [4,5]	
								PIR1FC3V Motion/ambient sensor, 8-15' mounting height, ambient sensor enabled at 1fc [4,5]	
								PIRH1FC3V Motion/ambient sensor, 15-30' mounting height, ambient sensor enabled at 1fc [4,5]	
								ELCW Emergency battery backup (includes external component enclosure), CA Title 20 Non-compliant [6,7]	

Other Options		Finish (required)	
Shipped installed	**Shipped separately** [8]	DDBXD Dark bronze	DSSTD Sandstone	DWHGXD Textured white
SF Single fuse (120, 277 or 347V) [1,9]	BSW Bird-deterrent spikes	DBLXD Black	DDBTXD Textured dark bronze	DSSTXD Textured sandstone
DF Double fuse (208, 240 or 480V) [1,9]	VG Vandal guard	DNAXD Natural aluminum	DBLBXD Textured black	
HS House-side shield [9]	DDL Diffused drop lens	DWHXD White	DNATXD Textured natural aluminum	
SPD Separate surge protection [10]				

Accessories Ordered and shipped separately.
DSHS(*) U House-side shield (one per light engine)
DSHSBSW U Bird-deterrent spikes
DSHSVG U Vandal guard accessory

NOTES
1. 20C 1000 is not available with PIR, PIRH, PIR1FC3V or PIRH1FC3V.
2. MVOLT driver operates on any line voltage from 120-277V (50/60 Hz).
3. Single fuse (SF) requires 120, 277 or 347 voltage option. Double fuse (DF) requires 208, 240 or 480 voltage option.
4. Only available with 20C, 700mA or 1000mA. Not available with PIR or PIRH.
5. Back box ships installed on fixture. Cannot be field installed. Cannot be ordered as an accessory.
6. Photocontrol (PE) requires 120, 208, 240, 277 or 347 voltage option. Not available with motion/ambient light sensors (PIR or PIRH).
7. Reference Motion Sensor table on page 3.
8. Shipped separately keyed. Not compatible with conduit entry applications. Not available with BBW mounting option. Not available with fusing. Not available with 347 or 480 voltage options. Dimensions for accessory components located in back box housing. Emergency mode IES files located on product page at www.lithonia.com.
9. Not available with SPD.
10. Not available with ELCW.
11. Also available as a separate accessory; see Accessories information.
12. Not available with ELCW.

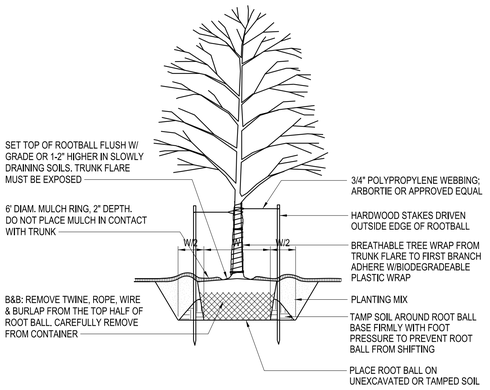
USER *DATE* *SYSTIME* *TIME*

Attachment: SP-2021-23 drawings 011322 (25067 : Sp-2021-23)



NOTES:
1. STAKE TREES AS DIRECTED BY THE LANDSCAPE ARCHITECT. STAKING WILL BE REQ'D WHEN ROOT BALLS ARE VERY SANDY OR WET CLAY, WHEN SOIL IS VERY SOFT, OR WHEN PLANTING LOCATIONS ARE WINDY.

2. TIGHTEN ARBORTIE ONLY ENOUGH TO KEEP FROM SLIPPING. ALLOW FOR SOME TRUNK MOVEMENT.

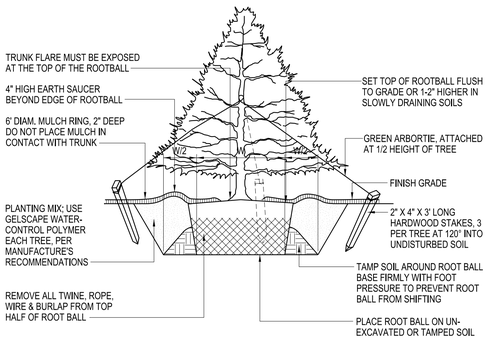
3. PRUNE ONLY CROSSING LIMBS, CO-DOMINANT LEADERS AND BROKEN OR DEAD BRANCHES.

4. TREE WRAP SHOULD BE INSTALLED AT TIME OF PLANTING AND REMOVED 12 MONTHS AFTER PLANTING.

C1 DECIDUOUS TREE PLANTING DETAIL
SCALE: N.T.S.

PLANTING SPECIFICATION

1. SCOPE OF WORK
   A. THIS WORK SHALL CONSIST OF PERFORMING, CLEARING, AND GRUBBING, SOIL PREPARATION, FINISH GRADING, PLANTING, DRAINAGE, INCLUDING ALL LABOR MATERIALS, TOOLS, EQUIPMENT, AND ANY OTHER APPURTENANCES NECESSARY FOR THE COMPLETION OF THIS PROJECT.
2. MATERIALS
   A. PLANTS - ALL PLANTS SHALL BE HEALTHY, OF NORMAL GROWTH, WELL ROOTED FREE FROM DISEASE AND INSECTS. QUALITY AND OF PLANT MATERIAL THAT SHALL CONFORM TO THE AMERICAN STANDARD FOR NURSERY STOCK (ANSI Z60.1) AND BE OF NUMBER ONE GRADE.
   B. VARIETIES AND SIZES OF PLANTS SHALL BE AS SHOWN ON DRAWINGS
3. FERTILIZER
   A. FERTILIZER SHALL BE MILORGANITE (6-2-0) OR APPROVED EQUAL.
4. GENERAL WORK PROCEDURES
   A. LANDSCAPE WORK SHALL BE ACCORDING TO THE WORKMANLIKE STANDARDS ESTABLISHED FOR LANDSCAPE CONSTRUCTION AND PLANTING.
5. WEEDING
   A. BEFORE AND DURING PRELIMINARY GRADING AND FINISH GRADING, ALL WEEDS AND GRASSES SHALL BE DUG OUT BY THE ROOTS AND DISPOSED OF AT THE CONTRACTOR'S EXPENSE.
6. SOIL CONDITIONING
   A. CULTIVATE ALL AREAS TO BE PLANTED TO A DEPTH OF 6". ALL DEBRIS EXPOSED FROM EXCAVATION AND CULTIVATION SHALL BE DISPOSED OF AT THE CONTRACTOR'S EXPENSE.
7. PLANTING
   POSITION TREES AND SHRUBS AT THEIR INTENDED LOCATIONS AS PER THE PLANS AND SECURE THE APPROVAL OF THE LANDSCAPE ARCHITECT BEFORE EXCAVATING PITS, MAKING NECESSARY ADJUSTMENTS AS DIRECTED.
   A. PLANTING PITS SHALL BE DUG WITH LEVEL BOTTOMS, AS SHOWN ON THE PLANTING DETAILS.
      - 3 PARTS TOPSOIL
      - 1 PART PEAT MOSS OR COMPOST
      - 1/3 PART MILORGANITE FERTILIZER
   B. PREPARED SOIL SHALL BE TAMPED FIRMLY AT BOTTOM OF PIT. FILL PREPARED SOIL AROUND BALL OF PLAN ½ WAY, AND WATER. COMPLETE BACK-FILLING AND WATER THOROUGHLY.
   C. ALL PLANTS SHALL BE SET SO THAT, WHEN SETTLED, THEY BEAR THE SAME RELATION TO THE REQUIRED GRADE AS THEY BORE TO THE NATURAL BEFORE BEING TRANSPLANTED.
   D. IMMEDIATELY AFTER PLANTING, STAKE ALL TREES WITH 3 CEDAR STAKES PER TREE.
   E. PREPARE RAISED EARTH SAUCER AS WIDE AS PLANTING HOLE OF EACH PLANT.
   F. WATER IMMEDIATELY AFTER PLANTING. WATER SHALL BE APPLIED TO EACH TREE AND SHRUB IN SUCH MANNER AS NOT TO DISTURB BACKFILL AND TO THE EXTENT THAT ALL MATERIALS IN THE PLANTING HOLE ARE THOROUGHLY SATURATED.
   G. AFTER SHRUB BEDS AND TREE SAUCERS ARE BACKFILLED AND FINE GRADED, MULCH WITH 3" DEPTH OF DARK, SHREDDED HARDWOOD BARK MULCH.
8. FINISH GRADING
   A. PLUS/MINUS .1 FOOT OF FINISH GRADE.
   B. ALL LAWN AND PLANTING AREAS SHALL BE GRADED TO A SMOOTH, EVEN, UNIFORM PLANE WITH NO ABRUPT CHANGE OF SURFACE. SOIL AREAS ADJACENT TO THE BUILDING SHALL SLOPE AWAY FROM THE BUILDING.
   C. ALL PLANTING AREAS SHALL BE GRADED AND MAINTAINED TO ALLOW FREE FLOW OF SURFACE WATER.
9. GUARANTEE
   A. CONTRACTOR SHALL GUARANTEE ALL PLANTS FOR A PERIOD OF ONE (1) YEAR.
10. CLEAN-UP
   A. UPON THE COMPLETION OF ALL PLANTING WORK AND BEFORE FINAL ACCEPTANCE, THE CONTRACTOR SHALL REMOVE ALL MATERIAL, EQUIPMENT AND DEBRIS RESULTING FROM HIS WORK, ALL ACCEPTABLE CONDITIONS AS APPROVED BY THE OWNERS AUTHORIZED REPRESENTATIVE.
11. MAINTENANCE
   MAINTENANCE PERIOD TO COMMENCE AFTER FINAL INSPECTION.
   A. MAINTENANCE PERIOD FOR THIS CONTRACT SHALL BE 90 CALENDAR DAYS COMMENCING AFTER FINAL INSPECTION OF CONSTRUCTION. MAINTAIN TREES, SHRUBS AND OTHER PLANTS BY PRUNING, CULTIVATING AND WEEDING AS REQUIRED FOR HEALTHY GROWTH, RESTORE PLANTING SAUCERS, TIGHTEN AND REPAIR STAKE AND GUY SUPPORTS AND RESET TREES AND SHRUBS TO PROPER GRADES OR VERTICAL POSITION AS REQUIRED. SPRAY AS REQUIRED TO KEEP TREES AND SHRUBS FREE OF INSECTS AND DISEASE. MAINTAIN LAWNS BY WATERING, FERTILIZING, WEEDING, MOWING, TRIMMING, AND OTHER OPERATIONS SUCH AS ROLLING, REGRADING, AND REPLANTING AS REQUIRED TO ESTABLISH A SMOOTH, ACCEPTABLE LAWN, FREE OF ERODED OR BARE AREAS.



NOTES:
1. STAKE TREES AS WHEN DIRECTED BY THE LANDSCAPE ARCHITECT. STAKING WILL BE REQUIRED WHEN ROOT BALLS HAVE VERY SANDY OR WET CLAY SOIL, WHEN ROOT BALLS ARE PLACED ON VERY SOFT SOIL, OR WHEN TREES ARE LOCATED IN AREAS WITH CONDITIONS.

2. TIGHTEN ARBORTIE ONLY ENOUGH TO KEEP FROM SLIPPING. ALLOW FOR SOME TRUNK MOVEMENT.

3. PRUNE ANY BROKEN OR DEAD BRANCHES.

DANDY SACK™ SPECIFICATIONS

NOTE: THE DANDY SACK™ WILL BE MANUFACTURED IN THE U.S.A. FROM A WOVEN MONOFILAMENT FABRIC THAT MEETS OR EXCEEDS THE FOLLOWING SPECIFICATIONS:

REGULAR FLOW DANDY SACK™ (BLACK)

MECHANICAL PROPERTIES	TEST METHOD	UNITS	MARV
GRAB TENSILE STRENGTH	ASTM D 4632	kN (lbs)	1.78 (400) x 1.40 (315)
GRAB TENSILE ELONGATION	ASTM D 4632	%	15 x 15
PUNCTURE STRENGTH	ASTM D 4833	kN (lbs)	0.67 (150)
MULLEN BURST STRENGTH	ASTM D 3786	kPa (psi)	5506 (800)
TRAPEZOID TEAR STRENGTH	ASTM D 4533	kN (lbs)	0.67 (150) x 0.73 (165)
UV RESISTANCE	ASTM D 4355	%	90
APPARENT OPENING SIZE	ASTM D 4751	Mm (US Std Sieve)	0.425 (40)
FLOW RATE	ASTM D 4491	1/min/m² (gal/min/ft²)	2852 (70)
PERMITTIVITY	ASTM D 4491	Sec⁻¹	0.90

HI-FLOW DANDY SACK™ (SAFETY ORANGE)

MECHANICAL PROPERTIES	TEST METHOD	UNITS	MARV
GRAB TENSILE STRENGTH	ASTM D 4632	kN (lbs)	1.62 (365) X 0.89 (200)
GRAB TENSILE ELONGATION	ASTM D 4632	%	24 X 10
PUNCTURE STRENGTH	ASTM D 4833	kN (lbs)	0.40 (90)
MULLEN BURST STRENGTH	ASTM D 3786	kPa (psi)	3097 (450)
TRAPEZOID TEAR STRENGTH	ASTM D 4533	kN (lbs)	0.51 (115) X 0.33 (75)
UV RESISTANCE	ASTM D 4355	%	90
APPARENT OPENING SIZE	ASTM D 4751	Mm (US Std Sieve)	0.425 (40)
FLOW RATE	ASTM D 4491	1/min/m² (gal/min/ft²)	5907 (145)
PERMITTIVITY	ASTM D 4491	Sec⁻¹	2.1

*NOTE: DANDY SACKS™ CAN BE ORDERED WITH OUR OPTIONAL OIL ABSORBENT PILLOWS.

C4 GENERAL NOTES

SCALE: N.T.S.

EROSION CONTROL NOTES:

THE FOLLOWING EROSION CONTROL PROCEDURE SHALL BE ADHERED TO BY THE CONTRACTOR:

1. INSTALL TEMPORARY SILT FENCE BARRIERS AS SHOWN ON THE PLAN AND AT ALL EXISTING STORMWATER CATCH BASINS WITHIN THE WORK AREA TO PREVENT SEDIMENT MIGRATION. ALL SILT FENCE/SOCK BARRIERS SHALL BE INSTALLED IN ACCORDANCE WITH THE DETAILS SHOWN ON THE PLANS.

2. THE TOPSOIL SHALL BE STRIPPED & STOCKPILED ON SITE FOR RE-USE AS DIRECTED BY THE OWNER. ALL LOCAL ORDINANCES REGARDING THE SALE AND/OR REMOVAL OF TOPSOIL FROM THE SITE MUST BE FOLLOWED.

3. ALL SILT FENCES/SOCKS SHALL BE REPLACED WHENEVER THEY BECOME CLOGGED OR INOPERABLE.

4. THE CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTENNACE & REMOVAL OF TEMPORARY SEDIMENTATION CONTROLS.

5. THE CONTRACTOR MUST CONTROL DUST DURING CONSTRUCTION. DURING EARTHWORK OPERATIONS, WATER SPREADING EQUIPMENT SHALL BE PROVIDED BY THE CONTRACTOR AND WATER APPLIED AS NECESSARY AND AS DIRECTED BY THE OWNER IN ORDER TO CONTROL DUST.

6. DIRT OR DEBRIS LEFT ON LOCAL PUBLIC ROADS AS A RESULT OF THIS CONSTRUCTION PROJECT SHALL BE REMOVED & ROAD SURFACES CLEANED BY THE CONTRACTOR ON A DAILY BASIS.

7. ALL DISTURBED AREAS (EXCEPT AREAS TO BE PAVED OR BUILT UPON) SHALL BE TOPSOILED TO A MINIMUM 4" DEPTH & SEEDED IMMEDIATELY AFTER FINE GRADING TAKES PLACE & AS SOON AS PHYSICALLY POSSIBLE.

8. THE CONTRACTOR IS RESPONSIBLE FOR THE MAINTENANCE OF DOWNSTREAM STORM SEWERS, DITCHES & CULVERTS. SILT BUILD-UP FOUND TO BE A RESULT OF THIS SITE CONSTRUCTION WORK SHALL BE REMOVED FROM DOWNSTREAM CULVERTS BY THE CONTRACTOR AT NO ADDITIONAL EXPENSE TO THE OWNER OR THE TOWN.

9. IN ADDITION TO STORM WATER DISCHARGES, THE FOLLOWING NON-STORM WATER DISCHARGES MAY CONTRIBUTE TO THE RUN-OFF FROM THE SITE:

- WATER FROM WATER SERVICE FLUSHINGS
- WATER USED TO WASH DOWN CONSTRUCTION VEHICLES (NO DETERGENTS)
- WATER USED FOR DUST CONTROL
- UNCONTAMINATED GROUNDWATER

10. THE ABOVE NON-STORM WATER FLOWS SHALL BE TREATED IN THE SAME MANNER AS STORM WATER FLOWS INDICATED HERIN.

SECTION A-A
NTS

NOTES:
1. ACTUAL LAYOUT DETERMINED IN FIELD
2. A CONCRETE WASHOUT SIGN SHALL BE INSTALLED WITHIN 30 FEET OF THE TEMPORARY WASHOUT FACILITY.

A2 CONCRETE WASH-OUT AREA

SCALE: N.T.S.

A3 TEMPORARY STABILIZED CONSTRUCTION ENTRANCE

SCALE: N.T.S.

STABILIZED CONSTRUCTION ENTRANCE NOTES:

1. STONE SIZE - USE 2" STONE, WASHED, CRUSHED.

2. LENGTH - NOT LESS THAN 50 FEET

3. THICKNESS - NOT LESS THAN SIX (6) INCHES

4. WIDTH - TWELVE (12) FOOT MINIMUM, BU NOT LESS THAN THE FULL WIDTH AT POINTS WHERE INGRESS OR EGRESS OCCURS. TWENTY-FOUR (24) FOOT IF SINGLE ENTRANCE TO SITE.

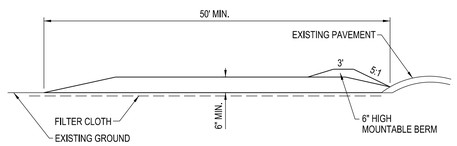
5. FILTER CLOTH - WILL BE PLACED OVER THE ENTIRE AREA PRIOR TO PLACING OF STONE.

6. SURFACE WATER - ALL SURFACE WATER FLOWING OR DIVERTED TOWARD CONSTRUCTION ENTRANCES SHALL BE PIPED ACROSS THE ENTRANCE. IF PIPING IS IMPRACTICAL, A MOUNTABLE BERM WITH 5:1 SLOPES WILL BE PERMITTED.

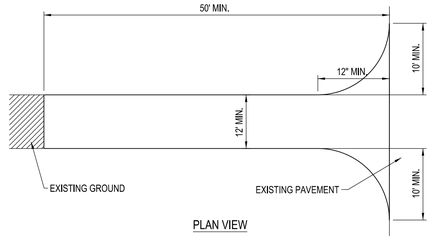
7. MAINTENANCE - THE ENTRANCE SHALL BE MAINTAINED IN A CONDITION WHICH WILL PREVENT TRACKING OR FLOWING OF SEDIMENT ONTO PUBLIC RIGHTS-OF-WAY. ALL SEDIMENT SPILLED, DROPPED, WASHED OR TRACKED ONTO PUBLIC-RIGHTS-OF-WAY MUST BE REMOVED IMMEDIATELY.

8. WHEN WASHING IS REQUIRED, IT SHALL BE DONE ON AN AREA STABILIZED WITH STONE & WHICH DRAINS INTO AN APPROVED SEDIMENT TRAPPING DEVICE.

9. PERIODIC INSPECTION & NEEDED MAINTENANCE SHALL BE PROVIDED AFTER EACH RAIN.



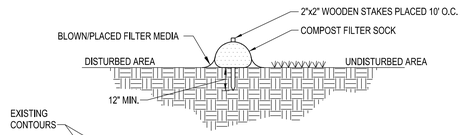
PROFILE

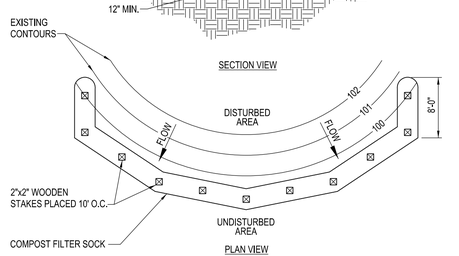


PLAN VIEW

A4 COMPOST FILTER SOCK

SCALE: N.T.S.





PLAN VIEW

ADAPTED FROM DETAILS PROVIDED BY: FILTREXX

COMPOST STANDARDS TABLE	
ORGANIC MATTER CONTENT	25% - 100% (DRY WEIGHT)
ORGANIC PORTION	FIBROUS & ELONGATED
PH	6.0 - 8.0
MOISTURE CONTENT	30% - 60%
PARTICLE SIZE	100 % PASSING A 1" SCREEN 10 - 50% PASSING A 3/8" SCREEN
SOLUBLE SALT CONCENTRATION	5.0 ds/M (mmhos/cm) MAXIMUM

1. SOCK FABRIC SHALL MEET STANDARDS OF TABLE 5.1. COMPOST SHALL MEET THE STANDARDS LISTED ON OF TABLE 5.2.

2. COMPOST FILTER SOCK SHALL BE PLACED AT EXISTING LEVEL GRADE. BOTH ENDS OF THE SOCK SHALL BE EXTENDED AT LEAST 8 FEET UP SLOPE AT 45 DEGREES TO THE MAIN SOCK ALIGNMENT (FIGURE 5.2). MAXIMUM SLOPE LENGTH ABOVE ANY SOCK SHALL NOT EXCEED THAT SHOWN ON FIGURE X.X. STAKES MAY BE INSTALLED IMMEDIATELY DOWNSLOPE OF THE SOCK IF SO SPECIFIED BY THE MANUFACTURER.

3. TRAFFIC SHALL NOT BE PERMITTED TO CROSS FILTER SOCKS.

4. ACCUMULATED SEDIMENT SHALL BE REMOVED WHEN IT REACHES HALF THE ABOVE GROUND HEIGHT OF THE SOCK & DISPOSED IN THE MANNER DESCRIBED ELSEWHERE IN THE PLAN.

5. SOCKS SHALL BE INSPECTED WEEKLY AND AFTER EACH RUNOFF EVENT. DAMAGED SOCKS SHALL BE REPAIRED ACCORDING TO MANUFACTURER'S SPECIFICATIONS OR REPLACED WITHIN 24 HOURS OF INSPECTION.

6. BIODEGRADABLE FILTER SOCKS SHALL BE REPLACED AFTER 6 MONTHS; PHOTODEGRADABLE SOCKS AFTER 1 YEAR. POLYPROPYLENE SOCKS SHALL BE REPLACED ACCORDING TO MANUFACTURER'S RECOMMENDATIONS.

7. UPON STABILIZATION OF THE AREA TRIBUTARY TO THE SOCKS, STAKES SHALL BE REMOVED, THE SOCK MAY BE LEFT IN PLACE AND VEGETATED OR REMOVED. IN THE LATTER CASE, THE MESH SHALL BE CUT OPEN AND THE MULCH SPREAD AS A SOIL SUPPLEMENT.

Attachment: SP-2021-23 drawings 011322 (25067 : Sp-2021-23)

NOTES

GENERAL

1. SIDEWALK CURB RAMP TYPE AND LOCATION ARE AS SHOWN ON THE PLANS OR AS DIRECTED.
2. ALL SIDEWALK CURB RAMP TYPES MAY BE USED IN STRAIGHT OR CURVED CURBED SECTIONS.
3. SIDEWALK CURB RAMP TYPES MAY BE DIFFERENT AT EACH LOCATION WITHIN AN INTERSECTION.

SIDEWALK CURB RAMP CRITERIA

4. THE MAXIMUM SLOPE OF A SIDEWALK CURB RAMP IN NEW CONSTRUCTION SHALL BE 1:12.IF SPACE LIMITATIONS ON EXISTING SITES PROHIBIT THE USE OF 1:12, THE FOLLOWING SLOPES AND RISES MAY BE USED:
   A) STEEPER THAN 1:12 (8.33%) BUT NO STEEPER THAN 1:10 (10%) 6" MAXIMUM RISE, 5 FT. MAXIMUM RUN
   B) STEEPER THAN 1:10 (10%) BUT NO STEEPER THAN 1:8 (12.5%) 3" MAXIMUM RISE, 2 FT. MAXIMUM RUN
   C) A SLOPE STEEPER THAN 1:8 (12.5%) NOT ALLOWED.
5. THE MINIMUM WIDTH OF A SIDEWALK CURB RAMP SHALL BE FIVE FEET, EXCLUSIVE OF FLARED SIDES.
6. ALL SIDEWALK CURB RAMPS SHALL HAVE FLUSH, SMOOTH TRANSITIONS TO THE ADJACENT STREET OR HIGHWAY SURFACE.

SURFACE FINISH

7. THE SURFACE OF ALL SIDEWALK CURB RAMPS SHALL BE STABLE, FIRM, AND SLIP RESISTANT. (E.G., A COARSE BROOM FINISH PERPENDICULAR TO THE RAMP SLOPE IS ACCEPTABLE ON CEMENT CONCRETE CURB RAMPS.)

SIDEWALK CURB RAMP PLACEMENT

8. AT A CORNER, WHERE THE CURB RADIUS IS 25' OR LESS, A SINGLE RAMP (EITHER TYPE A, B, OR C) LOCATED DIAGONALLY CAN OFTEN SERVE CROSSWALKS IN TWO DIRECTIONS. HOWEVER, A SINGLE RAMP SHALL ONLY BE USED WHERE THERE IS A MINIMUM CLEAR SPACE OF 48" FALLING ENTIRELY WITHIN THE PROJECTION OF THE INTERSECTING CURBS (SEE FIGURE 1). WHERE THE RADIUS EXCEEDS 25' OR THE MINIMUM 48" CLEAR SPACE IS UNACHIEVABLE, THEN SEPARATE RAMPS SHOULD BE PROVIDED FOR EACH CROSSWALK.

PAVEMENT MARKINGS AT CROSSWALKS

9. SIDEWALK CURB RAMPS AT MARKED CROSSINGS SHALL BE WHOLLY CONTAINED WITHIN THE MARKINGS, EXCLUDING ANY FLARED SIDES.
10. AT A CORNER, WHERE A SINGLE RAMP (EITHER TYPE A, B, OR C) LOCATED DIAGONALLY SERVES TWO CROSSWALKS, THERE SHALL BE A 48" MINIMUM CLEAR SPACE AT THE RAMP BOTTOM WHOLLY CONTAINED WITHIN THE INTERSECTING CROSSWALK MARKINGS (SEE FIGURE 1).
11. WHERE STOP LINES ARE NECESSARY, THEY SHALL BE LOCATED IN ADVANCE OF SIDEWALK CURB RAMPS.

UTILITIES AND DRAINAGE INLETS OR GRATES

12. WHERE FEASIBLE PROVIDE FOR DRAINAGE INLETS OR GRATES IMMEDIATELY UPSTREAM FROM THE CURB RAMPS. RETICULINE OR RECTANGULAR DRAINAGE GRATES ARE TO BE USED IN THE AREA OF CURB RAMPS.
13. DO NOT PLACE SIGNAL POLES, SIGN POSTS, UTILITY POLES, FIRE HYDRANTS, ETC., WITHIN THE RAMP OR SIDE FLARE AREAS.

PEDESTRIAN ACTIVATED SIGNALS

14. PUSHBUTTONS SHALL BE LOCATED NEAR CURB RAMPS AND WHERE A PERSON IN A WHEELCHAIR CAN ACTIVATE THE SIGNAL WITHOUT STOPPING ON THE CURB RAMP.
15. PUSH BUTTON HEIGHT SHALL BE 42" TO 48" ABOVE THE SIDEWALK SURFACE.
16. PUSH BUTTONS SHALL BE LOCATED SO THAT THE PEDESTRIAN CAN SEE THE APPROPRIATE SIGNAL HEAD WHILE ACTIVATING THE SIGNAL.

ISLANDS

17. ANY RAISED ISLANDS IN CROSSINGS SHALL BE CUT THROUGH LEVEL WITH THE STREET OR HAVE CURB RAMPS AT BOTH SIDES AND A LEVEL AREA AT LEAST 48 INCHES LONG IN THE PART OF THE ISLAND INTERSECTED BY THE CROSSINGS.

DEMOLITION PLAN SHEET KEYNOTES

1. CLEAR & DISPOSE OF BRUSH
2. SAWCUT PAVEMENT
3. REMOVE & DISPOSE OF CONCRETE SIDEWALK
4. REMOVE & DISPOSE OF CURB & GUTTER
5. REMOVE ROW OF STEEL FENCE POSTS
6. SHED TO BE RELOCATED, COORDINATE WITH OWNER

DEMOLITION PLAN LEGEND

- TREE TO BE REMOVED
- BRUSH TO BE REMOVED

DEMOLITION PLAN NOTES

1. CONTRACTOR TO REMOVE & DISPOSE OF ALL ITEMS INDICATED & ANY ITEMS INCIDENTAL TO THE CONSTRUCTION AS REQUIRED.

2. CONTRACTOR SHALL PROTECT/PRESERVE ALL EXISTING ITEMS TO REMAIN, INCLUDING, BUT NOT LIMITED TO BUILDINGS, PAVEMENT, OVERHEAD & BURIED UTILITIES, TREES LANDSCAPING, ETC. DAMAGE TO ITEMS SCHEDULED TO REMAIN SHALL BE REPAIRED OR REPLANTED AT NO ADDITIONAL COST TO THE OWNER.

3. UTILITIES SHOWN ARE APPROXIMATE. CONTRACTOR SHALL HAVE ALL UNDER -GROUND FACILITIES LOCATED AND MARKED PRIOR TO EXCAVATION/DEMOLITION/ CONSTRUCTION.

4. ALL UTILITY TERMINATIONS SHALL BE IN ACCORDANCE W/ THE APPLICABLE UTILITY COMPANY REQUIREMENTS.

5. CONTRACTOR SHALL LEGALLY DISPOSE OF ALL MATERIALS/DEBRIS REMOVED FROM THE SITE.

6. CONTRACTOR TO OBTAIN HIGHWAY WORK PERMIT PRIOR TO THE START OF CONSTRUCTION. CALL FOR STAKEOUT OF UTILITIES BEFORE STARTING WORK. NOTIFY ENGINEER OR OWNER'S REPRESENTATIVE OF ANY DISCREPANCIES FOUND IN THE FIELD.

7. THIS PLAN IS PREPARED FROM A SURVEY SHOWING KNOWN SURFACE FEATURES. IT IS INTENDED AS A GUIDE TO THE CONTRACTOR, NOT AS A COMPLETE AND UNIVERSAL DEMOLITION PLAN. SEE THE SITE PLAN, MORE FEATURES (NOT INDICATED) MAY REQUIRE DEMOLITION TO CONSTRUCT THE SITE PLAN. CONTRACTOR MUST VISIT THE SITE TO CONFIRM DEMOLITION EFFORT PRIOR TO BIDDING.

8. MAINTAIN STORM SEWER CONTINUITY & POSITIVE DRAINAGE DURING DEMOLITION, REMOVAL & CONSTRUCTION OF STORM SEWERS & INLETS.

PLANTING SPECIFICATION

1. SCOPE OF WORK
   - A. THIS WORK SHALL CONSIST OF PERFORMING, CLEARING, AND GRUBBING, SOIL PREPARATION, FINISH GRADING, PLANTING, DRAINAGE, INCLUDING ALL LABOR MATERIALS, TOOLS, EQUIPMENT, AND ANY OTHER APPURTENANCES NECESSARY FOR THE COMPLETION OF THIS PROJECT.
2. MATERIALS
   - A. PLANTS - ALL PLANTS SHALL BE HEALTHY, OF NORMAL GROWTH, WELL ROOTED FREE FROM DISEASE AND INSECTS. QUALITY AND OF PLANT MATERIAL THAT SHALL CONFORM TO THE AMERICAN STANDARD FOR NURSERY STOCK (ANSI Z60.1) AND BE OF NUMBER ONE GRADE.
   - B. VARIETIES AND SIZES OF PLANTS SHALL BE AS SHOWN ON DRAWINGS
3. FERTILIZER
   - A. FERTILIZER SHALL BE MILORGANITE (6-2-0) OR APPROVED EQUAL.
4. GENERAL WORK PROCEDURES
   - A. LANDSCAPE WORK SHALL BE ACCORDING TO THE WORKMANLIKE STANDARDS ESTABLISHED FOR LANDSCAPE CONSTRUCTION AND PLANTING.
5. WEEDING
   - A. BEFORE AND DURING PRELIMINARY GRADING AND FINISH GRADING, ALL WEEDS AND GRASSES SHALL BE DUG OUT BY THE ROOTS AND DISPOSED OF AT THE CONTRACTOR'S EXPENSE.
6. SOIL CONDITIONING
   - A. CULTIVATE ALL AREAS TO BE PLANTED TO A DEPTH OF 6". ALL DEBRIS EXPOSED FROM EXCAVATION AND CULTIVATION SHALL BE DISPOSED OF AT THE CONTRACTOR'S EXPENSE.
7. PLANTING

   POSITION TREES AND SHRUBS AT THEIR INTENDED LOCATIONS AS PER THE PLANS AND SECURE THE APPROVAL OF THE LANDSCAPE ARCHITECT BEFORE EXCAVATING PITS, MAKING NECESSARY ADJUSTMENTS AS DIRECTED.
   - A. PLANTING PITS SHALL BE DUG WITH LEVEL BOTTOMS, AS SHOWN ON THE PLANTING DETAILS.

     - 3 PARTS TOPSOIL
     - 1 PART PEAT MOSS OR COMPOST
     - 1/3 PART MILORGANITE FERTILIZER
   - B. PREPARED SOIL SHALL BE TAMPED FIRMLY AT BOTTOM OF PIT. FILL PREPARED SOIL AROUND BALL OF PLAN ½ WAY, AND WATER. COMPLETE BACK-FILLING AND WATER THOROUGHLY.
   - C. ALL PLANTS SHALL BE SET SO THAT, WHEN SETTLED, THEY BEAR THE SAME RELATION TO THE REQUIRED GRADE AS THEY BORE TO THE NATURAL BEFORE BEING TRANSPLANTED.
   - D. IMMEDIATELY AFTER PLANTING, STAKE ALL TREES WITH 3 CEDAR STAKES PER TREE.
   - E. PREPARE RAISED EARTH SAUCER AS WIDE AS PLANTING HOLE OF EACH PLANT.
   - F. WATER IMMEDIATELY AFTER PLANTING. WATER SHALL BE APPLIED TO EACH TREE AND SHRUB IN SUCH MANNER AS NOT TO DISTURB BACKFILL AND TO THE EXTENT THAT ALL MATERIALS IN THE PLANTING HOLE ARE THOROUGHLY SATURATED.
   - G. AFTER SHRUB BEDS AND TREE SAUCERS ARE BACKFILLED AND FINE GRADED, MULCH WITH 3" DEPTH OF DARK, SHREDDED HARDWOOD BARK MULCH.
8. FINISH GRADING
   - A. PLUS/MINUS .1 FOOT OF FINISH GRADE.
   - B. ALL LAWN AND PLANTING AREAS SHALL BE GRADED TO A SMOOTH, EVEN, UNIFORM PLANE WITH NO ABRUPT CHANGE OF SURFACE. SOIL AREAS ADJACENT TO THE BUILDING SHALL SLOPE AWAY FROM THE BUILDING.
   - C. ALL PLANTING AREAS SHALL BE GRADED AND MAINTAINED TO ALLOW FREE FLOW OF SURFACE WATER.
9. GUARANTEE
   - A. CONTRACTOR SHALL GUARANTEE ALL PLANTS FOR A PERIOD OF ONE (1) YEAR.
10. CLEAN-UP
    - A. UPON THE COMPLETION OF ALL PLANTING WORK AND BEFORE FINAL ACCEPTANCE, THE CONTRACTOR SHALL REMOVE ALL MATERIAL, EQUIPMENT AND DEBRIS RESULTING FROM HIS WORK. ALL ACCEPTABLE CONDITIONS AS APPROVED BY THE OWNERS AUTHORIZED REPRESENTATIVE.
11. MAINTENANCE

    MAINTENANCE PERIOD TO COMMENCE AFTER FINAL INSPECTION.
    - A. MAINTENANCE PERIOD FOR THIS CONTRACT SHALL BE 90 CALENDAR DAYS COMMENCING AFTER FINAL INSPECTION OF CONSTRUCTION. MAINTAIN TREES, SHRUBS AND OTHER PLANTS BY PRUNING, CULTIVATING AND WEEDING AS REQUIRED FOR HEALTHY GROWTH. RESTORE PLANTING SAUCERS. TIGHTEN AND REPAIR STAKE AND GUY SUPPORTS AND RESET TREES AND SHRUBS TO PROPER GRADES OR VERTICAL POSITION AS REQUIRED. SPRAY AS REQUIRED TO KEEP TREES AND SHRUBS FREE OF INSECTS AND DISEASE. MAINTAIN LAWNS BY WATERING, FERTILIZING, WEEDING, MOWING, TRIMMING, AND OTHER OPERATIONS SUCH AS ROLLING, REGRADING, AND REPLANTING AS REQUIRED TO ESTABLISH A SMOOTH, ACCEPTABLE LAWN, FREE OF ERODED OR BARE AREAS.

LANDSCAPING LEGEND

- EXISTING TREE TO BE PRESERVED
- PROPOSED DECIDUOUS TREE
- PROPOSED EVERGREEN TREE
- PROPOSED SHRUB
- EXISTING TREE TO BE REMOVED

NOTES:
1. ALL INTERIOR LANDSCAPED AREA SHALL HAVE A MINIMUM PLANTING SOIL DEPTH OF THREE (3) FEET AND BE FREE FROM ALL FORMS OF CONSTRUCTION DEBRIS AND FOREIGN MATERIAL.
2. ALL TREE SAUCERS AND SHRUB BEDS SHALL RECEIVE A MINIMUM OF THREE (3) INCHES DEPTH OF DARK SHREDDED HARDWOOD BARK MULCH.
3. ALL TREES SHALL BE STAKED WITH THREE (3) WOOD STAKES AS SHOWN ON THE TREE PLANTING DETAIL.
4. A ROOT PROTECTION ZONE SHALL BE ESTABLISHED AROUND ANY TREE WHICH IS IDENTIFIED ON THE LANDSCAPE PLAN AS A TREE TO BE PRESERVED. THE ROOT PROTECTION ZONE IS IDENTIFIED BY CREATING A CIRCLE AROUND THE TREE, THE SIZE OF WHICH IS DETERMINED BY PROVIDING ONE FOOT OF RADIUS FOR EVERY INCH DIAMETER OF THE TREE MEASURED AT BREAST HEIGHT (DBH). THE ROOT PROTECTION ZONE SHALL BE MARKED IN THE FIELD WITH A PHYSICAL BARRIER SUCH AS TEMPORARY FENCING OR OTHER MEANS WHICH SHALL PREVENT CONSTRUCTION ACTIVITIES FROM OCCURRING WITH THE TREE ROOT PROTECTION ZONE. METHODS FOR PRESERVING AND PROTECTING EXISTING TREES SHALL BE INCLUDED AS PART OF THE LANDSCAPE PLAN.

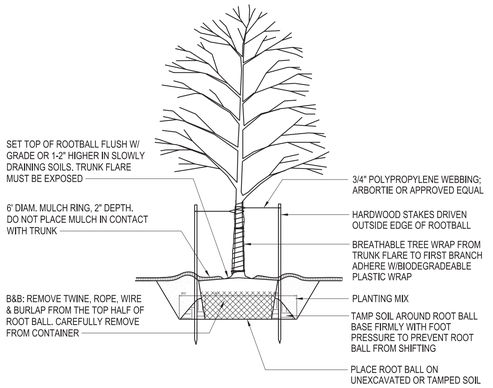
NTS



NOTES:

1. STAKE TREES AS DIRECTED BY THE LANDSCAPE ARCHITECT. STAKING WILL BE REQ'D WHEN ROOT BALLS ARE VERY SANDY OR WET CLAY, WHEN SOIL IS VERY SOFT, OR WHEN PLANTING LOCATIONS ARE WINDY.
2. TIGHTEN ARBORTIE ONLY ENOUGH TO KEEP FROM SLIPPING. ALLOW FOR SOME TRUNK MOVEMENT.
3. PRUNE ONLY CROSSING LIMBS, CO-DOMINANT LEADERS AND BROKEN OR DEAD BRANCHES.
4. TREE WRAP SHOULD BE INSTALLED AT TIME OF PLANTING AND REMOVED 12 MONTHS AFTER PLANTING.

EROSION CONTROL NOTES:

THE FOLLOWING EROSION CONTROL PROCEDURE SHALL BE ADHERED TO BY THE CONTRACTOR:

1. INSTALL TEMPORARY SILT FENCE BARRIERS AS SHOWN ON THE PLAN AND AT ALL EXISTING STORMWATER CATCH BASINS WITHIN THE WORK AREA TO PREVENT SEDIMENT MIGRATION. ALL SILT FENCE/SOCK BARRIERS SHALL BE INSTALLED IN ACCORDANCE WITH THE DETAILS SHOWN ON THE PLANS.

2. THE TOPSOIL SHALL BE STRIPPED & STOCKPILED ON SITE FOR RE-USE AS DIRECTED BY THE OWNER, ALL LOCAL ORDINANCES REGARDING THE SALE AND/OR REMOVAL OF TOPSOIL FROM THE SITE MUST BE FOLLOWED.

3. ALL SILT FENCES/SOCKS SHALL BE REPLACED WHENEVER THEY BECOME CLOGGED OR INOPERABLE.

4. THE CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTENNACE & REMOVAL OF TEMPORARY SEDIMENTATION CONTROLS.

5. THE CONTRACTOR MUST CONTROL DUST DURING CONSTRUCTION. DURING EARTHWORK OPERATIONS, WATER SPREADING EQUIPMENT SHALL BE PROVIDED BY THE CONTRACTOR AND WATER APPLIED AS NECESSARY AND AS DIRECTED BY THE OWNER IN ORDER TO CONTROL DUST.

6. DIRT OR DEBRIS LEFT ON LOCAL PUBLIC ROADS AS A RESULT OF THIS CONSTRUCTION PROJECT SHALL BE REMOVED & ROAD SURFACES CLEANED BY THE CONTRACTOR ON A DAILY BASIS.

7. ALL DISTURBED AREAS (EXCEPT AREAS TO BE PAVED OR BUILT UPON) SHALL BE TOPSOILED TO A MINIMUM 4" DEPTH & SEEDED IMMEDIATELY AFTER FINE GRADING TAKES PLACE & AS SOON AS PHYSICALLY POSSIBLE.

8. THE CONTRACTOR IS RESPONSIBLE FOR THE MAINTENANCE OF DOWNSTREAM STORM SEWERS, DITCHES & CULVERTS. SILT BUILD-UP FOUND TO BE A RESULT OF THIS SITE CONSTRUCTION WORK SHALL BE REMOVED FROM DOWNSTREAM CULVERTS BY THE CONTRACTOR AT NO ADDITIONAL EXPENSE TO THE OWNER OR THE TOWN.

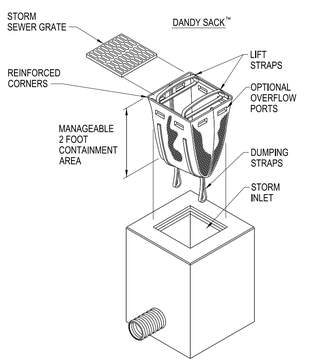
9. IN ADDITION TO STORM WATER DISCHARGES, THE FOLLOWING NON-STORM WATER DISCHARGES MAY CONTRIBUTE TO THE RUN-OFF FROM THE SITE:

- WATER FROM WATER SERVICE FLUSHINGS
- WATER USED TO WASH DOWN CONSTRUCTION VEHICLES (NO DETERGENTS)
- WATER USED FOR DUST CONTROL
- UNCONTAMINATED GROUNDWATER

10. THE ABOVE NON-STORM WATER FLOWS SHALL BE TREATED IN THE SAME MANNER AS STORM WATER FLOWS INDICATED HERIN.

C4 GENERAL NOTES

SCALE: N.T.S.



DANDY SACK™ SPECIFICATIONS

NOTE: THE DANDY SACK™ WILL BE MANUFACTURED IN THE U.S.A. FROM A WOVEN MONOFILAMENT FABRIC THAT MEETS OR EXCEEDS THE FOLLOWING SPECIFICATIONS:

REGULAR FLOW DANDY SACK™ (BLACK)

MECHANICAL PROPERTIES	TEST METHOD	UNITS	MARV
GRAB TENSILE STRENGTH	ASTM D 4632	kN (lbs)	1,78 (400) x 1,40 (315)
GRAB TENSILE ELONGATION	ASTM D 4632	%	15 x 15
PUNCTURE STRENGTH	ASTM D 4833	kN (lbs)	0.67 (150)
MULLEN BURST STRENGTH	ASTM D 3786	kPa (psi)	5506 (800)
TRAPEZOID TEAR STRENGTH	ASTM D 4533	kN (lbs)	0,67 (150) x 0,73 (165)
UV RESISTANCE	ASTM D 4355	%	90
APPARENT OPENING SIZE	ASTM D 4751	Mm (US Std Sieve)	0,425 (40)
FLOW RATE	ASTM D 4491	1/min/m² (gal/min/ft²)	2852 (70)
PERMITTIVITY	ASTM D 4491	Sec⁻¹	0.90

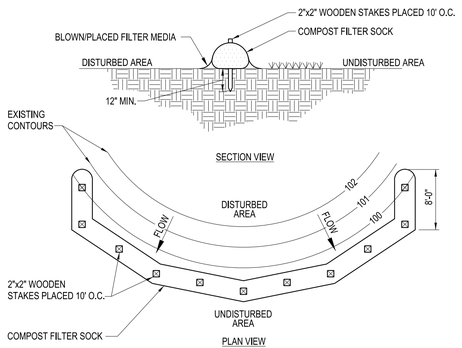
HI-FLOW DANDY SACK™ (SAFETY ORANGE)

MECHANICAL PROPERTIES	TEST METHOD	UNITS	MARV
GRAB TENSILE STRENGTH	ASTM D 4632	kN (lbs)	1,62 (365) X 0,89 (200)
GRAB TENSILE ELONGATION	ASTM D 4632	%	24 X 10
PUNCTURE STRENGTH	ASTM D 4833	kN (lbs)	0.40 (90)
MULLEN BURST STRENGTH	ASTM D 3786	kPa (psi)	3097 (450)
TRAPEZOID TEAR STRENGTH	ASTM D 4533	kN (lbs)	0.51 (115) X 0.33 (75)
UV RESISTANCE	ASTM D 4355	%	90
APPARENT OPENING SIZE	ASTM D 4751	Mm (US Std Sieve)	0,425 (40)
FLOW RATE	ASTM D 4491	1/min/m² (gal/min/ft²)	5907 (145)
PERMITTIVITY	ASTM D 4491	Sec⁻¹	2,1

*NOTE: DANDY SACKS™ CAN BE ORDERED WITH OUR OPTIONAL OIL ABSORBENT PILLOWS.

A1 FILTER SACK INLET PROTECTION

SCALE: N.T.S.



ADAPTED FROM DETAILS PROVIDED BY: FILTREXX

COMPOST STANDARDS TABLE	
ORGANIC MATTER CONTENT	25% - 100% (DRY WEIGHT)
ORGANIC PORTION	FIBROUS & ELONGATED
PH	6,0 - 8,0
MOISTURE CONTENT	30% - 60%
PARTICLE SIZE	100 % PASSING A 1" SCREEN 10 - 50% PASSING A 3/8" SCREEN
SOLUBLE SALT CONCENTRATION	5,0 ds/M (mmhos/cm) MAXIMUM

1. SOCK FABRIC SHALL MEET STANDARDS OF TABLE 5.1. COMPOST SHALL MEET THE STANDARDS LISTED ON OF TABLE 5.2.

2. COMPOST FILTER SOCK SHALL BE PLACED AT EXISTING LEVEL GRADE. BOTH ENDS OF THE SOCK SHALL BE EXTENDED AT LEAST 8 FEET UP SLOPE AT 45 DEGREES TO THE MAIN SOCK ALIGNMENT (FIGURE 5.2). MAXIMUM SLOPE LENGTH ABOVE ANY SOCK SHALL NOT EXCEED THAT SHOWN ON FIGURE X.X. STAKES MAY BE INSTALLED IMMEDIATELY DOWNSLOPE OF THE SOCK IF SO SPECIFIED BY THE MANUFACTURER.

3. TRAFFIC SHALL NOT BE PERMITTED TO CROSS FILTER SOCKS.

4. ACCUMULATED SEDIMENT SHALL BE REMOVED WHEN IT REACHES HALF THE ABOVE GROUND HEIGHT OF THE SOCK & DISPOSED IN THE MANNER DESCRIBED ELSEWHERE IN THE PLAN.

5. SOCKS SHALL BE INSPECTED WEEKLY AND AFTER EACH RUNOFF EVENT. DAMAGED SOCKS SHALL BE REPAIRED ACCORDING TO MANUFACTURER'S SPECIFICATIONS OR REPLACED WITHIN 24 HOURS OF INSPECTION.

6. BIODEGRADABLE FILTER SOCKS SHALL BE REPLACED AFTER 6 MONTHS; PHOTODEGRADABLE SOCKS AFTER 1 YEAR. POLYPROPYLENE SOCKS SHALL BE REPLACED ACCORDING TO MANUFACTURER'S RECOMMENDATIONS.

7. UPON STABILIZATION OF THE AREA TRIBUTARY TO THE SOCKS, STAKES SHALL BE REMOVED, THE SOCK MAY BE LEFT IN PLACE AND VEGETATED OR REMOVED. IN THE LATTER CASE, THE MESH SHALL BE CUT OPEN AND THE MULCH SPREAD AS A SOIL SUPPLEMENT.

A3 COMPOST FILTER SOCK

SCALE: N.T.S.

STABILIZED CONSTRUCTION ENTRANCE NOTES:

1. STONE SIZE - USE 2" STONE, WASHED, CRUSHED.

2. LENGTH - NOT LESS THAN 50 FEET

3. THICKNESS - NOT LESS THAN SIX (6) INCHES

4. WIDTH - TWELVE (12) FOOT MINIMUM, BU NOT LESS THAN THE FULL WIDTH AT POINTS WHERE INGRESS OR EGRESS OCCURS. TWENTY-FOUR (24) FOOT IF SINGLE ENTRANCE TO SITE.

5. FILTER CLOTH - WILL BE PLACED OVER THE ENTIRE AREA PRIOR TO PLACING OF STONE.

6. SURFACE WATER - ALL SURFACE WATER FLOWING OR DIVERTED TOWARD CONSTRUCTION ENTRANCES SHALL BE PIPED ACROSS THE ENTRANCE. IF PIPING IS IMPRACTICAL, A MOUNTABLE BERM WITH 5:1 SLOPES WILL BE PERMITTED.

7. MAINTENANCE - THE ENTRANCE SHALL BE MANTAINED IN A CONDITION WHICH WILL PREVENT TRACKING OR FLOWING OF SEDIMENT ONTO PUBLIC RIGHTS-OF-WAY, ALL SEDIMENT SPILLED, DROPPED, WASHED OR TRACKED ONTO PUBLIC-RIGHTS-OF-WAY MUST BE REMOVED IMMEDIATELY.

8. WHEN WASHING IS REQUIRED, IT SHALL BE DONE ON AN AREA STABILIZED WITH STONE & WHICH DRAINS INTO AN APPROVED SEDIMENT TRAPPING DEVICE.

9. PERIODIC INSPECTION & NEEDED MAINTENANCE SHALL BE PROVIDED AFTER EACH RAIN.

SCALE: N.T.S.

SANITARY SEWER TESTING METHODS

GENERAL NOTES

(A) LEAKAGE TESTS

01. THE TEST PERIOD WHEREIN THE MEASUREMENTS ARE TAKEN SHALL NOT BE LESS THAN 24 HOURS, REGARDLESS OF THE TEST METHOD USED.

02. THE TOTAL LEAKAGE OF ANY SECTION TESTED BY ANY TEST METHOD SHALL NOT EXCEED THE RATE OF 200 GALLONS PER MILE OF PIPE PER 24 HOURS PER INCH OF NOMINAL PIPE DIAMETER.

03. MANHOLES SHALL BE CONSIDERED AS SECTIONS OF 48" DIAMETER PIPE AND THE EQUIVALENT LEAKAGE ALLOWANCE SHALL BE COMPUTED PER NOTE 02 USING THE SUBMERGED HEIGHT OF MANHOLE AS THE LENGTH.

04. WHEN MANHOLES ARE TESTED SEPARATELY, ALL PIPE OPENINGS SHALL BE PLUGGED AND THE TEST PROCEDURES AND CRITERIA SHALL BE APPLIED IN THE SAME MANNER AS FOR TESTS INVOLVING ONLY THE PIPE OR A COMBINATION OF PIPE AND MANHOLES.

(B) INFILTRATION TEST CRITERIA FOR USE

01. THIS TEST METHOD MAY ONLY BE USED WHEN GROUND WATER LEVELS ARE AT LEAST TWO (2) FEET ABOVE THE TOP OF THE PIPE FOR THE ENTIRE LENGTH OF THE SECTION TO BE TESTED DURING THE ENTIRE PERIOD OF THE TESTS.

02. GROUND WATER LEVELS MAY BE MEASURED IN AN OPEN TRENCH OR IN STANDPIPES PREVIOUSLY PLACED IN BACKFILLED TRENCHES DURING BACKFILLING.

03. THE NUMBER OF STANDPIPES REQUIRED AND LOCATION OF THE SAME ARE TO BE AS ORDERED BY THE ENGINEER. STANDPIPES MAY BE OF ANY PIPE MATERIAL BUT MUST BE OF SUCH DIAMETER (2-1/2" MINIMUM) AS TO PERMIT THE INSERTION OF A RULE OR LEVEL ROD. CRUSHED STONE SHALL BE PLACED AROUND THE LOWER OPEN ENDS OF THE STANDPIPES.

04. STANDPIPES ARE TO BE REMOVED AT THE SATISFACTORY COMPLETION OF THE TESTS.

05. IF IN LIEU OF STANDPIPES, THE TRENCH IS TO BE LEFT OPEN FOR GROUND WATER OBSERVATION, THE LENGTH OF UNBACKFILLED TRENCH AT ANY ONE TIME MAY HAVE TO BE LIMITED FOR REASONS OF SAFETY.

(C) EXFILTRATION TEST CRITERIA FOR USE

01. THIS TEST CONSISTS OF FILLING THE PIPE WITH WATER TO PROVIDE A HEAD OF AT LEAST TWO (2) FEET ABOVE THE TOP OF THE PIPE OR ABOVE GROUND WATER WHICHEVER IS HIGHER AT THE HIGHEST POINT OF THE PIPE LINE UNDER TEST, AND THEN MEASURING THE LOSS OF WATER TO MAINTAIN THE ORIGINAL LEVEL.

02. IN THIS TEST THE PIPE LINE MUST BE FILLED WITH WATER AND ALLOWED TO REMAIN SO FILLED FOR AT LEAST 24 HOURS PRIOR TO TAKING MEASUREMENTS.

03. REGARDING GROUND WATER MEASUREMENTS: SEE NOTES 02 THROUGH 05 ABOVE.

04. REGARDING THE TEST STANDPIPE: THERE MUST BE SOME POSITIVE METHOD OF RELEASING ENTRAPPED AIR IN THE SEWER PRIOR TO TAKING MEASUREMENTS.

(D) DEFLECTION TEST FOR PVC SEWER PIPE

01. DEFLECTION TESTS SHALL BE PERFORMED ON ALL FLEXIBLE GRAVITY SEWER PIPE. TESTS SHALL BE CONDUCTED AFTER THE FINAL BACKFILL HAS BEEN IN PLACE FOR AT LEAST 30 DAYS.

02. NO PIPE SHALL EXCEED DEFLECTION OF 5%. DEFLECTION GAGE MAY BE BORROWED FROM THE TOWN ENGINEER FOR 8" AND 10" PIPE. THE DEFLECTION TEST MUST BE EXECUTED AFTER 30 DAYS OF PLACEMENT OF FINAL BACKFILL. THE TEST WILL ALSO BE DONE WITHOUT MECHANICAL PULLING DEVICES.

MANHOLE PLACEMENT AND MAINTENANCE DURING CONSTRUCTION AND DEVELOPMENT

CONTRACTOR AND/OR DEVELOPERS SHALL CONSTRUCT ALL MANHOLE STRUCTURES IN ACCORDANCE WITH THE TOWN OF AMHERST STANDARD SPECIFICATIONS OR THE SPECIFICATIONS OF THE DESIGN ENGINEER WHEN REQUIRED BY THE TOWN.

ALL MANHOLES ARE TO BE DESIGNED AND FURNISHED WITH RIM ELEVATIONS AT FINAL FINISHED GRADES. THE CONTRACTOR, DEVELOPER, OR HOME BUILDER SHALL BE RESPONSIBLE FOR ALL CORRECTIONS, ADJUSTMENTS, AND MODIFICATIONS NEEDED FOR RAISING, LOWERING, OR REPLACING ANY AND ALL MANHOLES AS PROPOSED FOR THE FACILITY.

ALL AS-BUILT STATIONING, LINE AND GRADE IMPROVEMENTS, INVERT AND RIM ELEVATIONS, "Y" LOCATIONS, INSPECTION REPORTS, ROADWAY OR STREET NAMES, RIGHT-OF-WAY WIDTHS, AND EASEMENT LINES SHALL BE FURNISHED TO THE TOWN ON A SET OF MYLAR DRAWINGS PRIOR TO TAP-IN APPROVAL, PIP ACCEPTANCE, AND/OR RELEASE OF FINAL PAYMENT.

ALL MANHOLE STRUCTURES SHALL BE MADE ACCESSIBLE TO THE TOWN OF AMHERST TELEVISION/MAINTENANCE CREWS. THE CONTRACTOR AND/OR DEVELOPER SHALL PROVIDE A DRY, WELL COMPACTED, STABLE SURFACE FREE FROM SHOW AND OBSTRUCTIONS FOR SAFE AND OPEN ACCESS WITH TOWN VEHICLES. SHOULD THE CONTRACTOR AND/OR DEVELOPER WISH TV INSPECTIONS DURING WET WEATHER/WET SOFT SOIL CONDITIONS, HE SHALL PROVIDE ALL NECESSARY GRANULAR BACKFILL, DISTRIBUTED AND COMPACTED TO SUPPLY ACCESS TO EACH MANHOLE. THE CONTRACTOR AND/OR DEVELOPER SHALL BEAR ALL COSTS OF TOWING, DOWN TIME, CREW TIME, AND DAMAGE ALONG WITH RESTORATION, SHOULD SUCH ACCESSWAYS FAIL.

21"-27"	5'-0"	6"
30"-36"	6'-0"	7"

* FOR DROP CONNECTIONS, INSIDE DIAMETER SHALL BE 5'-0"

GENERAL NOTES:

01. THE CONTRACTOR SHALL COMPLY WITH THE TOWN OF AMHERST STANDARD DRAWINGS AND SPECIFICATIONS.

02. THE CONTRACTOR SHALL IMMEDIATELY NOTIFY THE PROJECT ENGINEER AND THE TOWN OF AMHERST ENG. DEPT. OF ANY HAZARDOUS SUBSTANCE ENCOUNTERED DURING THE CONSTRUCTION OF THE WORK. HE SHALL AT HIS EXPENSE, CONFORM TO ALL LAWS, RULES, REGULATIONS AND DIRECTIONS AS PROMULGATED BY THE UNITED STATES DEPARTMENT OF LABOR, OCCUPATIONAL SAFETY AND HEALTH ADMINISTRATION, THE NEW YORK STATE DEPARTMENT OF HEALTH AND ANY SUCH LOCAL RULES, ORDINANCES AND LAWS WHEN ENCOUNTERING OR WORKING WITH ANY SUCH HAZARDOUS SUBSTANCE.

03. THE CONTRACTOR SHALL COMPLY IN ALL RESPECTS TO THE INDUSTRIAL CODE PART (RULE NO.) 53 RELATING TO CONSTRUCTION, EXCAVATION AND DEMOLITION OPERATIONS AT OR NEAR UNDERGROUND FACILITIES, AS ISSUED BY THE STATE OF NEW YORK DEPARTMENT OF LABOR, BOARD OF STANDARD AND APPEALS.

04. SINCE THE ERIE COUNTY WATER AUTHORITY OPERATES AND MAINTAINS THE EXISTING WATER LINES, THEY ARE TO BE NOTIFIED AT LEAST 48 HOURS IN ADVANCE OF THE START OF CONSTRUCTION. ALL EXISTING VALVES ARE TO BE OPERATED BY THE ERIE COUNTY WATER AUTHORITY PERSONNEL.

05. THE CONTRACTOR SHALL EXPOSE EXISTING UTILITIES AHEAD OF THE PIPE LAYING OPERATION, SO THAT, IF MINOR ADJUSTMENTS MUST BE MADE IN ELEVATION AND/OR ALIGNMENT DUE TO INTERFERENCE FROM THESE UTILITIES, SAID CHANGES CAN BE MADE IN ADVANCE OF THE WORK.

06. WHERE SUCH FACILITIES ARE UNDER THE SUPERVISION OF A PROFESSIONAL ENGINEER, HE SHALL CERTIFY TO THE ENGINEERING DEPARTMENT OF THE TOWN OF AMHERST THAT SAID FACILITIES AS CONSTRUCTED WERE SUPERVISED BY HIMSELF (HERSELF) AND THAT THE WORKS HAVE BEEN FULLY COMPLETED IN ACCORDANCE WITH THE APPROVED ENGINEERING REPORTS, PLANS, SPECIFICATIONS, CONTRACT DOCUMENTS AND ANY AND ALL ADDENDA TO SAME.

07. THE CONSTRUCTION OF THE FACILITIES SHALL BE UNDER THE SUPERVISION OF A PERSON OR FIRM QUALIFIED TO PRACTICE PROFESSIONAL ENGINEERING IN NEW YORK STATE UNDER THE EDUCATION LAW OF THE STATE, WHENEVER ENGINEERING SERVICES ARE REQUIRED BY SUCH LAW FOR SUCH PURPOSES.

08. A WRITTEN CERTIFICATE OF CONSTRUCTION COMPLIANCE, INCLUDING THE RESULTS OF HYDROSTATIC LEAKAGE TESTS, MADE BY THE PROFESSIONAL ENGINEER SUPERVISING THE CONSTRUCTION, SHALL BE SUBMITTED TO THE ERIE COUNTY DEPART. OF ENVIRONMENT PLANNING AND NEW YORK DEPARTMENT OF ENVIRONMENTAL CONSERVATION WITHIN THIRTY (30) DAYS AFTER CONSTRUCTION COMPLETION.

09. UNSUITABLE MATERIALS SUCH AS FROZEN ORGANIC AND/OR VEGETABLE MATERIAL, DEBRIS, TREES, LUMBER, LARGE STONES OR CLODS (6.0" OR LARGER), MUCK, PEAT, ORGANIC SILT WILL NOT BE ACCEPTABLE FILL AND CERTAIN MAN-MADE DEPOSITS OF INDUSTRIAL WASTE, SLUDGE OR LANDFILL MAY ALSO BE DETERMINED AS UNSUITABLE HAZARDOUS MATERIAL.

10. THE COMPACTION OF ALL MATERIALS WILL OCCUR AT 6" INCREMENTS.

11. VERIFICATION OF ALL EXISTING EASEMENTS IS THE RESPONSIBILITY OF THE DESIGN ENGINEER AND THEY MUST BE SHOWN ALONG WITH ALL PROPOSED EASEMENTS ON PLAN DRAWINGS.

12. SHOULD A FLUID CONDITION BE ENCOUNTERED AT THE TRENCH BOTTOM, THE CONTRACTOR IS TO INSTALL ADDITIONAL STONE CRADLE AS ORDERED BY THE ENGINEER.

13. ALL PIPE CROSSING UNDER PAVED AREAS ARE TO BE BACKFILLED TO SUBGRADE WITH COMPACTED SELECT MATERIAL TO FIVE (5) FEET OUTSIDE THE PAVEMENT EDGES.

14. THE CONTRACTOR SHALL RETAIN THE SERVICES OF A QUALIFIED TREE EXPERT TO REMOVE, WHERE NECESSARY, BRANCHES WHICH INTERFERE WITH THE CONSTRUCTION OPERATION, OR REPAIR TREES HAVING SUFFERED DAMAGE BY CONSTRUCTION ACTIVITIES. THE COST INVOLVED IN THE ABOVE IS TO BE INCLUDED IN THE VARIOUS ITEMS OF THE CONTRACT.

15. SEWERS SHALL BE LAID AT LEAST TEN (10) FEET HORIZONTALLY FROM ANY EXISTING OR PROPOSED WATERMAIN. THE DISTANCE SHALL BE MEASURED EDGE TO EDGE. IN CASES WHERE IT IS NOT PRACTICAL TO MAINTAIN A TEN FOOT SEPARATION, THE APPROPRIATE REVIEWING AGENCY MAY ALLOW DEVIATION ON A CASE-BY-CASE BASIS, IF SUPPORTED BY DATA FROM THE DESIGN ENGINEER. SUCH DEVIATION MAY ALLOW INSTALLATION OF THE SEWER CLOSER TO A WATERMAIN, PROVIDED THAT THE WATERMAIN IS IN A SEPARATE TRENCH OR ON AN UNDISTURBED EARTH SHELF LOCATED ON ONE SIDE OF THE SEWER AND AT AN ELEVATION SO THE BOTTOM OF THE WATERMAIN IS AT LEAST 18" (46CM) ABOVE THE TOP OF THE SEWER.

16. SEWERS CROSSING WATERMAINS SHALL BE LAID TO PROVIDE MINIMUM VERTICAL DISTANCE OF 18" (46CM) BETWEEN THE OUTSIDE OF A WATERMAIN AND THE OUTSIDE OF THE SEWER. THIS SHALL BE THE CASE WHERE THE WATERMAIN IS EITHER ABOVE OR BELOW THE SEWER. THE CROSSING SHALL BE ARRANGED SO THAT THE SEWER JOINTS WILL BE EQUIDISTANT AND AS FAR AS POSSIBLE FROM THE WATERMAIN JOINTS. WHERE A WATERMAIN CROSSES UNDER A SEWER, ADEQUATE STRUCTURAL SUPPORT SHALL BE PROVIDED FOR THE SEWER, TO PREVENT DAMAGE TO THE WATERMAIN.

17. WHEN IT IS IMPOSSIBLE TO OBTAIN PROPER HORIZONTAL AND VERTICAL SEPARATION AS STIPULATED ABOVE, THE SEWER SHALL BE DESIGNED AND CONSTRUCTED EQUAL TO WATER PIPE AND SHALL BE PRESSURE TESTED AS TO ASSURE WATERTIGHTNESS PRIOR TO BACKFILLING.

18. THE PIPE SHALL BE P.V.C. SEWER PIPE CONFORMING TO THE LATEST REVISIONS OF ASTM DESIGNATION D-3034, SDR-35, INSTALLED IN ACCORDANCE WITH ASTM.

19. THE MANHOLE COVERS ARE TO BEAR THE INSCRIPTION "AMHERST SANITARY".

NOTES

1. All elevations refer to USGS NAVD83 datum.
2. The CONTRACTOR shall obtain necessary permits and furnish copies to the ENGINEER prior to commencing work.
3. The CONTRACTOR'S work area shall be confined to the limits of the right-of-ways and easements. The CONTRACTOR shall obtain any additional easements or work releases should the CONTRACTOR require additional area to accommodate his operations.
4. The CONTRACTOR shall provide maintenance and protection of traffic in accordance with the Erie County Highway Department standards and the NYSDOT Manual of Uniform Traffic Control Devices.
5. The locations and depths of existing underground utilities as shown on the plans and profiles are approximate. Other underground utilities not shown may be encountered. The CONTRACTOR shall perform test pits to verify the location and elevation of utilities at interconnections and crossings as shown, directed, or required. The CONTRACTOR shall excavate in advance of the pipe laying operation and expose all existing underground utilities to prevent damage during construction and to determine required changes in grade necessary to install the watermain to avoid conflicts.
6. The CONTRACTOR shall install those measures required to limit erosion of areas disturbed by the work. Clearing shall be performed on an as-needed basis, phased to reduce erosion and visual impact.
7. Blasting will not be permitted.
8. No more than one connection may be made to any existing watermain prior to testing, disinfection, and approval of the Waterline Installation Completed Works Approval Report(s) by the Erie County Water Authority and the Erie County Health Department.
9. The Erie County Water Authority shall only operate existing valves and fire hydrants, including newly installed valves and fire hydrants that have been placed into service. The CONTRACTOR is advised that watertight conditions may not exist when existing valves are closed.
10. The CONTRACTOR shall have all equipment, manpower, and materials required on site and ready for use prior to commencing any shut-down or removing any existing facilities from service. The CONTRACTOR shall notify all affected customers in writing of any shut-down at least 48 hours in advance. The CONTRACTOR shall notify the appropriate fire stations 48 hours in advance prior to taking any fire hydrants out of service. Any fire hydrants not in service shall be bagged in burlap or plastic. Any shut-down shall be limited to 4 consecutive hours. It may be necessary to schedule shut-downs at night, weekends, or other off hours so as to not affect schools, businesses or other customers, as determined by the ENGINEER. Shut-down requests shall be submitted to the Erie County Water Authority a minimum of 5 business days in advance of the requested shut-down date.

I:\PUBLIC\ENGINEERING\CURRENT ECWA DETAILS\SD29_GENERAL_NOTES

		DWG. NO. SD29	
ERIE COUNTY WATER AUTHORITY BUFFALO, NEW YORK	STANDARD DETAIL GENERAL NOTES	DATE 3/05	REVISED 7/17

11. All watermain piping shall be installed with a minimum of 5'-0" of cover.
12. All watermain piping shall be installed with a minimum of 1'-6" of vertical clearance and 10'-0" of horizontal clearance from sanitary and storm piping, measured from the outside of the pipes at the point of crossing.
13. If the material at the design grade is unsuitable as determined by the ENGINEER, the CONTRACTOR, when ordered in writing, shall excavate additional material to the depth necessary and shall backfill to the proposed grade with the select granular material.
14. The installation of 90 degree bends in the watermain is not allowed, unless approved by the Erie County Water Authority.
15. Thrust restraint for watermain piping through 12-inch diameter shall consist of thrust blocks and pipe joint restraint.
16. The CONTRACTOR shall notify the owner of any utility pole in advance of any excavation work that will take place within 5'-0" of the utility pole. The CONTRACTOR shall include the cost of temporary pole support in the appropriate bid item.Where utility poles are required to be supported during construction, the CONTRACTOR shall make all necessary arrangements with the utility company.
17. If materials are encountered during the construction that are suspected of being contaminated, the CONTRACTOR shall immediately notify the NYSDEC for direction regarding testing, separation, containment, and disposal procedures.
18. Existing fire hydrants removed during construction and not reinstalled as part of the work shall be scheduled and returned to the Erie County Water Authority Service Center, 3030 Union Road, Cheektowaga, New York 14227.
19. The CONTRACTOR shall cold patch all trench excavations in traveled areas including roads, driveways, sidewalks, and parking areas.
20. The CONTRACTOR shall not restrict access for school buses or any emergency vehicles.
21. The use of existing fire hydrants for any reason is prohibited without prior approval of the Erie County Water Authority. This includes newly installed fire hydrants that have been placed into service.
22. The CONTRACTOR shall submit procedures for testing and disinfection of the watermain to the ENGINEER for review prior to the start of testing.
23. The CONTRACTOR shall be present and assist in the Final Walk inspection. The CONTRACTOR shall provide sufficient personnel and equipment to demonstrate to the ENGINEER that all valves, fire hydrants, and curb stops operate as required.

Attachment: SP-2021-23 drawings 011322 (25067 : Sp-2021-23)

FACILITY WATER DISTRIBUTION PIPING SPECIFICATION

PART 1 - GENERAL

1.1 SUBMITTALS:

A. Shop drawings and Product data on pipe and all appurtenances (i.e. joints, fittings, hydrants, etc.). Contractor shall also submit a materials list providing full information for all components of the system, including the materials of construction.

B. Manufacturer's descriptive literature, recommendations for installation and Operation and Maintenance information.

C. Manufacturer's certification that products meet specification requirements and are required for each shipment.

D. Certified copies of all test and disinfection reports.

1.2 PRODUCT DELIVERY, STORAGE, AND HANDLING:

A. Unload at the point of delivery, haul to and distribute at the site all pipe and accessories. Equipment for unloading shall be utilized so as to avoid damage to material. Material is not to be dropped, bumped, or damaged. During delivery, handling and storage, all materials shall be braced and protected from any distortion or damage in accordance with the manufacturer's requirements. Any distortion or damage shall be basis for rejection of materials.

B. The Contractor will replace, at his expense, all material found defective in manufacture or during handling.

C. Keep the interior of all pipes and appurtenances free from dirt and foreign matter at all times.

D. All pipe and appurtenances shall be stored in accordance with the manufacturer's recommendations and off the ground unless otherwise stated by the Engineer. Store to prevent distortion of pipe, both linear and round.

E. Store materials in locations that do not cause interference or safety hazards with private or public access traffic.

1.3 JOB CONDITIONS

A. Protection:
1. At the end of each day or when pipe laying is not in progress, place watertight plugs in the ends of all pipelines and appurtenances to keep dirt and other substances from entering the pipe.

1.4 QUALITY ASSURANCE

A. Reference Standards (Latest Revisions)
1. AWWA
2. ASTM
3. Other agency or local standards applicable to water distribution systems.

B. Parts Interchangeability
1. Components (pipe and appurtenances) provided under this section shall be the standard product in regular production by manufacturers whose products have proven reliable in similar services for at least two (2) years.
2. In so far as possible, components shall be product of the same manufacturer.

1.5 REGULATORY REQUIREMENTS

A. Sequence, coordinate and perform all work in accordance with applicable codes and regulations, including those of government and/or local agencies of authority and jurisdiction for all related activity. Any conflict arising from differences between the plans, specifications and applicable codes and regulations shall be immediately brought to the attention of the Engineer and shall be resolved prior to construction.

PART 2 – PRODUCTS

2.1 MATERIALS

A. Pipe
1. Material shall conform with AWWA C900 for polyvinyl chloride pipe.
a. Polyvinyl pipe in sizes from 4-inches to 12-inches in diameter, shall be made from class 12454-8 materials or better in accordance with ASTM D1784.
b. Pipe shall be a minimum of DF DR-18.
2. 2" and smaller services-type 'K' copper.

B. Fittings
1. Material shall be ductile iron mechanical joint type conforming to AWWA C110, AWWA C111 and AWWA C153; interior coating of double thickness cement lining per AWWA C104; exterior bituminous coating (standard). All fittings to be furnished with sufficient accessory quantities.
2. Hydrant tees shall be anchoring type; Acceptable manufacturers – Mueller Company or approved equal.

C. Anchorage Installation

1. Anchorage, General: Install water-distribution piping with restrained joints. Anchorages and restrained-joint types that may be used include the following:
a. Locking mechanical joints.
b. Set-screw mechanical retainer glands.
c. Pipe clamps and tie rods.

D. Gate Valves (Resilient Seat)
1. Conforming to AWWA C509 and AWWA C111, including working and test pressures for applicable valve sizes
2. Valves shall have mechanical joint ends. Suitable steel rods shall be installed between the main mechanical joint bell outlet and the valve (and/or fittings) to resist movement under pressure when the valve is closed. All bolts and nuts shall be fluorocarbon coated stainless steel or high strength corrosion resistant alloy steel unless otherwise stated.
3. The body, bonnet, seal plate, discs and hub nuts shall be iron. Ends shall conform to applicable standards for ductile iron pipe fittings.
4. Valve shall have non-rising stem. The non-rising valve stem, stem nuts, glands and bushings shall be bronze.
5. Shaft "O-ring" seals shall be synthetic rubber or Buna-N.
6. "O-ring" seals and non-rising stems shall withstand a minimum working pressure of 250 psi and a minimum test pressure of 500 psi.
7. All internal parts shall be accessible without removing the main body from the pressure line.
8. Operators shall be as specified in AWWA C509 for submerged, buried or in-plant service. Operators shall be equipped with a 2-inch square operating nut and shall be fully gasketed and grease packed for buried service. Operating nuts shall turn counterclockwise to close the valve. Buried operators with the operating nut greater than 8 feet below finished grade will be furnished an extension stem, centering device and operating nut. The extension stem shall come within 3 feet of the finished grade.
9. Acceptable manufacturers – Mueller Company or approved equal.
10. Valve shall open in a counter-clockwise direction.

E. Valve Boxes
1. Adjustable screw type valve box; 2 or 3-piece model with minimum 1-foot adjustment.
2. Valve box shall have a barrel not less than 5-1/4" inches in diameter with a base to fit the valve on which is to be installed.
3. The word "WATER" shall be cast in the cover.
4. Acceptable Manufacturers – Mueller Company or approved equal.

F. Hydrant Assemblies
1. Conforming to AWWA C502 and AWWA C111.
2. General – Hydrants shall have manufacturer's name cast in raised letters on hydrant body. All bolts required to connect buried valves shall be Type 304 Stainless Steel or fluorocarbon coated, high strength corrosion resistant alloy steel. All other bolts, nuts and studs shall conform to ASTM A 307, Grade B; or ASTM A 354 unless otherwise specified. Bolts and nuts shall have hexagon heads. Gasket material shall conform to manufacturer's recommendations. Hydrant shut-off gate valve shall be resilient seat.
3. Hydrant shall be cast iron body, break-away type barrel, "O-ring" operating stem seal and suitable for 250 psi maximum working pressure and 500 psi minimum test pressure. All operating parts, including brass valve seat, shall remove through the barrel without excavation. Operating nuts and caps shall be 1-1/2" pentagon and shall turn clockwise to close.
4. Hydrant shall be compression type, with valve opening not less than 5-⅛ inches and non-rising stems. Valve shall open against pressure and shall close with pressure.
5. Hydrant shall have two 2 National Standard hose connections and one 5-inch pumper connection with National Standard threads and operating nuts.
6. Barrel length shall provide for a minimum of 6 foot bury (extensions to be provided if required by finish grade).
7. Inlet shall be 6-inch mechanical joint unless otherwise specified.
8. Weep holes shall be provided for drainage.
9. Acceptable manufacturers – Mueller Company 5-1/4" barrel or approved equal.
10. Hydrant shall open in a counter-clockwise direction.

2.2 STONE BEDDING

A. NYSDOT No. 1 Stone.

2.3 LOCATOR TAPE

A. Mylar encased aluminum foil tape suitable for direct burial. Minimum width of 2 inches with lettering "CAUTION BURIED WATER LINE BELOW."

PART 3 – EXECUTION

3.1 PAINTING

A. The interior wetted surfaces of system fittings and appurtenances, except finished or bearing surfaces, shall be shop painted in accordance with NSF specifications for potable water and applied in accordance with the manufacturer's recommendations. Exterior surfaces shall receive two coats of heavy coal tar enamel or two-component coal-tar epoxy unless otherwise specified.

3.2 INSPECTION

A. Pipe and Appurtenances
1. All pipe and appurtenances will be inspected by the Engineer prior to installation. Carefully inspect all pipe prior to installation.
2. Do not use damaged components. Remove defective components from site.
4. Any pipe or appurtenance found to be broken or defective after it has been installed, shall be removed and replaced at the Contractor's expense.
5. Pipe to be straight to within 3/8" per length.

B. Trench:
1. Prior to work in this section, the Contractor shall inspect the installation area to determine if the work of other trades has progressed to the point where the installation may properly commence.
2. Contractor shall verify that the installation can proceed in accordance with all pertinent codes and regulations, the original design and referenced standards. The Contractor shall immediately notify the Engineer of any discrepancies. The Contractor shall not proceed with the installation in areas of discrepancy until the discrepancy has been resolved.
3. Insure that trench bottom is to proper line and grade.

3.3 PREPARATION

A. Trench:
1. Bed all pipe in stone as shown on the drawings.
2. Dig bell holes sufficiently large to insure proper mating, checking and bedding of joints.

B. Location, Grade and Cover
1. Pipelines and appurtenances shall be located as shown on the Contract Drawings or as directed and established from the control survey in accordance with general project requirements. Alignments and grades shall be determined and maintained by methods acceptable to the Engineer. Any section of pipe or appurtenance found to be laid at the wrong grade or to have settled shall be dug up and reinstalled to the satisfaction of the Engineer at the Contractor's expense.
2. Pipeline and appurtenances shall be installed with no less than the minimum cover indicated by the Contract drawings and governing authority. No pipe or appurtenance shall be laid upon a foundation in which frost may exist or develop.

C. Pipe and Appurtenances
1. Clean pipe and appurtenances thoroughly.
2. As applicable, apply proper lubricant in accordance with the manufacturer's written instruction.
3. Insert gasket and seal it if required, in accordance with the manufacturer's written directions.
4. If field cutting of pipe is necessary, leave a smooth end in accordance with the manufacturer's written instructions.

3.4 EXECUTION

A. General

1. Excavation, subgrade preparation, pipe bedding and backfilling shall be in accordance with the Contract drawings.
2. Blocking will not be permitted under pipe or appurtenances, except where the pipe or appurtenance is to be laid with concrete cradle or encasement.
3. Pipe and appurtenance shall be laid upon a foundation of select material, unless otherwise specified. The top of this layer shall be considered to be the bottom of the trench.
4. Temporary bulkheads shall be placed in all open ends of the installation (i.e. pipe) whenever installation activities are not actively in progress. The bulkheads shall be designed to prevent the entrance of dirt, debris or water.
5. Precautions shall be taken to prevent flotation or movement.
6. Installation shall include thrust restraints in the form of thrust blocks, tie rods, anchors, etc. of the size and type specified by the Contract drawings or as required by the pressure and stability of the supporting surface. Thrust restraints shall be installed at all changes in direction, changes in size, dead ends or other locations as shown. Thrust restraints shall be in place and concrete shall have developed the required strength prior to testing.

B. Interconnections and Abandonments
1. No work shall begin on the interconnections until the Engineer and governing water authority authorize the work. The Contractor shall not operate existing valves. Existing valves will be operated by the governing water authority only. The Contractor is advised that watertight conditions may not exist when existing valves are closed. The Contractor shall consider this in the bid. The maximum allowable shutdown of any existing water system shall be as per the requirements of the governing water authority. The work shall be scheduled through the Engineer and governing water authority to provide a minimum of three (3) days advance notice prior to the work.
2. Caps (or plugs) on pipe shall be mechanically restrained watertight caps (or plugs) compatible with the pipe being capped and suitable to resist thrusts due to operating pressures.
3. The Contractor shall perform test pits at existing pipes, valves, etc. to assess conditions and determine requirements for construction activity and interconnections.
4. Removal and/or abandonment of existing pipelines or appurtenances will be carried out as per the requirements of the Engineer and governing water authority.

C. Pipe Installation
1. Except as otherwise specified, all pipe shall be installed in accordance with the requirements of the governing water authority, AWWA C600 and applicable codes and regulations.
2. Carefully handle and lower pipe into the trench so as not to damage pipe or coatings.
3. Lay pipe with bell end facing upstream in respect to design flow direction.
4. Properly bed and secure each length of pipe prior to bringing next length of pipe into position.
5. Firmly bed and backfill each pipe for the full length of the barrel, on a solid stone bed as shown on the drawings.
6. Abut each length against the next in such a manner that there is no shoulder or unevenness of any kind along the inside of the bottom of the pipe.
7. All joint surfaces shall be clean prior to connection. Use a method to push or pull the joints home appropriate for size of pipe. Joints shall be assembled using gaskets, lubricants, etc. as furnished by the pipe manufacturer and in accordance with the manufacturer's recommendations.
8. Take appropriate precautions when pushing or pulling the joints home to prevent damage to the pipe or joint. Keep joints straight while pushing home.
9. Check the position of the gasket in each joint carefully.
10. Do not walk on the pipe until at least 12 inches of backfill is properly placed over the pipe.
11. Install pipe with manufacturer's lettering up.

D. Fittings Installation
1. Installation of fittings shall be in accordance with Section 3.4C Pipe Installation, Contract drawings, approved shop drawings and the manufacturer's recommendations.

E. Gate Valves

1. Installation of valves shall be to the configuration shown on the Contract drawings, approved shop drawings and in accordance with the manufacturer's recommendations.
2. Valves shall be installed between the hydrant and the main line at each hydrant installation as shown on the Contract drawings.
3. Valves shall be set on solid bearing, installed plumb and in a closed position unless otherwise specified.

G. Valve Boxes
1. Installation of valve boxes shall be to the configuration shown on the Contract drawings, approved shop drawings, in accordance with the manufacturer's recommendations and requirements of the governing water authority.
2. Valve boxes shall be set plumb, centered over the valve and shall be independently supported so no weight is transmitted to the valve or carrier pipe.

3.5 ANCHORAGE INSTALLATION

A. Anchorage, General: Install water-distribution piping with restrained joints. Anchorages and restrained-joint types that may be used include the following:

1. Locking mechanical joints.
2. Set-screw mechanical retainer glands.
3. Pipe clamps and tie rods.

B. Install anchorages for tees, plugs and caps, bends, crosses, valves, and hydrant branches. Include anchorages for the following piping systems:

1. Gasketed-Joint, Ductile Iron Water-Service Piping: According to AWWA C600.

C. Apply full coat of bituminous or other acceptable corrosion-resistant material to surfaces of installed ferrous anchorage devices

SECTION 15140

TESTING AND DISINFECTION

PART 1 - GENERAL

1.01 DESCRIPTION

A. Work Specified
1. Testing and disinfection of all pressure piping for leakage as specified.
   a. The CONTRACTOR shall furnish all labor, equipment, test connections, vents, water and materials necessary for carrying out the pressure and leakage tests as specified and required.
   b. The work specified shall include all labor, material, equipment, services and incidentals necessary to fill, clean, chlorinate, flush, and test all pipelines which will carry or hold potable water.

B. Related Work Specified Elsewhere
1. Section 02080 - Fire Hydrants
2. Section 15051 - Buried Piping Installation
3. Section 15106 - Ductile Iron Pipe and Fittings
4. Section 15108 - Thermoplastic Pipe
5. Section 15109 - Prestressed Concrete Cylinder Pipe
6. Section 15110 - Valves and Appurtenances
7. Section 15120 - Piping Specialties and Accessories

C. Description
1. Permission shall be obtained from the OWNER of the water system before the use of water from any existing system. The CONTRACTOR shall:
   a. Conform to the requirements of the OWNER.
   b. Pay all costs connected with the taking or use of water for any retesting.
   c. The CONTRACTOR shall provide written notice to the Authority and ENGINEER at least three working days in advance of testing and disinfection.
2. All work under this section shall be performed in the presence of the ENGINEER. A representative of the public health authority having jurisdiction must also be present, as required.
3. Chlorination shall be scheduled such that sampling and flushing will be performed during normal business hours.

1.02 QUALITY ASSURANCE

A. Reference Standards
1. AWWA B300, Standard for Hypochlorites

2. AWWA B301, Standard for Liquid Chlorine
3. AWWA C104, Cement-Mortar Lining for Ductile Iron Pipe and Fittings for Water
4. AWWA C301, Prestressed Concrete Pressure Pipe, Steel-Cylinder Type for Water and Other Liquids
5. AWWA C502, Standard for Dry-Barrel Fire Hydrants
6. AWWA C504, Standard for Rubber Seated Butterfly Valves
7. AWWA C600, Standard for Installation of Ductile Iron Watermains and Their Construction
8. AWWA C651-14, Standard for Disinfecting Water Mains
9. AWWA C900 Polyvinyl Chloride (PVC) Pressure Pipe, 4-inch Through 12-inch for Water Distribution
10. NSF/ANSI Standard 60 and 61 (as applicable)
11. Standard Methods for the Examination of Water and Wastewater, latest edition
12. 1996 Safe Drinking Water Act

1.03 SUBMITTALS

A. The CONTRACTOR shall submit proposed materials, methods, and operations regarding testing and disinfection to the ENGINEER for review prior to the start of testing.

B. CONTRACTOR must provide a sketch to the ENGINEER of the sampling locations identifying at minimum the following:
1. Street names,
2. North arrow,
3. Sampling locations,
4. House numbers of nearest buildings to sampling locations.
5. Other distinguishable landmarks,
6. Any other information as requested by ENGINEER, OWNER, AUTHORITY, or County Health Department.

C. The CONTRACTOR shall submit certification that all backflow preventers (Reduced Pressure Zone attachments) and pressure gauges have been tested and certified within the last year.

D. Qualifications of laboratory analyzing biological samples shall be New York State ELAP certified.

E. Chain-of-Custody forms are to be furnished for all biological samples taken.

F. For flushing operations, ENGINEER shall supply calculations identifying that a minimum 3.0 ft/sec scour velocity has been achieved in the new waterline and that three pipe volumes have passed through it.

G. ENGINEER shall provide pressure testing and leakage test results on the ECWA Pressure Test/Leakage Test form available on the ECWA website.

PART 2 - PRODUCTS

2.01 MATERIALS

A. All products must be suitable for use in a potable water system and NSF-60 certified. All piping, valves, etc. shall be NSF-61 certified.

B. Chlorination shall be by the use of a solution of sodium hypochlorite contained in the pipe or structure as specified. The use of calcium hypochlorite in powdered, granular, or tablet form, shall not be allowed.

PART 3 - EXECUTION

3.01 TESTS ON PRESSURE PIPING FOR POTABLE WATER

A. General
1. Flush, test and disinfect prior to connection to existing watermains as specified below, except as otherwise authorized by the ENGINEER.
2. The length of piping and sections included in the tests shall meet the approval of the ENGINEER; however, the length shall not exceed 2,000 feet in any case. Pressure test of pipe section shall be from valve to valve regardless of watermain size.
3. Notify the ENGINEER 72 hours in advance of testing.
4. Equipment in or attached to the pipes being tested shall be protected. Any damage to such equipment during the test shall be repaired by the CONTRACTOR at his expense.
5. Conduct all tests per AWWA C-600 and C-651, latest editions in the presence of the ENGINEER. Repeat tests in the presence of local authorities having jurisdiction if required by them.
6. CONTRACTOR shall have sufficient personnel at the site for the entire duration of all tests.
7. When piping is to be insulated or concealed in a structure, tests shall be made before the pipe is covered.
8. Provide outlets to flush line, expel air and perform specified tests.
9. Where connections to existing lines are called for only one such connection will be allowed.
10. All fittings, hydrants and appurtenances must be properly braced and harnessed before the pressure is applied. Thrust restraining devices which will become a part of the system must also be tested at the test pressure.
11. When testing absorbent pipe materials such as cement or concrete, the pipeline shall be filled with water at least 24 hours before the test is made.

12. The CONTRACTOR must supply all materials and manpower to perform the tests as specified herein.
13. Testing and disinfection shall be acceptable and approved by the agency of jurisdiction before another connection is made.

B. Initial Flushing
1. CONTRACTOR shall fill and flush new main to remove dirt and miscellaneous debris from the inside of the watermain.
2. CONTRACTOR is responsible for removing all entrapped air during flushing.
3. Flushing must have sufficient flowrate to achieve a fluid velocity of 3.0 feet per second inside the waterline.
4. A minimum 2" tap is required for proper flushing of all watermains having a diameter of 8 inches or less, however, multiple taps or larger taps may be required. ENGINEER shall be responsible for determining necessary connections and providing calculations verifying flushing conditions are met.
5. Refer to AWWA C651, for number of taps required to obtain the minimum 3.0 feet per second flow velocity in all pipes.
6. CONTRACTOR is responsible for providing a water source for flushing. With the permission of the OWNER, an existing watermain may be used as a water source, however, the following restrictions apply:
   a. The CONTRACTOR is not allowed to operate any valves or hydrants or operate any components which belong to the OWNER.
   b. If water is drawn from the existing system, an appropriate backwater preventer such as a Reduced-Pressure Zone (RPZ) device must be used. The RPZ must be tested within one (1) year and approved prior to usage.
   c. Water from flushing procedures must be disposed of properly. Water may be piped or gravity-fed to an existing storm sewer with the ENGINEER'S and the OWNER'S permission if proper erosion control methods to minimize sediment build-up are used. Discharge of water into a roadway or into a parking lot area is strictly prohibited. Water discharging operations shall not cause damage to any public or private property.
7. CONTRACTOR shall partially open and close valves and hydrants several times under expected line pressure to flush foreign material out of the valves and hydrants.
8. Flushing shall continue until three pipe volumes have passed through the new waterline and the water appears sediment-free.

C. Pressure Test
1. Pressure test apparatus must be installed as shown on the Drawings
2. Test pressure shall be as specified in Section 15051, Buried Piping Installation, at the lowest point in the line.

3. Test pressure shall be held on the piping for a period of at least 2 hours, unless a longer period is requested by the ENGINEER, OWNER, or AUTHORITY. Pressure should not fluctuate by more than 5 psi during testing.
4. Pressure gauge must be in good working condition and must be demonstrated to be accurate to the ENGINEER prior to any testing.
5. Gauge must have proper labeling to allow ENGINEER to accurately distinguish the maximum allowable 5 psi change in pressure. Gauge must have markings at no greater than 2 psi increments to allow accurate readings.
6. ENGINEER is responsible for reading the gauge and recording the test results he/she witnesses. Results obtained by the ENGINEER are considered final, and not subject to discussion by the CONTRACTOR.
7. ENGINEER may tap pressure gauge at each reading to ensure needle is measuring pressure accurately.
8. The AUTHORITY reserves the right to read the pressure gauge and record the test results for those lines considered suspect or for potentially inaccurate result recording.
9. ENGINEER shall record pressure at 15 or 30 minute intervals to help determine if the pressure loss is stabilizing.
10. The CONTRACTOR will inform the ENGINEER when to begin the test.
11. If the pressure drop is greater than 5 psi in 2 hours, or if the ENGINEER believes the line is suspect, the CONTRACTOR shall explore for the cause of the excessive leakage and after repairs have been made, the line shall be retested. This procedure shall be repeated until the pressure loss is less than the maximum allowable and the ENGINEER is satisfied.
12. If the pressure drop is 3 psi or greater but less than 5 psi in 2 hours, the CONTRACTOR shall continue the test for another 2 hours. If the pressure drop over the 4 hour period is 5 psi or greater, the test failed and must be repeated after the cause of the leakage is explored and the necessary repairs have been made
13. The ENGINEER shall make a preliminary determination if the test passes or fails based on the pressure and volume losses recorded during testing.
14. After each test, the CONTRACTOR must demonstrate that the test apparatus, including the pressure gauge, is fully functional and accurate. Inaccurate gauges or non-satisfactory equipment will be grounds for test failure, regardless of test results. CONTRACTOR will resupply proper equipment and retest, at his expense.
15. The pressure loss recorded over the 2 or 4-hour test must be acceptable to the County Health Department and AUTHORITY for final hydrostatic testing approval to be given.
16. At the end of the test, the pressure shall be increased to the starting pressure, so that the leakage test data is acquired. See Section D Leakage Test below, for additional information.

D. Leakage Test
1. The leakage test shall be conducted concurrently with the pressure test.
2. The rate of leakage shall be determined at 15-minute intervals by means of volumetric measurement of the makeup water added to maintain the test pressure. The test shall proceed until the rate of leakage has stabilized or is decreasing below an allowable value, for three consecutive 15-minute intervals. After this, the test pressure shall be maintained for at least another 15 minutes.
   a. At the completion of the test the pressure shall be released at the furthermost point from the point of application.
3. All exposed piping shall be examined during the test and all leaks, defective material or joints shall be repaired or replaced before repeating the tests.
4. The leakage for pressure pipelines shall not exceed the following allowable rates in gallons per hour per 1000 feet of pipe at the test pressure specified in Section 15051, Buried Piping Installation:

Pipe Diameter	Pipe Material	ECWA Allowable Leakage*
4"	PVC, DIP	0.26
6"	PVC, DIP	0.40
8"	PVC, DIP	0.53
10"	PVC, DIP	0.66
12"	PVC, DIP	0.79
16"	DIP, PCCP	1.06
20"	DIP, PCCP	1.32
24"	DIP, PCCP	1.59
30"	DIP, PCCP	1.98
36"	DIP, PCCP	2.38
42"	DIP, PCCP	2.78
48"	DIP, PCCP	3.17

* 75% of allowable leakage per AWWA C600-17.

5. Regardless of the above allowables, any visible leaks shall be permanently stopped.
6. The CONTRACTOR shall provide a meter certified within the last year or a source-water tank/barrel of small enough cross section so that measurable changes in water depth can be accurately recorded. A two hour test is permitted for circular tanks/barrels of 15 inches in diameter or less. A four hour test is required for circular tanks/barrels greater than 15 inches in diameter. If a tank of non-circular cross section or irregular shape is used, and the change in water depth cannot be properly measured, the ENGINEER or AUTHORITY may require the test to be run more than 2 hours until an accurate depth change can be recorded and the ENGINEER is satisfied with the results.
7. The leakage volume recorded over the 2 or 4-hour test must be acceptable to the County Health Department and AUTHORITY for final waterline approval to be given.

3.02 BUTTERFLY VALVE TESTING

A. Each butterfly valve shall have a field leakage test performed with the pressure differential as identified in Section 15051, Buried Piping Installation, applied in both directions. This requirement does not waive the requirements stipulated in AWWA C504.

B. The duration of each field test in each direction shall be a minimum of two (2) hours.

C. The CONTRACTOR shall demonstrate to the ENGINEER'S satisfaction that all system components operate correctly, both individually and as a system. All testing equipment and materials required to perform all tests shall be provided by the CONTRACTOR and demonstrated as functional and accurate to the ENGINEER. Non-functional or inaccurate equipment, regardless of test results, will be grounds for test failure. CONTRACTOR shall resupply proper equipment and retest.

3.03 RESILIENT SEAT GATE VALVE TESTING

A. Each gate valve shall have a field leakage test performed with the pressure differential as identified in Section 15051, Buried Piping Installation, applied in both directions. This requirement does not waive the requirements stipulated in AWWA C509.

B. The duration of each field test in each direction shall be a minimum of two (2) hours unless specifically defined by the ENGINEER.

C. The CONTRACTOR shall demonstrate to the ENGINEER'S satisfaction that all system components operate correctly, both individually and as a system. All testing equipment and materials required to perform all tests shall be provided by the CONTRACTOR and demonstrated as functional and accurate to the ENGINEER. Non-functional or inaccurate equipment, regardless of test results, will be grounds for test failure. CONTRACTOR will resupply proper equipment and retest.

3.04 TAPPING SLEEVE AND VALVE TESTING

A. Prior to making the tap, gate valves shall have a field leakage test performed with a hydrostatic pressure as identified in Section 15051, Buried Piping Installation, on the open end.

B. Once the system is complete, the valves shall be tested in accordance with the Butterfly and Resilient Seat Gate Valve Testing criteria stated above.

C. The duration of each field test shall be a minimum of two (2) hours unless specifically defined by the ENGINEER.

D. After installation of the tapping sleeve or saddle and prior to tapping the main, the sleeve or saddle shall be air tested in accordance with manufacturers' recommendations. If the results of the air test do not meet manufacturers' specifications, the sleeve or saddle will be replaced and retested until the results are satisfactory.

E. The CONTRACTOR shall demonstrate to the ENGINEER'S satisfaction that all system components operate correctly, both individually and as a system. All testing equipment and materials required to perform all tests shall be provided by the CONTRACTOR and demonstrated as functional and accurate to the ENGINEER. Non-functional or inaccurate equipment, regardless of test results, will be grounds for test failure. CONTRACTOR will resupply proper equipment and retest.

3.05 DISINFECTION

A. Before disinfection, the line shall be cleaned and flushed with clean water as defined in the Initial Flushing section. CONTRACTOR shall provide outlets as required.

B. The chlorine solution shall be admitted to pipelines through corporation stops placed in the horizontal axis of the pipe, to structures by means of tubing extending directly into the structure or other approved methods.

C. CONTRACTOR shall install 2-inch saddles on existing and proposed mains and run 2-inch Type K copper tubing with backflow prevention device to allow for addition of chlorinated water. The rate of chlorine solution flow shall be in such proportion to the rate of water entering the pipe or structure that the resulting free chlorine residual shall be between 50 and 100 milligrams per liter (mg/l). Concentrations over 100 mg/l shall not be allowed to enter the piping system.

D. The placement of chlorine powder or tablets inside the pipe during installation as a means of disinfection will not be allowed.

Attachment: SP-2021-23 drawings 011322 (25067 : Sp-2021-23)

E. The proposed piping shall be tested in all respects, prior to connecting the second end of the pipe to the existing system and prior to installing the annular fill at casing pipes.

F. All valves to existing mains must be closed during the chlorination process. CONTRACTOR must flush the proposed main through a backflow preventer such as a Reduced Pressure Zone (RPZ) and 2-inch copper until chlorine residual at the opposite end reaches 50 mg/l. All valves to the existing water network are to remain closed until this level is reached. While the chlorinated water is being added, all appurtenances on the main shall be operated so as to completely disinfect the new work. The operation shall be repeated as necessary to provide complete disinfection.

G. Chlorinated water from hydrants and taps must be properly collected and disposed of by the CONTRACTOR. Discharge of chlorinated water into the existing storm sewer or a natural water body shall not be allowed.

H. The chlorine treated water shall be retained in the pipe or structure at least 24 hours, unless otherwise directed. During the retention period all valves and hydrants within the treated sections shall be operated.

I. The chlorine residual shall be not less than 25 mg/l at any point in the pipe or structure at the end of the retention period. CONTRACTOR shall immediately perform final flushing to reduce the retention time high levels of chlorinated water.

J. When making repairs to or when specified, structures and portions of pipelines shall be chlorinated by a concentrated chlorine solution containing between 200 mg/l and 300 mg/l of free chlorine. The solution shall be applied with a brush or sprayed on the entire inner surface of the empty pipes or structures. The surfaces disinfected shall remain in contact with the strong chlorine solution for at least 30 minutes.

K. The CONTRACTOR must use an approved test method, as defined in AWWA C651 and *Standard Methods for the Examination of Water and Wastewater*, to determine chlorine levels. Test strips and test kits will be allowed for testing chlorine levels if the kit is less than six months old, in the original bottle, is not past the expiration date, and has a color coded scale on the side with legible concentrations defined. ENGINEER and AUTHORITY reserve the right to reject test results if the test strip or kit is suspect. Sending samples to an approved laboratory is also acceptable.

06 FINAL FLUSHING

A. Upon completion of each disinfecting operation, the CONTRACTOR will be required to empty the contents of the pipe into a tank truck. Dumping into a

sewer will only be allowed with approval from the local governing body. In no instance will chlorinated testing or flushing water be emptied onto the roadways, in ditches, culverts, streams, wetlands, or any other natural water body.

B. Final flushing will continue until such time as the chlorine residual is between 0.5 and 1.2 mg/l.

C. Prior to discharging into storm or sanitary sewer systems, and with the written approval of the municipality, the CONTRACTOR shall use a reducing agent (such as sodium thiosulfate) to neutralize any chlorine residual. CONTRACTOR shall prove to the ENGINEER, AUTHORITY and municipality that the water has been properly neutralized prior to discharge using an appropriate testing method.

3.07 BACTERIOLOGICAL TESTING

A. After disinfection and final flushing, a representative of the laboratory hired by the CONTRACTOR shall, in the presence of the ENGINEER, take two bacteriological samples from sampling points at maximum 1,000-foot intervals along the waterline, at every branch off the main line, and at each end of the test section (one immediately after final flushing and a second one after 24 hours) for testing by an ELAP certified laboratory in accordance with the latest Health Department requirements.

B. Should acceptable results not occur after these two consecutive tests, the CONTRACTOR shall, at his expense, repeat the disinfection procedure until safe results are obtained.

C. All precautions shall be taken to maintain dry and sanitary conditions and to prevent contamination of any piping, at the CONTRACTOR'S expense.

D. If, in the opinion of the ENGINEER or AUTHORITY, contamination has occurred, the CONTRACTOR shall repeat the disinfection and bacteriological testing at his cost and expense.

E. Test results from the laboratory shall be sent directly to the ENGINEER. Test results sent through the CONTRACTOR shall not be considered.

F. Bacteriological test results shall expire 30 calendar days after the samples are taken. After 30 calendar days, the CONTRACTOR shall be required to repeat the process, taking two sets of samples and submitting results for review.

G. As per AWWA C651-14 standards, the limit for pipe installed without bacteriological samples being taken is 20 linear feet.

3.08 APPROVAL

A. The ENGINEER shall submit the Waterline Installation Complete Works Approval Report(s) to the Erie County Water Authority for review and processing.

B. Once approval is given, after reconnecting the proposed piping to the existing piping, the CONTRACTOR shall slowly refill the watermain with water and allow it to pressurize so that the ENGINEER may inspect the connections and/or other piping.

C. The CONTRACTOR shall, at his expense, correct any observed defects to the satisfaction of the ENGINEER and OWNER.

103,500 x 75% = 77,625 SF (NET)		
77,625/150= 518 SPACES	341	228

SITE PLAN NOTES

1. SURVEY INFORMATION WAS PROVIDED BY GPI ENGINEERING, LANDSCAPE, ARCHITECTURE & SURVEYING, LLP DATED 05/29/2018. C&S ENGINEERS, INC. ASSUMES NO RESPONSIBILITY FOR ITS ACCURACY.
2. CONTRACTOR TO VERIFY ALL FIELD CONDITIONS AND UTILITY LOCATIONS PRIOR TO THE START OF CONSTRUCTION. CONTACT THE ENGINEER WITH ANY DISCREPANCIES FOUND IN THE FIELD.
3. ALL DIMENSIONS FROM PROPERTY LINES ARE 90° FROM PROPERTY LINE UNLESS OTHERWISE NOTED.
4. ALL DIMENSIONS ARE FROM FACE OF CURB UNLESS OTHERWISE NOTED.
5. COORDINATE EXACT LOCATION OF SIDEWALKS AT DOORWAYS WITH ARCHITECTURAL PLANS.
6. REFER TO ARCHITECTURAL PLANS FOR BUILDING DIMENSIONS AND LAYOUT.

NOTES

GENERAL

1. SIDEWALK CURB RAMP TYPE AND LOCATION ARE AS SHOWN ON THE PLANS OR AS DIRECTED.
2. ALL SIDEWALK CURB RAMP TYPES MAY BE USED IN STRAIGHT OR CURVED CURBED SECTIONS.
3. SIDEWALK CURB RAMP TYPES MAY BE DIFFERENT AT EACH LOCATION WITHIN AN INTERSECTION.

SIDEWALK CURB RAMP CRITERIA

4. THE MAXIMUM SLOPE OF A SIDEWALK CURB RAMP IN NEW CONSTRUCTION SHALL BE 1:12.IF SPACE LIMITATIONS ON EXISTING SITES PROHIBIT THE USE OF 1:12, THE FOLLOWING SLOPES AND RISES MAY BE USED:
   A) STEEPER THAN 1:12 (8.33%) BUT NO STEEPER THAN 1:10 (10%) 6" MAXIMUM RISE, 5 FT. MAXIMUM RUN
   B) STEEPER THAN 1:10 (10%) BUT NO STEEPER THAN 1:8 (12.5%) 3" MAXIMUM RISE, 2 FT. MAXIMUM RUN
   C) A SLOPE STEEPER THAN 1:8 (12.5%) NOT ALLOWED.
5. THE MINIMUM WIDTH OF A SIDEWALK CURB RAMP SHALL BE FIVE FEET, EXCLUSIVE OF FLARED SIDES.
6. ALL SIDEWALK CURB RAMPS SHALL HAVE FLUSH, SMOOTH TRANSITIONS TO THE ADJACENT STREET OR HIGHWAY SURFACE.

SURFACE FINISH

7. THE SURFACE OF ALL SIDEWALK CURB RAMPS SHALL BE STABLE, FIRM, AND SLIP RESISTANT. (E.G., A COARSE BROOM FINISH PERPENDICULAR TO THE RAMP SLOPE IS ACCEPTABLE ON CEMENT CONCRETE CURB RAMPS.)

SIDEWALK CURB RAMP PLACEMENT

8. AT A CORNER, WHERE THE CURB RADIUS IS 25' OR LESS, A SINGLE RAMP (EITHER TYPE A, B, OR C) LOCATED DIAGONALLY CAN OFTEN SERVE CROSSWALKS IN TWO DIRECTIONS. HOWEVER, A SINGLE RAMP SHALL ONLY BE USED WHERE THERE IS A MINIMUM CLEAR SPACE OF 48" FALLING ENTIRELY WITHIN THE PROJECTION OF THE INTERSECTING CURBS (SEE FIGURE 1). WHERE THE RADIUS EXCEEDS 25' OR THE MINIMUM 48" CLEAR SPACE IS UNACHIEVABLE, THEN SEPARATE RAMPS SHOULD BE PROVIDED FOR EACH CROSSWALK.

PAVEMENT MARKINGS AT CROSSWALKS

9. SIDEWALK CURB RAMPS AT MARKED CROSSINGS SHALL BE WHOLLY CONTAINED WITHIN THE MARKINGS, EXCLUDING ANY FLARED SIDES.
10. AT A CORNER, WHERE A SINGLE RAMP (EITHER TYPE A, B, OR C) LOCATED DIAGONALLY SERVES TWO CROSSWALKS, THERE SHALL BE A 48" MINIMUM CLEAR SPACE AT THE RAMP BOTTOM WHOLLY CONTAINED WITHIN THE INTERSECTING CROSSWALK MARKINGS (SEE FIGURE 1).
11. WHERE STOP LINES ARE NECESSARY, THEY SHALL BE LOCATED IN ADVANCE OF SIDEWALK CURB RAMPS.

UTILITIES AND DRAINAGE INLETS OR GRATES

12. WHERE FEASIBLE PROVIDE FOR DRAINAGE INLETS OR GRATES IMMEDIATELY UPSTREAM FROM THE CURB RAMPS. RETICULINE OR RECTANGULAR DRAINAGE GRATES ARE TO BE USED IN THE AREA OF CURB RAMPS.
13. DO NOT PLACE SIGNAL POLES, SIGN POSTS, UTILITY POLES, FIRE HYDRANTS, ETC., WITHIN THE RAMP OR SIDE FLARE AREAS.

PEDESTRIAN ACTIVATED SIGNALS

14. PUSHBUTTONS SHALL BE LOCATED NEAR CURB RAMPS AND WHERE A PERSON IN A WHEELCHAIR CAN ACTIVATE THE SIGNAL WITHOUT STOPPING ON THE CURB RAMP.
15. PUSH BUTTON HEIGHT SHALL BE 42" TO 48" ABOVE THE SIDEWALK SURFACE.
16. PUSH BUTTONS SHALL BE LOCATED SO THAT THE PEDESTRIAN CAN SEE THE APPROPRIATE SIGNAL HEAD WHILE ACTIVATING THE SIGNAL.

ISLANDS

17. ANY RAISED ISLANDS IN CROSSINGS SHALL BE CUT THROUGH LEVEL WITH THE STREET OR HAVE CURB RAMPS AT BOTH SIDES AND A LEVEL AREA AT LEAST 48 INCHES LONG IN THE PART OF THE ISLAND INTERSECTED BY THE CROSSINGS.

GI	14	Gleditsia triacanthos inermis "Skyline"	Skyline Honeylocust	2 ½" Caliper	
TC	30	Tilia cordata "Greenspire"	Greenspire Linden	2 ½" Caliper	
ZS	19	Zelkova serrata	Japanese Zelkova	2 ½" Caliper	

PLANTING SPECIFICATION

1. SCOPE OF WORK
   - A. THIS WORK SHALL CONSIST OF PERFORMING, CLEARING, AND GRUBBING, SOIL PREPARATION, FINISH GRADING, PLANTING, DRAINAGE, INCLUDING ALL LABOR MATERIALS, TOOLS, EQUIPMENT, AND ANY OTHER APPURTENANCES NECESSARY FOR THE COMPLETION OF THIS PROJECT.
2. MATERIALS
   - A. PLANTS - ALL PLANTS SHALL BE HEALTHY, OF NORMAL GROWTH, WELL ROOTED FREE FROM DISEASE AND INSECTS, QUALITY AND OF PLANT MATERIAL THAT SHALL CONFORM TO THE AMERICAN STANDARD FOR NURSERY STOCK (ANSIZ60.1) AND BE OF NUMBER ONE GRADE.
   - B. VARIETIES AND SIZES OF PLANTS SHALL BE AS SHOWN ON DRAWINGS
3. FERTILIZER
   - A. FERTILIZER SHALL BE MILORGANITE (6-2-0) OR APPROVED EQUAL.
4. GENERAL WORK PROCEDURES
   - A. LANDSCAPE WORK SHALL BE ACCORDING TO THE WORKMANLIKE STANDARDS ESTABLISHED FOR LANDSCAPE CONSTRUCTION AND PLANTING.
5. WEEDING
   - A. BEFORE AND DURING PRELIMINARY GRADING AND FINISH GRADING, ALL WEEDS AND GRASSES SHALL BE DUG OUT BY THE ROOTS AND DISPOSED OF AT THE CONTRACTOR'S EXPENSE.
6. SOIL CONDITIONING
   - A. CULTIVATE ALL AREAS TO BE PLANTED TO A DEPTH OF 6". ALL DEBRIS EXPOSED FROM EXCAVATION AND CULTIVATION SHALL BE DISPOSED OF AT THE CONTRACTOR'S EXPENSE.
7. PLANTING

   POSITION TREES AND SHRUBS AT THEIR INTENDED LOCATIONS AS PER THE PLANS AND SECURE THE APPROVAL OF THE LANDSCAPE ARCHITECT BEFORE EXCAVATING PITS, MAKING NECESSARY ADJUSTMENTS AS DIRECTED.
   - A. PLANTING PITS SHALL BE DUG WITH LEVEL BOTTOMS, AS SHOWN ON THE PLANTING DETAILS.
     - 3 PARTS TOPSOIL
     - 1 PART PEAT MOSS OR COMPOST
     - 1/3 PART MILORGANITE FERTILIZER
   - B. PREPARED SOIL SHALL BE TAMPED FIRMLY AT BOTTOM OF PIT, FILL PREPARED SOIL AROUND BALL OF PLANT & WAY, AND WATER, COMPLETE BACK-FILLING AND WATER THOROUGHLY.
   - C. ALL PLANTS SHALL BE SET SO THAT, WHEN SETTLED, THEY BEAR THE SAME RELATION TO THE REQUIRED GRADE AS THEY BORE TO THE NATURAL BEFORE BEING TRANSPLANTED.
   - D. IMMEDIATELY AFTER PLANTING, STAKE ALL TREES WITH 3 CEDAR STAKES PER TREE.
   - E. PREPARE RAISED EARTH SAUCER AS WIDE AS PLANTING HOLE OF EACH PLANT.
   - F. WATER IMMEDIATELY AFTER PLANTING. WATER SHALL BE APPLIED TO EACH TREE AND SHRUB IN SUCH MANNER AS NOT TO DISTURB BACKFILL AND TO THE EXTENT THAT ALL MATERIALS IN THE PLANTING HOLE ARE THOROUGHLY SATURATED.
   - G. AFTER SHRUB BEDS AND TREE SAUCERS ARE BACKFILLED AND FINE GRADED, MULCH WITH 3" DEPTH OF DARK, SHREDDED HARDWOOD BARK MULCH.
8. FINISH GRADING
   - A. PLUS/MINUS .1 FOOT OF FINISH GRADE.
   - B. ALL LAWN AND PLANTING AREAS SHALL BE GRADED TO A SMOOTH, EVEN, UNIFORM PLANE WITH NO ABRUPT CHANGE OF SURFACE. SOIL AREAS ADJACENT TO THE BUILDING SHALL SLOPE AWAY FROM THE BUILDING.
   - C. ALL PLANTING AREAS SHALL BE GRADED AND MAINTAINED TO ALLOW FREE FLOW OF SURFACE WATER.
9. GUARANTEE
   - A. CONTRACTOR SHALL GUARANTEE ALL PLANTS FOR A PERIOD OF ONE (1) YEAR.
10. CLEAN-UP
    - A. UPON THE COMPLETION OF ALL PLANTING WORK AND BEFORE FINAL ACCEPTANCE, THE CONTRACTOR SHALL REMOVE ALL MATERIAL, EQUIPMENT AND DEBRIS RESULTING FROM HIS WORK, ALL ACCEPTABLE CONDITIONS AS APPROVED BY THE OWNERS AUTHORIZED REPRESENTATIVE.
11. MAINTENANCE

    MAINTENANCE PERIOD TO COMMENCE AFTER FINAL INSPECTION.
    - A. MAINTENANCE PERIOD FOR THIS CONTRACT SHALL BE 90 CALENDAR DAYS COMMENCING AFTER FINAL INSPECTION OF CONSTRUCTION. MAINTAIN TREES, SHRUBS AND OTHER PLANTS BY PRUNING, CULTIVATING AND WEEDING AS REQUIRED FOR HEALTHY GROWTH; RESTORE PLANTING SAUCERS, TIGHTEN AND REPAIR STAKE AND GUY SUPPORTS AND RESET TREES AND SHRUBS TO PROPER GRADES OR VERTICAL POSITION AS REQUIRED. SPRAY AS REQUIRED TO KEEP TREES AND SHRUBS FREE OF INSECTS AND DISEASE. MAINTAIN LAWNS BY WATERING, FERTILIZING, WEEDING, MOWING, TRIMMING, AND OTHER OPERATIONS SUCH AS ROLLING, REGRADING, AND REPLANTING AS REQUIRED TO ESTABLISH A SMOOTH, ACCEPTABLE LAWN, FREE OF ERODED OR BARE AREAS.

NOTES:
1. ALL INTERIOR LANDSCAPED AREA SHALL HAVE A MINIMUM PLANTING SOIL DEPTH OF THREE (3) FEET AND BE FREE FROM ALL FORMS OF CONSTRUCTION DEBRIS AND FOREIGN MATERIAL.
2. ALL TREE SAUCERS AND SHRUB BEDS SHALL RECEIVE A MINIMUM OF THREE (3) INCHES DEPTH OF DARK SHREDDED HARDWOOD BARK MULCH.
3. ALL TREES SHALL BE STAKED WITH THREE (3) WOOD STAKES AS SHOWN ON THE TREE PLANTING DETAIL.
4. A ROOT PROTECTION ZONE SHALL BE ESTABLISHED AROUND ANY TREE WHICH IS IDENTIFIED ON THE LANDSCAPE PLAN AS A TREE TO BE PRESERVED. THE ROOT PROTECTION ZONE IS IDENTIFIED BY CREATING A CIRCLE AROUND THE TREE. THE SIZE OF WHICH IS DETERMINED BY PROVIDING ONE FOOT OF RADIUS FOR EVERY INCH DIAMETER OF THE TREE MEASURED AT BREAST HEIGHT (DBH). THE ROOT PROTECTION ZONE SHALL BE MARKED IN THE FIELD WITH A PHYSICAL BARRIER SUCH AS TEMPORARY FENCING OR OTHER MEANS WHICH SHALL PREVENT CONSTRUCTION ACTIVITIES FROM OCCURRING WITH THE TREE ROOT PROTECTION ZONE. METHODS FOR PRESERVING AND PROTECTING EXISTING TREES SHALL BE INCLUDED AS PART OF THE LANDSCAPE PLAN.

Acquest Wehrle LLC
Omar Abu-Sitta
5554 Main Street
Williamsville, NY 14221

Represented by:

C & S Engineers
Jason Utzig
141 Elm Street, Suite 100
Buffalo, NY 14203

REQUEST: Site Plan Review, SP-2021-23; Proposed Office Building and Roadway; property located at 2190 & 2220 Wehrle Drive.

PROJECT DESCRIPTION: In the northwest portion of the subject area a secured compound containing an 84,375 sq. ft. three-story office building, a 24,750 single story garage / maintenance / storage building, a 72,072 sq. ft. two-story parking garage and a one-story security booth are proposed along with 228 parking spaces (including those in the parking ramp) and having site access via a proposed 1,750± lineal foot roadway. Secondary emergency access to the site is proposed via a gated vehicular access to the Limestone Office Park building located at 17-20 Limestone Drive off of Main Street. The proposed public cul-de-sac roadway, public utilities and stormwater facilities are located on the eastern portion of the site and are intended to serve full build out of the entire development of the 2190 & 2200 Wehrle Drive parcels. Plans additionally show a

Attachment: SP-2021-23_draft neg dec_011322 (25067 : Sp-2021-23)

possible future building which is not part of the current request in the southwest portion of the subject parcel.

Location: North side of Wehrle Drive, 390± ft. east of Spindrift Drive and 290± feet west of Ridge Court South

SITE FACTORS:

Acreage: Subject sites, 24.6± acres
Project area, 17.5± acres

Configuration: Subject sites, rectangular
Project area, irregular

Frontage: 640± ft. on Wehrle Drive
60 ft. on Garfield Road

Depth: 1,654.49± ft.

Existing Development: Site is currently undeveloped with a meadow area and intermittent trees. The parcel located at 2190 Wehrle Drive was formerly occupied by a single-family home which has be demolished.

Other Factors:

- Wehrle Drive is an Erie County highway designated as a minor arterial in the Town of Amherst Bicentennial Comprehensive Plan.
- Site is located adjacent to the flight path for runway 5/23 at the Buffalo Niagara International Airport

Surrounding Zoning and Land Use: Per attached sketch.

REVIEW AGENCY REPORTS:

Assessor:

Approved with the following condition:

2190 and 2220 Wehrle Drive are required to be merged, request to merge to be sent to Assessor's Office and Planning Department

Building Department:

Approved with the following conditions:

Eight accessible parking spaces required, four shown on site plan, any spaces within the parking garage are not shown.

Plumbing Division:

Denied for the following reasons:

1. Show roof drainage for all buildings connected to the site storm sewer.
2. Provide drainage along the north and west property lines.

Note: All sanitary and water in the public ROW to be under a PIP. Sanitary and water on site (outside of ROW or public utility easement) to be under a Town of Amherst Plumbing Permit.

Attachment: SP-2021-23_draft neg dec_011322 (25067 : Sp-2021-23)

Engineering Department:

Approved with the following conditions:

Proposed Office Building:

1. Plans must be revised to include perimeter drainage along the west and north property lines.
2. A revised Developer commitment letter must be provided based on the revised Engineer's Report outlining the required financial contribution to the Town's I/I mitigation fund based on peak flow conditions. This revised commitment letter must be received by this office prior to the issuance of any plumbing permits.

Proposed Roadway:

1. All proposed utilities must be labeled as public or private. All proposed public utilities must be located either within the right-of-way or permanent public utility easements.
2. Erie County Division of Highways approval documents relative to the proposed activities within the Wehrle Drive right-of-way must be provided to this office prior to the issuance of a Town of Amherst plumbing permit or acceptance of any PIP applications

Stormwater Management Officer:

Approved with the following conditions:

1. Under Section 3.2 – construction controls add language that Town approval is required prior to disturbing more than 5 acres at any one time.
2. Under inspection report, please specify that photographs of the site on the day of inspection and deficiencies found shall be included in the report.
3. Include a copy of signed Owner certification.
4. Show location and detail of concrete wash-out area, contractor parking on the erosion and sediment control plan. Also include description of stabilization methods including quantities of material, specs, seeding rates, mulch material rates, etc. Soil stockpile stabilization methods and timing.
5. Please include a statement between pages 2 and 3 in the maintenance agreement stating "In the event that the facility owner ceases operation, it agrees that before ceasing said operation that it shall assure that its obligations under stormwater control maintenance agreement are transferred to a valuable and legal entity which would take over all of such responsibilities." Include a schedule summarizing the post-construction measures type of maintenance needed and schedule for those activities.
6. Under the N.O.T. (Notice of Termination) requirements within the SWPPP include language that once the project is stabilized, level 1 inspection for the stormwater management practices shall be performed and signed off by a professional engineer. The report shall be submitted to the Town's stormwater management officer with the NOT form.
7. Please include temporary sediment basin size design calculations per NYSDEC requirements.
8. How will the portion of bio-retention area inside the fence be maintained?

Attachment: SP-2021-23_draft neg dec_011322 (25067 : Sp-2021-23)

9. Show erosion and sediment control plan for the proposed road and the site east of the road.

Fire Chiefs' Association:

Denied due to the following:

1. Access gates shall comply with appendix D103.5
2. Tamper switches are required on fire service valves in hotbox.
3. Two separate remote access roads required per Appendix D.
4. Per Appendix D104.1 buildings exceeding 30 feet require two means of fire apparatus access for each structure.
5. Private hydrants must be painted red.
6. Enclosed parking garages exceeding 12,000 square feet require sprinkler protection.
7. Provide fire apparatus turning plan throughout site.
8. Provide address plan for each building on complex.

Highway Department:

Approved as submitted.

Traffic/Safety Board:

TIS Comments:

A. Tis Must be revised to reflect the most revised set of plans that only shows Building 'E' as a future development. The additional speculative buildings removed from the site plan (but remain in TIS) are located in the proposed stormwater detention basin. As such, revise the TIS removing these buildings.
B. TIS is showing signal adjustments at the Youngs/Wehrle signal as mitigation. Provide timing sheets as part of site plan review.
C. Petitioner must agree to follow up traffic study after full buildout to determine if warrants are met for a traffic signal. If warrants are met and a signal is recommended, petitioner must agree to fund its portion of installation cost of the traffic signal system to Town standards (incl. Miovision). Establishment of an escrow, may be necessary if the Planning Board requires such to accommodate this condition.

Site Plan comments:

1. Change the roadway to a private roadway.

R.O.W. Agent:

Approved as submitted.

OTHER INVOLVED AGENCIES:

ECDEP: Concur with the Town acting as Lead Agency
No recommendation; proposed action has been reviewed & determined to be of local concern.

.

Attachment: SP-2021-23_draft neg dec_011322 (25067 : Sp-2021-23)

ECDPW Highways: Concur with the Town acting as Lead Agency and comments:

1. The traffic signal warrant 3 for peak hour is met for both the Phase I and full build conditions. The three-color signal should be installed at the time of Phase I construction. The developer shall contact the Town of Amherst regarding signal design.
2. This site will negatively impact the signal timing at the intersections of Wehrle Drive with Spindrift Drive and Youngs Road. The developer shall contact the Town of Amherst regarding monitoring and adjustments to timing of these signals.
3. A stormwater management report shall be provided for our review. Stormwater drainage for this site shall be designed in accordance with the New York State Stormwater Management Design Manual and local Town requirements.
4. The project sponsor will be required to apply for and obtain an Erie County Highway Work Permit for Utility Work Perm-2 prior to construction within the Wehrle Drive (CR-290) highway right-of-way.
5. The project sponsor will be required to apply for and obtain an Erie County Highway Work Permit for Non-Utility Work Perm-3 prior to construction of a new road within the Wehrle Drive (CR-290) highway right-of-way.

NYSDOT: review pending.

BNIA: review pending.

NYSDEC: Concur with the Town acting as Lead Agency and comments

1. If any project activities will involve land disturbance of 1 acre or more, the project sponsor, owner or operator is required to obtain a State Pollutant Discharge Elimination System General Permit for Stormwater Discharges from Construction Activity (GP-0-20-001).
2. The Town of Amherst is designated as an MS4 community. The project sponsor, owner or operator of a construction activity that is subject to the requirements of a regulated, traditional land use control MS4 shall have their SWPPP reviewed and accepted by the MS4 community.
3. This proposed project requires a sanitary sewer connection that is designed to convey 2,500 gallons/day or more of municipal sewage and is therefore considered a sanitary sewer extension. A detailed Downstream Sewer Capacity Analysis must be performed and submitted for the proposed project as part of the Project's Engineering Report. Recent wet weather flow monitoring data and proposed new development flow should be analyzed relative to theoretical capacity at key nodes in the downstream sewer system and at pump stations (if any) to determine if capacity exists.
4. The Downstream Sewer Capacity Analysis must also contain a narrative and a detailed map showing the downstream routing of sewers from the proposed project site to the Wastewater Treatment Plant.

Attachment: SP-2021-23_draft neg dec_011322 (25067 : Sp-2021-23)

5. This Downstream Sewer Capacity Analysis, as well as any required infiltration and inflow (I/I) rehabilitation offset work at a 4:1 ratio, should be part of the Project's Engineering Report.

Other Considerations: None.

STAFF ANALYSIS:

Existing zoning / intent: Office Building District (OB), is intended to provide areas within the Town devoted exclusively to offices by regulating the land area, bulk and spacing of uses, particularly at common boundaries and promoting the most desirable land use and traffic patterns in accordance with the objectives of the comprehensive plan.

History of previous rezoning / site plan approvals:

REZONING:

2190 Wehrle Drive

Z-2000-23 The Town Board on December 17, 2001 approved a request to rezone the parcel from R-3 to OB with the following conditions:

a. The requirements of the ECDPW as stated in memo dated 11/15/01 be addressed for the development of Phase 1 (40,000 sq. ft.) prior to any final site plan approval for that phase. Any site plans for subsequent phases will be required to update the TIS so that the impact of the office park may be monitored relative to planned road improvements & other developments in the area.
b. The heights of the buildings & structures be limited to 1 story & 35 ft. from finished grade on the east side of the proposed subdivision road.
c. A minimum 50 ft. greenspace buffer be provided along the east property line of 2220 Wehrle Drive.
d. The EPA sewer connection moratorium be approved prior to any connections to the sanitary sewer system.
e. A vehicular connection to the Limestone Office Park from the proposed access road be required when the development extends beyond 800 ft. from Wehrle Drive.

Z-2021-01 The Town Board on June 21, 2021 approved a request to rezone the parcel from R-3 to OB with the following condition:

a. That the petitioner provide further information on the intended use of the northerly buildings to ensure compliance with the allowed uses set forth in §203-4-2(A)

2220 Wehrle Drive

Z-1995-12 The Town Board on December 4, 1995 approved a request to rezone the parcel from R-3 to OB with the following condition.

Attachment: SP-2021-23_draft neg dec_011322 (25067 : Sp-2021-23)

a. That the mitigation recommended by the NYSDOT and the ECDPW be required.

SITE PLANS:

SP-2000-16 The Planning Board on May 16, 2002 approved a site plan for a 1,675 lineal foot public road & R.O.W. to service a future business park. Access was provided to Limestone Office Park.

SP-2000-16_A The Planning Board on May 16, 2002 approved a site plan for 750 lineal feet of public road & R.O.W. to service a future business park.

SP-2002-10 The Planning Board on July 11, 2021 approved a site plan for a 2 story 51,200 sq. ft. office building with parking for 214 vehicles. 365 ft. of the approved road is planned to be constructed to serve this development.

Staff Comments:

Zoning Enforcement Officer:

Denied for the following reasons:

1. Unable to determine compliance with §203-4-2-2 A of Town Code for use of the subject site. Provide a detailed use and or tenant of building 'A' so that a determination as to the allowable use of building 'C' as an accessory use to Building 'A' can be made

2. Unable to determine compliance with §203-4-8-6 C of Town Code as the building facades are not dimensioned with enough detail to determine compliance.

3. The accessory structures (garage, security booth and maintenance facility) floor area exceeds that permitted by §203-6-8-1 B of Town Code. Maximum allowable is 75% of the gross floor area of the principal structure.

4. Onsite parking is insufficient to meet the requirements of §203-7-1-6 A of Town Code. A minimum of 341 parking stalls are required whereas a total of 228 spaces are provided. An alternative parking plan in accordance with §203-7-1-7 of Town Code may be sought.

5. The required landscape area adjacent to buildings is not provided as required by §203-7-2-3 A (2) of Town Code. North side of Building 'D', the west side of Building 'A', and south side of Building 'C'. Foundation plantings are required on all sides of the proposed buildings that are adjacent to vehicle use areas, with the exception of entrances and exits, drive throughs and covered pedestrian walkways. There are foundation plantings missing on the east side of Building 'C', the north side of Building 'D' and the west side of Building 'A' exclusive of building entrances. Additionally, the landscaped area adjacent to Building 'B' is not dimensioned to determine compliance with this section.

Attachment: SP-2021-23_draft neg dec_011322 (25067 : Sp-2021-23)

6. All landscape islands are not curbed as required by §203-7-2-3 A (3) (k). The island at the northwest corner of Building 'C' and the terminal landscape island in the southeast corner of the parking lot south of Building 'C' are not curbed.

7. If the proposed roadway will be a public roadway the vehicle use area between Buildings 'A' and 'D' and the public roadway will require the vehicle use area screen required by §203-7-2-4 A (2) of Town Code.

8. Be aware the proposed flag poles may only display national or governmental flags. Any flags, banners etc. bearing advertising or tenant identification will be considered signage and as such are not permitted by §203-7-8-2 of Town Code.

9. Unable to determine compliance with §204-3-2 C (6) and §204-3-2 C (10) of Town Code as no offset or distances to other streets onto Wehrle Drive were provided from the proposed roadway.

Planning Department Staff:

1. The portion of the subject development located on the parcel at 2200 Wehrle Drive was rezoned by the Town Board on December 4, 1995 with the condition "*That the mitigations recommended by the NYSDOT and ECDPW be required"* (Z-1995-12). Provide documentation from these agencies that the mitigation was provided or is no longer required.

2. Given the proposed public roadway serves no, or minimal public purpose it will be recommend to the Planning Board that it be classified as a private roadway.

3. Revise the light pole foundation detail on sheet CS501 to indicate that the light pole bases are to be 6 inches above finished grade in landscaped areas.

4. A reciprocal access agreement to allow for pedestrian and vehicular ingress and egress for the proposed vehicular connection shown to the future development area will be required.

5. A reciprocal access and maintenance agreement to allow for vehicular ingress and egress to the Existing office development site north of the subject site will be required.

Landscape Architect:

1. Provide plantings in the landscape island at the southwest corner of Building A, adjacent to the dumpster enclosure per section, per §7-2-3A (3) (e) of Town Code.

Attachment: SP-2021-23_draft neg dec_011322 (25067 : Sp-2021-23)

2. Provide landscaped areas adjacent to the building as per §7-2-3 (A) (2) of Town Code.

3. Please provide typical details for all above ground utilities as enumerated in § 7-2-4 (C) (1) of Town Code "*Non-single-family residential properties which may be viewed from residential uses, public streets or public park areas shall screen all roof, ground and wall mounted mechanical equipment (utility structures, multiple meter boards, generators, air conditioning units, backflow preventer [RPZ] hot boxes, etc.) from view at ground level of the property line*."

4. Consideration should be given to providing an east to west connection through the site near the Garfield Street area for pedestrian walkways or bicycle access. This multi-modal connection could be designed as an on-road treatment with bike lanes or separate off-road multi-use trail on the east side of the roadway.

STAFF RECOMMENDATION

SEQR: EAF completed; Type I Action, Town Established as Lead Agency, Issue Attached Negative Declaration.

Site Plan: **Table**, pending review by NYSDOT, BNIA and receipt of revised plans or materials that address the concerns of the Assessor's Office, Building, Engineering and Planning Departments, Plumbing Division, Traffic Safety Board, Zoning Enforcement Officer, Stormwater management Officer and Landscape Architect.

SEQR
Negative Declaration

NOTICE OF DETERMINATION OF NON-SIGNIFICANCE

Lead Agency: Town of Amherst Planning Board

Project: SP-2021-23

Address: 5583 Main Street
Williamsville, NY 14221
(716) 631-7051

Date:

This notice is issued pursuant to Part 617 and Local Law #3-82, as amended, of the implementing regulations pertaining to Article 8 (State Environmental Quality Review) of the Environmental Conservation Law.

The Lead Agency has determined that the proposed action described below will not have a significant adverse effect on the environment.

Title of Action: Site Plan Review

SEQR Status: Type I Action

Description of Action: development of 17.5 acres of a 24.6 acre site for an 84,375 sq. ft. three-story office building, a 24,750 single story garage / maintenance / storage building, a 72,072 sq. ft. two-story parking garage and a one-story security booth along with 228 parking spaces (including those within the parking ramp) and having site access via a proposed 1,750± lineal foot roadway. Work will include site improvements not specifically stated above, including, stormwater, utilities, grading, lighting, paving, and landscaping.

Location: 2190 & 2220 Wehrle Drive, Amherst, Erie County

Petitioner: Acquest Wehrle, LLC

Attachment: SP-2021-23_draft neg dec_011322 (25067 : Sp-2021-23)

Reasons Supporting This Determination

Based on information submitted by the applicant including a Full Environmental Assessment Form (EAF) - Part I, (as amended) and a complete site plan application, a preliminary staff analysis was undertaken. Compared to the criteria listed in Section 617.7, all indications are that this action will not have a significant impact on the environment, as follows:

1. The project is not expected to cause a substantial adverse change in existing air quality, ground or surface water quality or quantity, or noise levels; a substantial increase in solid waste production; or a substantial increase in the potential for erosion, flooding, leaching or drainage problems. The Engineering Department on_____ reviewed the Grading, Drainage and Utility Plan, Engineer's Report and Erosion Control Plan submitted on December 20, 2021, long with the Geotechnical Report prepared by Glynn Group Engineering & Architecture, PLLC. A Stormwater Pollution Prevention Plan (SWPPP) submitted on December 20, 2021 was also reviewed. Based on its review of these documents, the Department has determined that the project has or will have met all applicable requirements and has no objection to its approval.

2. The project will not result in the removal or destruction of large quantities of vegetation or fauna; or in significant adverse impacts to fish or wildlife species, habitats or other natural resources. The Planning Department reviewed a Landscape Plan submitted on December 20, 2021 and determined that it meets or exceeds Zoning Ordinance requirements for greenspace. The Landscape Plan has or will have met all Zoning Ordinance and Town requirements for landscaping.

3. The project is not expected to create any material conflict with the Town Comprehensive Plan. The Building Department in their review of _____ and the Planning Department in their review of _____ has reviewed the application documents, along with the Geotechnical Report submitted on November 15, 2021 and noted in their review of _____ that the subject project has or will have met all International Building Code – 2015 and Zoning Ordinance regulations.

4. The project is within an area identified by the State as having potential archaeological or historical significance. The NYS Office of Parks, Recreation and Historic Preservation has reviewed the project site and, as stated in their letters of October 4, 2005 and September 28, 2001 determined that there will be no impact on these resources.

5. The project will not impair the character or quality of important aesthetic resources or of existing community or neighborhood character. The project is located in the Office Building District (OB) zoning district; neighboring uses are office buildings to the north, a power transmission right-of-way to the west, office light industrial uses to the south across Wehrle Drive and detached single family homes to the east, zoned Office Building District (OB), Research Development District (RD) and Residential District Three (R3); therefore, the project is consistent with surrounding land uses.

Attachment: SP-2021-23_draft neg dec_011322 (25067 : Sp-2021-23)

6. The proposed subject development will include an 182,700± sq. ft. office building and associated accessory structures along with an 1,750± lineal foot roadway which will not cause a major change in the use of either the quantity or type of energy.

7. The project will not create any hazard to human health. The Fire Chief's Association on _____, and the BNIA on _____, have reviewed the project and have no objection to the approval of the site plan, as all requirements of these agencies have or will have been met.

8. The project will cause a substantial change in the use, or intensity of use, of land including agricultural, open space or recreational resources, or in its capacity to support existing uses. The 182,700± sq. ft. of office building and associated accessory structures and 1,750± lineal foot roadway will be consistent with the scale of surrounding land uses.

9. The function of the proposed 182,700± sq. ft. of office building and associated accessory structures and 1,750± lineal foot roadway will significantly increase the number of people using the site over its previous level of use.

10. Review by the Town Traffic/Safety Board dated _____, Erie County Dept. of Public Works –Highways Division dated _____, and NYSDOT dated_____ indicates that significant negative traffic impacts are not expected to result from the proposed project.

    Review of the Traffic Impact Study (TIS) prepared by SRF Associates submitted to the Planning Department on November 15, 2021 and reviewed by the Town Traffic/Safety Board _____, Erie County Dept. of Public Works –Highways Division,_____ and NYSDOT _____

    - ❑ indicates that significant negative traffic impacts are not expected to result from the proposed project.
    - ❑ Indicates that the following transportation improvements are required:
      _____
      _____
      _____
      _____

      and that these improvements will be constructed as part of this project.

11. A coordinated review of the project has been undertaken by Town Departments including, in addition to those mentioned above, Highway on _____, Assessor on _____, Plumbing Division on _____, and Right-of-Way Agent on _____. These reviews did not identify any potential significant adverse environmental issues and indicated that the proposal will not have a significant damaging impact on the environment.

Attachment: SP-2021-23_draft neg dec_011322 (25067 : Sp-2021-23)

DRAFT Negative Declaration SP-2021-23
DATE

12. Issues not specifically mentioned above and/or those not specifically reviewed were not raised by Town departments, outside agencies or the public and are not determined to cause significant negative environmental impacts.

TOWN OF AMHERST
PLANNING BOARD
SITE PLAN RESOLUTION
SP-2021-23

PETITIONER

Acquest Wehrle LLC
5554 Main Street
Williamsville, NY 14221

PROPERTY LOCATION

2190 & 2220 Wehrle Drive

WHEREAS, the Town of Amherst Planning Board on Thursday, January 13, 2022 held a public hearing on a Site Plan for a 182,700± sq. ft. of office building and associated accessory structures and a 1,750± lineal foot roadway and

WHEREAS, the Planning Board reviewed the plans and specifications for the proposed project, and

WHEREAS, the Site Plan was referred to the Town's various review agencies, and

WHEREAS, in accordance with Section 8-7-9 of the Zoning Ordinance, the Planning Board finds that:

A. The proposed site plan is consistent with the development plan if one is required.

B. The proposed site plan is consistent with the purpose and specific requirements of the Zoning Ordinance and generally consistent with the policies of the Comprehensive Plan.

C. Adequate services and utilities will be available prior to occupancy.

D. The site plan is consistent with all other applicable laws.

E. Pursuant to Local Law #3-82, as amended, the Planning Board has determined that the requirements of SEQR are complete and that the subject proposal is not expected to have a significant adverse effect on the environment.

F. Under Section 404 of the Clean Water Act, the US Army Corps of Engineers has determined that it has no jurisdiction.

NOW THEREFORE BE IT RESOLVED that in accordance with 6 NYCRR, Part 617 and Local Law #3-82, as amended, the Planning Board has issued a Negative Declaration attached hereto, and

Attachment: SP-2021-23_draft neg dec_011322 (25067 : Sp-2021-23)

DRAFT (1/13/2022)
TOWN OF AMHERST
PLANNING BOARD
SITE PLAN RESOLUTION
SP-2021-23

PETITIONER	PROPERTY LOCATION
Acquest Wehrle LLC	2190 & 2220 Wehrle Drive

NOW THEREFORE BE IT FURTHER RESOLVED that the Planning Board, in accordance with Section 8-7 of the Zoning Ordinance **approves/denies** said Site Plan subject to the following conditions:

1. That Building "C" (storage garage/maintenance facility) is not approved as part of this site plan. The subject building will be considered at a future time, when the developer provides written confirmation of the tenant/user and actual intended use, including a detailed floor plan allowing the Planning Department and the Zoning Enforcement Officer to determine if the intended use is a customary accessory use of the proposed principal office building use, and that such intended use is permitted within the OB- Office Business zoning district.

2 That the consideration of signs is specifically excluded from this approval as they require a separate review and approval by the Town.

3. That all dumpsters/trash containers and all mechanical equipment, utility structures, multiple meter boards, generators, and similar appurtenances, including those which are mounted on any part of a primary structure shall be appropriately screened with a fence, wall, and/or landscaping. Provide gate on dumpster enclosure that shall be closed whenever dumpster is not being serviced, enclosure shall be high enough to screen the dumpster(s) within.

4. That as-built record drawings, including location of utilities, be provided to the Engineering Department prior to issuance of a Certificate of Occupancy by the Building Department.

The foregoing resolution was adopted by the Town of Amherst Planning Board, _____; moved by - _____; seconded by - _____; ayes _, noes _; absent - ____.

PETITIONER

Acquest Wehrle LLC
Omar Abu-Sitta
5554 Main Street
Williamsville, NY 14221

Represented by:

C & S Engineers
Jason Utzig
141 Elm Street, Suite 100
Buffalo, NY 14203

REQUEST: Site Plan Review, SP-2021-23; Proposed Office Building and Roadway; property located at 2190 & 2220 Wehrle Drive.

PROJECT DESCRIPTION: In the northwest portion of the subject area a secured compound containing an 84,375 sq. ft. three-story office building, a 24,750 single story garage / maintenance / storage building, a 72,072 sq. ft. two-story parking garage and a one-story security booth are proposed along with 228 parking spaces (including those in the parking ramp) and having site access via a proposed 1,750± lineal foot roadway. Secondary emergency access to the site is proposed via a gated vehicular access to the Limestone Office Park building located at 17-20 Limestone Drive off of Main Street. The proposed public cul-de-sac roadway, public utilities and stormwater facilities are located on the eastern portion of the site and are intended to serve full build out of the entire development of the 2190 & 2200 Wehrle Drive parcels. Plans additionally show a

Attachment: SP-2021-23_draft resolution_011322 (25067 : Sp-2021-23)

possible future building which is not part of the current request in the southwest portion of the subject parcel.

Location: North side of Wehrle Drive, 390± ft. east of Spindrift Drive and 290± feet west of Ridge Court South

SITE FACTORS:

Acreage: Subject sites, 24.6± acres
Project area, 17.5± acres

Configuration: Subject sites, rectangular
Project area, irregular

Frontage: 640± ft. on Wehrle Drive
60 ft. on Garfield Road

Depth: 1,654.49± ft.

Existing Development: Site is currently undeveloped with a meadow area and intermittent trees. The parcel located at 2190 Wehrle Drive was formerly occupied by a single-family home which has be demolished.

Other Factors:

- Wehrle Drive is an Erie County highway designated as a minor arterial in the Town of Amherst Bicentennial Comprehensive Plan.
- Site is located adjacent to the flight path for runway 5/23 at the Buffalo Niagara International Airport

Surrounding Zoning and Land Use: Per attached sketch.

REVIEW AGENCY REPORTS:

Assessor:

Approved with the following condition:

2190 and 2220 Wehrle Drive are required to be merged, request to merge to be sent to Assessor's Office and Planning Department

Building Department:

Approved with the following conditions:

Eight accessible parking spaces required, four shown on site plan, any spaces within the parking garage are not shown.

Plumbing Division:

Denied for the following reasons:

1. Show roof drainage for all buildings connected to the site storm sewer.
2. Provide drainage along the north and west property lines.

Note: All sanitary and water in the public ROW to be under a PIP. Sanitary and water on site (outside of ROW or public utility easement) to be under a Town of Amherst Plumbing Permit.

Attachment: SP-2021-23_draft resolution_011322 (25067 : Sp-2021-23)

Engineering Department:

Approved with the following conditions:

Proposed Office Building:

1. Plans must be revised to include perimeter drainage along the west and north property lines.
2. A revised Developer commitment letter must be provided based on the revised Engineer's Report outlining the required financial contribution to the Town's I/I mitigation fund based on peak flow conditions. This revised commitment letter must be received by this office prior to the issuance of any plumbing permits.

Proposed Roadway:

1. All proposed utilities must be labeled as public or private. All proposed public utilities must be located either within the right-of-way or permanent public utility easements.
2. Erie County Division of Highways approval documents relative to the proposed activities within the Wehrle Drive right-of-way must be provided to this office prior to the issuance of a Town of Amherst plumbing permit or acceptance of any PIP applications

Stormwater Management Officer:

Approved with the following conditions:

1. Under Section 3.2 – construction controls add language that Town approval is required prior to disturbing more than 5 acres at any one time.
2. Under inspection report, please specify that photographs of the site on the day of inspection and deficiencies found shall be included in the report.
3. Include a copy of signed Owner certification.
4. Show location and detail of concrete wash-out area, contractor parking on the erosion and sediment control plan. Also include description of stabilization methods including quantities of material, specs, seeding rates, mulch material rates, etc. Soil stockpile stabilization methods and timing.
5. Please include a statement between pages 2 and 3 in the maintenance agreement stating "In the event that the facility owner ceases operation, it agrees that before ceasing said operation that it shall assure that its obligations under stormwater control maintenance agreement are transferred to a valuable and legal entity which would take over all of such responsibilities." Include a schedule summarizing the post-construction measures type of maintenance needed and schedule for those activities.
6. Under the N.O.T. (Notice of Termination) requirements within the SWPPP include language that once the project is stabilized, level 1 inspection for the stormwater management practices shall be performed and signed off by a professional engineer. The report shall be submitted to the Town's stormwater management officer with the NOT form.
7. Please include temporary sediment basin size design calculations per NYSDEC requirements.
8. How will the portion of bio-retention area inside the fence be maintained?

Attachment: SP-2021-23_draft resolution_011322 (25067 : Sp-2021-23)

9. Show erosion and sediment control plan for the proposed road and the site east of the road.

Fire Chiefs' Association:

Denied due to the following:

1. Access gates shall comply with appendix D103.5
2. Tamper switches are required on fire service valves in hotbox.
3. Two separate remote access roads required per Appendix D.
4. Per Appendix D104.1 buildings exceeding 30 feet require two means of fire apparatus access for each structure.
5. Private hydrants must be painted red.
6. Enclosed parking garages exceeding 12,000 square feet require sprinkler protection.
7. Provide fire apparatus turning plan throughout site.
8. Provide address plan for each building on complex.

Highway Department:

Approved as submitted.

Traffic/Safety Board:

TIS Comments:

A. Tis Must be revised to reflect the most revised set of plans that only shows Building 'E' as a future development. The additional speculative buildings removed from the site plan (but remain in TIS) are located in the proposed stormwater detention basin. As such, revise the TIS removing these buildings.
B. TIS is showing signal adjustments at the Youngs/Wehrle signal as mitigation. Provide timing sheets as part of site plan review.
C. Petitioner must agree to follow up traffic study after full buildout to determine if warrants are met for a traffic signal. If warrants are met and a signal is recommended, petitioner must agree to fund its portion of installation cost of the traffic signal system to Town standards (incl. Miovision). Establishment of an escrow, may be necessary if the Planning Board requires such to accommodate this condition.

Site Plan comments:

1. Change the roadway to a private roadway.

R.O.W. Agent:

Approved as submitted.

OTHER INVOLVED AGENCIES:

ECDEP: Concur with the Town acting as Lead Agency
No recommendation; proposed action has been reviewed & determined to be of local concern.

.

Attachment: SP-2021-23_draft resolution_011322 (25067 : Sp-2021-23)

ECDPW Highways: Concur with the Town acting as Lead Agency and comments:

1. The traffic signal warrant 3 for peak hour is met for both the Phase I and full build conditions. The three-color signal should be installed at the time of Phase I construction. The developer shall contact the Town of Amherst regarding signal design.
2. This site will negatively impact the signal timing at the intersections of Wehrle Drive with Spindrift Drive and Youngs Road. The developer shall contact the Town of Amherst regarding monitoring and adjustments to timing of these signals.
3. A stormwater management report shall be provided for our review. Stormwater drainage for this site shall be designed in accordance with the New York State Stormwater Management Design Manual and local Town requirements.
4. The project sponsor will be required to apply for and obtain an Erie County Highway Work Permit for Utility Work Perm-2 prior to construction within the Wehrle Drive (CR-290) highway right-of-way.
5. The project sponsor will be required to apply for and obtain an Erie County Highway Work Permit for Non-Utility Work Perm-3 prior to construction of a new road within the Wehrle Drive (CR-290) highway right-of-way.

NYSDOT: review pending.

BNIA: review pending.

NYSDEC: Concur with the Town acting as Lead Agency and comments

1. If any project activities will involve land disturbance of 1 acre or more, the project sponsor, owner or operator is required to obtain a State Pollutant Discharge Elimination System General Permit for Stormwater Discharges from Construction Activity (GP-0-20-001).
2. The Town of Amherst is designated as an MS4 community. The project sponsor, owner or operator of a construction activity that is subject to the requirements of a regulated, traditional land use control MS4 shall have their SWPPP reviewed and accepted by the MS4 community.
3. This proposed project requires a sanitary sewer connection that is designed to convey 2,500 gallons/day or more of municipal sewage and is therefore considered a sanitary sewer extension. A detailed Downstream Sewer Capacity Analysis must be performed and submitted for the proposed project as part of the Project's Engineering Report. Recent wet weather flow monitoring data and proposed new development flow should be analyzed relative to theoretical capacity at key nodes in the downstream sewer system and at pump stations (if any) to determine if capacity exists.
4. The Downstream Sewer Capacity Analysis must also contain a narrative and a detailed map showing the downstream routing of sewers from the proposed project site to the Wastewater Treatment Plant.

Attachment: SP-2021-23_draft resolution_011322 (25067 : Sp-2021-23)

5. This Downstream Sewer Capacity Analysis, as well as any required infiltration and inflow (I/I) rehabilitation offset work at a 4:1 ratio, should be part of the Project's Engineering Report.

Other Considerations: None.

STAFF ANALYSIS:

Existing zoning / intent: Office Building District (OB), is intended to provide areas within the Town devoted exclusively to offices by regulating the land area, bulk and spacing of uses, particularly at common boundaries and promoting the most desirable land use and traffic patterns in accordance with the objectives of the comprehensive plan.

History of previous rezoning / site plan approvals:

REZONING:

2190 Wehrle Drive

Z-2000-23 The Town Board on December 17, 2001 approved a request to rezone the parcel from R-3 to OB with the following conditions:

a. The requirements of the ECDPW as stated in memo dated 11/15/01 be addressed for the development of Phase 1 (40,000 sq. ft.) prior to any final site plan approval for that phase. Any site plans for subsequent phases will be required to update the TIS so that the impact of the office park may be monitored relative to planned road improvements & other developments in the area.
b. The heights of the buildings & structures be limited to 1 story & 35 ft. from finished grade on the east side of the proposed subdivision road.
c. A minimum 50 ft. greenspace buffer be provided along the east property line of 2220 Wehrle Drive.
d. The EPA sewer connection moratorium be approved prior to any connections to the sanitary sewer system.
e. A vehicular connection to the Limestone Office Park from the proposed access road be required when the development extends beyond 800 ft. from Wehrle Drive.

Z-2021-01 The Town Board on June 21, 2021 approved a request to rezone the parcel from R-3 to OB with the following condition:

a. That the petitioner provide further information on the intended use of the northerly buildings to ensure compliance with the allowed uses set forth in §203-4-2(A)

2220 Wehrle Drive

Z-1995-12 The Town Board on December 4, 1995 approved a request to rezone the parcel from R-3 to OB with the following condition.

Attachment: SP-2021-23_draft resolution_011322 (25067 : Sp-2021-23)

a. That the mitigation recommended by the NYSDOT and the ECDPW be required.

SITE PLANS:

SP-2000-16 The Planning Board on May 16, 2002 approved a site plan for a 1,675 lineal foot public road & R.O.W. to service a future business park. Access was provided to Limestone Office Park.

SP-2000-16_A The Planning Board on May 16, 2002 approved a site plan for 750 lineal feet of public road & R.O.W. to service a future business park.

SP-2002-10 The Planning Board on July 11, 2021 approved a site plan for a 2 story 51,200 sq. ft. office building with parking for 214 vehicles. 365 ft. of the approved road is planned to be constructed to serve this development.

Staff Comments:

Zoning Enforcement Officer:

Denied for the following reasons:

1. Unable to determine compliance with §203-4-2-2 A of Town Code for use of the subject site. Provide a detailed use and or tenant of building 'A' so that a determination as to the allowable use of building 'C' as an accessory use to Building 'A' can be made

2. Unable to determine compliance with §203-4-8-6 C of Town Code as the building facades are not dimensioned with enough detail to determine compliance.

3. The accessory structures (garage, security booth and maintenance facility) floor area exceeds that permitted by §203-6-8-1 B of Town Code. Maximum allowable is 75% of the gross floor area of the principal structure.

4. Onsite parking is insufficient to meet the requirements of §203-7-1-6 A of Town Code. A minimum of 341 parking stalls are required whereas a total of 228 spaces are provided. An alternative parking plan in accordance with §203-7-1-7 of Town Code may be sought.

5. The required landscape area adjacent to buildings is not provided as required by §203-7-2-3 A (2) of Town Code. North side of Building 'D', the west side of Building 'A', and south side of Building 'C'. Foundation plantings are required on all sides of the proposed buildings that are adjacent to vehicle use areas, with the exception of entrances and exits, drive throughs and covered pedestrian walkways. There are foundation plantings missing on the east side of Building 'C', the north side of Building 'D' and the west side of Building 'A' exclusive of building entrances. Additionally, the landscaped area adjacent to Building 'B' is not dimensioned to determine compliance with this section.

Attachment: SP-2021-23_draft resolution_011322 (25067 : Sp-2021-23)

6. All landscape islands are not curbed as required by §203-7-2-3 A (3) (k). The island at the northwest corner of Building 'C' and the terminal landscape island in the southeast corner of the parking lot south of Building 'C' are not curbed.

7. If the proposed roadway will be a public roadway the vehicle use area between Buildings 'A' and 'D' and the public roadway will require the vehicle use area screen required by §203-7-2-4 A (2) of Town Code.

8. Be aware the proposed flag poles may only display national or governmental flags. Any flags, banners etc. bearing advertising or tenant identification will be considered signage and as such are not permitted by §203-7-8-2 of Town Code.

9. Unable to determine compliance with §204-3-2 C (6) and §204-3-2 C (10) of Town Code as no offset or distances to other streets onto Wehrle Drive were provided from the proposed roadway.

Planning Department Staff:

1. The portion of the subject development located on the parcel at 2200 Wehrle Drive was rezoned by the Town Board on December 4, 1995 with the condition "*That the mitigations recommended by the NYSDOT and ECDPW be required"* (Z-1995-12). Provide documentation from these agencies that the mitigation was provided or is no longer required.

2. Given the proposed public roadway serves no, or minimal public purpose it will be recommend to the Planning Board that it be classified as a private roadway.

3. Revise the light pole foundation detail on sheet CS501 to indicate that the light pole bases are to be 6 inches above finished grade in landscaped areas.

4. A reciprocal access agreement to allow for pedestrian and vehicular ingress and egress for the proposed vehicular connection shown to the future development area will be required.

5. A reciprocal access and maintenance agreement to allow for vehicular ingress and egress to the Existing office development site north of the subject site will be required.

Landscape Architect:

1. Provide plantings in the landscape island at the southwest corner of Building A, adjacent to the dumpster enclosure per section, per §7-2-3A (3) (e) of Town Code.

Attachment: SP-2021-23_draft resolution_011322 (25067 : Sp-2021-23)

2. Provide landscaped areas adjacent to the building as per §7-2-3 (A) (2) of Town Code.

3. Please provide typical details for all above ground utilities as enumerated in § 7-2-4 (C) (1) of Town Code "*Non-single-family residential properties which may be viewed from residential uses, public streets or public park areas shall screen all roof, ground and wall mounted mechanical equipment (utility structures, multiple meter boards, generators, air conditioning units, backflow preventer [RPZ] hot boxes, etc.) from view at ground level of the property line*."

4. Consideration should be given to providing an east to west connection through the site near the Garfield Street area for pedestrian walkways or bicycle access. This multi-modal connection could be designed as an on-road treatment with bike lanes or separate off-road multi-use trail on the east side of the roadway.

STAFF RECOMMENDATION

SEQR: EAF completed; Type I Action, Town Established as Lead Agency, Issue Attached Negative Declaration.

Site Plan: **Table**, pending review by NYSDOT, BNIA and receipt of revised plans or materials that address the concerns of the Assessor's Office, Building, Engineering and Planning Departments, Plumbing Division, Traffic Safety Board, Zoning Enforcement Officer, Stormwater management Officer and Landscape Architect.

NOTICE OF DETERMINATION OF NON-SIGNIFICANCE

Lead Agency: Town of Amherst Planning Board

Project: SP-2021-23

Address: 5583 Main Street
Williamsville, NY 14221
(716) 631-7051

Date:

This notice is issued pursuant to Part 617 and Local Law #3-82, as amended, of the implementing regulations pertaining to Article 8 (State Environmental Quality Review) of the Environmental Conservation Law.

The Lead Agency has determined that the proposed action described below will not have a significant adverse effect on the environment.

Title of Action: Site Plan Review

SEQR Status: Type I Action

Description of Action: development of 17.5 acres of a 24.6 acre site for an 84,375 sq. ft. three-story office building, a 24,750 single story garage / maintenance / storage building, a 72,072 sq. ft. two-story parking garage and a one-story security booth along with 228 parking spaces (including those within the parking ramp) and having site access via a proposed 1,750± lineal foot roadway. Work will include site improvements not specifically stated above, including, stormwater, utilities, grading, lighting, paving, and landscaping.

Location: 2190 & 2220 Wehrle Drive, Amherst, Erie County

Petitioner: Acquest Wehrle, LLC

Attachment: SP-2021-23_draft resolution_011322 (25067 : Sp-2021-23)

Reasons Supporting This Determination

Based on information submitted by the applicant including a Full Environmental Assessment Form (EAF) - Part I, (as amended) and a complete site plan application, a preliminary staff analysis was undertaken. Compared to the criteria listed in Section 617.7, all indications are that this action will not have a significant impact on the environment, as follows:

1. The project is not expected to cause a substantial adverse change in existing air quality, ground or surface water quality or quantity, or noise levels; a substantial increase in solid waste production; or a substantial increase in the potential for erosion, flooding, leaching or drainage problems. The Engineering Department on_____ reviewed the Grading, Drainage and Utility Plan, Engineer's Report and Erosion Control Plan submitted on December 20, 2021, long with the Geotechnical Report prepared by Glynn Group Engineering & Architecture, PLLC. A Stormwater Pollution Prevention Plan (SWPPP) submitted on December 20, 2021 was also reviewed. Based on its review of these documents, the Department has determined that the project has or will have met all applicable requirements and has no objection to its approval.

2. The project will not result in the removal or destruction of large quantities of vegetation or fauna; or in significant adverse impacts to fish or wildlife species, habitats or other natural resources. The Planning Department reviewed a Landscape Plan submitted on December 20, 2021 and determined that it meets or exceeds Zoning Ordinance requirements for greenspace. The Landscape Plan has or will have met all Zoning Ordinance and Town requirements for landscaping.

3. The project is not expected to create any material conflict with the Town Comprehensive Plan. The Building Department in their review of _____ and the Planning Department in their review of _____ has reviewed the application documents, along with the Geotechnical Report submitted on November 15, 2021 and noted in their review of _____ that the subject project has or will have met all International Building Code – 2015 and Zoning Ordinance regulations.

4. The project is within an area identified by the State as having potential archaeological or historical significance. The NYS Office of Parks, Recreation and Historic Preservation has reviewed the project site and, as stated in their letters of October 4, 2005 and September 28, 2001 determined that there will be no impact on these resources.

5. The project will not impair the character or quality of important aesthetic resources or of existing community or neighborhood character. The project is located in the Office Building District (OB) zoning district; neighboring uses are office buildings to the north, a power transmission right-of-way to the west, office light industrial uses to the south across Wehrle Drive and detached single family homes to the east, zoned Office Building District (OB), Research Development District (RD) and Residential District Three (R3); therefore, the project is consistent with surrounding land uses.

Attachment: SP-2021-23_draft resolution_011322 (25067 : Sp-2021-23)

6. The proposed subject development will include an 182,700± sq. ft. office building and associated accessory structures along with an 1,750± lineal foot roadway which will not cause a major change in the use of either the quantity or type of energy.

7. The project will not create any hazard to human health. The Fire Chief's Association on _____, and the BNIA on _____, have reviewed the project and have no objection to the approval of the site plan, as all requirements of these agencies have or will have been met.

8. The project will cause a substantial change in the use, or intensity of use, of land including agricultural, open space or recreational resources, or in its capacity to support existing uses. The 182,700± sq. ft. of office building and associated accessory structures and 1,750± lineal foot roadway will be consistent with the scale of surrounding land uses.

9. The function of the proposed 182,700± sq. ft. of office building and associated accessory structures and 1,750± lineal foot roadway will significantly increase the number of people using the site over its previous level of use.

10. Review by the Town Traffic/Safety Board dated _____, Erie County Dept. of Public Works –Highways Division dated _____, and NYSDOT dated_____ indicates that significant negative traffic impacts are not expected to result from the proposed project.

    Review of the Traffic Impact Study (TIS) prepared by SRF Associates submitted to the Planning Department on November 15, 2021 and reviewed by the Town Traffic/Safety Board _____, Erie County Dept. of Public Works –Highways Division,_____ and NYSDOT _____

    - ❑ indicates that significant negative traffic impacts are not expected to result from the proposed project.
    - ❑ Indicates that the following transportation improvements are required:
      _____
      _____
      _____
      _____

      and that these improvements will be constructed as part of this project.

11. A coordinated review of the project has been undertaken by Town Departments including, in addition to those mentioned above, Highway on _____, Assessor on _____, Plumbing Division on _____, and Right-of-Way Agent on _____. These reviews did not identify any potential significant adverse environmental issues and indicated that the proposal will not have a significant damaging impact on the environment.

Attachment: SP-2021-23_draft resolution_011322 (25067 : Sp-2021-23)

DRAFT Negative Declaration SP-2021-23
DATE

12. Issues not specifically mentioned above and/or those not specifically reviewed were not raised by Town departments, outside agencies or the public and are not determined to cause significant negative environmental impacts.

TOWN OF AMHERST
PLANNING BOARD
SITE PLAN RESOLUTION
SP-2021-23

PETITIONER

Acquest Wehrle LLC
5554 Main Street
Williamsville, NY 14221

PROPERTY LOCATION

2190 & 2220 Wehrle Drive

WHEREAS, the Town of Amherst Planning Board on Thursday, January 13, 2022 held a public hearing on a Site Plan for a 182,700± sq. ft. of office building and associated accessory structures and a 1,750± lineal foot roadway and

WHEREAS, the Planning Board reviewed the plans and specifications for the proposed project, and

WHEREAS, the Site Plan was referred to the Town's various review agencies, and

WHEREAS, in accordance with Section 8-7-9 of the Zoning Ordinance, the Planning Board finds that:

A. The proposed site plan is consistent with the development plan if one is required.

B. The proposed site plan is consistent with the purpose and specific requirements of the Zoning Ordinance and generally consistent with the policies of the Comprehensive Plan.

C. Adequate services and utilities will be available prior to occupancy.

D. The site plan is consistent with all other applicable laws.

E. Pursuant to Local Law #3-82, as amended, the Planning Board has determined that the requirements of SEQR are complete and that the subject proposal is not expected to have a significant adverse effect on the environment.

F. Under Section 404 of the Clean Water Act, the US Army Corps of Engineers has determined that it has no jurisdiction.

NOW THEREFORE BE IT RESOLVED that in accordance with 6 NYCRR, Part 617 and Local Law #3-82, as amended, the Planning Board has issued a Negative Declaration attached hereto, and

Attachment: SP-2021-23_draft resolution_011322 (25067 : Sp-2021-23)

DRAFT (1/13/2022)
TOWN OF AMHERST
PLANNING BOARD
SITE PLAN RESOLUTION
SP-2021-23

PETITIONER	PROPERTY LOCATION
Acquest Wehrle LLC	2190 & 2220 Wehrle Drive

NOW THEREFORE BE IT FURTHER RESOLVED that the Planning Board, in accordance with Section 8-7 of the Zoning Ordinance **approves/denies** said Site Plan subject to the following conditions:

1. That Building "C" (storage garage/maintenance facility) is not approved as part of this site plan. The subject building will be considered at a future time, when the developer provides written confirmation of the tenant/user and actual intended use, including a detailed floor plan allowing the Planning Department and the Zoning Enforcement Officer to determine if the intended use is a customary accessory use of the proposed principal office building use, and that such intended use is permitted within the OB- Office Business zoning district.

2 That the consideration of signs is specifically excluded from this approval as they require a separate review and approval by the Town.

3. That all dumpsters/trash containers and all mechanical equipment, utility structures, multiple meter boards, generators, and similar appurtenances, including those which are mounted on any part of a primary structure shall be appropriately screened with a fence, wall, and/or landscaping. Provide gate on dumpster enclosure that shall be closed whenever dumpster is not being serviced, enclosure shall be high enough to screen the dumpster(s) within.

4. That as-built record drawings, including location of utilities, be provided to the Engineering Department prior to issuance of a Certificate of Occupancy by the Building Department.

The foregoing resolution was adopted by the Town of Amherst Planning Board, _____; moved by - _____; seconded by - _____; ayes _, noes _; absent - ____.

SUBJECT: MAJOR SITE PLAN REVIEW, **SP-2021-23**; PROPOSED OFFICE BUILDING AND ROADWAY; PROPERTY LOCATED AT **2190 & 2220 WEHRLE DRIVE**.

Dear Mr. Abu-Sitta:

At its meeting of January 13, 2022 the Planning Board voted to **adjourn** the subject site plan to the February 17, 2022 Planning Board meeting.

Please submit a detailed use of building "C" and floor plan along with revised plans or required materials by Monday, January 31, 2022 so they may be reviewed prior to the meeting.

Should you have any questions regarding the Planning Board's decision, please do not hesitate to call us.

Very truly yours,

Daniel C. Howard, AICP
Planning Director

TABLED

PLANNING BOARD ITEM (ID # 25069)

Proposed the Well Buffalo Church - Building Expansion, SP-1988-21B

Property located at 995 Dodge Road
The Well Buffalo, Petitioner

A proposed 13,960 s.f. single-story 29-foot addition to theWELLbuffalo church consisting of a 500-seat sanctuary, offices, activity space, associated parking expansion, landscaping, a 900 s.f. 1-story garage and ancillary site improvements.

Corey A. Auerbach, Esq., Barclay Damon, represented the petitioner, explained the proposal and was available to answer questions from the Board.

In response to the Board's questions, Mr. Auerbach stated the exterior materials proposed meet the requirements of Town Code other than the corrugated metal siding, the petitioner added 8 feet of brick from original design which did not include any, there are limited options in a prefabricated building, the height of the porte-cochère is to meet Fire regulations, the closest neighbor and congregation supports the design, the building is not outwardly facing and sits in the middle of an 8-acre site,

No further comments were heard on this proposal. The hearing was closed.

Following discussion, Mr. Gill moved to adjourn decision on the proposal. The motion was seconded by Mr. Giuliani and carried. Ayes 4, Noes 0, Absent 3 (Chmiel, Gelber, Raffaele).

TOWN OF AMHERST

APPLICATION & REVIEW PROCEDURE

MAJOR SITE PLAN

MATERIALS MUST BE PROVIDED IN AN ELECTRONIC FORMAT THAT CONTAINS PDF FILES OF THE APPLICATION, EAF, SITE PLAN DRAWING SET SURVEY, LANDSCAPE PLAN, PRELIMINARY BUILDING FLOO PLANS / ELEVATIONS & ANY OTHER SUPPORTING INFORMATION. THIS MUST BE SUBMITTED WITH YOUR APPLICATION. APPLICATIONS WILL NOT BE TRANSMITTED WITHOUT THIS ELECTRONIC INFORMATION.

THIS ALSO APPLIES TO REVISED MATERIALS THAT AR SUBMITTED.

This application package includes the following:

- Application Procedures
- Application Form & Checklist
- Stormwater Pollution Prevention Plan Checklist
- Appendix A Town of Amherst EAF Addendum
- Appendix B Criteria for Required 8½" x 11" Sketches
- Appendix C Erie Sewer District No. 5 – Commercial / Industrial New & Existing Buildings Requirements

- IMPORTANT-

1. A pre-submittal consultation with Planning Department staff is *strongly recommended* prior to submitting an application. The pre-submittal meeting gives the applicant an opportunity to discuss with staff such items as:
   - classifying the action as a major site plan, minor site plan, or minor site plan adjustment;
   - determining what specific information will be required to be submitted with the application;
   - identifying and discussing issues that must be addressed as part of the SEQR review;
   - identifying any potential variances required to implement the project as proposed.

   An appointment is required for all meetings with Planning Department staff.

2. This site plan petition is subject to the requirements of 6 NYCRR Part 617, State Environmental Quality Review Act (SEQR), and Chapter 104 of the Town of Amherst Code, as amended. The Planning Board cannot make a SEQR determination unless a complete Environmental Assessment Form (EAF), including Town of Amherst EAF Addendum, and any required supplementary information such as traffic impact studies, archaeological reports, wetland delineations or geotechnical reports, are submitted. SEQR issues may be discussed with Planning Department staff at a recommended pre-submittal meeting. Unlisted Actions require a Short EAF; Type I Actions require a Full EAF. The following is a link to the NYSDEC website and fillable forms with instructions*:*
   http://www.dec.ny.gov/permits/6191.html.

3. **Review by the Town Design Advisory Board (DAB) is required for Major Site Plans located in the following Mixed-Use zoning districts:**

   Traditional Infill 2.5 (TI-2.5)
   Traditional Infill 4 (TI-4)
   Shallow Corridor 3 (SC-3)
   Deep Corridor 3 (DC-3)
   Deep Corridor 5 (DC-5)
   Center 2.5 (CTR-2.5)
   Center 5 (CTR-5)
   Center 8 (CTR-8)

   The application for DAB review is required to be filed in conjunction with the major site plan application.

Attachment: SP-1988-21B application 011322 (25069 : Sp-1988-21B)

4. The application shall be executed or consented to in writing by the owner of the property.

5. **Any variances from the Zoning Board of Appeals, or any decision from the Town Board (e.g. removal of deed restrictions) must be obtained prior to action by the Planning Board on a Site Plan application.**

6. Submittal of an application grants permission to Town staff and Planning Board members to access the parcel(s) under consideration.

7. All site plan drawings must be prepared by a Registered Architect, Professional Engineer, Landscape Architect, or Land Surveyor (as applicable) licensed to practice in New York State.

8. If you wish to include a Coordinated Sign Plan application with the site plan petition, a separate application must be completed. Contact the Planning Department for a copy of a Coordinated Sign Plan application package.

9. All drawings should be no larger than 24 in. x 36 in. If site characteristics warrant larger plan sheets, they may be accepted subject to Planning Department concurrence. All drawings must also reserve a 4 in. x 6 in. area in the lower right hand corner for official Town use.

APPLICATION PROCEDURES

1. Applicant secures application package from the Planning Department, 5583 Main Street, Williamsville, NY 14221. (716) 631-7051. Forms are also available online at: www.amherst.ny.us, (keyword: Planning).

2. Applicant prepares information as required on the Site Plan Submittal Checklist, attached. NOTE: Some proposals may not require all items on the checklist; please verify with the Planning Department.

3. Applicant schedules an appointment with the Planning Department to review the following:
   - a complete set of site plan drawings, preliminary building elevations and floor plans (no larger than 24" x 36" in size)
   - Environmental Assessment Form (EAF) & Town EAF Addendum
   - any supporting reports and materials
   - verification from the Town Assessor that the address in the application is correct

4. Applicant schedules an application submittal appointment with the Planning Department. NO SITE PLAN WILL BE ACCEPTED FOR REVIEW WITHOUT A PRE-SET SUBMITTAL APPOINTMENT.

5. At the submittal appointment, applicant provides fourteen (14) complete and collated sets of drawings and application information to the Planning Department **(materials will not be accepted unless folded into 9" x 12" in size),** including**:**
   - application form
   - Environmental Assessment Form (EAF)
   - supporting reports / materials
   - complete set of site plan drawings, preliminary building elevations and floor plans (**at least one (1) set of drawings must bear a raised or wet seal and signature of the design professional** who prepared the plans; the remaining copies may be submitted with a facsimile of the seal and signature)
   - digital files of all materials in pdf format
   - an 8½" x 11" reduction of the sketch plan or plat drawing (see Appendix B)

Attachment: SP-1988-21B application 011322 (25069 : Sp-1988-21B)

6. After approval for filing by the Planning Department, applicant submits all necessary fees to the Town Clerk. **(See Schedule of Fees on first page of application and make checks payable to: Town of Amherst.)**

7. The applicant returns a copy of the filing receipt to the Planning Department.

8. The Planning Department transmits remaining thirteen (13) copies of the application and supporting materials to:
   - Assessor
   - Commissioner of Building
   - Town Engineer
   - Superintendent of Highways
   - Traffic/Safety Board
   - Fire Chiefs' Association
   - Plumbing Division
   - Right-of-Way Agent
   - Police Department (if applicable)
   - Zoning Enforcement Officer
   - Other Town and outside agencies, as applicable

9. Within 30 days of its receipt of the complete application for Site Plan approval, each agency completes its review and notifies the Planning Department in writing of its comments or recommendations as required by Ordinance.

10. The applicant may be required to submit revised plans, reports, or materials to address review agency comments. The procedures for submittal of revised plans are as follows:

    - A cover letter addressing all comments received to date is required.
    - "Highlight" the area of change on the drawings and provide a notation describing the change.
    - Revised plans/materials are required. Planning staff should be contacted to determine the number of sets needed.
    - All revised plans and materials must also be provided in an electronic format that contains pdf files of the revised information.

11. The Planning Board reviews the EAF to determine whether a Draft Environmental Impact Statement (DEIS) is required. The petitioner will be advised in the event that a DEIS is required and afforded the opportunity to prepare it. If the petitioner declines, the Planning Board will prepare the DEIS at the petitioner's expense. The public hearing will be held on the DEIS concurrently with the Planning Board hearing on the application.

12. Planning Board Meeting Procedures:

    The applicant or representative presents the project at the public hearing before the Planning Board and is available to answer any questions. The Planning Board may take any of the following actions:

    - Adjourn the hearing to a future Planning Board meeting (hearing remains open).
    - Close the hearing and table action on the site plan to a future Planning Board meeting. (The Planning Board may remove the item from the agenda until such time as all required information is provided.)
    - Close the hearing and make a decision on the site plan.

    All determinations on matters before the Planning Board are made after all public hearings on that meeting's agenda are completed.

Attachment: SP-1988-21B application 011322 (25069 : Sp-1988-21B)

13. A copy of the Planning Board's determination will be provided to the applicant, his / her representative, the Building Commissioner and the Town Clerk approximately 1 week following the Planning Board meeting at which it was heard.

14. If the Planning Board approves a Site Plan with conditions, the Planning Department will work with the applicant to ensure that all conditions of the approval are satisfactorily addressed. When all conditions are satisfied, the applicant submits **seven (7) final copies** of the complete set of all site plan drawings, folded into 9" x 12". For site plans in the Mixed-Use zoning districts, building elevations will also be required.

    All 7 sets must have original wet seals and include the required 4 in. x 6 in area in the lower right hand corner for official Town use. These drawings will be stamped and signed "Approved" by the Planning Director and transmitted to Town Departments for their files and use.

15. A building permit will not be issued by the Building Department until the stamped and signed Site Plan is issued by the Planning Director.

NOTE: Please check with the Planning Department to determine the deadline date for filing applications. Due to the public hearing notice requirements and department reviews, no site plan application will be placed on the Planning Board agenda after the deadline for filing has closed. Scheduling may be delayed if an application is incomplete.

Site Plan Submittal Requirements and Checklist

The following checklist outlines the information required by the Planning Department to accept a Site Plan application for review. ***It is strongly recommended that you make an appointment with Planning Staff to determine which items apply to your application***.

Item No.	Item	Submitted	Official use
I Basic Drawing Information			
1.0	**Drawing size not to exceed 24" x 36"**		
2.0	**Title of Drawing**		
3.0	**Name and address of Applicant**		
4.0	**Name of person preparing drawing**		
5.0	**Wet seal/raised seal and signature of NYS licensed architect, engineer, landscape architect, or surveyor (as applicable)**		
6.0	**Project address**		
7.0	**Zoning of subject property and adjacent parcels**		
8.0	**North point, scale, date, and revision date(s)**		
9.0	**4" x 6" reserved area in lower right hand corner for official Town use**		
II Structures, Paved Areas, & Open Space			
1.0	**Existing and Proposed Streets**		
1.1	Names of all existing and proposed streets		
1.2	Width and radii of proposed curb-cuts		
1.3	Existing curb-cuts on adjacent and opposite properties		
1.4	Show ROW width, pavement dimensions, lane widths, pavement markings, and proposed signage on proposed streets		
1.5	Show proposed ROW consistent with planned NYSDOT, Erie County, or Town road projects (if applicable)		
1.6	Show location of proposed cross access to adjacent parcels along with a draft easement		
1.7	Designation of Fire Lanes (if applicable)		
1.8	Fire apparatus access roads		
1.9	Label any proposed roads as public or private		
1.10	Location and dimensions of sidewalks		
1.11	Typical cross sections and profiles of proposed streets, pedestrian walkways, and bikeways		
2.0	**Proposed Structures**		
2.1	Location and complete dimensions of proposed structures		
2.2	Setback dimensions of structure(s) to all property lines		
2.3	Proposed use of structures		
2.4	Gross square feet area of each structure		
2.5	Location of all building entrances		
2.6	Indicate type of roof construction/materials		
2.7	Location, height, and design detail of existing and proposed fences and walls		
2.8	Location of light standards and building mounted lights		
2.9	Location of dumpster and detail of dumpster enclosure with gate		
2.10	Layout and dimensions of the lot(s) proposed for development		

Attachment: SP-1988-21B application 011322 (25069 : Sp-1988-21B)

Town of Amherst Planning Department 5583 Main Street Williamsville-NY-14221
(716) 631-7051- Fax: (716) 631-7153

Item No.	Item	Submitted	Official use
II Structures, Paved Areas, & Open Space (cont'd)			
3.0	**Floor Plans with individual rooms and spaces labeled** (fully dimensioned)		
4.0	**Building elevations with height dimensions from finished grade to the highest point of the roof and to midpoint of gable or hip of a pitched roof.** (fully dimensioned)		
4.1	Show screening of mechanical equipment		
5.0	**Parking/Loading/Stacking Areas**		
5.1	Location and complete dimensions of all paved areas		
5.2	Setback dimensions of all paved areas to property lines		
5.3	Dimension of typical parking space and drive aisles		
5.4	Location and layout of handicapped parking spaces & access aisles		
5.5	Detail of vertical signage for handicapped parking and access aisles		
5.6	Indicate minimum parking requirement & number of spaces provided		
5.7	Proposed signage for directing and guiding traffic		
5.8	Curb cut permits from NYS, Erie County, or Town (if applicable)		
5.9	Pedestrian connections (from proposed structures to public sidewalk network)		
6.0	**Location and proposed development of all open spaces, including parks, playgrounds, and open reservations**		
III Utilities and Drainage			
1.0	**Engineers Report** (bound separately from the Stormwater Pollution Prevention Plan [SWPPP])		
1.1	Stamped/sealed and signed by NYS licensed architect or professional engineer		
1.2	Proposed water service sizing, RPZ pressure and fire safety flow and pressure calculations		
1.3	Proposed sanitary sewer facility load calculations (avg. & peak flows) including calculation of the peaking factor		
1.4	Proposed storm drainage facility calculations (see information included with this application)		
2.0	**Grading Plan**		
2.1	Existing and proposed grades indicated (proposed grades may not exceed 1 on 3)		
3.0	**Water Service**		
3.1	Location, size and material of existing and proposed facilities		
3.2	Location of existing and proposed fire hydrant location(s)		
3.3	Indicate use of sprinklers, location of Fire Department connection, and proposed fire protection systems		
3.4	Existing and proposed meter/RPZ size and location		
3.5	Applicable construction details		
4.0	**Sanitary Sewers**		
4.1	Locations, sizes, slopes, inverts, and materials of all existing and proposed facilities		

Attachment: SP-1988-21B application 011322 (25069 : Sp-1988-21B)

Town of Amherst Planning Department 5583 Main Street Williamsville-NY-14221
(716) 631-7051- Fax: (716) 631-7153

Item No.		Submitted	Official use
III Utilities and Drainage (cont'd)			
4.2	Applicable construction details		
4.3	Proposed water/oil/grease interceptor sizing calculations by a professional engineer (if applicable)		
5.0	**Storm Drainage**		
5.1	Locations, sizes, slopes, inverts, and materials of existing and proposed storm drainage facilities		
5.2	Connection of roof drains to proposed drainage system		
5.3	Applicable Town Standard construction details		
5.4	Existing and proposed swales and ditches		
5.5	Detention area cross-section and high-level elevations		
5.6	County and State approval for tie-in to existing sewers		
6.0	**Stormwater Pollution Prevention Plan (SWPPP) as applicable** (bound separately from the Engineer's Report) **See attached checklist.**		
7.0	**Natural Gas Service**		
8.0	**Location of transformers, generators and other mechanical equipment; include detail drawings (if applicable)**		
9.0	**Downstream Sanitary Capacity Analysis (DSCA) Report** (must be submitted if proposed average flows are greater than 2,500 gallons per day)		
9.1	The DSCA Report must include a detailed downstream sewer capacity analysis and the calculations of and commitment to (via Developer commitment letter) the required financial contribution to the Town's I/I mitigation fund based on peak flow conditions. The contribution must be based on $250 per gallon per minute of mitigated flow		
IV Lighting Plan			
1.0	**Photometric plan showing light spread in foot candles at property lines**		
1.1	Detail of all light standards, including dimension of height from finished grade		
1.2	Detail of all exterior lighting fixtures		
V Landscape Plan			
1.0	**Wet/raised seal and signature of a licensed Landscape Architect**		
2.0	**Provide a calculation of the total Parking area and a calculation of interior parking area in square feet and as a percentage**		
3.0	**Indicate location, size, number and type of proposed landscape materials**		
4.0	**Indicate location, type and size of <u>all</u> existing trees 4" caliper or larger and indicate which will be removed or retained**		
VI Other Required Information/General Requirements			
1.0	**Complete boundary survey that includes all existing structures, acreage, legal description with reference to a property line, street, or other known feature, and easements plotted to scale by a NYS licensed land surveyor**		

Attachment: SP-1988-21B application 011322 (25069 : Sp-1988-21B)

(716) 631-7051- Fax: (716) 631-7153

Item No.		Submitted	Official Use
VI Other Required Information/General Requirements (cont'd)			
1.1	Copies of all easements, reciprocal access agreement or similar leag documents		
2.0	**Topographic Survey with a 30 ft. buffer outside all property lines by a NYS licensed land surveyor**		
3.0	**Draft of any deed restrictions, covenants, provisions for home associations and common ownership, and reciprocal easement agreements (as applicable).**		
4.0	**For assessment purposes, state intent to apply for condominium status (if applicable).**		
5.0	**Completed and signed Environmental Assessment Form**		
5.1	Soil boring report and geotechnical report prepared by a qualified Professional Engineer (if applicable)		
5.2	Traffic Impact Study (if applicable)		
5.3	Archaeological survey (if applicable		
5.4	Wetland Delineation report (if applicable)		
6.0	**Show existing zoning(s) of both the subject property and adjacent parcels on the Site Plan and the Landscape Plan**		
7.0	**Location of NYSDEC wetlands (including buffer area) and/or federal wetlands; indicate jurisdictional status**		
8.0	**Location of Floodway and floodplain** (if applicable)		
9.0	**Documentation pertaining to any conditions of zonings, including copies of required deed restrictions; indicate date of rezoning and the parcel address under which it was rezoned (if applicable)**		
10.0	**Documentation related to any required variances granted by the ZBA**		
11.0	**For residential site plans, provide a statement from the appropriate school district that adequate school sites and facilities are available.**		
12.0	**8 1/2" X 11" reduction of primary site plan drawing (see appendix "B" of application package for specifications)**		
13.0	**A CD containing a PDF of all site plan drawings (Must also be provided with revised drawings)**		
VII Additional Required Information for Projects in the Mixed Use Districts			
1.0	**Design Advisory Board Application**		
1.1	Required for Major Site Plan		
1.2	Required at the Planning Directors Discretion for Minor Site Plans		
2.0	**Block & Street Network Plan**		
2.1	Designation of Core, Local & Alley streets		
2.2	Dimensions of Blocks		
3.0	**Block Usage Plan (as applicable)**		
3.1	Designation of site usage for each block including open space areas		
4.0	**Phasing Plan**

Full Environmental Assessment Form
Part 1 - Project and Setting

Instructions for Completing Part 1

Part 1 is to be completed by the applicant or project sponsor. Responses become part of the application for approval or funding, are subject to public review, and may be subject to further verification.

Complete Part 1 based on information currently available. If additional research or investigation would be needed to fully respond to any item, please answer as thoroughly as possible based on current information; indicate whether missing information does not exist, or is not reasonably available to the sponsor; and, when possible, generally describe work or studies which would be necessary to update or fully develop that information.

Applicants/sponsors must complete all items in Sections A & B. In Sections C, D & E, most items contain an initial question that must be answered either "Yes" or "No". If the answer to the initial question is "Yes", complete the sub-questions that follow. If the answer to the initial question is "No", proceed to the next question. Section F allows the project sponsor to identify and attach any additional information. Section G requires the name and signature of the applicant or project sponsor to verify that the information contained in Part 1is accurate and complete.

A. Project and Applicant/Sponsor Information.

Name of Action or Project: theWELL Expansion		
Project Location (describe, and attach a general location map): 995 Dodge Road, SBL 41.02-2-26.1

City/PO: Getzville	State: NY	Zip Code: 14068
Project Contact (if not same as sponsor; give name and title/role): Barclay Damon LLP, Corey A. Auerbach as agent/attorney for Applicant	Telephone: (716) 858-3801 E-Mail: cauerbach@barclaydamon.com	
Address: 200 Delaware Avenue, Suite 1200		
City/PO: Buffalo	State: NY	Zip Code: 14202
Property Owner (if not same as sponsor):	Telephone: E-Mail:	
Address:		
City/PO:	State:	Zip Code:

Attachment: SP-1988-21B application 011322 (25069 : Sp-1988-21B)

B. Government Approvals

B. Government Approvals, Funding, or Sponsorship. ("Funding" includes grants, loans, tax relief, and any other forms of financial assistance.)

Government Entity	If Yes: Identify Agency and Approval(s) Required	Application Date (Actual or projected)
a. City Counsel, Town Board, or Village Board of Trustees ☐Yes ☐No		
b. City, Town or Village Planning Board or Commission ☑Yes ☐No	Town of Amherst Planning Board (Site Plan)	November 15, 2021
c. City, Town or Village Zoning Board of Appeals ☑Yes ☐No	Town of Amherst Zoning Board of Appeals (area variance)	November 22, 2021
d. Other local agencies ☐Yes ☐No		
e. County agencies ☐Yes ☐No		
f. Regional agencies ☐Yes ☐No		
g. State agencies ☐Yes ☐No		
h. Federal agencies ☐Yes ☐No		

i. Coastal Resources.

i. Is the project site within a Coastal Area, or the waterfront area of a Designated Inland Waterway? ☐Yes ☑No

ii. Is the project site located in a community with an approved Local Waterfront Revitalization Program? ☐Yes ☑No

iii. Is the project site within a Coastal Erosion Hazard Area? ☐Yes ☑No

C. Planning and Zoning

C.1. Planning and zoning actions.

Will administrative or legislative adoption, or amendment of a plan, local law, ordinance, rule or regulation be the only approval(s) which must be granted to enable the proposed action to proceed? ☐Yes ☑No

- **If Yes,** complete sections C, F and G.
- **If No,** proceed to question C.2 and complete all remaining sections and questions in Part 1

C.2. Adopted land use plans.

a. Do any municipally- adopted (city, town, village or county) comprehensive land use plan(s) include the site where the proposed action would be located? ☑Yes ☐No

If Yes, does the comprehensive plan include specific recommendations for the site where the proposed action would be located? ☐Yes ☑No

b. Is the site of the proposed action within any local or regional special planning district (for example: Greenway; Brownfield Opportunity Area (BOA); designated State or Federal heritage area; watershed management plan; or other?) ☑Yes ☐No

If Yes, identify the plan(s):

NYS Heritage Areas:West Erie Canal Corridor

c. Is the proposed action located wholly or partially within an area listed in an adopted municipal open space plan, or an adopted municipal farmland protection plan? ☐Yes ☑No

If Yes, identify the plan(s):

Attachment: SP-1988-21B application 011322 (25069 : Sp-1988-21B)

C.3. Zoning

a. Is the site of the proposed action located in a municipality with an adopted zoning law or ordinance. ☑ Yes ☐ No
If Yes, what is the zoning classification(s) including any applicable overlay district?
CF - Community Facilities

b. Is the use permitted or allowed by a special or conditional use permit? ☑ Yes ☐ No

c. Is a zoning change requested as part of the proposed action? ☐ Yes ☑ No
If Yes,
i. What is the proposed new zoning for the site? _____

C.4. Existing community services.

a. In what school district is the project site located? Williamsville Central School District

b. What police or other public protection forces serve the project site?
Town of Amherst Police

c. Which fire protection and emergency medical services serve the project site?
Getzville

d. What parks serve the project site?
Billy Wilson Park, North French Recreation Area, Clearfield Community Center/Recreation Center, Audobon Town Park

D. Project Details

D.1. Proposed and Potential Development

a. What is the general nature of the proposed action (e.g., residential, industrial, commercial, recreational; if mixed, include all components)? religious facility expansion

b. a. Total acreage of the site of the proposed action? 7.93 acres
b. Total acreage to be physically disturbed? +/- 0.92 acres
c. Total acreage (project site and any contiguous properties) owned or controlled by the applicant or project sponsor? 7.93 acres

c. Is the proposed action an expansion of an existing project or use? ☑ Yes ☐ No
i. If Yes, what is the approximate percentage of the proposed expansion and identify the units (e.g., acres, miles, housing units, square feet)? % 85.3% (14,860) Units: square feet

d. Is the proposed action a subdivision, or does it include a subdivision? ☐ Yes ☑ No
If Yes,
i. Purpose or type of subdivision? (e.g., residential, industrial, commercial; if mixed, specify types)
ii. Is a cluster/conservation layout proposed? ☐ Yes ☐ No
iii. Number of lots proposed? _____
iv. Minimum and maximum proposed lot sizes? Minimum _____ Maximum _____

e. Will the proposed action be constructed in multiple phases? ☐ Yes ☑ No
i. If No, anticipated period of construction: 9-12 months
ii. If Yes:
- Total number of phases anticipated _____
- Anticipated commencement date of phase 1 (including demolition) _____ month _____ year
- Anticipated completion date of final phase _____ month _____year
- Generally describe connections or relationships among phases, including any contingencies where progress of one phase may determine timing or duration of future phases: _____

Attachment: SP-1988-21B application 011322 (25069 : Sp-1988-21B)

4.a

f. Does the project include new residential uses? ☐Yes ☑No

If Yes, show numbers of units proposed.

	One Family	Two Family	Three Family	Multiple Family (four or more)
Initial Phase				
At completion of all phases				

g. Does the proposed action include new non-residential construction (including expansions)? ☑Yes ☐No

If Yes,

i. Total number of structures 1

ii. Dimensions (in feet) of largest proposed structure: +/- 29 height; 130 width; and 160 length

iii. Approximate extent of building space to be heated or cooled: +/-13,960 square feet

h. Does the proposed action include construction or other activities that will result in the impoundment of any liquids, such as creation of a water supply, reservoir, pond, lake, waste lagoon or other storage? ☑Yes ☐No

If Yes,

i. Purpose of the impoundment: underground stormwater detention facility

ii. If a water impoundment, the principal source of the water: ☐ Ground water ☐ Surface water streams ☑Other specify: surface stormwater runoff

iii. If other than water, identify the type of impounded/contained liquids and their source. N/A

iv. Approximate size of the proposed impoundment. Volume: 0.055 million gallons; surface area: 0.078 acres

v. Dimensions of the proposed dam or impounding structure: -3.5 ft height; 111 ft length

vi. Construction method/materials for the proposed dam or impounding structure (e.g., earth fill, rock, wood, concrete): stone and ADS N-12 Storm pipe

D.2. Project Operations

a. Does the proposed action include any excavation, mining, or dredging, during construction, operations, or both? (Not including general site preparation, grading or installation of utilities or foundations where all excavated materials will remain onsite) ☐Yes ☑No

If Yes:

i .What is the purpose of the excavation or dredging? _____

ii. How much material (including rock, earth, sediments, etc.) is proposed to be removed from the site?

- Volume (specify tons or cubic yards): _____
- Over what duration of time? _____

iii. Describe nature and characteristics of materials to be excavated or dredged, and plans to use, manage or dispose of them.

_____

_____

iv. Will there be onsite dewatering or processing of excavated materials? ☐Yes ☐No

If yes, describe. _____

_____

v. What is the total area to be dredged or excavated? _____acres

vi. What is the maximum area to be worked at any one time? _____ acres

vii. What would be the maximum depth of excavation or dredging? _____ feet

viii. Will the excavation require blasting? ☐Yes ☐No

ix. Summarize site reclamation goals and plan: _____

_____

_____

b. Would the proposed action cause or result in alteration of, increase or decrease in size of, or encroachment into any existing wetland, waterbody, shoreline, beach or adjacent area? ☐Yes ☑No

If Yes:

i. Identify the wetland or waterbody which would be affected (by name, water index number, wetland map number or geographic description): _____

_____

Attachment: SP-1988-21B application 011322 (25069 : Sp-1988-21B)

ii. Describe how the proposed action would affect that waterbody or wetland, e.g. excavation, fill, placement of structures, or alteration of channels, banks and shorelines. Indicate extent of activities, alterations and additions in square feet or acres:

iii. Will the proposed action cause or result in disturbance to bottom sediments? ☐ Yes ☐ No
If Yes, describe:

iv. Will the proposed action cause or result in the destruction or removal of aquatic vegetation? ☐ Yes ☐ No
If Yes:

- acres of aquatic vegetation proposed to be removed:
- expected acreage of aquatic vegetation remaining after project completion:
- purpose of proposed removal (e.g. beach clearing, invasive species control, boat access):
- proposed method of plant removal:
- if chemical/herbicide treatment will be used, specify product(s):

v. Describe any proposed reclamation/mitigation following disturbance:

c. Will the proposed action use, or create a new demand for water? ☑ Yes ☐ No
If Yes:

i. Total anticipated water usage/demand per day: 1,950 gallons/day

ii. Will the proposed action obtain water from an existing public water supply? ☑ Yes ☐ No
If Yes:

- Name of district or service area: Erie County Water Authority Lease Managed area
- Does the existing public water supply have capacity to serve the proposal? ☑ Yes ☐ No
- Is the project site in the existing district? ☑ Yes ☐ No
- Is expansion of the district needed? ☐ Yes ☑ No
- Do existing lines serve the project site? ☑ Yes ☐ No

iii. Will line extension within an existing district be necessary to supply the project? ☐ Yes ☑ No
If Yes:

- Describe extensions or capacity expansions proposed to serve this project:
- Source(s) of supply for the district:

iv. Is a new water supply district or service area proposed to be formed to serve the project site? ☐ Yes ☐ No
If, Yes:

- Applicant/sponsor for new district:
- Date application submitted or anticipated:
- Proposed source(s) of supply for new district:

v. If a public water supply will not be used, describe plans to provide water supply for the project:

vi. If water supply will be from wells (public or private), what is the maximum pumping capacity: _____ gallons/minute.

d. Will the proposed action generate liquid wastes? ☑ Yes ☐ No
If Yes:

i. Total anticipated liquid waste generation per day: 1,950 gallons/day

ii. Nature of liquid wastes to be generated (e.g., sanitary wastewater, industrial; if combination, describe all components and approximate volumes or proportions of each):
sanitary wastewater

iii. Will the proposed action use any existing public wastewater treatment facilities? ☑ Yes ☐ No
If Yes:

- Name of wastewater treatment plant to be used: Town of Amherst Wastewater Treatment Plant 16
- Name of district: Town of Amherst Sewer District # 16
- Does the existing wastewater treatment plant have capacity to serve the project? ☑ Yes ☐ No
- Is the project site in the existing district? ☑ Yes ☐ No
- Is expansion of the district needed? ☐ Yes ☑ No

Attachment: SP-1988-21B application 011322 (25069 : Sp-1988-21B)

- Do existing sewer lines serve the project site? ☑ Yes ☐ No
- Will a line extension within an existing district be necessary to serve the project? ☐ Yes ☑ No

If Yes:

- Describe extensions or capacity expansions proposed to serve this project: _____

_____

_____

iv. Will a new wastewater (sewage) treatment district be formed to serve the project site? ☐ Yes ☑ No

If Yes:

- Applicant/sponsor for new district: _____
- Date application submitted or anticipated: _____
- What is the receiving water for the wastewater discharge? _____

v. If public facilities will not be used, describe plans to provide wastewater treatment for the project, including specifying proposed receiving water (name and classification if surface discharge or describe subsurface disposal plans):

_____

_____

vi. Describe any plans or designs to capture, recycle or reuse liquid waste: _____

_____

_____

e. Will the proposed action disturb more than one acre and create stormwater runoff, either from new point sources (i.e. ditches, pipes, swales, curbs, gutters or other concentrated flows of stormwater) or non-point source (i.e. sheet flow) during construction or post construction? ☐ Yes ☑ No

If Yes:

i. How much impervious surface will the project create in relation to total size of project parcel?

_____ Square feet or _____ acres (impervious surface)

_____ Square feet or _____ acres (parcel size)

ii. Describe types of new point sources. _____

_____

iii. Where will the stormwater runoff be directed (i.e. on-site stormwater management facility/structures, adjacent properties, groundwater, on-site surface water or off-site surface waters)?

_____

_____

- If to surface waters, identify receiving water bodies or wetlands: _____

_____

_____

- Will stormwater runoff flow to adjacent properties? ☐ Yes ☐ No

iv. Does the proposed plan minimize impervious surfaces, use pervious materials or collect and re-use stormwater? ☐ Yes ☐ No

f. Does the proposed action include, or will it use on-site, one or more sources of air emissions, including fuel combustion, waste incineration, or other processes or operations? ☐ Yes ☑ No

If Yes, identify:

i. Mobile sources during project operations (e.g., heavy equipment, fleet or delivery vehicles)

_____

ii. Stationary sources during construction (e.g., power generation, structural heating, batch plant, crushers)

_____

iii. Stationary sources during operations (e.g., process emissions, large boilers, electric generation)

_____

g. Will any air emission sources named in D.2.f (above), require a NY State Air Registration, Air Facility Permit, or Federal Clean Air Act Title IV or Title V Permit? ☐ Yes ☑ No

If Yes:

i. Is the project site located in an Air quality non-attainment area? (Area routinely or periodically fails to meet ambient air quality standards for all or some parts of the year) ☐ Yes ☐ No

ii. In addition to emissions as calculated in the application, the project will generate:

- _____Tons/year (short tons) of Carbon Dioxide (CO_2)
- _____Tons/year (short tons) of Nitrous Oxide (N_2O)
- _____Tons/year (short tons) of Perfluorocarbons (PFCs)
- _____Tons/year (short tons) of Sulfur Hexafluoride (SF_6)
- _____Tons/year (short tons) of Carbon Dioxide equivalent of Hydroflourocarbons (HFCs)
- _____Tons/year (short tons) of Hazardous Air Pollutants (HAPs)

Attachment: SP-1988-21B application 011322 (25069 : Sp-1988-21B)

h. Will the proposed action generate or emit methane (including, but not limited to, sewage treatment plants, landfills, composting facilities)? ☐Yes ☑No

If Yes:

i. Estimate methane generation in tons/year (metric): _____

ii. Describe any methane capture, control or elimination measures included in project design (e.g., combustion to generate heat or electricity, flaring): _____

_____

i. Will the proposed action result in the release of air pollutants from open-air operations or processes, such as quarry or landfill operations? ☐Yes ☑No

If Yes: Describe operations and nature of emissions (e.g., diesel exhaust, rock particulates/dust):

_____

_____

j. Will the proposed action result in a substantial increase in traffic above present levels or generate substantial new demand for transportation facilities or services? ☐Yes ☑No

If Yes:

i. When is the peak traffic expected (Check all that apply): ☐ Morning ☐ Evening ☐Weekend ☐ Randomly between hours of _____ to _____.

ii. For commercial activities only, projected number of truck trips/day and type (e.g., semi trailers and dump trucks): _____

_____

iii. Parking spaces: Existing _____ Proposed _____ Net increase/decrease _____

iv. Does the proposed action include any shared use parking? ☐Yes ☐No

v. If the proposed action includes any modification of existing roads, creation of new roads or change in existing access, describe:

_____

vi. Are public/private transportation service(s) or facilities available within ½ mile of the proposed site? ☐Yes ☐No

vii Will the proposed action include access to public transportation or accommodations for use of hybrid, electric or other alternative fueled vehicles? ☐Yes ☐No

viii. Will the proposed action include plans for pedestrian or bicycle accommodations for connections to existing pedestrian or bicycle routes? ☐Yes ☐No

k. Will the proposed action (for commercial or industrial projects only) generate new or additional demand for energy? ☐Yes ☑No

If Yes:

i. Estimate annual electricity demand during operation of the proposed action: _____

_____

ii. Anticipated sources/suppliers of electricity for the project (e.g., on-site combustion, on-site renewable, via grid/local utility, or other):

_____

iii. Will the proposed action require a new, or an upgrade, to an existing substation? ☐Yes ☐No

l. Hours of operation. Answer all items which apply.

i. During Construction:

- Monday - Friday: Pursuant to Town Code
- Saturday: Pursuant to Town Code
- Sunday: Pursuant to Town Code
- Holidays: Pursuant to Town Code

ii. During Operations:

- Monday - Friday: Continuous
- Saturday: Continuous
- Sunday: Continuous
- Holidays: Continuous

Attachment: SP-1988-21B application 011322 (25069 : Sp-1988-21B)

m. Will the proposed action produce noise that will exceed existing ambient noise levels during construction, operation, or both? ☐ Yes ☑ No

If yes:

i. Provide details including sources, time of day and duration:

_____

_____

ii. Will the proposed action remove existing natural barriers that could act as a noise barrier or screen? ☐ Yes ☐ No

Describe: _____

_____

n. Will the proposed action have outdoor lighting? ☑ Yes ☐ No

If yes:

i. Describe source(s), location(s), height of fixture(s), direction/aim, and proximity to nearest occupied structures:

dark sky compatible security lighting in parking lot and along building. No spillage into neighboring residential properties.

_____

ii. Will proposed action remove existing natural barriers that could act as a light barrier or screen? ☐ Yes ☑ No

Describe: _____

_____

o. Does the proposed action have the potential to produce odors for more than one hour per day? ☐ Yes ☑ No

If Yes, describe possible sources, potential frequency and duration of odor emissions, and proximity to nearest occupied structures: _____

_____

_____

p. Will the proposed action include any bulk storage of petroleum (combined capacity of over 1,100 gallons) or chemical products 185 gallons in above ground storage or any amount in underground storage? ☐ Yes ☑ No

If Yes:

i. Product(s) to be stored _____

ii. Volume(s) _____ per unit time _____ (e.g., month, year)

iii. Generally, describe the proposed storage facilities:_____

_____

q. Will the proposed action (commercial, industrial and recreational projects only) use pesticides (i.e., herbicides, insecticides) during construction or operation? ☐ Yes ☑ No

If Yes:

i. Describe proposed treatment(s):

_____

_____

_____

_____

ii. Will the proposed action use Integrated Pest Management Practices? ☐ Yes ☐ No

r. Will the proposed action (commercial or industrial projects only) involve or require the management or disposal of solid waste (excluding hazardous materials)? ☐ Yes ☑ No

If Yes:

i. Describe any solid waste(s) to be generated during construction or operation of the facility:

- Construction: _____ tons per _____ (unit of time)
- Operation : _____ tons per _____ (unit of time)

ii. Describe any proposals for on-site minimization, recycling or reuse of materials to avoid disposal as solid waste:

- Construction: _____

  _____
- Operation: _____

  _____

iii. Proposed disposal methods/facilities for solid waste generated on-site:

- Construction: _____

  _____
- Operation: _____

  _____

Attachment: SP-1988-21B application 011322 (25069 : Sp-1988-21B)

4.a

s. Does the proposed action include construction or modification of a solid waste management facility? ☐ Yes ☑ No

If Yes:

i. Type of management or handling of waste proposed for the site (e.g., recycling or transfer station, composting, landfill, or other disposal activities): _____

ii. Anticipated rate of disposal/processing:

- _____ Tons/month, if transfer or other non-combustion/thermal treatment, or
- _____ Tons/hour, if combustion or thermal treatment

iii. If landfill, anticipated site life: _____ years

t. Will the proposed action at the site involve the commercial generation, treatment, storage, or disposal of hazardous waste? ☐ Yes ☑ No

If Yes:

i. Name(s) of all hazardous wastes or constituents to be generated, handled or managed at facility: _____

ii. Generally describe processes or activities involving hazardous wastes or constituents: _____

iii. Specify amount to be handled or generated _____ tons/month

iv. Describe any proposals for on-site minimization, recycling or reuse of hazardous constituents: _____

v. Will any hazardous wastes be disposed at an existing offsite hazardous waste facility? ☐ Yes ☐ No

If Yes: provide name and location of facility: _____

If No: describe proposed management of any hazardous wastes which will not be sent to a hazardous waste facility:

E. Site and Setting of Proposed Action

E.1. Land uses on and surrounding the project site

a. Existing land uses.

i. Check all uses that occur on, adjoining and near the project site.

☐ Urban ☐ Industrial ☑ Commercial ☑ Residential (suburban) ☐ Rural (non-farm)
☐ Forest ☐ Agriculture ☐ Aquatic ☑ Other (specify): vacant land, other community facilities (churches)

ii. If mix of uses, generally describe:

b. Land uses and covertypes on the project site.

Land use or Covertype	Current Acreage	Acreage After Project Completion	Change (Acres +/-)
• Roads, buildings, and other paved or impervious surfaces	1.99 ac	2.58	+ 0.59
• Forested	0		
• Meadows, grasslands or brushlands (non-agricultural, including abandoned agricultural)	0		
• Agricultural (includes active orchards, field, greenhouse etc.)	0		
• Surface water features (lakes, ponds, streams, rivers, etc.)	0		
• Wetlands (freshwater or tidal)	0		
• Non-vegetated (bare rock, earth or fill)	0		
• Other Describe: green space, lawn open aeeas	5.94	5.35	- 0.59

Attachment: SP-1988-21B application 011322 (25069 : Sp-1988-21B)

c. Is the project site presently used by members of the community for public recreation? ☐ Yes ☑ No
i. If Yes: explain: _____

d. Are there any facilities serving children, the elderly, people with disabilities (e.g., schools, hospitals, licensed day care centers, or group homes) within 1500 feet of the project site? ☐ Yes ☑ No
If Yes,
i. Identify Facilities:

_____
_____

e. Does the project site contain an existing dam? ☐ Yes ☑ No
If Yes:
i. Dimensions of the dam and impoundment:

- Dam height: _____ feet
- Dam length: _____ feet
- Surface area: _____ acres
- Volume impounded: _____ gallons OR acre-feet

ii. Dam's existing hazard classification: _____
iii. Provide date and summarize results of last inspection:

_____
_____

f. Has the project site ever been used as a municipal, commercial or industrial solid waste management facility, or does the project site adjoin property which is now, or was at one time, used as a solid waste management facility? ☐ Yes ☑ No
If Yes:
i. Has the facility been formally closed? ☐ Yes ☐ No

- If yes, cite sources/documentation: _____

ii. Describe the location of the project site relative to the boundaries of the solid waste management facility:

_____
_____

iii. Describe any development constraints due to the prior solid waste activities: _____

_____

g. Have hazardous wastes been generated, treated and/or disposed of at the site, or does the project site adjoin property which is now or was at one time used to commercially treat, store and/or dispose of hazardous waste? ☐ Yes ☑ No
If Yes:
i. Describe waste(s) handled and waste management activities, including approximate time when activities occurred:

_____
_____

h. Potential contamination history. Has there been a reported spill at the proposed project site, or have any remedial actions been conducted at or adjacent to the proposed site? ☐ Yes ☑ No
If Yes:
i. Is any portion of the site listed on the NYSDEC Spills Incidents database or Environmental Site Remediation database? Check all that apply: ☐ Yes ☐ No

☐ Yes – Spills Incidents database — Provide DEC ID number(s): _____
☐ Yes – Environmental Site Remediation database — Provide DEC ID number(s): _____
☐ Neither database

ii. If site has been subject of RCRA corrective activities, describe control measures:_____

_____
_____

iii. Is the project within 2000 feet of any site in the NYSDEC Environmental Site Remediation database? ☐ Yes ☑ No
If yes, provide DEC ID number(s): _____

iv. If yes to (i), (ii) or (iii) above, describe current status of site(s):

_____
_____

Attachment: SP-1988-21B application 011322 (25069 : Sp-1988-21B)

v. Is the project site subject to an institutional control limiting property uses? ☐ Yes ☐

- If yes, DEC site ID number: _____
- Describe the type of institutional control (e.g., deed restriction or easement): _____
- Describe any use limitations: _____
- Describe any engineering controls: _____
- Will the project affect the institutional or engineering controls in place? ☐ Yes ☐ No
- Explain: _____

E.2. Natural Resources On or Near Project Site

a. What is the average depth to bedrock on the project site? 6.6+ feet

b. Are there bedrock outcroppings on the project site? ☐ Yes ☑ No
If Yes, what proportion of the site is comprised of bedrock outcroppings? _____%

c. Predominant soil type(s) present on project site:

NfA Niagara Silt Loam, 0-3% slopes	50 %
Sw Swromville clay loam	25 %
Wd Wayland Soils complex, 0-3% slopes	25 %

d. What is the average depth to the water table on the project site? Average: 1.02 feet

e. Drainage status of project site soils:

☐ Well Drained:	____% of site	
☐ Moderately Well Drained:	____% of site	Web Soil Survey notes 75% of site
☑ Poorly Drained	25 % of site	"somewhat poorly drained."

f. Approximate proportion of proposed action site with slopes:

☑ 0-10%:	100 % of site
☐ 10-15%:	____% of site
☐ 15% or greater:	____% of site

g. Are there any unique geologic features on the project site? ☐ Yes ☑ No
If Yes, describe: _____

h. Surface water features.

i. Does any portion of the project site contain wetlands or other waterbodies (including streams, rivers, ponds or lakes)? ☑ Yes ☐ No

ii. Do any wetlands or other waterbodies adjoin the project site? ☑ Yes ☐ No

If Yes to either *i* or *ii*, continue. If No, skip to E.2.i.

iii. Are any of the wetlands or waterbodies within or adjoining the project site regulated by any federal, state or local agency? ☑ Yes ☐ No

iv. For each identified regulated wetland and waterbody on the project site, provide the following information:

- Streams: Name Seasonally flooded federal streambed (eastern portion of site) Classification R4SBC
- Lakes or Ponds: Name _____ Classification _____
- Wetlands: Name Federal Freshwater/Forested Shrub wetland (southern and eastern portion of site) Approximate Size 6.45; 0.75
- Wetland No. (if regulated by DEC) TE-18 (buffer zone on northern portion of site)

v. Are any of the above water bodies listed in the most recent compilation of NYS water quality-impaired waterbodies? ☐ Yes ☑ No

If yes, name of impaired water body/bodies and basis for listing as impaired: _____

i. Is the project site in a designated Floodway? ☐ Yes ☑ No

j. Is the project site in the 100-year Floodplain? ☐ Yes ☑ No

k. Is the project site in the 500-year Floodplain? ☑ Yes ☐ No

l. Is the project site located over, or immediately adjoining, a primary, principal or sole source aquifer? ☐ Yes ☑ No
If Yes:

i. Name of aquifer: _____

Attachment: SP-1988-21B application 011322 (25069 : Sp-1988-21B)

m. Identify the predominant wildlife species that occupy or use the project site: built landscape habitats

n. Does the project site contain a designated significant natural community? ☐ Yes ☑ No

If Yes:

i. Describe the habitat/community (composition, function, and basis for designation): _____

ii. Source(s) of description or evaluation: _____

iii. Extent of community/habitat:

- Currently: _____ acres
- Following completion of project as proposed: _____ acres
- Gain or loss (indicate + or -): _____ acres

o. Does project site contain any species of plant or animal that is listed by the federal government or NYS as endangered or threatened, or does it contain any areas identified as habitat for an endangered or threatened species? ☐ Yes ☑ No

If Yes:

i. Species and listing (endangered or threatened): _____

p. Does the project site contain any species of plant or animal that is listed by NYS as rare, or as a species of special concern? ☐ Yes ☑ No

If Yes:

i. Species and listing: _____

q. Is the project site or adjoining area currently used for hunting, trapping, fishing or shell fishing? ☐ Yes ☑ No

If yes, give a brief description of how the proposed action may affect that use: _____

E.3. Designated Public Resources On or Near Project Site

a. Is the project site, or any portion of it, located in a designated agricultural district certified pursuant to Agriculture and Markets Law, Article 25-AA, Section 303 and 304? ☐ Yes ☑ No

If Yes, provide county plus district name/number: _____

b. Are agricultural lands consisting of highly productive soils present? ☐ Yes ☑ No

i. If Yes: acreage(s) on project site? _____

ii. Source(s) of soil rating(s): _____

c. Does the project site contain all or part of, or is it substantially contiguous to, a registered National Natural Landmark? ☐ Yes ☑ No

If Yes:

i. Nature of the natural landmark: ☐ Biological Community ☐ Geological Feature

ii. Provide brief description of landmark, including values behind designation and approximate size/extent: _____

d. Is the project site located in or does it adjoin a state listed Critical Environmental Area? ☐ Yes ☑ No

If Yes:

i. CEA name: _____

ii. Basis for designation: _____

iii. Designating agency and date: _____

Attachment: SP-1988-21B application 011322 (25069 : Sp-1988-21B)

e. Does the project site contain, or is it substantially contiguous to, a building, archaeological site, or district which is listed on the National or State Register of Historic Places, or that has been determined by the Commissioner of the NYS Office of Parks, Recreation and Historic Preservation to be eligible for listing on the State Register of Historic Places? ☐ Yes ☑ No

If Yes:

i. Nature of historic/archaeological resource: ☐ Archaeological Site ☐ Historic Building or District

ii. Name: _____

iii. Brief description of attributes on which listing is based:

_____

f. Is the project site, or any portion of it, located in or adjacent to an area designated as sensitive for archaeological sites on the NY State Historic Preservation Office (SHPO) archaeological site inventory? ☑ Yes ☐ No

*See note below

g. Have additional archaeological or historic site(s) or resources been identified on the project site? ☐ Yes ☑ No

If Yes:

i. Describe possible resource(s): _____

ii. Basis for identification: _____

h. Is the project site within fives miles of any officially designated and publicly accessible federal, state, or local scenic or aesthetic resource? ☑ Yes ☐ No

If Yes:

i. Identify resource: Erie Canal National Heritage Corridor

ii. Nature of, or basis for, designation (e.g., established highway overlook, state or local park, state historic trail or scenic byway, etc.): Historic trail and recreation corridor

iii. Distance between project and resource: 3.5-5.0 miles.

i. Is the project site located within a designated river corridor under the Wild, Scenic and Recreational Rivers Program 6 NYCRR 666? ☐ Yes ☑ No

If Yes:

i. Identify the name of the river and its designation: _____

ii. Is the activity consistent with development restrictions contained in 6NYCRR Part 666? ☐ Yes ☐ No

F. Additional Information

Attach any additional information which may be needed to clarify your project.

If you have identified any adverse impacts which could be associated with your proposal, please describe those impacts plus any measures which you propose to avoid or minimize them.

G. Verification

I certify that the information provided is true to the best of my knowledge.

Applicant/Sponsor Name theWELL Buffalo Date November 15, 2021

Signature /s/ Corey Auerbach Title agent/attorney

*If the proposed action is within an area designated as containing "sensitive archaeological resources," the EAF Mapper will automatically check "yes" on the PDF of the EAF. Sensitivity for archaeological sites usually covers large areas. Proposed action is within the "Intensive Level Historic Resources Survey of Selected [Building] Resources in the Town of Amherst," Survey No. 17SR0080, which surveyed the entire Town of Amherst and Village of Williamsville, approximately 35,000 acres. No subsequent or site-specific survey done on site of proposed action and site of proposed action was not one of 225 specific properties investigated as part of Town survey.

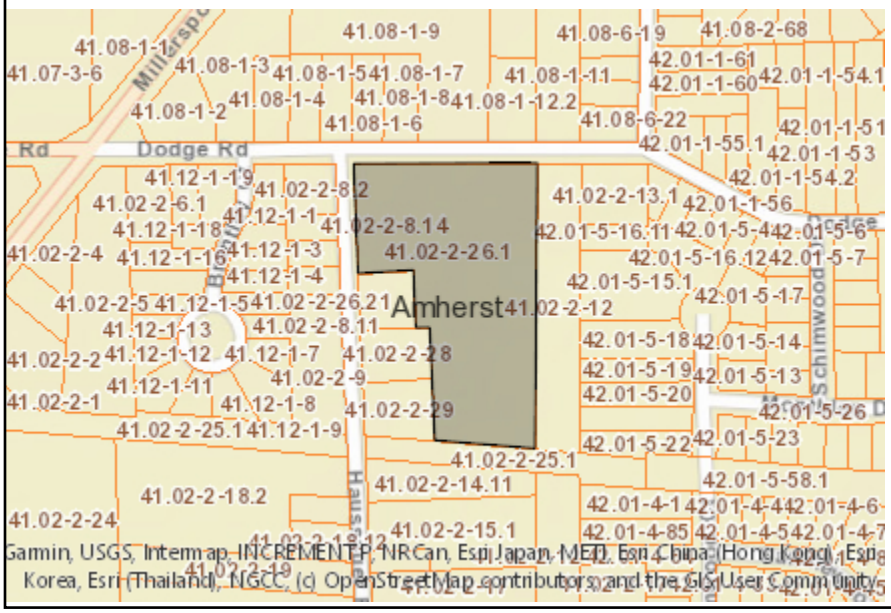
PRINT FORM

EAF Mapper Summary Report

Thursday, November 11, 2021 2:22 PM



Disclaimer: The EAF Mapper is a screening tool intended to assist project sponsors and reviewing agencies in preparing an environmental assessment form (EAF). Not all questions asked in the EAF are answered by the EAF Mapper. Additional information on any EAF question can be obtained by consulting the EAF Workbooks. Although the EAF Mapper provides the most up-to-date digital data available to DEC, you may also need to contact local or other data sources in order to obtain data not provided by the Mapper. Digital data is not a substitute for agency determinations.

B.i.i [Coastal or Waterfront Area]	No
B.i.ii [Local Waterfront Revitalization Area]	No
C.2.b. [Special Planning District]	Yes - Digital mapping data are not available for all Special Planning Districts. Refer to EAF Workbook.
C.2.b. [Special Planning District - Name]	NYS Heritage Areas:West Erie Canal Corridor
E.1.h [DEC Spills or Remediation Site - Potential Contamination History]	Digital mapping data are not available or are incomplete. Refer to EAF Workbook.
E.1.h.i [DEC Spills or Remediation Site - Listed]	Digital mapping data are not available or are incomplete. Refer to EAF Workbook.
E.1.h.i [DEC Spills or Remediation Site - Environmental Site Remediation Database]	Digital mapping data are not available or are incomplete. Refer to EAF Workbook.
E.1.h.iii [Within 2,000' of DEC Remediation Site]	No
E.2.g [Unique Geologic Features]	No
E.2.h.i [Surface Water Features]	Yes
E.2.h.ii [Surface Water Features]	Yes
E.2.h.iii [Surface Water Features]	Yes - Digital mapping information on local and federal wetlands and waterbodies is known to be incomplete. Refer to EAF Workbook.
E.2.h.iv [Surface Water Features - Wetlands Name]	Federal Waters
E.2.h.v [Impaired Water Bodies]	No
E.2.i. [Floodway]	No
E.2.j. [100 Year Floodplain]	No
E.2.k. [500 Year Floodplain]	Yes
E.2.l. [Aquifers]	No
E.2.n. [Natural Communities]	No

Attachment: SP-1988-21B application 011322 (25069 : Sp-1988-21B)

E.2.o. [Endangered or Threatened Species]	No
E.2.p. [Rare Plants or Animals]	No
E.3.a. [Agricultural District]	No
E.3.c. [National Natural Landmark]	No
E.3.d [Critical Environmental Area]	No
E.3.e. [National or State Register of Historic Places or State Eligible Sites]	Digital mapping data are not available or are incomplete. Refer to EAF Workbook.
E.3.f. [Archeological Sites]	Yes
E.3.i. [Designated River Corridor]	No

Attachment: SP-1988-21B application 011322 (25069 : Sp-1988-21B)

TOWN OF AMHERST
State Environmental Quality Review
ENVIRONMENTAL ASSESSMENT FORM
-- ADDENDUM --

1. For each applicable category of proposed <u>new</u> structures, including additions to existing structures, provide the following information for all soil types on the project site (*according to Soil Survey of Erie County, NY; Table 11, Building Site Development, pp 294-305):*

Soil Name	Shallow excavations	Dwellings without basements	Dwellings with basements	Small commercial buildings	Local roads and streets
NfA Niagara Silt Loam, 0-3% slopes	very limited	very limited	very limited	very limited	very limited
Sw Swromville clay loam	very limited	very limited	very limited	very limited	very limited
Wd Wayland soils complex, 0-3% slopes	very limited	very limited	very limited	very limited	very limited

2. If the Soil survey indicates either "severe" or "moderate" suitability for the proposed types of construction, a geotechnical and hydrological analysis based on one test per 3.5 acres of project area must be provided (per Town Board resolution, 3/17/03, amended 6/16/03).

   _____ Geotechnical report attached X Not applicable

3. Is your property located: On Youngs Road between Dodge and Klein Roads? ☐ Yes ☑ No
   On Wehrle Dr. between Spindrift Dr. and Oakwood Rd? ☐ Yes ☑ No

   If so, the property may be within an area of the Town that is affected by a moratorium on connections to the sanitary sewer system.

4. Are there alternative locations on the site for this project? ☐ Yes ☑ No

5. Location and size of real property owned by petitioner within one (1) mile of subject proposal:
   none.

6. Are you aware of current or future plans or intentions by others in the Town of Amherst to develop property within 1000± ft. of the present project request: ☐ Yes ☑ No

   Describe_____

   (Potential environmental impacts from adjacent or nearby projects undergoing the approval process will receive a coordinated environmental review to determine cumulative effects on common receivers (e.g. traffic and drainage corridors) and other relevant environmental concerns.)

7. Maximum number of vehicular trips to be generated per peak hour upon completion of project 15.00
   Source: Institute of transportation Engineers Common Trip Rates - Church - 1,000 sf GFA = 0.49/unit Tot GFA = 30,625/1000 = 30.63 x 0.49

8. Will blasting occur during construction? ☐ Yes ☑ No

9. Does the project propose to connect and be tributary to the public sanitary sewer system? ☑ Yes ☐ No

10. Proposed net additional gallons per day (gpd) of sanitary sewer discharge upon completion of project:
    1,950 average flow 7,624.50 peak flow.

    (Average flows of 2,500 gpd or greater will require an Engineer's Report that includes a detailed downstream sewer capacity analysis and the identification of and commitment to required I/I offset work during peak wastewater flow conditions.)

11. Based on the Town's *2011 Reconnaissance Level Survey of Historic Resources,* is your property 'blue-rated' for historic significance? ☐ Yes ☑ No

SITE NOTES

1. FOR REFERENCE INFORMATION SEE TOPOGRAPHIC SURVEY PREPARED BY WILLIAM SCHUTT ASSOCIATES JOB# 21171 DATED 8/30/21 INCLUDED WITH THIS SET OF SITE PLANS.
2. ALL CONSTRUCTION SHALL CONFORM TO TOWN OF AMHERST STANDARDS AND NEW YORK STATE CODE REQUIREMENTS, AS WELL AS THE LATEST A.I.S.C., A.C.I., O.S.H.A., AND A.S.T.M. STANDARDS. WHERE CODES OVERLAP, THE CONTRACTOR SHALL COMPLY WITH THE MORE STRINGENT CODE.
3. WHERE A SPECIFIC MANUFACTURER'S PRODUCT IS CALLED OUT ON THIS SHEET OR ANY OTHER PLAN IN THIS SET OF DRAWINGS, THE CONTRACTOR MUST COMPLY WITH THE MANUFACTURER'S LATEST PRINTED INSTRUCTIONS AND RECOMMENDATIONS FOR INSTALLATION.
4. ANY TEMPORARY TRAFFIC CONTROL AND WARNING SIGNS SHALL CONFORM TO N.Y.S.D.O.T. MANUAL OF UNIFORM TRAFFIC CONTROL DEVICES.
5. THE CONTRACTOR SHALL MAINTAIN ACCESSIBLE PASSAGEWAYS FOR TRAFFIC AND PEDESTRIANS TO EXISTING BUSINESSES WHICH WILL REMAIN IN OPERATION THROUGHOUT THE DURATION OF THE CONSTRUCTION.
6. ANY CAST-IN-PLACE CONCRETE SHALL CONFORM TO N.Y.S.D.O.T. STANDARD SPECIFICATIONS (SECTION 501). USE CLASS "C" FOR APRONS, OR STRUCTURAL SLABS. USE CLASS "D" FOR SIDEWALKS AND ALL OTHER GENERAL PURPOSE CONCRETE PAVEMENT ON SITE. CEMENT USED TO PRODUCE CONCRETE SHALL CONFORM WITH BOTH ACI 318 AND ASTM C1157. CONCRETE SHALL HAVE A SLUMP OF NO MORE THAN 5" AND AN AIR ENTRAINMENT OF 4-6%.
7. ALL CONCRETE CURBS, SIDEWALKS, APRONS, AND PADS SHALL BE CURED USING A PIGMENTED CURING COMPOUND CONFORMING TO A.S.T.M. C309.
8. ANY DEVIATION FROM ANY PLANS IN THIS DRAWING SET SHALL REQUIRE APPROVAL OF DESIGN ENGINEER AND THE TOWN OF AMHERST PLANNING AND BUILDING DEPARTMENTS, AS WELL AS THE APPROPRIATE UTILITY COMPANIES AND SERVICE PROVIDERS.
9. THE DESIGN ENGINEER (STUDIO T3) SHOULD BE IMMEDIATELY CONTACTED UPON DISCOVERY OF ANY ABOVEGROUND OR BELOW GROUND OBJECTS (BUILDING FOUNDATIONS, BURIED VAULTS, TREES, SIDEWALKS, PAVEMENT, RAILINGS, SIGNS, STOCKPILES, STUMPS, OR SIMILAR). WORK SHALL BE IMMEDIATELY SUSPENDED AND NOT COMMENCE UNTIL SUCH DISCOVERED OBJECTS ARE IDENTIFIED AND THE DESIGN ENGINEER (STUDIO T3) ISSUES EITHER A WRITTEN APPROVAL OR A SIGNED REVISED PLAN.
10. THE CONTRACTOR SHALL BE RESPONSIBLE FOR PAYING ALL NECESSARY FEES AND OBTAINING ALL NECESSARY PERMITS PRIOR TO THE START OF CONSTRUCTION. CONTACT TOWN OF AMHERST BUILDING DEPARTMENT FOR INSTRUCTIONS, PERMIT APPLICATIONS, AND FEES.
11. CONTRACTOR SHALL TAKE ALL REASONABLE MEASURES TO PROTECT EXISTING TREES WHICH ARE TO BE PRESERVED FROM ALL POSSIBLE TYPES OF ROOT, TRUNK, AND LIMB DAMAGE; INCLUDING BUT NOT LIMITED TO, RETAINING WALLS WHICH PREVENT FILLING ON TOP OF ROOTS OR EXCAVATING TREE ROOTS AS REQUIRED.

*NOTE THE REQUIRED 10% IS NOT NECESSARY, ONLY A PORTION OF THE EXISTNG PARKING LOT IS BEING MODIFIED.

GENERAL NOTE:

811

LOCATION OF EXISTING UTILITIES ARE APPROXIMATE. (HORIZONTAL AND VERTICAL) THESE PLANS DO NOT ASSURE THE PRESENCE OR LOCATION OF UTILITIES, JUST APPROXIMATE LOCATIONS. THE CONTRACTOR SHALL NOTIFY "DIG SAFELY NEW YORK" FOR LOCATION OF ALL UNDERGROUND UTILITIES. AT LEAST 2 TO 10 WORKING DAYS PRIOR TO ANY MECHANIZED WORK (DOES NOT INCLUDE THE DATE OF THE CALL) NOTICE MUST BE PROVIDED TO THE ONE-CALL NOTIFICATION SYSTEM, WHICH WILL TRANSMIT THE PROJECT INFORMATION TO INVOLVED MEMBERS SO THAT THEY CAN MARK THE LOCATION OF ANY FACILITIES AT THE EXCAVATION SITE

FOR EXCAVATION ON LONG ISLAND AND THE FIVE BOROUGHS OF NEW YORK CITY, NEW YORK 811 MUST BE CALLED AT 1-800-272-4480. FOR EXCAVATION ELSEWHERE IN NEW YORK STATE, DIG SAFELY NEW YORK MUST BE CALLED AT 1-800-962-7962. NOTIFICATION FOR EXCAVATION WORK ANYWHERE IN THE STATE CAN BE MADE BY DIALING 811. WHETHER DIALING THE 1-800 NUMBER OR 811, THERE IS NO CHARGE FOR THE CALL.

CONTRACTOR SHALL TAKE REASONABLE MEASURES TO PROTECT EXISTING TREES WHERE NECESSARY ON NEIGHBORING PROPERTY FROM ALL TYPES OF DAMAGE TO BOTH TRUNK AND ROOTS. LIMIT FILLING OVER TREE ROOTS TO 4" MAX.

AT LEAST 2 TO 10 WORKING DAYS PRIOR TO ANY MECHANIZED WORK (DOES NOT INCLUDE THE DATE OF THE CALL) NOTICE MUST BE PROVIDED TO THE ONE-CALL NOTIFICATION SYSTEM, WHICH WILL TRANSMIT THE PROJECT INFORMATION TO INVOLVED MEMBERS SO THAT THEY CAN MARK THE LOCATION OF ANY FACILITIES AT THE EXCAVATION SITE

FOR EXCAVATION ON LONG ISLAND AND THE FIVE BOROUGHS OF NEW YORK CITY, NEW YORK 811 MUST BE CALLED AT 1-800-272-4480. FOR EXCAVATION ELSEWHERE IN NEW YORK STATE, DIG SAFELY NEW YORK MUST BE CALLED AT 1-800-962-7962. NOTIFICATION FOR EXCAVATION WORK ANYWHERE IN THE STATE CAN BE MADE BY DIALING 811. WHETHER DIALING THE 1-800 NUMBER OR 811, THERE IS NO CHARGE FOR THE CALL.

CONTRACTOR SHALL TAKE REASONABLE MEASURES TO PROTECT EXISTING TREES WHERE NECESSARY ON NEIGHBORING PROPERTY FROM ALL TYPES OF DAMAGE TO BOTH TRUNK AND ROOTS. LIMIT FILLING OVER TREE ROOTS TO 4" MAX.

GRADING & DRAINAGE NOTES

1. FOR REFERENCE INFORMATION SEE TOPOGRAPHIC SURVEY PREPARED BY WILLIAM SCHUTT ASSOCIATES JOB# 21171 DATED 8/30/21 INCLUDED WITH THIS SET OF SITE PLANS.
2. THE CONTRACTOR SHALL FIELD VERIFY ALL UNDERGROUND UTILITY LOCATIONS AND DEPTHS PRIOR TO THE START OF EXCAVATION.
3. ALL EROSION CONTROL MEASURES SHALL REMAIN IN PLACE THROUGH OUT THE CONSTRUCTION PROCESS AND UNTIL LAWN AREAS HAVE OBTAIN 80% COVERAGE.
4. ALL SOIL FILL AREAS SHALL BE PLACED IN 8" MAXIMUM LIFTS. FILL SHALL NOT BE PLACED ON FROZEN SOIL.
5. ALL SELECT FILL AREAS BENEATH PAVED AREAS SHALL BE COMPACTED TO A MINIMUM 95% DENSITY IN 6" MAXIMUM LIFTS AS DETERMINED PER ASTM D 1557.
6. WHEREVER POSSIBLE, EXCAVATED TOPSOIL SHALL BE STOCKPILED ON SITE AND RE-USED DURING LANDSCAPING AS NECESSARY.
7. BEFORE CONSTRUCTION BEGINS, A CERTIFIED LICENSED GEOTECHNICAL ENGINEER SHOULD CONDUCT A FOUNDATION AND SOIL INVESTIGATION IN CONFORMANCE WITH SECTIONS 1802.2 THOUGH 1802.6 OF THE NEW YORK STATE BUILDING CODES. ALL CONSTRUCTION, FILL, AND SITE PREPARATION SHALL MEET OR EXCEED ALL SPECIFICATIONS AND RECOMMENDATIONS SET FORTH IN THE GEOTECHNICAL REPORT.
8. FUTURE LAWN AREAS SHALL BE SCARIFIED TO A MINIMUM DEPTH OF 3 INCHES PRIOR TO PLACEMENT OF TOPSOIL.
9. TILLING SHALL NOT BE PERFORMED WITHIN THE DRIP LINE OF EXISTING TREES TO REMAIN OR OVER EXISTING UNDERGROUND UTILITIES LESS THAN 24 INCHES BELOW GRADE.
10. CONTRACTOR SHALL TAKE ALL REASONABLE MEASURES TO PROTECT EXISTING TREES WHICH ARE TO BE PRESERVED FROM ALL POSSIBLE TYPES OF ROOT, TRUNK, AND LIMB DAMAGE; INCLUDING BUT NOT LIMITED TO, RETAINING WALLS WHICH PREVENT FILLING ON TOP OF ROOTS OR EXCAVATING TREE ROOTS AS REQUIRED.
11. RETAINING WALLS WHICH PREVENT FILLING ON TOP OF ROOTS OR EXCAVATING TREE ROOTS AS REQUIRED.
12. ALL SELECT FILL AREAS BENEATH PAVED AREAS SHALL BE COMPACTED TO A MINIMUM 95% DENSITY IN 6" MAXIMUM LIFTS AS DETERMINED PER ASTM D 1557.
13. ALL PROPOSED STORM SEWER PIPE SPECIFIED AS HDPE SHALL BE HI-Q PIPE AS MANUFACTURED BY ADVANCED DRAINAGE SYSTEMS (ADS) OR HANCOR INC. OR APPROVED EQUAL BY ENGINEER. CONFORMING TO ASTM F 405. HDPE STORM SEWERS SHALL MEET OR EXCEED AASHTO M294 STANDARDS.
14. THE DESIGN ENGINEER IS NOT RESPONSIBLE FOR STORM SEWER SYSTEM FAILURE DUE TO LACK OF INSPECTION OR MAINTENANCE.
15. THE DESIGN ENGINEER IS NOT RESPONSIBLE FOR ANY UTILITIES NOT SHOWN ON THIS PLAN OR ANY ACCIDENTAL RUPTURES DURING EXCAVATION OR CONSTRUCTION.
16. ALL NEW ROOF DRAIN LATERALS SHALL BE 6" DIAMETER PVC SDR-35 CONFORMING TO ASTM D 2665, ASTM D 3034, ASTM F 891, CSA-B182.2, OR CAN/CSA-B182.4.
17. ALL PIPE FITTINGS SHALL CONFORM TO ASTM D 2609, ASTM D 2464, ASTM D 2466, ASTM D 2467, CAN/CSA-B137.2, OR ASTM D 2665.
18. THE GENERAL CONTRACTOR SHALL PERFORM ALL APPLICABLE TESTS AS REQUIRED BY THE LOCAL PLUMBING AND BUILDING DEPARTMENT, AS WELL AS TESTS REQUIRED IN THE N.Y.S. PLUMBING CODE SECTIONS 312.2 THRU 312.9.
19. ALL JOINTS OR JOINT SYSTEMS FOR CULVERTS, UNDERGROUND DETENTION SYSTEMS, AND STORM SEWERS SHALL BE SILT TIGHT, AND SHALL RESIST INFILTRATION OF SOIL PARTICLES THAT PASS THE NO. 200 SIEVE. IF GEOTEXTILE WRAP IS SPECIFIED FOR USE IN JOINTS, IT SHALL MEET AASHTO M288, WITH AN APPARENT OPENING SIZE (AOS) GREATER THAN 70.
20. THE CONTRACTOR SHALL BE RESPONSIBLE FOR PAYING ALL NECESSARY FEES AND OBTAINING ALL NECESSARY PERMITS PRIOR TO THE START OF CONSTRUCTION. CONTACT TOWN OF AMHERST BUILDING DEPARTMENT (631-7030) FOR INSTRUCTIONS, PERMIT APPLICATIONS, AND FEES.

GENERAL NOTE:

811

LOCATION OF EXISTING UTILITIES ARE APPROXIMATE. (HORIZONTAL AND VERTICAL) THESE PLANS DO NOT ASSURE THE PRESENCE OR LOCATION OF UTILITIES, JUST APPROXIMATE LOCATIONS. THE CONTRACTOR SHALL NOTIFY "DIG SAFELY NEW YORK" FOR LOCATION OF ALL UNDERGROUND UTILITIES. AT LEAST 2 TO 10 WORKING DAYS PRIOR TO ANY MECHANIZED WORK (DOES NOT INCLUDE THE DATE OF THE CALL) NOTICE MUST BE PROVIDED TO THE ONE-CALL NOTIFICATION SYSTEM, WHICH WILL TRANSMIT THE PROJECT INFORMATION TO INVOLVED MEMBERS SO THAT THEY CAN MARK THE LOCATION OF ANY FACILITIES AT THE EXCAVATION SITE

FOR EXCAVATION ON LONG ISLAND AND THE FIVE BOROUGHS OF NEW YORK CITY, NEW YORK 811 MUST BE CALLED AT 1-800-272-4480. FOR EXCAVATION ELSEWHERE IN NEW YORK STATE, DIG SAFELY NEW YORK MUST BE CALLED AT 1-800-962-7962. NOTIFICATION FOR EXCAVATION WORK ANYWHERE IN THE STATE CAN BE MADE BY DIALING 811, WHETHER DIALING THE 1-800 NUMBER OR 811, THERE IS NO CHARGE FOR THE CALL.

CONTRACTOR SHALL TAKE REASONABLE MEASURES TO PROTECT EXISTING TREES WHERE NECESSARY ON NEIGHBORING PROPERTY FROM ALL TYPES OF DAMAGE TO BOTH TRUNK AND ROOTS. LIMIT FILLING OVER TREE ROOTS TO 4" MAX.

UTILITY NOTES

1. FOR REFERENCE INFORMATION SEE TOPOGRAPHIC SURVEY PREPARED BY WILLIAM SCHUTT ASSOCIATES JOB# 21171 DATED 8/30/21 INCLUDED WITH THIS SET OF SITE PLANS.
2. FOR REFERENCE ALSO SEE EXACT UTILITY CONNECTION LOCATIONS AND DEPTHS ON ARCHITECTURAL, MECHANICAL, ELECTRICAL, H.V.A.C., AND PLUMBING PLANS.
3. EXISTING SERVICE UTILITY CONNECTIONS TO BE ABANDONED OR DISCONTINUED SHALL BE SHUT OFF BY THE RESPECTIVE UTILITY AGENCY PRIOR TO THE START OF WORK.
4. EXISTING UNDERGROUND UTILITY LINES TO REMAIN WHICH ARE UNCOVERED BY EXCAVATION SHALL BE ADEQUATELY SUPPORTED AND PROTECTED DURING EARTHWORK ACTIVITIES.
5. THE CONTRACTOR SHALL PROVIDE SLEEVES THROUGH NEW FOUNDATION WALLS AS NECESSARY FOR PROTECTING EXISTING AND PROPOSED UTILITY LINES.
6. THE EXISTING WATERLINE SHALL BE FIELD VERIFIED.
7. MAINTAIN A MINIMUM 12" INCHES OF VERTICAL SEPARATION BETWEEN THE OUTSIDE DIAMETER OF NEW WATERLINES AND THE OUTSIDE DIAMETER OF SANITARY OR STORM SEWER PIPING.
8. MAINTAIN A MINIMUM 5' FOOT OF HORIZONTAL SEPARATION BETWEEN THE OUTSIDE DIAMETER OF NEW WATERLINES AND THE OUTSIDE DIAMETER OF SANITARY OR STORM SEWER PIPING.
9. THE TOWN OF AMHERST WATER DEPARTMENT SHALL PERFORM ALL WATER LINE WORK FROM TAP IN POINT ON THE WATERMAIN TO THE VALVES ON THE RIGHT-OF-WAY LINE.
10. AS PER SECTION 111.1 OF THE NEW YORK STATE BUILDING CODE, ALL NEW GAS, TELEPHONE, CABLE TV, AND ELECTRICAL UTILITIES SHALL BE DESIGNED, SIZED, AND INSTALLED BY THE RESPECTIVE UTILITY AGENCIES.
11. AS PER SECT 608.1.2 OF THE NYS PLUMBING CODE PRIVATE WELLS SHALL BE INSTALLED BY A WELL DRILLER REGISTERED WITH THE NYSDEC IN CONFORMANCE WITH NYSDEC & NYSDOH REGULATIONS.
12. ALL NEW WATER LINE PIPING SHALL BE INSTALLED WITH A MIN. 5'-0" DEPTH OF COVER. ANY MECHANICAL JOINTS ON WATERLINES (IF USED) SHALL BE MADE IN CONFORMANCE TO ASTM D 3139 OR AWWA C111. JOINTS BETWEEN DIFFERENT PIPING MATERIALS SHALL CONFORM TO ASTM D 1869 OR ASTM F 477.
13. THE NEW FIRE PROTECTION SERVICE LINES SHALL BE INSTALLED AND OWNED BY TOWN OF AMHERST WATER DEPARTMENT UP TO THE RIGHT-OF-WAY LINE. THE REMAINING WATER LINE AND FIRE PROTECTION SERVICE LINE (INCLUDING THE NEW VALVES AND VALVE BOXES) SHALL BE INSTALLED BY THE CONTRACTOR AND PRIVATELY OWNED AND MAINTAINED BY THE OWNER.
14. THE FIRE PROTECTION LINE WITHIN THE PARCEL SHALL BE INSPECTED, TESTED, AND MAINTAINED IN CONFORMANCE WITH NFPA 25, AS PER SECTION 508.5.3 OF THE NEW YORK STATE FIRE CODE.
15. THE NEW RPZ BACKFLOW PREVENTION DEVICES AND WATER METERS SHALL BE PRIVATELY OWNED AND MAINTAINED BY THE OWNER.
17. ALL NEW WATER SERVICE LINES SHALL BE DISINFECTED IN CONFORMANCE WITH A.W.W.A. SPECIFICATION C-651 PRIOR TO THE BEGINNING OF SERVICE.
18. THE DESIGN ENGINEER IS NOT RESPONSIBLE FOR ANY UTILITIES NOT SHOWN ON THIS PLAN OR ANY ACCIDENTAL RUPTURES DURING EXCAVATION OR CONSTRUCTION.
19. ALL NEW SANITARY SEWERS SHALL BE PVC (SDR-35) AND SHALL CONFORM TO ASTM D 3034, ASTM D 2665, ASTM D 2949, ASTM F 891, CSA B182.2, OR CAN/CSA-B182.4 STANDARDS. ALL NEW SANITARY SEWER FITTINGS SHALL CONFORM TO ASTM D 2661, ASTM D 3311, ASTM F 628, OR ASTM D 2665. ALL COMPRESSION GASKETS FOR HUB AND SPIGOT PIPE AND FITTINGS SHALL CONFORM TO ASTM C 564.
20. JOINTS BETWEEN DIFFERENT PIPE MATERIALS SHALL BE MADE WITH A CONNECTION CONFORMING TO ASTM C 425, ASTM C 443, ASTM C 564, ASTM C 1173, ASTM D 1869, ASTM F 477, CAN/CSA A257.3M, OR CAN/CSA B602M.
21. ALL PVC WATERLINES SHALL MEET OR EXCEED THE LATEST ASTM D 2412, D 2152, D 1785, D 2241, D 2672, OR CAN/SCA-B137.3, AS WELL AS NSF 61. ALL FLEXIBLE PVC WATERLINE FITTINGS SHALL MEET OR EXCEED A.S.T.M. D3139. ALL COPPER WATERLINES SHALL MEET OR EXCEED THE LATEST ASTM B 75, B 88, B 251, OR B 447 SPECIFICATIONS, AS WELL AS NSF 61. ALL DUCTILE IRON WATERLINES SHALL BE CLASS 51 MINIMUM, AND SHALL MEET OR EXCEED THE LATEST ANSI / AWWA C151 / A21.51 OR C115 SPECIFICATIONS, AS WELL AS NSF 61. ALL DUCTILE IRON WATERLINES SHALL ALSO BE CEMENT-MORTAR LINED IN CONFORMANCE WITH AWWA C104.
22. ALL NEW WATERLINES, VALVES, AND APPURTENANCES THAT ARE IN CONTACT WITH POTABLE WATER SHALL BE NSF/ANSI 61 CERTIFIED. ALL NEW FIRE HYDRANTS SHALL REQUIRE INTERIOR COATINGS THAT ARE NSF 61 CERTIFIED. ALL COPPER PIPE FITTINGS SHALL CONFORM TO ASME B16.15, B16.18, B16.22, B16.23, B16.26, AND B16.29. ALL DUCTILE IRON PIPE FITTINGS SHALL CONFORM TO AWWA C110 AND C153. ALL PVC PIPE FITTINGS SHALL CONFORM TO ASTM D 2464, D 2466, D 2467, AND CAN/CSA-B137.2.
23. ALL NEW ROOF DRAIN LATERALS SHALL BE PVC (SDR-35) CONFORMING TO ASTM D 2729, ASTM D 3034, ASTM F 891, CSA-B182.2, OR CAN/CSA-B182.4. ALL NEW STORM SEWERS AND CULVERTS SHALL BE HDPE CONFORMING TO ASTM F 405 AND AASHTO M294.
24. A CERTIFIED BACKFLOW PREVENTION DEVICE TESTER RETAINED BY THE OWNER SHALL APPROVE AND CERTIFY SATISFACTORY INSTALLATION OF THE DEVICE WITHIN 45 DAYS OF THE INSTALLATION. THE COMPLETED DOH-1013 FORM SHALL BE SUBMITTED TO THE NEW YORK STATE HEALTH DEPARTMENT AND ERIE COUNTY WATER AUTHORITY WITHIN 30 DAYS OF TESTING THE DEVICE.
25. AN ANNUAL TEST TO CERTIFY THE DEVICE MEETS THE REQUIREMENTS OF AN ACCEPTABLE CONTAINMENT DEVICE SHALL BE COMPLETED BY A N.Y.S. CERTIFIED TESTER ON A YEARLY BASIS AND SUBMITTED TO THE NEW YORK STATE HEALTH DEPARTMENT AND ERIE COUNTY WATER AUTHORITY WITHIN 30 DAYS OF TESTING THE DEVICE.
26. NYSEG SHALL SUPPLY, INSTALL, OWN, AND MAINTAIN THE NEW GAS METER. NYSEG SHALL ALSO TAP, INSTALL, AND OWN THE NEW SERVICE LINE FROM MAIN TO NEW METER. CONTACT NYSEG (438-9803) FOR INSTRUCTIONS, INSTALLATION COORDINATION, INSPECTION APPOINTMENTS, PERMIT APPLICATIONS, AND FEES.
27. NYSEG SHALL SUPPLY THE NEW ELECTRIC METER. THE ELECTRIC CONTRACTOR SHALL INSTALL THE NEW EELCTRIC METER AND ELECTRIC CONDUITS IN COORDINATION WITH NYSEG. NYSEG SHALL ALSO TAP THE NEW SERVICE TO THE EXISTING UTILITY POLE. THE ELECTRIC CONTRACTOR SHALL LEAVE ENOUGH WIRE TO REACH THE SECONDARY BUSHING OF THE NEW POLE-MOUNTED TRANSFORMER. CONTACT NYSEG (438-9803) FOR INSTRUCTIONS, INSTALLATION COORDINATION, INSPECTION APPOINTMENTS, PERMIT APPLICATIONS, AND FEES.
28. THE CONTRACTOR SHALL MAINTAIN A MINIMUM 12" VERTICAL SEPARATION DISTANCE BETWEEN EXISTING GAS AND ELECTRIC LINES AND NEW WATERLINES, STORM, OR SANITARY SEWERS. ALL NEW UNDERGROUND UTILITIES SHALL PASS BENEATH EXISTING ELECTRIC AND GAS LINES UNLESS CONSENT IS OTHERWISE GIVEN BY THE SERVICE PROVIDER OR EASEMENT OWNER.
29. THE GENERAL CONTRACTOR SHALL PERFORM ALL APPLICABLE TESTS AS REQUIRED IN THE N.Y.S. PLUMBING CODE SECTIONS 312.2 THRU 312.9 AND AWWA C600.
30. ANY PLAIN END DUCTILE IRON WATERLINE PIPE SHALL BE JOINED TO FLANGED FITTINGS USING UNI-FLANGE UFA400 ADAPTER FLANGES OR APPROVED EQUAL. ANY PLAIN END PVC WATERLINE PIPE SHALL BE JOINED TO FLANGED FITTINGS USING UNI-FLANGE UFA900 ADAPTER FLANGES OR APPROVED EQUAL.
31. PVC WATERLINES WITH MECHANICAL JOINTS SHALL BE RESTRAINED USING UNI-FLANGE SERIES 1300 OR SERIES 1500 JOINT RESTRAINERS OR APPROVED EQUAL. PVC WATERLINES WITH BELL JOINTS SHALL BE RESTRAINED USING UNI-FLANGE SERIES 1350 JOINT RESTRAINERS OR APPROVED EQUAL. DUCTILE IRON WATERLINES WITH MECHANICAL JOINTS SHALL BE RESTRAINED USING UNI-FLANGE SERIES 1400 OR SERIES 1450 RESTRAINERS OR APPROVED EQUAL. PVC TO DUCTILE IRON CONNECTIONS WITH MECHANICAL JOINTS SHALL BE RESTRAINED USING UNI-FLANGE SERIES 1390 PIPE RESTRAINTS OR APPROVED EQUAL.
32. PVC WATERLINE CONNECTIONS TO PRESSURE FITTINGS OR ELBOWS SHALL BE RESTRAINED USING UNI-FLANGE SERIES 1360 PIPE RESTRAINTS OR APPROVED EQUAL.
33. ALL JOINTS OR JOINT SYSTEMS FOR CULVERTS, UNDERGROUND DETENTION SYSTEMS, AND STORM SEWERS SHALL BE SILT TIGHT, AND SHALL RESIST INFILTRATION OF SOIL PARTICLES THAT PASS THE NO. 200 SIEVE. IF GEOTEXTILE WRAP IS SPECIFIED FOR USE IN JOINTS, IT SHALL MEET AASHTO M288, WITH AN APPARENT OPENING SIZE (AOS) GREATER THAN 70. ALL JOINTS OR JOINT SYSTEMS FOR SANITARY SEWERS OR LATERALS SHALL BE WATER TIGHT TO LIMIT LEAKAGE TO A MAXIMUM RATE OF 100 GALLONS PER INCH-DIAMETER PER MILE PER DAY.
34. THE CONTRACTOR SHALL BE RESPONSIBLE FOR PAYING ALL NECESSARY FEES AND OBTAINING ALL NECESSARY PERMITS PRIOR TO THE START OF CONSTRUCTION. CONTACT TOWN OF AMHERST BUILDING DEPARTMENT (651-7030) FOR INSTRUCTIONS, PERMIT APPLICATIONS, AND FEES.

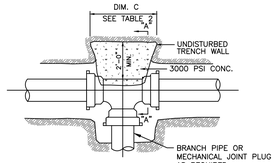
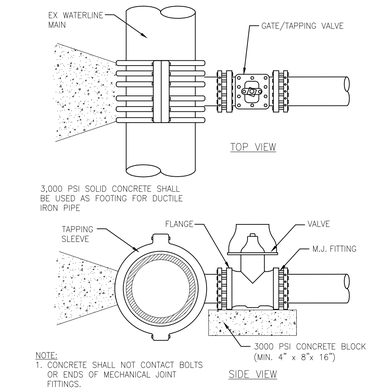
	FT. – IN.	TEE'S & PLUGS	WYE'S
16	7–6	0.62	0.85
14	5–9	0.48	0.66
12	4–0	0.33	0.60
10	3–2	0.25	0.43
8	2–3	0.16	0.29
6	1–8	0.10	0.18



NOTE:
ALL VERTICAL BENDS OVER 5° FACING DOWN WITHOUT JOINT HARNESS SHALL BE ANCHORED AS SHOWN USING THE CONCRETE QUANTITIES FROM TABLE 1.

TYPICAL DETAILS FOR CONCRETE PRESSURE PIPE BACKING (B)

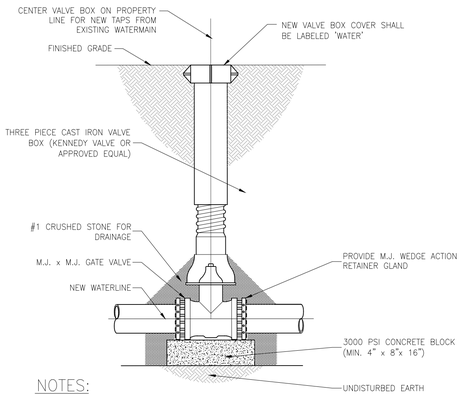
SCALE : 1" = 1'–0"



NOTE:
1. CONCRETE SHALL NOT CONTACT BOLTS OR ENDS OF MECHANICAL JOINT FITTINGS.

4"–24" TAPPING SLEEVE & VALVE ASSEMBLY (A)

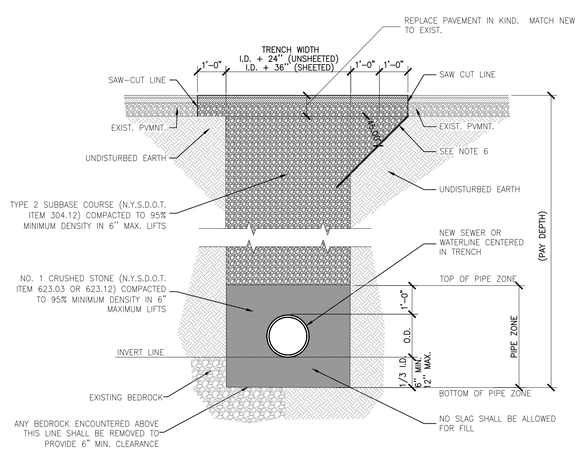
SCALE : NONE



NOTES:
1. VALVE SHALL NOT SUPPORT VALVE BOX.

WATER VALVE & VALVE BOX DETAIL (C)

SCALE : NONE



PAVEMENT REPLACEMENT DETAIL (E)

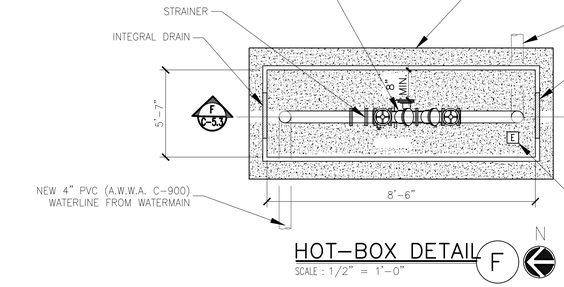
SCALE : 1/2" = 1'–0"

BLACKTOP REPLACEMENT

1. IF CONSTRUCTION IS PERFORMED BETWEEN OCTOBER 1 AND APRIL 1, THE CONTRACTOR IS REQUIRED TO PROVIDE 4" OF COLD PATCH FOR ALL PAVEMENT CUTS.
2. ALL OPEN CUTS WITHIN 50' OF AN INTERSECTION SHALL BE TOPPED WITH 4" OF COLD PATCH REGARDLESS OF THE TIME OF YEAR.
3. ALL ROAD CUTS ON HEAVILY TRAVELED HIGHWAYS ROADWAYS WILL REQUIRE 4" OF COLD PATCH (GENERALLY STATE AND COUNTY HIGHWAYS).
4. ALL TEMPORARY PAVEMENT PATCHES SHALL BE MAINTAINED BY THE CONTRACTOR.
5. SHEETING OR SHORING SHALL BE REQUIRED PER O.S.H.A. STANDARDS FOR WORKER SAFETY AND PROTECTION OF TRENCH AREA. ALL SHORING AND TRENCHING SHALL BE DONE AS DIRECTED BY THE OWNER'S ON–SITE GEOTECHNICAL ENGINEER AND SHALL REMAIN IN PLACE UNTIL ALL TRENCHING OPERATIONS ARE COMPLETED.
6. SELECT FILL (N.Y.S.D.O.T. ITEM 304.12) IS REQUIRED BENEATH NON–PAVED AREAS ADJACENT TO PAVED AREAS IF THE 45° LINE SHOWN ABOVE INTERCEPTS THE TRENCH ABOVE THE PIPE ZONE.
7. PIPE BEDDING AND MATERIAL AROUND THE PIPE ("NO. 1 CRUSHED STONE") SHALL CONFORM TO N.Y.S.D.O.T. TABLE 703–4, SIZE DESIGNATION 1, MATERIAL DESIGNATION 702–0201. OPTIONAL: PIPE BEDDING MATERIAL SHALL CONFORM TO CLASS I, II, OR III AS PER ASTM D 2321.
8. PIPE BEDDING AND TRENCH BACKFILL IN BERM OR SWALE AREAS SHALL BE CLAY OR NATIVE BACKFILL COMPACTED TO 95% PROCTOR DENSITY TO ELIMINATE THE POSSIBILITY OF PIPE UNDERMINING AND DUE TO SEEPAGE THROUGH THE PIPE ZONE.

SAW CUTS

1. PAVEMENT CUTS BY THE CONTRACTOR WILL BE MADE WITH A SAW, PNEUMATIC SPADE OR OTHER ACCEPTED MEANS PRIOR TO EXCAVATION.
2. FINAL PAVEMENT RESTORATION: THE CONTRACTOR WILL BE RESPONSIBLE TO SAW CUT AN ADDITIONAL 12" ON EACH SIDE OF THE DISTURBED TRENCH AREA, SO AS TO PROVIDE A UNIFORM STRAIGHT EDGE. THE CUT EDGE WILL THEN BE COATED WITH A BITUMINOUS SEAL COAT AND REPLACED IN THE MANNER DESCRIBED ABOVE.



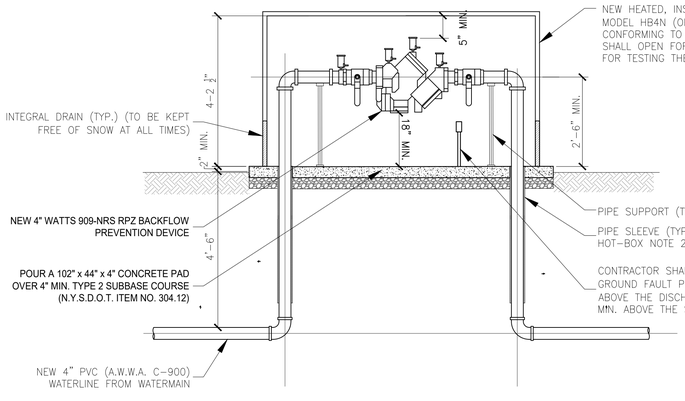
HOT–BOX DETAIL (F)

SCALE : 1/2" = 1'–0"

HOT BOX NOTES

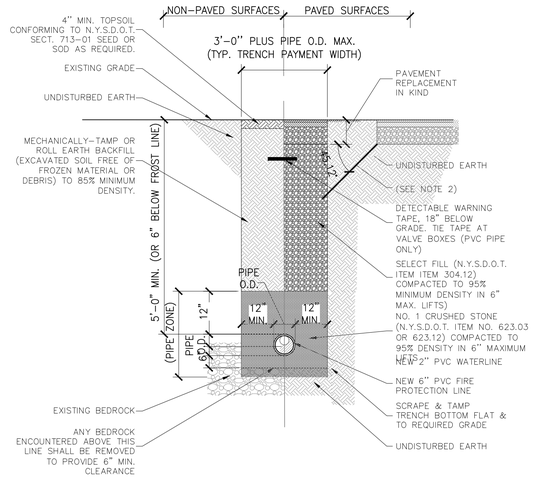
1. POUR A FULL CONCRETE PAD 4" THICK AROUND DEVICE ALLOWING A MINIMUM 1" RADIAL SPACE BETWEEN VALVE RISERS & PAD.
2. SIZE A PVC (SCH. 40) PIPE SLEEVE AS REQUIRED TO FIT IN THE RADIAL SPACE BETWEEN THE PAD AND THE VALVE RISERS. PACK THE ENTIRE LENGTH OF PIPE SLEEVE WITH FOAM INSULATION.
3. USE A MASONRY DRILL BIT TO DRILL THROUGH ANCHOR HINGE.
4. MARK AND MOUNT LOCKING HASP AND SUPPORT ROAD ANCHOR.
5. FOR HOT–ROKS USING SELF–REGULATING TAPE HEAT SOURCE, SECURE TAPE TO VALVE WITH WIRE TIES OR ELECTRICIAN'S TAPE.
6. THE HOT BOX SHALL BE EQUIPPED WITH SECURITY MEASURES SUCH AS LOCKING DOORS AND PANELS, FLOW ALARMS, AND INDICATOR LIGHTS.
7. FOR INSTALLATION INSTRUCTIONS CALL HOT–BOX / HOT–ROK MANUFACTURER AT 1–800–736–0238.
8. THE NEW WATER METER SHALL BE SUPPLIED, INSTALLED, OWNED, AND MAINTAINED BY THE TOWN OF AMHERST .
9. ALL PLUMBING WORK SHALL BE INSPECTED BY THE TOWN OF AMHERST PLUMBING INSPECTOR. ALL PLUMBING WORK SHALL BE PERFORMED BY A LICENSED AND INSURED PLUMBER CERTIFIED IN THE TOWN OF AMHERST
10. A CERTIFIED BACKFLOW PREVENTION DEVICE TESTER RETAINED BY THE OWNER SHALL APPROVE AND CERTIFY SATISFACTORY INSTALLATION OF THE DEVICE WITHIN 45 DAYS OF THE INSTALLATION. THE COMPLETED DOH–1013 FORM SHALL BE SUBMITTED TO THE NEW YORK STATE HEALTH DEPARTMENT AND ERIE COUNTY WATER WITHIN 30 DAYS OF TESTING THE DEVICE.
11. AN ANNUAL TEST TO CERTIFY THE DEVICE MEETS THE REQUIREMENTS OF AN ACCEPTABLE CONTAINMENT DEVICE SHALL BE COMPLETED BY A N.Y.S. CERTIFIED TESTER ON A YEARLY BASIS AND SUBMITTED TO THE NEW YORK STATE HEALTH DEPARTMENT AND ERIE COUNTY WATER AUTHORITY WITHIN 30 DAYS OF TESTING THE DEVICE.
12. ALL HOT BOX ENCLOSURES SHALL OPEN FOR LIGHT AND ACCESS FOR TESTING THE DEVICES.
13. PREVENT FREEZING BY WRAPPING DEVICES AND PIPES WITH A 90–WATT, 120–VOLT, SINGLE–PHASE HEAT TRACE TAPE.

CONCRETE SHALL HAVE A SLUMP OF NO MORE THAN 5" AND AN AIR ENTRAINMENT OF 4–6%. THE USE OF CALCIUM CHLORIDE IS NOT PERMITTED. PROVIDE PROPER CONCRETE PROTECTION IN COLD WEATHER AND MAINTAIN PROPER CURING PROCEDURES IN CONFORMANCEWITH ALL A.C.I. REQUIREMENTS.



HOT–BOX ELEVATION (F)

SCALE : 1/2" = 1'–0"



NOTE:
1. SHEETING OR SHORING SHALL BE REQUIRED PER O.S.H.A. STANDARDS FOR WORKER SAFETY AND PROTECTION OF WORK AREA AS DIRECTED BY OWNER'S ON–SITE GEOTECHNICAL ENGINEER.
2. SELECT FILL (N.Y.S.D.O.T. ITEM 304.12) IS REQUIRED FOR FULL DEPTH UNDER DRIVEWAYS, ROAD CROSSINGS, AND IF THE 45° LINE SHOWN ABOVE INTERCEPTS THE TRENCH ABOVE THE PIPE ZONE.
3. PIPE BEDDING AND MATERIAL AROUND THE PIPE ("NO. 1 CRUSHED STONE") SHALL CONFORM TO N.Y.S.D.O.T. TABLE 703–4, SIZE DESIGNATION 1, MATERIAL DESIGNATION 702–0201. OPTIONAL: CLASS I, II, OR III MATERIALS AS PER ASTM D 2321
4. IF SOFT MATERIALS OF POOR LOAD–BEARING QUALITY ARE FOUND AT THE BOTTOM OF THE TRENCH, STABILIZATION SHALL BE ACHIEVING BY EXCAVATING A MINIMUM OF TWO PIPE DIAMETERS AND BACKFILLING TO THE PIPE INVERT WITH PIPE BEDDING AND COMPACTING TO 95% DENSITY AS IN NOTE 5 ABOVE.

WATERLINE DETAIL (D)

SCALE : NONE

THE CONTRACTOR SHALL CONTACT THE DESIGN ENGINEER BEFORE EXCAVATION & CONSTRUCTION TO ENSURE HE/SHE HAS THE FINAL SET OF DESIGN DOCUMENTS AS ISSUED FOR CONSTRUCTION. THIS PLAN IS CURRENT AS OF THE DATE IT WAS ISSUED. SUBSEQUENT UPDATES OF THIS PLAN BY THE DESIGN ENGINEER DOES NOT AFFORD ANY TRANSFEREES THE RIGHT TO RECEIVE SAID UPDATES, BUT PLACES THE RESPONSIBILITY TO THE TRANSFEREE TO OBTAIN UPDATED PLANS WHICH ARE ISSUED FOR CONSTRUCTION AS THESE MAY DIFFER FROM PREVIOUS PLANS ISSUED FOR PER OR BID.

SHEET
C3.1

Attachment: SP-1988-21B drawings 011322 (2506 : Sp-1988-21B)

WARNING: IT IS A VIOLATION OF SECTION 7209, SUBDIVISION 2, OF THE NEW YORK STATE EDUCATION LAW FOR ANY PERSON, UNLESS ACTING UNDER THE DIRECTION OF A LICENSED ARCHITECT OR PROFESSIONAL ENGINEER, TO ALTER IN ANY WAY, PLANS, SPECIFICATIONS, OR REPORTS TO WHICH THE SEAL OF A LICENSED ARCHITECT OR PROFESSIONAL ENGINEER HAS BEEN APPLIED.

LANDSCAPE NOTES

1. THE CONTRACTOR SHALL PROVIDE MAINTENANCE INCLUDING FERTILIZING, RE-SEEDING, AND WATERING AS REQUIRED DURING LANDSCAPE INSTALLATION AND PLANTING FOR A MINIMUM PERIOD OF 12 MONTHS FROM PLANTING DATE.
2. THE CONTRACTOR SHALL SCARIFY ALL NEW LAWN AREAS PRIOR TO SEEDING. REMOVE DEBRIS AND ROCKS TO 12" DEPTH PRIOR TO APPLYING TOPSOIL. LIME SOIL AS NECESSARY TO A pH OF 6.0. FERTILIZE WITH 600 lbs. OF 5-10-10 OR EQUIVALENT PER ACRE (14 lbs. PER EVERY 1000 SQ. FT.).
3. THE CONTRACTOR SHALL FURNISH AND INSTALL A 3" MINIMUM LAYER OF HIGH-QUALITY SHREDDED HARDWOOD BARK OR CEDAR MULCH IN ALL PLANTING BEDS, OR AS INDICATED.
4. ALL PROPOSED LANDSCAPE AREAS AND PLANTING BEDS SHALL BE EXCAVATED OF ALL BUILDING MATERIALS AND POOR UNSUITABLE SOILS TO A DEPTH OF 36" AND BACKFILLED WITH TOPSOIL AND THE PLANTING MIXTURE AS SPECIFIED IN THE DETAILS.
5. THE CONTRACTOR SHALL ERECT TEMPORARY CONSTRUCTION FENCING AROUND ALL EXISTING TREES TO REMAIN WITHIN THE PROJECT LIMITS TO PROTECT FROM SITE WORK DISTURBANCE.
6. UNLESS RECOMMENDED OTHERWISE BY THE SEED VENDOR OR THE LANDSCAPE CONTRACTOR, PERMANENT GRASS SEEDING SHALL CONSIST OF A MIXTURE OF THE FOLLOWING AT 5-8 LBS/1000 SQ FT.
   - KENTUCKY BLUEGRASS = 25% BY WEIGHT (98% MIN. PURITY: 85% MIN. GERMINATION)
   - PENN LAWN RED FESCUE = 25% BY WEIGHT (95% MIN. PURITY: 80% MIN. GERMINATION)
   - TRIPLE CROWN PERENNIAL RYE = 50% BY WEIGHT (95% MIN. PURITY: 90% MIN. GERMINATION)
7. HAND-BROADCASTING OR HYDRO-SEEDING AND HYDRO-MULCHING SHALL BE USED TO ESTABLISH ALL NEW LAWN AREAS.
8. IN AREAS WHERE DECORATIVE STONES OR MULCH MAY BE USED, THE CONTRACTOR SHALL INSTALL A QUALITY WOVEN LANDSCAPE FABRIC FOR WEED CONTROL BENEATH A 2"-3" LAYER OF LANDSCAPE STONE OR MULCH. THE CONTRACTOR SHALL APPLY PREEN WEED CONTROL PER MANUFACTURER'S APPLICATION INSTRUCTIONS IN PLACE OF LANDSCAPE FABRIC.
9. LIMIT SOIL PLACEMENT OVER EXISTING TREE AND SHRUB ROOTS TO A MAXIMUM OF 3 INCHES. IN EXPOSED ROOT AREAS WOOD MULCH SPREAD TO A DEPTH OF 4 INCHES SHALL BE USED TO PREVENT SOIL COMPACTION OVER THE ROOT SYSTEM.
10. IF ROOTS OF EXISTING TREES TO REMAIN NEED TO BE REMOVED TO ALLOW FOR NEW STRUCTURE, UNDERGROUND UTILITY, OR PAVEMENT INSTALLATION A CERTIFIED TREE SURGEON SHALL PERFORM ALL SUCH WORK AND SHALL PRUNE THE CANOPY TO AN EQUAL PROPORTION.
11. CONTRACTOR SHALL TAKE ALL REASONABLE MEASURES TO PROTECT EXISTING TREES WHICH ARE TO BE PRESERVED FROM ALL POSSIBLE TYPES OF ROOT, TRUNK, AND LIMB DAMAGE; INCLUDING BUT NOT LIMITED TO, RETAINING WALLS WHICH PREVENT FILLING ON TOP OF ROOTS OR EXCAVATING TREE ROOTS AS REQUIRED.
12. ALL NEW LAWN AREAS SHALL HAVE A 6 INCH MINIMUM LAYER OF TOPSOIL BEFORE SEEDING.
13. NO TILLING SHALL NOT BE PERFORMED WITHIN THE DRIP LINE OF EXISTING TREES TO REMAIN OR OVER EXISTING UNDERGROUND UTILITIES LESS THAN 24 INCHES BELOW GRADE.
14. REMOVE ALL STICKS, RUBBISH, STONES, AND ANY DEBRIS COLLECTED DURING RAKING, MOWING, AND LAWN ESTABLISHMENT ACTIVITIES. DISPOSE OF AT AN APPROPRIATE OFF-SITE LOCATION PER LOCAL REGULATIONS.
15. SEEDING SHOULD BE DONE AFTER AUGUST 15 AND BEFORE MAY 15. THE DESIGN ENGINEER SHALL NOT BE RESPONSIBLE FOR SEED SURVIVAL OR GRASS ESTABLISHMENT IF SEEDING OCCURS OUTSIDE OF THIS TIME FRAME.
16. ALL TOPSOIL SHALL BE DISTRIBUTED TO A UNIFORM DEPTH AND NOT PLACED WHILE PARTIALLY FROZEN, MUDDY, OR ON FROZEN SLOPES OVER INCH, SNOW AND STANDING WATER PUDDLES. TOPSOIL PLACED ON SLOPES GREATER THAN 5% (20:1) SHALL BE PROMPTLY FERTILIZED, SEEDED, MULCHED, AND STABILIZED BY TRACKING WITH SUITABLE EQUIPMENT PER THE SPECIFICATIONS ABOVE.

GENERAL NOTE:

811

LOCATION OF EXISTING UTILITIES ARE APPROXIMATE. (HORIZONTAL AND VERTICAL) THESE PLANS DO NOT ASSURE THE PRESENCE OR LOCATION OF UTILITIES, JUST APPROXIMATE LOCATIONS. THE CONTRACTOR SHALL NOTIFY "DIG SAFELY NEW YORK" FOR LOCATION OF ALL UNDERGROUND UTILITIES. AT LEAST 2 TO 10 WORKING DAYS PRIOR TO ANY MECHANIZED WORK (DOES NOT INCLUDE THE DATE OF THE CALL) NOTICE MUST BE PROVIDED TO THE ONE-CALL NOTIFICATION SYSTEM, WHICH WILL TRANSMIT THE PROJECT INFORMATION TO INVOLVED MEMBERS SO THAT THEY CAN MARK THE LOCATION OF ANY FACILITIES AT THE EXCAVATION SITE

FOR EXCAVATION ON LONG ISLAND AND THE FIVE BOROUGHS OF NEW YORK CITY, NEW YORK 811 MUST BE CALLED AT 1-800-272-4480. FOR EXCAVATION ELSEWHERE IN NEW YORK STATE, DIG SAFELY NEW YORK MUST BE CALLED AT 1-800-962-7962. NOTIFICATION FOR EXCAVATION WORK ANYWHERE IN THE STATE CAN BE MADE BY DIALING 811. WHETHER DIALING THE 1-800 NUMBER OR 811, THERE IS NO CHARGE FOR THE CALL.

CONTRACTOR SHALL TAKE REASONABLE MEASURES TO PROTECT EXISTING TREES WHERE NECESSARY ON NEIGHBORING PROPERTY FROM ALL TYPES OF DAMAGE TO BOTH TRUNK AND ROOTS. LIMIT FILLING OVER TREE ROOTS TO 4" MAX.

WARNING: IT IS A VIOLATION OF SECTION 7209, SUBDIVISION 2, OF THE NEW YORK STATE EDUCATION LAW FOR ANY PERSON, UNLESS ACTING UNDER THE DIRECTION OF A LICENSED ARCHITECT OR PROFESSIONAL ENGINEER, TO ALTER IN ANY WAY, PLANS, SPECIFICATIONS, OR REPORTS TO WHICH THE SEAL OF A LICENSED ARCHITECT OR PROFESSIONAL ENGINEER HAS BEEN APPLIED.

Attachment: SP-1988-21B drawings 011322 (25069 : Sp-1988-21B)

DEMOLITION NOTES

1. PRIOR TO THE START OF CONSTRUCTION, THE CONTRACTOR SHALL BE RESPONSIBLE FOR PAYING ALL NECESSARY FEES AND OBTAINING ALL NECESSARY PERMITS FOR CLEARING, SOIL EROSION PROTECTION, AND DISPOSING OF DEBRIS FROM SITE.
2. THE CONTRACTOR SHALL COORDINATE THE REMOVAL, RELOCATION, OR RE-ROUTING OF ANY UTILITIES WITH EACH RESPECTIVE UTILITY COMPANY. NOTIFY UTILITY COMPANIES OR AGENCIES AT LEAST 72 HOURS PRIOR TO THE START OF WORK.
3. THE CONTRACTOR SHALL MAINTAIN ACCESSIBLE PASSAGEWAYS FOR TRAFFIC AND PEDESTRIANS TO EXISTING BUILDING WHICH WILL REMAIN IN OPERATION THROUGHOUT THE DURATION OF THE CONSTRUCTION.
4. THE CONTRACTOR SHALL FOLLOW ALL SOIL PREPARATION AND FOUNDATION CONSTRUCTION RECOMMENDATIONS AS STATED IN THE GEOTECHNICAL ENGINEERING REPORT.
5. CONTRACTOR SHALL TAKE ALL REASONABLE MEASURES TO PROTECT EXISTING TREES WHICH ARE TO BE PRESERVED FROM ALL POSSIBLE TYPES OF ROOT, TRUNK, AND LIMB DAMAGE; INCLUDING BUT NOT LIMITED TO, RETAINING WALLS WHICH PREVENT FILLING ON TOP OF ROOTS OR EXCAVATING TREE ROOTS AS REQUIRED.
6. THE DESIGN ENGINEER IS NOT RESPONSIBLE FOR ANY UTILITIES NOT SHOWN ON THE SURVEY OR ANY ACCIDENTAL RUPTURES DURING EXCAVATION OR CONSTRUCTION. THE DESIGN ENGINEER (STUDIO T3) AND THE RESPECTIVE UTILITY COMPANIES SHALL BE IMMEDIATELY NOTIFIED BY THE INSTALLATION CONTRACTOR UPON DISCOVERY OF ANY SUCH ABOVEGROUND OR UNDERGROUND UTILITIES NOT SHOWN ON THE SURVEY. WORK SHALL BE IMMEDIATELY SUSPENDED AND NOT COMMENCE UNTIL SUCH DISCOVERED UTILITIES ARE IDENTIFIED AND THE DESIGN ENGINEER (STUDIO T3) ISSUES EITHER A WRITTEN APPROVAL OR A SIGNED REVISED PLAN.
7. THE DESIGN ENGINEER (STUDIO T3) SHOULD BE IMMEDIATELY CONTACTED UPON DISCOVERY OF ANY ABOVEGROUND OR BELOW GROUND OBJECTS (BUILDING FOUNDATIONS, BURIED VAULTS, TREES, SIDEWALKS, PAVEMENT, RAILINGS, SIGNS, STOCKPILES, STUMPS, OR SIMILAR). WORK SHALL BE IMMEDIATELY SUSPENDED AND NOT COMMENCE UNTIL SUCH DISCOVERED OBJECTS ARE IDENTIFIED AND THE DESIGN ENGINEER (STUDIO T3) ISSUES EITHER A WRITTEN APPROVAL OR A SIGNED REVISED PLAN.
8. THE GROUND SURFACE ON WHICH RIPRAP OR STONE EROSION PROTECTION IS TO BE PLACED SHALL BE CLEARED OF BRUSH, TREES, STUMPS, AND TOPSOIL.
9. ANY CAVITIES OR TRENCHES REMAINING FROM EXCAVATED FOOTINGS, FOUNDATION WALLS, PIPELINES, BASEMENTS, AND UNDERGROUND TANKS SHALL BE BACKFILLED WITH FLOWABLE FILL TO THE FROST LINE, AND TYPE 2 CRUSHER RUN STONE (NYSDOT ITEM 304.12) ABOVE THE FROST LINE, COMPACTED TO 95% DENSITY (IN 6" MAXIMUM LIFTS).
10. PROVIDE TEMPORARY SNOW-FENCING AROUND ALL EXISTING TREES, SHRUBS, OR LANDSCAPING TO REMAIN.
11. ALL LITTER AND DEBRIS SHALL BE SWEPT UP AND REMOVED FROM PAVED AREAS RATHER THAN HOSING INTO STORM DRAINS OR SWALES.

EROSION CONTROL NOTES:

TEMPORARY GRAVEL CONSTRUCTION ENTRANCE:

1. CLEAR THE CONSTRUCTION ENTRANCE/EXIT AREA OF ALL VEGETATION, ROOTS, AND OTHER OBJECTIONABLE MATERIAL.
2. GRADE THE ROAD FOUNDATION SO THAT THE ENTRANCE/EXIT WILL HAVE A CROSS SLOPE IN A DIRECTION, SO THAT ALL RUNOFF WILL BE DIRECTED AWAY FROM THE ADJACENT ROAD (IF APPLICABLE).
3. PLACE STONE TO THE DIMENSIONS SHOWN ON PLAN C5.1(A) AT A 6 INCH MINIMUM DEPTH.
4. USE WASHED STONE 2 INCH TO 3 INCH IN SIZE.
5. MAINTAIN THE CONSTRUCTION ENTRANCE/EXIT IN A CONDITION TO PREVENT MUD OR SEDIMENT FROM LEAVING THE SITE. IF STONE BECOMES COMPACTED AND FILLED WITH MUD AND SEDIMENT AND IS NOT PERFORMING AS REQUIRED REPLACE CONSTRUCTION ENTRANCE WITH NEW STONE. SHOULD MUD BE TRACKED OR WASHED ONTO ADJACENT ROADS, REMOVE IMMEDIATELY.

LAND GRADING:

1. TEMPORARY DIVERSION SWALES SHALL BE CONSTRUCTED AS NECESSARY TO PREVENT ANY SOIL EROSION FROM OCCURRING DURING EXCAVATION. SWALES SHOULD OUTLET TO A TEMPORARY SEDIMENTATION BASIN (IF APPLICABLE).
2. SILT FENCE AND/OR ROCK CHECK DAMS SHALL BE PLACED WITHIN EXISTING AND PROPOSED SWALES AS PER DETAILS SHOWN ON C5.1(D) AND PER SPECIFICATIONS IN APPENDIX F OF THE SWPPP.
3. ALL CUT SLOPES SHALL BE FINE GRADED IMMEDIATELY AFTER ROUGH GRADING. THE SURFACE SHALL BE VEGETATED IMMEDIATELY TO PREVENT SOIL EROSION.
4. FILL SLOPES SHALL BE PLACED IN LAYERS NOT TO EXCEED 9 INCHES IN DEPTH AND COMPACTED.
5. THE SITE SHALL AT TIMES BE GRADED AND MAINTAINED SUCH THAT ALL STORM WATER RUN-OFF IS DIVERTED TO SOIL EROSION AND SEDIMENT CONTROL DEVICES.

SEDIMENT FENCE:

1. ALL SEDIMENT (SILT) FENCE OR FILTER SOCK SHALL BE CONSTRUCTED AROUND THE TOPSOIL STOCKPILE AND OTHER AREAS NOTED ON PLAN, SEE DETAILS ON C5.1.

OUTLET STABILIZATION:

1. A RIP-RAP APRON SHALL BE LOCATED AT THE INLET/OUTLET OF ANY CULVERT OR STORM PIPE TO PREVENT SCOUR (SEE OUTLET STABILIZATION DETAIL ON C5.1G AND APPENDIX F FOR SPECIFICATIONS).
2. ALL STORM DRAINAGE OUTLETS SHALL BE STABILIZED, AS REQUIRED, BEFORE THE DISCHARGE POINTS BECOME OPERATIONAL.

GENERAL:

1. REFER TO DRAWING NUMBER C 2.0 FOR LOT GRADING SPECIFICATIONS.
2. REFER TO DRAWING NUMBER C 5.0 – C 5.1 FOR ADDITIONAL EROSION CONTROL DETAILS AND NOTES.
3. THE LOCATIONS OF EROSION AND SEDIMENT CONTROL MEASURES, AS INDICATED IN THE CONTRACT DOCUMENTS, MAY REQUIRE FIELD ADJUSTMENTS DEPENDING ON THE SEQUENCE OF CONSTRUCTION ACTIVITIES, CONSTRUCTION METHODS, AND/OR ACTUAL FIELD CONDITIONS.
4. ALL CONSTRUCTION VEHICLES ENTERING OR LEAVING THE SITE SHALL USE THE CONSTRUCTION ENTRANCE. THE CONTRACTOR SHALL PREVENT TRACKING OR FLOWING OF MUD INTO STREETS OR AREAS OUTSIDE OF CONSTRUCTION LOCATION. ALL STREETS AT THE ENTRANCE(S) TO THE SITE SHALL BE KEPT FREE OF MUD AND DEBRIS DAILY.
5. DURING CONSTRUCTION, UNDER NO CIRCUMSTANCES SHALL CONCRETE TRUCK WASH WATER, MIXERS OR OTHER DEVICES BE ALLOWED TO BE DISCHARGED OR DUMPED INTO ANY STORM SEWER, CATCH BASIN, ROADSIDE DITCH OR POND ANYWHERE ON THE CONSTRUCTION SITE. ALL EXCESS CONCRETE OR WASH WATER SHALL BE DISPOSED OF AT AN APPROPRIATE OFFSITE LOCATION (SUCH AS A DESIGNATED LANDFILL) OR AS DIRECTED BY LOCAL AUTHORITIES.
6. GRADING, TOPSOILING, AND STABILIZING SECTIONS SHALL BE COMPLETED BEFORE EXCAVATION STARTS ON OTHER SECTIONS, IN ORDER NOT TO LEAVE ANY AREAS EXPOSED TO WIND AND RAIN EROSION FOR LONGER DURATION THAN NECESSARY.
7. ANY DISTURBED AREAS THAT ARE LEFT EXPOSED MORE THAN 7 DAYS, AND ARE NOT SUBJECT TO CONSTRUCTION TRAFFIC, SHALL IMMEDIATELY RECEIVE TEMPORARY SEEDING.
8. STORMWATER FROM DISTURBED AREAS MUST BE PASSED THROUGH A SEDIMENT TRAP, OR SILTATION FENCE BEFORE DISCHARGE BEYOND DISTURBED AREAS OR INTO INLETS OF OTHER DRAINAGE SYSTEMS.
9. TOPSOIL STOCKPILES SHALL NOT BLOCK DRAINAGE FLOWS DURING CONSTRUCTION. STOCKPILES SHALL NOT BE LOCATED NEAR SLOPES, ROADWAYS, SWALES, DRAINAGE INLETS, OR BODIES OF WATER. THE BASE OF ALL STOCKPILES SHALL BE PROTECTED WITH SILT FENCING OR SILT SOCK. IF NECESSARY, OR PER TOWN REGULATIONS TOPSOIL PILES CAN BE HYDROSEEDED WITH AN ANNUAL RYE GRASS TO HELP IN SOIL EROSION OR EXPOSURE.
10. ALL WASTE MATERIALS SHALL BE COLLECTED AND STORED IN A SECURELY LIDDED METAL DUMPSTER. ALL TRASH AND CONSTRUCTION DEBRIS FROM THE SITE SHALL BE DEPOSITED IN THE DUMPSTER ON A DAILY BASIS. ABSOLUTELY NO CONSTRUCTION MATERIALS SHALL BE BURIED ON SITE.
11. ALL VEHICLES ON SITE DURING THE ENTIRE DURATION OF CONSTRUCTION SHALL BE MONITORED FOR LEAKS AND RECEIVE REGULAR PREVENTIVE MAINTENANCE TO REDUCE THE CHANCE OF LEAKAGE. ANY PETROLEUM PRODUCTS USED SHALL BE STORED IN TIGHTLY SEALED CONTAINERS WHICH ARE CLEARLY LABELED. SPILL KITS SHALL BE INCLUDED WITH ANY FUELING SOURCES AND MAINTENANCE ACTIVITIES AS NECESSARY.
12. ALL PAINT CONTAINERS OR CURING COMPOUNDS SHALL BE TIGHTLY SEALED AND STORED WHEN NOT IN USE. EXCESS PAINT SHALL NOT BE DISCHARGED TO THE STORM SEWER SYSTEM BUT SHALL BE PROPERLY DISPOSED OF IN CONFORMANCE TO MANUFACTURER'S INSTRUCTIONS. SECURE OPEN BAGS OF CEMENT AND KEEP CEMENT POWDER AWAY FROM STREETS, CATCH BASINS, AND SWALES. PROTECT CONSTRUCTION MATERIALS FROM RAINFALL AND RUNOFF BY STORING UNDER COVER. AVOID STORING MATERIALS NEAR CATCH BASINS, SWALES, PONDS OR STORM SEWERS.
18. ALL WATER PUMPED FROM EXCAVATIONS SHOULD BE DIRECTED TO A SEDIMENT TRAP, SEDIMENT BASIN, OR FILTRATION DEVICE SHOWN ON THE EROSION CONTROL DETAILS.
19. ALL CATCH BASIN SUMPS SHALL BE CLEANED OUT & SOIL SEDIMENTS SHALL BE DISPOSED OF AT AN APPROPRIATE OFFSITE LOCATION.
20. ALL CHLORINATED WATER USED FOR FLUSHING WATERLINES SHALL BE DISCHARGED TO THE SANITARY SEWER AND NEVER TO ANY STORM SEWER, CATCH BASIN, SWALE, OR POND.
21. ALL PORTABLE TOILETS SHALL BE LOCATED AWAY FROM GUTTERS, CATCH BASINS, STORM SEWERS, AND WATERWAYS. PORTABLE TOILETS SHALL BE PLACED ON A FLAT, STABLE GROUND SURFACE NOT PRONE TO FLOODING. ALL PORTABLE TOILETS SHALL BE ANCHORED TO PREVENT BLOWING OVER DURING WINDSTORMS.
22. ANY DETERGENTS OR ACID CLEANERS WASHES USED TO CLEAN OR RINSE CONCRETE, STUCCO, MASONRY, ETC. SHALL NEVER BE DISCHARGED TO ANY STORM SEWER, CATCH BASIN, SWALE, OR POND.
23. AVOID ON-SITE STORAGE OF PETROLEUM PRODUCTS, PESTICIDES, FERTILIZERS, AND HERBICIDES. IF UNAVOIDABLE, ALL CHEMICALS SHALL BE STORED IN ORIGINAL PACKAGES IN A SEPARATELY DESIGNATED COVERED CONTAINMENT AREA AND AWAY FROM CATCH BASINS AND PONDS.
24. USE CLEAN OR RECYCLED WATER WHEN SPRINKLING SOIL FOR DUST CONTROL.
25. WHEN ACTIVITIES TEMPORARILY CEASE DURING CONSTRUCTION, SOIL STOCKPILES AND ANY EXPOSED SOILS SHOULD BE STABILIZED BY MULCH, SEEDED OR COVERED WITH TARPS NO MORE THAN 14 DAYS AFTER CONSTRUCTION ACTIVITY HAS CEASED. ANY DISTURBED AREAS THAT WILL BE LEFT EXPOSED FOR MORE THAN THIRTY (30) DAYS, AND NOT SUBJECT TO CONSTRUCTION TRAFFIC WILL IMMEDIATELY RECEIVE TEMPORARY SEEDING WITH ANNUAL OR PERENNIAL RYE GRASS AT 30 lbs. PER ACRE, FOLLOWED BY MULCHING WITH STRAW AT A RATE OF 2 TO 2-½ TONS PER ACRE.
26. FOR CONSTRUCTION SITES WHERE SOIL DISTURBANCE ACTIVITIES HAVE BEEN TEMPORARILY SUSPENDED (I.E. WINTER SHUTDOWN) AND TEMPORARY STABILIZATION MEASURES HAVE BEEN APPLIED TO ALL DISTURBED AREAS, PROPER SITE INSPECTIONS ONCE EVERY THIRTY (30) CALENDAR DAYS AND NOTIFY THE REGIONAL OFFICE OF THE NYSDEC IN WRITING PRIOR TO REDUCING FREQUENCY OF INSPECTIONS.

INSTALLATION INSTRUCTIONS:

1. REMOVE THE GRATE FROM THE CATCH BASIN AND STAND ON END.
2. MOVE THE TOP LIFTING STRAPS OUT OF THE WAY AND PLACE THE GRATE INTO THE DANDY BAG II UNIT SO THAT THE GRATE IS BELOW THE TOP STRAPS AND ABOVE THE LOWER STRAPS. THE GRATE SHOULD BE CRADLED BETWEEN THE UPPER AND LOWER STRAPS.
3. HOLDING THE LIFTING DEVICES, INSERT THE GRATE INTO THE CATCH BASIN INLET FRAME, BEING CAREFUL THAT THE GRATE REMAINS IN PLACE AND BEING CAREFUL NOT TO DAMAGE THE DANDY BAG II UNIT.
4. CONTACT MANUFACTURER, SUPPLIER, OR DESIGNATED EROSION CONTROL INSPECTOR IF NECESSARY TO ASSIST IN INSTALLATION.

MAINTENANCE INSTRUCTIONS:

1. REMOVE ALL ACCUMULATED SEDIMENT AND DEBRIS FROM VICINITY OF THE CATCH BASIN AFTER EACH STORM EVENT.
2. AFTER EACH STORM EVENT AND AT REGULAR INTERVALS, LOOK INTO THE DANDY BAG II UNIT. IF THE UNIT IS MORE THAN 1/3 FULL OF ACCUMULATED SEDIMENT, THE UNIT MUST BE EMPTIED.
3. TO EMPTY THE UNIT, USING THE LIFTING STRAPS LIFT THE UNIT OUT OF THE INLET AND REMOVE THE GRATE. TRANSPORT THE UNIT TO AN APPROPRIATE LOCATION FOR REMOVAL OF THE CONTENTS. HOLDING THE DUMPING STRAPS ON THE OUTSIDE AT THE BOTTOM OF THE UNIT, TURN THE UNIT UPSIDE DOWN, EMPTYING THE CONTENTS. REINSTALL UNIT AS PER INSTALLATION INSTRUCTIONS.
4. DISPOSE OF DEBRIS AND SEDIMENTS IN COMPLIANCE WITH APPLICABLE FEDERAL, STATE, AND LOCAL ENVIRONMENTAL LAWS AND REGULATIONS. IF UNIT IS TORN OR DAMAGED DISPOSE OF UNIT AND/OR ABSORBENT IN COMPLIANCE WITH APPLICABLE FEDERAL, STATE, AND LOCAL ENVIRONMENTAL LAWS AND REGULATIONS.

TEMPORARY INLET PROTECTION DETAIL — C

DRAFT

(1/13/2022)

SEQR
Negative Declaration

NOTICE OF DETERMINATION OF NON-SIGNIFICANCE

Lead Agency: Town of Amherst Planning Board

Project: SP-1988-21B

Address: 5583 Main Street
Williamsville, NY 14221
(716) 631-7051

Date:

This notice is issued pursuant to Part 617 and Local Law #3-82, as amended, of the implementing regulations pertaining to Article 8 (State Environmental Quality Review) of the Environmental Conservation Law.

The Lead Agency has determined that the proposed action described below will not have a significant adverse effect on the environment.

Title of Action: Site Plan Review

SEQR Status: Unlisted

Description of Action: A proposed 13,960 s.f. single-story addition of theWELLbuffalo church consisting of a 500-seat sanctuary, offices, activity space, associated parking expansion, landscaping, a 900 s.f. 1-story garage and ancillary site improvements. Work will include the site improvements not specifically stated above, including, stormwater, utilities, grading, lighting, paving, and landscaping.

Location: 995 Dodge Road, Amherst, Erie County

Petitioner: theWELLbuffalo

Attachment: SP-1988-21_B_draft neg dec_011322 (25069 : Sp-1988-21B)

Reasons Supporting This Determination

Based on information submitted by the applicant including a Full Environmental Assessment Form (EAF) - Part I, (as amended) and a complete site plan application, a preliminary staff analysis was undertaken. Compared to the criteria listed in Section 617.7, all indications are that this action will not have a significant impact on the environment, as follows:

1. The project is not expected to cause a substantial adverse change in existing air quality, ground or surface water quality or quantity, or noise levels; a substantial increase in solid waste production; or a substantial increase in the potential for erosion, flooding, leaching or drainage problems. The Engineering Department on December 22, 2021 reviewed the Grading, Drainage and Utility Plans submitted on December 20, 2021, Erosion Control Plan submitted on December 20, 2021 and Engineer's Report submitted on November 16, 2021. Based on its review of these documents, the Department has determined that the project has or will have met all applicable requirements and has no objection to its approval.

2. As the site is predominantly developed and the project will not result in the removal or destruction of large quantities of vegetation or fauna; or in significant adverse impacts to fish or wildlife species, habitats or other natural resources. The Planning Department reviewed a Landscape Plan submitted on December 20, 2021 and determined that it meets or exceeds Zoning Ordinance requirements for greenspace. The Landscape Plan has or will have met all Zoning Ordinance and Town requirements for landscaping.

3. The project is not expected to create any material conflict with the Town Comprehensive Plan. The Building Department in their review of December 13, 2021 and the Planning Department in their review of January 5, 2022 have reviewed the application documents, and determined in their review of theWELbuffalo building expansion that the subject project has or will have met the International Building Code – 2018 and the Zoning Ordinance regulations.

4. The project is within an area identified by the State as having potential archaeological or historical significance. However, the site has been previously disturbed and the project does not signifcaly increase the bounds of the developed area, therefore, it is anticipated the project will not impair the character or quality of important historical resources.

5. The project will not impair the character or quality of important aesthetic resources or of existing community or neighborhood character. The project is a permitted use in the Community Facilities District (CF) and Residential District Three (R-3); neighboring adjoining uses are single-family residential to the west, the peanut line to the south and a National Grid right-of-way to the east, within a larger residential neighborhoods to the south and east zoned R-3; and therefore, the project remains compatible with surrounding land use.

6. The proposed project will include an expansion of the existing church which will not cause a major change in the use of either the quantity or type of energy.

Attachment: SP-1988-21_B_draft neg dec_011322 (25069 : Sp-1988-21B)

7. The project will not create any hazard to human health. The Fire Chief's Association on December 30, 2021**,** has reviewed the project and has no objections to the approval of the site plan, as all requirements of this agency have or will have been met.

8. The building addition will not cause a substantial adverse change in the use, or intensity of use, of land or in its capacity to support existing uses.

9. The function of the proposed place of worship will not significantly increase the number of people using the site over its previous level of use.

10. Review by the Town Traffic/Safety Board dated January 4, 2022 indicates that significant negative traffic impacts are not expected to result from the proposed project.

11. A coordinated review of the project has been undertaken by Town Departments including, in addition to those mentioned above, Highway on December 16, 2021, Assessor on December 13, 2021, Plumbing Division on December 1, 2021, and Right-of-Way Agent on November 19, 2021. These reviews did not identify any potential significant adverse environmental issues and indicated that the proposal will not have a significant damaging impact on the environment.

12. Issues not specifically mentioned above and/or those not specifically reviewed were not raised by Town departments, outside agencies or the public and are not determined to cause significant negative environmental impacts.

DRAFT (1/13/2022)
TOWN OF AMHERST
PLANNING BOARD
SITE PLAN RESOLUTION
SP-1988-21B

PETITIONER

theWELLbuffalo
995 Dodge Road
Getzville, NY 14068

PROPERTY LOCATION

995 Dodge Road

WHEREAS, the Town of Amherst Planning Board on Thursday, January 13, 2022 held a virtual public hearing on a Site Plan for a 13,960 s.f. single story building addition, and

WHEREAS, the Planning Board reviewed the plans and specifications for the proposed project, and

WHEREAS, the Site Plan was referred to the Town's various review agencies, and

WHEREAS, in accordance with Section 8-7-9 of the Zoning Ordinance, the Planning Board finds that:

A. The proposed site plan is consistent with the development plan if one is required.

B. The proposed site plan is consistent with the purpose and specific requirements of the Zoning Ordinance or variances granted by the ZBA on 12/21/21 and generally consistent with the policies of the Comprehensive Plan.

C. Adequate services and utilities will be available prior to occupancy.

D. The site plan is consistent with all other applicable laws.

E. Pursuant to Local Law #3-82, as amended, the Planning Board has determined that the requirements of SEQR are complete and that the subject proposal is not expected to have a significant adverse effect on the environment.

F. Review by the US Army Corps of Engineers under Section 404 of the Clean Water Act may be waived because the parcel is developed.

NOW THEREFORE BE IT RESOLVED that in accordance with 6 NYCRR, Part 617 and Local Law #3-82, as amended, the Planning Board has issued a Negative Declaration attached hereto, and

NOW THEREFORE BE IT FURTHER RESOLOVED that the Planning Board, in accordance with Part II, Chapter 83, Part IX, Section 1-2 of Town Law waives sidewalks required along Dodge Road and Haussauer Road until required at some future time by the Town Board, and

TOWN OF AMHERST
PLANNING BOARD
SITE PLAN RESOLUTION
SP-1988-21B

PETITIONER	PROPERTY LOCATION
theWELLbuffalo	995 Dodge Road

NOW THEREFORE BE IT FURTHER RESOLVED that the Planning Board, in accordance with Section 8-7 of the Zoning Ordinance approves said Site Plan subject to the following conditions:

1. That the consideration of signs is specifically excluded from this approval as they require a separate review and approval by the Town.

2. That all dumpsters/trash containers and all mechanical equipment, utility structures, multiple meter boards, generators, and similar appurtenances, including those which are mounted on any part of a primary structure shall be appropriately screened with a fence, wall, and/or landscaping. Provide gate on dumpster enclosure that shall be closed whenever dumpster is not being serviced, enclosure shall be high enough to screen the dumpster(s) within.

3. That as-built record drawings, including location of utilities, be provided to the Engineering Department prior to issuance of a Certificate of Occupancy by the Building Department.

4. That exterior wall surfaces of the addition shall meet §203-5-5-4C of Town Code unless the ZBA grants a variance.

The foregoing resolution was adopted by the Town of Amherst Planning Board, _____; moved by - _____; seconded by - _____; ayes _, noes _; absent - ____.

SUBJECT: MAJOR SITE PLAN REVIEW, **SP-1988-21_B**; PROPOSED THE WELL BUFFALO – EXPANSION; PROPERTY LOCATED AT **995 DODGE ROAD**.

Dear Sir/Madam:

At its meeting of January 13, 2022 the Planning Board voted to **adjourn** decision on the subject site plan pending submittal of revised plans and materials that address the comments of Planning Departments letter dated January 5, 2022 and revised building elevations. *The public hearing for this item has been closed.*

This request will be placed on the Planning Board agenda for the February 17, 2022 meeting.

Please submit revised plans or required materials by Monday, January 31, 2022 so they may be reviewed prior to the meeting.

Should you have any questions regarding the Planning Board's decision, please do not hesitate to call us.

Very truly yours,

Daniel C. Howard, AICP
Planning Director

Instructions for Completing Part 1

Part 1 is to be completed by the applicant or project sponsor. Responses become part of the application for approval or funding, are subject to public review, and may be subject to further verification.

Complete Part 1 based on information currently available. If additional research or investigation would be needed to fully respond to any item, please answer as thoroughly as possible based on current information; indicate whether missing information does not exist, or is not reasonably available to the sponsor; and, when possible, generally describe work or studies which would be necessary to update or fully develop that information.

Applicants/sponsors must complete all items in Sections A & B. In Sections C, D & E, most items contain an initial question that must be answered either "Yes" or "No". If the answer to the initial question is "Yes", complete the sub-questions that follow. If the answer to the initial question is "No", proceed to the next question. Section F allows the project sponsor to identify and attach any additional information. Section G requires the name and signature of the project sponsor to verify that the information contained in Part 1is accurate and complete.

A. Project and Sponsor Information.

Name of Action or Project: Preserve at Muir Woods Subdivision - Proposed 8 Lot Residential Subdivision		
Project Location (describe, and attach a general location map): 520 Campbell Boulevard, Town of Amherst - Erie County		
Brief Description of Proposed Action (include purpose or need): The project ("action") consists of a residential subdivision on a portion of the approximately 14.39 acres parcel at 520 Campbell Boulevard ("Project Site") consisting of eight lots for detached single-family homes. The portion of the Project Site to be developed as single-family homes on individuals lot consists of 1.80 acres of the Project Site [approximately 12.5%] that is properly zoned NCD-ND. No impacts to the 6.88 acres of jurisdictional federal on the Project Site are being proposed and a copy of the Jurisdictional Determination issued by the U.S. Army Corps of Engineers on July 12, 2017 is provided at Attachment "A" of this Part 1 of the Full EAF. The action has been defined broadly to include all required discretionary approvals and permits as well as all site improvements including the proposed detached single-family homes, driveways, grading, sanitary sewer and water lines and connections and all other required utility improvements. The project purpose is to develop the a portion of 520 Campbell Boulevard with frontage on a public roadway as single-family homes. The project is a Unlisted Action pursuant to the State Environmental Quality Review Act ("SEQRA") since none of the impacts cross the threshold for a Type I action contained in 6 NYCRR Part 617.4. Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

B. Government Approvals

B. Government Approvals, Funding, or Sponsorship. ("Funding" includes grants, loans, tax relief, and any other forms of financial assistance.)

Government Entity	If Yes: Identify Agency and Approval(s) Required	Application Date (Actual or projected)
a. City Council, Town Board, or Village Board of Trustees ☐Yes ☑No		
b. City, Town or Village Planning Board or Commission ☑Yes ☐No	Site Plan Approval and Final Plat Approval	November 15, 2021
c. City Council, Town or Village Zoning Board of Appeals ☐Yes ☑No		
d. Other local agencies ☑Yes ☐No	Building Dept. - Building Permits; Engineering Department - SWPPP Approval	To be Determined
e. County agencies ☑Yes ☐No	ECHD - Sanitary Sewer, Water Approval and Realty Subdivision; ECWA - Water	To be Determined
f. Regional agencies ☐Yes ☐No		
g. State agencies ☑Yes ☐No	New York State Department of Environmental Conservation - SPDES Permit	To be Determined
h. Federal agencies ☐Yes ☑No		

i. Coastal Resources.
i. Is the project site within a Coastal Area, or the waterfront area of a Designated Inland Waterway? ☐Yes ☑No
ii. Is the project site located in a community with an approved Local Waterfront Revitalization Program? ☐Yes ☑No
iii. Is the project site within a Coastal Erosion Hazard Area? ☐Yes ☑No

C. Planning and Zoning

C.1. Planning and zoning actions.

Will administrative or legislative adoption, or amendment of a plan, local law, ordinance, rule or regulation be the only approval(s) which must be granted to enable the proposed action to proceed? ☐Yes ☑No

- **If Yes,** complete sections C, F and G.
- **If No,** proceed to question C.2 and complete all remaining sections and questions in Part 1

C.2. Adopted land use plans.

a. Do any municipally- adopted (city, town, village or county) comprehensive land use plan(s) include the site where the proposed action would be located? ☑Yes ☐No
If Yes, does the comprehensive plan include specific recommendations for the site where the proposed action would be located? ☑Yes ☐No

b. Is the site of the proposed action within any local or regional special planning district (for example: Greenway Brownfield Opportunity Area (BOA); designated State or Federal heritage area; watershed management plan; or other?) [Note: The action will have no adverse impacts on the West Erie Canal Corridor.] ☑Yes ☐No
If Yes, identify the plan(s):
NYS Heritage Areas:West Erie Canal Corridor

c. Is the proposed action located wholly or partially within an area listed in an adopted municipal open space plan, or an adopted municipal farmland protection plan? ☐Yes ☑No
If Yes, identify the plan(s):

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

C.3. Zoning

a. Is the site of the proposed action located in a municipality with an adopted zoning law or ordinance. ☑ Yes ☐ No
If Yes, what is the zoning classification(s) including any applicable overlay district?
The portion of the Project Site to be developed as a eight lot residential subdivision is properly zoned NCD-ND.

b. Is the use permitted or allowed by a special or conditional use permit? ☐ Yes ☑ No

c. Is a zoning change requested as part of the proposed action? ☐ Yes ☑ No
If Yes,
i. What is the proposed new zoning for the site?

C.4. Existing community services.

a. In what school district is the project site located? Williamsville Central School District

b. What police or other public protection forces serve the project site?
Town of Amherst Police Department

c. Which fire protection and emergency medical services serve the project site?
Getzville Fire Protection District and Twin City Ambulance

d. What parks serve the project site?
Nature View Park, Walton Woods Park and Ellicott Creek Park

D. Project Details

D.1. Proposed and Potential Development

a. What is the general nature of the proposed action (e.g., residential, industrial, commercial, recreational; if mixed, include all components)? Detached single-family homes on individual lots.

b. a. Total acreage of the site of the proposed action? 14.39 acres
b. Total acreage to be physically disturbed? 1.8± acres
c. Total acreage (project site and any contiguous properties) owned or controlled by the applicant or project sponsor? 341± acres
[Note: 9.97 acres of 520 Campbell Boulevard will consist of Permanent Open Space subject to a Declaration of Restrictions.]

c. Is the proposed action an expansion of an existing project or use? ☐ Yes ☑ No
i. If Yes, what is the approximate percentage of the proposed expansion and identify the units (e.g., acres, miles, housing units, square feet)? % Units:

d. Is the proposed action a subdivision, or does it include a subdivision? ☑ Yes ☐ No
If Yes,
i. Purpose or type of subdivision? (e.g., residential, industrial, commercial; if mixed, specify types)
Residential subdivision consisting of detached single-family homes on individual lots.
ii. Is a cluster/conservation layout proposed? ☐ Yes ☑ No
iii. Number of lots proposed? 8
iv. Minimum and maximum proposed lot sizes? Minimum 9,100± sqft Maximum 13,490± sqft

e. Will proposed action be constructed in multiple phases? ☐ Yes ☑ No
i. If No, anticipated period of construction: 3 months
ii. If Yes:
- Total number of phases anticipated
- Anticipated commencement date of phase 1 (including demolition) month year
- Anticipated completion date of final phase month year
- Generally describe connections or relationships among phases, including any contingencies where progress of one phase may determine timing or duration of future phases:

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

f. Does the project include new residential uses? ☑ Yes ☐ No

If Yes, show numbers of units proposed.

	One Family	Two Family	Three Family	Multiple Family (four or more)
Initial Phase	8			
At completion of all phases	8			

g. Does the proposed action include new non-residential construction (including expansions)? ☐ Yes ☑ No

If Yes,

i. Total number of structures _____

ii. Dimensions (in feet) of largest proposed structure: _____ height; _____ width; and _____ length

iii. Approximate extent of building space to be heated or cooled: _____ square feet

h. Does the proposed action include construction or other activities that will result in the impoundment of any liquids, such as creation of a water supply, reservoir, pond, lake, waste lagoon or other storage? ☐ Yes ☑ No

If Yes,

i. Purpose of the impoundment: _____

ii. If a water impoundment, the principal source of the water: ☐ Ground water ☐ Surface water streams ☐ Other specify:

_____

iii. If other than water, identify the type of impounded/contained liquids and their source.

_____

iv. Approximate size of the proposed impoundment. Volume: _____ million gallons; surface area: _____ acres

v. Dimensions of the proposed dam or impounding structure: _____ height; _____ length

vi. Construction method/materials for the proposed dam or impounding structure (e.g., earth fill, rock, wood, concrete):

_____

D.2. Project Operations

a. Does the proposed action include any excavation, mining, or dredging, during construction, operations, or both? (Not including general site preparation, grading or installation of utilities or foundations where all excavated materials will remain onsite) ☐ Yes ☑ No

If Yes:

i .What is the purpose of the excavation or dredging? _____

ii. How much material (including rock, earth, sediments, etc.) is proposed to be removed from the site?

- Volume (specify tons or cubic yards): _____
- Over what duration of time? _____

iii. Describe nature and characteristics of materials to be excavated or dredged, and plans to use, manage or dispose of them.

_____

_____

iv. Will there be onsite dewatering or processing of excavated materials? ☐ Yes ☐ No

If yes, describe. _____

_____

v. What is the total area to be dredged or excavated? _____ acres

vi. What is the maximum area to be worked at any one time? _____ acres

vii. What would be the maximum depth of excavation or dredging? _____ feet

viii. Will the excavation require blasting? ☐ Yes ☐ No

ix. Summarize site reclamation goals and plan: _____

_____

_____

b. Would the proposed action cause or result in alteration of, increase or decrease in size of, or encroachment into any existing wetland, waterbody, shoreline, beach or adjacent area? ☐ Yes ☑ No

If Yes:

i. Identify the wetland or waterbody which would be affected (by name, water index number, wetland map number or geographic description): _____

_____

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

ii. Describe how the proposed action would affect that waterbody or wetland, e.g. excavation, fill, placement of structures, or alteration of channels, banks and shorelines. Indicate extent of activities, alterations and additions in square feet or acres:

iii. Will proposed action cause or result in disturbance to bottom sediments? ☐ Yes ☐ No
If Yes, describe:

iv. Will proposed action cause or result in the destruction or removal of aquatic vegetation? ☐ Yes ☐ No
If Yes:

- acres of aquatic vegetation proposed to be removed:
- expected acreage of aquatic vegetation remaining after project completion:
- purpose of proposed removal (e.g. beach clearing, invasive species control, boat access):
- proposed method of plant removal:
- if chemical/herbicide treatment will be used, specify product(s):

v. Describe any proposed reclamation/mitigation following disturbance:

c. Will the proposed action use, or create a new demand for water? ☑ Yes ☐ No
If Yes:

i. Total anticipated water usage/demand per day: 4,200± gallons/day

ii. Will the proposed action obtain water from an existing public water supply? ☑ Yes ☐ No
If Yes:

- Name of district or service area: Town of Amherst
- Does the existing public water supply have capacity to serve the proposal? ☑ Yes ☐ No
- Is the project site in the existing district? ☑ Yes ☐ No
- Is expansion of the district needed? ☐ Yes ☑ No
- Do existing lines serve the project site? ☑ Yes ☐ No

iii. Will line extension within an existing district be necessary to supply the project? ☐ Yes ☑ No
If Yes:

- Describe extensions or capacity expansions proposed to serve this project:
- Source(s) of supply for the district:

iv. Is a new water supply district or service area proposed to be formed to serve the project site? ☐ Yes ☑ No
If, Yes:

- Applicant/sponsor for new district:
- Date application submitted or anticipated:
- Proposed source(s) of supply for new district:

v. If a public water supply will not be used, describe plans to provide water supply for the project:

vi. If water supply will be from wells (public or private), maximum pumping capacity: _____ gallons/minute.

d. Will the proposed action generate liquid wastes? ☑ Yes ☐ No
If Yes:

i. Total anticipated liquid waste generation per day: 2,800± gallons/day

ii. Nature of liquid wastes to be generated (e.g., sanitary wastewater, industrial; if combination, describe all components and approximate volumes or proportions of each):

iii. Will the proposed action use any existing public wastewater treatment facilities? ☑ Yes ☐ No
If Yes:

- Name of wastewater treatment plant to be used: Town of Amherst Water Pollution Control Facility
- Name of district: Town District 16
- Does the existing wastewater treatment plant have capacity to serve the project? ☑ Yes ☐ No
- Is the project site in the existing district? ☑ Yes ☐ No
- Is expansion of the district needed? ☐ Yes ☑ No

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

- Do existing sewer lines serve the project site? ☑Yes ☐No
- Will line extension within an existing district be necessary to serve the project? ☐Yes ☑No

If Yes:

- Describe extensions or capacity expansions proposed to serve this project: _____

iv. Will a new wastewater (sewage) treatment district be formed to serve the project site? ☐Yes ☑No

If Yes:

- Applicant/sponsor for new district: _____
- Date application submitted or anticipated: _____
- What is the receiving water for the wastewater discharge? _____

v. If public facilities will not be used, describe plans to provide wastewater treatment for the project, including specifying proposed receiving water (name and classification if surface discharge, or describe subsurface disposal plans):

vi. Describe any plans or designs to capture, recycle or reuse liquid waste: _____

e. Will the proposed action disturb more than one acre and create stormwater runoff, either from new point sources (i.e. ditches, pipes, swales, curbs, gutters or other concentrated flows of stormwater) or non-point source (i.e. sheet flow) during construction or post construction? ☑Yes ☐No

If Yes:

i. How much impervious surface will the project create in relation to total size of project parcel?

_____ Square feet or 0.5± acres (impervious surface)

_____ Square feet or 1.8± acres (parcel size)

ii. Describe types of new point sources. New point sources will be inletting/outletting the proposed stormwater facilities. The impervious surfaces include driveways and single family homes.

iii. Where will the stormwater runoff be directed (i.e. on-site stormwater management facility/structures, adjacent properties, groundwater, on-site surface water or off-site surface waters)?

Runoff will be directed to new stormwater facilities which will outlet to the adjacent lake which will ultimately flow to Ellicott Creek

- If to surface waters, identify receiving water bodies or wetlands: Ellicott Creek
- Will stormwater runoff flow to adjacent properties? ☐Yes ☑No

iv. Does proposed plan minimize impervious surfaces, use pervious materials or collect and re-use stormwater? ☐Yes ☑No

f. Does the proposed action include, or will it use on-site, one or more sources of air emissions, including fuel combustion, waste incineration, or other processes or operations? ☑Yes ☐No

If Yes, identify:

i. Mobile sources during project operations (e.g., heavy equipment, fleet or delivery vehicles)

Heavy equipment emissions during site construction.

ii. Stationary sources during construction (e.g., power generation, structural heating, batch plant, crushers)

iii. Stationary sources during operations (e.g., process emissions, large boilers, electric generation)

g. Will any air emission sources named in D.2.f (above), require a NY State Air Registration, Air Facility Permit, or Federal Clean Air Act Title IV or Title V Permit? ☐Yes ☑No

If Yes:

i. Is the project site located in an Air quality non-attainment area? (Area routinely or periodically fails to meet ambient air quality standards for all or some parts of the year) ☐Yes ☑No

ii. In addition to emissions as calculated in the application, the project will generate:

- _____Tons/year (short tons) of Carbon Dioxide (CO_2)
- _____Tons/year (short tons) of Nitrous Oxide (N_2O)
- _____Tons/year (short tons) of Perfluorocarbons (PFCs)
- _____Tons/year (short tons) of Sulfur Hexafluoride (SF_6)
- _____Tons/year (short tons) of Carbon Dioxide equivalent of Hydroflourocarbons (HFCs)
- _____Tons/year (short tons) of Hazardous Air Pollutants (HAPs)

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

h. Will the proposed action generate or emit methane (including, but not limited to, sewage treatment plants, landfills, composting facilities)? ☐Yes ☑No

If Yes:

i. Estimate methane generation in tons/year (metric): _____

ii. Describe any methane capture, control or elimination measures included in project design (e.g., combustion to generate heat or electricity, flaring): _____

i. Will the proposed action result in the release of air pollutants from open-air operations or processes, such as quarry or landfill operations? ☐Yes ☑No

If Yes: Describe operations and nature of emissions (e.g., diesel exhaust, rock particulates/dust):

_____

j. Will the proposed action result in a substantial increase in traffic above present levels or generate substantial new demand for transportation facilities or services? ☐Yes ☑No

If Yes:

i. When is the peak traffic expected (Check all that apply): ☐ Morning ☐ Evening ☐Weekend ☐ Randomly between hours of _____ to _____.

ii. For commercial activities only, projected number of semi-trailer truck trips/day: _____

iii. Parking spaces: Existing _____ Proposed _____ Net increase/decrease _____

iv. Does the proposed action include any shared use parking? ☐Yes ☐No

v. If the proposed action includes any modification of existing roads, creation of new roads or change in existing access, describe:

_____

vi. Are public/private transportation service(s) or facilities available within ½ mile of the proposed site? ☐Yes ☐No

vii Will the proposed action include access to public transportation or accommodations for use of hybrid, electric or other alternative fueled vehicles? ☐Yes ☐No

viii. Will the proposed action include plans for pedestrian or bicycle accommodations for connections to existing pedestrian or bicycle routes? ☐Yes ☐No

k. Will the proposed action (for commercial or industrial projects only) generate new or additional demand for energy? ☐Yes ☑No

If Yes:

i. Estimate annual electricity demand during operation of the proposed action: _____

ii. Anticipated sources/suppliers of electricity for the project (e.g., on-site combustion, on-site renewable, via grid/local utility, or other):

_____

iii. Will the proposed action require a new, or an upgrade to, an existing substation? ☐Yes ☐No

l. Hours of operation. Answer all items which apply.

i. During Construction:

- Monday - Friday: 7am - 7pm
- Saturday: 7am - 7pm
- Sunday: To be determined
- Holidays: Not Anticipated

ii. During Operations:

- Monday - Friday: N/A
- Saturday: N/A
- Sunday: N/A
- Holidays: N/A

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

m. Will the proposed action produce noise that will exceed existing ambient noise levels during construction, operation, or both? ☑ Yes ☐ No

If yes:

i. Provide details including sources, time of day and duration:

During construction activities, there will be temporary unavoidable noise impacts associated with the use of construction equipment and vehicles.

ii. Will proposed action remove existing natural barriers that could act as a noise barrier or screen? ☐ Yes ☑ No

Describe: _____

n.. Will the proposed action have outdoor lighting? ☑ Yes ☐ No

If yes:

i. Describe source(s), location(s), height of fixture(s), direction/aim, and proximity to nearest occupied structures:

Street fixtures and lighting on single family homes.

ii. Will proposed action remove existing natural barriers that could act as a light barrier or screen? ☐ Yes ☑ No

Describe: _____

o. Does the proposed action have the potential to produce odors for more than one hour per day? ☐ Yes ☑ No

If Yes, describe possible sources, potential frequency and duration of odor emissions, and proximity to nearest occupied structures: _____

p. Will the proposed action include any bulk storage of petroleum (combined capacity of over 1,100 gallons) or chemical products 185 gallons in above ground storage or any amount in underground storage? ☐ Yes ☑ No

If Yes:

i. Product(s) to be stored _____

ii. Volume(s) _____ per unit time _____ (e.g., month, year)

iii. Generally describe proposed storage facilities: _____

q. Will the proposed action (commercial, industrial and recreational projects only) use pesticides (i.e., herbicides, insecticides) during construction or operation? ☐ Yes ☑ No

If Yes:

i. Describe proposed treatment(s):

ii. Will the proposed action use Integrated Pest Management Practices? ☐ Yes ☐ No

r. Will the proposed action (commercial or industrial projects only) involve or require the management or disposal of solid waste (excluding hazardous materials)? ☐ Yes ☑ No

If Yes:

i. Describe any solid waste(s) to be generated during construction or operation of the facility:

- Construction: _____ tons per _____ (unit of time)
- Operation : _____ tons per _____ (unit of time)

ii. Describe any proposals for on-site minimization, recycling or reuse of materials to avoid disposal as solid waste:

- Construction: _____
- Operation: _____

iii. Proposed disposal methods/facilities for solid waste generated on-site:

- Construction: _____
- Operation: _____

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

s. Does the proposed action include construction or modification of a solid waste management facility? ☐ Yes ☑ No

If Yes:

i. Type of management or handling of waste proposed for the site (e.g., recycling or transfer station, composting, landfill, or other disposal activities): _____

ii. Anticipated rate of disposal/processing:

- _____ Tons/month, if transfer or other non-combustion/thermal treatment, or
- _____ Tons/hour, if combustion or thermal treatment

iii. If landfill, anticipated site life: _____ years

t. Will proposed action at the site involve the commercial generation, treatment, storage, or disposal of hazardous waste? ☐ Yes ☑ No

If Yes:

i. Name(s) of all hazardous wastes or constituents to be generated, handled or managed at facility: _____

ii. Generally describe processes or activities involving hazardous wastes or constituents: _____

iii. Specify amount to be handled or generated _____ tons/month

iv. Describe any proposals for on-site minimization, recycling or reuse of hazardous constituents: _____

v. Will any hazardous wastes be disposed at an existing offsite hazardous waste facility? ☐ Yes ☐ No

If Yes: provide name and location of facility: _____

If No: describe proposed management of any hazardous wastes which will not be sent to a hazardous waste facility:

E. Site and Setting of Proposed Action

E.1. Land uses on and surrounding the project site

a. Existing land uses.

i. Check all uses that occur on, adjoining and near the project site.

☐ Urban ☐ Industrial ☑ Commercial ☑ Residential (suburban) ☐ Rural (non-farm)
☐ Forest ☐ Agriculture ☐ Aquatic ☐ Other (specify): _____

ii. If mix of uses, generally describe:

The primary use of the parcels in the vicinity of the Project Site is single-family homes on residential units. There are commercial uses at the intersection of Campbell Boulevard and North French Road and also multifamily uses to the south of the site on the east side of Campbell Boulevard.

b. Land uses and covertypes on the project site.

Land use or Covertype	Current Acreage	Acreage After Project Completion	Change (Acres +/-)
• Roads, buildings, and other paved or impervious surfaces	0	0.5±	+ 0.5±
• Forested	1.4±	0.0±	-1.4±
• Meadows, grasslands or brushlands (non-agricultural, including abandoned agricultural)	6.11±	5.71±	-0.4±
• Agricultural (includes active orchards, field, greenhouse etc.)	0	0	0
• Surface water features (lakes, ponds, streams, rivers, etc.)	0	0	0
• Wetlands (freshwater or tidal) [federal wetlands]	6.88	6.88	0
• Non-vegetated (bare rock, earth or fill)	-	-	-
• Other Describe: Lawns and landscaping	0	1.3±	+ 1.3±

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

c. Is the project site presently used by members of the community for public recreation? ☐Yes ☑No
i. If Yes: explain: _____

d. Are there any facilities serving children, the elderly, people with disabilities (e.g., schools, hospitals, licensed day care centers, or group homes) within 1500 feet of the project site? ☐Yes ☑No
If Yes,
i. Identify Facilities:

e. Does the project site contain an existing dam? ☐Yes ☑No
If Yes:
i. Dimensions of the dam and impoundment:
- Dam height: _____ feet
- Dam length: _____ feet
- Surface area: _____ acres
- Volume impounded: _____ gallons OR acre-feet

ii. Dam's existing hazard classification: _____
iii. Provide date and summarize results of last inspection:

f. Has the project site ever been used as a municipal, commercial or industrial solid waste management facility, or does the project site adjoin property which is now, or was at one time, used as a solid waste management facility? ☐Yes ☑No
If Yes:
i. Has the facility been formally closed? ☐Yes ☐ No
- If yes, cite sources/documentation: _____

ii. Describe the location of the project site relative to the boundaries of the solid waste management facility:
iii. Describe any development constraints due to the prior solid waste activities: _____

g. Have hazardous wastes been generated, treated and/or disposed of at the site, or does the project site adjoin property which is now or was at one time used to commercially treat, store and/or dispose of hazardous waste? ☐Yes ☑No
If Yes:
i. Describe waste(s) handled and waste management activities, including approximate time when activities occurred:

h. Potential contamination history. Has there been a reported spill at the proposed project site, or have any remedial actions been conducted at or adjacent to the proposed site? ☐Yes ☑ No
If Yes:
i. Is any portion of the site listed on the NYSDEC Spills Incidents database or Environmental Site Remediation database? Check all that apply: ☐Yes ☐No
☐ Yes – Spills Incidents database — Provide DEC ID number(s): _____
☐ Yes – Environmental Site Remediation database — Provide DEC ID number(s): _____
☐ Neither database

ii. If site has been subject of RCRA corrective activities, describe control measures: _____

iii. Is the project within 2000 feet of any site in the NYSDEC Environmental Site Remediation database? ☐Yes ☑No
If yes, provide DEC ID number(s): _____
iv. If yes to (i), (ii) or (iii) above, describe current status of site(s):

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

v. Is the project site subject to an institutional control limiting property uses? ☐ Yes ☑ No

- If yes, DEC site ID number: _____
- Describe the type of institutional control (e.g., deed restriction or easement): _____
- Describe any use limitations: _____
- Describe any engineering controls: _____
- Will the project affect the institutional or engineering controls in place? ☐ Yes ☐ No
- Explain: _____

E.2. Natural Resources On or Near Project Site

a. What is the average depth to bedrock on the project site? greater than 5 feet

b. Are there bedrock outcroppings on the project site? ☐ Yes ☑ No
If Yes, what proportion of the site is comprised of bedrock outcroppings? 0 %

c. Predominant soil type(s) present on project site:

Ch - Cheektowaga	63 %
Cv - Cosad	37 %
	%

d. What is the average depth to the water table on the project site? Average: 0.0-1.5 feet

e. Drainage status of project site soils:
☐ Well Drained: ____% of site
☐ Moderately Well Drained: ____% of site
☑ Poorly Drained 100 % of site

f. Approximate proportion of proposed action site with slopes:
☑ 0-10%: 100 % of site
☐ 10-15%: ____% of site
☐ 15% or greater: ____% of site

g. Are there any unique geologic features on the project site? ☐ Yes ☑ No
If Yes, describe: _____

h. Surface water features.

i. Does any portion of the project site contain wetlands or other waterbodies (including streams, rivers, ponds or lakes)? [There are 6.88 acres of federal wetlands located on the Project Site per the Jurisdictional Determination issued by the USACE on July 12, 2017. A copy is provided at Attachment "A."] ☑ Yes ☐ No

ii. Do any wetlands or other waterbodies adjoin the project site? ☑ Yes ☐ No
If Yes to either *i* or *ii*, continue. If No, skip to E.2.i.

iii. Are any of the wetlands or waterbodies within or adjoining the project site regulated by any federal, state or local agency? [The Applicant is not proposing any impacts to the 6.88 acres of federal wetlands.] ☑ Yes ☐ No

iv. For each identified regulated wetland and waterbody on the project site, provide the following information:

- Streams: Name _____ Classification _____
- Lakes or Ponds: Name _____ Classification _____
- Wetlands: Name Federal Waters Approximate Size 6.88 Acres
- Wetland No. (if regulated by DEC) _____

v. Are any of the above water bodies listed in the most recent compilation of NYS water quality-impaired waterbodies? ☐ Yes ☑ No
If yes, name of impaired water body/bodies and basis for listing as impaired: _____

i. Is the project site in a designated Floodway? ☐ Yes ☑ No

j. Is the project site in the 100 year Floodplain? ☐ Yes ☑ No

k. Is the project site in the 500 year Floodplain? ☑ Yes ☐ No

l. Is the project site located over, or immediately adjoining, a primary, principal or sole source aquifer? ☐ Yes ☑ No
If Yes:
i. Name of aquifer: _____

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

m. Identify the predominant wildlife species that occupy or use the project site:
Typical suburban species

n. Does the project site contain a designated significant natural community? ☐Yes ☑No
If Yes:
i. Describe the habitat/community (composition, function, and basis for designation):
ii. Source(s) of description or evaluation:
iii. Extent of community/habitat:
- Currently: _____ acres
- Following completion of project as proposed: _____ acres
- Gain or loss (indicate + or -): _____ acres

o. Does project site contain any species of plant or animal that is listed by the federal government or NYS as endangered or threatened, or does it contain any areas identified as habitat for an endangered or threatened species? ☐Yes ☑No

p. Does the project site contain any species of plant or animal that is listed by NYS as rare, or as a species of special concern? ☐Yes ☑No

q. Is the project site or adjoining area currently used for hunting, trapping, fishing or shell fishing? ☐Yes ☑No
If yes, give a brief description of how the proposed action may affect that use:

E.3. Designated Public Resources On or Near Project Site

a. Is the project site, or any portion of it, located in a designated agricultural district certified pursuant to Agriculture and Markets Law, Article 25-AA, Section 303 and 304? ☐Yes ☑No
If Yes, provide county plus district name/number:

b. Are agricultural lands consisting of highly productive soils present? ☐Yes ☑No
i. If Yes: acreage(s) on project site?
ii. Source(s) of soil rating(s):

c. Does the project site contain all or part of, or is it substantially contiguous to, a registered National Natural Landmark? ☐Yes ☑No
If Yes:
i. Nature of the natural landmark: ☐ Biological Community ☐ Geological Feature
ii. Provide brief description of landmark, including values behind designation and approximate size/extent:

d. Is the project site located in or does it adjoin a state listed Critical Environmental Area? ☐Yes ☑No
If Yes:
i. CEA name:
ii. Basis for designation:
iii. Designating agency and date:

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

e. Does the project site contain, or is it substantially contiguous to, a building, archaeological site, or district which is listed on, or has been nominated by the NYS Board of Historic Preservation for inclusion on, the State or National Register of Historic Places? ☐ Yes ☑ No

If Yes:

i. Nature of historic/archaeological resource: ☐ Archaeological Site ☐ Historic Building or District

ii. Name: _____

iii. Brief description of attributes on which listing is based:

_____

f. Is the project site, or any portion of it, located in or adjacent to an area designated as sensitive for archaeological sites on the NY State Historic Preservation Office (SHPO) archaeological site inventory? ☑ Yes ☐ No

[Copy of No Impact Determination Letter issued by SHPO on October 10, 2001 provided at Attachment "B".]

g. Have additional archaeological or historic site(s) or resources been identified on the project site? ☐ Yes ☑ No

If Yes:

i. Describe possible resource(s): _____

ii. Basis for identification: _____

h. Is the project site within fives miles of any officially designated and publicly accessible federal, state, or local scenic or aesthetic resource? ☐ Yes ☑ No

If Yes:

i. Identify resource: _____

ii. Nature of, or basis for, designation (e.g., established highway overlook, state or local park, state historic trail or scenic byway, etc.): _____

iii. Distance between project and resource: _____ miles.

i. Is the project site located within a designated river corridor under the Wild, Scenic and Recreational Rivers Program 6 NYCRR 666? ☐ Yes ☑ No

If Yes:

i. Identify the name of the river and its designation: _____

ii. Is the activity consistent with development restrictions contained in 6NYCRR Part 666? ☐ Yes ☐ No

F. Additional Information

Attach any additional information which may be needed to clarify your project.

If you have identified any adverse impacts which could be associated with your proposal, please describe those impacts plus any measures which you propose to avoid or minimize them.

G. Verification

I certify that the information provided is true to the best of my knowledge.

SUBJECT: Preliminary Jurisdictional Determination for Department of the Army Application No. 2001-00067.

Ciminelli Real Estate Corporation
Centerpointe Corporate Park
350 Essjay Road
Williamsville, NY 14221

Dear Mr. Brad Packard:

I have reviewed the wetland delineation map you submitted for your request for a wetland boundary verification, located at 520 Campbell Boulevard which is directly adjacent to the Muir Woods project site, Town of Amherst, County of Erie, New York.

I have evaluated your submitted wetland delineation map and have determined that the wetland and water boundaries shown on the map accurately represent on-site conditions. Please note that this is a Preliminary Jurisdictional Determination (JD). Preliminary JDs are non-binding written indications that there may be waters of the United States (WOUS) on your parcel and approximate locations of those waters. Preliminary JDs are advisory in nature and may not be appealed.

Pursuant to Regulatory Guidance Letter 16-01, any permit application made in reliance on this Preliminary JD will be evaluated as though all wetlands or waters on the site are regulated by the Corps. Further, all waters, including wetlands will be used for purposes of assessing the area of project related impacts and compensatory mitigation. If you require a definitive response regarding Department of the Army jurisdiction for any or all of the waters identified on the submitted drawings, you may request an approved jurisdictional determination (AJD) from this office. If an AJD is requested, please be aware that this is often a lengthy process and we may require the submittal of additional information.

I have enclosed the Preliminary JD Form with this letter. The form and attached table identifies the extent of waters on the site and specific terms and conditions of the Preliminary JD. Please sign and return a copy of this form to my attention. If you do not respond within 15 days, we will presume concurrence and no additional follow up is necessary prior to finalizing an action.

In accordance with Regulatory Guidance Letter 05-02, "Preliminary jurisdictional determinations are not definitive determinations of areas within regulatory jurisdiction and do not have expirations dates." However, I strongly recommend that the boundaries of all aquatic resources on the parcel be re-evaluated by a qualified wetland biologist after five years of the

Regulatory Branch

SUBJECT: Preliminary Jurisdictional Determination for Department of the Army Application No. 2001-00067.

date of this letter. This will ensure that any changes are appropriately identified and you do not inadvertently incur a violation of Federal law while constructing your project or working on your project site.

Lastly, this determination has been conducted only to identify the limits of waters that may be subject to Corps Clean Water Act or Rivers and Harbors Act jurisdiction. This delineation/determination may not be valid for the wetland conservation provisions of the Food Security Act of 1985, as amended. If you or your tenant are United States Department of Agriculture (USDA) program participants, or anticipate participation in USDA programs, you should request a certified wetland determination from the local office of the Natural Resource Conservation Service prior to starting work.

Questions pertaining to this matter should be directed to me at 716-879-4346, by writing to the following address: U.S. Army Corps of Engineers, 1776 Niagara Street, Buffalo, New York 14207, or by e-mail at: martin.h.crosson@usace.army.mil

NOTIFICATION OF ADMINISTRATIVE APPEAL OPTIONS AND PROCESS AND REQUEST FOR APPEAL

Applicant: Ciminelli Real Estate Corporation	File Number: 2001-00067	Date: 07/12/2017
Attached is:		See Section below
	INITIAL PROFFERED PERMIT (Standard Permit or Letter of permission)	A
	PROFFERED PERMIT (Standard Permit or Letter of permission)	B
	PERMIT DENIAL	C
	APPROVED JURISDICTIONAL DETERMINATION	D
X	PRELIMINARY JURISDICTIONAL DETERMINATION	E

SECTION I - The following identifies your rights and options regarding an administrative appeal of the above decision. Additional information may be found at http://www.usace.army.mil/CECW/Pages/reg_materials.aspx or Corps regulations at 33 CFR Part 331.

A: INITIAL PROFFERED PERMIT: You may accept or object to the permit.

- **ACCEPT:** If you received a Standard Permit, you may sign the permit document and return it to the district engineer for final authorization. If you received a Letter of Permission (LOP), you may accept the LOP and your work is authorized. Your signature on the Standard Permit or acceptance of the LOP means that you accept the permit in its entirety, and waive all rights to appeal the permit, including its terms and conditions, and approved jurisdictional determinations associated with the permit.

- ***OBJECT:*** If you object to the permit (Standard or LOP) because of certain terms and conditions therein, you may request that the permit be modified accordingly. You must complete Section II of this form and return the form to the district engineer. Your objections must be received by the district engineer within 60 days of the date of this notice, or you will forfeit your right to appeal the permit in the future. Upon receipt of your letter, the district engineer will evaluate your objections and may: (a) modify the permit to address all of your concerns, (b) modify the permit to address some of your objections, or (c) not modify the permit having determined that the permit should be issued as previously written. After evaluating your objections, the district engineer will send you a proffered permit for your reconsideration, as indicated in Section B below.

B: PROFFERED PERMIT: You may accept or appeal the permit

- **ACCEPT:** If you received a Standard Permit, you may sign the permit document and return it to the district engineer for final authorization. If you received a Letter of Permission (LOP), you may accept the LOP and your work is authorized. Your signature on the Standard Permit or acceptance of the LOP means that you accept the permit in its entirety, and waive all rights to appeal the permit, including its terms and conditions, and approved jurisdictional determinations associated with the permit.

- **APPEAL:** If you choose to decline the proffered permit (Standard or LOP) because of certain terms and conditions therein, you may appeal the declined permit under the Corps of Engineers Administrative Appeal Process by completing Section II of this form and sending the form to the division engineer. This form must be received by the division engineer within 60 days of the date of this notice.

C: PERMIT DENIAL: You may appeal the denial of a permit under the Corps of Engineers Administrative Appeal Process by completing Section II of this form and sending the form to the division engineer. This form must be received by the division engineer within 60 days of the date of this notice.

D: APPROVED JURISDICTIONAL DETERMINATION: You may accept or appeal the approved JD or provide new information.

- **ACCEPT:** You do not need to notify the Corps to accept an approved JD. Failure to notify the Corps within 60 days of the date of this notice, means that you accept the approved JD in its entirety, and waive all rights to appeal the approved JD.

- **APPEAL:** If you disagree with the approved JD, you may appeal the approved JD under the Corps of Engineers Administrative Appeal Process by completing Section II of this form and sending the form to the division engineer. This form must be received by the division engineer within 60 days of the date of this notice.

E: PRELIMINARY JURISDICTIONAL DETERMINATION: You do not need to respond to the Corps regarding the preliminary JD. The Preliminary JD is not appealable. If you wish, you may request an approved JD (which may be appealed), by contacting the Corps district for further instruction. Also you may provide new information for further consideration by the Corps to reevaluate the JD.

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

SECTION II - REQUEST FOR APPEAL or OBJECTIONS TO AN INITIAL PROFFERED PERMIT

REASONS FOR APPEAL OR OBJECTIONS: (Describe your reasons for appealing the decision or your objections to an initial proffered permit in clear concise statements. You may attach additional information to this form to clarify where your reasons or objections are addressed in the administrative record.)

ADDITIONAL INFORMATION: The appeal is limited to a review of the administrative record, the Corps memorandum for the record of the appeal conference or meeting, and any supplemental information that the review officer has determined is needed to clarify the administrative record. Neither the appellant nor the Corps may add new information or analyses to the record. However, you may provide additional information to clarify the location of information that is already in the administrative record.

POINT OF CONTACT FOR QUESTIONS OR INFORMATION:

If you have questions regarding this decision and/or the appeal process you may contact:	If you only have questions regarding the appeal process you may also contact:
Martin Crosson U.S. Army Corps of Engineers 1776 Niagara Street Buffalo, New York 14207 716-879-4346 martin.h.crosson@usace.army.mil	Attn: Jacob Siegrist Great Lakes and Ohio River Division CELRD-PD-REG 550 Main Street, Room 10524 Cincinnati, OH 45202-3222 513-684-2699; FAX 513-684-2460

RIGHT OF ENTRY: Your signature below grants the right of entry to Corps of Engineers personnel, and any government consultants, to conduct investigations of the project site during the course of the appeal process. You will be provided a 15 day notice of any site investigation, and will have the opportunity to participate in all site investigations.

Williamsville, NY 14221

C. DISTRICT OFFICE, FILE NAME, AND NUMBER: LRB Buffalo, Ciminelli Real Estate Corporation, 2001-00067.

D. PROJECT LOCATION(S) AND BACKGROUND INFORMATION:

State: New York County/parish/borough: Erie City: Amherst

Center coordinates of site (lat/long in degree decimal format):

Lat.: 43.03126° Long.: -78.77060°

Universal Transverse Mercator: 17

Name of nearest waterbody: Ellicott Creek

E. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY):

☒ Office (Desk) Determination. Date: July 12, 2017.

☒ Field Determination. Date(s): July 11, 2017.

TABLE OF AQUATIC RESOURCES IN REVIEW AREA WHICH "MAY BE" SUBJECT TO REGULATORY JURISDICTION.

Site number	Latitude (decimal degrees)	Longitude (decimal degrees)	Estimated amount of aquatic resource in review area (acreage and linear feet, if applicable)	Type of aquatic resource (i.e., wetland vs. non-wetland waters)	Geographic authority to which the aquatic resource "may be" subject (i.e., Section 404 or Section 10/404)
Wetland 1	43.03126°	-78.77060°	6.888	PSS/FO	404

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

1) The Corps of Engineers believes that there may be jurisdictional aquatic resources in the review area, and the requestor of this PJD is hereby advised of his or her option to request and obtain an approved JD (AJD) for that review area based on an informed decision after having discussed the various types of JDs and their characteristics and circumstances when they may be appropriate.

2) In any circumstance where a permit applicant obtains an individual permit, or a Nationwide General Permit (NWP) or other general permit verification requiring "pre-construction notification" (PCN), or requests verification for a non-reporting NWP or other general permit, and the permit applicant has not requested an AJD for the activity, the permit applicant is hereby made aware that: (1) the permit applicant has elected to seek a permit authorization based on a PJD, which does not make an official determination of jurisdictional aquatic resources; (2) the applicant has the option to request an AJD before accepting the terms and conditions of the permit authorization, and that basing a permit authorization on an AJD could possibly result in less compensatory mitigation being required or different special conditions; (3) the applicant has the right to request an individual permit rather than accepting the terms and conditions of the NWP or other general permit authorization; (4) the applicant can accept a permit authorization and thereby agree to comply with all the terms and conditions of that permit, including whatever mitigation requirements the Corps has determined to be necessary; (5) undertaking any activity in reliance upon the subject permit authorization without requesting an AJD constitutes the applicant's acceptance of the use of the PJD; (6) accepting a permit authorization (e.g., signing a proffered individual permit) or undertaking any activity in reliance on any form of Corps permit authorization based on a PJD constitutes agreement that all aquatic resources in the review area affected in any way by that activity will be treated as jurisdictional, and waives any challenge to such jurisdiction in any administrative or judicial compliance or enforcement action, or in any administrative appeal or in any Federal court; and (7) whether the applicant elects to use either an AJD or a PJD, the JD will be processed as soon as practicable. Further, an AJD, a proffered individual permit (and all terms and conditions contained therein), or individual permit denial can be administratively appealed pursuant to 33 C.F.R. Part 331. If, during an administrative appeal, it becomes appropriate to make an official determination whether geographic jurisdiction exists over aquatic resources in the review area, or to provide an official delineation of jurisdictional aquatic resources in the review area, the Corps will provide an AJD to accomplish that result, as soon as is practicable. This PJD finds that there *"may be"* waters of the U.S. and/or that there *"may be"* navigable waters of the U.S. on the subject review area, and identifies all aquatic features in the review area that could be affected by the proposed activity, based on the following information:

RESOLUTION 2021-570 **ADOPTED**

Request to Reclassify a Portion of 520 Campbell Boulevard and to Amend the Audubon Development Plan

Adoption of Local Law to Amend the Zoning Map
(520 Campbell Boulevard (portion), Z-2021-03)

RESOLVED, that pursuant to 6NYCRR Part 617 (SEQR) and Town Code Section 104, as amended, the requirements of SEQR have been completed and the Town Board issues the attached Negative Declaration, and be it further

RESOLVED, that pursuant to NYS Town Law Sec.272-a, the Town Board concurs with the findings of the Planning Board as stated in their resolution of May 28, 2021 that the proposed NCD-ND zoning at 520 Campbell Boulevard (portion) is consistent with the adopted Bicentennial Comprehensive Plan, as amended, and be it further

RESOLVED, that to the extent the proposed zoning is not consistent with the adopted Comprehensive Plan, the plan is hereby amended to be consistent with the proposed zoning at this location, and be it further

RESOLVED, that in accordance with Section 203-8-3 of the Town Code (Zoning), the Town Board adopts Local Law (#) to amend the Town zoning map subject to the following condition as recommended by the Planning Board

1. That future development of the site complies with the dimensional requirements set forth in the R-3 zoning district listed in §203-3-6(B) of Town Code.

2. That the 9.88 acres be donated to the Town of Amherst.

7/12/2021
A motion to open the public hearing was made by Supervisor Kulpa, seconded by Councilmember Lavin and unanimously approved 5-0. The public hearing was opened at 7:44 PM.

Sean W. Hopkins, Esq., presented and answered questions.

The following Speaker addressed the Town Board:
Judy Colton, Sunshine Dr. - Questioned whether this rezoning would have any impact on the land near Bucyrus Heights

As there were no further speakers, Supervisor Kulpa motioned to adjourn the public hearing and set a decision date for August 9th. The motion was seconded by Councilmember Lavin and unanimously approved 5-0. The public hearing was adjourned at 8:04 PM.

8/09/2021
A motion to adjourn until Sept. 13th was made by Supervisor Kulpa, seconded by Councilmember Bucki and unanimously approved 5-0. The public hearing was adjourned at 7:13 PM.

SUBJECT: Preliminary Jurisdictional Determination for Department of the Army Application No. 2001-00067.

Ciminelli Real Estate Corporation
Centerpointe Corporate Park
350 Essjay Road
Williamsville, NY 14221

Dear Mr. Brad Packard:

I have reviewed the wetland delineation map you submitted for your request for a wetland boundary verification, located at 520 Campbell Boulevard which is directly adjacent to the Muir Woods project site, Town of Amherst, County of Erie, New York.

I have evaluated your submitted wetland delineation map and have determined that the wetland and water boundaries shown on the map accurately represent on-site conditions. Please note that this is a Preliminary Jurisdictional Determination (JD). Preliminary JDs are non-binding written indications that there may be waters of the United States (WOUS) on your parcel and approximate locations of those waters. Preliminary JDs are advisory in nature and may not be appealed.

Pursuant to Regulatory Guidance Letter 16-01, any permit application made in reliance on this Preliminary JD will be evaluated as though all wetlands or waters on the site are regulated by the Corps. Further, all waters, including wetlands will be used for purposes of assessing the area of project related impacts and compensatory mitigation. If you require a definitive response regarding Department of the Army jurisdiction for any or all of the waters identified on the submitted drawings, you may request an approved jurisdictional determination (AJD) from this office. If an AJD is requested, please be aware that this is often a lengthy process and we may require the submittal of additional information.

I have enclosed the Preliminary JD Form with this letter. The form and attached table identifies the extent of waters on the site and specific terms and conditions of the Preliminary JD. Please sign and return a copy of this form to my attention. If you do not respond within 15 days, we will presume concurrence and no additional follow up is necessary prior to finalizing an action.

In accordance with Regulatory Guidance Letter 05-02, "Preliminary jurisdictional determinations are not definitive determinations of areas within regulatory jurisdiction and do not have expirations dates." However, I strongly recommend that the boundaries of all aquatic resources on the parcel be re-evaluated by a qualified wetland biologist after five years of the

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

date of this letter. This will ensure that any changes are appropriately identified and you do not inadvertently incur a violation of Federal law while constructing your project or working on your project site.

Lastly, this determination has been conducted only to identify the limits of waters that may be subject to Corps Clean Water Act or Rivers and Harbors Act jurisdiction. This delineation/determination may not be valid for the wetland conservation provisions of the Food Security Act of 1985, as amended. If you or your tenant are United States Department of Agriculture (USDA) program participants, or anticipate participation in USDA programs, you should request a certified wetland determination from the local office of the Natural Resource Conservation Service prior to starting work.

Questions pertaining to this matter should be directed to me at 716-879-4346, by writing to the following address: U.S. Army Corps of Engineers, 1776 Niagara Street, Buffalo, New York 14207, or by e-mail at: martin.h.crosson@usace.army.mil

Sincerely,

Martin H. Crosson
Biologist

NOTIFICATION OF ADMINISTRATIVE APPEAL OPTIONS AND PROCESS AND REQUEST FOR APPEAL

Applicant: Ciminelli Real Estate Corporation	File Number: 2001-00067	Date: 07/12/2017
Attached is:		See Section below
	INITIAL PROFFERED PERMIT (Standard Permit or Letter of permission)	A
	PROFFERED PERMIT (Standard Permit or Letter of permission)	B
	PERMIT DENIAL	C
	APPROVED JURISDICTIONAL DETERMINATION	D
X	PRELIMINARY JURISDICTIONAL DETERMINATION	E

SECTION I - The following identifies your rights and options regarding an administrative appeal of the above decision. Additional information may be found at http://www.usace.army.mil/CECW/Pages/reg_materials.aspx or Corps regulations at 33 CFR Part 331.

A: INITIAL PROFFERED PERMIT: You may accept or object to the permit.

- **ACCEPT:** If you received a Standard Permit, you may sign the permit document and return it to the district engineer for final authorization. If you received a Letter of Permission (LOP), you may accept the LOP and your work is authorized. Your signature on the Standard Permit or acceptance of the LOP means that you accept the permit in its entirety, and waive all rights to appeal the permit, including its terms and conditions, and approved jurisdictional determinations associated with the permit.

- **OBJECT:** If you object to the permit (Standard or LOP) because of certain terms and conditions therein, you may request that the permit be modified accordingly. You must complete Section II of this form and return the form to the district engineer. Your objections must be received by the district engineer within 60 days of the date of this notice, or you will forfeit your right to appeal the permit in the future. Upon receipt of your letter, the district engineer will evaluate your objections and may: (a) modify the permit to address all of your concerns, (b) modify the permit to address some of your objections, or (c) not modify the permit having determined that the permit should be issued as previously written. After evaluating your objections, the district engineer will send you a proffered permit for your reconsideration, as indicated in Section B below.

B: PROFFERED PERMIT: You may accept or appeal the permit

- **ACCEPT:** If you received a Standard Permit, you may sign the permit document and return it to the district engineer for final authorization. If you received a Letter of Permission (LOP), you may accept the LOP and your work is authorized. Your signature on the Standard Permit or acceptance of the LOP means that you accept the permit in its entirety, and waive all rights to appeal the permit, including its terms and conditions, and approved jurisdictional determinations associated with the permit.

- **APPEAL:** If you choose to decline the proffered permit (Standard or LOP) because of certain terms and conditions therein, you may appeal the declined permit under the Corps of Engineers Administrative Appeal Process by completing Section II of this form and sending the form to the division engineer. This form must be received by the division engineer within 60 days of the date of this notice.

C: PERMIT DENIAL: You may appeal the denial of a permit under the Corps of Engineers Administrative Appeal Process by completing Section II of this form and sending the form to the division engineer. This form must be received by the division engineer within 60 days of the date of this notice.

D: APPROVED JURISDICTIONAL DETERMINATION: You may accept or appeal the approved JD or provide new information.

- **ACCEPT:** You do not need to notify the Corps to accept an approved JD. Failure to notify the Corps within 60 days of the date of this notice, means that you accept the approved JD in its entirety, and waive all rights to appeal the approved JD.

- **APPEAL:** If you disagree with the approved JD, you may appeal the approved JD under the Corps of Engineers Administrative Appeal Process by completing Section II of this form and sending the form to the division engineer. This form must be received by the division engineer within 60 days of the date of this notice.

E: PRELIMINARY JURISDICTIONAL DETERMINATION: You do not need to respond to the Corps regarding the preliminary JD. The Preliminary JD is not appealable. If you wish, you may request an approved JD (which may be appealed), by contacting the Corps district for further instruction. Also you may provide new information for further consideration by the Corps to reevaluate the JD.

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

SECTION II - REQUEST FOR APPEAL or OBJECTIONS TO AN INITIAL PROFFERED PERMIT

REASONS FOR APPEAL OR OBJECTIONS: (Describe your reasons for appealing the decision or your objections to an initial proffered permit in clear concise statements. You may attach additional information to this form to clarify where your reasons or objections are addressed in the administrative record.)

ADDITIONAL INFORMATION: The appeal is limited to a review of the administrative record, the Corps memorandum for the record of the appeal conference or meeting, and any supplemental information that the review officer has determined is needed to clarify the administrative record. Neither the appellant nor the Corps may add new information or analyses to the record. However, you may provide additional information to clarify the location of information that is already in the administrative record.

POINT OF CONTACT FOR QUESTIONS OR INFORMATION:

If you have questions regarding this decision and/or the appeal process you may contact:	If you only have questions regarding the appeal process you may also contact:
Martin Crosson U.S. Army Corps of Engineers 1776 Niagara Street Buffalo, New York 14207 716-879-4346 martin.h.crosson@usace.army.mil	Attn: Jacob Siegrist Great Lakes and Ohio River Division CELRD-PD-REG 550 Main Street, Room 10524 Cincinnati, OH 45202-3222 513-684-2699; FAX 513-684-2460

RIGHT OF ENTRY: Your signature below grants the right of entry to Corps of Engineers personnel, and any government consultants, to conduct investigations of the project site during the course of the appeal process. You will be provided a 15 day notice of any site investigation, and will have the opportunity to participate in all site investigations.

	Date:	Telephone number:

PRELIMINARY JURISDICTIONAL DETERMINATION (PJD) FORM

BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR PJD: July 12, 2017.

B. NAME AND ADDRESS OF PERSON REQUESTING PJD:

Ciminelli Real Estate Corporation
Centerpointe Corporate Park
350 Essjay Road
Williamsville, NY 14221

C. DISTRICT OFFICE, FILE NAME, AND NUMBER: LRB Buffalo, Ciminelli Real Estate Corporation, 2001-00067.

D. PROJECT LOCATION(S) AND BACKGROUND INFORMATION:

State: New York County/parish/borough: Erie City: Amherst

Center coordinates of site (lat/long in degree decimal format):

Lat.: 43.03126° Long.: -78.77060°

Universal Transverse Mercator: 17

Name of nearest waterbody: Ellicott Creek

E. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY):

☒ Office (Desk) Determination. Date: July 12, 2017.

☒ Field Determination. Date(s): July 11, 2017.

TABLE OF AQUATIC RESOURCES IN REVIEW AREA WHICH "MAY BE" SUBJECT TO REGULATORY JURISDICTION.

Site number	Latitude (decimal degrees)	Longitude (decimal degrees)	Estimated amount of aquatic resource in review area (acreage and linear feet, if applicable)	Type of aquatic resource (i.e., wetland vs. non-wetland waters)	Geographic authority to which the aquatic resource "may be" subject (i.e., Section 404 or Section 10/404
Wetland 1	43.03126°	-78.77060°	6.888	PSS/FO	404

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

1) The Corps of Engineers believes that there may be jurisdictional aquatic resources in the review area, and the requestor of this PJD is hereby advised of his or her option to request and obtain an approved JD (AJD) for that review area based on an informed decision after having discussed the various types of JDs and their characteristics and circumstances when they may be appropriate.

2) In any circumstance where a permit applicant obtains an individual permit, or a Nationwide General Permit (NWP) or other general permit verification requiring "pre-construction notification" (PCN), or requests verification for a non-reporting NWP or other general permit, and the permit applicant has not requested an AJD for the activity, the permit applicant is hereby made aware that: (1) the permit applicant has elected to seek a permit authorization based on a PJD, which does not make an official determination of jurisdictional aquatic resources; (2) the applicant has the option to request an AJD before accepting the terms and conditions of the permit authorization, and that basing a permit authorization on an AJD could possibly result in less compensatory mitigation being required or different special conditions; (3) the applicant has the right to request an individual permit rather than accepting the terms and conditions of the NWP or other general permit authorization; (4) the applicant can accept a permit authorization and thereby agree to comply with all the terms and conditions of that permit, including whatever mitigation requirements the Corps has determined to be necessary; (5) undertaking any activity in reliance upon the subject permit authorization without requesting an AJD constitutes the applicant's acceptance of the use of the PJD; (6) accepting a permit authorization (e.g., signing a proffered individual permit) or undertaking any activity in reliance on any form of Corps permit authorization based on a PJD constitutes agreement that all aquatic resources in the review area affected in any way by that activity will be treated as jurisdictional, and waives any challenge to such jurisdiction in any administrative or judicial compliance or enforcement action, or in any administrative appeal or in any Federal court; and (7) whether the applicant elects to use either an AJD or a PJD, the JD will be processed as soon as practicable. Further, an AJD, a proffered individual permit (and all terms and conditions contained therein), or individual permit denial can be administratively appealed pursuant to 33 C.F.R. Part 331. If, during an administrative appeal, it becomes appropriate to make an official determination whether geographic jurisdiction exists over aquatic resources in the review area, or to provide an official delineation of jurisdictional aquatic resources in the review area, the Corps will provide an AJD to accomplish that result, as soon as is practicable. This PJD finds that there *"may be"* waters of the U.S. and/or that there *"may be"* navigable waters of the U.S. on the subject review area, and identifies all aquatic features in the review area that could be affected by the proposed activity, based on the following information:

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

SUPPORTING DATA. Data reviewed for PJD (check all that apply)

Checked items should be included in subject file. Appropriately reference sources below where indicated for all checked items:

I. Introduction

The proposed development, Muir Woods Subdivision Phase Four, is located along the northern side of Sierra Drive near Campbell Boulevard in the Town of Amherst. The 1.75± development is part of the larger 118± acre Muir Woods Subdivision and will be constructed on a portion of an existing vacant parcel of land at 520 Campbell Boulevard (SBL: 27.19-1-34). The project site is bounded on the north and east by single family residential lots fronting Campbell Boulevard; bounded on the south by Sierra Drive; and bounded on the west by vacant land owned and controlled by the developer and Muir Woods Subdivision.

Muir Woods Subdivision Phase Four will consist of a total of eight (8) single family homes and was accounted for during the design of Muir Woods Subdivision. It is estimated that the population for the proposed development will be 28 persons (8 single family residences x 3.5 people/residence). The project is scheduled for a construction start in 2022.

Sanitary sewage service will be provided to the new homes by gravity sewers that were installed during the development of the earlier phases of the subdivision. The sanitary sewer laterals for each home will connect to the existing line along the north side of Sierra Drive and flow to the east to the existing Campbell Boulevard gravity sanitary sewer (owned, operated, and maintained by the Town of Amherst) which ties into the N. French Road Trunk Sewer and is tributary to the Town of Amherst Water Pollution Control Facility.

Water service for domestic use and firefighting will be provided by the water main located on the south side of Sierra Drive which was constructed during the earlier phases of the subdivision. The main was constructed by a private contractor, turned over to the Town of Amherst, and is operated and maintained under a lease management agreement with the Erie County Water Authority.

Storm drainage will be provided on site by rear yard drainage swales and storm sewers discharging into an existing ditch or an onsite retention pond, with both the pond and ditch ultimately discharge to the existing Muir Lake. Water quality, channel protection, and runoff reduction requirements were met during the design of the Muir Woods Subdivision per NYSDEC and Town requirements. Runoff reduction criteria was achieved by conserving natural areas and planting trees throughout the entire development.

Stormwater design of the Muir Woods Subdivision includes 133 single family lots and the additional 8 lots of Phase 4. Stormwater calculations that represent the entire site are provided in more detail within the Stormwater Pollution Prevention Plan (SWPPP) for the Muir Woods Development. A NYSDEC SPDES permit was obtained for SWPPP on 6/28/2018 under permit number NYR 11D909 and remains active.

Stormwater retention and detention facilities on site were designed in accordance with the New York State Stormwater Design Manual and the requirements of SPDES General Permit for Stormwater Discharges from Construction Activities, GP-0-15-002 and Town of Amherst stormwater standards.

The main text of this report summarizes the development of design. Detailed calculations

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

and supplemental information, forms, etc., are located in the appendices.

II Discussion

A. Sanitary Sewers

1. System Description and Design Flows

Each lot and single family house will be serviced by a 6-inch lateral service line which will connect to the existing 8-inch PVC (SDR-35) sanitary sewer pipe located along the northern side of Sierra Drive.

The estimated domestic sanitary sewer flow of 0.0028 mgd is expected from the 8 single family units (8 homes x 3.5 persons x 100 gpcd). The max flow is 0.01117 mgd (0.0028 mgd x a peaking factor of 3.99) and the minimum flow rate is 0.00056 mgd (0.0028 mgd x 20%).

2. Down Stream Routing of Flow and Capacity

The sanitary sewer flows to the existing 8-inch line along Sierra Drive to the existing Campbell Boulevard gravity sanitary sewer (owned, operated, and maintained by the Town of Amherst). The Campbell Boulevard systems flow north into the 36-inch Trunk Sewer along N. French Road. From there, sewage will flow westerly through the 36-inch Trunk Sewer along N. French Road to Sweet Home Road, at which point the Trunk Sewer becomes 48-inch and continues westerly to Sundridge Drive; the 48-inch Trunk Sewer flows to the north along Sundridge Drive and westerly into the Town of Amherst Water Pollution Control Facility (a.k.a. Plant #16) which has an average daily flow rate of 25.4 mgd and is designed for 36 mgd for the year 2006.

The downstream routing was analyzed during the initial design of the Muir Woods Subdivision and indicated that when adding the 0.1859 MGD peak design flows from the project to the measured flows the system appears to be operating at 67% of its full flow capacity at Node 1; 34% of its full flow capacity at Node 2; and 57% of its full flow capacity at Node 3 therefore, indicating that there is sufficient downstream capacity in the existing system to support the proposed development. There will be no negative impact on the downstream sewer. The full results of the monitoring and detailed analysis can be found within the Muir Woods Subdivision Engineers Report.

3. Observation of construction will be performed by consultant services agreement operating under the provisions of the Town of Amherst Public Improvement Permit process, overseen by the Town of Amherst Engineering Department.

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

B. Watermains

1. System Description

Individual water services will be installed from the existing 8-inch PVC line on the south side of Sierra Drive. There is an existing hydrant located on the south side of Sierra Drive near the eastern portion of Phase 4 and an additional hydrant located on the east side of Sierra Drive near the western portion of Phase 4.

2. Design Flow

Erie County Water Authority (ECWA) standards require that design of new watermains be based on the following:

a. Design Population = 8 lots at 3.5 persons per lot = 28 persons
b. Average Daily Demand at 150 gallons per capita per day (gpcd) (28 persons x 150 gpcd)/1440 = 2.92 gpm
c. Maximum Daily Demand at two times average = 5.83 gpm
d. Peak Hourly Demand at three times average = 8.76 gpm

The required water demand for firefighting purposes are based on the Insurance Services Offices (ISO) Guide for Determination of Needed Fire Flow, Edition 05-2008. For One and Two-Family Dwellings not exceeding two stories in height, with a separation distance between structures of 11-30 feet, the fire flow required is 1000 gallons per minute.

Per Erie County Health Department, the system must be capable of supplying 3 gpm per single family home (3 gpm x 8 homes = 24 gpm) plus fire demand (1,000 gpm) which results in a peak flow of 1024 gpm.

Watermain sizing for the Muir Woods Subdivision was completed via hydraulic model utilizing the WaterCad program by Bentley. The full results and detailed analysis can be found within the Muir Woods Subdivision Engineers Report.

C. Stormwater Management

The 1.75± acre Muir Woods Subdivision Phase Four will be converted from a brushed and wooded area to an eight (8) lot development with attendant infrastructure. Stormwater quality and runoff reduction requirements were anticipated and accounted for during the design of the Muir Woods Subdivision. The anticipated construction is permitted under NYSDEC SPDES permit number NYR 11D909 obtained on 6/28/2018 and remains active. Runoff reduction for the site was achieved with conservation of natural areas and tree plantings throughout the development. A downstream analysis was preformed and showed a less than 1% increase in the flow in Ellicott Creek. In accordance with the NYS Stormwater Design Manual peak flow attenuation was determined to not be necessary. The retention ponds onsite provide water quality and channel protection volume only.

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

The 1.75± acre Muir Woods Subdivision Phase Four storm drainage will be provided on site by new rear yard drainage systems discharging either to an existing culvert under Sierra Drive and south into an existing ditch or will flow to retention pond 1. Both the ditch and retention pond discharge to Muir Lake. Specific Phase 4 design calculations for storm sewer sizing are provided herein. No changes to the overall SWPPP and stormwater pond and ditch analysis were required for the final design of the current Phase 4 due to runoff from this phase being accounted for within the permitted design of the Muir Woods Subdivision.

The storm sewers are designed to flow full or in a non-surcharged state under future condition for a 10 year storm event. The storm retention facilities (wet ponds) were designed to temporarily store run-off from the post developed site, provide water quality enhancement, stream channel protection, and peak flow attenuation. Runoff reduction is being achieved through the use of conserved areas. See Appendix B for the storm sewer sizing calculations.

No portion of the proposed development lies within a 100 year flood plain as mapped on the Flood Insurance Rate Maps (FIRM's) for the Town of Amherst.

1. *Existing Conditions*

The area proposed for the Muir Woods Subdivision Phase 4 is divided into two sections. The eastern section is wooded and currently drains to the south toward a 12-inch HDPE culvert pipe that crosses Sierra Drive and flows to an existing ditch. This ditch flow southwest and discharges into the northeastern inlet of Muir Lake. The western section of Phase 4 is wooded and currently drains to the north into the conservation/wetland area. This area discharges into an existing ditch which flows west to the northwestern inlet of Muir Lake.

The full analysis of Muir Lake as well as the total flows in Ellicott Creek can be found within the original design of Muir Woods Subdivision.

2. *Post Developed Conditions*

The 1.75± acres of the site will be converted from a brushed and wooded area to eight (8) lots. During the initial design and development of the Muir Woods Subdivision all associated infrastructure, which includes one (1) bioretention area, two (2) wet ponds, and three (3) pretreatment chambers for stormwater quality and runoff reduction requirements in accordance with Town Drainage Policy and the New York State Stormwater Design Manual in compliance with GP-0-15-002 were previously designed, permitted, and constructed. Additional runoff reduction is achieved with conservation of natural areas and tree plantings throughout the development.

The eastern portion of Phase 4 will consist of seven (7) lots. A drainage swale will capture offsite run-on from the north as well as runoff from the lots. This swale will discharge to a 12-inch HDPE pipe that will connect to the existing 12-inch culvert crossing Sierra Drive and flow into an existing

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

ditch and ultimately to Muir Lake.

The western portion of Phase 4 will consist of one (1) lot. A drainage swale is proposed along the northern boundary of this lot to prevent runoff from flowing into the conservation/wetland area. The swale will discharge to retention pond 1 which was designed and constructed during earlier phases of the Muir Woods Subdivision. This pond discharges to an existing ditch which flows to Muir Lake.

Retention Pond 1:

The original design of retention pond 1 did not include the runoff from the 0.28± acre lot. Below are the updated calculations for the pond:

Two Stage Outlet: 1st Stage- 6-inch Orifice flow @ 571.0 2nd Stage – Weir Flow @ 572.50 discharging into 18-inch HDPE @ 0.74%	
Water Quality Volume Required	0.25 ac-ft
Water Quality Volume Provided	1.8455 ac-ft
Stream Channel Protection Volume Required	0.31 ac-ft
Stream Channel Protection Elevation	571.59
Stream Channel Protection Volume Provided	0.834 ac-ft
Stream Channel Protection Elevation Provided	572.50
Water Surface Elevation	571.0 ft.
Minimum Allowable Top of Bank	574.00 ft.

Routing of design storms through the wet pond results in the following:

Retention Pond 1:

1 YEAR - 24 HOUR STORM	
Peak Inflow Rate	6.54 cfs @ 12.10 hrs.
Volume of Inflow	0.507 ac-ft
Peak Discharge Rate	0.40 cfs @ 14.05 hrs.
Peak Elevation	571.54 ft
Peak Volume of Storage	2.122 ac-ft*

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

10 YEAR - 24 HOUR STORM	
Peak Inflow Rate	14.71 cfs @ 12.10 hrs.
Volume of Inflow	1.145 ac-ft
Peak Discharge Rate	0.81 cfs @ 14.00 hrs.
Peak Elevation	572.27 ft
Peak Volume of Storage	2.529 ac-ft*

100 YEAR - 24 HOUR STORM	
Peak Inflow Rate	28.85 cfs @ 12.05 hrs.
Volume of Inflow	2.291 ac-ft
Peak Discharge Rate	5.27 cfs @ 12.60 hrs.
Peak Elevation	573.13 ft
Peak Volume of Storage	3.061 ac-ft*

*Storage Volume includes 1.8455 ac-ft below normal water elevation

1 Year–24 Hour Storm			
	Pre- Developed	Original Design	Post Developed
Peak Runoff Rate	6.30 cfs	0.41 cfs	0.40 cfs

10 Year–24 Hour Storm			
	Pre- Developed	Original Design	Post Developed
Peak Runoff Rate	14.15 cfs	0.81 cfs	0.81 cfs

25 Year–24 Hour Storm			
	Pre- Developed	Original Design	Post Developed
Peak Runoff Rate	18.64 cfs	1.38 cfs	1.61 cfs

100 Year–24 Hour Storm			
	Pre- Developed	Original Design	Post Developed
Peak Runoff Rate	27.75 cfs	4.79 cfs	5.27 cfs

The computer modeling results and full calculations for the downstream analysis and onsite water quality ponds are contained in Appendix B.

Due to the original design of Muir Woods Subdivision accounting for the development of Phase 4, no additional analysis was completed. The full analysis of Muir Lake as well as the total flows in Ellicott Creek can be found within the original design of Muir Woods Subdivision.

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

APPENDIX A

Sanitary Sewer System

- SANITARY SEWER FLOW CALCULATIONS

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

Location:	Town of Amherst, New York	Checked:	KZ	Date:	

Sanitary Sewer Flow Calculations

** REFERENCE: NYSDEC Design Standards for Wastewater Treatment Works, 1988

No. of New Lots = 8

Total No. = 8

Design Population, p = 28 assumed no. of people per unit = 3.5

Design Average Flow

Hydraulic Loading = 100 gpcd x design population = 2800 gpd = **0.0028 mgd
1.94 gpm
0.00 cfs

Peaking Factor, PF = [(18+((p/1000)^0.5)) / (4+((p/1000)^0.5))] = 4.3595

Peak Design Flow = Design Average Flow x Peaking Factor = 12206 gpd = **0.0122 mgd**
8.48 gpm
0.02 cfs

NOTE: Per the "Recommended Standards for Wastewater Facilities, 2014 Edition - Section 11.243, b.
"The 100 gpcd figure shall be used in conjunction with a peaking factor from Figure 1(as calculated above), is intended to cover normal infiltration for systems built with modern construction techniques."

Infiltration and Inflow: (Remove 4 gallons of I&I from the existing sanitary sewer system per every 1 gallon of Peak Design Flow)

Required I&I removal = 4 x the Peak Design Flow = 33.91 gpm

Example of I&I Mitigation Based On Repair or Replacement of Defective Residential Laterals:

Determine the number of Defective Residential Laterals to be repaired or replaced

I&I Contribution per each Defective Residential Lateral = 30 **gpm**

No. of Defective Residential Laterals to be repaired or replaced = **2 laterals**

TECHNICAL REVIEW OF PLANS AND SPECIFICATIONS
FOR SEWAGE AND WASTE TREATMENT SYSTEMS

PROJECT DATA

1. Type of Facility: Extension of an Existing Sanitary Sewer System
(Treatment Plant, Interceptor, Pumping Station, Additions, etc.)

2. Location: Muir Woods Subdivision Ph 4
Town of Amherst, New York

3. Type of Sewer System: Separate
(Separate or Combined)

4. Population to be Immediately Served: 28

Design Population: 28

5. Design Period: 2021

6. Hydraulic Loading

	Present Flow (mgd)	Design Flow (mgd)
Sanitary Sewage	0	0.0028
Institutional Waste	0	0
Industrial Waste	0	0
Infiltration	0	0
Total	0	0.0028
Minimum Flow	0	0.00056
Maximum Flow	0	0.0122

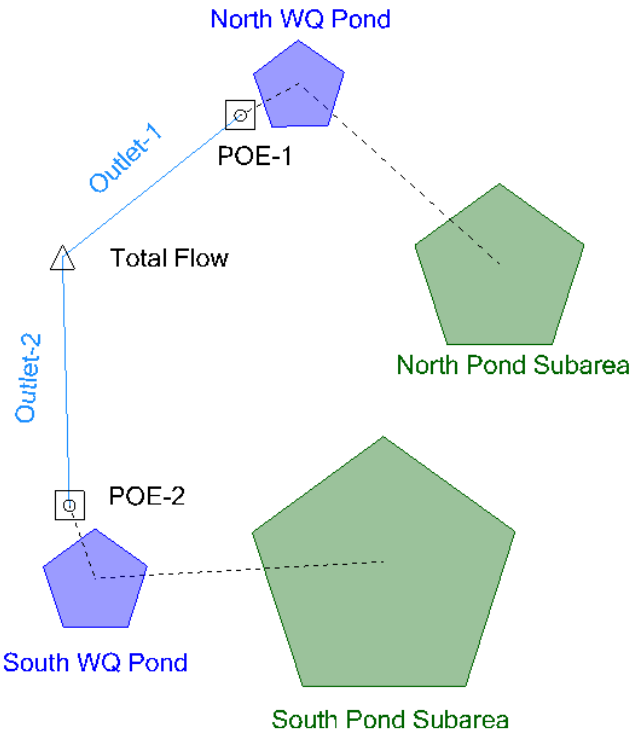
A. Watershed Model



Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

B. Establish Sub-Basin Runoff Parameters

1. *Subarea P-1 (Onsite)*

Area = 1.47 acres

Soil Type: Type "D" 100 %

Land Use:	Hydrologic Soil Group A B C D
Impervious Area- Paved & Roof	0.42 acres
Open Space; Lawn- Good	1.05 acres

Time of Concentration:

Sheet Flow
Length, L = 100 ft Slope, s = 0.010 ft/ft
Ground Cover = Grass, Dense
Manning's "n" = 0.240
T_t = **0.38 hr**

Shallow Concentrated Flow
Length, L = 266 ft Slope, s = 0.002 ft/ft
Surface Type = Grassed Waterway
Velocity, V = 0.65 ft/s
T_t = **0.11 hr**

Shallow Concentrated Flow
Length, L = 145 ft Slope, s = 0.002 ft/ft
Surface Type = Pipe Flow
Velocity, V = 3.00 ft/s
T_t = **0.01 hr**

Total Time of Concentration T_c = 0.38 hr. + 0.11 hr.+ 0.01 hr. = 0.50 hours

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

2. *Subarea P-2 (Onsite)*

Area = 0.28 acres

Soil Type: Type "D" 100 %

Land Use:	Hydrologic Soil Group A	B	C	D
Impervious Area- Paved & Roof				0.06 acres
Open Space; Lawn- Good				0.22 acres

Time of Concentration:

Sheet Flow
Length, L = 10 ft Slope, s = 0.002 ft/ft
Ground Cover = Grass, Dense
Manning's "n" = 0.240
T_t = **0.11 hr**

Shallow Concentrated Flow
Length, L = 215 ft Slope, s = 0.005 ft/ft
Surface Type = Grassed Waterway
Velocity, V = 1.06 ft/s
T_t = **0.06 hr**

Total Time of Concentration T_c = 0.11 hr.+ 0.06 hr. = 0.17 hours

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

3. ***Subarea O-1 (Offsite)***

Area = 4.5 acres

Soil Type: Type "D" 100 %

Land Use:	Hydrologic Soil Group A	B	C	D
Woods- Good				4.5 acres

Time of Concentration:

Sheet Flow
Length, L = 100 ft Slope, s = 0.008 ft/ft
Ground Cover = Woods, D. underbrush
Manning's "n" = 0.800
T_t = **1.11 hr**

Shallow Concentrated Flow
Length, L = 300 ft Slope, s = 0.007 ft/ft
Surface Type = Forest w/ Heavy Litter
Velocity, V = 0.20 ft/s
T_t = **0.41 hr**

Shallow Concentrated Flow
Length, L = 142 ft Slope, s = 0.002 ft/ft
Surface Type = Grassed Waterway
Velocity, V = 0.67 ft/s
T_t = **0.06 hr**

Total Time of Concentration T_c = 1.11 hr. + 0.41 hr.+ 0.06 hr. = 1.58 hours

Tax Map Numbers
27.19-1-29

1. Provide the Geographic Coordinates for the project site in NYTM Units. To do this you **must** go to the NYSDEC Stormwater Interactive Map on the DEC website at:

www.dec.ny.gov/imsmaps/stormwater/viewer.htm

Zoom into your Project Location such that you can accurately click on the centroid of your site. Once you have located your project site, go to the tool boxes on the top and choose "i"(identify). Then click on the center of your site and a new window containing the X, Y coordinates in UTM will pop up. Transcribe these coordinates into the boxes below. For problems with the interactive map use the help function.

X Coordinates (Easting) 192411

Y Coordinates (Northing) 4770972

2. What is the nature of this construction project?

● **New Construction**

○ **Redevelopment with increase in impervious area**

○ **Redevelopment with no increase in impervious area**

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

3. Select the predominant land use for both pre and post development conditions.
SELECT ONLY ONE CHOICE FOR EACH

Pre-Development Existing Land Use	Post-Development Future Land Use
○ FOREST	○ SINGLE FAMILY HOME
● PASTURE/OPEN LAND	● SINGLE FAMILY SUBDIVISION — Number of Lots: 133
○ CULTIVATED LAND	○ TOWN HOME RESIDENTIAL
○ SINGLE FAMILY HOME	○ MULTIFAMILY RESIDENTIAL
○ SINGLE FAMILY SUBDIVISION	○ INSTITUTIONAL/SCHOOL
○ TOWN HOME RESIDENTIAL	○ INDUSTRIAL
○ MULTIFAMILY RESIDENTIAL	○ COMMERCIAL
○ INSTITUTIONAL/SCHOOL	○ MUNICIPAL
○ INDUSTRIAL	○ ROAD/HIGHWAY
○ COMMERCIAL	○ RECREATIONAL/SPORTS FIELD
○ ROAD/HIGHWAY	○ BIKE PATH/TRAIL
○ RECREATIONAL/SPORTS FIELD	○ LINEAR UTILITY (water, sewer, gas, etc.)
○ BIKE PATH/TRAIL	○ PARKING LOT
○ LINEAR UTILITY	○ CLEARING/GRADING ONLY
○ PARKING LOT	○ DEMOLITION, NO REDEVELOPMENT
○ OTHER	○ WELL DRILLING ACTIVITY *(Oil, Gas, etc.)
	○ OTHER

***Note:** for gas well drilling, non-high volume hydraulic fractured wells only

4. In accordance with the larger common plan of development or sale, enter the total project site area; the total area to be disturbed; existing impervious area to be disturbed (for redevelopment activities); and the future impervious area constructed within the disturbed area. (Round to the nearest tenth of an acre.)

Total Site Area	Total Area To Be Disturbed	Existing Impervious Area To Be Disturbed	Future Impervious Area Within Disturbed Area
118.9	41.7	0.0	15.9

5. Do you plan to disturb more than 5 acres of soil at any one time? ● Yes ○ No

6. Indicate the percentage of each Hydrologic Soil Group(HSG) at the site.

A	B	C	D
%	%	%	100 %

7. Is this a phased project? ● Yes ○ No

8. Enter the planned start and end dates of the disturbance activities.

Start Date	End Date
10/01/2017	10/01/2022

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

9. Identify the nearest surface waterbody(ies) to which construction site runoff will discharge.

Name

Tributary To Ellicott Creek

9a. Type of waterbody identified in Question 9?

- ○ Wetland / State Jurisdiction On Site (Answer 9b)
- ○ Wetland / State Jurisdiction Off Site
- ○ Wetland / Federal Jurisdiction On Site (Answer 9b)
- ○ Wetland / Federal Jurisdiction Off Site
- ● Stream / Creek On Site
- ○ Stream / Creek Off Site
- ○ River On Site
- ○ River Off Site
- ○ Lake On Site
- ○ Lake Off Site
- ○ Other Type On Site
- ○ Other Type Off Site

9b. How was the wetland identified?

- ○ Regulatory Map
- ● Delineated by Consultant
- ○ Delineated by Army Corps of Engineers
- ○ Other (identify)

10. Has the surface waterbody(ies) in question 9 been identified as a 303(d) segment in Appendix E of GP-0-15-002? ● **Yes** ○ **No**

11. Is this project located in one of the Watersheds identified in Appendix C of GP-0-15-002? ○ **Yes** ● **No**

12. Is the project located in one of the watershed areas associated with AA and AA-S classified waters? ○ **Yes** ● **No**
If no, skip question 13.

13. Does this construction activity disturb land with no existing impervious cover and where the Soil Slope Phase is identified as an E or F on the USDA Soil Survey? ○ **Yes** ● **No**
If Yes, what is the acreage to be disturbed?

14. Will the project disturb soils within a State regulated wetland or the protected 100 foot adjacent area? ○ **Yes** ● **No**

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

15. Does the site runoff enter a separate storm sewer system (including roadside drains, swales, ditches, culverts, etc)? ● Yes ○ No ○ Unknown

16. What is the name of the municipality/entity that owns the separate storm sewer system?

Town of Amherst

17. Does any runoff from the site enter a sewer classified as a Combined Sewer? ○ Yes ● No ○ Unknown

18. Will future use of this site be an agricultural property as defined by the NYS Agriculture and Markets Law? ○ Yes ● No

19. Is this property owned by a state authority, state agency, federal government or local government? ○ Yes ● No

20. Is this a remediation project being done under a Department approved work plan? (i.e. CERCLA, RCRA, Voluntary Cleanup Agreement, etc.) ○ Yes ● No

21. Has the required Erosion and Sediment Control component of the SWPPP been developed in conformance with the current NYS Standards and Specifications for Erosion and Sediment Control (aka Blue Book)? ● Yes ○ No

22. Does this construction activity require the development of a SWPPP that includes the post-construction stormwater management practice component (i.e. Runoff Reduction, Water Quality and Quantity Control practices/techniques)? ● Yes ○ No
If No, skip questions 23 and 27-39.

23. Has the post-construction stormwater management practice component of the SWPPP been developed in conformance with the current NYS Stormwater Management Design Manual? ● Yes ○ No

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

24. The Stormwater Pollution Prevention Plan (SWPPP) was prepared by:

- ● **Professional Engineer (P.E.)**
- ○ **Soil and Water Conservation District (SWCD)**
- ○ **Registered Landscape Architect (R.L.A)**
- ○ **Certified Professional in Erosion and Sediment Control (CPESC)**
- ○ **Owner/Operator**
- ○ **Other**

SWPPP Preparer Certification

I hereby certify that the Stormwater Pollution Prevention Plan (SWPPP) for this project has been prepared in accordance with the terms and conditions of the GP-0-15-002. Furthermore, I understand that certifying false, incorrect or inaccurate information is a violation of this permit and the laws of the State of New York and could subject me to criminal, civil and/or administrative proceedings.

First Name **MI**

Last Name

Signature

Date / /

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

25. Has a construction sequence schedule for the planned management practices been prepared? ● Yes ○ No

26. Select **all** of the erosion and sediment control practices that will be employed on the project site:

Temporary Structural

- ● Check Dams
- ○ Construction Road Stabilization
- ● Dust Control
- ○ Earth Dike
- ○ Level Spreader
- ● Perimeter Dike/Swale
- ○ Pipe Slope Drain
- ○ Portable Sediment Tank
- ○ Rock Dam
- ○ Sediment Basin
- ○ Sediment Traps
- ● Silt Fence
- ● Stabilized Construction Entrance
- ● Storm Drain Inlet Protection
- ○ Straw/Hay Bale Dike
- ○ Temporary Access Waterway Crossing
- ○ Temporary Stormdrain Diversion
- ○ Temporary Swale
- ○ Turbidity Curtain
- ○ Water bars

Biotechnical

- ○ Brush Matting
- ○ Wattling

Vegetative Measures

- ○ Brush Matting
- ○ Dune Stabilization
- ○ Grassed Waterway
- ● Mulching
- ○ Protecting Vegetation
- ○ Recreation Area Improvement
- ● Seeding
- ○ Sodding
- ○ Straw/Hay Bale Dike
- ○ Streambank Protection
- ● Temporary Swale
- ● Topsoiling
- ○ Vegetating Waterways

Permanent Structural

- ○ Debris Basin
- ○ Diversion
- ○ Grade Stabilization Structure
- ● Land Grading
- ○ Lined Waterway (Rock)
- ○ Paved Channel (Concrete)
- ○ Paved Flume
- ○ Retaining Wall
- ○ Riprap Slope Protection
- ○ Rock Outlet Protection
- ○ Streambank Protection

Other

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

Post-construction Stormwater Management Practice (SMP) Requirements

Important: Completion of Questions 27-39 is not required if response to Question 22 is No.

27. Identify all site planning practices that were used to prepare the final site plan/layout for the project.

- ● **Preservation of Undisturbed Areas**
- ○ **Preservation of Buffers**
- ● **Reduction of Clearing and Grading**
- ○ **Locating Development in Less Sensitive Areas**
- ○ **Roadway Reduction**
- ○ **Sidewalk Reduction**
- ○ **Driveway Reduction**
- ○ **Cul-de-sac Reduction**
- ○ **Building Footprint Reduction**
- ○ **Parking Reduction**

27a. Indicate which of the following soil restoration criteria was used to address the requirements in Section 5.1.6("Soil Restoration") of the Design Manual (2010 version).

- ● All disturbed areas will be restored in accordance with the Soil Restoration requirements in Table 5.3 of the Design Manual (see page 5-22).
- ○ Compacted areas were considered as impervious cover when calculating the **WQv Required**, and the compacted areas were assigned a post-construction Hydrologic Soil Group (HSG) designation that is one level less permeable than existing conditions for the hydrology analysis.

28. Provide the total Water Quality Volume (WQv) required for this project (based on final site plan/layout).

Total WQv Required

1.69 **acre-feet**

29. Identify the RR techniques (Area Reduction), RR techniques(Volume Reduction) and Standard SMPs with RRv Capacity in Table 1 (See Page 9) that were used to reduce the Total WQv Required(#28).

Also, provide in Table 1 the total impervious area that contributes runoff to each technique/practice selected. For the Area Reduction Techniques, provide the total contributing area (includes pervious area) and, if applicable, the total impervious area that contributes runoff to the technique/practice.

Note: Redevelopment projects shall use Tables 1 and 2 to identify the SMPs used to treat and/or reduce the WQv required. If runoff reduction techniques will not be used to reduce the required WQv, skip to question 33a after identifying the SMPs.

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

Table 1 - Runoff Reduction (RR) Techniques and Standard Stormwater Management Practices (SMPs)

	Total Contributing Area (acres)		Total Contributing Impervious Area (acres)
RR Techniques (Area Reduction)			
● Conservation of Natural Areas (RR-1)	33.30	and/or	
○ Sheetflow to Riparian Buffers/Filters Strips (RR-2)		and/or	
● Tree Planting/Tree Pit (RR-3)	2.07	and/or	0.69
○ Disconnection of Rooftop Runoff (RR-4)		and/or	
RR Techniques (Volume Reduction)			
○ Vegetated Swale (RR-5)			
○ Rain Garden (RR-6)			
○ Stormwater Planter (RR-7)			
○ Rain Barrel/Cistern (RR-8)			
○ Porous Pavement (RR-9)			
○ Green Roof (RR-10)			
Standard SMPs with RRv Capacity			
○ Infiltration Trench (I-1)			
○ Infiltration Basin (I-2)			
○ Dry Well (I-3)			
○ Underground Infiltration System (I-4)			
● Bioretention (F-5)			1.85
○ Dry Swale (O-1)			
Standard SMPs			
○ Micropool Extended Detention (P-1)			
● Wet Pond (P-2)			11.79
○ Wet Extended Detention (P-3)			
○ Multiple Pond System (P-4)			
○ Pocket Pond (P-5)			
○ Surface Sand Filter (F-1)			
○ Underground Sand Filter (F-2)			
○ Perimeter Sand Filter (F-3)			
○ Organic Filter (F-4)			
○ Shallow Wetland (W-1)			
○ Extended Detention Wetland (W-2)			
○ Pond/Wetland System (W-3)			
○ Pocket Wetland (W-4)			
○ Wet Swale (O-2)			

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

Table 2 - Alternative SMPs (DO NOT INCLUDE PRACTICES BEING USED FOR PRETREATMENT ONLY)

Alternative SMP	Total Contributing Impervious Area (acres)
○ Hydrodynamic	
○ Wet Vault	
○ Media Filter	
○ Other [ ]	

Provide the name and manufacturer of the Alternative SMPs (i.e. proprietary practice(s)) being used for WQv treatment.

Name

Manufacturer

Note: Redevelopment projects which do not use RR techniques, shall use questions 28, 29, 33 and 33a to provide SMPs used, total WQv required and total WQv provided for the project.

30. Indicate the Total RRv provided by the RR techniques (Area/Volume Reduction) and Standard SMPs with RRv capacity identified in question 29.

Total RRv provided

0.286 **acre-feet**

31. Is the Total RRv provided (#30) greater than or equal to the total WQv required (#28).

○ **Yes** ● **No**

If Yes, go to question 36.
If No, go to question 32.

32. Provide the Minimum RRv required based on HSG.
[Minimum RRv Required = (P)(0.95)(Ai)/12, Ai=(S)(Aic)]

Minimum RRv Required

0.252 **acre-feet**

32a. Is the Total RRv provided (#30) greater than or equal to the Minimum RRv Required (#32)?

● **Yes** ○ **No**

If Yes, go to question 33.
Note: Use the space provided in question #39 to summarize the specific site limitations and justification for not reducing 100% of WQv required (#28). A detailed evaluation of the specific site limitations and justification for not reducing 100% of the WQv required (#28) must also be included in the SWPPP.
If No, sizing criteria has not been met, so NOI can not be processed. SWPPP preparer must modify design to meet sizing criteria.

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

33. Identify the Standard SMPs in Table 1 and, if applicable, the Alternative SMPs in Table 2 that were used to treat the remaining total WQv(=Total WQv Required in 28 - Total RRv Provided in 30).

Also, provide in Table 1 and 2 the total impervious area that contributes runoff to each practice selected.

Note: Use Tables 1 and 2 to identify the SMPs used on Redevelopment projects.

33a. Indicate the Total WQv provided (i.e. WQv treated) by the SMPs identified in question #33 and Standard SMPs with RRv Capacity identified in question 29.

WQv Provided

3.665 **acre-feet**

Note: For the standard SMPs with RRv capacity, the WQv provided by each practice = the WQv calculated using the contributing drainage area to the practice - RRv provided by the practice. (See Table 3.5 in Design Manual)

34. Provide the sum of the Total RRv provided (#30) and the WQv provided (#33a).

3.951

35. Is the sum of the RRv provided (#30) and the WQv provided (#33a) greater than or equal to the total WQv required (#28)? ● **Yes** ○ **No**

If Yes, go to question 36.
If No, sizing criteria has not been met, so NOI can not be processed. SWPPP preparer must modify design to meet sizing criteria.

36. Provide the total Channel Protection Storage Volume (CPv) required and provided or select waiver (36a), if applicable.

CPv Required

1.152 **acre-feet**

CPv Provided

1.188 **acre-feet**

36a. The need to provide channel protection has been waived because:

○ Site discharges directly to tidal waters or a fifth order or larger stream.

○ Reduction of the total CPv is achieved on site through runoff reduction techniques or infiltration systems.

37. Provide the Overbank Flood (Qp) and Extreme Flood (Qf) control criteria or select waiver (37a), if applicable.

Total Overbank Flood Control Criteria (Qp)

Pre-Development . **CFS**

Post-development . **CFS**

Total Extreme Flood Control Criteria (Qf)

Pre-Development . **CFS**

Post-development . **CFS**

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

37a. The need to meet the Qp and Qf criteria has been waived because:

- ○ Site discharges directly to tidal waters or a fifth order or larger stream.
- ● Downstream analysis reveals that the Qp and Qf controls are not required

38. Has a long term Operation and Maintenance Plan for the post-construction stormwater management practice(s) been developed? ● Yes ○ No

If Yes, Identify the entity responsible for the long term Operation and Maintenance

Homeowner's Association

39. Use this space to summarize the specific site limitations and justification for not reducing 100% of WQv required(#28). (See question 32a) This space can also be used for other pertinent project information.

100% of the Water Quality Volume was not reduced for this site due to the poor infiltration qualities of the site soils (Type 'D') and the limiting head available.

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

40. Identify other DEC permits, existing and new, that are required for this project/facility.

- ○ Air Pollution Control
- ○ Coastal Erosion
- ○ Hazardous Waste
- ○ Long Island Wells
- ○ Mined Land Reclamation
- ○ Solid Waste
- ○ Navigable Waters Protection / Article 15
- ● Water Quality Certificate
- ○ Dam Safety
- ○ Water Supply
- ○ Freshwater Wetlands/Article 24
- ○ Tidal Wetlands
- ○ Wild, Scenic and Recreational Rivers
- ○ Stream Bed or Bank Protection / Article 15
- ○ Endangered or Threatened Species(Incidental Take Permit)
- ○ Individual SPDES
- ○ SPDES Multi-Sector GP N Y R
- ○ Other
- ○ None

41. Does this project require a US Army Corps of Engineers Wetland Permit? ● **Yes** ○ **No**
If Yes, Indicate Size of Impact. 2.5

42. Is this project subject to the requirements of a regulated, traditional land use control MS4? ● **Yes** ○ **No**
(If No, skip question 43)

43. Has the "MS4 SWPPP Acceptance" form been signed by the principal executive officer or ranking elected official and submitted along with this NOI? ● **Yes** ○ **No**

44. If this NOI is being submitted for the purpose of continuing or transferring coverage under a general permit for stormwater runoff from construction activities, please indicate the former SPDES number assigned. N Y R

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

Owner/Operator Certification

I have read or been advised of the permit conditions and believe that I understand them. I also understand that, under the terms of the permit, there may be reporting requirements. I hereby certify that this document and the corresponding documents were prepared under my direction or supervision. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations. I further understand that coverage under the general permit will be identified in the acknowledgment that I will receive as a result of submitting this NOI and can be as long as sixty (60) business days as provided for in the general permit. I also understand that, by submitting this NOI, I am acknowledging that the SWPPP has been developed and will be implemented as the first element of construction, and agreeing to comply with all the terms and conditions of the general permit for which this NOI is being submitted.

MS4 SWPPP Acceptance Form - continued

V. Certification Statement - MS4 Official (principal executive officer or ranking elected official) or Duly Authorized Representative

I hereby certify that the final Stormwater Pollution Prevention Plan (SWPPP) for the construction project identified in question 5 has been reviewed and meets the substantive requirements in the SPDES General Permit For Stormwater Discharges from Municipal Separate Storm Sewer Systems (MS4s). Note: The MS4, through the acceptance of the SWPPP, assumes no responsibility for the accuracy and adequacy of the design included in the SWPPP. In addition, review and acceptance of the SWPPP by the MS4 does not relieve the owner/operator or their SWPPP preparer of responsibility or liability for errors or omissions in the plan.

Re ACKNOWLEDGMENT of NOTICE of INTENT for Coverage Under SPDES General Permit for Storm Water Discharges from CONSTRUCTION ACTIVITY General Permit No. GP-0-15-002

Dear Prospective Permittee:

This is to acknowledge that the New York State Department of Environmental Conservation (Department) has received a complete Notice of Intent (NOI) for coverage under General Permit No. GP-0-15-002 for the construction activities located at:

Muir Woods Subdivision
1121 North French Road & 520 Campbell Blvd
Amherst, NY 14228 County: **ERIE**

Pursuant to Environmental Conservation Law (ECL) Article 17, Titles 7 and 8, ECL Article 70, discharges in accordance with GP-0-15-002 from the above construction site will be authorized **5** business days from **06/28/2018**, which is the date we received your final NOI, unless notified differently by the Department.

The permit identification number for this site is: **NYR11D909**. Be sure to include this permit identification number on any forms or correspondence you send us. When coverage under the permit is no longer needed, you must submit a Notice of Termination to the Department.

This authorization is conditioned upon the following:

1. The information submitted in the NOI received by the Department on **06/28/2018** is accurate and complete.

2. You have developed a Stormwater Pollution Prevention Plan (SWPPP) that complies with GP-0-15-002 which must be implemented as the first element of construction at the above-noted construction site.

3. Activities related to the above construction site comply with all other requirements of GP-0-15-002.

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

4. Payment of the annual $110 regulatory fee, which is billed separately by the Department in the late fall. The regulatory fee covers a period of one calendar year. In addition, since September 1, 2004, construction stormwater permittees have been assessed an initial authorization fee which is now $110 per acre of land disturbed and $675 per acre of future impervious area. The initial authorization fee covers the duration of the authorized disturbance.

5. Your SWPPP has been reviewed by the regulated, traditional land use control MS4 where your project is located and has been determined to be in substantive conformance with the requirements in the SPDES General Permit for Stormwater Discharges from MS4s.

6. Before disturbing greater than 5 acres of soil at any one time, you have obtained written authorization from the regulated, traditional land use control MS4 that has jurisdiction over the project.

7. When applicable, project review pursuant to the State Environmental Quality Review Act (SEQRA) has been satisfied.

8. You have obtained all necessary Department permits subject to the Uniform Procedures Act (UPA). You should check with your Regional Permit Administrator for further information.

***Note: Construction activities cannot commence until project review pursuant to SEQRA has been satisfied, when SEQRA is applicable; and, where required, all necessary Department permits subject to the UPA have been obtained.**

Please be advised that the Department may request a copy of your SWPPP for review.

Should you have any questions regarding any aspect of the requirements specified in GP-0-15-002, please contact Dave Gasper at (518) 402-8114 or the undersigned at (518) 402-8109.

Sincerely,

Toni Cioffi

Toni Cioffi
Environmental Program Specialist 1

PLEASE NOTE: EPA HAS FINALIZED THE eREPORTING RULE; AND, IN THE NEAR FUTURE, ALL NOIs WILL HAVE TO BE SUBMITTED ELECTRONICALLY.
BY FILING AN NOI ELECTRONICALLY, A PROJECT CAN TYPICALLY GAIN COVERAGE IN 5 BUSINESS DAYS COMPARED TO 10 BUSINESS DAYS FOR THE PAPER NOI.
INFORMATION ON THE eNOI CAN BE FOUND ON OUR WEBSITE AT:
http://www.dec.ny.gov/chemical/43133.html UNDER "FORMS."

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:15,800.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Erie County, New York
Survey Area Data: Version 15, Sep 23, 2016

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Data not available.

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Description

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

TOWN OF AMHERST ATTACHMENT
State Environmental Quality Review
ENVIRONMENTAL ASSESSMENT FORM

Site Plan Application - Portion of 520 Campbell Boulevard from

1. For each applicable category of proposed new structures, including additions to existing structures, provide the following information for all soil types on the project site (*according to Soil Survey of Erie County, NY; Table 11, Building Site Development, pp 294-305):*

Soil Name	Shallow excavations	Dwellings without basements	Dwellings with basements	Small commercial buildings	Local roads and streets
Cheektowaga [Ch]	Severe: wetness, too clayey	Severe: wetness	Severe: wetness	Severe: wetness	Severe: wetness
Cosad [Cv]	Severe: wetness, cutbanks cave, too clayey	Severe: wetness	Severe: wetness	Severe: wetness	Moderate: wetness

2. If the Soil survey indicates either "severe" or "moderate" suitability for the proposed types of construction, a geotechnical and hydrological analysis based on one test per 3.5 acres of project area must be provided (per Town Board resolution, 3/17/03, amended 6/16/03).

___ Geotechnical report attached __ Not applicable

[Note: Enclosed are three copies of the Geotechnical Report prepared by Glynn Group dated October 4, 2018].

3. Is your property located: On Youngs Road between Dodge and Klein Roads? □ Yes ✓ No
On Wehrle Dr. between Spindrift Dr. and Oakwood Rd? □ Yes ✓ No

If so, the property may be within an area of the Town that is affected by a moratorium on connections to the sanitary sewer system.

4. Are there alternative locations on the site for this project? □ Yes ✓ No

5. Location and size of real property owned by petitioner within one (1) mile of subject proposal:

The Petitioner owns the parcels of real property 1081 and 1121 North French Road which consist of nearly 330 acres of land.

6. Are you aware of current or future plans or intentions by others in the Town of Amherst to develop property within 1000± ft. of the present project request: □ Yes ✓ No

Describe: **There are current proposals to develop Site "B" of Muir Woods as student housing and Site "A" of Muir Woods as a mixed-use project.**

(Potential environmental impacts from adjacent or nearby projects undergoing the approval process will receive a coordinated environmental review to determine cumulative effects on common receivers (e.g. traffic and drainage corridors) and other relevant environmental concerns.)

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

7. Maximum number of vehicular trips to be generated per hour upon completion of project: **8 vehicular trips during the weekday peak travel period.**

8. Will blasting occur during construction? □ Yes ✓ No

9. Does the project propose to connect and be tributary to the public sanitary sewer system? ✓ Yes □ No

10. Proposed net additional gallons per day (gpd) of sanitary sewer discharge upon completion of project:

    2,800 gpd average flow **11,200** gpd peak flow.

    (Please note that average flows of 2,500 gpd or greater will require an Engineer's Report that includes a detailed downstream sewer capacity analysis and the identification of and commitment to required I/I offset work during peak wastewater flow conditions.)

October 4, 2018

Ciminelli Real Estate Corporation
350 Essjay Road
Williamsville, New York 14221

Attn: Mr. Matt Ciminelli

Subject: **Preliminary Geotechnical Evaluation**
520 Campbell Boulevard Rezoning
Town of Amherst, New York
GGEA 18-1263

Dear Mr. Ciminelli:

Glynn Group Engineering and Architecture, PLLC (GGEA) has prepared this preliminary geotechnical evaluation to assist in rezoning efforts for the proposed development of eight (8) lots along Sierra Drive in the Town of Amherst, New York. Sierra Drive is to intersect with Campbell Boulevard in the vicinity of address 520 and will be part of the Preserve at Muir Woods Subdivision Part 2. The project site is located on the west side of Campbell Boulevard approximately 0.25 miles south of North French Road. This geotechnical evaluation is based on one (1) SPT soil boring performed Earth Dimensions, Inc. (EDI) on September 25, 2018 at the approximate southern end of Lot 138. The site was forested and undeveloped prior to the construction of Sierra Drive.

The subsurface investigation was performed in accordance with ASTM D-1586 "Standard Test Method for Standard Penetration Test (SPT) and Split-Barrel Sampling of Soils". Hollow stem augers were advanced through the overburden material to permit soil sample retrieval using a twenty-four inch long, two inch diameter split spoon sampler. Resistance values, or blow counts, were recorded for each six-inch advancement of the split spoon sampler and "N" values were calculated by totaling the resistance values for the 6/12 and 12/18 inch intervals. Retrieved soil samples were logged and visually classified by EDI in accordance with the ASEE System of Definition for Visual Identification of Soils (Burmister Classification System) and ASTM D-2488 "Standard Practice for Description and Identification of Soils (Visual – Manual Procedure)".

The soil boring was terminated in very dense glacial till at a depth of 35.0 feet below existing grade. Specific subsurface conditions can be found on the enclosed soil boring log, however subsurface conditions were found to be typical for the area and generally consist of moist, compact, silty sand (SM) to a depth of 2.5 feet, followed by moist, very stiff, lean clay with gravel (CL) to a depth of 10.0 feet, followed by extremely moist to wet, firm, lean clay (CL) to a depth of 12.0 feet, followed by wet, soft, lean clay (CL) to a depth of 25.5 feet, followed by moist, very dense, sandy silt with gravel (ML) to the boring termination depth of 35.0 feet. Bedrock is estimated at a depth of approximately 45 feet.

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

Groundwater was not encountered in the augers upon the completion of drilling efforts. The augers did not remain in the ground for an extended period of time to allow for groundwater to migrate through the soils and stabilize in the augers, nor was a groundwater monitoring well installed to obtain accurate groundwater elevation data. However, based on the moisture content and color of recovered soil samples, the stabilized groundwater elevation is estimated at a depth of approximately 10 feet below existing grade, where soils transition from moist to wet and begin to decrease in strength.

The native subsurface conditions at this property are of good structural quality in the upper 12 feet and will provide for the construction of shallow foundation systems for the proposed structures consisting of standard strip and spread footings. Although soft soils were encountered from approximately 12 to 14 feet, properly designed and constructed shallow foundation systems bearing within the upper stiff soils will provide adequate support for the proposed houses. The site is suitable for basement construction pending foundations are designed for an allowable bearing capacity not to exceed 2,500 psf.

In accordance with Section 1613 (Earthquake Loads) of the 2015 IBC, the site is classified as Seismic Site Class D. The site classification is based on the summation of N values for the upper 100 feet of soil in accordance with equation 20.4-2 of ASCE 7.

This completes the current scope of GGEA's services for this project. Foundation construction and design recommendations should be provided through the preparation of a full multi-boring geotechnical investigation and report prior to construction. Please contact GGEA if you should have any questions or if encountered subsurface conditions differ from those identified within this report.

Sincerely,

G. Edward Lover

Re: The Preserve at Muir Woods Subdivision – Final Plat Review [SP-2017-03FP]
Project Site: 1121 and 520 Campbell Boulevard
Applicant: Ciminelli Muir Woods, LLC
HSR File No. 10024.2

Dear Ms. Kost:

Attached as Exhibit "1" is a copy of the Declaration of Restrictions as recorded in at the Erie County Clerk's Office on Thursday, June 21st in Liber 11330 of Deeds at Page 8243 for the purpose of complying with the relevant portion of the Amended Findings Statement issued by the Town Board pursuant to the State Environmental Quality Review Act ("SEQRA") on December 7, 2015. A copy of the recording receipt is provided at the last page of the enclosed copy of the recorded Declaration of Restrictions.

The recording of the enclosed Declaration of Restrictions also satisfies the first bullet point contained in Site Plan Condition No. 10 as imposed by the Planning Board on September 14, 2017 stating as follows:

> "10. That the petitioner comply with all the requirements contained in the Muir Woods Findings statement amended by the Town Board on December 7, 2015 which include but are not limited to: Prohibiting construction vehicles from using Lynette Lane as a means of access (a deed restriction to be included with the sale of any lots within Sites C and D (Section 8F)."

Please feel free to contact me at 510-4338 or via e-mail at shopkins@hsr-legal.com if you have any questions regarding this letter or the enclosed copy of the Declaration of Restrictions as filed at the Erie County Clerk's Office on June 21st.

Sincerely,

HOPKINS SORGI & ROMANOWSKI PLLC

DECLARATION OF RESTRICTIONS

THIS DECLARATION OF RESTRICTIONS ("***Declaration***") is made as of the 8th day of June, 2018 by **CIMINELLI MUIR WOODS, LLC**, a limited liability company organized under the laws of the State of New York, having its office at 350 Essjay Road, Williamsville, NY ("***Declarant***") under facts and circumstances summarized by the following recitals:

WHEREAS, Declarant is the owner of real property consisting of approximately 326 acres of real property located at 1081 and 1121 North French Road (hereinafter "***Subject Property***") and that is more particularly by the metes and bounds legal description attached at **Schedule "1"** hereto;

WHEREAS, the Subject Property is zoned New Community District ("***NCD***") pursuant to the Zoning Map of the Town of Amherst and the use of land within the New Community District is regulated pursuant to the land use classifications contained in the Zoning Code of the Town of Amherst;

WHEREAS, Declarant petitioned the Town Board of the Town of Amherst (hereinafter "***Town Board***") to amend the land use classifications of portions of the Subject Property that is owned by the Declarant;

WHEREAS, on December 3, 2007, the Town Board issued a Findings Statement pursuant to the State Environmental Quality Review Act ("SEQRA") and the Town Board also voted to: 1.) approve Amendment #51 to the Audubon Development Plan, 2.) amend the land use classifications of portions of the Subject Property from NCD-Neighborhood District and NCD-Major Open Space to NCD-General Commercial, NCD-Restricted Industrial and NCD-Major Open Space;

WHEREAS, as the Town Board imposed conditions in connection with its decisions to issue a Findings Statement pursuant to SEQRA and amending the land use classifications of portions of the Subject Property;

WHEREAS, the Town Board issued an Amended Statement of Findings pursuant to SEQRA on December 7, 2015;

NOW, THEREFORE, in exchange for good and valuable consideration the sufficiency of which is acknowledged, the Declarant agrees to restrict the future use of the portions of the Subject Property (or its entirety when expressly specified) in accordance with the conditions imposed by the Town Board that are subject to this Declaration of Restrictions as follows

1. All construction equipment and vehicles that will be utilized in connection with the development the Subject Property pursuant to site plans and final plats to be approved by the Town of Amherst Planning Board shall be expressly prohibited from utilizing the existing streets within the Franklin Heights Subdivision, including but not limited to Lynette Lane, for purposes of egress and ingress to the Subject Property.

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

2. The residential components of the project shall be prohibited from utilizing the condominium form of ownership.

3. On those portions of the Subject Parcel where commercial development (excluding all residential uses) will be located directly adjacent to existing residential areas (i.e. Bucyrus Heights), minimum setbacks have been established for the purpose of providing an adequate buffer. The following minimum setbacks will apply only to development of portions of the Subject Property that are directly adjacent to existing residential uses as of the date of this Declaration of Restrictions:

   - All commercial development (buildings and parking areas) will have a minimum setback of fifty feet (50'), with the area within forty feet (40') of adjacent residential property boundaries remaining undisturbed so that existing trees and brush remain as a buffer. The planting of additional trees and shrubs by the Declarant within the minimum setback area may be required by the Town of Amherst during the site plan review process to supplement the existing vegetation in order to provide adequate buffers.

   - A combination of earthen berms and new vegetation will be required in those portions of the minimum setback area where there is not sufficient existing vegetation to provide an adequate buffer. The minimum height at the top of berms shall be three feet (3'), and the maximum slope shall be 1 on 3 (33%) to promote the growth and long-term viability of trees and shrubs planted on the berms. Berms should have a natural appearance by varying their width and height. The Town of Amherst will verify compliance with this requirement during the site plan review process.

   - Site A: Site A is the western portion of the Subject Parcel that is proposed to be utilized for flex office/R&D buildings and it is located directly south of the existing Bucyrus Heights subdivision. A legal description of Site A is attached as **Schedule "2"**. The minimum setbacks for development within Site A shall be as follows:

     - 60 ft. minimum required building setback from residential lot line.

     - 60 ft. minimum required parking setback from residential lot line.

   - Site B: Site B is the center portion of the Subject Parcel that will be utilized for office space. A legal description of Site B is attached as **Schedule "3"**. The minimum setbacks for development within Site B shall be as follows:

     - 60 ft. minimum building setback from residential lot line. If the height of any proposed office buildings exceeds 50 feet, the required minimum building setback shall be equal to or greater than the height of the proposed office building.

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

- 60 ft. minimum parking setback to residential lot line.

4. The following maximum building heights shall apply to the commercial components of the development of the Subject Parcel:

- Site A (western portion of the project site) – The maximum building height for buildings within Site A as described in **Schedule "2"** shall be as follows:
  - Maximum building height shall be 40 ft. as measured from the finished grade to the top of any parapet (excluding any rooftop mechanical equipment). All mechanical equipment shall be properly screened in accordance with the standards contained in the Zoning Code adopted by the Town Board in May of 2006.
- Site B (center portion of the Subject Parcel) – The maximum building height for buildings within Site B as described in **Schedule "3"** shall be as follows:
  - There will not be a maximum height for office buildings to be constructed on Site B. All office buildings to be constructed on Site B will be required to comply with a minimum required setback that shall be the greater of fifty feet (50') feet or the height of the proposed office building at the point of its maximum height (including rooftop mechanicals, etc.).

5. The portions of the Subject Property reclassified to New Community District – General Commercial ("NCD-GC") by the Town Board as described in the attached **Schedule "4"** shall be prohibited from being utilized for the following categories of land uses:

A. Automobile sales and service facilities (except vehicles used primarily on the subject property);

B. Veterinary clinics or kennels; and

C. Gasoline service stations shall be prohibited around the existing approximately 32 acre lake on the southeastern portion of the Subject Property.

The above restrictions contained in numbered paragraphs 1, 2, 3, 4 and 5 shall be binding on all parties claiming thereunder and shall run and touch the land except that the above restrictions can be changed, modified or eliminated by a majority vote of the Town Board.

SCHEDULE 4

LEGAL DESCRIPTION OF PORTIONS OF SUBJECT PROPERTY RECLASSIFIED TO NEW COMMUNITY DISTRICT – GENERAL COMMERCIAL ("NCD-GC")

ALL THAT TRACT OR PARCEL OF LAND situate in the Town of Amherst, County of Erie, State of New York, being Part of Lots 70 and 76, Township 12, Range 7 of the Holland Land Survey (so-called) bounded and described as follows:

COMMENCING at the southeasterly corner of Pleasant Acres Subdivision, Part III as shown on a map filed in the Erie County Clerk's Office under Map Cover 2305:

THENCE: N-88°-55'-52"-E, a distance of 25.49 feet to the POINT OR PLACE OF BEGINNING of the parcel hereinafter described:

THENCE: Through lands now or formerly of New York State Urban Development Corporation the following thirty (30) courses and distances:

1.) N-01°-04'-00"-W, a distance of 399.46 feet to a point;
2.) S-89°-49'-30"-E, a distance of 1113.76 feet to a point;
3.) N-01°-04'-00"-W, a distance of 477.72 feet to a point;
4.) N-43°-56'-00"-W, a distance of 212.13 feet to a point;
5.) N-88°-56'-00"-E, a distance of 500.00 feet to a point;
6.) S-01°-04'-00"-E, a distance of 633.18 feet to a point;
7.) N-64°-16'-09"-E, a distance of 40.36 feet to a point of curvature;
8.) Northeasterly along a curve to the left having a radius 246.47 feet, an arc distance of 199.72 feet to a point of reverse curvature;
9.) Northeasterly along a curve to the right having a radius of 290.00 feet, an arc distance of 271.18 feet to a point;
10.) N-73°-15'-30"-E, a distance of 466.70 feet to a point;
11.) N-88°-48'-50"-E, a distance of 1197.84 feet to a point;
12.) S-00°-14'-01"-W, a distance of 470.19 feet to a point on a curve;
13.) Southwesterly and southeasterly along a curve to the left having a radius of 175.00 feet an arc distance of 442.29 feet to a point of compound curvature;
14.) Easterly along a curve to the left having a radius of 425.00 feet an arc distance of 145.78 feet to a point of reverse curvature;
15.) Easterly along a curve to the right having a radius of 500.00 an arc distance of 172.91 feet to a point of compound curvature;
16.) Southeasterly and southwesterly along a curve to the right having a radius of 185.00 an arc distance of 438.62 feet to a point of compound curvature;
17.) Southwesterly along a curve to the right having a radius of 475.00 feet an arc distance of 382.34 feet to a point of tangency;
18.) S-89°-22'-54"-W, a distance of 150.00 feet to a point;
19.) Westerly along a curve to the right having a radius of 500.00 feet an arc distance of 222.66 feet to a point of reverse curvature;

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

20.) Westerly along a curve to the left having a radius of 500.00 feet an arc distance of 341.90 feet to a point of reverse curvature;
21.) Westerly along a curve to the right having a radius of 585.00 feet an arc distance of 414.74 feet to a point of compound curvature;
22.) Northwesterly along a curve to the right having a radius of 1200.00 feet an arc distance of 986.04 feet to a point of reverse curvature;
23.) Northwesterly and southwesterly along a curve to the left having a radius of 145.00 an arc distance of 455.53 feet to a point of compound curvature;
24.) Southeasterly along a curve to the left having a radius of 1490.00 feet, an arc distance of 235.87 feet to a point to a point of tangency;
25.) S-26°-24'-00"-E, a distance of 38.95 feet to a point of curvature;
26.) Southwesterly along a curve to the right having a radius of 265.00 feet, an arc distance of 400.91 feet to a point to a point of compound curvature;
27.) Southwesterly along a curve to the right having a radius of 500.00 feet, an arc distance of 345.60 feet to a point to a point of reverse curvature;
28.) Southwesterly along a curve to the left having a radius of 100.00 feet, an arc distance of 99.07 feet to a point to a point of tangency;
29.) S-42°-22'-25"-W, a distance of 40.03 feet to a point of curvature;
30.) Southwesterly along a curve to the left having a radius of 215.00 feet, an arc distance of 161.56 feet to a point on the northerly boundary line of the Lockport Expressway;

Thence along the said northerly boundary of the Lockport Expressway the following three (3) courses and distances:

1.) S-89°-19'-05"-W, a distance of 248.17 feet to a point;
2.) S-75°-02'-22"-W, a distance of 970.22 feet to a point of curvature;
3.) Southwesterly along a curve to the left having a radius of 6848.00 feet an arc distance of 111.80 feet to a point:

THENCE: Through lands now or formerly of New York State Urban Development Corporation the following five (5) courses and distances:

1.) N-17°-38'-00"-W, a distance of 219.03 feet to a point of curvature;
2.) Northerly along a curve to the right having a radius of 500.00 feet an arc distance of 272.15 feet to a point of reverse curvature;
3.) Northerly along a curve to the left having a radius of 500.00 feet an arc distance of 127.60 feet to a point of tangency;
4.) N-01°-04'-08"-W, a distance of 200.00 feet to a point;
5.) S-88°-55'-52"-W, a distance of 125.00 feet to the above described POINT OR PLACE OF BEGINNING containing 87.733 acres be the same more or less.

EXECUTIVE SUMMARY

OVERVIEW

The purpose of this report is to update the March 2017 Traffic impact Study prepared by GPI for the Muir Woods Project. The study identifies and evaluates the potential traffic impacts associated with the remaining phases of the Preserve at Muir Woods located south of North French Road and east of Campbell Blvd in the Town of Amherst, Erie County, New York. Within this report, the operating characteristics of the access drives and impacts to the adjacent roadway network are identified and mitigating measures, if needed, are provided to minimize identified capacity or safety concerns.

To define traffic impact, this analysis establishes existing traffic conditions, projects background traffic flow including area growth, and determines the traffic operations that would result from the final phase of the project.

The project site is bounded by a residential development and N French Rd to the north, an undeveloped wooded area to the east, Campbell Blvd to the west, and I-990 to the south. The site is currently undeveloped land with a subdivision street. The study area consists of the following intersections:

1. North French Road/Lynette Lane
2. North French Road/Campbell Boulevard
3. Campbell Boulevard/Sierra Drive
4. Campbell Boulevard/Dodge Road

The final phase of the project consists of 47 single family homes. Access to the site will be provided via two existing subdivision streets, Lynette Ln and Sierra Dr.

Construction of the final development phase is anticipated to reach full build-out within one year. The Town of Amherst was contacted to discuss any other specific developments that are currently approved or under construction that would generate additional traffic in the study area. No such projects were identified.

A review of historical NYSDOT traffic volume data on the study roadways in the vicinity of the site indicates that traffic has decreased between 2011 and 2019. To account for normal increases in background traffic growth, including any unforeseen developments in the project study area a growth rate of 0.5% per year has been applied to the existing traffic volumes, based upon historical traffic growth for the one-year build-out period.

CONCLUSIONS & RECOMMENDATIONS

This Traffic Impact Study identifies and evaluates the potential traffic impacts that can be expected from the final phase of the Preserve at Muir Woods project located south of North French Road and east of Campbell Blvd in the Town of Amherst, Erie County, New York. The results of this study determine that the existing transportation network can adequately accommodate the projected traffic volumes and resulting impacts to study area intersections, with no mitigation required. The following sets forth the conclusions based upon the results of the analyses:

1. The final phase of the project is expected to generate approximately 10 entering/28 exiting vehicle trips during the AM peak hour and 31 entering/18 exiting vehicle trips during the PM peak hour at full build out.

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

2. Crash analyses at the existing intersections did not identify any identifiable crash clusters or inherent safety deficiencies.

3. Evaluation of left turn treatment warrants at the North French Rd/Lynette Ln and Campbell Blvd/Sierra Dr intersections indicate that the guidelines for left-turn treatment are marginally met during the weekday PM peak hours at both locations. However, given that both left turn movements currently operate at LOS "A" with little to no delay and the projected left turn traffic volumes are relatively small, a left turn lane is not recommended at either location.

4. Evaluation of signal warrants at the North French Rd/Lynette Ln and Campbell Blvd/Sierra Dr intersections indicate that none of the warrants for signalization are met at either location and signalization of the intersections is not recommended.

5. The projected traffic impacts resulting from full development of the final phase of the project during both peak hours can be accommodated by the existing transportation network with no highway improvements.

6. For purposes of the environmental review of the final phase of the project pursuant to the State Environmental Quality Review Act (SEQRA), it is our firm's professional opinion that the final phase of the project will not result in any potentially significant adverse traffic impacts to the study area intersections.

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

I. INTRODUCTION

The purpose of this report is to update the March 2017 Traffic impact Study prepared by GPI for the Muir Woods Project. The study identifies and evaluates the potential traffic impacts associated with the remaining phases of the Preserve at Muir Woods located south of North French Road and east of Campbell Blvd in the Town of Amherst, Erie County, New York. Within this report, the operating characteristics of the access drives and impacts to the adjacent roadway network are identified and mitigating measures, if needed, are provided to minimize identified capacity or safety concerns.

To define traffic impact, this analysis establishes existing traffic conditions, projects background traffic flow including area growth, and determines the traffic operations that would result from the final phase of the project.

II. LOCATION

The project site is bounded by a residential development and N French Rd to the north, an undeveloped wooded area to the east, Campbell Blvd to the west, and I-990 to the south. The project site is currently undeveloped land with a subdivision street. The study area consists of the following intersections:

1. North French Road/Lynette Lane
2. North French Road/Campbell Boulevard
3. Campbell Boulevard/Sierra Drive
4. Campbell Boulevard/Dodge Road

The site location and study area are illustrated in **Figure 1** (all Figures are included at the end of this report).

III. EXISTING HIGHWAY SYSTEM

A. Vehicular Network Description

The following information outlined in **Table I** provides a description of the existing roadway network within project study area. **Figure 2** illustrates the lane geometry at each of the study intersections and the Annual Average Daily Traffic (AADT) volumes on the study roadways. The AADTs reflect the most recently collected data obtained from the New York State Department of Transportation (NYSDOT).

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

TABLE I: EXISTING HIGHWAY SYSTEM

ROADWAY[1]	CLASS[2]	AGENCY[3]	SPEED LIMIT[4]	# OF TRAVEL LANES[5]	TRAVEL PATTERN/ DIRECTION	EST. AADT[6] & SOURCE[7]
North French Road (CR-299)	14	ECDPW	45	2	Two-way/ East-West	11,209 NYSDOT (2019)
Campbell Blvd (NY-270)	16	NYSDOT	40	2	Two-way/ North-South	7,893 NYSDOT (2018)
Dodge Road (CR-45)	16	ECDPW	40	2	Two-way/ East-West	4,809 NYSDOT (2018)
Lynette Ln	19	Town of Amherst	30	2	Two-way/ North-South	N/A
Sierra Dr	19	Town of Amherst	30	2	Two-way/ East-West	N/A

Notes:
1. Route Name/Number: "NY" = New York; "CR" = County Road
2. State Functional Classification of Roadway (All are Urban): 14 = Principal Arterial, 16 = Minor Arterial, 19 = Local
3. Jurisdictional Agency of Roadway. "NYSDOT" = New York State Department of Transportation; "ECDPW" = Erie County Department of Public Works
4. Posted or Statewide Limit in Miles per Hour (mph).
5. Excludes turning/auxiliary lanes developed at intersections.
6. Estimated AADT in Vehicles per Day (vpd).
7. AADT Source (Year).

B. Multi-Modal Network Description

This evaluation reviewed the study area's pedestrian, bicycle, and transit network via field and aerial reconnaissance. A description of the multi-modal infrastructure is described hereafter.

Pedestrian and Bicycle Facilities

There are sidewalks along the northwest, southwest, and southeast corners of the North French Rd/Campbell Blvd intersection that extend for various lengths depending on the approach. There is also a segment of sidewalk along the northwest corner of the Campbell Blvd/Dodge Rd intersection. There are no dedicated bicycle facilities in the study area, however, bicyclists are allowed to share the road with motorists on all roadways and utilize the existing shoulder space, when available, within the study area.

Transit Facilities

There is no public transport service within the study area.

C. Planned Highway Improvements

NYSDOT is currently designing highway improvements for NY Route 270 (Campbell Blvd) from North French Rd to Erie Co. Line and North French Rd from Campbell Blvd to I-990. The Campbell Blvd/North French Rd intersection is included within this project. Information contained within the Initial Project Proposal (IPP) dated June 2021 indicates that improvements may include a new westbound right turn lane on North French Rd, widening of

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

North French Rd from NY Route 270 to I-990 and possible signal upgrades at the NY Route 270/ North French Rd intersection.

These modifications will improve operating conditions at the NY Route 270/ North French Rd intersection and will relieve previously identified cut-through issues in the French Landings neighborhood.

IV. EXISTING TRAFFIC CONDITIONS

A. *Peak Intervals for Analysis*

Given the functional characteristics of the corridors and the land use proposed for the site (single family residential), the peak hours selected for analysis are the weekday commuter AM and PM peak periods. The combination of site traffic and adjacent through traffic produces the greatest demand during these time periods.

B. *Existing Traffic Volume Data*

Turning movement traffic counts were collected on Thursday, October 7th, 2021 by SRF Associates (SRF) at the study intersections described in Section II. Traffic counts were conducted between 7:00-10:00 AM for the weekday AM peak hour and 3:00 – 6:00 PM for the PM peak hour. The peak hour traffic periods generally occurred between 7:30-8:30 AM and 4:30-5:30 PM

All turning movement count data was collected on a typical weekday. No adverse weather conditions impacted the traffic counts and all schools in the vicinity of the study area were in session. The traffic volumes were reviewed to confirm the accuracy and relative balance of the collective traffic counts. The actual differences in traffic volumes can be attributed to temporal variations in traffic volumes as well as activity related to driveways located in the segments between the study intersections. **Figure 3** illustrates the weekday AM and PM peak hour volumes used for analysis purposes in this study.

C. *Field Observations*

The study intersections were observed during both peak intervals to assess current traffic operations. Signal timing information was obtained from the NYSDOT through a Freedom of Information (FOIL) request to determine peak hour phasing plans and phase durations during each interval. This information was used to support and/or calibrate capacity analysis models described in detail later in this report.

Operating conditions at the existing Sierra Drive/Lynette Lane intersection roundabout were also observed. At the time of field observations, there was no signage either approaching or within the roundabout. Vehicles were observed traveling in the wrong direction of the roundabout. The following changes are recommended to provide positive guidance for motorists and reduce/eliminate wrong way travel through the roundabout:

- Add appropriate signage on the roundabout approaches
- Add appropriate directional signage in the center of the roundabout
- If wrong way travel persists, the Town may want to consider constructing raised splitter islands on the approaches

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

D. Existing Crash Investigation

The purpose of this crash analysis is to identify inherent safety issues by studying and quantifying historical crashes at the study intersections and identifying potential crash patterns and clusters.

A crash cluster is defined as an abnormal occurrence of similar crash types occurring at approximately the same location or involving the same geometric features. The severity of the crashes should also be considered. A history of crashes is an indication that further analysis is required to determine the cause(s) of the crash(es) and to identify what actions, if any, could be taken to mitigate the crashes.

A crash investigation within the study area was conducted to assess the safety history from January 1, 2017, through December 31, 2019. The data was provided by the New York State Department of Motor Vehicles through a Freedom of Information (FOIL) request.

Given that the COVID-19 pandemic influenced daily travel in 2020, any reported crashes in 2020 were dismissed from the study.

Reportable (non-injury, injury, and fatal injury) type crashes are defined as damage to one person's property in the amount of $1,001 or more. The Non-Reportable type crashes result in property damage of $1,000 or less. Crash rates were computed for the study intersection and compared with NYSDOT average crash rates for similar intersections, as summarized in **Table II**. Intersection rates are listed as crashes per million entering vehicle (CR/MEV). Pertinent crash data is provided in the Appendices. There were no reported crashes at Campbell Blvd/Sierra Dr.

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

North French Rd/Lynette Ln

As shown in the crash investigation table, the study intersection has a crash rate that is approximately 1.9 times higher than the statewide average crash rate for similar intersections. There was one reported crash at this intersection which was a collision with a fixed object. No discernable crash patterns were identified and there are no inherent safety deficiencies at this intersection.

North French Rd/Campbell Blvd

As shown in the crash investigation table, the study intersection has a crash rate that is approximately 2.2 times higher than the statewide average crash rate for similar intersections. Of the 29 total crashes, the predominant crash types were rear end (41%), and left turn (14%). Of the remaining crashes, one was a collision with an animal, and another was a fixed object accident. There are no inherent safety deficiencies at this intersection.

North French Rd/Dodge Rd

As shown in the crash investigation table, the study intersection has a crash rate that is approximately 1.9 times higher than the statewide average crash rate for similar intersections. Of the 16 total crashes, the predominant crash types were rear end (38%), left turn (19%), and right angle (19%). Of the remaining crashes, one was a collision with a fixed object. There are no inherent safety deficiencies at this intersection.

E. License Plate Survey

The intersections of North French Rd/Lynette Ln, Lynette Ln/Sierra Dr, and Campbell Blvd/Sierra Dr were observed to determine how much traffic, if any, use Lynette Ln and Sierra Dr to avoid the North French Rd/Campbell Blvd intersection. This was done by recording a portion of the license plates of the vehicles that went through each of the observed intersections during the weekday AM and PM peak hours. The license plate portions that were recorded at each intersection were then compared to see if any appeared at all three intersections.

It was determined that during the AM peak, there were two vehicles that used Lynette Ln and Sierra Dr to avoid the North French Rd/Campbell Blvd intersection. It should be noted that one of these vehicles was a school bus that travels this route to pick up students. During the PM peak no vehicles used Lynette Ln and Sierra Dr to avoid the North French Rd/Campbell Blvd intersection.

V. FUTURE AREA DEVELOPMENT AND LOCAL GROWTH

Construction of the final development phase is anticipated to reach full build-out within one year. The Town of Amherst was contacted to discuss any other specific developments that are currently approved or under construction that would generate additional traffic in the study area. No such projects were identified.

A review of historical NYSDOT traffic volume data on the study roadways in the vicinity of the site indicates that traffic has decreased between 2011 and 2019. To account for normal increases in background traffic growth, including any unforeseen developments in the project study area a growth rate of 0.5% per year has been applied to the existing traffic volumes, based upon historical traffic growth for the one-year build-out period. Future background traffic volumes are shown in **Figure 4**.

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

VI. DEVELOPMENT

A. Description

The final phase of the project consists of 47 single family homes. Access to the site will be provided via two existing subdivision streets, Lynette Ln and Sierra Dr. **Figure 5** illustrates the approved site plan.

B. Site Traffic

The next step in evaluation of the potential traffic impacts related to the remaining phases of the Preserve at Muir Woods was to determine the additional traffic consisting of vehicle trips entering and exiting the project site that are attributable to the residential development. The volume of traffic generated by a site is dependent on the intended land use and size of the development. Trip generation is an estimate of the number of trips generated by a specific building or land use. These trips represent the volume of traffic entering and exiting the development. Trip Generation, 11th Edition (2021), published by the Institute of Transportation Engineers (ITE), is used as a reference for this information. The trip rate for the peak hour of the generator may or may not coincide in time or volume with the trip rate for the peak hour of adjacent street traffic. Volumes generated during the peak hour of adjacent street traffic, in this case the weekday AM and PM peaks, represent a more critical volume when analyzing the capacity of the system; those intervals will provide the basis of this analysis.

Table III shows the total site generated trips for the weekday AM and PM peak hours for the final development phase. All trip generation information has been included in the Appendices.

TABLE III: SITE GENERATED TRIPS

DESCRIPTION	ITE LAND USE CODE	SIZE[1]	AM PEAK HOUR		PM PEAK HOUR	
			ENTER	EXIT	ENTER	EXIT
Single-Family Detached Housing	210	47 Units	10	28	31	18

The final phase of the project is expected to generate approximately 10 entering/28 exiting vehicle trips during the AM peak hour and 31 entering/18 exiting vehicle trips during the PM peak hour at full build out.

C. Site Traffic Distribution

The cumulative effect of site traffic on the transportation network is dependent on the origins and destinations of that traffic and the location of the driveways serving the site.

The proposed arrival/departure distribution of traffic to be generated at this site is considered a function of several parameters, including the following:

- Employment centers.
- Internal site circulation design.
- Site access intersection locations.
- Existing traffic patterns; and
- Existing traffic conditions and controls

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

Figure 6 shows the anticipated trip distribution pattern percentages for the final development phase traffic. Figure 7 illustrates the peak hour site generated traffic based on those percentages.

VII. FULL DEVELOPMENT VOLUMES

Proposed design hour traffic volumes are developed for the AM and PM peak hours by combining the background traffic conditions (Figure 4) and the future Preserve at Muir Woods site-generated traffic volumes (Figure 7) to yield the traffic volumes under full development conditions. The resulting design hour volumes for the remaining phases of the Preserve at Muir Woods are illustrated in Figure 8 under full build-out conditions.

VIII. CAPACITY ANALYSIS

A. Description of Capacity Analysis

Capacity analysis is a technique used for determining a measure of effectiveness for a section of roadway and/or intersection based on the number of vehicles during a specific time period. The measure of effectiveness used for the capacity analysis is referred to as a Level of Service (LOS). Levels of Service are calculated to provide an indication of the amount of delay that a motorist experiences while traveling along a roadway or through an intersection. Since the most amount of delay to motorists usually occurs at intersections, capacity analysis typically focuses on intersections, as opposed to highway segments.

Six Levels of Service are defined for analysis purposes. They are assigned letter designations, from "A" to "F", with LOS "A" representing the conditions with little to no delay, and LOS "F" conditions with very long delays. Suggested ranges of service capacity and an explanation of Levels of Service are included in the Appendix.

The standard procedure for capacity analysis of signalized and un-signalized intersections is outlined in the Highway Capacity Manual (HCM 2016) published by the Transportation Research Board (TRB). Traffic analysis software, SYNCHRO 11, which is based on procedures and methodologies contained in the HCM, was used to analyze operating conditions at study area intersections. The procedure yields a Level of Service (LOS) based on the HCM as an indicator of how well intersections operate. However, it is noted that capacity analysis results were derived using the HCM 2000 methodology for unsignalized intersections within Synchro as required by NYSDOT Region 5.

B. Capacity Analysis Results

Existing and background operating conditions during the peak study periods are evaluated to determine a basis for comparison with the projected future conditions. The future traffic conditions generated by the project were analyzed to assess the operation of the study area intersections. Capacity results for existing, background and full development conditions are listed in Table IV. The discussion following the table summarizes capacity conditions. All capacity analysis calculations are included in the Appendices.

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

Notes:

1. A(2.8) = Level of Service (Delay in seconds per vehicle)
2. EB = Eastbound, WB = Westbound, NB = Northbound, SB = Southbound
3. (S) = Signalized; (U) = Unsignalized
4. N/A = Approach does not exist and/or was not analyzed during this condition
5. Green shaded cells indicate low delays, yellow shaded cells indicate moderate delays, red shaded cells indicate long delays.
6. The v/c ratio, also referred to as degree of saturation, represents the sufficiency of an intersection to accommodate the vehicular demand. A v/c ratio less than 0.85 generally indicates that adequate capacity is available and vehicles are not expected to experience significant queues and delays. A v/c ratio between 0.85 and 0.95 generally indicates an intersection is nearing capacity. Intersections with a v/c ratio of 1.0 or greater generally indicate conditions at or above capacity.

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

North French Rd/Lynette Ln
All approaches operate at LOS "C" or better during both peak hours under all conditions. No changes in LOS are anticipated as a result of the project, therefore, no improvements are warranted or recommended.

North French Rd/Campbell Blvd
This intersection is shown to operate at LOS "E" or better for all movements under existing, background and full development conditions. The eastbound thru/right movement is anticipated to change form a LOS "C" to "D" during the PM peak hour as a result of the project. This is a result of a borderline condition as the threshold between LOS "C" and "D" is 35 seconds and the actual increase in delay is 2.6 seconds per vehicle. No improvements are warranted or recommended.

Campbell Blvd/Sierra Dr
All approaches operate at LOS "C" or better during both peak hours under all conditions. No changes in LOS are anticipated as a result of the project, therefore, no improvements are warranted or recommended.

Campbell Blvd/Dodge Rd
All approaches operate at LOS "B" or better during both peak hours under all conditions. No changes in LOS are anticipated as a result of the project, therefore, no improvements are warranted or recommended.

IX. LEFT-TURN TREATMENT WARRANT INVESTIGATION

Volume guidelines for left-turn treatments along North French Rd and Campbell Blvd at the development access points (Lynette Ln and Sierra Dr) were investigated using the Transportation Board's NCHRP Report 279, Intersection Channelization Design Guide, 1985. Provisions for left-turn lane facilities should be established where traffic volumes are high enough and safety considerations are enough to warrant the additional lane. This investigation analyzes warrants during the weekday AM and PM peak hours for the existing North French Rd/Lynette Ln and Campbell Blvd/Sierra Dr intersections under full development conditions.

At the North French Rd/Lynette Ln intersection, the combination of projected westbound traffic volumes turning left from North French Rd onto Lynette Ln (shown in Figure 3 and 8 of the TIS for existing and full development conditions, respectively) indicate that the guidelines for left-turn treatment are met during the weekday PM peak hour during existing and full build conditions. However, given that the westbound left turn movement currently operates at LOS "A", the final development phase of Muir Woods is expected to add 1(6) left turns, and the future traffic volumes making this left turn are less than 1 vehicle every 2 minutes, a left turn lane is not recommended at this location.

At the Campbell Blvd/Sierra Dr intersection, the combination of projected northbound traffic volumes turning left from Campbell Blvd onto Sierra Dr (shown in Figure 3 and 8 of the TIS for existing and full development conditions, respectively) indicate that the guidelines for left-turn treatment are marginally met during the weekday PM peak hour under full build conditions. Similar to the North French/Lynette Lane intersection, the northbound left turn movement currently operates at LOS "A", the final development phase of Muir Woods is expected to add 4(9) left turns, and the future traffic volumes making this left turn are less than 1 vehicle every 2 minutes, a left turn lane is not recommended at this location.

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

X. SIGNAL WARRANT ANALYSIS

A traffic signal warrant analysis was completed at the North French Rd/Lynette Ln and Campbell Blvd/Sierra Dr intersections during existing and full build conditions as part of this report. The need for a traffic signal is determined by comprehensive investigation of existing and projected traffic conditions and physical characteristics at the location. The Standard Specifications Update for the adoption of the National MUTCD (FHWA) and the New York State Supplement were reviewed to investigate the need for a traffic control signal at this location under full build conditions. There are nine (9) warrants and they are as follows:

Warrant 1	Eight-Hour vehicular volume
Warrant 2	Four-Hour vehicular volume
Warrant 3	Peak Hour
Warrant 4	Pedestrian Volume
Warrant 5	School Crossing
Warrant 6	Coordinated Signal System
Warrant 7	Crash Experience
Warrant 8	Roadway Network
Warrant 9	Intersection Near a Grade Crossing

Detailed signal warrant calculations are attached. Prior to applying warrants, the MUTCD suggests consideration of the effects of right-turn volumes on the minor street approach, and a reduction taken in the number of right turning vehicles, where appropriate. A certain number of right-turn vehicles will execute a right-turn on the red indication without actuating a traffic signal (if one were in place). For purposes of being conservative, it is assumed that 0% of the minor street right-turning vehicles exiting the existing intersections will execute a right-turn on red maneuver and should, therefore be subtracted for the purposes of the warrant analysis. The posted speed limit on North French Rd and Campbell Blvd at the existing intersections is 45 MPH and 40 MPH, respectively, therefore, 70 percent thresholds in Table 4C-1, Figure 4C-2 and Figure 4C-4 are used as a basis for analysis.

North French Rd/Lynette Ln

Warrant 1 is subdivided into Condition A and Condition B. The Minimum Vehicular Volume, Condition A, is intended for application at locations where a large volume of intersecting traffic is the principal reason to consider installing a traffic control signal. The Interruption of Continuous Traffic, Condition B, is intended for application at locations where Condition A is not satisfied and where the traffic volume on a major street is so heavy that traffic on a minor intersecting street suffers excessive delay or conflict in entering or crossing the major street. These conditions are satisfied when, for each of any eight hours of an average day, anticipated volumes on the artery and side road exceed the minimum values presented in Tables 4C-1 in the MUTCD. **Condition A is not met under existing and full build conditions. Condition B is not met under existing and full build conditions.**

Warrant 2, the Four-Hour Vehicular Volume signal warrant conditions, are intended to be applied where the volume of intersecting traffic is the principal reason to consider installing a traffic control signal. This warrant stipulates that for any four hours of a day, minimum threshold volumes are met on the artery and side road. **This warrant is not met under existing and full development conditions.**

Warrant 3 is intended for application where minor street traffic suffers undue delay in entering or crossing the major street for one hour of the day. It stipulates that the warrant shall be applied in unusual cases (high-occupancy vehicle facilities – i.e., shopping centers) where a

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

large number of vehicles discharge over a short period of time. Based on the development, this warrant may be applicable. **This warrant is not met under existing and full build conditions.**

Warrant 4 is met when pedestrians experience excessive delay in crossing the major street (North French Rd) because the traffic volumes are so heavy. The intersection currently has low pedestrian activity. This warrant is not met.

Warrant 5 is met when a sufficient number of gaps in traffic do not exist for certain size and frequency of school children to cross the major roadway. Based on the future site conditions, this warrant is not applicable at this location and is not met.

Warrant 6 is met when a traffic signal is needed to maintain progressive movement and vehicle platooning in a coordinated signal system. Based on the current signal system along North French Rd, this warrant is not met.

Warrant 7 is intended for application where the severity and frequency of crashes are the principal reasons to consider installing a traffic control signal. The need for a traffic control signal shall be considered if *all* of the following criteria are met:

a. Adequate trial of alternatives with satisfactory observance and enforcement has failed to reduce crash frequency. **Condition A is not satisfied.**

b. Five (5) or more reported crashes, of types susceptible to correction by a traffic signal, to have occurred within a 12-month period, each crash involving a personal injury or property damage. Four (4) crashes were documented in the crash analysis over a 36-month period. **Condition B is not satisfied.**

   Given that both Conditions A and B are not satisfied, this warrant is not satisfied.

Warrant 8 is met when a traffic signal might encourage concentration and organization of traffic flow on a roadway network. This warrant primarily focuses on two major intersecting roadways, which is not the case at the study intersection. Therefore, this warrant is not met.

Warrant 9 is applicable when an intersection is located near an at-grade rail crossing. This warrant is not applicable at this location.

Campbell Blvd/Sierra Dr

Warrant 1 is subdivided into Condition A and Condition B. The Minimum Vehicular Volume, Condition A, is intended for application at locations where a large volume of intersecting traffic is the principal reason to consider installing a traffic control signal. The Interruption of Continuous Traffic, Condition B, is intended for application at locations where Condition A is not satisfied and where the traffic volume on a major street is so heavy that traffic on a minor intersecting street suffers excessive delay or conflict in entering or crossing the major street. These conditions are satisfied when, for each of any eight hours of an average day, anticipated volumes on the artery and side road exceed the minimum values presented in Tables 4C-1 in the MUTCD. **Condition A is not met under existing and full build conditions. Condition B is not met under existing and full build conditions.**

Warrant 2, the Four-Hour Vehicular Volume signal warrant conditions, are intended to be applied where the volume of intersecting traffic is the principal reason to consider installing a traffic control signal. This warrant stipulates that for any four hours of a day, minimum

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

threshold volumes are met on the artery and side road. **This warrant is not met under existing and full development conditions.**

Warrant 3 is intended for application where minor street traffic suffers undue delay in entering or crossing the major street for one hour of the day. It stipulates that the warrant shall be applied in unusual cases (high-occupancy vehicle facilities – i.e., shopping centers) where a large number of vehicles discharge over a short period of time. Based on the development, this warrant may be applicable. **This warrant is not met under existing and full build conditions.**

Warrant 4 is met when pedestrians experience excessive delay in crossing the major street (Campbell Blvd) because the traffic volumes are so heavy. The intersection currently has low pedestrian activity. This warrant is not met.

Warrant 5 is met when a sufficient number of gaps in traffic do not exist for certain size and frequency of school children to cross the major roadway. Based on the future conditions, this warrant is not applicable at this location and is not met.

Warrant 6 is met when a traffic signal is needed to maintain progressive movement and vehicle platooning in a coordinated signal system. Based on the current signal system along Campbell Blvd, this warrant is not met.

Warrant 7 is intended for application where the severity and frequency of crashes are the principal reasons to consider installing a traffic control signal. The need for a traffic control signal shall be considered if *all* of the following criteria are met:

a. Adequate trial of alternatives with satisfactory observance and enforcement has failed to reduce crash frequency. **Condition A is not satisfied.**

b. Five (5) or more reported crashes, of types susceptible to correction by a traffic signal, to have occurred within a 12-month period, each crash involving a personal injury or property damage. Four (4) crashes were documented in the crash analysis over a 36-month period. **Condition B is not satisfied.**

Given that both Conditions A and B are not satisfied, this warrant is not satisfied.

Warrant 8 is met when a traffic signal might encourage concentration and organization of traffic flow on a roadway network. This warrant primarily focuses on two major intersecting roadways, which is not the case at the study intersection. Therefore, this warrant is not met.

Warrant 9 is applicable when an intersection is located near an at-grade rail crossing. This warrant is not applicable at this location.

TABLE V: TRAFFIC SIGNAL WARRANT SUMMARY

WARRANT	SATISFACTION OF WARRANTS AT N FRENCH RD/LYNETTE LN	SATISFACTION OF WARRANTS AT CAMPBELL BLVD/SIERRA DR
1A – Eight-Hour Condition A	NOT SATISFIED	NOT SATISFIED
1B – Eight-Hour Condition B	NOT SATISFIED	NOT SATISFIED
2 – Four-Hour	NOT SATISFIED	NOT SATISFIED

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

TABLE V: TRAFFIC SIGNAL WARRANT SUMMARY

WARRANT	SATISFACTION OF WARRANTS AT N FRENCH RD/LYNETTE LN	SATISFACTION OF WARRANTS AT CAMPBELL BLVD/SIERRA DR
3 – Peak-Hour	NOT SATISFIED	NOT SATISFIED
4 – Pedestrian Volume	N/A	N/A
5 – School Crossing	N/A	N/A
6 – Coordinated Signal System	N/A	N/A
7 – Crash Experience	NOT SATISFIED	NOT SATISFIED
8 – Roadway Network	N/A	N/A
9 – Intersection Near a Grade Crossing	N/A	N/A

Table VI summarizes each warrant and the result of the investigation. Based on the expected delays under full development conditions and the results of the Traffic Signal Warrant Analysis, a three-colored traffic signal is not recommended for this intersection prior to full build out of the development.

XI. CONCLUSIONS & RECOMMENDATIONS

This Traffic Impact Study identifies and evaluates the potential traffic impacts that can be expected from the final phase of the Preserve at Muir Woods project located south of North French Road and east of Campbell Blvd in the Town of Amherst, Erie County, New York. The results of this study determine that the existing transportation network can adequately accommodate the projected traffic volumes and resulting impacts to study area intersections, with no mitigation required. The following sets forth the conclusions based upon the results of the analyses:

1. The final phase of the project is expected to generate approximately 10 entering/28 exiting vehicle trips during the AM peak hour and 31 entering/18 exiting vehicle trips during the PM peak hour at full build out.

2. Crash analyses at the existing intersections did not identify any identifiable crash clusters or inherent safety deficiencies.

3. Evaluation of left turn treatment warrants at the North French Rd/Lynette Ln and Campbell Blvd/Sierra Dr intersections indicate that the guidelines for left-turn treatment are marginally met during the weekday PM peak hours at both locations. However, given that both left turn movements currently operate at LOS “A” with little to no delay and the projected left turn traffic volumes are relatively small, a left turn lane is not recommended at either location.

4. Evaluation of signal warrants at the North French Rd/Lynette Ln and Campbell Blvd/Sierra Dr intersections indicate that none of the warrants for signalization are met at either location and signalization of the intersections is not recommended.

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

5. The projected traffic impacts resulting from full development of the final phase of the project during both peak hours can be accommodated by the existing transportation network with no highway improvements.

6. For purposes of the environmental review of the project pursuant to the State Environmental Quality Review Act (SEQRA), it is our firm's professional opinion that the final phase of the project will not result in any potentially significant adverse traffic impacts to the study area intersections.

Level of Service:
Criteria and Definitions

Attachment: SP-2021-24 application 011322 (25070 : Sp-2021-24)

Level of Service Criteria

Highway Capacity Manual 2016

SIGNALIZED INTERSECTIONS

Level of Service is a qualitative measure describing operational conditions within a traffic stream, based on service measures such as speed and travel time, freedom to maneuver, traffic interruptions, comfort, and convenience. Level of Service for signalized intersections is defined in terms of delay specifically, average total delay per vehicle for a 15 minute analysis period. The ranges are as follows:

Level of Service	Control Delay per vehicle (seconds)
A	< 10
B	10 – 20
C	20 – 35
D	35 – 55
E	55 – 80
F	>80

UNSIGNALIZED INTERSECTIONS

Level of Service for unsignalized intersections is also defined in terms of delay. However, the delay criteria are different from a signalized intersection. The primary reason for this is driver expectation that a signalized intersection is designed to carry higher volumes than an unsignalized intersection. The total delay threshold for any given Level of Service is less for an unsignalized intersection than for a signalized intersection. The ranges are as follows:

Level of Service	Control Delay per vehicle (seconds)
A	< 10
B	10 – 15
C	15 – 25
D	25 – 35
E	35 - 50
F	>50

NOTES

1. All elevations refer to USGS NAVD83 datum.
2. The CONTRACTOR shall obtain necessary permits and furnish copies to the ENGINEER prior to commencing work.
3. The CONTRACTOR work area shall be confined to the limits of the right-of-ways and easements. The CONTRACTOR shall obtain any additional easements or work releases should the CONTRACTOR require additional area to accommodate his operations.
4. The CONTRACTOR shall provide maintenance and protection of traffic in accordance with the Erie County Highway Department standards and the NYSDOT Manual of Uniform Traffic Control Devices.
5. The locations and depths of existing underground utilities as shown on the plans and profiles are approximate. Other underground utilities not shown may be encountered. The CONTRACTOR shall perform test pits to verify the location and elevation of utilities at interconnections and crossings as shown, directed or required. The CONTRACTOR shall excavate in advance of the pipe laying operation and expose all existing underground utilities to prevent damage during construction and to determine required changes in grade necessary to install watermain to avoid conflicts.
6. The CONTRACTOR shall install those measures required to limit erosion of areas disturbed by the work. Clearing shall be performed on an as needed basis, phased to reduce erosion and visual impact.
7. Blasting will not be permitted.
8. No more than one connection may be made to any existing watermain prior to testing, disinfection, and approval of the Waterline Installation Completed Works Approval Report(s) by the Erie County Water Authority and the Erie County Health Department.
9. The Erie County Water Authority only shall operate existing valves and fire hydrants, including newly installed valves and fire hydrants that have been placed into service. The CONTRACTOR is advised that watertight conditions may not exist when existing valves are closed.
10. The CONTRACTOR shall have all equipment, manpower, and materials required on site and ready for use prior to commencing any shut-down or removing any existing facilities from service. The CONTRACTOR shall notify all affected customers of any shut-down at least 48 hours in advance. The CONTRACTOR shall notify the appropriate fire stations 48 hours in advance prior to taking any fire hydrants out of service. Any fire hydrants not in service shall be bagged in burlap or plastic. Any shut-down shall be limited to 4 consecutive hours. It may be necessary to schedule shut-downs at night, weekends, or other off hours so as to not affect schools, businesses or other customers, as determined by the ENGINEER. Shut-down requests shall be submitted to the Erie County Water Authority a minimum of 5 business days in advance of the requested shut-down date.

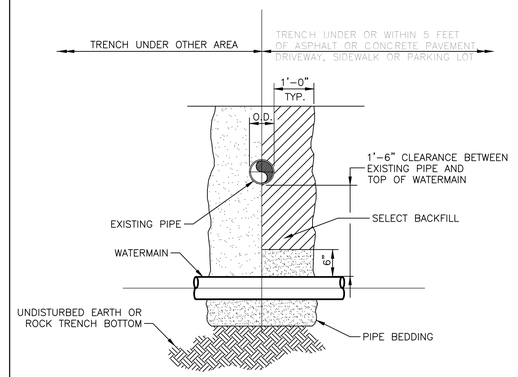
I:\PUBLIC\ENGINEERING\CURRENT ECWA DETAILS\SD29_GENERAL_NOTES

ERIE COUNTY WATER AUTHORITY BUFFALO, NEW YORK	STANDARD DETAIL GENERAL NOTES	SD29 DATE 3/05	REVISED 8/16

11. **All watermain piping shall be installed with a minimum of 5'-0" of cover.**
12. All watermain piping shall be installed with a minimum of 1'-6" of vertical clearance and 10'-0" of horizontal clearance from sanitary and storm piping, measured from the outside of the pipes at the point of crossing.
13. If the material at the design grade is unsuitable as determined by the ENGINEER, the CONTRACTOR, when ordered in writing, shall excavate additional material to the depth necessary and shall backfill to the proposed grade with the select granular material.
14. The installation of the 90 degree bends in the watermain is not allowed, unless approved by the Erie County Water Authority.
15. Thrust restraint for watermain piping through 12-inch diameter shall consist of thrust blocks and pipe joint restraint.
16. The CONTRACTOR shall notify the owner of any utility pole in advance of any excavation work that will take place within 5'-0" of the utility pole. The CONTRACTOR shall include the cost of temporary pole support in the appropriate bid item.Where utility poles are required to be supported during construction, the CONTRACTOR shall make all necessary arrangements with the utility company.
17. If materials are encountered during the construction that are suspected of being contaminated, the CONTRACTOR shall immediately notify the NYSDEC for direction regarding testing, separation, containment and disposal procedures.
18. Existing fire hydrants removed during construction and not reinstalled as part of the work shall be returned to the Erie County Water Authority Service Center, 3030 Union Road, Cheektowaga.
19. The CONTRACTOR shall cold patch all trench excavations in traveled areas including roads, driveways, sidewalks, and parking areas.
20. The CONTRACTOR shall not restrict school bus access.
21. The use of existing fire hydrants for any reason is prohibited without prior approval of the Erie County Water Authority. This includes newly installed fire hydrants that have been placed into service.
22. The CONTRACTOR shall submit procedures for testing and disinfection of the watermain to the ENGINEER for approval.
23. The CONTRACTOR shall be present and assist in the Final Walk inspection. The CONTRACTOR shall provide sufficient personnel and equipment to demonstrate to the ENGINEER that all valves, fire hydrants and curb stops operate as required.

I:\PUBLIC\ENGINEERING\CURRENT ECWA DETAILS\SD30_GENERAL_NOTES

ERIE COUNTY WATER AUTHORITY BUFFALO, NEW YORK	STANDARD DETAIL GENERAL NOTES	DWG. NO. SD30 DATE 3/05	REVISED 8/16



NOTES:

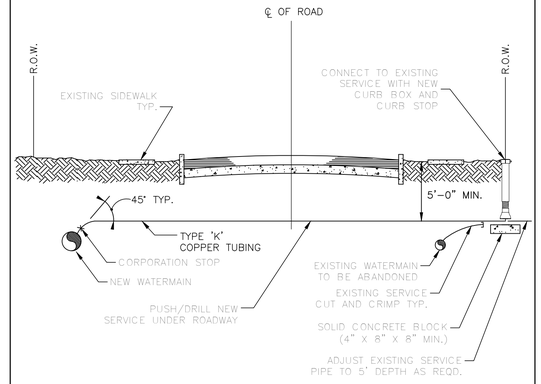
1. ALL EXISTING UTILITIES MUST BE SUPPORTED DURING CONSTRUCTION OF THE NEW WATERMAIN.
2. WHEN CROSSING A SEWERLINE WITH A NEW WATERMAIN, ONE FULL PIPE LENGTH (18. FT. MIN.) SHALL BE USED AT THE POINT OF CROSSING. THE WATERMAIN SHALL BE PLACED SO THAT BOTH JOINT ENDS ARE AS FAR AS POSSIBLE FROM THE EXISTING SEWERLINE.

SECTION

N.T.S.

I:\PUBLIC\ENGINEERING\CURRENT ECWA DETAILS\SD2_PIPE_CROSSING

ERIE COUNTY WATER AUTHORITY BUFFALO, NEW YORK	STANDARD DETAIL PIPE CROSSING	DWG. NO. SD2 DATE 4/28/92	REVISED 7/16



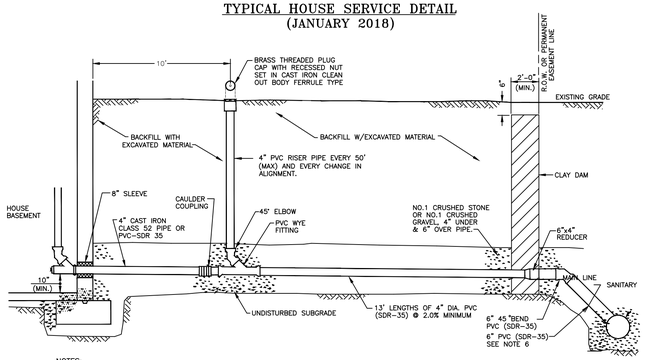
NOTES:

1. EXISTING SERVICES SHALL BE CRIMPED AND ABANDONED IN PLACE.
2. SERVICE SADDLES SHALL BE USED UNDER THE FOLLOWING CONDITIONS:
   A. WHEN SERVICES AND PLACED ON 4" OR SMALLER PIPES.
   B. WHEN SERVICES LARGER THAN 1" ARE PLACED ON A 6" PIPE.
   C. WHEN SERVICES LARGER THAN 1 1/2" ARE PLACED ON AN 8" PIPE.
   D. WHEN SERVICES LARGER THAN 1 1/2" ARE PLACED ON DUCTILE IRON PIPE.
   E. WHEN TAPPING ALL PLASTIC (PVC) PIPE.
   F. WHEN TAPPING ALL ASBESTOS-CEMENT PIPE.
3. CURB BOXES SHALL NOT BE PLACED IN SIDEWALKS, DRIVEWAYS, OR CURB RAMPS.
4. USE POLYETHYLENE FOR 3/4" AND 1" SERVICES GREATER THAN 100 FEET IN LENGTH, AND FOR 1-1/2" AND 2" SERVICES GREATER THAN 60 FEET IN LENGTH. ALL POLYETHYLENE SERVICES SHALL INCLUDE A TRACER WIRE FOR DETECTION BY ECWA FORCES.
5. UNIONS ON COPPER TUBING ARE NOT ALLOWED UNLESS APPROVED BY ECWA PRIOR TO INSTALLATION.

I:\PUBLIC\ENGINEERING\CURRENT ECWA DETAILS\SD16_SERVICE_REPLACE SMO

ERIE COUNTY WATER AUTHORITY BUFFALO, NEW YORK	STANDARD DETAIL SERVICE REPLACEMENT/INSTALLATION	DWG. NO. SD16 DATE 4/92	REVISED 10/20

TYPICAL HOUSE SERVICE DETAIL
(JANUARY 2018)



NOTES:

1. NO INSPECTION WILL BE PROVIDED WITHOUT A PERMIT. INSPECTIONS REQUIRE 48 HR. ADVANCE NOTICE FOR SCHEDULING.
2. ALL WORK MUST BE INSPECTED BY A COUNTY INSPECTOR
3. PVC PIPE MATERIAL SHALL BE MANUFACTURED IN ACCORDANCE WITH ASTM D-3034 OR THE LATEST ASTM SPECIFICATION D-3033/D-3034. CAST IRON PIPE MATERIAL SHALL BE EXTRA HEAVY CAST IRON MEETING THE REQUIREMENTS OF ASTM A74-42.
4. A MANUAL VALVE SHALL BE INSTALLED ON BASEMENT LAUNDRY DRAIN LINE.
5. CLEAN OUTS MUST BE INSTALLED IN LAWN AREAS, NOT IN SIDEWALKS OR DRIVEWAY AREAS. PREFERABLY LOCATED AT THE BACK OF THE SIDEWALK.
6. SELECT BACKFILL REQUIRED UNDER PAVED AREAS.
7. CONCRETE ENCASEMENT IF COVER DEPTH IS LESS THAN 4'-0" UNDER PAVED AREAS
8. FOR NEW CONSTRUCTION, AN 8x6 WYE WITH 6" PVC TO 6" 45° BEND, THEN 6" x 4" REDUCER IS USED.
9. A 6" CLEAN OUT IS REQUIRED AT R.O.W. WHENEVER THE MAIN SEWER IS UNDER THE PAVEMENT LIMITS OR AT FAR SIDE OF PAVEMENT.
10. ANY EXCAVATION TO BE LEFT OPEN OVERNIGHT SHALL BE COMPLETELY ENCLOSED IN FENCING, OR WHERE NECESSARY, COVERED WITH STEEL PLATES.
11. DOWN SPOUTS, SUMP PUMPS, AND FOOTING DRAINS ARE NOT PERMITTED TO BE CONNECTED TO THE HOUSE LATERAL.
12. FOR NEW STRUCTURES, NO CONNECTION SHALL BE MADE UNTIL BUILDING ROOF IS ERECTED AND BASEMENT FLOOR IS POURED.

SPECIFICATIONS:
CONCRETE: 4,000 P.S.I. @ 28 DAYS.
ENTRAINED AIR: 5% - 9%
STEEL: A.S.T.M. A496-A615 GRADE 60-80 KSI.
DESIGN LOADING: A.A.S.H.T.O. HS-20-44 WITH 30% IMPACT AND EQUIVALENT SOIL PRESSURE OF 130 (PSF). FLOATATION FORCES NOT ACCOUNTED FOR.
WEIGHT 2,268 LBS.

FRAME & GRATE:

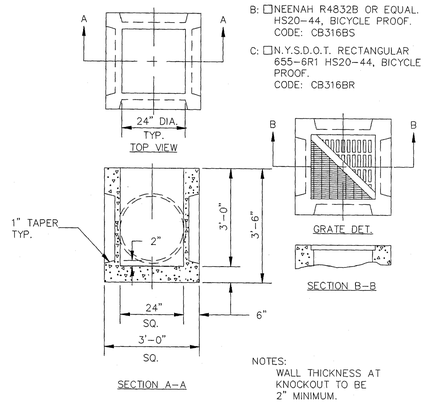
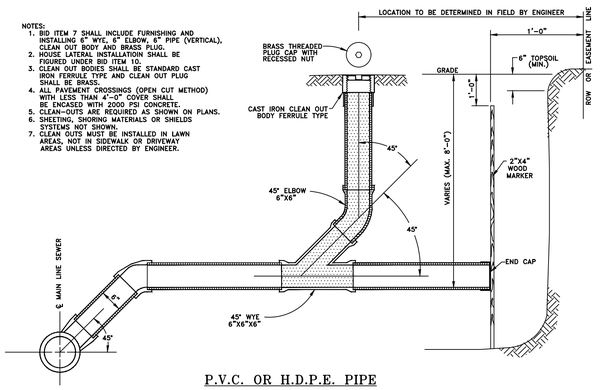
C: ☐N.Y.S.D.O.T. RECTANGULAR 655-6R1 HS20-44, BICYCLE PROOF.
CODE: CB316BR



NOTES:
WALL THICKNESS AT KNOCKOUT TO BE 2" MINIMUM.

LIGHT DUTY RECEIVER (LD RCVR)

CLEAN-OUT DETAIL FOR SERVICE CONNECTION
(JANUARY 2012)



NOTES:
1. BID ITEM 7 SHALL INCLUDE FURNISHING AND INSTALLING 6" WYE, 6" ELBOW, 6" PIPE (VERTICAL), CLEAN OUT BODY AND BRASS PLUG. HOUSE LATERAL INSTALLATION SHALL BE FIGURED UNDER BID ITEM 10.
2. CLEAN OUT BODIES SHALL BE STANDARD CAST IRON FERRULE TYPE AND CLEAN OUT PLUG SHALL BE BRASS.
3. ALL PAVEMENT CROSSINGS (OPEN CUT METHOD) WITH LESS THAN 4'-0" COVER SHALL BE ENCASED WITH 2000 PSI CONCRETE.
4. CLEAN-OUTS ARE REQUIRED AS SHOWN ON PLANS.
5. SHEETING, SHORING MATERIALS OR SHIELDS SYSTEMS NOT SHOWN.
6. CLEAN OUTS MUST BE INSTALLED IN LAWN AREAS, NOT IN SIDEWALK OR DRIVEWAY AREAS UNLESS DIRECTED BY ENGINEER.

Attachment: SP-2021-24 drawings 011322 (25070 : Sp-2021-24)

STANDARD AND SPECIFICATIONS FOR RECREATION AREA SEEDING

Definition & Scope

Establishing **permanent** grasses, legumes, vines, shrubs, trees, or other plants, or selectively reducing stand density and trimming woody plants, to improve an area for recreation. To increase the attractiveness and usefulness of recreation areas and to protect the soil and plant resources.

Conditions Where Practice Applies

On any area planned for recreation use, lawns, and areas that will be maintained in a closely mowed condition.

Specifications

ESTABLISHING GRASSES (Turfgrass)

The following applies for playgrounds, parks, athletic fields, camping areas, picnic areas, passive recreation areas such as lawns, and similar areas.

1. Time of Planting

Fall planting is preferred. Seed after August 15. In the spring, plant until May 15.

If seeding is done between May 15 and August 15, irrigation may be necessary to ensure a successful seeding.

2. Site Preparation

A. Install needed water and erosion control measures and bring area to be seeded to desired grades. A minimum of 4 in. topsoil is required.

B. Prepare seedbed by loosening soil to a depth of 4-6 inches and decompacting required areas per Soil Restoration Standard.

C. See Standard and Specification of Topsoiling.

D. Lime to a pH of 6.5. See Lime Application Standard.

E. **Fertilize as per soil test** or, if soil must be fertilized before results of a soil test can be obtained to determine fertilizer needs, apply commercial fertilizer at 850 pounds of 5-5-10 or equivalent per acre (20 lbs/1,000 sq. ft.). See Fertilizer Application Standard.

F. Incorporate lime and fertilizer in top 2-4 inches of topsoil.

G. Smooth. Remove sticks, foreign matter, and stones over 1 inch in diameter, from the surface. Firm the seedbed.

3. Planting

Use a cultipacker type seeder if possible. Seed to a depth of 1/8 to 1/4 inch. If seed is to be broadcast, cultipack or roll after seeding. If hydroseeded, lime and fertilizer may be applied through the seeder, and rolling is not practical.

4. Mulching

Mulch all seedings in accordance with Standard and Specifications for Mulching. Small grain straw is the best material.

5. Seed Mixtures

Select seed mixture for site conditions and intended use from Table 4.5.

6. Contact Cornell Cooperative Extension Turf Specialist for suitable varieties.

Turf-type tall fescues have replaced the old KY31 tall fescues. New varieties have finer leaves and are the most resistant grass to foot traffic. Do not mix it with fine textured grasses such as bluegrass and red fescue.

Common ryegrass and redtop, which are relatively short lived species, provide quick green cover. Improved lawn cultivars of perennial ryegrass provide excellent quality turf, but continue to lack winter hardiness.

Common white clover can be added to mixtures at the rate of 1-2 lbs/acre to help maintain green color during the dry summer period; however, they will not withstand heavy traffic. Avoid using around swimming areas as flowers attract bees which can be easily stepped on.

7. Fertilizing—First Year

Apply fertilizer as indicated by the soil test three to four weeks after germination (spring seedlings). If test results have not been obtained, apply 1 pound nitrogen/1,000 square feet using a complete fertilizer with a 2-1-1 or 4-1-3 ratio. Summer and early fall seedings, apply as above unless air temperatures are above 85°F for an extended period. Wait for cooler temperatures to fertilize. Late fall/ winter seedings, fertilize in spring.

8. Restrict Use

New seedlings should be protected from use for one full year or a spring and fall growth cycle where possible to allow development of a dense sod with good root structure.

MAINTAINING GRASSES

1. Maintain a pH of 6.0 - 7.0.

2. Fertilize in late May to early June as follows with 5-5-10 analysis fertilizer at the rate of 5 lbs./1,000 sq. ft. and repeat in late August if sod density is not adequate. Avoid fertilizing when heat is greater than 85°F. Top dress weak sod annually in the spring, but at least once every 2 to 3 years. **Fertilize in accordance with soil test analysis**, after determining adequate topsoil depth exists.

3. Aerate compacted or heavily used areas, like athletic fields, annually as soon as soil moisture conditions permit. Aerate area six to eight times using a spoon or hollow tine type aerator. Do not use solid spike equipment.

4. Reseed bare and thin areas annually with original seed mix.

Site - Use	Species (% by weight)	lbs/1,000 ft² (PLS)	lbs/acre (PLS)
Sunny Sites (well, moderately well, and somewhat poorly drained soils)	*Athletic fields and similar areas*

STANDARD AND SPECIFICATIONS FOR COMPOST FILTER SOCK

Definition & Scope

A **temporary** sediment control practice composed of a degradable geotextile mesh tube filled with compost fiber media to filter sediment and other pollutants associated with construction activity to prevent their migration offsite.

Condition Where Practice Applies

Compost filter socks can be used in many construction site applications where erosion will occur in the form of sheet erosion and there is no concentration of water flowing to the sock. In areas with steep slopes and/or rocky terrain, soil conditions must be such that good continuous contact between the sock and the soil is maintained throughout its length. For use on impervious surfaces such as road pavement or parking areas, proper anchorage must be provided to prevent shifting of the sock or separation of the contact between the sock and the pavement. Compost filter socks are utilized both at the site perimeter as well as within the construction areas. These socks may be filled after placement by blowing compost into the tube pneumatically, or filled at a staging location and moved into its designed location.

Design Criteria

1. Compost filter socks will be placed on the contour with both terminal ends of the sock extended 8 feet upslope at a 45 degree angle to prevent bypass flow.

2. Diameters designed for use shall be 12" – 32" except that 8" diameter socks may be used for residential lots to control areas less than 0.25 acres.

3. The flat dimension of the sock shall be at least 1.5 times the nominal diameter.

4. The **Maximum Slope Length** (in feet) above a compost filter sock shall not exceed the following limits:

Dia. (in.)	Slope %						
	2	5	10	20	25	33	50
8	225*	200	100	50	20	—	—
12	250	225	125	65	50	40	25
18	275	250	150	70	55	45	30
24	350	275	200	130	100	60	35
32	450	325	275	150	120	75	50

* Length in feet

5. The compost infill shall be well decomposed (matured at least 3 months), weed-free, organic matter. It shall be aerobically composted, possess no objectionable odors, and contain less than 1%, by dry weight, of manmade foreign matter. The physical parameters of the compost shall meet the standards listed in Table 5.2 - Compost Standards Table. **Note: All biosolids compost produced in New York State (or approved for importation) must meet NYS DEC's 6 NYCRR Part 360 (Solid Waste Management Facilities) requirements. The Part 360 requirements are equal to or more stringent than 40 CFR Part 503 which ensure safe standards for pathogen reduction and heavy metals content. When using compost filter socks adjacent to surface water, the compost should have a low nutrient value.**

6. The compost filter sock fabric material shall meet the

7. Compost filter socks shall be anchored in earth with 2" x 2" wooden stakes driven 12" into the soil on 10 foot centers on the centerline of the sock. On uneven terrain, effective ground contact can be enhanced by the placement of a fillet of filter media on the disturbed area side of the compost sock.

8. All specific construction details and material specifications shall appear on the erosion and sediment control constructions drawings when compost filter socks are included in the plan.

Maintenance

1. Traffic shall not be permitted to cross filter socks.

2. Accumulated sediment shall be removed when it reaches half the above ground height of the sock and disposed of in accordance with the plan.

3. Socks shall be inspected weekly and after each runoff event. Damaged socks shall be repaired in the manner required by the manufacturer or replaced within 24 hours of inspection notification.

4. Biodegradable filter socks shall be replaced after 6 months; photodegradable filter socks after 1 year. Polypropylene socks shall be replaced according to the manufacturer's recommendations.

5. Upon stabilization of the area contributory to the sock, stakes shall be removed. The sock may be left in place and vegetated or removed in accordance with the stabilization plan. For removal the mesh can be cut and the compost spread as an additional mulch to act as a soil supplement.

Table 5.1 - Compost Sock Fabric Minimum Specifications Table

Material Type	3 mil HDPE	5 mil HDPE	5 mil HDPE	Multi-Filament Polypropylene (MFPP)	Heavy Duty Multi-Filament Polypropylene (HDMFPP)

STANDARD AND SPECIFICATIONS FOR GEOTEXTILE FILTER BAG

Definition & Scope

A **temporary** portable device through which sediment laden water is pumped to trap and retain sediment prior to its discharge to drainageways or off-site.

Condition Where Practice Applies

On sites where space is limited such as urban construction or linear projects (e.g. roads and utility work) where rights-of-way are limited and larger de-silting practices are impractical.

Design Criteria

1. Location - The portable filter bag should be located to minimize interference with construction activities and pedestrian traffic. It should also be placed in a location that is vegetated, relatively level, and provides for ease of access by heavy equipment, cleanout, disposal of trapped sediment, and proper release of filtered water.

   The filter bag shall also be placed at least 50 feet from all wetlands, streams or other surface waters.

2. Size - Geotextile filter bag shall be sized in accordance with the manufacturers recommendations based on the pump discharge rate.

Materials and Installation

1. The geotextile material will have the following attributes:

Minimum Grab Tensile Strength	200 lbs.
Minimum Grab Tensile Elongation	50 %
Minimum Trapezoid Tear Strength	80 lbs.
Mullen Burst Strength	380 psi
Minimum Puncture Strength	130 lbs
Apparent Opening Size	40 - 80 US sieve
Minimum UV Resistance	70%
Minimum Flow Thru Rate	70 gpm/sq ft

2. The bag shall be sewn with a double needle machine using high strength thread, double stitched "Joe" type capable of minimum roll strength of 100 lbs/inch (ASTM D4884).

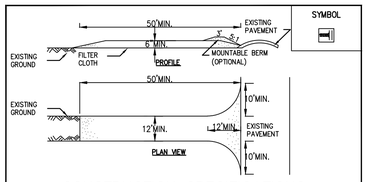
3. The geotextile filter bag shall have an opening large enough to accommodate a 4 inch diameter discharge hose with an attached strap to tie off the bag to the hose to prevent back flow.

4. The geotextile shall be placed on a gravel bed 2 inches thick, a straw mat 4 inches thick, or a vegetated filter strip to allow water to flow out of the bag in all directions.

Maintenance

1. The geotextile filter bag is considered full when remaining bag flow area has been reduced by 75%. At this point, it should be replaced with a new bag.

2. Disposal may be accomplished by removing the bag to an appropriate designated upland area, cut open, remove the geotextile for disposal, and spread sediment contents and seeded and mulched according to the vegetative plan.



CONSTRUCTION SPECIFICATIONS

1. STONE SIZE – USE 1–4 INCH STONE, OR RECLAIMED OR RECYCLED CONCRETE EQUIVALENT.
2. LENGTH – NOT LESS THAN 50 FEET (EXCEPT ON A SINGLE RESIDENCE LOT WHERE A 30 FOOT MINIMUM LENGTH WOULD APPLY).
3. THICKNESS – NOT LESS THAN SIX (6) INCHES.
4. WIDTH – TWELVE (12) FOOT MINIMUM, BUT NOT LESS THAN THE FULL WIDTH AT POINTS WHERE INGRESS OR EGRESS OCCURS. TWENTY–FOUR (24) FOOT IF SINGLE ENTRANCE TO SITE.
5. GEOTEXTILE – WILL BE PLACED OVER THE ENTIRE AREA PRIOR TO PLACING OF STONE.
6. SURFACE WATER – ALL SURFACE WATER FLOWING OR DIVERTED TOWARD CONSTRUCTION ACCESS SHALL BE PIPED BENEATH THE ENTRANCE, IF PIPING IS IMPRACTICAL, A MOUNTABLE BERM WITH 5:1 SLOPES WILL BE PERMITTED.
7. MAINTENANCE – THE ENTRANCE SHALL BE MAINTAINED IN A CONDITION WHICH WILL PREVENT TRACKING OR FLOWING OF SEDIMENT ONTO PUBLIC RIGHTS–OF–WAY. ALL SEDIMENT SPILLED, DROPPED, WASHED OR TRACKED ONTO PUBLIC RIGHTS–OF–WAY MUST BE REMOVED IMMEDIATELY.
8. WHEN WASHING IS REQUIRED, IT SHALL BE DONE ON AN AREA STABILIZED WITH STONE AND WHICH DRAINS INTO AN APPROVED SEDIMENT TRAPPING DEVICE.
9. PERIODIC INSPECTION AND NEEDED MAINTENANCE SHALL BE PROVIDED AFTER EACH RAIN.

ADAPTED FROM DETAILS PROVIDED BY: USDA – NRCS, NEW YORK STATE DEPARTMENT OF TRANSPORTATION, NEW YORK STATE DEPARTMENT OF ENVIRONMENTAL CONSERVATION, NEW YORK STATE SOIL & WATER CONSERVATION COMMITTEE

STABILIZED CONSTRUCTION ACCESS

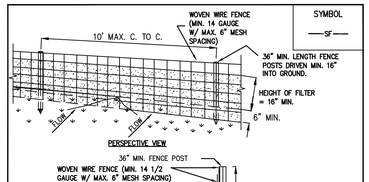
RIPRAP OUTLET PROTECTION EXAMPLE

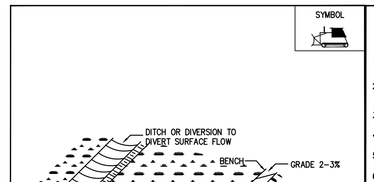


CONSTRUCTION SPECIFICATIONS

1. WOVEN WIRE FENCE TO BE FASTENED SECURELY TO FENCE POSTS WITH WIRE TIES OR STAPLES. POSTS SHALL BE STEEL EITHER "T" OR "U" TYPE OR HARDWOOD.
2. FILTER CLOTH TO BE TO BE FASTENED SECURELY TO WOVEN WIRE FENCE WITH TIES SPACED EVERY 24" AT TOP AND MID SECTION. FENCE SHALL BE WOVEN WIRE, 6" MAXIMUM MESH OPENING.
3. WHEN TWO SECTIONS OF FILTER CLOTH ADJOIN EACH OTHER THEY SHALL BE OVERLAPPED BY SIX INCHES AND FOLDED. FILTER CLOTH SHALL BE EITHER FILTER X, MIRAFI 100X, STABILINKA T140N, OR APPROVED EQUIVALENT.
4. PREFABRICATED UNITS SHALL BE GEOFAB, ENVROFENCE, OR APPROVED EQUIVALENT.
5. MAINTENANCE SHALL BE PERFORMED AS NEEDED AND MATERIAL REMOVED WHEN "BULGES" DEVELOP IN THE SILT FENCE.

ADAPTED FROM DETAILS PROVIDED BY: USDA – NRCS, NEW YORK STATE DEPARTMENT OF TRANSPORTATION, NEW YORK STATE DEPARTMENT OF ENVIRONMENTAL CONSERVATION, NEW YORK STATE SOIL & WATER CONSERVATION COMMITTEE

SILT FENCE



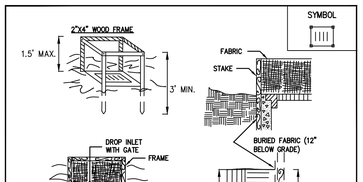
CONSTRUCTION SPECIFICATIONS

1. ALL GRADED OR DISTURBED AREAS INCLUDING SLOPES SHALL BE PROTECTED DURING CLEARING AND CONSTRUCTION IN ACCORDANCE WITH THE APPROVED EROSION AND SEDIMENT CONTROL PLAN UNTIL THEY ARE PERMANENTLY STABILIZED.
2. ALL SEDIMENT CONTROL PRACTICES AND MEASURES SHALL BE CONSTRUCTED, APPLIED AND MAINTAINED IN ACCORDANCE WITH THE APPROVED EROSION AND SEDIMENT CONTROL PLAN.
3. TOPSOIL REQUIRED FOR THE ESTABLISHMENT OF VEGETATION SHALL BE STOCKPILED IN AMOUNT NECESSARY TO COMPLETE FINISHED GRADING OF ALL EXPOSED AREAS.
4. AREAS TO BE FILLED SHALL BE CLEARED, GRUBBED, AND STRIPPED OF TOPSOIL TO REMOVE TREES, VEGETATION, ROOTS OR OTHER OBJECTIONABLE MATERIAL.
5. AREAS WHICH ARE TO BE TOPSOILED SHALL BE SCARIFIED TO A MINIMUM DEPTH OF FOUR INCHES PRIOR TO PLACEMENT OF TOPSOIL.
6. ALL FILLS SHALL BE COMPACTED AS REQUIRED TO REDUCE EROSION, SLIPPAGE, SETTLEMENT, SUBSIDENCE OR OTHER RELATED PROBLEMS. FILL INTENDED TO SUPPORT BUILDINGS, STRUCTURES AND CONDUITS, ETC. SHALL BE COMPACTED IN ACCORDANCE WITH LOCAL REQUIREMENTS OR CODES.
7. ALL FILL SHALL BE PLACED AND COMPACTED IN LAYERS NOT TO EXCEED 9 INCHES IN THICKNESS.
8. EXCEPT FOR APPROVED LANDFILLS, FILL MATERIAL SHALL BE FREE OF FROZEN PARTICLES, BRUSH, ROOTS, SOD, OR OTHER FOREIGN OR OTHER OBJECTIONABLE MATERIALS THAT WOULD INTERFERE WITH OR PREVENT CONSTRUCTION OF SATISFACTORY FILLS.
9. FROZEN MATERIALS OR SOFT, MUCKY OR HIGHLY COMPRESSIBLE MATERIALS SHALL NOT BE INCORPORATED IN FILLS.
10. FILL SHALL NOT BE PLACED ON SATURATED OR FROZEN SURFACES.
11. ALL BENCHES SHALL BE KEPT FREE OF SEDIMENT DURING ALL PHASES OF DEVELOPMENT.
12. SEEPS OR SPRINGS ENCOUNTERED DURING CONSTRUCTION SHALL BE HANDLED IN ACCORDANCE WITH STANDARD AND SPECIFICATION FOR SUBSURFACE DRAIN OR OTHER APPROVED METHOD.
13. ALL GRADED AREAS SHALL BE PERMANENTLY STABILIZED IMMEDIATELY FOLLOWING FINISHED GRADING.
14. STOCKPILES, BORROW AREAS AND SPOIL AREAS SHALL BE SHOWN ON THE PLANS AND SHALL BE SUBJECT TO THE PROVISIONS OF THIS STANDARD AND SPECIFICATION.

ADAPTED FROM DETAILS PROVIDED BY: USDA – NRCS, NEW YORK STATE DEPARTMENT OF TRANSPORTATION, NEW YORK STATE DEPARTMENT OF ENVIRONMENTAL CONSERVATION, NEW YORK STATE SOIL & WATER CONSERVATION COMMITTEE

LANDGRADING DETAIL

LANDGRADING SPECIFICATIONS



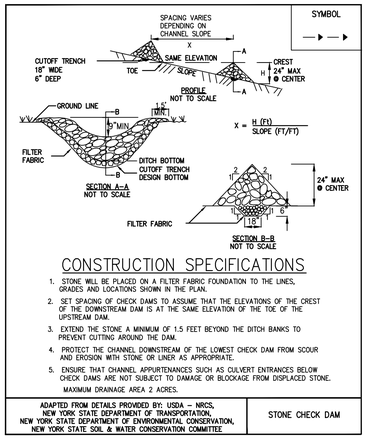
CONSTRUCTION SPECIFICATIONS

1. FABRIC SHALL HAVE AN EOS OF 40–85, BURLAP MAY BE USED FOR SHORT TERM APPLICATIONS.
2. CUT FABRIC FROM A CONTINUOUS ROLL TO ELIMINATE JOINTS. IF JOINTS ARE NEEDED THEY WILL BE OVERLAPPED TO THE NEXT STAKE.
3. STAKE MATERIALS WILL BE STANDARD 2" X 4" WOOD OR EQUIVALENT. METAL WITH A MINIMUM LENGTH OF 3 FEET.
4. SPACE STAKES EVENLY AROUND INLET 3 FEET APART AND DRIVE A MINIMUM OF 18 INCH DEPTH. STAKES ARE TO BE DRIVEN UNTIL MAY BE EMBEDDED WITH THE USE OF WIRE BEHIND THE FILTER FABRIC FOR SUPPORT.
5. FABRIC SHALL BE EMBEDDED 1 FOOT MINIMUM BELOW GROUND AND BACKFILLED. IT SHALL BE SECURELY FASTENED TO THE STAKES AND FRAME.
6. A 2" X 4" WOOD FRAME SHALL BE COMPLETED AROUND THE CREST OF THE FABRIC FOR OVER FLOW STABILITY.

MAXIMUM DRAINAGE AREA 1 ACRE

ADAPTED FROM DETAILS PROVIDED BY: USDA – NRCS, NEW YORK STATE DEPARTMENT OF TRANSPORTATION, NEW YORK STATE DEPARTMENT OF ENVIRONMENTAL CONSERVATION, NEW YORK STATE SOIL & WATER CONSERVATION COMMITTEE

FABRIC DROP INLET PROTECTION



CONSTRUCTION SPECIFICATIONS

1. STONE WILL BE PLACED ON A FILTER FABRIC FOUNDATION TO THE LINES, GRADES AND LOCATIONS SHOWN IN THE PLAN.
2. SET SPACING OF CHECK DAMS TO ASSURE THAT THE ELEVATIONS OF THE CREST OF THE DOWNSTREAM DAM IS AT THE SAME ELEVATION OF THE TOE OF THE UPSTREAM DAM.
3. EXTEND THE STONE A MINIMUM OF 1.5 FEET BEYOND THE DITCH BANKS TO PREVENT CUTTING AROUND THE DAM.
4. PROTECT THE CHANNEL DOWNSTREAM OF THE LOWEST CHECK DAM FROM SCOUR AND EROSION WITH STONE OR LINER AS APPROPRIATE.
5. ENSURE THAT CHANNEL APPURTENANCES SUCH AS CULVERT ENTRANCES BELOW CHECK DAMS ARE NOT SUBJECT TO DAMAGE OR BLOCKAGE FROM DISPLACED STONE.

MAXIMUM DRAINAGE AREA 2 ACRES.

ADAPTED FROM DETAILS PROVIDED BY: USDA – NRCS, NEW YORK STATE DEPARTMENT OF TRANSPORTATION, NEW YORK STATE DEPARTMENT OF ENVIRONMENTAL CONSERVATION, NEW YORK STATE SOIL & WATER CONSERVATION COMMITTEE

STONE CHECK DAM

STANDARD AND SPECIFICATIONS FOR CONCRETE TRUCK WASHOUT

Definition & Scope

A temporary excavated or above ground lined constructed pit where concrete truck mixers and equipment can be washed after their loads have been delivered, to prevent highly alkaline runoff from entering storm drainage systems or leaching into soil.

Conditions Where Practice Applies

Washout facilities shall be provided for every project where concrete will be poured or otherwise formed on the site. This facility will receive highly alkaline wash water from the cleaning of chutes, mixers, hoppers, vibrators, placing equipment, trowels, and screeds. Under no circumstances will wash water from these operations be allowed to infiltrate into the soil or enter surface waters.

Design Criteria

Capacity: The washout facility should be sized to contain solids, wash water, and rainfall and sized to allow for the evaporation of the wash water and rainfall. Wash water shall be estimated at 7 gallons per chute and 50 gallons per hopper of the concrete pump truck and/or discharging drum. The minimum size shall be 8 feet by 8 feet at the bottom and 2 feet deep. If excavated, the side slopes shall be 2 horizontal to 1 vertical.

Location: Locate the facility a minimum of 100 feet from drainage swales, storm drain inlets, wetlands, streams and other surface waters. Prevent surface water from entering the structure except for the access road. Provide appropriate access with a gravel access road sloped down to the structure. Signs shall be placed to direct drivers to the facility after their load is discharged.

Liner: All washout facilities will be lined to prevent leaching of liquids into the ground. The liner shall be plastic sheeting with a minimum thickness of 10 mils with no holes or tears, and anchored beyond the top of the pit with an earthen berm, sand bags, stone, or other structural appurtenance except at the access point.

If pre-fabricated washouts are used they must ensure the capture and containment of the concrete wash and be sized based on the expected frequency of concrete pours. They shall be sited as noted in the location criteria.

Maintenance

- All concrete washout facilities shall be inspected daily. Damaged or leaking facilities shall be deactivated and repaired or replaced immediately. Excess rainwater that has accumulated over hardened concrete should be pumped to a stabilized area, such as a grass filter strip.
- Accumulated hardened material shall be removed when 75% of the storage capacity of the structure is filled. Any excess wash water shall be pumped into a containment vessel and properly disposed of off site.
- Dispose of the hardened material off-site in a construction/demolition landfill. On-site disposal may be allowed if this has been approved and accepted as part of the projects SWPPP. In that case, the material should be recycled as specified, or buried and covered with a minimum of 2 feet of clean compacted earthfill that is permanently stabilized to prevent erosion.
- The plastic liner shall be replaced with each cleaning of the washout facility.
- Inspect the project site frequently to ensure that no concrete discharges are taking place in non-designated areas.

STANDARD AND SPECIFICATIONS FOR DUST CONTROL

Definition & Scope

The control of dust resulting from land-disturbing activities, to prevent surface and air movement of dust from disturbed soil surfaces that may cause off-site damage, health hazards, and traffic safety problems.

Conditions Where Practice Applies

On construction roads, access points, and other disturbed areas subject to surface dust movement and dust blowing where off-site damage may occur if dust is not controlled.

Design Criteria

Construction operations should be scheduled to minimize the amount of area disturbed at one time. Buffer areas of vegetation should be left where practical. Temporary or permanent stabilization measures shall be installed. No specific design criteria is given; see construction specifications below for common methods of dust control.

Water quality must be considered when materials are selected for dust control. Where there is a potential for the material to wash off to a stream, ingredient information must be provided to the NYSDEC.

No polymer application shall take place without written approval from the NYSDEC.

Construction Specifications

A. **Non-driving Areas** – These areas use products and materials applied or placed on soil surfaces to prevent airborne migration of soil particles.

Vegetative Cover – For disturbed areas not subject to traffic, vegetation provides the most practical method of dust control (see Section 3).

Mulch (including gravel mulch) – Mulch offers a fast effective means of controlling dust. This can also include rolled erosion control blankets.

Spray adhesives – These are products generally composed of polymers in a liquid or solid form that are mixed with water to form an emulsion that is sprayed on the soil surface with typical hydroseeding equipment. The mixing ratios and application rates will be in accordance with the manufacturer's recommendations for the specific soils on the site. In no case should the application of these adhesives be made on wet soils or if there is a probability of precipitation within 48 hours of its proposed use. Material Safety Data Sheets will be provided to all applicators and others working with the material.

B. **Driving Areas** – These areas utilize water, polymer emulsions, and barriers to prevent dust movement from the traffic surface into the air.

Sprinkling – The site may be sprayed with water until the surface is wet. This is especially effective on haul roads and access route to provide short term limited dust control.

Polymer Additives – These polymers are mixed with water and applied to the driving surface by a water truck with a gravity feed drip bar, spray bar or automated distributor truck. The mixing ratios and application rates will be in accordance with the manufacturer's recommendations. Incorporation of the emulsion into the soil will be done to the appropriate depth based on expected traffic. Compaction after incorporation will be by vibratory roller to a minimum of 95%. The prepared surface shall be moist and no application of the polymer will be made if there is a probability of precipitation within 48 hours of its proposed use. Material Safety Data Sheets will be provided to all applicators working with the material.

Barriers – Woven geo-textiles can be placed on the driving surface to effectively reduce dust throw and particle migration on haul roads. Stone can also be used for construction roads for effective dust control.

Windbreak – A silt fence or similar barrier can control air currents at intervals equal to ten times the barrier height. Preserve existing wind barrier vegetation as much as practical.

Maintenance

Maintain dust control measures through dry weather periods until all disturbed areas are stabilized.

Mulch Material	Quality Standards	per 1000 Sq. Ft.	per Acre	Depth of Application	Remarks
Wood chips or shavings	Air-dried. Free of objectionable coarse material	500-900 lbs.	10-20 tons	2-7"	Used primarily around shrub and tree plantings and recreation trails to inhibit weed competition. Resistant to wind blowing. Decomposes slowly.
Wood fiber cellulose (partly digested wood fibers)	Made from natural wood usually with green dye and dispersing agent	50 lbs.	2,000 lbs.	—	Apply with hydromulcher. No tie down required. Less erosion control provided than 2 tons of hay or straw.
Gravel, Crushed Stone or Slag	Washed; Size 2B or 3A – 1 1/2"	9 cu. yds.	405 cu. yds.	3"	Excellent mulch for short slopes and around plants and ornamentals. Use 2B where subject to traffic. (Approximately 2,000 lbs./cu. yd.). Frequently used over filter fabric for better weed control.
Hay or Straw	Air-dried; free of undesirable seeds & coarse materials	90-100 lbs. 2-3 bales	2 tons (100-120 bales)	cover about 90% surface	Use small grain straw where mulch is maintained for more than three months. Subject to wind blowing unless anchored. Most commonly used mulching material. Provides the best micro-environment for germinating seeds.
Jute twisted yarn	Undyed, unbleached plain weave. Warp 78 ends/yd., Weft 41 ends/ yd. 60-90 lbs./roll	48" x 50 yds. or 48" x 75 yds.	—	—	Use without additional mulch. Tie down as per manufacturers specifications. Good for center line of concentrated water flow.
Excelsior wood fiber mats	Interlocking web of excelsior fibers with photodegradable plastic netting	4' x 112.5' or 8' x 112.5'.	—	—	Use without additional mulch. Excellent for seeding establishment. Anchor as per manufacturers specifications. Approximately 72 lbs./roll for excelsior with plastic on both sides. Use two sided plastic for centerline of waterways.
Straw or coconut fiber, or combination	Photodegradable plastic net on one or two sides	Most are 6.5 ft. x 3.5 ft.	81 rolls	—	Designed to tolerate higher velocity water flow, centerlines of waterways, 60 sq. yds. per roll.

Type of Soil Disturbance	Soil Restoration Requirement	Comments/Examples
No soil disturbance	Restoration not permitted	Preservation of Natural Features
Minimal soil disturbance	Restoration not required	Clearing and grubbing
Areas where topsoil is stripped only - no change in grade	HSG A&B	HSG C&D	Protect area from any ongoing construction activities.
	Apply 6 inches of topsoil	Aerate* and apply 6 inches of topsoil	
Areas of cut or fill	HSG A&B	HSG C&D
	Aerate* and apply 6 inches of topsoil	Apply full Soil Restoration**	
Heavy traffic areas on site (especially in a zone 5-25 feet around buildings but not within a 5 foot perimeter around foundation walls)	Apply full Soil Restoration (decompaction and compost enhancement)	
Areas where

POLLUTION PREVENTION

1. THE FOLLOWING GENERAL NOTES PROVIDE A DESCRIPTION OF POLLUTION PREVENTION MEASURES UTILIZED TO CONTROL LITTER, CONSTRUCTION CHEMICALS, CONSTRUCTION DEBRIS, AND STORAGE PRACTICES FROM BECOMING A POLLUTANT SOURCE TO STORMWATER DISCHARGES, AS WELL AS SPILL PREVENTION AND RESPONSE MEASURES.

2. MATERIAL DELIVERY AND STORAGE:

   A. LOCATE MATERIAL STORAGE AND DELIVERY AREAS AT A MINIMUM DISTANCE OF 100 FEET AWAY FROM ANY DRAIN INLET AND SURFACE WATER BODIES.

   B. KEEP INVENTORY LOW.

   C. STORE DRY CHEMICALS AND BAGGED MATERIALS ON PALLETS.

   D. STORE ALL FLAMMABLE PRODUCTS AWAY FROM ANY HEAT AND/OR IGNITION SOURCE.

   E. PROVIDE SECONDARY CONTAINMENT FOR LIQUIDS.

   F. KEEP DESIGNATED STORAGE AREAS CLEAN AND WELL ORGANIZED. CONDUCT WEEKLY INSPECTIONS TO CHECK FOR DAMAGED CONTAINERS, LEAKS, ETC.

   G. COMPLY WITH STATE AND LOCAL REQUIREMENTS FOR STORAGE OF HAZARDOUS WASTE.

   H. DURING THE WET SEASON, COVER CHEMICALS, DRUMS, AND BAGGED MATERIALS TO PREVENT CONTACT WITH RAINWATER (E.G. TARPS, BINS, STRUCTURES).

   I. DURING THE WET SEASON, COVER SECONDARY CONTAINMENT AREAS TO PREVENT ACCUMULATION OF WATER.

   J. KEEP CHEMICALS LABELED AND IN ORIGINAL CONTAINERS.

   K. TRAIN EMPLOYEES AND CONTRACTORS ON THE PROPER USE OF STORAGE AREA.

3. SPILL PREVENTION AND CONTROL:

   A. NOTIFY ALL CONSTRUCTION WORKERS OF THE LOCATION OF MATERIALS UTILIZED FOR CLEANING UP SPILLS.

   B. STORE SPILL CLEANUP MATERIALS ON SITE AND NEAR POTENTIAL SPILL AREAS.

   C. KEEP COMMERCIALLY AVAILABLE SPILL KITS FOR CONSTRUCTION EQUIPMENT ON SITE.

   D. KEEP DRUMS, BARRELS, TEMPORARY STORAGE BAGS, OR EQUIVALENT MATERIALS FOR CONTAINMENT AND TRANSPORTATION ON SITE.

   E. KEEP ABSORBENT PADS, OIL BOOMS, MAT, OR EQUIVALENT MATERIALS ON SITE.

   F. KEEP WASHABLE, REUSABLE RAGS FOR CLEANING UP SMALL LUBRICANT LEAKS ON SITE.

   G. TRAIN EMPLOYEES AND SUBCONTRACTORS ON PROPER SPILL PREVENTION AND CONTROL METHODS.

   H. NEVER HOSE DOWN OR BURY DRY MATERIAL SPILLS. CLEANUP AS MUCH AS POSSIBLE AND DISPOSE OF PROPERLY.

   I. IN THE EVENT OF A SPILL OCCURRENCE, THE FOLLOWING ACTIONS ARE TO BE TAKEN:

      1. DOCUMENT THE SPILL AND REPORT TO THE PROJECT CONSTRUCTION MANAGER AND ENVIRONMENTAL MONITOR.

      2. FOR SPILLS LESS THAN 5 GALLONS ON AN IMPERVIOUS SURFACE, ATTEMPT TO CONFINE AND CLEAN THE SPILL.

      3. FOR SPILLS GREATER THAN 5 GALLONS, ATTEMPT TO CONFINE THE SPILL AND CALL A REMEDIATION CONTRACTOR IF ASSISTANCE IS REQUIRED WITH PRODUCT RECOVERY AND CONTAINMENT.

      4. FOR SPILLS GREATER THAN 5 GALLONS, REPORT TO NYSDEC REGION 9 SPILL PREVENTION AND RESPONSE (716-851-7220) WITHIN TWO HOURS OF DISCOVERY.

      5. PROVIDE WRITTEN DOCUMENTATION OF THE SPILL.

      6. DISPOSAL OF RECOVERED MATERIALS MUST BE CONDUCTED IN ACCORDANCE WITH STATE AND FEDERAL REGULATIONS.

4. SOLID WASTE MANAGEMENT:

   A. PROVIDE AS MANY WASTE BINS AS NEEDED TO KEEP SITE CLEAN OF LITTER AND WASTE.

   B. DURING THE WET SEASON, WASTE BINS MUST BE COVERED TO PREVENT RUNOFF FROM TRASH.

   C. COLLECT TRASH ON A DAILY BASIS.

   D. ARRANGE FOR REGULAR WASTE COLLECTION BY A LICENSED TRASH HAULER.

   E. SEGREGATE AND RECYCLE WASTE MATERIALS (E.G. PAINTS, SOLVENTS, OIL, ETC.)

   F. PROVIDE COVERED WASTE BINS FOR DISPOSAL OF ALL EMPTY PRODUCTS (E.G. PAINTS, SOLVENTS, GLUES, PESTICIDES, ETC.)

   G. LOCATE WASTE CONTAINER STORAGE AREA(S) AT A MINIMUM DISTANCE OF 100 FEET AWAY FROM ANY DRAIN INLET AND SURFACE WATER BODIES.

   H. PROVIDE SECONDARY CONTAINMENT FOR HAZARDOUS WASTE CONTAINERS.

   9. COMPLY WITH ALL LOCAL AND STATE SOLID WASTE DISPOSAL AND NUISANCE REQUIREMENTS.

   I. DO NOT HOSE OUT WASTE CONTAINERS ON SITE.

   J. TRAIN EMPLOYEES AND SUBCONTRACTORS TO USE PROPER SOLID WASTE MANAGEMENT.

5. VEHICLE/EQUIPMENT MAINTENANCE:

   A. DO NOT DISCHARGE VEHICLE/MACHINERY WASH WATERS OR SOLVENTS TO STORM DRAINS OR TO SURFACE WATER BODIES.

   B. LOCATE AREAS FOR FUELING AND MAINTENANCE AT A MINIMUM DISTANCE OF 100-FEET AWAY FROM ANY DRAIN INLET AND SURFACE WATER BODIES.

   C. ANY EQUIPMENT WHICH MUST BE REFUELED IN THE FIELD WILL BE REFUELED FROM TANKS CARRIED TO THE WORK SITE BY TRUCK.

   D. PREVENT SPILLS AND LEAKS DURING FUELING AND MAINTENANCE OPERATIONS.

   E. INSPECT AND MAINTAIN VEHICLES REGULARLY TO MINIMIZE LEAKS AND DRIPS; PLACE DRIP PANS OR ABSORBENT MATERIALS UNDER LEAK-PRONE MACHINERY WHEN IDLE.

   F. COMPLY WITH FEDERAL, STATE, AND LOCAL REQUIREMENTS FOR FUEL STORAGE TANKS.

6. LANDSCAPING OPERATIONS:

   A. CAREFULLY FOLLOW RECOMMENDED USAGE INSTRUCTIONS FOR THE APPLICATION OF ALL FERTILIZER. DISPOSAL OF TREES, BRUSH, OR OTHER DEBRIS IN ANY STREAM CORRIDOR, WETLAND, OR SURFACE WATER IS PROHIBITED. AVOID APPLICATIONS OF FERTILIZERS PRIOR TO STORM EVENTS. APPLY FERTILIZERS IN MULTIPLE SMALLER APPLICATIONS, AS OPPOSED TO ONE LARGE APPLICATION. TRAIN EMPLOYEES AND SUBCONTRACTORS IN THE PROPER USE OF LANDSCAPE MATERIALS AND CHEMICALS.

7. CONCRETE WASTE MANAGEMENT:

   A. AVOID MIXING EXCESS AMOUNTS OF CONCRETE OR FRESH CEMENT ON SITE.

   B. STORE CONCRETE, GROUT, AND MORTAR UNDER COVER AND AWAY FROM DRAINAGE AREAS.

   C. DESIGNATE A WASH OUT AREA ON SITE AND INSURE THAT MATERIAL CAN NOT FLOW TO STORM DRAINS, OPEN DITCHES, STREETS, OR SURFACE WATER BODIES BY CONSTRUCTING A TEMPORARY PIT OR BERMED AREA.

   D. CONCRETE FROM WASHOUT AREA SHOULD BE ALLOWED TO SET. UPON COMPLETION OF THE CONCRETE WORK, THE CONTRACTOR SHALL BREAK UP, REMOVE, AND HAUL AWAY SOLID CONCRETE THAT HAS ACCUMULATED IN THE WASHOUT.

   E. TRAIN EMPLOYEES AND SUBCONTRACTORS IN PROPER CONCRETE WASTE MANAGEMENT.

8. SANITARY/SEPTIC WASTE MANAGEMENT:

   A. LOCATE SANITARY FACILITIES FOR CONVENIENT ACCESS AND AT A MINIMUM OF 100 FEET AWAY FROM DRAIN INLETS AND SURFACE WATER BODIES.

   B. UNTREATED RAW WASTEWATER MAY NOT BE DISCHARGED TO LAND, THE STORM DRAIN SYSTEM, OR TO SURFACE WATER BODIES.

   C. SANITARY/SEPTIC FACILITIES SHOULD BE MAINTAINED IN GOOD WORKING ORDER BY A LICENSED SERVICE.

   D. ARRANGE REGULAR WASTE COLLECTION BY A LICENSED HAULER BEFORE FACILITIES OVERFLOW.

   E. IF WASHING OUT OF INTERIOR OR PORTABLE TOILETS IS NEEDED, INSURE THAT WASH WATER IS DISCHARGED TO LAND AND DOES NOT FLOW INTO STREET, THE STORM DRAIN SYSTEM, OR SURFACE WATER BODIES.

GENERAL ENVIRONMENTAL NOTES AND RESTRICTIONS

GENERAL NOTES:

1. THE CONTRACTOR SHALL HAVE KNOWLEDGE OF, AND WORK IN COMPLIANCE WITH THE TERMS AND CONDITIONS STATED IN THE PERMITS ISSUED BY THE NEW YORK STATE DEPARTMENT OF ENVIRONMENTAL CONSERVATION (NYSDEC), AND IS SUBJECT TO THE SANCTIONS FOR VIOLATIONS OF SUCH PERMITS.

2. ALL ACTIVITIES AUTHORIZED UNDER THE PERMITS ISSUED BY THE NYSDEC MUST BE IN STRICT CONFORMANCE WITH THE DETAILS DEPICTED ON THE EROSION AND SEDIMENT CONTROL PLANS.

3. NONE OF THE ISSUED PERMITS ALLOW FOR THE RIGHT TO TRESPASS UPON THE LANDS OR INTERFERE WITH THE PROPERTY AND/OR RIPARIAN RIGHTS OF LANDOWNERS THAT ARE NOT PARTICIPANTS OF THE PROJECT.

4. THE CONTRACTOR SHALL NOTE THE CONDITION OF ANY EXISTING FENCE THAT MAY BE IMPACTED BY PROJECT CONSTRUCTION. FENCES THAT MUST BE REMOVED AND/OR CUT WILL HAVE A TEMPORARY GATE INSTALLED. UPON COMPLETION OF CONSTRUCTION, THE TEMPORARY GATE WILL BE REMOVED AND THE FENCE WILL BE REBUILT TO LIKE-NEW CONDITION AS DIRECTED BY THE LANDOWNER.

5. LOCAL FIRE DEPARTMENTS AND EMERGENCY MANAGEMENT TEAMS SHALL BE MADE AWARE OF HAZARDOUS CHEMICALS AND WASTE ON-SITE.

6. REPRESENTATIVES FROM THE NYSDEC SHALL BE PERMITTED TO INSPECT THE SITE AT ANY TIME DEEMED NECESSARY, TO ENSURE THAT ALL ACTIVITIES ARE IN ACCORDANCE WITH THE TERMS AND CONDITIONS SPECIFIED IN THE ISSUED PERMITS.

7. CROSSING OF EXISTING GAS TRANSMISSION PIPELINES OR ANY OTHER EXISTING UNDERGROUND UTILITY BY HEAVY EQUIPMENT SHALL BE RESTRICTED TO IMPROVED GRAVEL ACCESS ROAD CROSSINGS.

8. ALL CONSTRUCTION ACTIVITY, INCLUDING OPERATION OF MACHINERY, EXCAVATION, FILLING, GRADING, CLEARING OF VEGETATION, DISPOSAL OF WASTE, AND STOCKPILING OF MATERIAL MUST TAKE PLACE WITHIN THE APPROVED WORK AREA AS DEPICTED ON THE EROSION AND SEDIMENT CONTROL PLANS.

9. FUGITIVE DUST RESULTING FROM CONSTRUCTION ACTIVITIES SHALL BE MINIMIZED BY IMPLEMENTING APPROPRIATE CONTROL MEASURES. THESE MEASURES MAY INCLUDE THE APPLICATION OF MULCH, WATER, STONE, OR APPROVED CHEMICAL AGENTS ON ACCESS ROADS, EXPOSED SOILS, STOCKPILED SOILS, OR UNPAVED PUBLIC ROADS WHEN DRY AND WINDY CONDITIONS EXIST. A WATERING VEHICLE SHALL BE AVAILABLE FOR THE DURATION OF PROJECT ACTIVITIES, INCLUDING THROUGHOUT RESTORATION.

10. BLASTING IS NOT PERMITTED WITHOUT PRIOR TOWN APPROVAL AND ACQUISITION OF ALL REQUIRED PERMITS.

11. NOISE IMPACTS SHALL BE MINIMIZED AND MITIGATED TO THE EXTENT PRACTICABLE. CONTRACTOR SHALL MAINTAIN ALL EQUIPMENT IN GOOD OPERATING CONDITIONS AND ALL MOTORS AND ENGINES WILL BE MUFFLED ACCORDING TO MANUFACTURER'S SPECIFICATIONS AND WILL COMPLY WITH STATE ENVIRONMENTAL LAW, SUBCHAPTER E, PART 450 (NOISE FROM HEAVY MOTOR VEHICLES). ANY FAULTY NOISE SUPPRESSOR WILL BE REPAIRED OR REPLACED. EQUIPMENT WILL NOT BE LEFT RUNNING UNNECESSARILY, AND EXISTING TALL GROWING VEGETATION WILL BE MAINTAINED, TO THE MAXIMUM EXTENT PRACTICABLE, TO SERVE AS A NOISE BUFFER.

12. CONSTRUCTION ACTIVITY WILL ONLY OCCUR BETWEEN THE HOURS OF 7:00 A.M. AND 6:00 P.M. MONDAY THROUGH SATURDAY. AT THE DISCRETION OF THE TOWN OF AMHERST, WORK HOURS MAY BE EXPANDED.

13. WITHIN 100 FEET OF STATE-REGULATED WETLANDS AND 50 FEET OF OTHER WATER BODIES, REMOVE ONLY THE MINIMUM VEGETATION NECESSARY TO ALLOW CONSTRUCTION AND OPERATION OF THE FACILITY.

14. THE DISPOSAL OF TREES, BRUSH, OR OTHER DEBRIS IN ANY STREAM CORRIDOR, WETLAND, OR SURFACE WATER IS PROHIBITED.

15. CULVERTS SHALL BE SUFFICIENT SIZE AND CAPACITY TO PREVENT ALTERATION OF THE NATURAL FLOW. REFER TO CONSTRUCTION DRAWINGS FOR CULVERT SIZES.

16. THE USE OF EQUIPMENT IN ANY STREAM OR WETLAND AREA, UNLESS PERMITTED, IS STRICTLY PROHIBITED.

17. ALL NECESSARY PRECAUTIONS SHALL BE TAKEN TO PRECLUDE CONTAMINATION OF ANY WETLAND OR WATERWAY BY SUSPENDED SOLIDS, SEDIMENTS, FUELS, SOLVENTS, LUBRICANTS, EPOXY COATINGS, PAINTS, CONCRETE, LEACHATE, OR ANY OTHER ENVIRONMENTALLY DELETERIOUS MATERIALS ASSOCIATED WITH THE PROJECT. THESE MATERIALS SHALL BE STORED A MINIMUM OF 100 FEET FROM ANY WETLAND, STREAM, DITCH, WATERCOURSE, OR DRAINAGE. NO EQUIPMENT RE-FUELING SHALL OCCUR WITHIN THE SAME 100-FOOT AREA.

18. STREAMS AND WETLANDS WILL BE PROTECTED FROM INDIRECT IMPACTS DURING CONSTRUCTION BY UTILIZING VARIOUS EROSION AND SEDIMENT CONTROL MEASURES INDICATED IN THE EROSION AND SEDIMENT CONTROL DETAILS, INCLUDING SILT FENCES PLACED BETWEEN WATER RESOURCE BOUNDARIES AND CONSTRUCTION AREAS. EXPOSED SOIL WILL BE SEEDED AND/OR MULCHED, AS SOON AS PRACTICABLE, TO ASSURE THAT EROSION AND SILTATION IS KEPT TO A MINIMUM ALONG STREAM AND WETLANDS BOUNDARIES.

19. TEMPORARY EROSION CONTROL DEVICES SHALL BE INSTALLED AS SOON AS PRACTICABLE AND APPROPRIATE, AS INDICATED IN THE EROSION AND SEDIMENT CONTROL PLANS. EROSION CONTROL DEVICES SHALL BE INSTALLED PRIOR TO ANY GRADING OR FILLING OPERATIONS AND INSTALLATIONS OF PROPOSED STRUCTURES OR UTILITIES. THEY SHALL REMAIN IN PLACE UNTIL CONSTRUCTION IS COMPLETE AND THE AREA IS STABILIZED AND/OR RE-VEGETATED. ADDITIONALLY, NO SITE PREPARATION WORK SHALL BE UNDERTAKEN UNTIL ALL REQUIRED EROSION CONTROL MEASURE HAVE BEEN INSTALLED.

20. SILTATION PREVENTION MEASURES, SUCH AS SILT FENCING AND STABILIZED CONSTRUCTION ENTRANCES SHALL BE INSTALLED AND MAINTAINED THROUGHOUT THE DURATION OF THE PROJECT, TO PREVENT MOVEMENT OF SILT AND TURBID WATERS FROM THE PROJECT SITE AND INTO ANY WATERCOURSE, STREAM, WATER BODY, OR WETLAND. THESE MEASURES SHALL REMAIN IN PLACE UNTIL CONSTRUCTION IS COMPLETED AND THE AREA IS STABILIZED AND/OR RE-VEGETATED.

21. ALL DISTURBED AREAS WHERE SOIL WILL BE TEMPORARILY EXPOSED OR STOCKPILED FOR LONGER THAN ONE WEEK SHALL BE CONTAINED BY A CONTINUOUS LINE OF SILT FENCE PLACED ON THE DOWN SLOPE SIDE BETWEEN THE FILL AND WETLAND OR STATE-REGULATED 100-FOOT ADJACENT AREA. TARPS ARE AUTHORIZED TO SUPPLEMENT THESE APPROVED METHODS.

22. ALL AREAS OF SOIL DISTURBANCE RESULTING FROM THIS PROJECT SHALL BE STABILIZED IMMEDIATELY FOLLOWING PROJECT COMPLETION OR PRIOR TO NYSDEC PERMIT EXPIRATION, WHICHEVER COMES FIRST. THE NYSDEC APPROVED METHODOLOGIES AREA AS FOLLOWS:

   A. STABILIZATION OF THE ENTIRE DISTURBED AREA WITH APPROPRIATE VEGETATION (GRASSES, ETC.)
   B. TEMPORARILY STABILIZATION WITH STRAW MULCH OR JUTE MATTING OR OTHER SIMILAR NATURAL FIBER MATTING WITHIN ONE WEEK OF FINAL GRADING. TEMPORARY STABILIZATION SHALL BE MAINTAINED UNTIL A MATURE VEGETATIVE COVER IS ESTABLISHED

23. VISIBLE TURBID DISCHARGES FROM LAND CLEARING, GRADING OR EXCAVATING ACTIVITIES, OR DE-WATERING OPERATIONS SHALL NOT ENTER A STREAM, NAVIGABLE WATER, OR WETLAND. PRIOR TO ENTRY IN A STREAM, NAVIGABLE WATER, OR WETLAND, ANY SUCH DISCHARGE SHALL BE:

   A. RETAINED IN AN APPROPRIATELY MAINTAINED UPLAND SETTLING BASIN
   B. FILTERED THROUGH CRUSHED STONE, SAND, STRAW BALES, SILT SCREENING (MAXIMUM OPENING SIZE OF U.S. SIEVE NUMBER 20), ETC, OR;
   C. DIRECTED TO A GRASSY UPLAND AREA SUFFICIENT DISTANCE FROM THE STREAM TO PREVENT CHANGE IN TURBIDITY OF THE RECEIVING WATER.

24. IN THE EVENT THAT ARCHAEOLOGICAL MATERIALS, HUMAN REMAINS, OR EVIDENCE OF HUMAN BURIALS ARE ENCOUNTERED DURING CONSTRUCTION, ALL WORK IN THE VICINITY OF THE FIND SHALL BE IMMEDIATELY HALTED, THE FIND PROTECTED FROM FURTHER DAMAGE, AND THE CONSTRUCTION MANAGER AND ENVIRONMENTAL MONITOR ADVISED. THE PERMITEE IS REQUIRED TO NOTIFY THE LOCAL POLICE AND THE STATE HISTORIC PRESERVATION OFFICE IMMEDIATELY FOLLOWING SUCH A DISCOVERY.

INSPECTIONS

THE OWNER AND SITE CONTRACTOR SHALL HAVE A QUALIFIED PROFESSIONAL CONDUCT AN ASSESSMENT OF THE SITE PRIOR TO THE COMMENCEMENT OF CONSTRUCTION AND TO CERTIFY IN AN INSPECTION REPORT THAT THE APPROPRIATE EROSION AND SEDIMENT CONTROLS DESCRIBED IN THE SWPPP AND REQUIRED BY THE SPDES GENERAL PERMIT HAVE BEEN ADEQUATELY INSTALLED OR IMPLEMENTED TO ENSURE OVERALL PREPAREDNESS OF THE SITE FOR THE COMMENCEMENT OF CONSTRUCTION. AFTER COMMENCEMENT OF CONSTRUCTION, THE OWNER OR OPERATOR SHALL ENSURE THAT AT LEAST ONE TRAINED CONTRACTOR IS ON SITE ON A DAILY BASIS WHEN SOIL DISTURBANCE ACTIVITIES ARE BEING PERFORMED. FURTHER, THE OWNER SHALL HAVE A QUALIFIED PROFESSIONAL PERFORM SITE INSPECTIONS WEEKLY FOR SITES WITH DISTURBANCE AREAS OF LESS THAN FIVE (5) ACRES AND TWICE WEEKLY FOR SITES WITH DISTURBANCE AREAS OF GREATER THAN FIVE (5) ACRES. PRIOR TO FILING A NOTICE OF TERMINATION (NOT) FORM WITH NYSDEC FOR EACH PROJECT SITE OR AT THE END OF THE PERMIT TERM, THE OWNER SHALL HAVE THE QUALIFIED PROFESSIONAL PERFORM A FINAL SITE INSPECTION.

SPILL PREVENTION, CONTAINMENT, & COUNTER-MEASURES NOTES

1. GENERAL: PERSONNEL RESPONSIBLE FOR THE OVERSIGHT OF THE PETROLEUM PRODUCTS AND HAZARDOUS OR CONTROLLED SUBSTANCES INCLUDE:

   A. CONSTRUCTION MANAGER
   B. JOB-SITE COORDINATORS DESIGNATED BY THE CONSTRUCTION MANAGER

2. SPILLS SHALL BE IMMEDIATELY REPORTED TO THE OWNER BY THE CONTRACTOR. THE CONTRACTOR WILL KEEP AN UP-TO-DATE LIST OF QUALIFIED EMERGENCY RESPONSE CONTRACTORS WITH THE CAPABILITY OF REACHING THE PROJECT SITE QUICKLY. IN THE EVENT THAT A SPILL OCCURS ON THE SITE, THE FOLLOWING NOTIFICATION PROCEDURE WILL BE FOLLOWED.

   A. CONSTRUCTION TEAM LEADER NOTIFIES THE CONSTRUCTION MANAGER.
   B. CONSTRUCTION MANAGER NOTIFIES THE INSPECTOR DESIGNATED BY THE TOWN OF AMHERST.
   C. CONSTRUCTION MANAGER NOTIFIES THE OWNER AT (716-631-8000).
   D. THE OWNER NOTIFIES NYSDEC REGION 9 SPILL PREVENTION AND RESPONSE (716-851-7220).

PETROLEUM PRODUCTS & HAZARDOUS / CONTROLLED SUBSTANCES

1. PETROLEUM PRODUCTS AND HAZARDOUS OR CONTROLLED SUBSTANCES SHALL BE STORED AT THE TEMPORARY STORAGE AND STAGING AREA. IT IS ANTICIPATED THAT THE FOLLOWING HAZARDOUS OR CONTROLLED SUBSTANCES AND PETROLEUM PRODUCTS MAY BE STORED ON SITE IN REGULATORY APPROVED STORAGE CONTAINERS.

   A. GASOLINE
   B. DIESEL FUEL
   C. EQUIPMENT OILS AND LUBRICANTS
   D. COMMERCIAL FERTILIZER

EROSION AND SEDIMENT CONTROL PRACTICES

1. ALL SOIL EROSION AND SEDIMENTATION CONTROL (SESC) MEASURES TO CONFORM TO THE LATEST EDITION OF THE NEW YORK STANDARDS AND SPECIFICATIONS FOR EROSION AND SEDIMENT CONTROL. SELECT THE APPROPRIATE SESC MEASURES TO BEST CONTROL SOIL EROSION AND SEDIMENTATION, SHOULD SITE CONDITIONS WARRANT.

2. PROVIDE AND MAINTAIN SESC MEASURES IN ACCORDANCE WITH THE PROJECT STORM WATER POLLUTION PREVENTION PLAN (SWPPP) AND SESC DRAWINGS TO EFFECTIVELY CONTAIN ALL SOIL MATERIAL WITHIN THE SITE CONSTRUCTION AREA WHEN RAINFALL IS IMMINENT.

   A. THE PLAN AND DETAILS SHOWN ARE INTENDED TO BE USED AS A GUIDE. ANY REVISIONS DEEMED NECESSARY SHALL BE DONE IN ACCORDANCE WITH THE LATEST EDITION OF THE NEW YORK STANDARDS AND SPECIFICATIONS FOR EROSION AND SEDIMENT CONTROL.

3. THE CONTROL MEASURES THAT CAN BE UTILIZED UTILIZED DURING THE PROJECT ARE SUMMARIZED BELOW:

   A. SILT FENCE: FENCE SHALL BE INSTALLED AROUND SOIL STOCKPILES, WHERE ROADWAY CUT/FILL SLOPES ARE LOCATED WITHIN 100 FEET OF WATERCOURSES, AT THE LOCATION OF UTILITY LINE STREAM CROSSINGS, AND BETWEEN WETLAND BOUNDARIES AND CONSTRUCTION AREAS.

   B. STABILIZED CONSTRUCTION ENTRANCE: STABILIZED CONSTRUCTION ENTRANCES SHALL BE CONSTRUCTED WHERE ALL ACCESS ROADS INTERSECT LOCAL, COUNTY OR STATE ROADS.

   C. TEMPORARY SWALE: A TEMPORARY SWALE IS TO BE CONSTRUCTED TO PREVENT RUNOFF FROM ENTERING DISTURBED AREAS BY INTERCEPTING AND DIVERTING IT TO A STABILIZED OUTLET OR TO INTERCEPT SEDIMENT LADEN WATER AND DIVERT IT TO A SEDIMENT TRAPPING DEVICE.

   D. EARTH DIKE: EARTH DIKES CAN ALSO BE INSTALLED FOR DIVERTING CLEAN WATER AWAY FROM DISTURBED AREAS AND/OR INTERCEPT AND DIRECT SEDIMENT LADEN WATER TO A SEDIMENT TRAPPING DEVICE.

   E. SEDIMENT TRAP: SEDIMENT TRAPS ARE INSTALLED IN DRAINAGE WAYS, NATURAL OR TEMPORARY, BY EXCAVATION AND/OR EMBANKMENT TO INTERCEPT SEDIMENT LADEN RUNOFF AND RETAIN THE SEDIMENT.

   F. SEDIMENT FILTER BAG: SEDIMENT FILTER BAGS SHALL BE USED TO FILTER WATER PUMPED FROM OPEN EXCAVATIONS. SEDIMENT FILTER BAGS SHALL BE USED DURING CULVERT INSTALLATIONS AND AT INTERCONNECT STREAM CROSSINGS.

   G. WATERING VEHICLE: THE WATERING VEHICLE SHALL BE USED TO PREVENT SURFACE AND AIR MOVEMENT OF DUST FROM DISTURBED SOIL SURFACES THAT MAY CAUSE OFF-SITE DAMAGE, HEALTH HAZARDS, AND TRAFFIC SAFETY PROBLEMS. WATER WILL BE USED TO SPRAY THE SURFACE ON CONSTRUCTION ROADS, ACCESS POINTS, AND OTHER DISTURBED AREAS WHERE OFF-SITE DAMAGE MAY OCCUR IF DUST IS NOT CONTROLLED.

CONSTRUCTION SCHEDULE:

1. OBTAIN PLAN APPROVAL AND OTHER APPLICABLE PERMITS.
2. HOLD PRE-CONSTRUCTION CONFERENCE AT LEAST ONE WEEK PRIOR TO STARTING CONSTRUCTION.
3. INSTALL STABILIZED CONSTRUCTION ENTRANCES AND SILT FENCE WHERE SHOWN ON EROSION AND SEDIMENT CONTROL PLAN.
4. INSTALL ALL TEMPORARY EROSION AND SEDIMENT CONTROL PRACTICES AS DESIGNED ON PLANS.
5. PLACE EXCAVATED MATERIAL IN AREAS REQUIRING FILL. TOPSOIL TO BE STOCKPILED IN AN AREA APPROVED BY ENGINEER. STOCKPILED MATERIAL TO BE ENCLOSED BY SILT FENCE. STOCKPILES SHALL UNDERGO TEMPORARY STABILIZATION METHODS WITHIN 14 DAYS OF INACTIVITY.
6. INSTALL SITE UTILITIES AND STORM SEWERS.
7. CONSTRUCT BUILDINGS.
8. GRADE, TOPSOIL AND SEED AS SOON AS PRACTICAL UPON COMPLETION OF UTILITIES INSTALLATION.
9. ONCE ALL DISTURBED AREAS ARE VEGETATED, ALL TEMPORARY SEDIMENT CONTROL MEASURES CAN BE REMOVED. SITE CONTRACTOR MUST HAVE THE ENTIRE SITE STABILIZED PRIOR TO WITHDRAWING FROM SITE.

CONSTRUCTION SPECIFICATIONS

GENERAL SPECIFICATIONS FOR THE INSTALLATION OF THE EROSION AND CONTROL PRACTICES ARE SUMMARIZED BELOW.

1. SILT FENCE: FILTER FABRIC SHOULD BE INSTALLED AT LEVEL GRADE. BOTH ENDS OF EACH FENCE SECTION SHOULD BE EXTENDED AT LEAST 8 FEET UPSLOPE AT 45 DEGREES TO THE MAIN FENCE ALIGNMENT TO ALLOW FOR POOLING OF WATER. A 6 INCH DEEP TRENCH SHOULD BE EXCAVATED, MINIMIZING THE DISTURBANCE ON THE DOWNSIDE SLOPE. THE BOTTOM OF THE TRENCH SHOULD BE AT LEVEL GRADE. MAXIMUM DEVIATION FROM LEVEL GRADE SHOULD BE 1% AND NOT EXTEND MORE THAN 25 FEET. THE BOTTOM OF THE FENCE SHOULD BE ANCHORED BY PLACING FABRIC IN BOTTOM OF THE TRENCH, AND BACKFILLING AND COMPACTING THE FILL MATERIAL IN THE TRENCH. SUPPORT STAKES SHOULD BE DRIVEN 18 INCHES BELOW THE EXISTING GROUND SURFACE AT 8 FEET (MAX) INTERVALS. FILTER FABRIC SHOULD BE STRETCHED AND FASTENED TO THE UPSLOPE SIDE OF THE SUPPORT STAKES. AT FABRIC ENDS, BOTH ENDS SHOULD BE WRAPPED AROUND THE SUPPORT STAKE AND STAPLED. IF THE FABRIC COMES ALREADY ATTACHED TO THE STAKES, THE END STAKES SHOULD BE HELD TOGETHER WHILE THE FABRIC IS WRAPPED AROUND THE STAKES AT LEAST ONE REVOLUTION PRIOR TO DRIVING THE STAKES.

2. STABILIZED CONSTRUCTION ENTRANCE: CLEAR THE ENTRANCE/EXIT AREA OF ALL VEGETATION, ROOTS, AND OTHER OBJECTIONABLE MATERIAL. PLACE GEOTEXTILE FABRIC OVERLAYED WITH STONE TO THE DIMENSIONS, GRADES, AND ELEVATION SHOWN ON THE EROSION AND SEDIMENT CONTROL PLANS.

3. TEMPORARY SWALE:

   ALL TEMPORARY SWALES SHALL HAVE UNINTERRUPTED POSITIVE GRADE TO AN OUTLET.

   DIVERTED RUNOFF FROM A DISTURBED AREA SHALL BE CONVEYED TO A SEDIMENT TRAPPING DEVICE.

   DIVERTED RUNOFF FROM AN UNDISTURBED AREA SHALL OUTLET DIRECTLY INTO AN UNDISTURBED STABILIZED AREA AT NON-EROSIVE VELOCITY.

   ALL TREES, BRUSH, STUMPS, OBSTRUCTIONS, AND OTHER OBJECTIONABLE MATERIAL SHALL BE REMOVED AND DISPOSED OF SO AS NOT TO INTERFERE WITH THE PROPER FUNCTIONING OF THE SWALE

   THE SWALE SHALL BE EXCAVATED OR SHAPED TO LINE, GRADE, AND CROSS SECTION AS REQUIRED TO MEET THE CRITERIA SPECIFIED HEREIN AND BE FREE OF BANK PROJECTIONS OR OTHER IRREGULARITIES WHICH WILL IMPEDE NORMAL FLOW.

   FILLS SHALL BE COMPACTED BY EARTH MOVING EQUIPMENT.

   ALL EARTH REMOVED AND NOT NEEDED FOR CONSTRUCTION SHALL BE PLACED SO THAT IT WILL NOT INTERFERE WITH THE FUNCTIONING OF THE SWALE.

   STABILIZATION SHALL BE AS PER THE FLOW CHANNEL STABILIZATION CHART BELOW:

TYPE OF TREATMENT	CHANNEL GRADE	A(5 AC OR LESS)	B(5 AC -10AC)
1	0.5-3.0%	SEED AND STRAW MULCH	SEED AND STRAW MULCH
2	3.1-5.0%	SEED AND STRAW MULCH	SEED USING JUTE OR EXCELSIOR
3	5.1-8.0%	SEED WITH JUTE OR EXCELSIOR, SOD	LINED WITH 4-8" RIP-RAP OR RECYCLED CONCRETE EQUIVALENT
4	8.1-20.%	LINED WITH 4-8" RIP-RAP	ENGINEERED DESIGN

MAINTENANCE PLAN

ALL EROSION AND SEDIMENT POLLUTION CONTROL DEVICES SHALL BE IN PLACE AT THE END OF EACH WORKING DAY. THE CONTROL DEVICES WILL BE INSPECTED AND MAINTAINED AS PRESCRIBED BELOW.

1. ALL EROSION AND SEDIMENT CONTROL PRACTICES SHALL BE CHECKED FOR STABILITY AND OPERATION FOLLOWING EVERY RUNOFF-PRODUCING RAINFALL BUT IN NO CASE LESS THAN ONCE EVERY WEEK. ANY REPAIRS NEEDED WILL BE MADE IMMEDIATELY TO MAINTAIN ALL PRACTICES AS DESIGNED.
2. SEDIMENT ACCUMULATIONS AT THE SILT FENCE SHALL BE REMOVED WHEN THE DEPTH OF THE SEDIMENT AT THE FENCE REACHES 0.5-FEET. REPAIRS WILL BE MADE TO THE FENCE TO MAINTAIN ITS BARRIER.
3. THE STABILIZED CONSTRUCTION ENTRANCES SHALL BE MAINTAINED IN A CONDITION WHICH WILL PREVENT THE TRACKING OF SEDIMENT ONTO PUBLIC AND PRIVATE RIGHT-OF-WAYS OR STREETS. PERIODICALLY, THE ENTRANCE WILL BE TOP DRESSED WITH ADDITIONAL AGGREGATE TO MAINTAIN THE 6-INCH THICKNESS. ANY SEDIMENT WHICH IS SPILLED, DROPPED OR WASHED ONTO PUBLIC AND PRIVATE RIGHT-OF-WAYS SHALL BE REMOVED IMMEDIATELY.
4. SEDIMENT FILTER BAGS SHALL BE INSPECTED DAILY DURING USE. IF A PROBLEM IS DETECTED, PUMPING SHOULD CEASE IMMEDIATELY AND NOT RESUME UNTIL THE PROBLEM IS CORRECTED. FILTER BAGS WILL BE REPLACED WHEN THEY BECOME ½ FULL. SPARE BAGS SHOULD BE KEPT AVAILABLE FOR REPLACEMENT OF THOSE THAT HAVE FAILED OR FILLED.
5. ALL SEEDED AREAS SHALL BE FERTILIZED, RESEEDED AS NECESSARY, AND MULCHED ACCORDING TO SPECIFICATIONS IN THE VEGETATIVE PLAN TO MAINTAIN A VIGOROUS, DENSE VEGETATIVE COVER.
6. DUST CONTROL MEASURES SHALL BE MAINTAINED THROUGH DRY WEATHER PERIODS UNTIL ALL DISTURBED AREAS ARE STABILIZED.

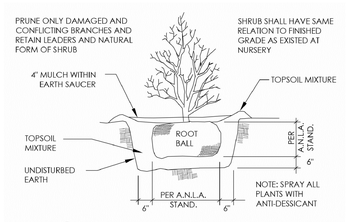
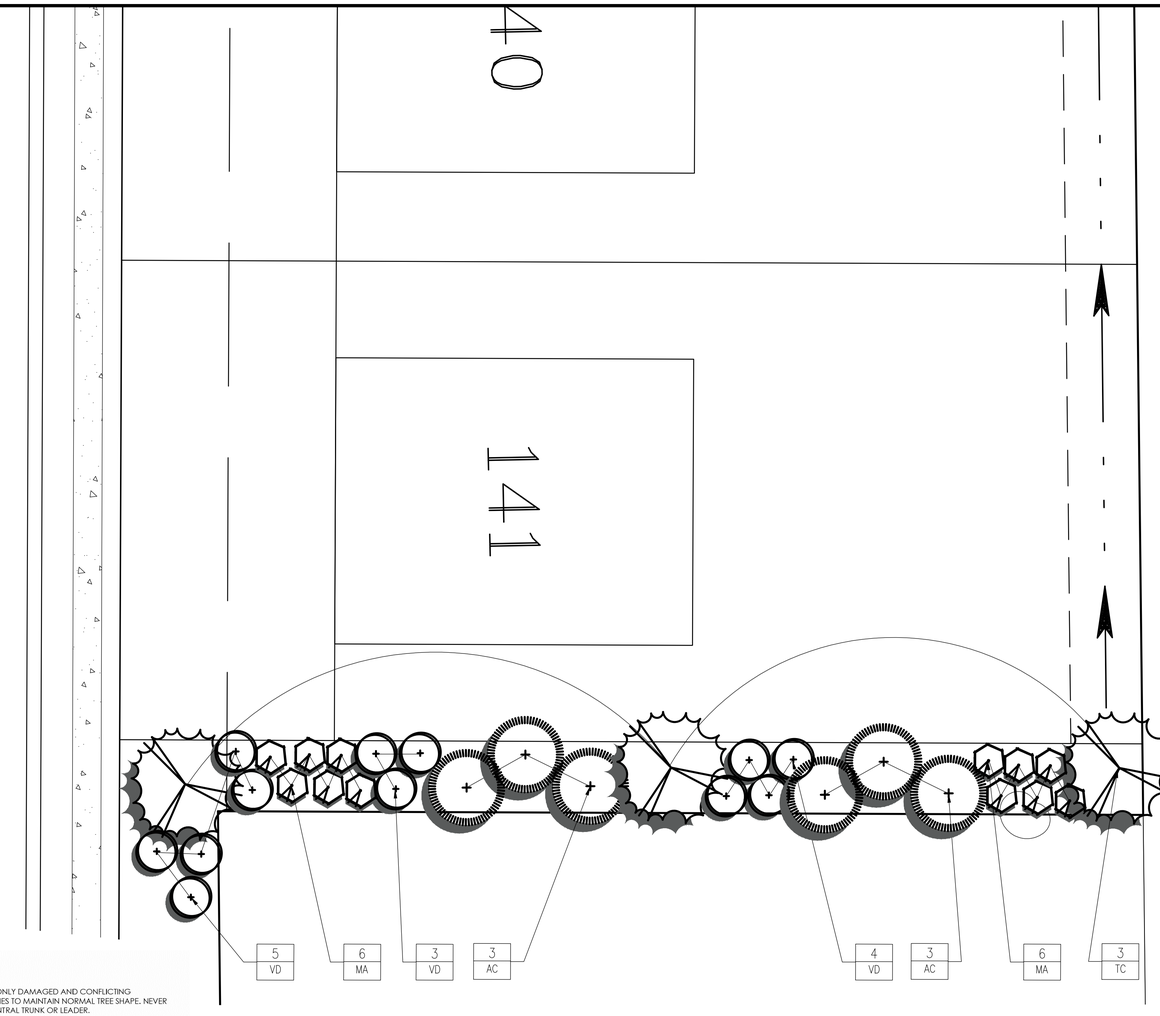
PREPAR



SHRUB PLANTING

SCALE: N.T.S.



0 10' 20' SCALE IN FEET N

LANDSCAPE NOTES:

1. IT IS THE LANDSCAPE CONTRACTORS RESPONSIBILITY TO VISIT THE SITE PRIOR TO BID MOBILIZATION, TO BECOME FAMILIAR WITH EXISTING CONDITIONS AT THE SITE.
2. STANDARDS SET FORTH IN THE "AMERICAN STANDARD FOR NURSERY STOCK", ANSI Z60.1 (LATEST EDITION) REPRESENT GUIDELINE SPECIFICATIONS ONLY AND SHALL CONSTITUTE THE MINIMUM QUALITY REQUIREMENTS FOR PLANT MATERIALS DELIVERED AND INSTALLED ON THIS PROJECT.
3. ALL PLANTS MUST BE HEALTHY, VIGOROUS AND FREE OF PESTS AND DISEASE.
4. ALL PLANTS MUST BE HARDY UNDER CLIMATE CONDITIONS THAT EXIST AT THE PROJECT SITE AND GROWN AT A NURSERY IN THE SAME HARDINESS ZONE AS THE PROJECT LOCATION.
5. ALL PLANTS MUST BE CONTAINER GROWN OR BALLED AND BURLAPPED AS INDICATED ON THE PLANT LIST.
6. ANY PROPOSED DEVIATION TO THE LANDSCAPE PLAN MUST FIRST BE REVIEWED AND APPROVED BY THE LANDSCAPE ARCHITECT PRIOR TO THE INSTALLATION OF THE PROPOSED LANDSCAPING CHANGES.
7. ALL TREES MUST BE STRAIGHT–TRUNKED, INJURY FREE, HAVE A FULL, SYMMETRICAL CROWN (HEAD) AND MEET ALL REQUIREMENTS SPECIFIED (E.G. SINGLE STEM, MULTI–STEM, HEAVY BRANCHED, ETC.).
8. THE CONTRACTOR IS RESPONSIBLE FOR VERIFYING ALL QUANTITIES SHOWN ON THESE PLANS.
9. ANY DISCREPANCIES IN THE QUANTITIES SHALL BE BROUGHT TO THE ATTENTION OF THE OWNER AND/OR LANDSCAPE ARCHITECT (OWNER'S REPRESENTATIVE).
10. ANY CONCERNS RELATED TO SITE CONDITIONS AND/OR PLANT LOCATIONS SHALL BE BROUGHT TO THE ATTENTION OF THE OWNER AND/OR DESIGN LANDSCAPE ARCHITECT (OWNER'S REPRESENTATIVE) PRIOR TO INSTALLATION.
11. ALL GRADING AND UTILITY WORK SHALL BE COMPLETED PRIOR TO INSTALLATION OF PLANT MATERIAL AND LANDSCAPE MULCH.
12. THE FINAL LOCATION OF TREES AND OTHER LANDSCAPING SHALL BE DETERMINED IN THE FIELD BASED ON UTILITY STAKEOUT AND SHALL NOT CONFLICT WITH TRAFFIC SIGNS AND/OR UTILITIES. STAKE OUT SHALL BE APPROVED BY OWNER'S REPRESENTATIVE PRIOR TO BEGINNING WORK.
13. PLANTING BACKFILL MIXTURE: 20 PARTS ON–SITE SOIL, 10 PARTS SCREENED TOPSOIL, 5 PARTS PEAT MOSS, 5 PARTS ALL GROW, 2.5 PARTS WELL ROTTED MANURE AND 10 LBS. 5–10–5 PLANTING FERTILIZER, MIXED THOROUGHLY PER CUBIC YARD.
14. MULCH ALL PLANT BEDS, AND INDIVIDUAL TREES IN LAWN AREAS WITH COMPOSTED AND AGED SHREDDED HARDWOOD BARK MULCH TO A DEPTH OF FOUR (4") INCHES UNLESS OTHERWISE SPECIFIED ON PLANTING DETAILS, OR AS DIRECTED BY THE LANDSCAPE ARCHITECT DUE TO SITE CONDITIONS. MULCH SAMPLE TO BE SUBMITTED TO THE OWNER AND THE OWNER'S REPRESENTATIVE FOR FINAL APPROVAL.
15. ANY PLANT WHICH TURNS BROWN, DEFOLIATES OR DIES PRIOR TO FINAL ACCEPTANCE BY THE OWNER, OR LANDSCAPE ARCHITECT, SHALL BE PROMPTLY REMOVED FROM THE SITE AND REPLACED WITH THE SAME PLANT (SPECIES, VARIETY AND SIZE) AS SPECIFIED ON THE PLANT SCHEDULE (LIST).
16. THE CONTRACTOR SHALL MAINTAIN ALL PLANT MATERIALS UNTIL THE PROJECT HAS RECEIVED FINAL ACCEPTANCE BY THE OWNER OR OWNER'S REPRESENTATIVE. MAINTENANCE SHALL INCLUDE, BUT NOT BE LIMITED TO: WATERING, MULCHING, FERTILIZING, SPRAYING (FUNGICIDE, PESTICIDE, ANTI–DESICANT), AS WELL AS RAISING PLANTS THAT HAVE SETTLED TOO DEEP OR REQUIRE STRAIGHTENING.
17. ALL AREAS DISTURBED BY SITE GRADING AND/OR UTILITY INSTALLATION SHALL RECEIVE APPROVED TOPSOIL (BASED ON APPROVED SAMPLES SUBMITTED BY THE CONTRACTOR) AND SPREAD TO A DEPTH NOT LESS THAN SIX (6") INCHES AFTER COMPACTION. TOPSOIL PLACED FOR LAWNS SHALL BE FINE GRADED, SEEDED, MULCHED AND WATERED UNTIL A HEALTHY STAND OF GRASS IS ESTABLISHED (BY OTHERS). THIS IS EXCLUDING FOUNDATION PLANT BEDS, LANDSCAPE ISLANDS AND ENTRANCE AREAS. **TOPSOIL PLACEMENT IS NOT A PART OF THIS CONTRACT.**
18. LOCATIONS OF EXISTING BURIED UTILITIES SHOWN ON THE SITE PLAN ARE BASED UPON THE BEST AVAILABLE INFORMATION AND ARE TO BE CONSIDERED APPROXIMATE. THE CONTRACTOR IS RESPONSIBLE TO CALL FOR A UTILITY STAKEOUT PRIOR TO COMMENCING PLANT INSTALLATION. THE CONTRACTOR SHALL BE RESPONSIBLE FOR REPAIRING ANY AND ALL DAMAGE TO UTILITIES, STRUCTURES, AND SITE APPURTENANCES WHICH OCCURS AS A RESULT OF LANDSCAPE INSTALLATION OPERATIONS.
19. EXISTING TREES INDICATED TO BE REMOVED SHALL OCCUR UNDER THE SITE CONTRACT FOR THIS PROJECT. THE LANDSCAPE CONTRACTOR IS RESPONSIBLE FOR NEW PLANTINGS OR RESTORATION OF THE DISTURBED AREA (LAWNS, PLANT BEDS).
20. EXISTING TREES TO REMAIN SHALL BE PROTECTED BY INSTALLING A TEMPORARY FENCE AT THE OUTER LIMITS OF THE TREE CANOPY.
21. ALL SHRUB BEDS ADJACENT TO LAWN AREAS SHALL HAVE A SPADED EDGE BORDER.

SEQR
Negative Declaration

NOTICE OF DETERMINATION OF NON-SIGNIFICANCE

Lead Agency: Town of Amherst
Planning Board

Project: SP-2021-24

Address: 5583 Main Street
Williamsville, NY 14221
(716) 631-7051

Date:

This notice is issued pursuant to Part 617 and Local Law #3-82, as amended, of the implementing regulations pertaining to Article 8 (State Environmental Quality Review) of the Environmental Conservation Law.

The Lead Agency has determined that the proposed action described below will not have a significant adverse effect on the environment.

Title of Action: Site Plan Review

SEQR Status: Unlisted Action

Description of Action: The project consists of a residential subdivision on a portion of an approximately 14.39 acre parcel located at 520 Campbell Boulevard consisting of eight lots for detached single-family homes. The portion of the project site to be developed as eight (8) single family homes on individual lots consists of 1.8 acres of the project site that is zoned NCD-ND with frontage on a public roadway. Work will include the site improvements not specifically stated above, including, stormwater, utilities, grading, lighting, paving, and landscaping.

Location: 520 Campbell Boulevard (portion), Amherst, Erie County

Petitioner: Ciminelli Muir Woods

Attachment: SP-2021-24_draft neg dec_011322 (25070 : Sp-2021-24)

REASONS SUPPORTING THIS DETERMINATION

Based on information submitted by the applicant including a Full Environmental Assessment Form (EAF) - Part I, (as amended) and a complete site plan application, a preliminary staff analysis was undertaken. Compared to the criteria listed in Section 617.7, all indications are that this action will not have a significant impact on the environment, as follows:

1. The project is not expected to cause a substantial adverse change in existing air quality, ground or surface water quality or quantity, or noise levels; a substantial increase in solid waste production; or a substantial increase in the potential for erosion, flooding, leaching or drainage problems. The Engineering Department on December 2, 2021 reviewed the Grading, Drainage and Utility Plans, Erosion Control Plan, and Engineer's Report submitted on November 16, 2021 and Geotechnical Report prepared by Glynn Group Engineering & Architects, PLLC.

   The Stormwater Pollution Prevention Plan (SWPPP) submitted on November 16, 2021 was also reviewed. Based on its review of these documents, the Department has determined that the project has or will have met all applicable requirements and has no objection to its approval.

2. The project will not result in the removal or destruction of large quantities of vegetation or fauna; or in significant adverse impacts to fish or wildlife species, habitats or other natural resources. The Planning Department reviewed a Landscape Plan submitted on November 16, 2021 and determined that it meets or exceeds Zoning Ordinance requirements for greenspace. The Landscape Plan has or will have met all Zoning Ordinance and Town requirements for landscaping.

3. The project is not expected to create any material conflict with the Town Comprehensive Plan. The Building Department has reviewed the application documents, along with the Geotechnical Report submitted on October 4, 2018, and determined in their review of November 18, 2021 that the subject project has or will have met all Zoning Ordinance regulations.

4. The project is within an area identified by the State as having potential archaeological or historical significance. The NYS Office of Parks, Recreation and Historic Preservation has reviewed the project and, as stated in their letter of October 10, 2001, determined that there will be no impact on these resources.

5. The project will not impair the character or quality of important aesthetic resources or of existing community or neighborhood character. The project is located in the New Community District – Neighborhood Development (NCD-ND) zoning district; neighboring uses are single family lots and zoned New Community District – Neighborhood Development or Suburban Agriculture (NCD-ND or NCD-SA); therefore, the project is consistent with surrounding land use.

6. The proposed subject development will include the creation of eight new single family residential lots which will not cause a major change in the use of either the quantity or type of energy.

Attachment: SP-2021-24_draft neg dec_011322 (25070 : Sp-2021-24)

7. The project will not create any hazard to human health. The Fire Chief's Council on December 6, 2021, has reviewed the project and has no objection to the approval of the site plan, as all requirements of this agency have or will have been met.

8. The project will not cause a substantial change in the use, or intensity of use, of land including agricultural, open space or recreational resources, or in its capacity to support existing uses. The proposed eight new single family residential lots will be consistent with the scale of surrounding land uses.

9. The proposed eight new single family residential lots will not significantly increase the number of people using the site over its previous level of use.

10. Review by the Town Traffic/Safety Board dated December 13, 2021, and NYSDOT dated _____ **indicate/indicates** that significant negative traffic impacts are not expected to result from the proposed project.

    Review of the Traffic Impact Study (TIS) prepared by SRF Associates, submitted to the planning Department on December 2021 and reviewed by the Town Traffic/Safety Board _____, and NYSDOT _____ indicates that significant negative traffic impacts are not expected to result from the proposed project.

11. A coordinated review of the project has been undertaken by Town Departments including, in addition to those mentioned above, Highway on November 30, 2021, Assessor on December 9, 2021, Plumbing Division on December 30, 2021, and Right-of-Way Agent on November 17, 2021. These reviews did not identify any potential significant adverse environmental issues and indicated that the proposal will not have a significant damaging impact on the environment.

12. Issues not specifically mentioned above and/or those not specifically reviewed were not raised by Town departments, outside agencies or the public and are not determined to cause significant negative environmental impacts.

TOWN OF AMHERST
PLANNING BOARD
SITE PLAN RESOLUTION (NCD)
SP-2021-24

PETITIONER

Ciminelli Muir Woods
Adam Faeth
50 Fountain Plaza, Suite 500
Buffalo, NY 14202

PROPERTY LOCATION

520 Campbell Boulevard (portion)

WHEREAS the Town of Amherst Planning Board on Thursday, January 13, 2021 held a public hearing on a site plan for the proposed eight lot residential subdivision, and

WHEREAS the Planning Board has reviewed the plans and specifications for the proposed project, and

WHEREAS the Site Plan has been referred to the Town's various review agencies and they have made findings on this project, and

WHEREAS the Planning Board finds that:

1. The proposed site plan is consistent with the intent, objectives and specific requirements of the Zoning Ordinance, specifically those of the New Community District, Section 5-2.

2. The proposed site plan is in conformity with the Approved Development Plan for the Audubon New Community.

3. Adequate services and utilities are or will be available prior to occupancy, and

4. Review of the US Army Corps of Engineers under Section 404 of the Clean Water Act is required since hydric / potentially hydric soils have been identified on the parcel. A Preliminary Jurisdictional Determination from the USACOE was issued on July 12, 2017.

5. Pursuant to Local Law #3-82, as amended, the Planning Board has determined that the requirements of SEQR are complete and that the subject proposal is not expected to have a significant adverse effect on the environment.

6. The Site Plan is consistent with all other applicable laws.

NOW THEREFORE BE IT RESOLVED that in accordance with 6 NYCRR, Part 617 and Local Law #3-82, as amended, the Planning Board has issued a Negative Declaration attached hereto, and

Attachment: SP-2021-24_draft resolution_011322 (25070 : Sp-2021-24)

TOWN OF AMHERST
PLANNING BOARD
SITE PLAN RESOLUTION (NCD)
SP-2021-24

PETITIONER	PROPERTY LOCATION
Ciminelli Muir Woods	520 Campbell Boulevard (portion)

NOW THEREFORE BE IT FURTHER RESOLVED that the Planning Board, in accordance with Section 8-15-9 of the Zoning Ordinance, approves said Site Plan, subject to the following conditions:

1. The developer complete the pedestrian trial segment within the Muir Woods Subdivision.

2. The developer contribute funds to improve the intersection of North French Road and Campbell Boulevard as determined by the NYSDOT.

3. That all dumpsters/trash containers and all mechanical equipment, utility structures, multiple meter boards, generators, and similar appurtenances, including those which are mounted on any part of a primary structure shall be appropriately screened with a fence, wall, and/or landscaping. Provide gate on dumpster enclosure that shall be closed whenever dumpster is not being serviced and enclosure shall be high enough to enclose entire dumpster within.

4. That as-built record drawings, including location of utilities, be provided to the Engineering Department prior to issuance of a Certificate of Occupancy by the Building Department.

The foregoing resolution was adopted by the Town of Amherst Planning Board, _____; moved by - _____; seconded by - _____; ayes _, noes _; absent - ____.

SUBJECT: MAJOR SITE PLAN REVIEW, **SP-2021-24**; PROPOSED 8 LOT SUBDIVISION MUIR WOODS PHASE 4, PROPERTY LOCATED AT **520 CAMPBELL BOULEVARD (PORTION)**.

Dear Mr. Faeth:

At its meeting of January 13, 2022 the Planning Board voted to **adjourn** the subject site plan at your request.

This request will be placed on the Planning Board agenda for the February 17, 2022 meeting.

Please submit revised plans or required materials by Monday, January 31, 2022 so they may be reviewed prior to the meeting.

Should you have any questions regarding the Planning Board's decision, please do not hesitate to call us.

Very truly yours,

for Daniel C. Howard, AICP
Planning Director

BUFFALO, NEW YORK 14207-3199

TOWN OF AMHERST
PLANNING DEPT.

December 15, 2020

Regulatory Branch

SUBJECT: Determination of No Jurisdiction, Department of Army Application No. LRB-2015-01255

Mohammad Qasaymeh
33 Sanctuary Court
Buffalo, New York 14221

Dear Mr. Qasaymeh:

This pertains to the wetland delineation and walkover submitted on your behalf by Earth Dimensions, Inc for a recent request for a jurisdictional determination for the parcel of land located 166 Klein Road, Town of Amherst, Erie County, New York.

Section 404 of the Clean Water Act (CWA) establishes Corps of Engineers jurisdiction over the discharge of dredged or fill material into waters of the United States, including wetlands, as defined in 33 CFR Part 328.3.

I am hereby verifying the Federal wetland/waters boundary as shown on the attached wetland delineation map dated October 29, 2019. This verification will remain valid for a period of five (5) years from the date of this correspondence unless new information warrants revision of the delineation before the expiration. At the end of this period, a new wetland delineation will be required if a project has not been completed on this property or additional impacts are proposed for WOUS. Further this delineation/determination has been conducted to identify the limits of the Corps CWA jurisdiction for the particular site identified in this request. This delineation/determination may not be valid for the wetland conservation provisions of the Food Security Act of 1985, as amended. If you or your tenant are USDA program participants, or anticipate participation in USDA programs, you should request a certified wetland determination from the local office of the Natural Resource Conservation Service prior to starting work.

Based upon my review of the submitted delineation and on-site observations, I have determined that aquatic resources Wetland 1, 2, 3 and Ditch 1 on the parcel are excluded waters as defined in the Navigable Waters Protection Rule. Therefore, these are not regulated under Section 404 of the CWA. Accordingly, you do not need Department of the Army authorization to commence work in these areas.

I encourage you to contact the appropriate state and local governmental officials to ensure that the proposed work complies with their requirements.

Attachment: SUB-2021-01 application 081921 (23436 : Sub-2021-01_Sk)

Regulatory Branch
SUBJECT: Determination of No Jurisdiction, Department of Army Application No. LRB-2015-01255

Finally, this letter contains an approved JD for the subject parcel. If you object to this JD, you may request an administrative appeal under Corps regulations at 33 CFR Part 331. Enclosed you will find a Notification of Appeal Process (NAP) fact sheet and Request for Appeal (RFA) form. If you request to appeal the above JD, you must submit a completed RFA form within 60 days of the date on this letter to the Great Lakes/Ohio River Division Office at the following address:

Suzanne Chubb
Regulatory Appeals Review Officer
US Army Corps of Engineers
Great Lakes and Ohio River Division
550 Main Street, Room 10-714
Cincinnati, Ohio 45202-3222
Phone: 513-684-7261 Fax: 513-684-2460

In order for an RFA to be accepted by the Corps, the Corps must determine that it is complete, that it meets the criteria for appeal under 33 C.F.R. part 331.5, and that it has been received by the Division Office within 60 days of the date of the NAP. Should you decide to submit an RFA form, it must be received at the above address by February 13, 2021.

It is not necessary to submit an RFA to the Division office if you do not object to the determination in this letter.

Questions pertaining to this matter should be directed to me at (716) 879-4279 by writing to the following address: U.S. Army Corps of Engineers Regulatory Branch 1776 Niagara Street, Buffalo, New York 14207 or by e-mail at: Joseph.M.Rowley@usace.army.mil.

Sincerely,

Joseph Rowley
Physical Scientist

NOTIFICATION OF ADMINISTRATIVE APPEAL OPTIONS AND PROCESS AND REQUEST FOR APPEAL		
Applicant: Mohammad Qasaymeh	File Number: LRB-2015-01255	Date: December 15, 2020
Attached is:		See Section below
	INITIAL PROFFERED PERMIT (Standard Permit or Letter of permission)	A
	PROFFERED PERMIT (Standard Permit or Letter of permission)	B
	PERMIT DENIAL	C
	APPROVED JURISDICTIONAL DETERMINATION	D
	PRELIMINARY JURISDICTIONAL DETERMINATION	E

SECTION I - The following identifies your rights and options regarding an administrative appeal of the above decision. Additional information may be found at http://www.usace.army.mil/CECW/Pages/reg_materials.aspx or Corps regulations at 33 CFR Part 331.

A: INITIAL PROFFERED PERMIT: You may accept or object to the permit.

- **ACCEPT:** If you received a Standard Permit, you may sign the permit document and return it to the district engineer for final authorization. If you received a Letter of Permission (LOP), you may accept the LOP and your work is authorized. Your signature on the Standard Permit or acceptance of the LOP means that you accept the permit in its entirety, and waive all rights to appeal the permit, including its terms and conditions, and approved jurisdictional determinations associated with the permit.

- **OBJECT:** If you object to the permit (Standard or LOP) because of certain terms and conditions therein, you may request that the permit be modified accordingly. You must complete Section II of this form and return the form to the district engineer. Your objections must be received by the district engineer within 60 days of the date of this notice, or you will forfeit your right to appeal the permit in the future. Upon receipt of your letter, the district engineer will evaluate your objections and may: (a) modify the permit to address all of your concerns, (b) modify the permit to address some of your objections, or (c) not modify the permit having determined that the permit should be issued as previously written. After evaluating your objections, the district engineer will send you a proffered permit for your reconsideration, as indicated in Section B below.

B: PROFFERED PERMIT: You may accept or appeal the permit

- **ACCEPT:** If you received a Standard Permit, you may sign the permit document and return it to the district engineer for final authorization. If you received a Letter of Permission (LOP), you may accept the LOP and your work is authorized. Your signature on the Standard Permit or acceptance of the LOP means that you accept the permit in its entirety, and waive all rights to appeal the permit, including its terms and conditions, and approved jurisdictional determinations associated with the permit.

- **APPEAL:** If you choose to decline the proffered permit (Standard or LOP) because of certain terms and conditions therein, you may appeal the declined permit under the Corps of Engineers Administrative Appeal Process by completing Section II of this form and sending the form to the division engineer. This form must be received by the division engineer within 60 days of the date of this notice.

C: PERMIT DENIAL: You may appeal the denial of a permit under the Corps of Engineers Administrative Appeal Process by completing Section II of this form and sending the form to the division engineer. This form must be received by the division engineer within 60 days of the date of this notice.

D: APPROVED JURISDICTIONAL DETERMINATION: You may accept or appeal the approved JD or provide new information.

- **ACCEPT:** You do not need to notify the Corps to accept an approved JD. Failure to notify the Corps within 60 days of the date of this notice, means that you accept the approved JD in its entirety, and waive all rights to appeal the approved JD.

- **APPEAL:** If you disagree with the approved JD, you may appeal the approved JD under the Corps of Engineers Administrative Appeal Process by completing Section II of this form and sending the form to the division engineer. This form must be received by the division engineer within 60 days of the date of this notice.

E: PRELIMINARY JURISDICTIONAL DETERMINATION: You do not need to respond to the Corps regarding the preliminary JD. The Preliminary JD is not appealable. If you wish, you may request an approved JD (which may be appealed), by contacting the Corps district for further instruction. Also you may provide new information for further consideration by the Corps to reevaluate the JD.

Attachment: SUB-2021-01 application 081921 (23436 : Sub-2021-01_Sk)

SECTION II - REQUEST FOR APPEAL or OBJECTIONS TO AN INITIAL PROFFERED PERMIT

REASONS FOR APPEAL OR OBJECTIONS: (Describe your reasons for appealing the decision or your objections to an initial proffered permit in clear concise statements. You may attach additional information to this form to clarify where your reasons or objections are addressed in the administrative record.)

ADDITIONAL INFORMATION: The appeal is limited to a review of the administrative record, the Corps memorandum for the record of the appeal conference or meeting, and any supplemental information that the review officer has determined is needed to clarify the administrative record. Neither the appellant nor the Corps may add new information or analyses to the record. However, you may provide additional information to clarify the location of information that is already in the administrative record.

POINT OF CONTACT FOR QUESTIONS OR INFORMATION:

If you have questions regarding this decision and/or the appeal process you may contact:	If you only have questions regarding the appeal process you may also contact:
Joseph Rowley U.S. Army Corps of Engineers 1776 Niagara Street Buffalo, New York 14207 Joseph.M.Rowley@usace.army.mil 716-879-4279	Suzanne Chubb Regulatory Appeals Review Officer US Army Corps of Engineers Great Lakes and Ohio River Division 550 Main Street, Room 10-714 Cincinnati, Ohio 45202-3222 Phone: 513-684-7261 Fax: 513-684-2460

RIGHT OF ENTRY: Your signature below grants the right of entry to Corps of Engineers personnel, and any government consultants, to conduct investigations of the project site during the course of the appeal process. You will be provided a 15 day notice of any site investigation, and will have the opportunity to participate in all site investigations.

NAVIGABLE WATERS PROTECTION RULE

I. ADMINISTRATIVE INFORMATION

Completion Date of Approved Jurisdictional Determination (AJD): 15-DEC-2020
ORM Number: LRB-2015-01255 (Qasaymeh, Mohammad)
Associated JDs: N/A or ORM numbers and identifiers (e.g. HQS-2020-00001-MSW-MITSITE)
Review Area Location[1]:
State/Territory: NY City: Amherst County: Erie County
Center Coordinates of Review Area: Latitude 43.002604 Longitude -78.732741

II. FINDINGS

A. Summary: Check all that apply. At least one box from the following list MUST be selected. Complete the corresponding sections/tables and summarize data sources.

- ☐ The review area is comprised entirely of dry land (i.e., there are no waters or water features, including wetlands, of any kind in the entire review area). Rationale: N/A or describe rationale.
- ☐ There are "navigable waters of the United States" within Rivers and Harbors Act jurisdiction within the review area (complete table in section II.B).
- ☐ There are "waters of the United States" within Clean Water Act jurisdiction within the review area (complete appropriate tables in section II.C).
- ☒ There are waters or water features excluded from Clean Water Act jurisdiction within the review area (complete table in section II.D).

B. Rivers and Harbors Act of 1899 Section 10 (§ 10)[2]

§ 10 Name	§ 10 Size	§ 10 Criteria	Rationale for § 10 Determination
N/A	N/A	N/A	N/A

C. Clean Water Act Section 404

Territorial Seas and Traditional Navigable Waters ((a)(1) waters)[3]

(a)(1) Name	(a)(1) Size	(a)(1) Criteria	Rationale for (a)(1) Determination
N/A	N/A	N/A	N/A

Tributaries ((a)(2) waters):

(a)(2) Name	(a)(2) Size	(a)(2) Criteria	Rationale for (a)(2) Determination
N/A	N/A	N/A	N/A

Lakes and ponds, and impoundments of jurisdictional waters ((a)(3) waters):

(a)(3) Name	(a)(3) Size	(a)(3) Criteria	Rationale for (a)(3) Determination
N/A	N/A	N/A	N/A

Adjacent wetlands ((a)(4) waters):

N/A	N/A	N/A	N/A

[1] Map(s)/Figure(s) are attached to the AJD provided to the requestor.
[2] If the navigable water is not subject to the ebb and flow of the tide or included on the District's list of Rivers and Harbors Act Section 10 navigable waters list, do NOT use this document to make the determination. The District must continue to follow the procedure outlined in 33 CFR part 329.14 to make a Rivers and Harbors Act Section 10 navigability determination.
[3] A stand-alone TNW determination is completed independently of a request for an AJD. A stand-alone TNW determination is conducted for a specific segment of river or stream or other type of waterbody, such as a take, where independent upstream or downstream limits or lake borders are established. A stand-alone TNW determination should be completed following applicable guidance and should NOT be documented on the AJD form.
[4] Some excluded waters, such as (b)(2) and (b)(4), may not be specifically identified on the AJD form unless a requestor specifically asks a Corps district to do so. Corps Districts may, in case-by-case instances, choose to identify some or all of these waters within the review area.
[5] Because of the broad nature of the (b)(1) exclusion and in an effort to collect data on specific types of waters that would be covered by the (b)(1) exclusion, four sub-categories of (b)(1) exclusions were administratively created for the purposes of the AJD Form. These four sub-categories are not new exclusions, but are simply administrative distinctions and remain (b)(1) exclusions as defined by the NWPR.

NAVIGABLE WATERS PROTECTION RULE

D. Excluded Waters or Features

Excluded waters ((b)(1) – (b)(12))[4]:

Exclusion Name	Exclusion Size	Exclusion[5]	Rationale for Exclusion Determination
Ditch 1	700 feet	(b)(5) Ditch that is not an (a)(1) or (a)(2) water, and those portions of a ditch constructed in an (a)(4) water that do not satisfy the conditions of (c)(1)	Ditch 1 was a drainage feature observed during the April 2016 site visit. It appeared the ditch was excavated to alleviate rear yard drainage. However, during the site visit no bed or banks were observed within the ditch. In addition, no water or flow was observed in the ditch even though water was observed in the surrounding area and delineated wetlands. The ditch is not found on the USGS Clarence Center Quad. The ditch was vegetated and significantly covered in leaf litter with old fill piles and woody debris (cut logs) found throughout. The ditch is perched significantly higher in elevation then the maintained Town of Amherst ditch to the North. The ditch doesn't contribute direct flow to an A(1) water or is an A(1) water, the ditch was not constructed in a tributary, doesn't relocate a tributary nor or was the ditch constructed in an adjacent wetland. Finally, the ditch doesn't contribute perennial or intermittent flow during a particular year.
Wetland 1	0.417 acres	(b)(1) Non-adjacent wetland	In the delineation report, it states Wetland 2 is a hard wood swamp pocket located in the North portion of the delineated parcel. The soils are mapped potentially hydric. Vegetation found within this wetland is a mix of non-hydric and hydrophtic vegetation. A review of aerial imagery and other in-house resources show no drainage patterns coming or going from wetland 1. This was confirmed during the site visit. Wetland 1 is more than 41 linear feet from Ditch 1 and 100 linear feet from an excavated, maintained Town of Amherst ditch to the West. No A(1)-A(3) waters were identified directly abutting Wetland 1 during the site visit or an in-house review of aerial imagery, topo maps, the NYSDEC environmental resource or USFWS Wetland mapper. The wetland is a shallow surface concave depression that collects water and holds it long enough to provide wetland characteristics but does not drain to A (1) – A(3) waters. No natural or artificial barriers between Wetland 1 and A(1) – A(3) waters were found during the site visit. The wetland is not inundated by an A(1) – A(3) waters. Also, the NRCS/USDA Web Soil Survey "Flood Frequency Class" rating is "none" which means, "....flooding is not probable. The chance of flooding is nearly 0 percent in any year". All resources reviewed support the determination that Wetland 1 doesn't directly abut an A(1)-A(3) waters, is not separated from an A(1)-A(3) waters by a natural or man-made feature and is not adjacent to an A(1)-A(3) waters.
Wetland 2	0.398 acres	(b)(1) Non-adjacent wetland	In the delineation report, it states Wetland 2 is a hard wood/scrub-shrub swamp pocket located in the Center

[1] Map(s)/Figure(s) are attached to the AJD provided to the requestor.
[2] If the navigable water is not subject to the ebb and flow of the tide or included on the District's list of Rivers and Harbors Act Section 10 navigable waters list, do NOT use this document to make the determination. The District must continue to follow the procedure outlined in 33 CFR part 329.14 to make a Rivers and Harbors Act Section 10 navigability determination.
[3] A stand-alone TNW determination is completed independently of a request for an AJD. A stand-alone TNW determination is conducted for a specific segment of river or stream or other type of waterbody, such as a lake, where independent upstream or downstream limits or lake borders are established. A stand-alone TNW determination should be completed following applicable guidance and should NOT be documented on the AJD form.
[4] Some excluded waters, such as (b)(2) and (b)(4), may not be specifically identified on the AJD form unless a requestor specifically asks a Corps district to do so. Corps Districts may, in case-by-case instances, choose to identify some or all of these waters within the review area.
[5] Because of the broad nature of the (b)(1) exclusion and in an effort to collect data on specific types of waters that would be covered by the (b)(1) exclusion, four sub-categories of (b)(1) exclusions were administratively created for the purposes of the AJD Form. These four sub-categories are not new exclusions, but are simply administrative distinctions and remain (b)(1) exclusions as defined by the NWPR.

			portion of the delineated parcel. The soils are mapped potentially hydric. Vegetation found within this wetland is a mix of non-hydric and hydrophtic vegetation. A review of aerial imagery and other in-house resources show no drainage patterns coming or going from wetland 2. This was confirmed during the site visit. Wetland 2 is more than 60 linear feet from Ditch 1 and 350 linear feet from an excavated, maintained Town of Amherst ditch to the West. No A(1)-A(3) waters were identified directly abutting Wetland 1 during the site visit or an in-house review of aerial imagery, topo maps, the NYSDEC environmental resource or USFWS Wetland mapper. The wetland is a shallow surface concave depression that collects water and holds it long enough to provide wetland characteristics but does not drain to A (1) – A(3) waters. No natural or artificial barriers between Wetland 2 and A(1) – A(3) waters were found during the site visit. The wetland is not inundated by an A(1) – A(3) waters. Also, the NRCS/USDA Web Soil Survey "Flood Frequency Class" rating is "none" which means, "….flooding is not probable. The chance of flooding is nearly 0 percent in any year". All resources reviewed support the determination that Wetland 1 doesn't directly abut an A(1)-A(3) waters, is not separated from an A(1)-A(3) waters by a natural or man-made feature and is not adjacent to an A(1)-A(3) waters.
Wetland 3	0.11 acres	(b)(1) Non-adjacent wetland	In the delineation report, it states Wetland 3 is a hard wood/scrub-shrub swamp pocket located in the Eastern portion of the delineated parcel. The soils are mapped potentially hydric. Vegetation found within this wetland is a mix of non-hydric and hydrophtic vegetation. A review of aerial imagery and other in-house resources show no drainage patterns coming or going from wetland 3. This was confirmed during the site visit. Wetland 3 is more than 31 linear feet from Ditch 1 and 550 linear feet from an excavated, maintained Town of Amherst ditch to the West. In addition, Wetland 3 is more than 150 linear feet from Klein Road to the East but no open drainage is located along the road. No A(1)-A(3) waters were identified directly abutting Wetland 3 during the site visit or an in-house review of aerial imagery, topo maps, the NYSDEC environmental resource or USFWS Wetland mapper. The wetland is a shallow surface concave depression that collects water and holds it long enough to provide wetland characteristics but does not drain to A (1) – A(3) waters. No natural or artificial barriers between Wetland 3 and A(1) – A(3) waters were found during the site visit. The wetland is not inundated by an A(1) – A(3) waters. Also, the NRCS/USDA Web Soil Survey "Flood Frequency Class" rating is "none" which means, "….flooding is not probable. The chance of flooding is

			nearly 0 percent in any year". All resources reviewed support the determination that Wetland 3 doesn't directly abut an A(1)-A(3) waters, is not separated from an A(1)-A(3) waters by a natural or man-made feature and is not adjacent to an A(1)-A(3) waters.

III. SUPPORTING INFORMATION

A. Select/enter all resources that were used to aid in this determination and attach data/maps to this document and/or references/citations in the administrative record, as appropriate.

_X_ Information submitted by, or on behalf of, the applicant/consultant: *Wetland delineation dated November 3, 2015 submitted by Earth Dimensions, Inc. Also, an additional walkover report dated October 29, 2019 submitted by Earth Dimensions, Inc.*
Rationale: The reports submitted by EDI contained accurate, completed data sheets, photographs, NWI map, web soil survey with hydric soil ratings and other supporting information.
___ Data sheets prepared by the Corps: *Title(s) and/or date(s).*
__X Photographs: Photographs included within the delineation report; Google Earth, ESRI
__X Corps Site visit(s) conducted on: April 2016
___ Previous Jurisdictional Determinations (AJDs or PJDs): N/A
___ Antecedent Precipitation Tool: *provide detailed discussion in Section III.B.*
_X_ USDA NRCS Soil Survey: USDA/NRCS Web Soil Survey – Accessed Dec 10, 2020
_x_ USFWS NWI maps: USFWS Wetland Mapper – Accessed Dec 10, 2020
_X_ USGS topographic maps: USGS Clarence Center Quad – delineated parcel located

Other data sources used to aid in this determination:

Data Source (select)	Name and/or date and other relevant information
USGS Sources	N/A.
USDA Sources	N/A.
NOAA Sources	N/A.
USACE Sources	ORM Maps – Accessed Dec 10, 2020
State/Local/Tribal Sources	NYSDEC Freshwater Wetland Maps – no State regulated wetlands are within the vicinity of the delineated parcel – Accessed Dec 10, 2020
Other Sources	N/A.

B. Typical year assessment(s): N/A

C. Additional comments to support AJD: N/A

[1] Map(s)/Figure(s) are attached to the AJD provided to the requestor.
[2] If the navigable water is not subject to the ebb and flow of the tide or included on the District's list of Rivers and Harbors Act Section 10 navigable waters list, do NOT use this document to make the determination. The District must continue to follow the procedure outlined in 33 CFR part 329.14 to make a Rivers and Harbors Act Section 10 navigability determination.
[3] A stand-alone TNW determination is completed independently of a request for an AJD. A stand-alone TNW determination is conducted for a specific segment of river or stream or other type of waterbody, such as a lake, where independent upstream or downstream limits or lake borders are established. A stand-alone TNW determination should be completed following applicable guidance and should NOT be documented on the AJD form.
[4] Some excluded waters, such as (b)(2) and (b)(4), may not be specifically identified on the AJD form unless a requestor specifically asks a Corps district to do so. Corps Districts may, in case-by-case instances, choose to identify some or all of these waters within the review area.
[5] Because of the broad nature of the (b)(1) exclusion and in an effort to collect data on specific types of waters that would be covered by the (b)(1) exclusion, four sub-categories of (b)(1) exclusions were administratively created for the purposes of the AJD Form. These four sub-categories are not new exclusions, but are simply administrative distinctions and remain (b)(1) exclusions as defined by the NWPR.

EARTH DIMENSIONS, INC.

Mr. John Rinaldo
166 Klein Rd
Williamsville, NY 14221

Dear Mr. Rinaldo:

Wetland CC-10
Freshwater Wetland Determination
166 Klein Road
Town of Amherst, Erie County

This letter serves as notification that Senior Ecologist Charles Rosenburg and I, accompanied by Scott Livingstone of Earth Dimensions, Inc., completed a freshwater wetland determination for Wetland CC-10 in relation to your 166 Klein Road property, parcel # 56.10-13-1, on October 7, 2015. A small wetland, 0.23 acres in size, near the north edge of your property was determined to not be part of Wetland CC-10, which is currently mapped just north of your parcel. This wetland is relatively small in size, is a single wetland (versus one of a cluster of wetlands), exhibits a seasonally saturated/ shallowly flooded hydrologic regime, lacks Class 1 wetland characteristics, and is separated by a distance of 39-meters from extensive wetland on the Town parcel to the north (i.e., close to the DEC's 50-meter limit for extending jurisdiction).

Considering the wetland characteristics described above, this Department has determined that the 0.23-acre wetland does not significantly function as a unit with the extensive wetland area to the north in providing wetland benefits. Similarly, we believe the two wetland areas are not dependent on each other in providing wetland benefits. This analysis is specific to this parcel and this circumstance has no precedential value for any other site. Finally, no other wetlands were observed within 50 meters of the extensive area of Wetland CC-10 on the Town parcel to the north. Therefore, we determined that Wetland CC-10 does not extend into the 166 Klein Road parcel.

Please note that the regulated 100-foot adjacent area associated with the Wetland CC-10 boundary we identified within the Town parcel to the north does not extend into the 166 Klein Road parcel. Therefore, there is no Article 24 Freshwater

Attachment: SUB-2021-01 application 081921 (23436 : Sub-2021-01_Sk)

Wetlands jurisdiction within the parcel, so an Article 24 Freshwater Wetlands permit is not needed for development of the parcel.

Be advised that the U.S. Army Corps of Engineers may also have wetland jurisdiction irrespective of the Department of Environmental Conservation. For more information, you may contact the Corps at:

United States Army Corps of Engineers Regulatory Branch
1776 Niagara Street
Buffalo, New York 14207
Telephone: (716) 879-4330

If you have any questions about this wetland delineation, please feel free to call me in the Buffalo office at (716) 851-7010.

Sincerely,

Angela G. Driscoll
Fish & Wildlife Technician I

WHEREAS the Town of Amherst Planning Board on Thursday, August 19, 2021 held a public hearing on an 18-lot subdivision, "_____", and

WHEREAS the Planning Board has reviewed plans and specifications for the proposed Subdivision, and

WHEREAS the Subdivision has been referred to the Town's various review agencies, and

WHEREAS the Planning Board finds that:

1. The proposed subdivision is consistent with the intent, objectives and specific requirements of the Zoning Ordinance.

2. Adequate services and utilities are or will be available prior to occupancy.

3. The Subdivision is consistent with all other applicable laws.

4. Under Section 404 of the Clean Water Act, the US Army Corps of Engineers has determined that it has no jurisdiction.

NOW THEREFORE BE IT RESOLVED that the Planning Board, in accordance with Section 8-7 of the Zoning Ordinance and Part III of the Subdivision Regulations approves said Subdivision subject to the follow condition(s):

1.

NOW THEREFORE BE IT FURTHER RESOLVED that _____ Street/road be classified as local/collector/arterial street(s) and that sidewalks **are** required, and that the required ramps and/or curb cuts to meet ADA compliance be included and constructed with the P.I.P. for the roadway utilities.

NOW THEREFORE BE IT FURTHER RESOLVED that a lighting district is required for the proposed subdivision.

NOW THEREFORE BE IT FURTHER RESOLVED that recreation fees are required for the proposed subdivision lots in accordance with the adopted fee schedule.

SUBJECT: Determination of No Jurisdiction, Department of Army Application No. LRB-2015-01255

Mohammad Qasaymeh
33 Sanctuary Court
Buffalo, New York 14221

Dear Mr. Qasaymeh:

This pertains to the wetland delineation and walkover submitted on your behalf by Earth Dimensions, Inc for a recent request for a jurisdictional determination for the parcel of land located 166 Klein Road, Town of Amherst, Erie County, New York.

Section 404 of the Clean Water Act (CWA) establishes Corps of Engineers jurisdiction over the discharge of dredged or fill material into waters of the United States, including wetlands, as defined in 33 CFR Part 328.3.

I am hereby verifying the Federal wetland/waters boundary as shown on the attached wetland delineation map dated October 29, 2019. This verification will remain valid for a period of five (5) years from the date of this correspondence unless new information warrants revision of the delineation before the expiration. At the end of this period, a new wetland delineation will be required if a project has not been completed on this property or additional impacts are proposed for WOUS. Further this delineation/determination has been conducted to identify the limits of the Corps CWA jurisdiction for the particular site identified in this request. This delineation/determination may not be valid for the wetland conservation provisions of the Food Security Act of 1985, as amended. If you or your tenant are USDA program participants, or anticipate participation in USDA programs, you should request a certified wetland determination from the local office of the Natural Resource Conservation Service prior to starting work.

Based upon my review of the submitted delineation and on-site observations, I have determined that aquatic resources Wetland 1, 2, 3 and Ditch 1 on the parcel are excluded waters as defined in the Navigable Waters Protection Rule. Therefore, these are not regulated under Section 404 of the CWA. Accordingly, you do not need Department of the Army authorization to commence work in these areas.

I encourage you to contact the appropriate state and local governmental officials to ensure that the proposed work complies with their requirements.

Attachment: SUB-2021-01 application 011322 (23436 : Sub-2021-01_Sk)

Regulatory Branch
SUBJECT: Determination of No Jurisdiction, Department of Army Application No. LRB-2015-01255

Finally, this letter contains an approved JD for the subject parcel. If you object to this JD, you may request an administrative appeal under Corps regulations at 33 CFR Part 331. Enclosed you will find a Notification of Appeal Process (NAP) fact sheet and Request for Appeal (RFA) form. If you request to appeal the above JD, you must submit a completed RFA form within 60 days of the date on this letter to the Great Lakes/Ohio River Division Office at the following address:

Suzanne Chubb
Regulatory Appeals Review Officer
US Army Corps of Engineers
Great Lakes and Ohio River Division
550 Main Street, Room 10-714
Cincinnati, Ohio 45202-3222
Phone: 513-684-7261 Fax: 513-684-2460

In order for an RFA to be accepted by the Corps, the Corps must determine that it is complete, that it meets the criteria for appeal under 33 C.F.R. part 331.5, and that it has been received by the Division Office within 60 days of the date of the NAP. Should you decide to submit an RFA form, it must be received at the above address by February 13, 2021.

It is not necessary to submit an RFA to the Division office if you do not object to the determination in this letter.

Questions pertaining to this matter should be directed to me at (716) 879-4279 by writing to the following address: U.S. Army Corps of Engineers Regulatory Branch 1776 Niagara Street, Buffalo, New York 14207 or by e-mail at: Joseph.M.Rowley@usace.army.mil.

Sincerely,

Joseph Rowley
Physical Scientist

NOTIFICATION OF ADMINISTRATIVE APPEAL OPTIONS AND PROCESS AND REQUEST FOR APPEAL		
Applicant: Mohammad Qasaymeh	File Number: LRB-2015-01255	Date: December 15, 2020
Attached is:		See Section below
	INITIAL PROFFERED PERMIT (Standard Permit or Letter of permission)	A
	PROFFERED PERMIT (Standard Permit or Letter of permission)	B
	PERMIT DENIAL	C
	APPROVED JURISDICTIONAL DETERMINATION	D
	PRELIMINARY JURISDICTIONAL DETERMINATION	E

SECTION I - The following identifies your rights and options regarding an administrative appeal of the above decision. Additional information may be found at http://www.usace.army.mil/CECW/Pages/reg_materials.aspx or Corps regulations at 33 CFR Part 331.

A: INITIAL PROFFERED PERMIT: You may accept or object to the permit.

- **ACCEPT:** If you received a Standard Permit, you may sign the permit document and return it to the district engineer for final authorization. If you received a Letter of Permission (LOP), you may accept the LOP and your work is authorized. Your signature on the Standard Permit or acceptance of the LOP means that you accept the permit in its entirety, and waive all rights to appeal the permit, including its terms and conditions, and approved jurisdictional determinations associated with the permit.

- **OBJECT:** If you object to the permit (Standard or LOP) because of certain terms and conditions therein, you may request that the permit be modified accordingly. You must complete Section II of this form and return the form to the district engineer. Your objections must be received by the district engineer within 60 days of the date of this notice, or you will forfeit your right to appeal the permit in the future. Upon receipt of your letter, the district engineer will evaluate your objections and may: (a) modify the permit to address all of your concerns, (b) modify the permit to address some of your objections, or (c) not modify the permit having determined that the permit should be issued as previously written. After evaluating your objections, the district engineer will send you a proffered permit for your reconsideration, as indicated in Section B below.

B: PROFFERED PERMIT: You may accept or appeal the permit

- **ACCEPT:** If you received a Standard Permit, you may sign the permit document and return it to the district engineer for final authorization. If you received a Letter of Permission (LOP), you may accept the LOP and your work is authorized. Your signature on the Standard Permit or acceptance of the LOP means that you accept the permit in its entirety, and waive all rights to appeal the permit, including its terms and conditions, and approved jurisdictional determinations associated with the permit.

- **APPEAL:** If you choose to decline the proffered permit (Standard or LOP) because of certain terms and conditions therein, you may appeal the declined permit under the Corps of Engineers Administrative Appeal Process by completing Section II of this form and sending the form to the division engineer. This form must be received by the division engineer within 60 days of the date of this notice.

C: PERMIT DENIAL: You may appeal the denial of a permit under the Corps of Engineers Administrative Appeal Process by completing Section II of this form and sending the form to the division engineer. This form must be received by the division engineer within 60 days of the date of this notice.

D: APPROVED JURISDICTIONAL DETERMINATION: You may accept or appeal the approved JD or provide new information.

- **ACCEPT:** You do not need to notify the Corps to accept an approved JD. Failure to notify the Corps within 60 days of the date of this notice, means that you accept the approved JD in its entirety, and waive all rights to appeal the approved JD.

- **APPEAL:** If you disagree with the approved JD, you may appeal the approved JD under the Corps of Engineers Administrative Appeal Process by completing Section II of this form and sending the form to the division engineer. This form must be received by the division engineer within 60 days of the date of this notice.

E: PRELIMINARY JURISDICTIONAL DETERMINATION: You do not need to respond to the Corps regarding the preliminary JD. The Preliminary JD is not appealable. If you wish, you may request an approved JD (which may be appealed), by contacting the Corps district for further instruction. Also you may provide new information for further consideration by the Corps to reevaluate the JD.

Attachment: SUB-2021-01 application 011322 (23436 : Sub-2021-01_Sk)

SECTION II - REQUEST FOR APPEAL or OBJECTIONS TO AN INITIAL PROFFERED PERMIT

REASONS FOR APPEAL OR OBJECTIONS: (Describe your reasons for appealing the decision or your objections to an initial proffered permit in clear concise statements. You may attach additional information to this form to clarify where your reasons or objections are addressed in the administrative record.)

ADDITIONAL INFORMATION: The appeal is limited to a review of the administrative record, the Corps memorandum for the record of the appeal conference or meeting, and any supplemental information that the review officer has determined is needed to clarify the administrative record. Neither the appellant nor the Corps may add new information or analyses to the record. However, you may provide additional information to clarify the location of information that is already in the administrative record.

POINT OF CONTACT FOR QUESTIONS OR INFORMATION:

If you have questions regarding this decision and/or the appeal process you may contact:	If you only have questions regarding the appeal process you may also contact:
Joseph Rowley U.S. Army Corps of Engineers 1776 Niagara Street Buffalo, New York 14207 Joseph.M.Rowley@usace.army.mil 716-879-4279	Suzanne Chubb Regulatory Appeals Review Officer US Army Corps of Engineers Great Lakes and Ohio River Division 550 Main Street, Room 10-714 Cincinnati, Ohio 45202-3222 Phone: 513-684-7261 Fax: 513-684-2460

RIGHT OF ENTRY: Your signature below grants the right of entry to Corps of Engineers personnel, and any government consultants, to conduct investigations of the project site during the course of the appeal process. You will be provided a 15 day notice of any site investigation, and will have the opportunity to participate in all site investigations.

I. ADMINISTRATIVE INFORMATION

Completion Date of Approved Jurisdictional Determination (AJD): 15-DEC-2020
ORM Number: LRB-2015-01255 (Qasaymeh, Mohammad)
Associated JDs: N/A or ORM numbers and identifiers (e.g. HQS-2020-00001-MSW-MITSITE)
Review Area Location[1]:
State/Territory: NY City: Amherst County: Erie County
Center Coordinates of Review Area: Latitude 43.002604 Longitude -78.732741

II. FINDINGS

A. Summary: Check all that apply. At least one box from the following list MUST be selected. Complete the corresponding sections/tables and summarize data sources.

- ☐ The review area is comprised entirely of dry land (i.e., there are no waters or water features, including wetlands, of any kind in the entire review area). Rationale: N/A or describe rationale.
- ☐ There are "navigable waters of the United States" within Rivers and Harbors Act jurisdiction within the review area (complete table in section II.B).
- ☐ There are "waters of the United States" within Clean Water Act jurisdiction within the review area (complete appropriate tables in section II.C).
- ☒ There are waters or water features excluded from Clean Water Act jurisdiction within the review area (complete table in section II.D).

B. Rivers and Harbors Act of 1899 Section 10 (§ 10)[2]

§ 10 Name	§ 10 Size	§ 10 Criteria	Rationale for § 10 Determination
N/A	N/A	N/A	N/A

C. Clean Water Act Section 404

Territorial Seas and Traditional Navigable Waters ((a)(1) waters)[3]

(a)(1) Name	(a)(1) Size	(a)(1) Criteria	Rationale for (a)(1) Determination
N/A	N/A	N/A	N/A

Tributaries ((a)(2) waters):

(a)(2) Name	(a)(2) Size	(a)(2) Criteria	Rationale for (a)(2) Determination
N/A	N/A	N/A	N/A

Lakes and ponds, and impoundments of jurisdictional waters ((a)(3) waters):

(a)(3) Name	(a)(3) Size	(a)(3) Criteria	Rationale for (a)(3) Determination
N/A	N/A	N/A	N/A

Adjacent wetlands ((a)(4) waters):

N/A	N/A	N/A	N/A

[1] Map(s)/Figure(s) are attached to the AJD provided to the requestor.
[2] If the navigable water is not subject to the ebb and flow of the tide or included on the District's list of Rivers and Harbors Act Section 10 navigable waters list, do NOT use this document to make the determination. The District must continue to follow the procedure outlined in 33 CFR part 329.14 to make a Rivers and Harbors Act Section 10 navigability determination.
[3] A stand-alone TNW determination is completed independently of a request for an AJD. A stand-alone TNW determination is conducted for a specific segment of river or stream or other type of waterbody, such as a take, where independent upstream or downstream limits or lake borders are established. A stand-alone TNW determination should be completed following applicable guidance and should NOT be documented on the AJD form.
[4] Some excluded waters, such as (b)(2) and (b)(4), may not be specifically identified on the AJD form unless a requestor specifically asks a Corps district to do so. Corps Districts may, in case-by-case instances, choose to identify some or all of these waters within the review area.
[5] Because of the broad nature of the (b)(1) exclusion and in an effort to collect data on specific types of waters that would be covered by the (b)(1) exclusion, four sub-categories of (b)(1) exclusions were administratively created for the purposes of the AJD Form. These four sub-categories are not new exclusions, but are simply administrative distinctions and remain (b)(1) exclusions as defined by the NWPR.

U.S. ARMY CORPS OF ENGINEERS
REGULATORY PROGRAM
APPROVED JURISDICTIONAL DETERMINATION FORM (INTERIM)
NAVIGABLE WATERS PROTECTION RULE

D. Excluded Waters or Features

Excluded waters ((b)(1) – (b)(12))[4]:

Exclusion Name	Exclusion Size	Exclusion[5]	Rationale for Exclusion Determination
Ditch 1	700 feet	(b)(5) Ditch that is not an (a)(1) or (a)(2) water, and those portions of a ditch constructed in an (a)(4) water that do not satisfy the conditions of (c)(1)	Ditch 1 was a drainage feature observed during the April 2016 site visit. It appeared the ditch was excavated to alleviate rear yard drainage. However, during the site visit no bed or banks were observed within the ditch. In addition, no water or flow was observed in the ditch even though water was observed in the surrounding area and delineated wetlands. The ditch is not found on the USGS Clarence Center Quad. The ditch was vegetated and significantly covered in leaf litter with old fill piles and woody debris (cut logs) found throughout. The ditch is perched significantly higher in elevation then the maintained Town of Amherst ditch to the North. The ditch doesn't contribute direct flow to an A(1) water or is an A(1) water, the ditch was not constructed in a tributary, doesn't relocate a tributary nor or was the ditch constructed in an adjacent wetland. Finally, the ditch doesn't contribute perennial or intermittent flow during a particular year.
Wetland 1	0.417 acres	(b)(1) Non-adjacent wetland	In the delineation report, it states Wetland 2 is a hard wood swamp pocket located in the North portion of the delineated parcel. The soils are mapped potentially hydric. Vegetation found within this wetland is a mix of non-hydric and hydrophtic vegetation. A review of aerial imagery and other in-house resources show no drainage patterns coming or going from wetland 1. This was confirmed during the site visit. Wetland 1 is more than 41 linear feet from Ditch 1 and 100 linear feet from an excavated, maintained Town of Amherst ditch to the West. No A(1)-A(3) waters were identified directly abutting Wetland 1 during the site visit or an in-house review of aerial imagery, topo maps, the NYSDEC environmental resource or USFWS Wetland mapper. The wetland is a shallow surface concave depression that collects water and holds it long enough to provide wetland characteristics but does not drain to A (1) – A(3) waters. No natural or artificial barriers between Wetland 1 and A(1) – A(3) waters were found during the site visit. The wetland is not inundated by an A(1) – A(3) waters. Also, the NRCS/USDA Web Soil Survey "Flood Frequency Class" rating is "none" which means, "....flooding is not probable. The chance of flooding is nearly 0 percent in any year". All resources reviewed support the determination that Wetland 1 doesn't directly abut an A(1)-A(3) waters, is not separated from an A(1)-A(3) waters by a natural or man-made feature and is not adjacent to an A(1)-A(3) waters.
Wetland 2	0.398 acres	(b)(1) Non-adjacent wetland	In the delineation report, it states Wetland 2 is a hard wood/scrub-shrub swamp pocket located in the Center

[1] Map(s)/Figure(s) are attached to the AJD provided to the requestor.
[2] If the navigable water is not subject to the ebb and flow of the tide or included on the District's list of Rivers and Harbors Act Section 10 navigable waters list, do NOT use this document to make the determination. The District must continue to follow the procedure outlined in 33 CFR part 329.14 to make a Rivers and Harbors Act Section 10 navigability determination.
[3] A stand-alone TNW determination is completed independently of a request for an AJD. A stand-alone TNW determination is conducted for a specific segment of river or stream or other type of waterbody, such as a lake, where independent upstream or downstream limits or lake borders are established. A stand-alone TNW determination should be completed following applicable guidance and should NOT be documented on the AJD form.
[4] Some excluded waters, such as (b)(2) and (b)(4), may not be specifically identified on the AJD form unless a requestor specifically asks a Corps district to do so. Corps Districts may, in case-by-case instances, choose to identify some or all of these waters within the review area.
[5] Because of the broad nature of the (b)(1) exclusion and in an effort to collect data on specific types of waters that would be covered by the (b)(1) exclusion, four sub-categories of (b)(1) exclusions were administratively created for the purposes of the AJD Form. These four sub-categories are not new exclusions, but are simply administrative distinctions and remain (b)(1) exclusions as defined by the NWPR.

			portion of the delineated parcel. The soils are mapped potentially hydric. Vegetation found within this wetland is a mix of non-hydric and hydrophtic vegetation. A review of aerial imagery and other in-house resources show no drainage patterns coming or going from wetland 2. This was confirmed during the site visit. Wetland 2 is more than 60 linear feet from Ditch 1 and 350 linear feet from an excavated, maintained Town of Amherst ditch to the West. No A(1)-A(3) waters were identified directly abutting Wetland 1 during the site visit or an in-house review of aerial imagery, topo maps, the NYSDEC environmental resource or USFWS Wetland mapper. The wetland is a shallow surface concave depression that collects water and holds it long enough to provide wetland characteristics but does not drain to A (1) – A(3) waters. No natural or artificial barriers between Wetland 2 and A(1) – A(3) waters were found during the site visit. The wetland is not inundated by an A(1) – A(3) waters. Also, the NRCS/USDA Web Soil Survey "Flood Frequency Class" rating is "none" which means, "….flooding is not probable. The chance of flooding is nearly 0 percent in any year". All resources reviewed support the determination that Wetland 1 doesn't directly abut an A(1)-A(3) waters, is not separated from an A(1)-A(3) waters by a natural or man-made feature and is not adjacent to an A(1)-A(3) waters.
Wetland 3	0.11 acres	(b)(1) Non-adjacent wetland	In the delineation report, it states Wetland 3 is a hard wood/scrub-shrub swamp pocket located in the Eastern portion of the delineated parcel. The soils are mapped potentially hydric. Vegetation found within this wetland is a mix of non-hydric and hydrophtic vegetation. A review of aerial imagery and other in-house resources show no drainage patterns coming or going from wetland 3. This was confirmed during the site visit. Wetland 3 is more than 31 linear feet from Ditch 1 and 550 linear feet from an excavated, maintained Town of Amherst ditch to the West. In addition, Wetland 3 is more than 150 linear feet from Klein Road to the East but no open drainage is located along the road. No A(1)-A(3) waters were identified directly abutting Wetland 3 during the site visit or an in-house review of aerial imagery, topo maps, the NYSDEC environmental resource or USFWS Wetland mapper. The wetland is a shallow surface concave depression that collects water and holds it long enough to provide wetland characteristics but does not drain to A (1) – A(3) waters. No natural or artificial barriers between Wetland 3 and A(1) – A(3) waters were found during the site visit. The wetland is not inundated by an A(1) – A(3) waters. Also, the NRCS/USDA Web Soil Survey "Flood Frequency Class" rating is "none" which means, "….flooding is not probable. The chance of flooding is

[1] Map(s)/Figure(s) are attached to the AJD provided to the requestor.
[2] If the navigable water is not subject to the ebb and flow of the tide or included on the District's list of Rivers and Harbors Act Section 10 navigable waters list, do NOT use this document to make the determination. The District must continue to follow the procedure outlined in 33 CFR part 329.14 to make a Rivers and Harbors Act Section 10 navigability determination.
[3] A stand-alone TNW determination is completed independently of a request for an AJD. A stand-alone TNW determination is conducted for a specific segment of river or stream or other type of waterbody, such as a lake, where independent upstream or downstream limits or lake borders are established. A stand-alone TNW determination should be completed following applicable guidance and should NOT be documented on the AJD form.
[4] Some excluded waters, such as (b)(2) and (b)(4), may not be specifically identified on the AJD form unless a requestor specifically asks a Corps district to do so. Corps Districts may, in case-by-case instances, choose to identify some or all of these waters within the review area.
[5] Because of the broad nature of the (b)(1) exclusion and in an effort to collect data on specific types of waters that would be covered by the (b)(1) exclusion, four sub-categories of (b)(1) exclusions were administratively created for the purposes of the AJD Form. These four sub-categories are not new exclusions, but are simply administrative distinctions and remain (b)(1) exclusions as defined by the NWPR.

Dear Mr. Rinaldo:

Wetland CC-10
Freshwater Wetland Determination
166 Klein Road
Town of Amherst, Erie County

This letter serves as notification that Senior Ecologist Charles Rosenburg and I, accompanied by Scott Livingstone of Earth Dimensions, Inc., completed a freshwater wetland determination for Wetland CC-10 in relation to your 166 Klein Road property, parcel # 56.10-13-1, on October 7, 2015. A small wetland, 0.23 acres in size, near the north edge of your property was determined to not be part of Wetland CC-10, which is currently mapped just north of your parcel. This wetland is relatively small in size, is a single wetland (versus one of a cluster of wetlands), exhibits a seasonally saturated/ shallowly flooded hydrologic regime, lacks Class 1 wetland characteristics, and is separated by a distance of 39-meters from extensive wetland on the Town parcel to the north (i.e., close to the DEC's 50-meter limit for extending jurisdiction).

Considering the wetland characteristics described above, this Department has determined that the 0.23-acre wetland does not significantly function as a unit with the extensive wetland area to the north in providing wetland benefits. Similarly, we believe the two wetland areas are not dependent on each other in providing wetland benefits. This analysis is specific to this parcel and this circumstance has no precedential value for any other site. Finally, no other wetlands were observed within 50 meters of the extensive area of Wetland CC-10 on the Town parcel to the north. Therefore, we determined that Wetland CC-10 does not extend into the 166 Klein Road parcel.

Please note that the regulated 100-foot adjacent area associated with the Wetland CC-10 boundary we identified within the Town parcel to the north does not extend into the 166 Klein Road parcel. Therefore, there is no Article 24 Freshwater

Attachment: SUB-2021-01 application 011322 (23436 : Sub-2021-01_Sk)

Wetlands jurisdiction within the parcel, so an Article 24 Freshwater Wetlands permit is not needed for development of the parcel.

Be advised that the U.S. Army Corps of Engineers may also have wetland jurisdiction irrespective of the Department of Environmental Conservation. For more information, you may contact the Corps at:

United States Army Corps of Engineers Regulatory Branch
1776 Niagara Street
Buffalo, New York 14207
Telephone: (716) 879-4330

If you have any questions about this wetland delineation, please feel free to call me in the Buffalo office at (716) 851-7010.

Sincerely,

Angela G. Driscoll
Fish & Wildlife Technician I
Region 9 - Buffalo

ACKNOWLEDGEMENTS

Elite Construction Development Corporation has retained Earth Dimensions, Inc. (EDI) to complete a wetland delineation study for 166 Klein Road located in the Town of Amherst, County of Erie and State of New York. EDI would like to thank Copy Market, Inc. for providing the duplicating and binding services.

Attachment: SUB-2021-01 application 011322 (23436 : Sub-2021-01_SK)

EXECUTIVE SUMMARY

Elite Construction Development Corporation has proposed the development of a 5.41± acre site located on the north side of Klein Road in the Town of Amherst, County of Erie, and State of New York. Elite Construction Development Corporation has retained Earth Dimensions, Inc. (EDI) to complete a wetland delineation report that would allow the U.S. Army Corps of Engineers (USACE) and New York State Department of Environmental Conservation (NYSDEC) to determine their jurisdictional authority over the investigation area, pursuant to Section 404 of the Clean Water Act and Articles 15 (Protection of Waters) and 24 (Freshwater Wetlands) of the New York State Environmental Conservation Law.

A preliminary review of available information pertaining to vegetation, soils, and hydrology in the project area was implemented prior to conducting a field investigation at the site. Sources of information included the United States Geological Survey (USGS), Natural Resources Conservation Service (NRCS), National Wetland Inventory (NWI), and NYSDEC Freshwater Wetland maps. The NRCS map indicates the presence of hydric soils and therefore the potential wetlands under federal jurisdiction. The NYSDEC map indicates the potential for wetland under state jurisdiction.

EDI applied methodology specified by the Corps of Engineers Wetlands Delineation Manual (January 1987) and Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Northcentral and Northeast Region Version 2.0 (January 2012) to perform a delineation of Federal jurisdictional wetlands within the site. EDI identified two (2) wetland areas totaling 0.48± acre within the investigation area. One (1) linear drainage feature was identified along the eastern limits of the property during the investigation. The identification number of the wetlands, their acreage and boundary flags are as follows:

TABLE 1: WETLAND SUMMARY

Wetland Identification #	Geographic Center (NAD83)		Boundary Flag #	Total Acreage On-site	Wetland Type (Cowardin)	Wetland Type (Reschke)	Jurisdictional Determination
	Latitude	Longitude					
Wetland 1	43.00263	78.73274	W1-1 through W1-14	0.33±	PFO1E	Hardwood Swamp	Non-jurisdictional
Wetland 2	43.00355	78.73276	W2-1 through W2-12	0.15±	PFO1B	Hardwood Swamp	Non-jurisdictional
Total Wetland Acreage:				0.48±

TABLE 2: STREAM & DRAINAGE SUMMARY

Stream Identification #	Waterway	DEC Class	Linear Feet On-site	Highwater Width (Ft)	Flow Regime	Substrate	Classification (Cowardin)	Jurisdictional Determination
Stream 1	UNT to Ransom Creek	N/A	587.3 feet	3 feet	Perennial	silt, detritus	R2UB4	Jurisdictional

Attachment: SUB-2021-01 application 011322 (23436 : Sub-2021-01_SK)

SECTION I: INTRODUCTION

Elite Construction Development Corporation has proposed the development of a 5.41± acre site on the north side of Klein Road in the Town of Amherst, County of Erie, and State of New York. The project has been given the name 166 Klein Road and is located on USGS 7.5 minute quadrangle map indexed as Clarence Center/2002 DeLorme (Figure 1). The field work was completed on November 3, 2015 using a hand held Garmin GPSmap 62s to locate wetland and drainage boundaries.

Elite Construction Development Corporation has retained Earth Dimensions, Inc. (EDI) to complete a wetland delineation study at this site. The investigation was designed to facilitate a determination of the extent of USACE and NYSDEC jurisdiction over the project area pursuant to Section 404 of the Clean Water Act and Articles 15 (Protection of Waters) and 24 (Freshwater Wetlands) of the New York State Environmental Conservation Law.

EDI has performed a wetland delineation study at the site under guidelines specified by the *Corps of Engineers Wetlands Delineation Manual*, dated January 1987 (referred to hereafter as the Corps Manual) and the *Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Northcentral and Northeast Region version 2.0* (January 2012) (referred to hereafter as the Northcentral and Northeast Regional Supplement). The purpose of this report is to present EDI's methods, results, conclusions and recommendations with respect to the 166 Klein Road project site.

Attachment: SUB-2021-01 application 011322 (23436 : Sub-2021-01_SK)

SECTION II: SITE DESCRIPTION

The 166 Klein Road project area is comprised of a 5.41± acre rectangular shaped investigation area on the north side of Klein Road, east of Hopkins Road and west of Youngs Road, and is outlined on Figure 1 and depicted on the Wetland Delineation Map included in Appendix A (Figure 8).

The natural topography of the 166 Klein Road site is flat to gently sloping. The upland within the investigation area consisted of mown lawn and successional northern hardwood communities. The wetland areas were found to consist of hardwood swamp communities. The vegetative communities of the investigation area are described according to *Ecological Communities of New York State* (Edinger et al. 2014).

Attachment: SUB-2021-01 application 011322 (23436 : Sub-2021-01_SK)

SECTION III: PRELIMINARY DATA REVIEW

A. SUMMARY OF FINDINGS

Several sources of information may be reviewed to facilitate the completion of a wetland delineation study. In some cases it is even possible to make a preliminary office wetland determination based upon available vegetation, soils, and hydrologic information for a project area. EDI completed a preliminary review of several data sources at the onset of this study. The results of the review are summarized as follows:

1. USGS 7.5 MINUTE TOPOGRAPHICAL MAP

Figure 1 depicts the 166 Klein Road project site on the Clarence Center/2002 DeLorme quadrangle map. The figure depicts the flat to gently sloping topography of the site. No linear drainage features are shown within the investigation area.

2. USFWS NATIONAL WETLANDS INVENTORY MAP

Figure 2 depicts the National Wetlands Inventory (NWI) map obtained from the USFWS Wetland Mapper http://www.fws.gov/wetlands/Data/Mapper.html which shows no wetlands mapped within the investigation area.

3. NATURAL RESOURCES CONSERVATION SERVICE SOILS MAP

Figure 3 presents the project area outlined on a copy of the Erie County Soil Survey map from the National Cooperative Soil Survey. As shown on that figure, the site has the following soil types:

Soil Conservation Service Legend

Map Unit Symbol	Map Unit Name	Hydric Soil/Inclusions?
La	Lakemont silt loam, 0 to 3% slopes	Hydric Soil
Ut	Urban land-Odessa complex	Inclusions Possible

Lakemont silt loam: The Lakemont series consists of deep, poorly drained and very poorly drained soils of lake plains. They are nearly level soils formed in very slowly permeable reddish colored clayey lacustrine sediments. Slope ranges from 0 to 3 percent. Permeability is moderately slow in the surface

Attachment: SUB-2021-01 application 011322 (23436 : Sub-2021-01_SK)

and very slow in the subsoil sand substratum. Mean annual temperature is about 48°F and mean annual precipitation is about 34 inches.

Urban land-Odessa complex: This complex consists of nearly level areas of Urban land and somewhat poorly drained Odessa soils. The Odessa soils formed in clayey lake-laid sediments. The typical area of this complex is 60% Urban land that is mostly covered by concrete, asphalt, buildings or other impervious surfaces, about 25% Odessa soils, and 15% other soils.

The U.S. Department of Agriculture's National Technical Committee for Hydric Soils Criteria has developed a list of soils that often display hydric soil characteristics. Hydric soil typically forms in places of the landscape where surface water periodically collects for some time and/or where groundwater discharges are sufficient to create waterlogged or anaerobic soils. Such anaerobic soils can support the growth and survival of hydrophytic vegetation that is tolerant of such conditions. Lakemont is a hydric soil and therefore may support wetland vegetation. Wetland hydrologic conditions, hydric soils, and hydrophytic vegetation are the three criteria of a wetland.

4. NYSDEC Freshwater Wetlands Map

The NYSDEC Freshwater Wetlands map obtained from the online NYSDEC Environmental Resource Mapper displays state jurisdictional Freshwater Wetland CC-10 within and adjacent to the investigation area.

B. RESULTS OF AGENCY INFORMATION REVIEW

The preliminary data review revealed that USACE may have jurisdiction over wetlands at the project location. The evidence consisted of hydric soils and soils with possible hydric inclusions depicted within the project area as shown on the NRCS map (Figure 3). NYSDEC may also have jurisdiction over wetlands at the project location as shown on the NYSDEC Resource Mapper (Figure 4). Therefore, it was considered necessary to perform a field investigation at the site in order to determine the presence of federal and/or state protected wetlands. The methods specified in the Corps of Engineers Wetlands Delineation Manual (January 1987) and Northcentral and Northeast Regional Supplement Version 2.0 (January 2012) were employed during the field investigation. Procedures, results, and conclusions of the wetland delineation study are presented in the remainder of this report.

Attachment: SUB-2021-01 application 011322 (23436 : Sub-2021-01_Sk)

SECTION IV: FIELD INVESTIGATION PROCEDURES

WETLANDS

Step 1

EDI applied methodology specified by the 1987 Corps of Engineers Wetlands Delineation Manual and Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Northcentral and Northeast Region (Version 2.0, January 2012) to perform a delineation of Federal jurisdictional wetlands within the site. EDI used the Level 2 Routine Determination method (on-site inspection necessary) since insufficient information was available for making a determination for the entire project area. This methodology is consistent with Part IV, Section D of the Corps Manual.

Step 2

EDI's initial evaluation of the project area revealed that no atypical situations existed. If an atypical situation had existed, EDI would have used methodology outlined in Part IV, Section F of the Corps manual and/or Section 5 of the Northcentral and Northeast Supplement.

Step 3

EDI made the determination that normal environmental conditions were present, as the area was not lacking hydrophytic vegetation or hydrologic indicators due to annual, seasonal or long-term fluctuations in precipitation, surface water, or groundwater levels. The Northcentral and Northeast Supplement defines the growing season as beginning when one of the following indicators of biological activity are evident in a given year: (1) above-ground growth and development of vascular plants and/or (2) soil temperature measured at 12" below ground surface reaches 41°F. The end of the growing season is defined as the point at which deciduous species lose their leaves or the last herbaceous plants cease flowering and their leaves become dry or brown, whichever comes latest.

Step 4

In order to accurately identify the limits of various vegetative communities and extent of wetlands on-site, a routine determination method was used. As depicted in Appendix A and included in Appendix B, four (4) data points were used to characterize the site.

Attachment: SUB-2021-01 application 011322 (23436 : Sub-2021-01_SK)

Step 5

The plant community inhabiting each observation point was characterized in accordance with methods specified in the Northcentral and Northeast Regional Supplement. Dominant plant species were identified within four vegetative strata (i.e. herb, sapling/shrub, tree and liana (woody vines) at each sampling point. The Northcentral and Northeast Regional Supplement defines the vegetative strata in the following manner:

Herb – A non-woody individual of a macrophytic species. Seedlings of woody plants (including vines) that are less than 3.28 feet in height are considered to be herbs.

Sapling/Shrub – A layer of vegetation composed of woody plants < 3.0 inches in diameter at breast height but greater than 3.28 feet in height, exclusive of woody vines.

Tree – A woody plant > 3.0 inches in diameter at breast height, regardless of height (exclusive of woody vines)

Liana – A layer of vegetation in forested plant communities that consist of woody vines greater than 3.28 feet in height.

As outlined in the manual, the quadrant sizes used for the vegetative strata were (i) a 3.28-foot radius for herbs; (ii) a ten-foot radius for saplings/shrubs and woody vines; and (iii) a 30-foot radius for trees. Dominant plant species were estimated using aerial coverage methods. Dominant species are defined in the Corps Manual as the most abundant plant species that when ranked in descending order of abundance and cumulatively totaled immediately exceed 50 percent of the total dominance measure for the stratum, plus any additional species comprising 20 percent or more of the total dominance measure.

The wetland indicator status (OBL, FACW, FAC, FACU, or UPL) listed for each identified species by the U.S. Fish and Wildlife Service in the National List of Plant Species that Occur in Wetlands: Northeast (Region 1) was recorded. The U.S. Fish and Wildlife wetland indicator status listings are defined as follows:

OBL – Plants that occur almost always (estimated probability >99 percent) in wetlands under natural conditions, but which may also occur rarely (estimated probability < 1 percent) in nonwetlands.

FACW – Plants that occur usually (estimated probability >67 percent to 99 percent) in wetlands, but also occur (estimated probability 1 percent to 33 percent) in nonwetlands.

Attachment: SUB-2021-01 application 011322 (23436 : Sub-2021-01_SK)

FAC – Plants with a similar likelihood (estimated probability 33 percent to 67 percent) of occurring in both wetlands and nonwetlands.

FACU – Plants that occur sometimes (estimated probability 1 percent to <33 percent) in wetlands, but occur more often (estimated probability >67 percent to 99 percent) in nonwetlands.

UPL – Plants that occur rarely (estimated probability < 1 percent) in wetlands, but occur almost always (estimated probability >99 percent) in nonwetlands under natural conditions.

The plant community data was summarized on the data forms provided in the Northcentral and Northeast Regional Supplement included in this report as Appendix B.

Step 6

Plant data from each observation point were tested against the hydrophytic vegetation criterion specified in the Corps Manual and Northcentral and Northeast Regional Supplement. The Northcentral and Northeast Regional Supplement identifies a four-tiered approach for making a determination of whether or not the hydrophytic vegetation criteria is met for a sample plot. Indicator 1 (Rapid Test for Hydrophytic Vegetation) was first applied to determine if all dominant species across all strata are rated OBL and/or FACW. If Indicator 1 did not meet the hydrophytic vegetation criteria, Indicator 2 was then applied (dominance test); if greater than 50% of all plant species across all strata were rated OBL, FACW, or FAC, the hydrophytic vegetation criteria was considered met. In rare cases, when Indicators 1 and 2 did not meet the hydrophytic vegetation criteria but soils and hydrology criteria were met, Indicators 3 (Prevalence Index) and 4 (Morphological Adaptations) were used to make a final determination. All observation points that met the hydrophytic vegetation criterion were considered potential wetlands. Soils were then characterized.

Step 7

The Corps Manual specifies that soils need not be characterized (and are assumed hydric soils) at sampling points meeting the hydrophytic vegetation criterion if: (i) all dominant plant species have an indicator status of OBL, or (ii) all dominant species have an indicator status of OBL and/or FACW, and the wetland boundary is abrupt (at least one dominant OBL species must be present). All observation points sampled during this field investigation were examined directly for soil and hydrologic characteristics.

Attachment: SUB-2021-01 application 011322 (23436 : Sub-2021-01_SK)

Step 8

At observation points requiring a soil evaluation, soil borings were performed by an EDI Soil Scientist using methods specified in the Northcentral and Northeast Regional Supplement. Soil pits were dug using a tile spade. Testpits were generally dug to a depth of 20 inches below ground surface. Soils were examined for any of the hydric soil indicators, as outlined in the Field Indicators of Hydric Soils in the United States. A determination was made as to whether or not the hydric soil criterion was met. Soils data was recorded on the data forms included in Appendix B of this report.

Step 9

EDI's Soil Scientist examined hydrologic indicators using methods specified by the Northcentral and Northeast Regional Supplement at each observation point. The wetland hydrology criterion was met if: (i) one or more primary field indicators was materially present, (ii) available hydrologic records provided necessary evidence, or (iii) two or more secondary indicators were present. Results were recorded on data forms taken from the Corps Manual and are included in this report as Appendix B.

Step 10

A wetland determination was made for every observation point. If a sample plot met the hydrophytic vegetation, hydric soil, and wetland hydrology criteria, the area was considered to be wetland.

Step 11

Based on the results of the transected data, wetland boundaries were established for each identified wetland using survey ribbon labeled "wetland delineation" and numbered consecutively along each wetland boundary. As outlined in the Corps Manual, the placement of flags was based on the limits of areas where all three parameters were met. Wetland flags were labeled W1-1 through W1-14 and W2-1 through W2-12.

STREAMS & DRAINAGES

The federally regulated Ordinary High Water (OHW) mark of streams within the Project area were delineated utilizing the definitional criteria as presented in Title 33, Code of Federal Regulations, Part 328, and the USACE Regulatory Guidance Letter 05-05 – Guidance on Ordinary

Attachment: SUB-2021-01 application 011322 (23436 : Sub-2021-01_SK)

High Water Mark Identification. Each stream is categorized in regard to its flow regime as perennial, intermittent, or ephemeral, as defined by the USACE. The Ordinary High Water (OHW) mark for each stream is surveyed using the handheld Garmin GPSmap 62s. Each stream is assigned a letter designation, and survey points are numbered consecutively. Substrate characteristics and water depth are noted. Streams classified as AA, A, B, C, C(t) and C(ts) in the State of New York are regulated by NYSDEC under Article 15 Use and Protection of Waters. Streams are given classifications which designate the level of protection afforded to each waterbody. Class AA and A are assigned to sources of drinking water. Class B streams are best suited for swimming and other contact recreation, but not drinking water. Class C streams identify waters that support fishing and non-contact activities. A classification with (t) designates a stream with the potential to support trout populations. A classification of (ts) identifies waters that may support trout spawning. Class D waters are the lowest classification, and are often highly imperiled.

Attachment: SUB-2021-01 application 011322 (23436 : Sub-2021-01_Sk)

SECTION V: RESULTS AND CONCLUSIONS

Earth Dimensions, Inc. (EDI) has completed a wetland delineation study at 166 Klein Road located in the Town of Amherst, County of Erie, and State of New York. A field investigation was conducted by a Soil Scientist and a Wetland Ecologist from EDI. The wetland delineation study identified two (2) wetlands totaling 0.48 ± acre present within the site. In addition, a 587.3 foot linear ditch was identified along the eastern property limits. No open waterbodies were identified within the investigation area.

Figure 7 depicts the vegetative communities as they existed at the time of the investigation. The uplands within the investigation area were comprised of mown lawn and successional northern hardwood communities. The wetland areas were found to consist of hardwood swamp communities. The vegetative communities of the investigation area are described according to Ecological Communities of New York State (Edinger et al. 2014). No data was taken in the mown lawn community, however, species present were consistent with descriptions provided by Reschke.

The successional northern hardwood community was dominated by the following species: green ash (*Fraxinus pennsylvanica*), eastern cottonwood (*Populus deltoides*), black cherry (*Prunus serotina*), common buckthorn (*Rhamnus cathartica*), Tatarian honeysuckle (*Lonicera tatarica*) and common red raspberry (*Rubus ideaus*).

Wetland W1 is a 0.33± acre hardwood swamp dominated by green ash (*Fraxinus pennsylvanica*), common buckthorn (*Rhamnus cathartica*), calico aster (*Symphyotrichum lateriflorum*) and poison ivy (*Toxicodendron radicans*). Soils within wetland W1 are mapped as Lakemont Silt Loam and had a soil color of 10YR3/1 with 5% 10YR5/8 mottles. The texture is silt loam. This soil fits the NRCS F6 indicator (Redox Dark Surface). Wetland W1 has no apparent connection to drainages on-site and is therefore considered isolated and non-jurisdictional.

Wetland W2 is a 0.15± acre hardwood swamp dominated by silver maple (*Acer saccharinum*), red maple (*Acer rubrum*), green ash (*Fraxinus pennsylvanica*) and fowl mannagrass (*Glyceria striata*). Soils within wetland W1 are mapped as Lakemont Silt Loam and had a topsoil color of 10YR2/1 and a subsoil color of 10YR6/1 with 5% 10YR5/6 mottles. The texture is silt loam and very fine sandy loam.

Attachment: SUB-2021-01 application 011322 (23436 : Sub-2021-01_SK)

This soil fits the NRCS S4 indicator (Sandy Gleyed Matrix). Wetland W1 has no apparent connection to drainages on-site and is therefore considered isolated and non-jurisdictional.

Drainage 1 is identified as an unnamed tributary to Ransom Creek and flows northerly along the eastern limits of the investigation area, before turning westerly off-site to the northeast. This perennial channel is not identified by NYSDEC standards. The substrate consists of silt and detritus, with sparse vegetation along the banks. Within the project area, drainage S1 is approximately 3 feet wide (8 feet at top of bank) with an average water depth of 6 inches.

A map which depicts the site boundaries and the location of all observation points established during the field survey is included as Figure 8 in Appendix A of this report. Data forms are included as Appendix B. Appendix C includes representative photographs of the project area. Appendix D notes the references used during the preparation of this report and during the field investigation. Appendix E provides the names, addresses and phone numbers of the survey personnel involved in the wetland delineation study.

Attachment: SUB-2021-01 application 011322 (23436 : Sub-2021-01_SK)

SECTION VI: RECOMMENDATIONS

Two (2) wetland areas and one (1) linear drainage were identified during the course of a field investigation based upon the three parameter technique (vegetation, soils, and hydrology) outlined in the Corps Manual and Northcentral and Northeast Regional Supplement. It is EDI's professional opinion that the two wetland areas identified do not have a connection to Waters of the U.S. and are therefore non-jurisdictional. The unnamed tributary to Ransom Creek is assumed to be regulated by the USACE under Section 404 of the Clean Water Act. In a letter dated October 19, 2015, NYSDEC determined that wetland W2 is not connected to NYSDEC Freshwater Wetland CC-10. The letter stated that NYSDEC has no jurisdiction over any portion of the property under Article 24 of New York Conservation Law. USACE and NYSDEC approach their regulatory analyses by first considering avoidance of wetlands and minimization of wetland losses. EDI recommends the following:

(1) Submit this report to USACE with a request for a wetland boundary confirmation and jurisdictional determination.

(2) If no impacts are proposed to federal wetlands or drainages based on the outcome of the jurisdictional determination, it is the professional opinion of EDI that the project may proceed without the need for Section 404 Permit.

(3) If any federally jurisdictional wetland impacts are proposed, it is EDI's recommendation that a Joint Application for Permit and supporting documentation be submitted to the USACE and NYSDEC with a request for a Section 404 Permit and Section 401 Water Quality Certification.

HYDROLOGY

Wetland Hydrology Indicators:

Primary Indicators (minimum of one is required; check all that apply)

- ___ Surface Water (A1)
- ___ High Water Table (A2)
- ___ Saturation (A3)
- ___ Water Marks (B1)
- ___ Sediment Deposits (B2)
- ___ Drift Deposits (B3)
- ___ Algal Mat or Crust (B4)
- ___ Iron Deposits (B5)
- ___ Inundation Visible on Aerial Imagery (B7)
- ___ Sparsely Vegetated Concave Surface (B8)
- ___ Water-Stained Leaves (B9)
- ___ Aquatic Fauna (B13)
- ___ Marl Deposits (B15)
- ___ Hydrogen Sulfide Odor (C1)
- ___ Oxidized Rhizospheres on Living Roots (C3)
- ___ Presence of Reduced Iron (C4)
- ___ Recent Iron Reduction in Tilled Soils (C6)
- ___ Thin Muck Surface (C7)
- ___ Other (Explain in Remarks)

Secondary Indicators (minimum of two required)

- ___ Surface Soil Cracks (B6)
- ___ Drainage Patterns (B10)
- ___ Moss Trim Lines (B16)
- ___ Dry-Season W ater Table (C2)
- ___ Crayfish Burrows (C8)
- ___ Saturation Visible on Aerial Imagery (C9)
- ___ Stunted or Stressed Plants (D1)
- ___ Geomorphic Position (D2)
- ___ Shallow Aquitard (D3)
- ___ Microtopographic Relief (D4)
- ___ FAC-Neutral Test (D5)

Field Observations:

Surface Water Present?	Yes	No X	Depth (inches): N/A
Water Table Present?	Yes	No X	Depth (inches): N/A
Saturation Present? (includes capillary fringe)	Yes	No X	Depth (inches): N/A

[1]Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/shrub - Woody plants less than 3 in. DBH and greater than 3.28 ft (1 m) tall.

Herb - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

Woody vines - All woody vines greater than 3.28 ft in height.

Community Type: Hardwood Swamp

Hydrophytic Vegetation Present? Yes X No ____

HYDROLOGY

Wetland Hydrology Indicators:

Primary Indicators (minimum of one is required; check all that apply)

- __ Surface Water (A1)
- __ High Water Table (A2)
- __ Saturation (A3)
- __ Water Marks (B1)
- __ Sediment Deposits (B2)
- __ Drift Deposits (B3)
- __ Algal Mat or Crust (B4)
- __ Iron Deposits (B5)
- __ Inundation Visible on Aerial Imagery (B7)
- __ Sparsely Vegetated Concave Surface (B8)
- __ Water-Stained Leaves (B9)
- __ Aquatic Fauna (B13)
- __ Marl Deposits (B15)
- __ Hydrogen Sulfide Odor (C1)
- __ Oxidized Rhizospheres on Living Roots (C3)
- __ Presence of Reduced Iron (C4)
- __ Recent Iron Reduction in Tilled Soils (C6)
- __ Thin Muck Surface (C7)
- __ Other (Explain in Remarks)

Secondary Indicators (minimum of two required)

- __ Surface Soil Cracks (B6)
- __ Drainage Patterns (B10)
- __ Moss Trim Lines (B16)
- __ Dry-Season W ater Table (C2)
- __ Crayfish Burrows (C8)
- __ Saturation Visible on Aerial Imagery (C9)
- __ Stunted or Stressed Plants (D1)
- __ Geomorphic Position (D2)
- __ Shallow Aquitard (D3)
- __ Microtopographic Relief (D4)
- __ FAC-Neutral Test (D5)

Field Observations:

Surface Water Present?	Yes ____	No X	Depth (inches): N/A
Water Table Present?	Yes ____	No X	Depth (inches): N/A
Saturation Present? (includes capillary fringe)	Yes ____	No X	Depth (inches): N/A

Wetland Hydrology Present? Yes ____ No X

Re: Sketch Plan Application [SUB-02021-01SK]
Proposed 18 Lot Residential Subdivision – 166 Klein Road
Applicant: Regency Builders LLC
File No. 10066.10

Dear Tom:

Attached as Exhibit "1" is a copy of correspondence issued by Charles P. Rosenburg of the New York State Department of Environmental Conservation ("NYSDEC") dated today stating that neither NYSDEC Freshwater Wetland CC-10 nor its regulated 100-foot adjacent area extend onto the northern boundary of the property at 166 Klein Road ("Project Site") and that therefore the development of the Project Site as a residential subdivision in accordance with its existing R-3 zoning classification does not require an Article 24 Freshwater Wetlands permit from the NYSDEC.

If you have any questions regarding this letter or the status the proposed residential subdivision, please feel free to contact me at 510-4338 or via e-mail at shopkins@hsmlegal.com.

Sincerely,

HOPKINS SORGI & MCCARTHY PLLC

Sean W. Hopkins, Esq.

October 28, 2021

Mohammad Qasaymeh
33 Sanctuary Court
Buffalo, New York 14221

Dear Mohammad Qasaymeh:

Determination of No Article 24 Jurisdiction
Freshwater Wetland CC-10
166 Klein Road Parcel
Town of Amherst, Erie County

This letter serves as notification that Fish & Wildlife Technician, Molly Peck, and I completed a field inspection on October 5, 2021 of the wetland boundary delineation completed by Earth Dimensions, Inc. (EDI), within your 166 Klein Road property (Parcel 56.10-13-1) in the Town of Amherst. Scott Livingstone of EDI accompanied us. The objective of this inspection was to determine if wetlands present within the parcel meet New York State Department of Environmental Conservation (DEC) criteria for state wetlands jurisdiction.

A finger of Freshwater Wetland CC-10 is mapped within the northeast corner of this Klein Road parcel, extending eastward into the Bentley Court subdivision property. Please note that this wetland finger was legally removed pursuant to an Article 24 freshwater wetlands permit issued by the DEC in September 1986. That permit authorized construction of the Bentley Court subdivision. Subsequent to construction of this development, the true on-the-ground boundary of Wetland CC-10 is located >100 feet to the north of your Klein Road property, within the Town-owned parcel 56.01-1-4, and is separated from your property by a 75-foot wide National Grid right-of-way.

During the DEC's October 5, 2021 field inspection of your property, I verified the EDI wetland delineation which identified three small wetlands (ranging in size from 0.110 to 0.417 acre) within your property. These wetlands occur almost completely outside the former (i.e., mapped) boundary of Wetland CC-10, are relatively small in size, are not part of a vernal pool complex, exhibit a seasonally saturated/shallowly flooded hydrologic regime, lack DEC Class 1 wetland characteristics, and are separated by distances of approximately 39, 125, and 210 meters, respectively, from the current on-the-ground boundary of Wetland CC-10 within the Town-owned parcel to the north.

Considering the wetland characteristics described above, the DEC has determined that none of the three EDI-delineated wetlands substantively function as a unit with the extensive area of Wetland CC-10 to the north in providing wetland benefits. Similarly, we determined that none of the three EDI-delineated wetlands are dependent on each other or on Wetland CC-10, within the Town-owned parcel to the north, in providing wetland benefits. Therefore, we determined that Wetland CC-10 does not extend into the 166 Klein Road parcel.

Attachment: SUB-2021-01 application 011322 (23436 : Sub-2021-01_Sk)

This determination is consistent with past wetland determinations by DEC in May 1990 and October 2015. This analysis is specific to this parcel and this circumstance has no precedential value for any other site.

Please be aware that wetland boundaries may change over time and this letter does not fix wetland boundaries indefinitely. The DEC will consider this wetland determination to be valid for five (5) years from the date of this letter.

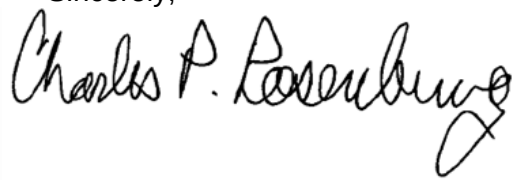
Please note that the regulated 100-foot adjacent area associated with the Wetland CC-10 boundary within the Town-owned parcel to the north does not extend into the 166 Klein Road parcel. Therefore, there is no Article 24 Freshwater Wetlands jurisdiction within the parcel, so an Article 24 Freshwater Wetlands permit is not needed for any activities proposed within the parcel.

Please be advised that the U.S. Army Corps of Engineers may have wetland jurisdiction irrespective of the Department of Environmental Conservation. For more information, you may contact the Corps at:

United States Army Corps of Engineers Regulatory Branch
1776 Niagara Street
Buffalo, New York 14207
Telephone: (716) 879-4330

If you have any questions about this wetlands determination, feel free to contact me in the Buffalo office at (716) 851-7024 or Charles.Rosenburg@dec.ny.gov.

Sincerely,



Charles P. Rosenburg

EXECUTIVE SUMMARY

OVERVIEW

The purpose of this report is to evaluate the potential traffic impacts related to the proposed residential subdivision project at 166 Klein Road in the Town of Amherst, NY. Within this report, the operating characteristics of the proposed access point and impacts to the adjacent roadway network are evaluated and recommends mitigating measures (if needed) to minimize operational concerns.

To define traffic impact, this analysis establishes existing baseline traffic conditions, projects background traffic flow including area growth, and determines the traffic operations that would result from the proposed project.

The proposed residential subdivision is located at 166 Klein Road between Kingswaye Drive and Bentley Court in the Town of Amherst, Erie County, New York. The project site is bounded by forested land to the north, residential development to the east, Klein Road to the south, and residential development to the west. Land uses in the vicinity of the proposed project include residential, medical, and service.

To ensure a comprehensive analysis of potential traffic impacts, our firm sought input from the Town of Amherst to determine the project study area. Based upon the input received, this study evaluated the existing intersections of:

- Klein Road/Hopkins Road (signalized)
- Klein Road/Kingswaye Drive (unsignalized)
- Klein Road/Bentley Court/Eastwick Drive (unsignalized)
- Klein Road/Youngs Road (signalized)

The proposed project consists of constructing 18 single family homes. Access to the proposed project will be provided via a single access point along Klein Road. **Figure 5** illustrates the proposed site plan.

Construction of the proposed project is anticipated to reach full build-out in approximately two years depending on market conditions. Town of Amherst personnel were contacted to discuss any other specific projects that are currently approved or under construction that would generate additional traffic in the study area. No projects were identified.

To account for normal increases in background traffic growth, including any unforeseen developments in the project study area, a growth rate of 0.5% was applied to the existing traffic volumes in the study area based upon a review of historical traffic information obtained from the New York State Department of Transportation.

CONCLUSIONS & RECOMMENDATIONS

This Traffic Impact Study identified and evaluated the potential traffic impacts that can be expected from the proposed residential subdivision at 166 Klein Road in the Town of Amherst, New York. The results of this study determined that the existing transportation network can adequately accommodate the projected traffic volumes and resulting minor impacts to study area intersections. The following sets forth the conclusions and recommendations based upon the results of the analyses:

Attachment: SUB-2021-01 application 011322 (23436 : Sub-2021-01_Sk)

1. The proposed project is expected to generate approximately four entering/12 exiting vehicle trips during the AM peak hour and 12 entering/seven exiting vehicle trips during the PM peak hour based upon ITE Trip Generation Manual data.

2. The existing crash investigation revealed a pattern of rear end crashes at the intersection of Klein Road/Hopkins Road and left turn crashes at the intersection of Klein Road/Youngs Road. Consideration may be given to installing "signal ahead" signs for westbound drivers approaching the intersection of Klein Road/Hopkins Road. For the intersection of Klein Road/Youngs Road, consideration may be given to modifying the signal and replacing the northbound/southbound permissive left turn movements to permissive/protected phasing. No other deficiencies were determined at this time.

3. Sufficient roadway access spacing for Klein Road is 125 feet to a conservative 245 feet from the closest edge of the pavement of one connection to the next closest edge of pavement of the next connection based upon its classification as a collector roadway and 35 mph posted speed limit.

4. Required sight distances are satisfied at the proposed site access location along Klein Road.

5. The projected minor traffic impacts resulting from full development of the proposed residential subdivision during both peak hours can be accommodated by the existing transportation network and study area intersections. No capacity improvements are required.

Attachment: SUB-2021-01 application 011322 (23436 : Sub-2021-01_Sk)

I. INTRODUCTION

The purpose of this report is to evaluate the potential traffic impacts related to the proposed residential subdivision comprised of eighteen lots for single family homes to be located at 166 Klein Road in the Town of Amherst, NY. Within this report, the operating characteristics of the proposed access point and impacts to the adjacent roadway network are evaluated and recommends mitigating measures (if needed) to minimize operational concerns.

To define traffic impact, this analysis establishes existing baseline traffic conditions, projects background traffic flow including area growth, and determines the traffic operations that would result from the proposed project.

II. LOCATION

The proposed project consisting is located at 166 Klein Road between Kingswaye Drive and Bentley Court in the Town of Amherst, Erie County, New York. The project site is bounded by forested land to the north, residential development to the east, Klein Road to the south, and residential development to the west. Land uses in the vicinity of the proposed project include residential, medical, and service.

To ensure a comprehensive analysis of potential traffic impacts, our firm sought input from the Town of Amherst to determine the project study area. Based upon the input received, this study evaluated the existing intersections of:

- Klein Road/Hopkins Road (signalized)
- Klein Road/Kingswaye Drive (unsignalized)
- Klein Road/Bentley Court/Eastwick Drive (unsignalized)
- Klein Road/Youngs Road (signalized)

The project site location and study area are illustrated in **Figure 1** (all figures are included at the end of this report).

III. EXISTING HIGHWAY SYSTEM

A. Vehicular Network Description

The following information outlined in **Table I** provides a description of the existing roadway network within project study area. **Figure 2** illustrates the lane geometry at each of the study intersections and the Annual Average Daily Traffic (AADT) volumes on the study roadways. The AADTs reflect the most recently collected data obtained from the New York State Department of Transportation (NYSDOT). Where recent data is not available, traffic data is shown as an extrapolation of turning movement counts performed by SRF Associates (SRF) in 2021.

Functional classification of highways within the study area is determined by the NYSDOT and the Federal Highway Administration (FHWA). Definitions of the functional classifications shown in Table I are provided after the table.

Kingswaye Drive, Bentley Court, and Eastwick Drive are local streets.

Attachment: SUB-2021-01 application 011322 (23436 : Sub-2021-01_Sk)

TABLE I: EXISTING HIGHWAY SYSTEM

ROADWAY	CLASS[1]	AGENCY[2]	SPEED LIMIT[3]	TRAVEL LANES[4]	TRAVEL PATTERN/ DIRECTION	EST. AADT & SOURCE[5]
Klein Road	17	Town	35	2	Two-way/ East-West	12,424 NYSDOT (2017)
Hopkins Road (CR-87)	16	ECDPW	35	2	Two-way/ North-South	11,735-14,471 NYSDOT (2017)
Youngs Road	17	Town	45	2	Two-way/ North-South	6,978-12,920 NYSDOT (2017)

Notes:
1. State Functional Classification of Roadway.
2. Jurisdictional Agency of Roadway. "ECDPW" = Erie County Department of Public Works.
3. Posted or Statewide Limit in Miles per Hour (mph).
4. Total number of travel lanes. Excludes turning/auxiliary lanes developed at intersections.
5. Estimated AADT in Vehicles per Day (vpd). AADT Source (Year). SRF data determined via extrapolation of collected turning movement counts.

Urban Minor Arterial (Class 16)

An urban minor arterial provide service for trips of moderate length, serve geographic areas that are smaller than higher arterial roadways, and offer connectivity to higher arterial systems. These roadways distribute traffic to smaller geographic areas, provide more land access without disrupting neighborhood access, and provide urban connections for rural collectors.

Urban Major Collector (Class 17)

The collector street system provides both land access service and traffic circulation in higher density residential neighborhoods and commercial and industrial areas. The collector street distributes trips from the arterials through the area to their ultimate destination and vice versa (i.e., the collector street also collects traffic from local streets in residential neighborhoods and channels it into the arterial system). The collector street system may also service bus routes. Operating characteristics tend to include higher speeds and more signalized intersections.

B. Multi-Modal Network Description

This evaluation reviewed the study area's pedestrian, bicycle, and transit network via field and aerial reconnaissance. A description of the multi-modal infrastructure is described hereafter.

Pedestrian & Bicycle Facilities

Sidewalks are present throughout the study area. Klein Road has sidewalks on both sides from Hopkins Road to Kingswaye Drive and along the south side from Kingswaye Drive to Youngs Road.

There is a bike route from Klein Road to the north along the west side of Hopkins Road. No other dedicated facilities are present; however, cyclists are permitted to share the road with motorists on all roadways within the study area.

Transit Facilities

The Niagara Frontier Transportation Authority (NFTA) provides regional bus and rail service. There are no transit facilities within the study area.

Attachment: SUB-2021-01 application 011322 (23436 : Sub-2021-01_Sk)

IV. EXISTING TRAFFIC CONDITIONS

A. Peak Intervals for Analysis

Given the functional characteristics of the corridors, adjacent land uses, and the proposed land use for the project site (residential), the peak hours selected for analysis are the weekday commuter AM and PM peak periods. The combination of site traffic and adjacent through traffic produces the greatest demand during these time periods.

B. Existing Traffic Volume Data

Turning movement traffic counts were collected by SRF at the study intersections described in Section II on Thursday, September 9, 2021. Traffic counts were conducted from 7:00-9:00 AM and 4:00-6:00 PM. The peak hour traffic periods generally occurred from 7:15-8:15 AM and 4:30-5:30 PM.

All turning movement count data was collected on a typical weekday. No adverse weather conditions impacted the traffic counts and all schools in the vicinity of the study area were in session. The traffic volumes were reviewed to confirm the accuracy and relative balance of the collective traffic counts. The actual differences in traffic volumes can be attributed to temporal variations in traffic volumes as well as activity related to driveways located in the segments between the study intersections. **Figure 3** illustrates the weekday AM and PM peak hour volumes used for analysis purposes in this study.

C. Field Observations

The study intersection was observed during both peak intervals to assess current traffic operations. Signal timing and phasing information was obtained from the Town of Amherst to determine peak hour phasing plans and phase durations during each interval. This information was used to support and/or calibrate capacity analysis models described in detail later in this report.

D. Existing Crash Investigation

The purpose of this crash analysis is to identify inherent safety issues by studying and quantifying historical crashes at the study intersections and identifying potential crash patterns and clusters.

A crash cluster is defined as an abnormal occurrence of similar crash types occurring at approximately the same location or involving the same geometric features. The severity of the crashes should also be considered. A history of crashes is an indication that further analysis is required to determine the cause(s) of the crash(es) and to identify what actions, if any, could be taken to mitigate the crashes.

A crash investigation within the study area was conducted to assess the safety history from January 1, 2017, through December 31, 2019. The data was provided by the New York State Department of Motor Vehicles through a Freedom of Information (FOIL) request.

Given that the COVID-19 pandemic influenced daily travel in 2020, any reported crashes in 2020 were dismissed from the study.

Reportable (non-injury, injury, and fatal injury) type crashes are defined as damage to one person's property in the amount of $1,001 or more. The Non-Reportable type crashes result in property damage of $1,000 or less. Crash rates were computed for the study intersection

Attachment: SUB-2021-01 application 011322 (23436 : Sub-2021-01_Sk)

and compared with NYSDOT average crash rates for similar intersections, as summarized in **Table II**. Intersection rates are listed as crashes per million entering vehicle (CR/MEV). Pertinent crash data is provided in the Appendices. There were no reported crashes at Klein Road/Kingswaye Drive.

Attachment: SUB-2021-01 application 011322 (23436 : Sub-2021-01_Sk)

Below or Above Statewide Average	2.6x Above	Below	3.7x Above

Note:
1. All roadways within the study area are not State roadways but are compared to Statewide average rates for informational purposes.

Attachment: SUB-2021-01 application 011322 (23436 : Sub-2021-01_Sk)

Two of the four study intersections reported crash rates lower than the statewide average for similar intersections. The two remaining study intersections had crash rates higher than the statewide average for similar intersections and are described in greater detail. Notable crash clusters are approaches with three or greater identifiable consistent crash types.

Klein Road/Hopkins Road

As shown in the crash investigation table, the study intersection has a crash rate that is approximately 2.6 times higher than the statewide average crash rate for similar intersections. Eight of the 18 (44%) of the reported crashes were attributed to rear end collisions. This is characteristic of moderate to heavily trafficked signalized intersections. Two of the crashes occurred in the westbound direction and were reportedly attributed to unsafe speeds. To address the rear end crashes along Klein Road, "signal ahead" warning signs should be considered in advance of the intersection for the westbound approach. The remaining causes of the rear end crashes were generally due to "following too closely."

Klein Road/Youngs Road

As shown in the crash investigation table, the study intersection has a crash rate that is approximately 3.7 times higher than the statewide average crash rate for similar intersections. Of the 23 total crashes, the predominant crash types were left turn (30%), right angle (22%), and rear end (17%). The left turn crashes primarily occurred in the northbound and southbound directions and were generally attributed to "failure to yield the right of way." Sight distance is adequate at the intersection and there is a permissive-protective left-turn phase only for the westbound. Consideration should be given to modifying the signal and replacing the northbound/southbound permissive left turn movements to permissive/protected phasing.

Of the five total right angle crashes, two were attributed to "slippery pavement", one was "driver experience", one was "traffic control devices disregarded", and one was "failure to yield the right of way." Two of the four rear end crashes occurred in the southbound direction, one occurred in the northbound direction, and one was unclassified.

V. FUTURE AREA DEVELOPMENT AND LOCAL GROWTH

Construction of the proposed eighteen (18) lot residential subdivision is anticipated to reach full build-out in approximately two years depending on market conditions. Town of Amherst personnel were contacted to discuss any other specific projects that are currently approved or under construction that would generate additional traffic in the study area. No projects were identified.

To account for normal increases in background traffic growth, including any unforeseen developments in the project study area, a growth rate of 0.5% was applied to the existing traffic volumes in the study area based upon a review of historical traffic information obtained from the NYSDOT. All ambient growth calculations are included in the Appendices. The background traffic volumes are depicted in **Figure 4**.

Attachment: SUB-2021-01 application 011322 (23436 : Sub-2021-01_Sk)

VI. PROPOSED DEVELOPMENT

A. Project Description

The proposed subdivision consists of eighteen (18) single family homes. Access to the proposed project will be provided via a single access point along Klein Road. **Figure 5** illustrates the proposed sketch plan for the residential subdivision.

B. Site Generated Traffic

The volume of traffic generated by a site is dependent on the intended land use and size of the development. Trip generation is an estimate of the number of trips generated by a specific building or land use. These trips represent the volume of traffic entering and exiting the development. Trip Generation Manual (11th Edition) published by the Institute of Transportation Engineers (ITE) is used as a reference for this information. The trip rate for the peak hour of the generator may or may not coincide in time or volume with the trip rate for the peak hour of adjacent street traffic. Volumes generated during the peak hour of the adjacent street traffic and proposed land use, in this case, the weekday commuter AM and PM peaks, represent a more critical volume when analyzing the capacity of the system; those intervals will provide the basis of this analysis.

Table III shows the total site generated trips for the weekday commuter AM and PM peak hours for the proposed project. All trip generation information has been included in the Appendices.

TABLE III: SITE GENERATED TRIPS

DESCRIPTION	ITE LUC[1]	SIZE	AM PEAK HOUR		PM PEAK HOUR	
			ENTER	EXIT	ENTER	EXIT
Single Family Housing	210	18 lots	4	12	12	7

Note:
1. LUC = Land Use Code.

The proposed residential subdivision is expected to generate approximately four entering/12 exiting vehicle trips during the AM peak hour and 12 entering/seven exiting vehicle trips during the PM peak hour based upon ITE Trip Generation Manual data.

C. Site Traffic Distribution

The cumulative effect of site-generated traffic on the transportation network is dependent on the origins and destinations of that traffic and the location of the access drives serving the site. The proposed arrival/departure distribution of traffic generated by the proposed project is considered a function of several parameters, including:

- Employment centers using Census Data
- Commercial centers
- Existing traffic patterns
- Existing traffic conditions and controls

Figure 6 shows the anticipated trip distribution pattern percentages for the traffic from the proposed project. **Figures 7** illustrates the peak hour project site-generated traffic based on those percentages.

Attachment: SUB-2021-01 application 011322 (23436 : Sub-2021-01_Sk)

VII. FULL DEVELOPMENT VOLUMES

Proposed design hour traffic volumes are developed for the AM and PM peak hours by combining the background traffic conditions (Figure 4) and the new site generated traffic volumes (Figure 7) to yield the traffic volumes under full development conditions. The resulting design hour volumes for the proposed project are illustrated in **Figure 8** under full build-out conditions.

VIII. CAPACITY ANALYSIS

A. Description of Capacity Analysis

Capacity analysis is a technique used for determining a measure of effectiveness for a section of roadway and/or intersection based on the number of vehicles during a specific time period. The measure of effectiveness used for the capacity analysis is referred to as a Level of Service (LOS). Levels of Service are calculated to provide an indication of the amount of delay that a motorist experiences while traveling along a roadway or through an intersection. Since the most amount of delay to motorists usually occurs at intersections, capacity analysis focuses on intersections, as opposed to highway segments.

Six Levels of Service are defined for analysis purposes. They are assigned letter designations, from "A" to "F", with LOS "A" representing the conditions with little to no delay, and LOS "F" conditions with very long delays. Suggested ranges of service capacity and an explanation of Levels of Service are included in the Appendices. LOS “C” or better is generally desirable, but LOS “D” for signalized locations and LOS “E” for unsignalized are generally acceptable during peak periods so long as the volume to capacity ratio (v/c) is below 1.0.

The standard procedure for capacity analysis of signalized and unsignalized intersections is outlined in the Highway Capacity Manual (HCM 2016) published by the Transportation Research Board (TRB). Traffic analysis software, Synchro 11, which is based on procedures and methodologies contained in the HCM, was used to analyze operating conditions at study area intersections. The procedure yields a Level of Service based on the HCM as an indicator of how well intersections operate.

B. Capacity Analysis Results

Existing and background operating conditions during the peak study periods are evaluated to determine a basis for comparison with the projected future conditions. The future traffic conditions generated by the project were analyzed to assess the operation of the study area intersections. Capacity results for existing, background and full development conditions are listed in **Table IV**. The discussion following the table summarizes capacity conditions.

Attachment: SUB-2021-01 application 011322 (23436 : Sub-2021-01_Sk)

Volume-to-Capacity (v/c) Ratio	***0.87***		***0.91***		***0.88***		***0.92***		***0.88***		***0.92***	

Notes:

1. A(2.8) = Level of Service (Delay in seconds per vehicle)
2. EB = Eastbound, WB = Westbound, NB = Northbound, SB = Southbound
3. (S) = Signalized; (U) = Unsignalized
4. N/A = Approach does not exist and/or was not analyzed during this condition
5. Green shaded cells indicate low delays, yellow shaded cells indicate moderate delays, red shaded cells indicate long delays.
6. The v/c ratio, also referred to as degree of saturation, represents the sufficiency of an intersection to accommodate the vehicular demand. A v/c ratio less than 0.85 generally indicates that adequate capacity is available and vehicles are not expected to experience significant queues and delays. A v/c ratio between 0.85 and 0.95 generally indicates an intersection is nearing capacity. Intersections with a v/c ratio of 1.0 or greater generally indicate conditions at or above capacity.

Attachment: SUB-2021-01 application 011322 (23436 : Sub-2021-01_Sk)

1. KLEIN ROAD/HOPKINS ROAD

During the AM peak hour, all movements generally operate at LOS "D" or better under existing conditions with short to moderate delays. While most movements operate at LOS "D" or better during the PM peak hour, the eastbound thru/right and westbound thru/right movements operate at LOS "E" with moderate to long delays and queuing under existing conditions.

Between existing and background conditions, signal optimization is recommended during the PM peak hour to reduce projected delays and queuing conditions. With signal timing changes, notably increasing the green time given to the eastbound/westbound approaches by four seconds, all movements are projected to operate at LOS "D" or better.

No changes in LOS are projected because of the proposed project. The proposed project constitutes approximately 0.45% of total intersection traffic during the AM peak hour and 0.44% during the PM peak hour.

The projected minor traffic impacts resulting from the proposed project can be sufficiently accommodated by the existing intersection and no capacity improvements are recommended.

2. KLEIN ROAD/KINGSWAYE DRIVE

All movements operate at LOS "C" or better under existing, projected background, and future build conditions during both peak hours studied. No changes in LOS are projected because of the proposed project. The projected minor traffic impacts resulting from the proposed project can be sufficiently accommodated by the existing intersection and no capacity improvements are recommended.

3. KLEIN ROAD/PROPOSED DRIVEWAY

All movements operate at LOS "C" or better under projected future build conditions during both peak hours studied.

Access Management Considerations

Section 204-3-2-4-C (10) of the Town's Subdivision Regulations states as follows: "Minor or secondary street openings into collector or major arterial roads shall, in general, be at least 500 feet apart."

As proposed, the proposed roadway will be located approximately 290.07 feet from Kingswaye Drive (measured from the closest edge of the pavement of one connection to the next closest edge of pavement of the next connection) and 266.09 feet from Bentley Court.

Generally, the spacing of driveways "should reflect a balance between traffic and engineering conditions and needs; local development objectives; and existing land use characteristics (such as lot sizes, land use type, and frontage requirements)." Desirable access spacing is based upon functional classification of prevailing roadways and posted speeds. As speed limits rise, access spacing should also increase. Desired connection spacing is as follows based upon the posted speed limit and functional classification of the roadway:

- Posted speed 35 mph or less: 125 feet (collector and local roadways)
- Posted speed 40 mph: 245 feet (collector and local roadways)
- Posted speed 45 mph or greater: 440 feet (collector and local roadways)

Attachment: SUB-2021-01 application 011322 (23436 : Sub-2021-01_Sk)

Sufficient access spacing for Klein Road is 125 feet to a conservative 245 feet from the closest edge of the pavement of one connection to the next closest edge of pavement of the next connection based upon its classification as a collector roadway and 35 mph posted speed limit.

4. KLEIN ROAD/EASTWICK DRIVE/BENTLEY COURT

All movements operate at LOS "D" or better under existing, projected background, and future build conditions during both peak hours studied. No changes in LOS are projected because of the proposed project. The projected minor traffic impacts resulting from the proposed project can be sufficiently accommodated by the existing intersection and no capacity improvements are recommended.

5. KLEIN ROAD/YOUNGS ROAD

All movements generally operate at LOS "C" or better under existing and projected background conditions with short to moderate delays during both peak hours studied. The exceptions are the eastbound thru/right and southbound thru movements, which operate at LOS "D".

No changes in LOS are projected because of the proposed project. The proposed project constitutes approximately only 0.33% of total intersection traffic during the AM peak hour and only 0.40% during the PM peak hour.

The projected minor traffic impacts resulting from the proposed project can be sufficiently accommodated by the existing intersection and no capacity improvements are recommended.

IX. SIGHT DISTANCE EVALUATION

Sight distance was investigated at the proposed site access location along Klein Road. Sight distance is provided at intersections to allow drivers to perceive the presence of potentially conflicting vehicles. This should occur in sufficient time for a motorist to stop or adjust their speed, as appropriate, to avoid a collision at the intersection. Sight distance is also provided at intersections to allow the drivers of stopped vehicles a sufficient view of the intersecting highway to anticipate and avoid potential incidents. If the available sight distance for an entering or crossing vehicle is at least equal to the appropriate Stopping Sight Distance (SSD) for the major road, then drivers have sufficient sight distance to anticipate and avoid collisions. To enhance traffic operations, Intersection Sight Distances (ISD) that exceed SSD are desirable along the major road.

A Policy on Geometric Design of Highways and Streets published by the American Association of State Highway and Transportation Officials (AASHTO) in 2011 was used as a reference to establish the required SSD and desirable ISD.

The required SSD and desirable ISD for a left turn from a stop are based on the design speed (posted plus 5 MPH) for a given section of roadway. **Table V** depicts the results.

Attachment: SUB-2021-01 application 011322 (23436 : Sub-2021-01_Sk)

TABLE V: SIGHT DISTANCE REQUIREMENT AND MEASUREMENTS

INTERSECTION	POSTED SPEED	DESIGN SPEED	REQUIRED SSD	DESIRABLE ISD	AVAILABLE SIGHT DISTANCE TO THE:	
					LEFT	RIGHT
Klein Road/ Proposed Access Road	35 mph	40 mph	305’	445’	ISD: >500’ SSD: >500’	ISD: >500’ SSD: >500’

The available sight distances exceed the required SSD and desirable ISD. No mitigation is required. Any brush and foliage along the sight lines should be maintained to ensure maximum visibility at the site access location.

X. CONCLUSIONS & RECOMMENDATIONS

This Traffic Impact Study identified and evaluated the potential traffic impacts that can be expected from the proposed residential subdivision at 166 Klein Road in the Town of Amherst, New York. The results of this study determined that the existing transportation network can adequately accommodate the projected traffic volumes and resulting minor impacts to study area intersections. The following sets forth the conclusions and recommendations based upon the results of the analyses:

1. The proposed project is expected to generate approximately four entering/12 exiting vehicle trips during the AM peak hour and 12 entering/seven exiting vehicle trips during the PM peak hour based upon ITE Trip Generation Manual data.

2. The existing crash investigation revealed a pattern of rear end crashes at the intersection of Klein Road/Hopkins Road and left turn crashes at the intersection of Klein Road/Youngs Road. Consideration may be given to installing “signal ahead” signs for westbound drivers approaching the intersection of Klein Road/Hopkins Road. For the intersection of Klein Road/Youngs Road, consideration may be given to modifying the signal and replacing the northbound/southbound permissive left turn movements to permissive/protected phasing. No other deficiencies were determined at this time.

3. Sufficient roadway access spacing for Klein Road is 125 feet to a conservative 245 feet from the closest edge of the pavement of one connection to the next closest edge of pavement of the next connection based upon its classification as a collector roadway and 35 mph posted speed limit.

4. Required sight distances are satisfied at the proposed site access location along Klein Road.

5. The projected minor traffic impacts resulting from full development of the proposed residential subdivision during both peak hours can be accommodated by the existing transportation network and study area intersections. No capacity improvements are required.

Level of Service: Criteria and Definitions

Attachment: SUB-2021-01 application 011322 (23436 : Sub-2021-01_Sk)

Level of Service Criteria

Highway Capacity Manual 2016

SIGNALIZED INTERSECTIONS

Level of Service is a qualitative measure describing operational conditions within a traffic stream, based on service measures such as speed and travel time, freedom to maneuver, traffic interruptions, comfort, and convenience. Level of Service for signalized intersections is defined in terms of delay specifically, average total delay per vehicle for a 15 minute analysis period. The ranges are as follows:

Level of Service	Control Delay per vehicle (seconds)
A	< 10
B	10 – 20
C	20 – 35
D	35 – 55
E	55 – 80
F	>80

UNSIGNALIZED INTERSECTIONS

Level of Service for unsignalized intersections is also defined in terms of delay. However, the delay criteria are different from a signalized intersection. The primary reason for this is driver expectation that a signalized intersection is designed to carry higher volumes than an unsignalized intersection. The total delay threshold for any given Level of Service is less for an unsignalized intersection than for a signalized intersection. The ranges are as follows:

Level of Service	Control Delay per vehicle (seconds)
A	< 10
B	10 – 15
C	15 – 25
D	25 – 35
E	35 - 50
F	>50

PROPERTY LOCATION
166 Klein Road

WHEREAS the Town of Amherst Planning Board on Thursday, January 13, 2022 held a public hearing on a sketch plan for an 18-lot subdivision, and

WHEREAS the Planning Board has reviewed plans and specifications for the proposed sketch plan for a subdivision, and

WHEREAS a sketch plan for a Subdivision has been referred to the Town's various review agencies, and

WHEREAS the Planning Board finds that:

1. The proposed subdivision is consistent with the intent, objectives and specific requirements of the Zoning Ordinance.

2. Adequate services and utilities are or will be available prior to occupancy.

3. The Subdivision is consistent with all other applicable laws.

4. Under Section 404 of the Clean Water Act, the US Army Corps of Engineers has determined that it has no jurisdiction.

NOW THEREFORE BE IT RESOLVED that the Planning Board, in accordance with Section 8-7 of the Zoning Ordinance and Part III of the Subdivision Regulations approves said Subdivision subject to the follow conditions:

1. The petitioner must comply with the requirements of the New York State Department of Environmental Conservation, the Town of Amherst Stormwater Management Officer, the Town of Amherst Fire Chief's Association, and the Town of Amherst Planning Department and Zoning Enforcement Officer in their respective letters, prior to approval of a preliminary plat.

NOW THEREFORE BE IT FURTHER RESOLVED that the proposed private road requires sidewalks, and that the required ramps and/or curb cuts to meet ADA compliance be included and constructed with the P.I.P. for the roadway utilities.

SUBJECT: SKETCH PLAN REVIEW, **SUB-2021-01_SK,** FOR A PROPOSED; 18-LOT SUBDIVISION; PROPERTY LOCATED AT **166 KLEIN ROAD**.

Dear Sir/Madam:

At its meeting of January 13, 2022 the Planning Board voted to **adjourn** the subject subdivision at your request.

This request will be placed on the Planning Board agenda for the February 17, 2022 meeting.

Please submit revised plans or required materials by Monday, January 31, 2022 so they may be reviewed prior to the meeting.

Should you have any questions regarding the Planning Board's decision, please do not hesitate to call us.

Very truly yours,

Daniel C. Howard, AICP
Planning Director

DOC ID: 25071

PLANNING BOARD ITEM (ID # 25071)

Request to Rezone 3.93± Acres of Land from GB to SC-3, Z-2021-10

Property located at 100 Maple Road
Aria Buf Maple LLC, Petitioner

The purpose of this rezoning request is to allow the petitioner to convert existing extended stay hotel into 112 apartments for lease. The rezoning request was a condition of the Zoning Board of Appeals Use Variance decision.

Peter Sorgi, Esq., Hopkins Sorgi & McCarthy, represented the petitioner, explained the proposal and was available to answer questions from the Board.

No further comments were heard on this proposal.

Following later discussion, Mr. Giuliani moved to approve the request based on the resolution.
The motion was seconded by Mr. Gill and carried. Ayes 4, Noes 0, Absent 3 (Chmiel, Gelber, Raffaele).

TO BE COMPLETED BY APPLICANT

1. **Petitioner:** Name: ARIA BUF MAPLE, LLC c/o Sean Hopkins, Esq.

Address: Hopkins Sorgi & McCarthy PLLC
5500 Main Street, Suite 343
Williamsville, New York 14221
City State Zip Code

Phone: 510-4338 Fax:

E Mail shopkins@hsmlegal.com

2. **The undersigned hereby petitions the Honorable Town Board to rezone the following described property**

From: GB District

To: SC-3 District

3. **Street address of land to be rezoned:** (must be verified by Town Assessor's Office)

100 Maple Road

SBL #: 55.03-1-3.12

4. **Area of land to be rezoned** (in acres): 3.93 acres

5. **Owner of Land:**

Name: ARIA BUF MAPLE, LLC

Address: 180 N. University Avenue, Suite 200, Provo Utah 84601

Telephone: 716.510-4338 [Sean Hopkins, Esq.]

6. **Representative** (Architect, Engineer, Landscape Architect, Surveyor or Attorney):

Name: Sean W. Hopkins, Esq.

Address: 5500 Main Street, Suite 343
Williamsville, New York 14221
Tel: 716.510-4338 - E-mail: shopkins@hsmlegal.com
City State Zip Code

Attachment: Z-2021-10 application 011322 (25071 : Z-2021-10)

7. **Petitioner's interest in property**

_____Option to purchase

__X__Owner

_____Other (explain) _____

8. **The following are all others having an interest in this application and join herein with the petitioner named above:** (describe extent of interest; attach sheets as needed)

Not Applicable.

9. **Attach Survey and Legal description of land to be rezoned. The Survey must be prepared by a New York State Licensed Land Surveyor.** Legal description of property to be rezoned from GB to SC-3 is attached as Exhibit "2" and copy of the Survey of the property at 100 Maple Road is attached as Exhibit "3".

10. **Said property has the following deed restrictions or Covenants:** (attach copy) Not Applicable.

Liber _____ Page _____

11. **Information on proposed project:**

A. Description of the character of the proposed development:

See Exhibit 4.

B. Rationale for rezoning request:

1. Why was this site chosen?

See Exhibit 4.

Attachment: Z-2021-10 application 011322 (25071 : Z-2021-10)

15. Open Space ownership and maintenance provisions (if applicable):

Greenspace and landscaping will be privately owned and maintained.

16. Basis for Findings (Sec. 8-3-5 of the Town Zoning Code) (Attach sheets and supplemental materials as necessary.)

A. The proposed zoning and development plan must be generally consistent with the policies of the Comprehensive Plan and the Town Zoning Ordinance.

1. State in detail why the proposed zoning is consistent with the adopted Town of Amherst Bicentennial Comprehensive Plan. Cite specific sections, maps, and/or figures in the plan that support the proposed zoning at this location (The Comprehensive Plan document is available at the Planning Department, Town Clerk's Office, Amherst libraries, or at www.amherst.ny.us). Add sheets as needed.

See Exhibit 5.

2. Pursuant to NYS Town Law Section 272a(11), "all Town land use regulations must be in accordance with a comprehensive plan adopted pursuant to this Section." The Town Board adopted the Comprehensive Plan pursuant to NYS Town Law 272 on January 2, 2007. If the rezoning is approved, the Town Board may require the Plan to be amended, as applicable.

Cite all text, map, and / or figures that must be amended to support the proposed zoning at this location (attach pages as necessary) and provide detailed suggested amendments.

See Exhibit 5.

Attachment: Z-2021-10 application 011322 (25071 : Z-2021-10)

3. State why the proposed zoning is consistent with intent and objectives (Sec. 1-2-2) of the Zoning Ordinance:

See Exhibit 5.

B. Adequate Services and Utilities are available or are proposed to be made available with the construction of the development:

1. Sanitary Sewer
   Yes.
2. Storm Sewer/Drainage
   Yes.
3. Water
   Yes.
4. Other Yes.

C. Compatibility with the present zoning and conforming uses of nearby property and with the character of the neighborhood:

See Exhibit 5.

D. Suitability of the subject property for uses permitted by the current versus the proposed district:

See Exhibit 5.

Attachment: Z-2021-10 application 011322 (25071 : Z-2021-10)

E. Whether the proposed change tends to improve the balance of uses, or meets a specific demand in the Town:

See Exhibit 5.

17. The petitioner encloses herewith the sum of $ 1,765.00 to pay the fee, and consents to the placement of a sign(s) at the described location identifying this request for a period of time to be determined by the Town Clerk.

18. The undersigned certifies that all information required to be disclosed pursuant to Section 809 of the General Municipal Law (see below) is as follows:

The undersigned swears or affirms that all statements made herein are true, that all drawings submitted correctly show the situation involved in this petition.

Commission Expires Dec. 10, 2022

N.Y.S. General Municipal Law - Section 809 Disclosure in certain applications:

1. Every application, petition or request submitted for a variance, amendment, change of zoning, approval of a plat, exemption from a plat or official map, license or permit, pursuant to the provision of any ordinance, local law, rule or regulation constituting the zoning and planning regulations of a municipality shall state the name, residence and the nature and extent of the interest of any state office or any office or employee of such municipality or of a municipality of which such municipality is a part, in the person, partnership or association making such application, petition or request (hereinafter called the applicant) to the extent known to such applicant.

Attachment: Z-2021-10 application 011322 (25071 : Z-2021-10)

2. For the purpose of this section an officer or employee shall be deemed to have an interest in the applicant when he, his spouse, or their brothers, sisters, parents, children, grandchildren, or the spouse of any of them

   (a) is the applicant, or
   (b) is an officer, director, partner or employee of the applicant, or
   (c) legally or beneficially owns or controls stock of a corporate applicant or is a member of a partnership or association applicant, or
   (d) is a party to an agreement with such an applicant, express or implied, whereby he may receive any payment or other benefit, whether or not for services rendered, dependent or contingent upon the favorable approval of such applicant, petition or request.

3. In the county of Nassau the provisions of subdivisions one and two of this section shall also apply to a party officer. "Party Officer" shall mean any person holding any position or office, whether by election, appointment or otherwise, in any party as defined by subdivision four or section two of the election law.

4. Ownership of less than five per cent of the stock of a corporation whose stock is listed on the New York or American Stock Exchanges shall not constitute an interest for the purposes of this section.

5. A person who knowingly and intentionally violates this section shall be guilty of a misdemeanor.

Instructions for Completing

Part 1 – Project Information. The applicant or project sponsor is responsible for the completion of Part 1. Responses become part of the application for approval or funding, are subject to public review, and may be subject to further verification. Complete Part 1 based on information currently available. If additional research or investigation would be needed to fully respond to any item, please answer as thoroughly as possible based on current information.

Complete all items in Part 1. You may also provide any additional information which you believe will be needed by or useful to the lead agency; attach additional pages as necessary to supplement any item.

Part 1 – Project and Sponsor Information

Name of Action or Project:
Residence Inn Residential Redevelopment Project

Project Location (describe, and attach a location map):
100 Maple Road - Town of Amherst - Erie County

Brief Description of Proposed Action:
The Project Sponsor is converting the Residence Inn by Marriott located at 100 Maple Road ("Project Site") consisting of 14 two-story buildings (8 units per building) into a multifamily housing project consisting of a total of 112 studios and 1-bedroom units. An aerial photograph of the Project Site is provided at Exhibit "6" of the Rezoning Application. The proposed rezoning of the Project Site from GB to SC-3 will not result in any potentially significant adverse environmental impacts and as the issuance of a negative declaration by the Town Board pursuant to the State Environmental Quality Review Act ("SEQRA") is appropriate and justified. The Zoning Board of Appeals previously conducted an environmental review of the redevelopment project that resulted in its issuance of a negative declaration on July 20, 2020. A copy of the negative declaration issued by the Zoning Board of Appeals is provided at Attachment "A" of this Short Environmental Assessment Form.

Name of Applicant or Sponsor:	Telephone: 716.510-4338
ARIA BUF MAPLE, LLC, LLC c/o Sean Hopkins, Esq.	E-Mail: shopkins@hsmlegal.com

Address:
5500 Main Street, Suite 343

City/PO:	State:	Zip Code:
Williamsville	NY	14221

	NO	YES
1. Does the proposed action only involve the legislative adoption of a plan, local law, ordinance, administrative rule, or regulation? If Yes, attach a narrative description of the intent of the proposed action and the environmental resources that may be affected in the municipality and proceed to Part 2. If no, continue to question 2.	☑	☐
2. Does the proposed action require a permit, approval or funding from any other government Agency? If Yes, list agency(s) name and permit or approval: Town of Amherst Town Board - Rezoning of Project Site from GB to SC-3	☐	☑

3. a. Total acreage of the site of the proposed action? 3.93 acres
   b. Total acreage to be physically disturbed? <.1 acres
   c. Total acreage (project site and any contiguous properties) owned or controlled by the applicant or project sponsor? 3.93 acres

4. Check all land uses that occur on, are adjoining or near the proposed action:

5. ☐ Urban ☐ Rural (non-agriculture) ☐ Industrial ☑ Commercial ☑ Residential (suburban)
   ☐ Forest ☐ Agriculture ☐ Aquatic ☐ Other(Specify):
   ☐ Parkland

Attachment: Z-2021-10 application 011322 (25071 : Z-2021-10)

		NO	YES	N/A
5. Is the proposed action, a. A permitted use under the zoning regulations?	[The Project Site is zoned General Business ("GB") District. The Zoning Board of Appeals granted a use variance for 1st floor apartment units during its meeting on July 20, 2020 subject to a condition that the Applicant seek a rezoning of the Project Site.]	☐	☑	☐
b. Consistent with the adopted comprehensive plan?		☐	☑	☐

	NO	YES
6. Is the proposed action consistent with the predominant character of the existing built or natural landscape?	☐	☑
7. Is the site of the proposed action located in, or does it adjoin, a state listed Critical Environmental Area? If Yes, identify: _____	☑	☐
8. a. Will the proposed action result in a substantial increase in traffic above present levels?	☑	☐
b. Are public transportation services available at or near the site of the proposed action?	☐	☑
c. Are any pedestrian accommodations or bicycle routes available on or near the site of the proposed action?	☐	☑
9. Does the proposed action meet or exceed the state energy code requirements? If the proposed action will exceed requirements, describe design features and technologies: _____ _____	☐	☑
10. Will the proposed action connect to an existing public/private water supply? If No, describe method for providing potable water: _____ _____	☐	☑
11. Will the proposed action connect to existing wastewater utilities? If No, describe method for providing wastewater treatment: _____ _____	☐	☑
12. a. Does the project site contain, or is it substantially contiguous to, a building, archaeological site, or district which is listed on the National or State Register of Historic Places, or that has been determined by the Commissioner of the NYS Office of Parks, Recreation and Historic Preservation to be eligible for listing on the State Register of Historic Places?	☑	☐
b. Is the project site, or any portion of it, located in or adjacent to an area designated as sensitive for archaeological sites on the NY State Historic Preservation Office (SHPO) archaeological site inventory?	☑	☐
13. a. Does any portion of the site of the proposed action, or lands adjoining the proposed action, contain wetlands or other waterbodies regulated by a federal, state or local agency?	☐	☑
b. Would the proposed action physically alter, or encroach into, any existing wetland or waterbody? [Note: There are not any wetlands located on the Project Site.] If Yes, identify the wetland or waterbody and extent of alterations in square feet or acres: _____ _____ _____	☑	☐

Attachment: Z-2021-10 application 011322 (25071 : Z-2021-10)

14. Identify the typical habitat types that occur on, or are likely to be found on the project site. Check all that apply:

☐ Shoreline ☐ Forest ☐ Agricultural/grasslands ☐ Early mid-successional

☐ Wetland ☐ Urban ☑ Suburban

	NO	YES
15. Does the site of the proposed action contain any species of animal, or associated habitats, listed by the State or Federal government as threatened or endangered?	☑	☐
16. Is the project site located in the 100-year flood plan?	☑	☐
17. Will the proposed action create storm water discharge, either from point or non-point sources?	☐	☑
If Yes, a. Will storm water discharges flow to adjacent properties?	☑	☐
b. Will storm water discharges be directed to established conveyance systems (runoff and storm drains)?	☐	☑
If Yes, briefly describe:		
18. Does the proposed action include construction or other activities that would result in the impoundment of water or other liquids (e.g., retention pond, waste lagoon, dam)?	☑	☐
If Yes, explain the purpose and size of the impoundment:		
19. Has the site of the proposed action or an adjoining property been the location of an active or closed solid waste management facility?	☑	☐
If Yes, describe:		
20. Has the site of the proposed action or an adjoining property been the subject of remediation (ongoing or completed) for hazardous waste?	☐	☑
If Yes, describe: The Project Site has not been the subject of remediation for hazardous waste and the Project Sponsor is not aware of any nearby sites that have been or that are subject to remediation for regulated hazardous waste.		

I CERTIFY THAT THE INFORMATION PROVIDED ABOVE IS TRUE AND ACCURATE TO THE BEST OF MY KNOWLEDGE

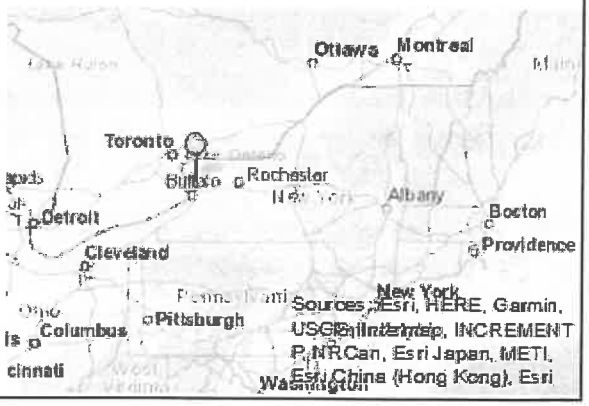
EAF Mapper Summary Report

Saturday, May 16, 2020 5:12 PM

Disclaimer: The EAF Mapper is a screening tool intended to assist project sponsors and reviewing agencies in preparing an environmental assessment form (EAF). Not all questions asked in the EAF are answered by the EAF Mapper. Additional information on any EAF question can be obtained by consulting the EAF Workbooks. Although the EAF Mapper provides the most up-to-date digital data available to DEC, you may also need to contact local or other data sources in order to obtain data not provided by the Mapper. Digital data is not a substitute for agency determinations.



Part 1 / Question 7 [Critical Environmental Area]	No
Part 1 / Question 12a [National or State Register of Historic Places or State Eligible Sites]	No
Part 1 / Question 12b [Archeological Sites]	No
Part 1 / Question 13a [Wetlands or Other Regulated Waterbodies]	Yes - Digital mapping information on local and federal wetlands and waterbodies is known to be incomplete. Refer to EAF Workbook.
Part 1 / Question 15 [Threatened or Endangered Animal]	No
Part 1 / Question 16 [100 Year Flood Plain]	No
Part 1 / Question 20 [Remediation Site]	Yes

SEQR

NEGATIVE DECLARATION

NOTICE OF DETERMINATION OF NON-SIGNIFICANCE

Lead Agency:	Town of Amherst Zoning Board of Appeals	**Action:**	Use & Area Variances
Address:	5583 Main Street Williamsville, NY 14221 (716) 631-7051	**Date:**	July 21, 2020

This notice is issued pursuant to Part 617 and Local Law #3-82, as amended, of the implementing regulations pertaining to Article 8 (State Environmental Quality Review) of the Environmental Conservation Law.

The Lead Agency has determined that the proposed action described below will not have a significant adverse effect on the environment.

Title of Action:	Use and Area Variances
SEQR Status:	Unlisted action
Description of Action:	Granting a use variance to permit ground floor apartments as a principal use within the GB- General Business zoning district and an area variance to permit a reduction in required off street parking spaces.
Location:	100 Maple Road, Town of Amherst, Erie County, New York
Petitioner:	PEG Properties, LLC

Attachment: Z-2021-10 application 011322 (25071 : Z-2021-10)

Reasons Supporting This Determination

Based on information submitted by the applicant, including a complete ZBA application, Short Environmental Assessment Form and supporting documentation, a preliminary staff analysis was undertaken. Compared to the criteria listed in Section 617.7, all indications are that the proposed request will not have a significant impact on the environment, as follows:

1. The action is not expected to cause a substantial adverse change in existing air quality, ground or surface water quality or quantity; a substantial increase in solid waste production; or a substantial increase in the potential for erosion, flooding, leaching or drainage problems.

2. The action will not result in the removal or destruction of large quantities of vegetation or fauna; or in significant adverse impacts to fish or wildlife species, habitats or other natural resources. The site is currently developed as a 112 unit motel.

3. Granting a use variance to permit ground floor apartments at the subject property and an area variance for a parking reduction is not expected to create any material conflict with the Town Comprehensive Plan. The Town's Comprehensive Plan has identified the subject property for a future rezoning to the Town's newly adopted mixed use zoning designation, which permits multifamily dwellings on the ground floor as of right. Additionally, the new mixed use regulations permit a 50 percent reduction in required off street parking. After the Town rezones the subject site to its desired mixed use zoning district the subject variances will no longer be needed.

4. The site is not within an area identified by the State as potentially containing significant cultural or archeological resources. The site is currently developed as a 112 unit motel and there will not be any impacts to cultural or archeological resources.

5. The action will not impair the character or quality of important aesthetic resources or of existing community or neighborhood character.

6. The action will not cause a change in the use or the quantity of energy.

7. The action will not create a hazard to human health.

8. The action is not anticipated to change the intensity of the land use on this site from its current use.

9. The action is not anticipated to significantly increase the number of people using the site over its current level of use.

Attachment: Z-2021-10 application 011322 (25071 : Z-2021-10)

10. Significant negative traffic impacts are not expected to result from the proposed action.

11. Coordinated reviews of the action by the Building and Planning Departments have not identified any significant environmental issues and indicate that the action will not have a significant damaging impact on the environment.

12. Issues not specifically mentioned above and/or those not specifically reviewed were not raised by Town departments, outside agencies or the public and are not determined to be causing significant negative environmental impacts.

ALL THAT TRACT OR PARCEL OF LAND situate in the Town of Amherst, County of Erie and State of New York, being part of Lot No. 73, Township 12, Range 7 of the Holland Land Company's Survey, and also known as Parcel "B" of a subdivision Map of lands of Amherst Manor Associates prepared by Charles E. Reed, Professional Land Surveyor, dated May 3, 1995, bounded and described as follows:

COMMENCING at a point marked by an iron pin at the intersection of the division line of Town Lot No. 73 and Town Lot No. 67 with the north street line of Maple Road, also known as County Road 192; thence (1) north 0° 43' 30" east along the division line between Town Lot No. 73 and Town Lot No. 67, distance of 314.30 feet to a point; thence (2) south 89° 16' 30" east along the south line of lands owned by Amherst Manor Apartments, a distance of 517.13 feet to a point; thence (3) south 0° 43' 30" east, a distance of 126.50 feet to a point; thence (4) south 36° 26' 19" west, a distance of 83.68 feet to a point; thence (5) south 0° 43' 30"E, a distance of 57.00 feet to a point; thence (6) south 27° 17' 27" east, a distance of 38.01 feet to a point; thence (7) south 0° 43' 30" east, a distance of 53.00 feet to a point on the northerly street line of Maple Road; thence (8) north 89° 16' 30" east along the northerly street line of Maple Road, a distance of 358.64 feet to the point and place of beginning.

TOGETHER with the benefits of an agreement made between Amherst Manor Associates and Rockgate Inns, A Limited Partnership dated September 19, 1996 and recorded December 8, 1998 in liber 9652 of Deeds at Page 315.

BEING MORE CURRENTLY DESCRIBED AS:

ALL THAT TRACT OR PARCEL OF LAND containing 3.931 acres more or less, situate in the Town of Amherst, County of Erie and State of New York, being part of Lot No. 73, Township 12, Range 7 of the Holland Land Company's Survey, and also known as Parcel "B" of a subdivision Map of lands of Amherst Manor Associates prepared by Charles E. Reed, Professional Land Surveyor, dated May 3, 1995, amended and described as follows:

Beginning at the intersection of the division line of Town Lots 73 and 67 with the northerly right-of-way line of Maple Road (County Road 192)(85' Right-of-Way); thence

1. S89°16'22"W, along said northerly right-of-way line of Maple Road, a distance of 358.64 feet to a point on the westerly boundary line of Lands now or formerly of 83 Maple Road (T.A. No. 055.003-0001-003.011) being Parcel A of the Amherst Manor Associates Subdivision; thence

The following 5 (five) courses are along said westerly boundary line of Parcel A:

2. N00°43'30"W, a distance of 53.00 feet to a point; thence
3. N27°27'27"W, a distance of 38.01 feet to a point; thence
4. N00°43'30"W, a distance of 57.00 feet to a point; thence
5. N56°34'17"E, a distance of 80.88 feet to a point; thence
6. N00°43'30"W, a distance of 126.50 feet to a point on the southerly boundary line of lands now or formerly of Amherst Manor LLC (T.A. No. 055.003-0001-002); thence
7. N89°16'22"E, along said southerly boundary line of Amherst Manor LLC, a distance of 517.13 feet to a point on the westerly boundary line of lands now or formerly of Thai & Hoyen Nguyen (T.A. No. 055.003-0001-005); thence
8. S00°43'23"W, along said westerly boundary of Nguyen, a distance of 314.30 feet to the Point of Beginning.

TOGETHER with the benefits of an Agreement made between Amherst Manor Associates and Rockgate Inns, A Limited Partnership dated September 19, 1996 and recorded December 8, 1998 in liber 9652 of Deeds at Page 315.

TO: ROCKGATE INNS, A LIMITED PARTNERSHIP; A KANSAS LIMITED PARTNERSHIP; U.S. BANK, NATIONAL ASSOCIATION; WELLS FARGO BANK, N.A., ITS SUCCESSORS AND/OR ASSIGNS AND MONROE TITLE INSURANCE COMPANY:

THIS IS TO CERTIFY THAT THIS MAP OR PLAT AND THE SURVEY ON WHICH IT IS BASED WERE MADE IN ACCORDANCE WITH THE "MINIMUM STANDARD DETAIL REQUIREMENTS FOR ALTA/ACSM LAND TITLE SURVEYS," JOINTLY ESTABLISHED AND ADOPTED BY ALTA AND NSPS IN 2005, AND INCLUDES ITEMS 2, 3, 4, 6, 7(a), 7(b)(1), 7(c)(1), 7(d), 8, 9, 10, 11(a), AND 13 OF TABLE A THEREOF. PURSUANT TO THE ACCURACY STANDARDS AS ADOPTED BY ALTA AND NSPS AND IN EFFECT ON THE DATE OF THIS CERTIFICATION, UNDERSIGNED FURTHER CERTIFIES THAT IN MY PROFESSIONAL OPINION, AS A LAND SURVEYOR REGISTERED IN THE STATE OF NEW YORK, THE RELATIVE POSITIONAL ACCURACY OF THIS SURVEY DOES NOT EXCEED THAT WHICH IS SPECIFIED THEREIN.

EXHIBIT 4

REZONING OF 100 MAPLE ROAD FROM GB TO SC-3

Question 11(A): Description of the character of the proposed development:

Response to Question 11(A): The Applicant is seeking to amend the zoning classification of 100 Maple Road ("Project Site") from GB to SC so that the zoning classification will be consistent with the continued use of the Project Site as a multifamily project of 112 attached residential units for lease consisting of studio and one-bedroom units. An 11" x 17" size copy of the Site Plan [Drawing C-100] depicting the layout of the project is attached as **Exhibit "8"**. A color aerial photograph of the Project Site is attached as **Exhibit "6"**.

Question 11(B)(1): Rationale for rezoning request: 1. What was this site chosen?

Response to Question 11(B)(1): The Project Site is an appropriate location for the requested rezoning from GB to SC-3 given that Figure 6-A of the adopted Comprehensive designates the Project Site as appropriate as Suburban Corridor. A copy of Figure 6-A of the Comprehensive Plan is attached as **Exhibit "7"**.

Question 11(B)(2): Why cannot land be used with the existing zoning?

Response to Question 11(B)(2): The Project Site is currently zoned General Business District ("GB"), a zoning classification which does not permit first floor residential units. As such, the rezoning of the Project Site is necessary in connection with the continued long-term use of the Project Site as a project that includes first floor residential units for lease.

Attachment: Z-2021-10 application 011322 (25071 : Z-2021-10)

Question 11(B)(3): How will this rezoning impact surrounding properties?

Response to Question 11(B)(3): The requested rezoning of the Project Site from GB to DC-5 to accommodate the continued use of the Project Site as a residential project consisting of attached residential units for lease will not have any impacts on surrounding properties.

Question 11(B)(4): How will this rezoning impact the school system?

Response to Question 11(B)(4): The proposed project will have positive impacts on the school district since the property taxes that will be generated on an annual basis will be greater than the cost of providing educational services to the minimal number of school age children that will reside in the project. The demand for educational services for the project will be low given that the project is comprised exclusively of studios and one-bedroom units.

EXHIBIT 5

REZONING OF 100 MAPLE ROAD FROM GB TO SC-3

Question 16(A)(1): **State in detail why the proposed zoning is consistent with the adopted Town of Amherst Bicentennial Comprehensive Plan. Cite specific sections, maps and/or figures in the plan that support the proposed zoning at this location.**

Response to Question 16(A)(1): The Town of Amherst adopted the Bicentennial Comprehensive Plan in January of 2007 after completing a lengthy planning process that included numerous public meetings and public hearings involving the Comprehensive Plan Advisory Committee, the Planning Board and the Town Board.[1] On December 14, 2020, the Town Board most recently adopted amendments to the Bicentennial Comprehensive Plan.

Figure 6-A of the adopted Bicentennial Comprehensive Plan is the titled Commercial and Mixed-Use Designations and it depicts the Project Site as appropriate for Suburban Corridor designation. A color copy of Figure 6 of the Comprehensive Plan is provided at **Exhibit "7"**.

Question 16(A)(2): **Cite all text, map, and/or figures that must be amended to support the proposed zoning at this location and provide detailed suggested amendments.**

Response to Question 16(A)(2): The rezoning of the Project Site from GB to SC-3 to accommodate the continued use of the Project Site as a multifamily project does not require an amendment of the Comprehensive Plan.

---

[1] A copy of the resolution adopted by the Town Board on January 2, 2007 for the purpose of adopting the Bicentennial Comprehensive Plan pursuant to Town Law Section 272-a is included at the beginning of the Comprehensive Plan. This resolution recites the lengthy planning history that incorporated numerous opportunities for public input as well as a coordinated environmental review pursuant to SEQRA that involved the preparation a Generic EIS and the issuance of a Findings Statement.

Attachment: Z-2021-10 application 011322 (25071 : Z-2021-10)

Question 16(A)(3): State why the proposed zoning is consistent with intent and objectives (Sec. 1-2-2) of the Zoning Ordinance:

Response to Question 16(A)(3): Section 1-2-1 of the Zoning Code is titled "Purpose" and it states as follows:

> *"The purpose of this Zoning Ordinance and the intent of the legislative authority in its adoption is to promote the environment of the town and its public health, safety, convenience, comfort, prosperity and the general welfare by regulating the use of buildings, other structures and land for residences, open space, public facilities, business, services, industry or other purposes; by regulating and restricting the bulk, height, design, building coverage and location of structures; by regulating and limiting population density; and for the aforesaid purposes, to divide the land within the limits of the town into districts of such number and dimensions generally consistent with the policies of the Comprehensive Plan and to provide procedures for the administration and amendment of said Zoning Ordinance."*

The proposed rezoning of the Project Site from GB to SC-3 to accommodate the continued use of the Project Site as a multifamily project is consistent with the "Purpose" of the Zoning Code. Section 1-2-2 of the Zoning Code sets forth the objectives of the Zoning Code. This section of the Zoning Code lists thirteen objectives that are discussed below as follows:

A. To protect the character and values of residential, institutional and public uses, business, commercial and manufacturing uses and to insure their orderly and beneficial development;

Response: The proposed rezoning of the Project Site from GB to SC-3 to accommodate the continued use of the Project Site for residential purposes will be consistent with the objective of protecting the character and value of existing land uses.

B. To provide adequate open spaces for light, air and outdoor uses to include public, common and private open space areas;

Response: The proposed rezoning of the Project Site from GB to SC-3 will not be inconsistent with this objective.

Attachment: Z-2021-10 application 011322 (25071 : Z-2021-10)

C. To prevent overcrowding of land;

Response: The project is consistent with the type of development designated as appropriate for the Project Site.

D. To prevent excessive concentration of population and to prevent spare and uncoordinated development;

Response: The proposed rezoning of the Project Site from GB to SC-3 will not result in excessive concentration of population.

E. To regulate and control the location and spacing of buildings on the lot and in relation to the surrounding property generally consistent with the policies of the Comprehensive Plan.

Response: The responses to the Questions in Section 16 of the Rezoning Application as set forth above states the reasons the proposed rezoning is consistent with the policies of the Comprehensive Plan.

F. To protect persons and property from damage and injury due to fire or flood;

Response: The requested rezoning of the Project Site from GB to SC-3 will not result in any concerns regarding the protection of persons and property from damage and injury due to fire or flooding.

G. To preserve and protect significant natural features and vegetation, thereby preventing ecological damage and visual blight which occur when those features or vegetation are eliminated or substantially altered to serve development purposes only.

Response: The proposed rezoning of the Project Site from GB to SC-3 is not inconsistent with this objective. There are not significant natural features located on the Project Site.

H. To assure that structure and land use arrangements are aesthetically harmonious with nearby areas and structures.

Response: The propose rezoning of the Project Site from GB to SC-3 is not inconsistent with this objective.

Attachment: Z-2021-10 application 011322 (25071 : Z-2021-10)

I. To regulate the location of buildings and intensity of uses in relation to streets according to plans so as to cause the least interference with and be damaged least by traffic movements and hence result in lessened street congestion and improved public safety.

Response: The proposed rezoning will not result in any changes to the existing access onto Maple Road. No new driveway connections to the roadway network are being proposed.

J. To establish zoning patterns that insure economical extensions for sewers, water supply waste disposal and other public utilities, as well as development of recreation, schools and other public facilities;

Response: The Project Site has access to sanitary sewer and water lines as well as necessary public utilities to continue to service the multifamily project.

K. To guide the future development of the town so as to being the gradual conformity of land, structures and uses generally consistent with the policies of the Comprehensive Plan.

Response: The proposed rezoning of the Project Site from GB to SC-3 is consistent with this objective since the existing multifamily project is consistent with the policies contained in the Comprehensive Plan.

L. To accomplish the specific intents and goals set forth in the introduction to the respective sections.

Response: The proposed rezoning of the Project Site from GB to SC-3 is consistent with this objective.

M. To protect the community from visual pollution resulting from the unregulated use of signs and other advertising devices.

Response: The proposed rezoning of the Project Site from GB to SC-3 is not inconsistent with this objective.

Attachment: Z-2021-10 application 011322 (25071 : Z-2021-10)

Question 16(C): **Compatibility with the present zoning and conforming uses of nearby property and with the character of the neighborhood:**

Response to Question 16(C): The proposed rezoning of the Project Site from GB to SC-3 is compatible with the present zoning and conforming uses of nearby properties and the character of the neighborhood. The Project Site is currently zoned GB which would allow more intensive land uses.

Question 16(D): **Suitability of the subject property for uses permitted by the current versus the proposed district:**

Response to Question 16(D): The Project Site is suitable for uses permitted by both the existing GB zoning classification and the proposed SC-3 zoning classification.

Question 16(E): **Whether the proposed change tends to improve the balance of uses, or meets a specific demand in the Town:**

Response to Question 16(D): The proposed change in the zoning classification of the Project Site from GB to SC-3 to accommodate the continued use of the Project Site as a multifamily project will have positive impacts on the balance of uses in the Town by providing smaller apartments that are affordable. The proposed zoning classification is consistent with the recommended land use per the adopted Comprehensive Plan.

TOGETHER WITH the benfits of an Agreement made between Amherst Manor Associates and Rockgate Inns, A Limited Partnership datedd September 19, 1986 and recorded December 8, 1986 in Liber 9652 of Deeds at Page 315.

TO: ROCKGATE INNS, A LIMITED PARTNERSHIP, A KANSAS LIMITED PARTNERSHIP; U.S. BANK, NATIONAL ASSOCIATION; WELLS FARGO BANK, N.A., ITS SUCCESSORS AND/OR ASSIGNS AND MONROE TITLE INSURANCE COMPANY:

THIS IS TO CERTIFY THAT THIS MAP OR PLAT AND THE SURVEY ON WHICH IT IS BASED WERE MADE IN ACCORDANCE WITH THE "MINIMUM STANDARD DETAIL REQUIREMENTS FOR ALTA/ACSM LAND TITLE SURVEYS," JOINTLY ESTABLISHED AND ADOPTED BY ALTA AND NSPS IN 2005, AND INCLUDES ITEMS 2, 3, 4, 6, 7(a), 7(b)(1), 7(b)(2), 7(c), 8, 9, 10, 11(a) AND 13 OF TABLE A THEREOF. PURSUANT TO THE ACCURACY STANDARDS AS ADOPTED BY ALTA AND NSPS AND IN EFFECT ON THE DATE OF THIS CERTIFICATION, UNDERSIGNED FURTHER CERTIFIES THAT IN MY PROFESSIONAL OPINION, AS A LAND SURVEYOR REGISTERED IN THE STATE OF NEW YORK, THE RELATIVE POSITIONAL ACCURACY OF THIS SURVEY DOES NOT EXCEED THAT WHICH IS SPECIFIED THEREIN.

TOWN OF AMHERST
PLANNING BOARD
ZONING RESOLUTION
Z-2021-10

PETITIONER

ARIA BUF MAPLE, LLC
180 N. University Ave., Suite 200
Provo, UT 84601

PROPERTY LOCATION

100 Maple Road

WHEREAS the Town of Amherst Planning Board on Thursday, January 13, 2022 held a virtual public hearing on the proposed rezoning of land from General Business District (GB) to Shallow-Corridor-3 District (SC-3), and

WHEREAS the Planning Board has reviewed plans and other materials regarding the rezoning proposal, and

WHEREAS the materials and plans have been referred to the Town's various review agencies, and

WHEREAS in accordance with Section 8-3-5 of the Zoning Ordinance the Planning Board finds that:

A. The proposed zoning and development plan **is** generally consistent with the policies of the Comprehensive Plan and the Zoning Ordinance.

B. The proposal is consistent with the Conceptual Land Use Plan (Figure 6 of the Bicentennial Comprehensive Plan) which shows commercial office on this parcel surrounded by mixed residential uses. The proposal is also consistent with the Figure 6A of the Plan which recommends the "Maple/Amherst Manor" neighborhood be redeveloped in mixed-use manner.

C. The proposal is consistent with Section 5A-3-3, "Shallow Corridor 3 (SC-3)" because it reuses an existing motel site for a permitted use (multi-family residences) and utilizes a private access drive behind the existing 2½-story buildings.

D. There are adequate services and utilities available or proposed to be made available in the redevelopment of the parcel.

E. The proposal is compatible with the proposed zoning and conforming uses of nearby property and the character of the neighborhood.

F. The subject property is suitable for uses permitted by the current versus the proposed district.

G. The proposed change does tend to improve the balance of uses, or meets a specific demand in the Town.

H. Review by the US Army Corps of Engineers under Section 404 of the Clean Water Act may be waived because the parcel is developed.

WHEREAS pursuant to Local Law #3-82, as amended, the Planning Board recommends that the Town Board determine that the requirements of SEQR are complete and that the subject proposal is not expected to have a significant adverse effect on the environment.

NOW THEREFORE BE IT RESOLVED that the Planning Board recommends to the Town Board in accordance with Section 8-3-4 of the Zoning Ordinance, that the rezoning request be approved subject to the following conditions:

1. The project shall require Minor Site Plan Review and Approval for the revision to the site indicated on the plan submitted with the application dated 9/2020.

The foregoing resolution was adopted by the Town of Amherst Planning Board, _____; moved by - _____; seconded by - _____; ayes _, noes _; absent - ____.

PLANNING BOARD ITEM (ID # 25094)

Proposed Local Law to Amend the Zoning Ordinance: Amendments to Chapter 203, Part 5A MIXED USE DISTRICTS, ZTA-2021-02

Town of Amherst, Petitioner

The draft local law is an amendment to the Town Zoning Ordinance which amends the text of the recently adopted Mixed-Use regulations. The amendments are necessary based on challenges experienced by the Planning Department with the application of the regulations and practical difficulties which may be encountered for land owners during redevelopment. The initial changes include, the ability to permit new buildings and additions without a required second functional story, allowing for decorative architectural elements up to 48" above the roof height, permitting pole signs within the center and corridor zoning districts and prohibiting such signs within the traditional infill districts, increased door entrance spacing in the village frontage type, flexibility in the block perimeter requirement when existing conditions present practical difficulties and permitting drive up ATM machines as an accessory use within the shallow corridor district. Subsequent draft changes to the Mixed-Use regulations are anticipated in the future after the Planning Department has consulted with its Code consultant.

Daniel Ulatowski, Assistant Planning Director, represented the petitioner, explained the proposal and was available to answer questions from the Board.

In response to the Board's questions, Mr. Ulatowski stated requiring 10% of parking spaces to be equipped with electronic vehicle charging stations is too excessive, requiring 1% of parking spaces to be equipped with electronic vehicle charging stations is more realistic and accurate based on usage.

No further comments were heard on this proposal.

Following discussion, Mr. Giuliani moved to approve the request based on the resolution. The motion was seconded by Mr. Gill and carried. Ayes 4, Noes 0, Absent 3 (Chmiel, Gelber, Raffaele).

Full Environmental Assessment Form
Part 1 - Project and Setting

Instructions for Completing Part 1

Part 1 is to be completed by the applicant or project sponsor. Responses become part of the application for approval or funding, are subject to public review, and may be subject to further verification.

Complete Part 1 based on information currently available. If additional research or investigation would be needed to fully respond to any item, please answer as thoroughly as possible based on current information; indicate whether missing information does not exist, or is not reasonably available to the sponsor; and, when possible, generally describe work or studies which would be necessary to update or fully develop that information.

Applicants/sponsors must complete all items in Sections A & B. In Sections C, D & E, most items contain an initial question that must be answered either "Yes" or "No". If the answer to the initial question is "Yes", complete the sub-questions that follow. If the answer to the initial question is "No", proceed to the next question. Section F allows the project sponsor to identify and attach any additional information. Section G requires the name and signature of the applicant or project sponsor to verify that the information contained in Part 1is accurate and complete.

A. Project and Applicant/Sponsor Information.

Name of Action or Project: Zoning Text Amendment - Part 5A		
Project Location (describe, and attach a general location map): Town-wide		
Brief Description of Proposed Action (include purpose or need): Text amendments to the Mixed Use regulations (Part 5A) of the Town of Amherst Zoning Ordinance (Chapter 203). Text amendments include the removal of a requirement that new buildings and additions be provided with a required second functional story, allowing for decorative architectural elements of 48" above the roof height, permitting pole signs within the center and corridor zoning districts and prohibiting such signs within the traditional infill districts, increasing the door entrance spacing in the village frontage type to 50 feet and an amendment to the block perimeter requirement when existing conditions present practical difficulties.

B. Government Approvals

B. Government Approvals, Funding, or Sponsorship. ("Funding" includes grants, loans, tax relief, and any other forms of financial assistance.)

Government Entity	If Yes: Identify Agency and Approval(s) Required	Application Date (Actual or projected)
a. City Counsel, Town Board, or Village Board of Trustees ☑Yes ☐No	Town Board (Legislative Approval)	
b. City, Town or Village Planning Board or Commission ☑Yes ☐No	Planning Board (Advisory)	December 13,2021
c. City, Town or Village Zoning Board of Appeals ☐Yes ☐No		
d. Other local agencies ☐Yes ☑No		
e. County agencies ☐Yes ☑No		
f. Regional agencies ☐Yes ☑No		
g. State agencies ☐Yes ☑No		
h. Federal agencies ☐Yes ☑No		

i. Coastal Resources.

i. Is the project site within a Coastal Area, or the waterfront area of a Designated Inland Waterway? ☐Yes ☑No

ii. Is the project site located in a community with an approved Local Waterfront Revitalization Program? ☑Yes ☐No

iii. Is the project site within a Coastal Erosion Hazard Area? ☐Yes ☑No

C. Planning and Zoning

C.1. Planning and zoning actions.

Will administrative or legislative adoption, or amendment of a plan, local law, ordinance, rule or regulation be the only approval(s) which must be granted to enable the proposed action to proceed? ☑Yes ☐No

- **If Yes,** complete sections C, F and G.
- **If No,** proceed to question C.2 and complete all remaining sections and questions in Part 1

C.2. Adopted land use plans.

a. Do any municipally- adopted (city, town, village or county) comprehensive land use plan(s) include the site where the proposed action would be located? ☑Yes ☐No

If Yes, does the comprehensive plan include specific recommendations for the site where the proposed action would be located? ☐Yes ☑No

b. Is the site of the proposed action within any local or regional special planning district (for example: Greenway; Brownfield Opportunity Area (BOA); designated State or Federal heritage area; watershed management plan; or other?) ☐Yes ☑No

If Yes, identify the plan(s):

_____

_____

_____

c. Is the proposed action located wholly or partially within an area listed in an adopted municipal open space plan, or an adopted municipal farmland protection plan? ☐Yes ☑No

If Yes, identify the plan(s):

_____

_____

_____

Attachment: ZTA-2021-02_011322 (25094 : Zta-2021-02)

C.3. Zoning

a. Is the site of the proposed action located in a municipality with an adopted zoning law or ordinance. ☑ Yes ☐ No
If Yes, what is the zoning classification(s) including any applicable overlay district?

b. Is the use permitted or allowed by a special or conditional use permit? n/a ☐ Yes ☐ No

c. Is a zoning change requested as part of the proposed action? ☐ Yes ☑ No
If Yes,
i. What is the proposed new zoning for the site?

C.4. Existing community services.

a. In what school district is the project site located? Sweet Home, Williamsville, Amherst, Clarence

b. What police or other public protection forces serve the project site?
Town of Amherst Police Department

c. Which fire protection and emergency medical services serve the project site?
Snyder, Main-Transit, East Amherst, Getzville, North Amherst, Swormville, Ellicott Creek, North Bailey, Eggertsville, Willliamsville

d. What parks serve the project site?
All Town of Amherst parks

D. Project Details

D.1. Proposed and Potential Development

a. What is the general nature of the proposed action (e.g., residential, industrial, commercial, recreational; if mixed, include all components)?

b. a. Total acreage of the site of the proposed action? _____ acres
b. Total acreage to be physically disturbed? _____ acres
c. Total acreage (project site and any contiguous properties) owned or controlled by the applicant or project sponsor? _____ acres

c. Is the proposed action an expansion of an existing project or use? ☐ Yes ☐ No
i. If Yes, what is the approximate percentage of the proposed expansion and identify the units (e.g., acres, miles, housing units, square feet)? % _____ Units: _____

d. Is the proposed action a subdivision, or does it include a subdivision? ☐ Yes ☐ No
If Yes,
i. Purpose or type of subdivision? (e.g., residential, industrial, commercial; if mixed, specify types)
ii. Is a cluster/conservation layout proposed? ☐ Yes ☐ No
iii. Number of lots proposed? _____
iv. Minimum and maximum proposed lot sizes? Minimum _____ Maximum _____

e. Will the proposed action be constructed in multiple phases? ☐ Yes ☐ No
i. If No, anticipated period of construction: _____ months
ii. If Yes:
- Total number of phases anticipated _____
- Anticipated commencement date of phase 1 (including demolition) _____ month _____ year
- Anticipated completion date of final phase _____ month _____year
- Generally describe connections or relationships among phases, including any contingencies where progress of one phase may determine timing or duration of future phases:

Attachment: ZTA-2021-02_011322 (25094 : Zta-2021-02)

f. Does the project include new residential uses? ☐Yes☐

If Yes, show numbers of units proposed.

	One Family	Two Family	Three Family	Multiple Family (four or more)
Initial Phase	_____	_____	_____	_____
At completion of all phases	_____	_____	_____	_____

g. Does the proposed action include new non-residential construction (including expansions)? ☐Yes☐No

If Yes,

i. Total number of structures _____

ii. Dimensions (in feet) of largest proposed structure: _____height; _____width; and _____ length

iii. Approximate extent of building space to be heated or cooled: _____ square feet

h. Does the proposed action include construction or other activities that will result in the impoundment of any liquids, such as creation of a water supply, reservoir, pond, lake, waste lagoon or other storage? ☐Yes☐No

If Yes,

i. Purpose of the impoundment: _____

ii. If a water impoundment, the principal source of the water: ☐ Ground water ☐ Surface water streams ☐Other specify:

_____

iii. If other than water, identify the type of impounded/contained liquids and their source.

_____

iv. Approximate size of the proposed impoundment. Volume: _____ million gallons; surface area: _____ acres

v. Dimensions of the proposed dam or impounding structure: _____ height; _____ length

vi. Construction method/materials for the proposed dam or impounding structure (e.g., earth fill, rock, wood, concrete):

_____

D.2. Project Operations

a. Does the proposed action include any excavation, mining, or dredging, during construction, operations, or both? ☐Yes☐No
(Not including general site preparation, grading or installation of utilities or foundations where all excavated materials will remain onsite)

If Yes:

i .What is the purpose of the excavation or dredging? _____

ii. How much material (including rock, earth, sediments, etc.) is proposed to be removed from the site?

- Volume (specify tons or cubic yards): _____
- Over what duration of time? _____

iii. Describe nature and characteristics of materials to be excavated or dredged, and plans to use, manage or dispose of them.

_____

_____

iv. Will there be onsite dewatering or processing of excavated materials? ☐Yes☐No
If yes, describe. _____

_____

v. What is the total area to be dredged or excavated? _____acres

vi. What is the maximum area to be worked at any one time? _____ acres

vii. What would be the maximum depth of excavation or dredging? _____ feet

viii. Will the excavation require blasting? ☐Yes☐No

ix. Summarize site reclamation goals and plan: _____

_____

_____

b. Would the proposed action cause or result in alteration of, increase or decrease in size of, or encroachment into any existing wetland, waterbody, shoreline, beach or adjacent area? ☐Yes☐No

If Yes:

i. Identify the wetland or waterbody which would be affected (by name, water index number, wetland map number or geographic description): _____

_____

Attachment: ZTA-2021-02_011322 (25094 : Zta-2021-02)

ii. Describe how the proposed action would affect that waterbody or wetland, e.g. excavation, fill, placement of structures, or alteration of channels, banks and shorelines. Indicate extent of activities, alterations and additions in square feet or acres:

_____

_____

_____

_____

iii. Will the proposed action cause or result in disturbance to bottom sediments? ☐Yes ☐No

If Yes, describe: _____

iv. Will the proposed action cause or result in the destruction or removal of aquatic vegetation? ☐Yes ☐No

If Yes:

- acres of aquatic vegetation proposed to be removed: _____
- expected acreage of aquatic vegetation remaining after project completion: _____
- purpose of proposed removal (e.g. beach clearing, invasive species control, boat access): _____

_____

- proposed method of plant removal: _____
- if chemical/herbicide treatment will be used, specify product(s): _____

v. Describe any proposed reclamation/mitigation following disturbance: _____

_____

c. Will the proposed action use, or create a new demand for water? ☐Yes ☐No

If Yes:

i. Total anticipated water usage/demand per day: _____ gallons/day

ii. Will the proposed action obtain water from an existing public water supply? ☐Yes ☐No

If Yes:

- Name of district or service area: _____
- Does the existing public water supply have capacity to serve the proposal? ☐Yes ☐No
- Is the project site in the existing district? ☐Yes ☐No
- Is expansion of the district needed? ☐Yes ☐No
- Do existing lines serve the project site? ☐Yes ☐No

iii. Will line extension within an existing district be necessary to supply the project? ☐Yes ☐No

If Yes:

- Describe extensions or capacity expansions proposed to serve this project: _____

_____

- Source(s) of supply for the district: _____

iv. Is a new water supply district or service area proposed to be formed to serve the project site? ☐Yes ☐No

If, Yes:

- Applicant/sponsor for new district: _____
- Date application submitted or anticipated: _____
- Proposed source(s) of supply for new district: _____

v. If a public water supply will not be used, describe plans to provide water supply for the project: _____

_____

vi. If water supply will be from wells (public or private), what is the maximum pumping capacity: _____ gallons/minute.

d. Will the proposed action generate liquid wastes? ☐Yes ☐No

If Yes:

i. Total anticipated liquid waste generation per day: _____ gallons/day

ii. Nature of liquid wastes to be generated (e.g., sanitary wastewater, industrial; if combination, describe all components and approximate volumes or proportions of each): _____

_____

_____

iii. Will the proposed action use any existing public wastewater treatment facilities? ☐Yes ☐No

If Yes:

- Name of wastewater treatment plant to be used: _____
- Name of district: _____
- Does the existing wastewater treatment plant have capacity to serve the project? ☐Yes ☐No
- Is the project site in the existing district? ☐Yes ☐No
- Is expansion of the district needed? ☐Yes ☐No

Attachment: ZTA-2021-02_011322 (25094 : Zta-2021-02)

- Do existing sewer lines serve the project site? ☐Yes ☐
- Will a line extension within an existing district be necessary to serve the project? ☐Yes ☐No

If Yes:

- Describe extensions or capacity expansions proposed to serve this project: _____

_____

_____

iv. Will a new wastewater (sewage) treatment district be formed to serve the project site? ☐Yes ☐No

If Yes:

- Applicant/sponsor for new district: _____
- Date application submitted or anticipated: _____
- What is the receiving water for the wastewater discharge? _____

v. If public facilities will not be used, describe plans to provide wastewater treatment for the project, including specifying proposed receiving water (name and classification if surface discharge or describe subsurface disposal plans):

_____

_____

vi. Describe any plans or designs to capture, recycle or reuse liquid waste: _____

_____

_____

e. Will the proposed action disturb more than one acre and create stormwater runoff, either from new point sources (i.e. ditches, pipes, swales, curbs, gutters or other concentrated flows of stormwater) or non-point source (i.e. sheet flow) during construction or post construction? ☐Yes ☐No

If Yes:

i. How much impervious surface will the project create in relation to total size of project parcel?

_____ Square feet or _____ acres (impervious surface)

_____ Square feet or _____ acres (parcel size)

ii. Describe types of new point sources. _____

_____

iii. Where will the stormwater runoff be directed (i.e. on-site stormwater management facility/structures, adjacent properties, groundwater, on-site surface water or off-site surface waters)?

_____

_____

- If to surface waters, identify receiving water bodies or wetlands: _____

_____

_____

- Will stormwater runoff flow to adjacent properties? ☐Yes ☐ No

iv. Does the proposed plan minimize impervious surfaces, use pervious materials or collect and re-use stormwater? ☐Yes ☐ No

f. Does the proposed action include, or will it use on-site, one or more sources of air emissions, including fuel combustion, waste incineration, or other processes or operations? ☐Yes ☐No

If Yes, identify:

i. Mobile sources during project operations (e.g., heavy equipment, fleet or delivery vehicles)

_____

ii. Stationary sources during construction (e.g., power generation, structural heating, batch plant, crushers)

_____

iii. Stationary sources during operations (e.g., process emissions, large boilers, electric generation)

_____

g. Will any air emission sources named in D.2.f (above), require a NY State Air Registration, Air Facility Permit, or Federal Clean Air Act Title IV or Title V Permit? ☐Yes ☐No

If Yes:

i. Is the project site located in an Air quality non-attainment area? (Area routinely or periodically fails to meet ambient air quality standards for all or some parts of the year) ☐Yes ☐No

ii. In addition to emissions as calculated in the application, the project will generate:

- _____Tons/year (short tons) of Carbon Dioxide (CO_2)
- _____Tons/year (short tons) of Nitrous Oxide (N_2O)
- _____Tons/year (short tons) of Perfluorocarbons (PFCs)
- _____Tons/year (short tons) of Sulfur Hexafluoride (SF_6)
- _____Tons/year (short tons) of Carbon Dioxide equivalent of Hydroflourocarbons (HFCs)
- _____Tons/year (short tons) of Hazardous Air Pollutants (HAPs)

Attachment: ZTA-2021-02_011322 (25094 : Zta-2021-02)

h. Will the proposed action generate or emit methane (including, but not limited to, sewage treatment plants, landfills, composting facilities)? ☐Yes ☐No

If Yes:

i. Estimate methane generation in tons/year (metric): _____

ii. Describe any methane capture, control or elimination measures included in project design (e.g., combustion to generate heat or electricity, flaring): _____

_____

i. Will the proposed action result in the release of air pollutants from open-air operations or processes, such as quarry or landfill operations? ☐Yes ☐No

If Yes: Describe operations and nature of emissions (e.g., diesel exhaust, rock particulates/dust):

_____

_____

j. Will the proposed action result in a substantial increase in traffic above present levels or generate substantial new demand for transportation facilities or services? ☐Yes ☐No

If Yes:

i. When is the peak traffic expected (Check all that apply): ☐ Morning ☐ Evening ☐Weekend

☐ Randomly between hours of _____ to _____.

ii. For commercial activities only, projected number of truck trips/day and type (e.g., semi trailers and dump trucks): _____

_____

iii. Parking spaces: Existing _____ Proposed _____ Net increase/decrease _____

iv. Does the proposed action include any shared use parking? ☐Yes ☐No

v. If the proposed action includes any modification of existing roads, creation of new roads or change in existing access, describe:

_____

vi. Are public/private transportation service(s) or facilities available within ½ mile of the proposed site? ☐Yes ☐No

vii Will the proposed action include access to public transportation or accommodations for use of hybrid, electric or other alternative fueled vehicles? ☐Yes ☐No

viii. Will the proposed action include plans for pedestrian or bicycle accommodations for connections to existing pedestrian or bicycle routes? ☐Yes ☐No

k. Will the proposed action (for commercial or industrial projects only) generate new or additional demand for energy? ☐Yes ☐No

If Yes:

i. Estimate annual electricity demand during operation of the proposed action: _____

_____

ii. Anticipated sources/suppliers of electricity for the project (e.g., on-site combustion, on-site renewable, via grid/local utility, or other):

_____

iii. Will the proposed action require a new, or an upgrade, to an existing substation? ☐Yes ☐No

l. Hours of operation. Answer all items which apply.

i. During Construction:

- Monday - Friday: _____
- Saturday: _____
- Sunday: _____
- Holidays: _____

ii. During Operations:

- Monday - Friday: _____
- Saturday: _____
- Sunday: _____
- Holidays: _____

Attachment: ZTA-2021-02_011322 (25094 : Zta-2021-02)

m. Will the proposed action produce noise that will exceed existing ambient noise levels during construction, operation, or both? ☐ Yes ☐

If yes:

i. Provide details including sources, time of day and duration:

_____

_____

ii. Will the proposed action remove existing natural barriers that could act as a noise barrier or screen? ☐ Yes ☐ No

Describe: _____

_____

n. Will the proposed action have outdoor lighting? ☐ Yes ☐ No

If yes:

i. Describe source(s), location(s), height of fixture(s), direction/aim, and proximity to nearest occupied structures:

_____

_____

ii. Will proposed action remove existing natural barriers that could act as a light barrier or screen? ☐ Yes ☐ No

Describe: _____

_____

o. Does the proposed action have the potential to produce odors for more than one hour per day? ☐ Yes ☐ No

If Yes, describe possible sources, potential frequency and duration of odor emissions, and proximity to nearest occupied structures: _____

_____

_____

p. Will the proposed action include any bulk storage of petroleum (combined capacity of over 1,100 gallons) or chemical products 185 gallons in above ground storage or any amount in underground storage? ☐ Yes ☐ No

If Yes:

i. Product(s) to be stored _____

ii. Volume(s) _____ per unit time _____ (e.g., month, year)

iii. Generally, describe the proposed storage facilities:_____

_____

q. Will the proposed action (commercial, industrial and recreational projects only) use pesticides (i.e., herbicides, insecticides) during construction or operation? ☐ Yes ☐ No

If Yes:

i. Describe proposed treatment(s):

_____

_____

_____

_____

ii. Will the proposed action use Integrated Pest Management Practices? ☐ Yes ☐ No

r. Will the proposed action (commercial or industrial projects only) involve or require the management or disposal of solid waste (excluding hazardous materials)? ☐ Yes ☐ No

If Yes:

i. Describe any solid waste(s) to be generated during construction or operation of the facility:

- Construction: _____ tons per _____ (unit of time)
- Operation : _____ tons per _____ (unit of time)

ii. Describe any proposals for on-site minimization, recycling or reuse of materials to avoid disposal as solid waste:

- Construction: _____

  _____
- Operation: _____

  _____

iii. Proposed disposal methods/facilities for solid waste generated on-site:

- Construction: _____

  _____
- Operation: _____

  _____

Attachment: ZTA-2021-02_011322 (25094 : Zta-2021-02)

s. Does the proposed action include construction or modification of a solid waste management facility? ☐ Yes ☐

If Yes:

i. Type of management or handling of waste proposed for the site (e.g., recycling or transfer station, composting, landfill, or other disposal activities): _____

ii. Anticipated rate of disposal/processing:

- _____ Tons/month, if transfer or other non-combustion/thermal treatment, or
- _____ Tons/hour, if combustion or thermal treatment

iii. If landfill, anticipated site life: _____ years

t. Will the proposed action at the site involve the commercial generation, treatment, storage, or disposal of hazardous waste? ☐ Yes ☐ No

If Yes:

i. Name(s) of all hazardous wastes or constituents to be generated, handled or managed at facility: _____

_____

_____

ii. Generally describe processes or activities involving hazardous wastes or constituents: _____

_____

_____

iii. Specify amount to be handled or generated _____ tons/month

iv. Describe any proposals for on-site minimization, recycling or reuse of hazardous constituents: _____

_____

_____

v. Will any hazardous wastes be disposed at an existing offsite hazardous waste facility? ☐ Yes ☐ No

If Yes: provide name and location of facility: _____

_____

If No: describe proposed management of any hazardous wastes which will not be sent to a hazardous waste facility:

_____

_____

E. Site and Setting of Proposed Action

E.1. Land uses on and surrounding the project site

a. Existing land uses.

i. Check all uses that occur on, adjoining and near the project site.

☐ Urban ☐ Industrial ☐ Commercial ☐ Residential (suburban) ☐ Rural (non-farm)
☐ Forest ☐ Agriculture ☐ Aquatic ☐ Other (specify): _____

ii. If mix of uses, generally describe:

_____

_____

b. Land uses and covertypes on the project site.

Land use or Covertype	Current Acreage	Acreage After Project Completion	Change (Acres +/-)
• Roads, buildings, and other paved or impervious surfaces			
• Forested			
• Meadows, grasslands or brushlands (non-agricultural, including abandoned agricultural)			
• Agricultural (includes active orchards, field, greenhouse etc.)			
• Surface water features (lakes, ponds, streams, rivers, etc.)			
• Wetlands (freshwater or tidal)			
• Non-vegetated (bare rock, earth or fill)			
• Other Describe: _____ _____			

Attachment: ZTA-2021-02_011322 (25094 : Zta-2021-02)

c. Is the project site presently used by members of the community for public recreation? ☐ Yes ☐ No
i. If Yes: explain: _____

d. Are there any facilities serving children, the elderly, people with disabilities (e.g., schools, hospitals, licensed day care centers, or group homes) within 1500 feet of the project site? ☐ Yes ☐ No
If Yes,
i. Identify Facilities:
_____
_____

e. Does the project site contain an existing dam? ☐ Yes ☐ No
If Yes:
i. Dimensions of the dam and impoundment:
- Dam height: _____ feet
- Dam length: _____ feet
- Surface area: _____ acres
- Volume impounded: _____ gallons OR acre-feet

ii. Dam's existing hazard classification: _____
iii. Provide date and summarize results of last inspection:
_____
_____

f. Has the project site ever been used as a municipal, commercial or industrial solid waste management facility, or does the project site adjoin property which is now, or was at one time, used as a solid waste management facility? ☐ Yes ☐ No
If Yes:
i. Has the facility been formally closed? ☐ Yes ☐ No
- If yes, cite sources/documentation: _____

ii. Describe the location of the project site relative to the boundaries of the solid waste management facility:
_____
_____
iii. Describe any development constraints due to the prior solid waste activities: _____
_____

g. Have hazardous wastes been generated, treated and/or disposed of at the site, or does the project site adjoin property which is now or was at one time used to commercially treat, store and/or dispose of hazardous waste? ☐ Yes ☐ No
If Yes:
i. Describe waste(s) handled and waste management activities, including approximate time when activities occurred:
_____
_____

h. Potential contamination history. Has there been a reported spill at the proposed project site, or have any remedial actions been conducted at or adjacent to the proposed site? ☐ Yes ☐ No
If Yes:
i. Is any portion of the site listed on the NYSDEC Spills Incidents database or Environmental Site Remediation database? Check all that apply: ☐ Yes ☐ No
☐ Yes – Spills Incidents database — Provide DEC ID number(s): _____
☐ Yes – Environmental Site Remediation database — Provide DEC ID number(s): _____
☐ Neither database

ii. If site has been subject of RCRA corrective activities, describe control measures:_____
_____
_____
iii. Is the project within 2000 feet of any site in the NYSDEC Environmental Site Remediation database? ☐ Yes ☐ No
If yes, provide DEC ID number(s): _____
iv. If yes to (i), (ii) or (iii) above, describe current status of site(s):
_____
_____

Attachment: ZTA-2021-02_011322 (25094 : Zta-2021-02)

v. Is the project site subject to an institutional control limiting property uses? ☐ Yes ☐

- If yes, DEC site ID number: _____
- Describe the type of institutional control (e.g., deed restriction or easement): _____
- Describe any use limitations: _____
- Describe any engineering controls: _____
- Will the project affect the institutional or engineering controls in place? ☐ Yes ☐ No
- Explain: _____

E.2. Natural Resources On or Near Project Site

a. What is the average depth to bedrock on the project site? _____ feet

b. Are there bedrock outcroppings on the project site? ☐ Yes ☐ No
If Yes, what proportion of the site is comprised of bedrock outcroppings? _____%

c. Predominant soil type(s) present on project site: _____ _____%
_____ _____%
_____ _____%

d. What is the average depth to the water table on the project site? Average: _____ feet

e. Drainage status of project site soils: ☐ Well Drained: _____% of site
☐ Moderately Well Drained: _____% of site
☐ Poorly Drained _____% of site

f. Approximate proportion of proposed action site with slopes: ☐ 0-10%: _____% of site
☐ 10-15%: _____% of site
☐ 15% or greater: _____% of site

g. Are there any unique geologic features on the project site? ☐ Yes ☐ No
If Yes, describe: _____

h. Surface water features.

i. Does any portion of the project site contain wetlands or other waterbodies (including streams, rivers, ponds or lakes)? ☐ Yes ☐ No

ii. Do any wetlands or other waterbodies adjoin the project site? ☐ Yes ☐ No

If Yes to either *i* or *ii*, continue. If No, skip to E.2.i.

iii. Are any of the wetlands or waterbodies within or adjoining the project site regulated by any federal, state or local agency? ☐ Yes ☐ No

iv. For each identified regulated wetland and waterbody on the project site, provide the following information:

- Streams: Name _____ Classification _____
- Lakes or Ponds: Name _____ Classification _____
- Wetlands: Name _____ Approximate Size _____
- Wetland No. (if regulated by DEC) _____

v. Are any of the above water bodies listed in the most recent compilation of NYS water quality-impaired waterbodies? ☐ Yes ☐ No

If yes, name of impaired water body/bodies and basis for listing as impaired: _____

i. Is the project site in a designated Floodway? ☐ Yes ☐ No

j. Is the project site in the 100-year Floodplain? ☐ Yes ☐ No

k. Is the project site in the 500-year Floodplain? ☐ Yes ☐ No

l. Is the project site located over, or immediately adjoining, a primary, principal or sole source aquifer? ☐ Yes ☐ No
If Yes:

i. Name of aquifer: _____

Attachment: ZTA-2021-02_011322 (25094 : Zta-2021-02)

m. Identify the predominant wildlife species that occupy or use the project site: _____

_____ _____ _____

_____ _____ _____

n. Does the project site contain a designated significant natural community? ☐Yes ☐No

If Yes:

i. Describe the habitat/community (composition, function, and basis for designation): _____

_____

ii. Source(s) of description or evaluation: _____

iii. Extent of community/habitat:

- Currently: _____ acres
- Following completion of project as proposed: _____ acres
- Gain or loss (indicate + or -): _____ acres

o. Does project site contain any species of plant or animal that is listed by the federal government or NYS as endangered or threatened, or does it contain any areas identified as habitat for an endangered or threatened species? ☐Yes ☐No

If Yes:

i. Species and listing (endangered or threatened):_____

_____

_____

p. Does the project site contain any species of plant or animal that is listed by NYS as rare, or as a species of special concern? ☐Yes ☐No

If Yes:

i. Species and listing:_____

_____

q. Is the project site or adjoining area currently used for hunting, trapping, fishing or shell fishing? ☐Yes ☐No

If yes, give a brief description of how the proposed action may affect that use: _____

_____

E.3. Designated Public Resources On or Near Project Site

a. Is the project site, or any portion of it, located in a designated agricultural district certified pursuant to Agriculture and Markets Law, Article 25-AA, Section 303 and 304? ☐Yes ☐No

If Yes, provide county plus district name/number: _____

b. Are agricultural lands consisting of highly productive soils present? ☐Yes ☐No

i. If Yes: acreage(s) on project site? _____

ii. Source(s) of soil rating(s): _____

c. Does the project site contain all or part of, or is it substantially contiguous to, a registered National Natural Landmark? ☐Yes ☐No

If Yes:

i. Nature of the natural landmark: ☐ Biological Community ☐ Geological Feature

ii. Provide brief description of landmark, including values behind designation and approximate size/extent: _____

_____

_____

d. Is the project site located in or does it adjoin a state listed Critical Environmental Area? ☐Yes ☐No

If Yes:

i. CEA name: _____

ii. Basis for designation: _____

iii. Designating agency and date: _____

Attachment: ZTA-2021-02_011322 (25094 : Zta-2021-02)

e. Does the project site contain, or is it substantially contiguous to, a building, archaeological site, or district which is listed on the National or State Register of Historic Places, or that has been determined by the Commissioner of the NYS Office of Parks, Recreation and Historic Preservation to be eligible for listing on the State Register of Historic Places? ☐ Yes ☐ No

If Yes:

i. Nature of historic/archaeological resource: ☐ Archaeological Site ☐ Historic Building or District

ii. Name: _____

iii. Brief description of attributes on which listing is based:

_____

f. Is the project site, or any portion of it, located in or adjacent to an area designated as sensitive for archaeological sites on the NY State Historic Preservation Office (SHPO) archaeological site inventory? ☐ Yes ☐ No

g. Have additional archaeological or historic site(s) or resources been identified on the project site? ☐ Yes ☐ No

If Yes:

i. Describe possible resource(s): _____

ii. Basis for identification: _____

h. Is the project site within fives miles of any officially designated and publicly accessible federal, state, or local scenic or aesthetic resource? ☐ Yes ☐ No

If Yes:

i. Identify resource: _____

ii. Nature of, or basis for, designation (e.g., established highway overlook, state or local park, state historic trail or scenic byway, etc.): _____

iii. Distance between project and resource: _____ miles.

i. Is the project site located within a designated river corridor under the Wild, Scenic and Recreational Rivers Program 6 NYCRR 666? ☐ Yes ☐ No

If Yes:

i. Identify the name of the river and its designation: _____

ii. Is the activity consistent with development restrictions contained in 6NYCRR Part 666? ☐ Yes ☐ No

F. Additional Information

Attach any additional information which may be needed to clarify your project.

See Attachment "A"

If you have identified any adverse impacts which could be associated with your proposal, please describe those impacts plus any measures which you propose to avoid or minimize them.

G. Verification

I certify that the information provided is true to the best of my knowledge.

Applicant/Sponsor Name Daniel J. Ulatowski, AICP Date December 13, 2021

D R A F T
LOCAL LAW NO. _____ -2022

TOWN OF AMHERST
COUNTY OF ERIE, STATE OF NEW YORK

A Local Law Making Amendments To Chapter 203 Of The Code Of The Town Of Amherst, Also Known As The Zoning Code As Adopted By Local Law 6-2006.

Be it enacted by the Town Board of the Town of Amherst as follows:

Section 1. Title.

This Local Law shall be referred to as, "A Local Law Amending Chapter 203 of the Code of The Town of Amherst, "Section 5A Mixed Use Districts."

Section 2. Purpose

The purpose of this Local Law is to provide amendments to the Town's Mixed-Use district regulations to recognize existing developed conditions, address necessary text corrections and overall, further the implementation of the original intent of the mixed-use provisions.

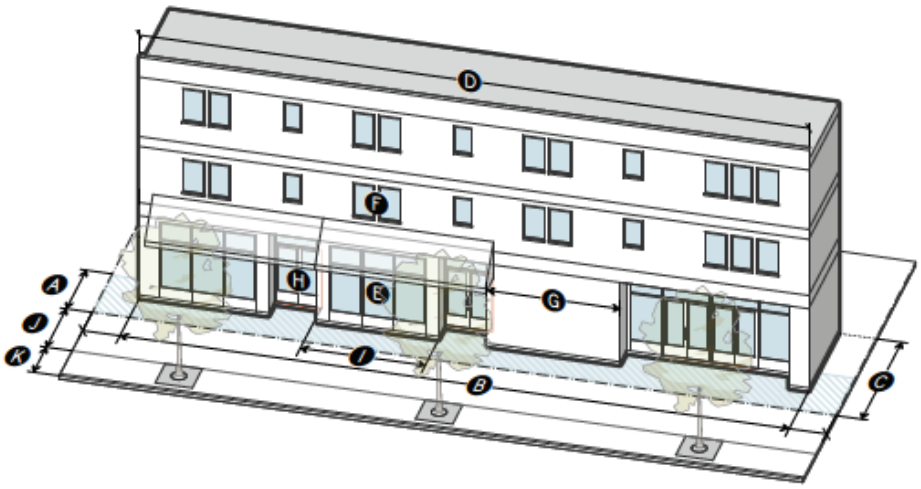
Section 3.

Chapter 203 of the Code of the Town of Amherst is amended as shown on the following pages

Attachment: ZTA-2021-02_011322 (25094 : Zta-2021-02)

Proposed Text Changes to Part 5A, *(changes denoted by highlighted areas)*

5A-2-4. Village Frontage



BUILDING SETBACKS	
A Build-to zone	0' min/10' max
B Lot frontage	90% min
PARKING SETBACKS	
C Street	20' min
BUILDING MASS	
D Street-facing building length	200' max
STORY HEIGHT	
Ground floor elevation	0' min / 2' max
Ground story height	13' min
Upper story height	9' min

TRANSPARENCY	
E Ground story	70% min
F Upper story	20% min
G Blank wall length	15' max
PEDESTRIAN ACCESS	
H Street-facing entrance	Required
I Entrance spacing	30' max
STREETSCAPE	
J Clear pedestrian zone	10' min
K Curb zone	6' min
Tree planting type	Grates
Tree spacing	35' on-center avg.

Amend entrance Spacing to 50’ max.

Attachment: ZTA-2021-02_011322 (25094 : Zta-2021-02)

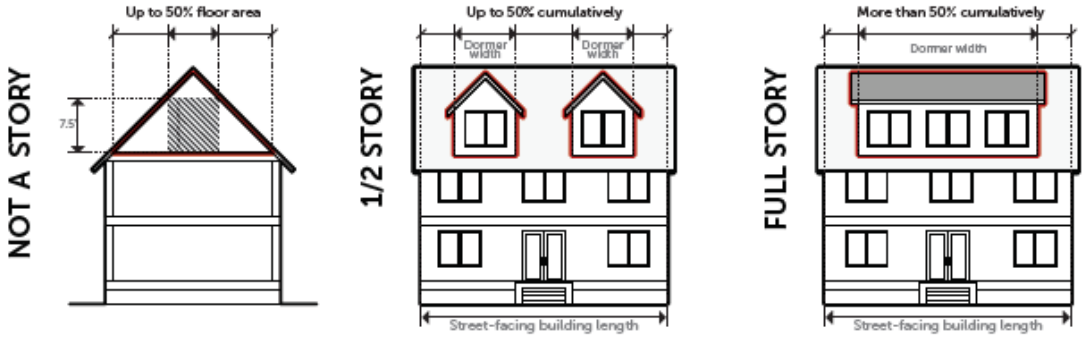
5A-7-8. Building Height

A. Stories

(1) A story counts as a half story if dormers are present on no more than 50% of the front or side building length. Where dormers exceed 50% of the front or side building length, it will be considered a full story.



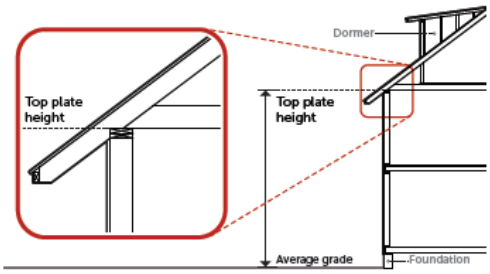
(2) An attic in a pitched roof form does not count as a story when no dormers are present and 50% or more of the attic floor area has a clear height of less than 7.5 feet as measured from the finished floor to the finished ceiling.

(3) Basements and mezzanines, as defined in the Building Code, do not count as a story.

~~(4) Minimum height requirements must be met using additional functional stories above the ground story containing conditioned space and covering the full extent of the ground story.~~ Strike language above

B. Top Plate Height

Top plate height is measured from average grade to the top of the wall plate that bears the roof structure.



C. Roof Pitch

The pitch of a roof is calculated based on the number of inches it rises vertically for every 12 inches it extends horizontally. For example, a roof that rises 6 inches for every 12 inches of horizontal run has a 6:12 pitch.

Add New Section D.

Decorative roof elements which do not serve as functional elements of a roof structure, such as pediments, cupolas, weather vanes and similar ornamentation may exceed the maximum building height listed in the building mass tables, providing such ornamentation does not exceed 48 inches in height and does not comprise more than 10 percent of the roof area.

Attachment: ZTA-2021-02_011322 (25094 : Zta-2021-02)

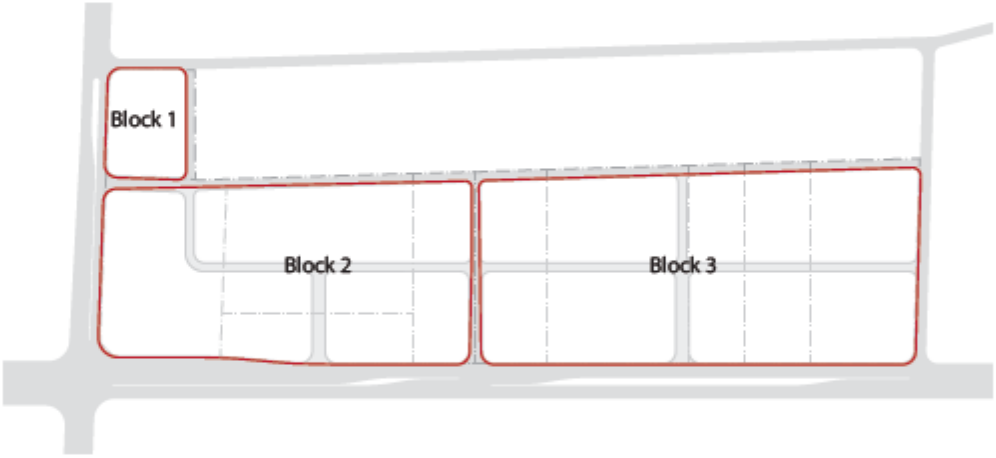
5A-7-12. Blocks

A. Perimeter

(1) A block is bounded by a public or private right-of-way or a street with a classification of local street or greater (not including an alley).

(2) Where a new street is provided along a lot line shared with another mixed use district, a Core Half-Street or Local Half-Street may be provided when neighboring property has not undergone redevelopment since the adoption of this Chapter 203.

(3) Block perimeter is measured along the edge of the property adjoining the right-of-way.



(4) The Zoning Administrator may waive the block perimeter requirements when steep slopes in excess of 25%, freeways, waterways, railroad lines, tree conservation areas, stream buffers, cemeteries, open space or utility easements would make the provision of a complete block infeasible.

(5) Where the block pattern is interrupted by public parkland (including a greenway), that is open and accessible to the public, pedestrian access points must be provided with a minimum spacing equal to maximum block length for the district.

Amend (4) above to read

The Planning Director may modify the block perimeter requirements when steep slopes in excess of 25%, freeways, waterways, railroad lines, tree conservation areas, stream buffers, cemeteries, open space, utility easements or when existing conditions make the provisions of a complete block structure infeasible, or warrant a larger block structure.

5A-9-1. Parking, ~~Loading and Stacking~~

All parking, loading and stacking must meet the requirements of 7-1, except as required below.

A. Minimum Parking in Mixed Use Districts

(1) Off-Street Vehicle Parking

Off-street parking facilities must be provided in quantities not less than set forth in the following schedule.

SCHEDULE OF PARKING REQUIREMENTS

RESIDENTIAL USES	
Single-family detached	1.0 space per dwelling unit
Attached dwelling	1.0 space per dwelling unit
Multi-family dwelling, upper-story dwelling, assisted group living, senior citizen housing	.75 space per efficiency unit 1.0 space per one or two-bedroom unit 1.5 space per three or more bedroom unit
PUBLIC AND CIVIC USES	
Ambulance service	2.5 spaces per 1,000 SF
Business college, commercial school	3.5 spaces per 1,000 SF
College, university	3.5 spaces per 1,000 SF
Day care	3.5 spaces per 1,000 SF
Place of worship	3.5 spaces per 1,000 SF
Public utility service structure or facility	2.5 spaces per 1,000 SF
School, elementary/secondary (private)	3.5 spaces per 1,000 SF
Telecommunication facility, minor utility	1 space per facility
COMMERCIAL USES	
Animal grooming, cat boarding facility, animal hospital or veterinarian	2 spaces per 1,000 SF
Lodging	.75 spaces per room
Medical	3.5 spaces per 1,000 SF
Office	2.5 spaces per 1,000 SF
Personal service	2.5 spaces per 1,000 SF
Recreation, indoor	2.5 spaces per 1,000 SF
Restaurant	4.0 spaces per 1,000 SF
Retail sales and service	2.5 spaces per 1,000 SF

Add: (gross square feet) each SF

D. Electric Vehicle Charging Stations

In the Mixed Use Districts, 10% of all parking spaces must be electric-vehicle (EV) ready, with a minimum of 2 EV-ready spaces for all parking lots over 20 spaces. Electric-vehicle ready means, at minimum, conduit or other means to connect power to each space is installed in advance.

Amend : reduce to 1% of all parking spaces.

PETITIONER *Miscellaneous #1*

Town of Amherst
5583 Main St.
Williamsville, NY 14221

REQUEST: Proposed Local Law to Amend the Zoning Ordinance: Amendments to Part 5A, Mixed-Use Regulations, ZTA-2021-02.

PROJECT DESCRIPTION: The draft local law is an amendment to the Town Zoning Ordinance which amends the text of the recently adopted Mixed-Use regulations. The amendments are necessary based on challenges experienced by the Planning Department with the application of the regulations and practical difficulties which may be encountered for land owners during redevelopment. The initial changes include, the ability to permit new buildings and additions without a required second functional story, allowing for decorative architectural elements up to 48" above the roof height, permitting pole signs within the center and corridor zoning districts and prohibiting such signs within the traditional infill districts, increased door entrance spacing in the village frontage type, flexibility in the block perimeter requirement when existing conditions present practical difficulties and permitting drive up ATM machines as an accessory use within the shallow corridor district. Subsequent draft changes to the Mixed-Use regulations are anticipated in the future after the Planning Department has consulted with its Code consultant.

DRAFT LOCAL LAW: See attached for draft local law.

REVIEW AGENCY REPORTS:

Building: Review Pending

Highway: Review Pending

Engineering: Review Pending.

Town Attorney: Review pending.

Attachment: ZTA-2021-02_draft neg dec_011322 (25094 : Zta-2021-02)

Zoning Enforcement Officer: Approved as submitted.

Fire Chief's Association: Review pending

OTHER AGENCIES:

NYSDEC: agrees the Town of Amherst should act as the SEQR Lead Agency. NYSDEC is not an involved agency and does not have any specific comments regarding the zoning ordinance amendments.

ECDEP: No recommendation; proposed action has been reviewed and determined to be of local concern.

Town of Tonawanda: No Comments

Town of Cheektowaga: No Comments

Town of Clarence: No Comments

Town of Pendelton: No Comments

City of Buffalo: No Comments

STAFF ANALYSIS

Consistency with Comprehensive Plan: The proposed changes have no policy implications and further the objectives of section 3.3.2, Commercial and Mixed-Use land use as described in the Comprehensive Plan. The proposed changes do not alter the Zoning Ordinance's consistency with the Comprehensive Plan.

Consistency with the Intent of the Zoning Ordinance: The proposed changes are consistent with the original intent of the mixed-use regulations. The changes recognize implementation challenges for existing developed properties and will allow for greater opportunities for redevelopment. The proposed changes are consistent with the intent of the Town Zoning Ordinance.

STAFF RECOMMENDATION:

SEQR

The subject request is a Type I action, FEAF Parts 1 & 2 completed. The SEQR determination of environmental significance is the responsibility the Town Board as the SEQR Lead Agency.

Text Amendments:

Approve, based on the attached resolution.

DRAFT (1/13/2022)
TOWN OF AMHERST
PLANNING BOARD
ZONING TEXT AMENDMENTS
ZTA-2021-02

PETITIONER
Town of Amherst
5583 Main Street
Williamsville, NY 14221

WHEREAS the Town of Amherst Planning Board on Thursday, January 13, 2022 held a remote public hearing on the proposed zoning ordinance text amendments, and

WHEREAS the Planning Board has reviewed materials regarding the proposed text amendments, and

WHEREAS the materials have been referred to the Town's various review agencies, and

WHEREAS per Chapter 203, Part 8, Section 8-5-5(A) & (B) of the Town Code, the Planning Board finds that:

1. The proposed text amendments are consistent with the remainder of the Zoning Ordinance, including, specifically, the following purpose statement as found in Section 1-2-2:

> To protect the character and values of residential, institutional and public uses, business, commercial and manufacturing uses and to insure their orderly and beneficial development, and to regulate and control the location and spacing of buildings on the lot and in relation to the surrounding property generally consistent with the policies of the Comprehensive Plan.

2. The proposed text amendment does not present a new idea not considered in the existing Ordinance, or does not represent a revision necessitated by changing circumstances over time.

3. The proposed text amendments does not correct an error in the Ordinance.

4. The proposed text amendments does not revise the Ordinance to comply with state or federal statutes or case law.

5. The proposed text amendments advance the public health, safety or welfare and is consistent with the Zoning Ordinance.

6. The proposed text amendments are generally consistent with the policies of the Comprehensive Plan.

NOW THEREFORE BE IT RESOLVED that the Planning Board recommends to the Town Board in accordance with Section 8-3-4 of the Zoning Ordinance, that the request be approved.

NEGATIVE DECLARATION

NOTICE OF DETERMINATION OF NON-SIGNIFICANCE

Lead Agency: Town of Amherst
Town Board

Project: ZTA-2021-02

Address: 5583 Main Street
Williamsville, NY 14221
(716) 631-7051

Date:

This notice is issued pursuant to Part 617 and Local Law #3-82, as amended, of the implementing regulations pertaining to Article 8 (State Environmental Quality Review) of the Environmental Conservation Law.

The Lead Agency has determined that the proposed action described below will not have a significant adverse effect on the environment.

Title of Action: Proposed Zoning Ordinance Text Amendment to Amend Part 5A (Section 5A -Mixed -Use Regulations)

SEQR Status: Type 1

Description of Action: Text amendments to portions of the Mixed-Use regulations within the Town of Amherst Zoning Ordinance.

Location: Town of Amherst, Erie County, New York

Petitioner: Town of Amherst

Attachment: ZTA-2021-02_draft neg dec_011322 (25094 : Zta-2021-02)

Based on information submitted by the applicant, including a Full Environmental Assessment Form (EAF) - Part 1 and Part 2, a complete zoning text amendment application and a preliminary staff analysis was undertaken. Compared to the criteria listed in Section 617.7, all indications are that the proposed revisions to the Town Zoning Ordinance will not have a significant impact on the environment, as follows:

1. The action is not expected to cause a substantial adverse change in existing air quality, ground or surface water quality or quantity, or noise levels; a substantial increase in solid waste production; or a substantial increase in the potential for erosion, flooding, leaching or drainage problems.

2. The action will not result in the removal or destruction of large quantities of vegetation or fauna; or in significant adverse impacts to fish or wildlife species, habitats or other natural resources.

3. The action is not expected to create any material conflict with the Town Comprehensive Plan. The proposed amendment is intended to further implement a plan objective to encourage redevelopment that is compatible with established neighborhoods.

4. The text amendments may apply to areas identified by the State as potentially containing significant cultural or archeological resources. As requests for development of individual parcels or site plan applications are received, an analysis will be undertaken to ensure that future development will not impair the character or quality of important historical or cultural resources.

5. The action will not impair the character or quality of important aesthetic resources or of existing community or neighborhood character. The text amendments are designed to permit development that is consistent with surrounding land use and development.

6. The proposed text amendments will not cause a major change in the use of either the quantity or type of energy.

7. The proposed text amendments will not create any hazard to human health.

8. The proposed text amendments will not cause a substantial change in the use, or intensity of use, of land including agricultural, open space or recreational resources, or in its capacity to support existing uses. The proposed text amendments will allow development that is consistent with the scale of surrounding land uses.

9. The proposed text amendments will not significantly increase the number of people using sites over their previous level of use.

Attachment: ZTA-2021-02_draft neg dec_011322 (25094 : Zta-2021-02)

10. Coordinated reviews of the project have been undertaken by Town Departments**,** including Building, Planning and the Town Attorney, along with the Erie County Department of Environmental and Planning and NYSDEC. These reviews have not identified any significant environmental issues and indicate that the proposal will not have a significant damaging impact on the environment.

11. Issues not specifically mentioned above and/or those not specifically reviewed were not raised by Town departments, outside agencies or the public and are not determined to be causing significant negative environmental impacts.

DRAFT (1/13/2022)
TOWN OF AMHERST
PLANNING BOARD
VIRTUAL MEETING RESOLUTION

WHEREAS, more than millions of New York State residents have been affected by COVID-19 and the disease has killed many New Yorkers since May 2020; and

WHEREAS, it is necessary to contain the pandemic that has brought widespread economic and social destruction; and

WHEREAS, many Amherst residents have experienced financial hardship due to measures that have been taken to contain the pandemic and such measures have closed businesses and schools, resulting in income loss across the State; and

WHEREAS, even as New York State enters a phase of economic recovery, the need for continued statutory protection and other public health measures as demonstrated by rates of transmission in COVID-19 in the State is ongoing; and

WHEREAS, for the foregoing reasons, it is necessary to temporarily alter certain provisions of the Open Meetings Law (Article 7 of the Public Officers Law) to ensure that certain public bodies can hold their meetings in a manner that balances the public's health and safety with the public's right to observe the proceedings;

NOW THEREFORE, BE IT RESOLVED, that the Town Board hereby provides authorization to any board, commission or local public party of the Town of Amherst as defined in General Construction Law §66, or committee or sub-committee of a similar body or entity of a political subdivision as defined in General Municipal Law §100, to take such action as authorized by law without permitting the public in-person access to the meetings; and

BE IT FURTHER RESOLVED, authorization is also given to hold such meetings remotely by conference or by similar service such as Zoom, provided that the public has the ability to view or listen to such proceedings and that such meetings are recorded and later transcribed if requested; and

BE IT FURTHER RESOLVED, that this resolution shall take effect immediately for the Planning Board's meetings and

BE IT FURTHER RESOLVED, that said authority shall expire and be deemed repealed when authority by the state legislature and/or New York State Governor has expired.

TOWN OF AMHERST
PLANNING BOARD
VIRTUAL MEETING RESOLUTION

WHEREAS, more than millions of New York State residents have been affected by COVID-19 and the disease has killed many New Yorkers since May 2020; and

WHEREAS, it is necessary to contain the pandemic that has brought widespread economic and social destruction; and

WHEREAS, many Amherst residents have experienced financial hardship due to measures that have been taken to contain the pandemic and such measures have closed businesses and schools, resulting in income loss across the State; and

WHEREAS, even as New York State enters a phase of economic recovery, the need for continued statutory protection and other public health measures as demonstrated by rates of transmission in COVID-19 in the State is ongoing; and

WHEREAS, for the foregoing reasons, it is necessary to temporarily alter certain provisions of the Open Meetings Law (Article 7 of the Public Officers Law) to ensure that certain public bodies can hold their meetings in a manner that balances the public's health and safety with the public's right to observe the proceedings;

NOW THEREFORE, BE IT RESOLVED, that the Town Board hereby provides authorization to any board, commission or local public party of the Town of Amherst as defined in General Construction Law §66, or committee or sub-committee of a similar body or entity of a political subdivision as defined in General Municipal Law §100, to take such action as authorized by law without permitting the public in-person access to the meetings; and

BE IT FURTHER RESOLVED, authorization is also given to hold such meetings remotely by conference or by similar service such as Zoom, provided that the public has the ability to view or listen to such proceedings and that such meetings are recorded and later transcribed if requested; and

BE IT FURTHER RESOLVED, that this resolution shall take effect immediately for the Planning Board's meetings and

BE IT FURTHER RESOLVED, that said authority shall expire and be deemed repealed when authority by the state legislature and/or New York State Governor has expired.

The foregoing resolution was adopted by the Town of Amherst Planning Board, January 13, 2021; moved by – Mr. Giuliani; seconded by – Mr. Gill; ayes 4, noes 0, absent 3 (Chmiel, Gelber, Raffaele).

Robert J. Gilmour, Chair
