MINUTES
TOWN OF AMHERST
AMHERST PLANNING BOARD MEETING
April 20, 2023
6:30 PM

The Planning Board will hold a public work session at 6:00 pm in the Amherst Municipal Building, 5583 Main Street, Williamsville, NY 14221 on the same date.

This meeting is being video recorded.

The plans and documents that are available below for each Planning Board hearing item were submitted by the project applicant and are intended to provide general information about the proposal.

The official, complete sets of submittal documents and materials that provide more detailed information about the projects are available in the Planning Department, which is located in Amherst Town Hall, 5583 Main Street, Williamsville, NY 14221. Hours are 9 am to 5 pm, Monday through Friday. If you have any questions, please contact the Planning Department at (716) 631-7051.

Revised plans are submitted on an ongoing basis throughout the review process to address comments on the project. Every effort will be made to post the most recent version of the plans and application materials in a timely manner.

Please note the following time limits for speakers at public hearings:

- **Presentation by Petitioner: 15 minutes**
- **Rebuttal by neighborhood/resident spokesperson: 15 minutes**
- **Individual speakers: 3 minutes**

PUBLIC HEARINGS

SITE PLANS & RELIEF FROM CONDITIONS OF SITE PLANS

1. PROPOSED DENTISTRY SCHOOL AND PARKING LOT EXPANSION, SP-2022-02
Property located at 2525 Kensington Avenue
Philipps Bros Supply Inc., Petitioner

April 21, 2022
No comments were heard on this proposal. The Petitioner requested an adjournment. Ms. Penberthy moved to adjourn until the May Planning Board meeting. The motion was seconded by Mr. Chmiel and carried. Ayes 6, Noes 0, Absent 1 (Gilmour).

May 19, 2022
No comments were heard on this proposal. Mr. Chmiel moved to adjourn the proposal. The motion was seconded by Mr. Raffaele and carried. Ayes 6, Noes 0, Absent 1 (Giuliani).

October 20, 2022
No comments were heard on this proposal. Mr. Giuliani moved to adjourn the proposal. The motion was seconded by Ms. Kahn and carried. Ayes 6, Noes 0, Absent 1 (Gill).

April 20, 2023

Proposed conversion of a portion of the existing 29,350 s.f. Philips Bros. retail/warehouse building for the Shatkin School of Dentistry (16,253 s.f.). The project includes an approximately 4,000 s.f. second floor build-out, as well as redevelopment of Ridgewood Drive for public parking under a license agreement with the Town. Improvements in the Ridgewood Drive right-of-way are not subject to zoning ordinance requirements and are under the jurisdictional review of the Town of Amherst Highway Superintendent.

Joseph Molek, Stieglitz Snyder, represented the petitioner, explained the proposal and was available to answer questions from the Board. Michael Brogan, Daemen University; Dr. Todd Shatkin; Phil Snyder, Stieglitz Snyder; and Matt and Pat Phillips, Philipps Bros. Supply Inc. were also present.

In response to the Board's questions, Dr. Shatkin stated there will be 40 students per year in the program, the clinic will have 40-50 dental chairs and will be open to the public, the students will pair up, there should be 20-30 patients at any given time, most students will have completed their undergraduate courses and will receive training at the clinic, the clinic will be open from 9 am to 7 or 8 pm, there will also be weekend hours, there will be a maximum of 120 students at the clinic at one time, there will be 80 parking spots on site, students will be shuttled to/from Daemen University. Mr. Brogan stated the University currently shuttles students from student housing and the campus, the shuttle frequency will be as needed, commuter students will park on campus and the shuttle will pick up students from student housing.

David Borden, 627 King Hwy. and Linda Prout, 2418 Kensington Ave. spoke in opposition of the proposal. Ari Goldberg, Barclay Damon, representing Grindstone, is in favor of the project but has parking/signage concerns.

No further comments were heard on this proposal. The hearing was closed.

Following discussion, Mr. Chmiel moved to approve the Negative Declaration. The motion was seconded by Mr. Raffaele and carried. Ayes 7, Noes 0.

Following the approval of the Negative Declaration, Mr. Chmiel moved to approve the request based on the resolution. The motion was seconded by Ms. Penberthy and carried. Ayes 7, Noes 0.

RESULT:	**APPROVED [UNANIMOUS]**
MOVER:	Michael Chmiel, Board Member
SECONDER:	Brittany Lee Penberthy, Board Member
AYES:	Gilmour, Chmiel, Gill, Giuliani, Penberthy, Raffaele Jr., Kahn

2. PROPOSED OFFICE/WAREHOUSE ADDITION, SP-1987-64A
Property located at 80 Creekside Drive
80 Creekside Drive LLC, Petitioner

This project consists of a 10,525 square foot building addition on the north side of an existing warehousing building. The addition is 1-story (16.5 feet tall) and is constructed of steel siding and a metal roof. Other site work includes the addition of 8 parking stalls adjacent to the building addition and a dumpster enclosure. A new stormwater detention pond is also included in the site work to offset the additional pavement required in order to facilitate the building addition.

Chris Wood, Carmina Wood Design, represented the petitioner, explained the proposal and was available to answer questions from the Board. Joe Manzella and Kevein Curry were also present.

In response to the Board's questions, Mr. Wood stated there no existing sidewalks.
No further comments were heard on this proposal. The hearing was closed.
Following discussion, Mr. Giuliani moved to approve the Negative Declaration. The motion was seconded by Mr. Gill and carried. Ayes 7, Noes 0.

Following the approval of the Negative Declaration, Mr. Chmiel moved to approve the request based on the resolution. The motion was seconded by Ms. Penberthy and carried. Ayes 7, Noes 0.

RESULT:	**APPROVED [UNANIMOUS]**
MOVER:	Michael Chmiel, Board Member
SECONDER:	Brittany Lee Penberthy, Board Member
AYES:	Gilmour, Chmiel, Gill, Giuliani, Penberthy, Raffaele Jr., Kahn

REZONING & RELIEF FROM CONDITIONS OF REZONINGS

None

3. REQUEST TO REZONE 0.77± ACRES OF LAND FROM OB TO MFR-5, Z-2023-01
Property located at 2350 Sweet Home Road
Essex Homes of WNY, Petitioner

The purpose of this rezoning request is to rezone strips of land on the south and west sides of the site adjacent to the existing MFR-5 zoning to allow for the construction of future sunrooms on the back sides of the existing residential buildings. The rezoning area on the west side of the site ranges in width from 4.13 feet on the north to 9.55 feet on the south and a consistent width of 8 feet along the south of the existing MFR-5 zoning.

Sean Hopkins, Esq., Hopkins Sorgi & McCarthy, represented the petitioner, explained the proposal and was available to answer questions from the Board. Kevin Curry, Essex Homes, was also present.

In response to the Board's questions, Mr. Hopkins stated they have been diligently working with the neighbors.

Laura Stone, 550 N. Ellicott Creek Rd.; Elliott Bartley, 574 N. Ellicott Creek Rd.; John Blitstein, 540 N. Ellicott Creek Rd.; Andrew Fenster, 520 N. Ellicott Creek Rd.; George Rusk, 70 Lamarck Dr.; spoke in opposition of the proposal.

No further comments were heard on this proposal. The hearing was closed.

Following discussion, Mr. Giuliani moved to approve the request based on the resolution. The motion was seconded by Mr. Gilmour and failed. Ayes 3, Noes 4 (Chmiel, Gill, Penberthy, Raffaele).

Ms. Penbrthy moved to deny the request based on the resolution. The motion was seconded by Mr. Chmiel and carried. Ayes 4, Noes 3 (Gilmour, Giuliani, Kahn).

RESULT:	**DENIED [4 TO 3]**
MOVER:	Brittany Lee Penberthy, Board Member
SECONDER:	Michael Chmiel, Board Member
AYES:	Chmiel, Gill, Penberthy, Raffaele Jr.
NAYS:	Gilmour, Giuliani, Kahn

4. REQUEST TO AMEND A DECLARATION OF RESTRICTIONS AS PART OF A REZONING DECISION THAT RESTRICTS WINDOWS FROM BEING CONSTRUCTED ON THE REAR OF BUILDINGS AND LIMITING THE MINIMUM SETBACK, Z-2016-16D & Z-2017-11B
Property located at 2350 & 2360 Sweet Home Road
Essex Homes of WNY, Petitioner

The purpose of this rezoning request is to allow the petitioner to construct sunrooms or enclosed porches on the units which abut the west and south sides of the development and to allow for second story windows on the rear of interior buildings within the development.

Sean Hopkins, Esq., Hopkins Sorgi & McCarthy, represented the petitioner, explained the proposal and was available to answer questions from the Board. Kevin Curry, Essex Homes, was also present.

In response to the Board's questions, Mr. Curry showed the location where a window was accidentally constructed and removed.

Corey Fenster, 520 N. Ellicott Creek Rd.; Kim Bartley, 574 N. Ellicott Creek Rd.; and John Blitstein, 540 N. Ellicott Creek Rd. spoke in opposition of the proposal.

No further comments were heard on this proposal. The hearing was closed.

Following discussion, Mr. Chmiel moved to deny the request based on the resolution. The motion was seconded by Ms. Penberthy and carried. Ayes 4, Noes 3 (Gilmour, Giuliani, Kahn).

RESULT:	**DENIED [4 TO 3]**
MOVER:	Michael Chmiel, Board Member
SECONDER:	Brittany Lee Penberthy, Board Member
AYES:	Chmiel, Gill, Penberthy, Raffaele Jr.
NAYS:	Gilmour, Giuliani, Kahn

5. REQUEST TO REZONE 0.50± ACRES OF LAND FROM R4 TO CTR-5, Z-2023-02
Property located at 3945 Rensch Road
Rensch Group LLC, Petitioner

Rezoning approximately 0.57± acres to the CTR-5 mixed-use district to allow development of a three-story multi-family building containing 12 apartments, recreation space and parking.

Sean Hopkins, Esq., Hopkins Sorgi & McCarthy, represented the petitioner, explained the proposal and was available to answer questions from the Board.

In response to the Board's questions, Mr. Hopkins stated having the building sprinklered will be addressed during the site plan process.

No further comments were heard on this proposal. The hearing was closed.

Following discussion, Ms. Penberthy moved to approve the request based on the resolution. The motion was seconded by Mr. Chmiel and carried. Ayes 7, Noes 0.

RESULT:	**APPROVED [UNANIMOUS]**
MOVER:	Brittany Lee Penberthy, Board Member
SECONDER:	Michael Chmiel, Board Member
AYES:	Gilmour, Chmiel, Gill, Giuliani, Penberthy, Raffaele Jr., Kahn

MISCELLANEOUS

None

6. PROPOSED LOCAL LAW TO AMEND CHAPTER 203 OF TOWN CODE (ZONING ORDINANCE), SECTION 1-13 - ZONING IMMUNITY, ZTA-2023-01
Town of Amherst Law Department, Petitioner

This request is being initiated by the Town Attorney's Office on behalf of the Town Board. The purpose of this zoning text change is to exempt the Town from adhering to the requirements of the Town Zoning Ordinance for certain public uses.

Martin Polowy, Town Attorney, represented the petitioner, explained the proposal and was available to answer questions from the Board.

Samantha Smith, 60 Fruehauf Ave., spoke in opposition of the proposal.

No further comments were heard on this proposal. The hearing was closed.

Following discussion, Mr. Giuliani moved to approve the request based on the resolution. The motion was seconded by Mr. Gilmour. Mr. Giuliani withdrew his motion to approve.

Following discussion, Ms. Penberthy moved to deny the request based on the resolution. The motion was seconded by Mr. Raffaele and carried. Ayes 4, Noes 3 (Gilmour, Giuliani, Kahn).

RESULT:	**DENIED [4 TO 3]**
MOVER:	Brittany Lee Penberthy, Board Member

All public hearings are completed and closed at the termination of public discussion for each agenda item unless otherwise specified by the Chair.

UNFINISHED BUSINESS

Note: All public hearings have been completed. There will be no public hearings for items listed under this section.

SITE PLANS & RELIEF FROM CONDITIONS OF SITE PLANS

7. PROPOSED SNYDER MIXED-USE BUILDING, SP-2022-11
Property located at 4548 & 4564 Main Street, 17 Fruehauf Avenue and 22 Chateau Terrace
Benderson Development, Petitioner

February 16, 2023
Proposal's to:
1. Request for design exception in accordance with §203-5A-7-19 of Town Code for the length of the building abutting Chateau Terrace and Fruehauf Avenue and for the requirement of tree grates along the frontage of Chateau Terrace and Fruehauf Avenue of the development to satisfy particular design standards in the Mixed Use Districts.

2. Demolish all existing structures located on the subject parcels and construct a proposed 2½ story mixed use building containing 48 apartment units (22 one bedroom, 24 two bedroom & 2 three bedroom) with 2 commercial (restaurant) tenant spaces totaling 6,624 sq. ft. Parking is provided for 76 vehicles and is internal to the building. 54 parking spaces are located in the basement level which will be controlled via gate arm and accessed via Chateau Terrace with 22 parking spaces being located on the 1st floor level and accessed via Fruehauf Avenue. Refuse will be contained within a trash storage room in the basement level and bike racks are provided on the basement and first floor levels.

James Boglioli, Esq., Benderson Development Co., represented the petitioner, explained the proposal and was available to answer questions from the Board.

In response to the Board's questions, Mr. Boglioli stated there will be designated parking spaces on Main Street for loading and unloading of trucks, one current parking space on Main Street will be eliminated, the proposed building size is less than Town Code requires, electronic bicycles could be required to be stored outdoors, the building will be fully sprinklered, the power lines on Main Street cannot be moved, the proposed building is not much higher than the existing building, the parking meets the Town's requirement, tenants will not use the space if the parking is inadequate, Samantha Smith, 60 Fruehauf Ave.; Joy Testa-Cinquino, 74 Fruehauf Ave.; Jerry O'Conner, 27 Chateau Ter.; Cheri Cejka, 30 Chateau Ter.; Jim Kalinowski, 46 Chateau Ter.; Chris Drongosky, 1250 Youngs Rd; Robbie Illos-Gerth, 11 Chateau S.; Cathy Skora, 90 Fruehauf Ave.; Amanda Casali, 23 Fruehauf Ave.; John Casali, 23 Fruehauf Ave.; Mike Kozelsky, 60 Fruehauf Ave.; Katie Buonanno, 63 Fruehauf Ave.; Mark Buonanno, 63 Fruehauf Ave.; Christina Coyle-Lenz, 64 Chateau Ter. E.; Jessica Black, 79 Fruehauf Ave.; Eric Anson, 57 Fruehauf Ave.; Bob Drdul, 92 Chateau Ter.; Lisa Drdul, 92 Chateau Ter.; Jane Cox, 4584 Harlem Rd.; Kalinowski, 46 Chateau Ter. E.; Blake Kalinowski, 46 Chateau Ter. E.; Jeff Druzbik, 70 Fruehauf Ave.; Jacob Edelman, 4885 Main St., Matt Lingle, 47 Fruehauf Ave.; Claudia Drdul, 4885 Main St.; Paul Zarcone, Hamilton and Chateau Ter.; Fred Lenz, 64 Chateau Ter.; Dave 101 Fruehauf Ave. and Dave Kimball, 104 Fruehauf Ave. spoke in opposition of the proposal.
No further comments were heard on this proposal. The hearing was closed.
Following discussion, Mr. Giuliani moved to adjourn the proposal. The motion was seconded by Ms. Penberthy and carried. Ayes 7, Noes 0.

April 20, 2023
After Roll Call the Chairman asked for a motion to move unfinished item (No.7) Snyder Mixed-Use Building to item number 1 on the agenda for consideration. Mr. Giuliani motioned to move item number 7. The motion was seconded by Ms. Kahn and carried. Ayes 6, Noes 0, Abstain 1 (Chmiel).

Mr. Gilmour asked for a motion to adjourn the request because a (SEQR) State Environmental Quality Review Act determination cannot be made by the Planning Board at this time for the following reasons:

1. The Planning Department must coordinate with the NYS Office of Parks Recreation & Historic Preservation (SHPO) pursuant to section 617.6(b)(4)(ii) of the SEQR regulations. Based on the resource evaluation report created March 23, 2023, SHPO has now determined that the building at 4548 Main Street is eligible for inclusion on the State and National Register as an Historic Place.

2. The Town of Amherst Historic Preservation Committee (HPC) has received a local landmark designation application for 4548 Main Street. Accordingly, the Planning Board requests a determination from the HPC requiring the designation of 4548 Main Street.

3. The property at 22 Chateau Terrace is identified in the 2011 Reconnaissance Level Survey of Historic Resources for the Town of Amherst as part of a potential local historic district. The HPC has received a landmark designation application for 22 Chateau Terrace. Accordingly, the Planning Board requests a determination from the HPC regarding the designation at 22 Chateau Terrace.

Mr. Giuliani motioned to adjourn the request. The motion was seconded by Mr. Gill and carried. Ayes 6, Noes 0, Abstain 1 (Chmiel).

RESULT:	**ADJOURNED [6 TO 0]**	**Next: 5/18/2023 6:30 PM**

ABSTAIN:	Chmiel	

8. REQUEST FOR EXTENSION OF SITE PLAN APPROVAL, SP-2016-04B & SP-2016-04C
Property located at 6569 Main Street
Gurdwara Cultural Center, Petitioner

Proposal to expand the existing Gurdwara Cultural Center to include demolition of an office building and construction of a 2-story free-standing building with an 8,475± sq. ft. footprint in its place, redesign of the parking lot to create 52 parking spaces, and closure of the Main Street driveway. This development site includes the existing Gurdwara Cultural Center building and a single-family residence to the south of the main building that is associated with the cultural center. Parking spaces will be added behind the proposed new building. The site will continue utilizing two of the three existing curb cuts - one to Ridge Court North and one to Amherston Drive for the residence. The existing Main Street driveway will be closed; this development will be able to exit only at a shared driveway with the property to the east (6589 Main Street).

No comments were heard on this proposal.

Following discussion, Mr. Chmiel moved to adjourn the proposal until the variances needed to implement the site plan are obtained. The motion was seconded by Ms. Penberthy and carried. Ayes 7, Noes 0.

RESULT:	**ADJOURNED [UNANIMOUS]**	**Next: 6/15/2023 6:30 PM**
MOVER:	Michael Chmiel, Board Member	
SECONDER:	Brittany Lee Penberthy, Board Member

The Planning Board meeting of April 20, 2023 was adjourned at 9:15 pm.

TOWN OF AMHERST

APPLICATION & REVIEW PROCEDURE

MAJOR SITE PLAN

MATERIALS MUST BE PROVIDED IN AN ELECTRONIC FORMAT THAT CONTAINS PDF FILES OF THE APPLICATION, EAF, SITE PLAN DRAWING SET SURVEY, LANDSCAPE PLAN, PRELIMINARY BUILDING FLOO PLANS / ELEVATIONS & ANY OTHER SUPPORTING INFORMATION. THIS MUST BE SUBMITTED WITH YOUR APPLICATION. APPLICATIONS WILL NOT BE TRANSMITTED WITHOUT THIS ELECTRONIC INFORMATION.

THIS ALSO APPLIES TO REVISED MATERIALS THAT AR SUBMITTED.

This application package includes the following:

- Application Procedures
- Application Form & Checklist
- Stormwater Pollution Prevention Plan Checklist
- Appendix A Town of Amherst EAF Addendum
- Appendix B Criteria for Required 8½" x 11" Sketches
- Appendix C Erie Sewer District No. 5 – Commercial / Industrial New & Existing Buildings Requirements

- IMPORTANT-

1. A pre-submittal consultation with Planning Department staff is *strongly recommended* prior to submitting an application. The pre-submittal meeting gives the applicant an opportunity to discuss with staff such items as:
   - classifying the action as a major site plan, minor site plan, or minor site plan adjustment;
   - determining what specific information will be required to be submitted with the application;
   - identifying and discussing issues that must be addressed as part of the SEQR review;
   - identifying any potential variances required to implement the project as proposed.

   An appointment is required for all meetings with Planning Department staff.

2. This site plan petition is subject to the requirements of 6 NYCRR Part 617, State Environmental Quality Review Act (SEQR), and Chapter 104 of the Town of Amherst Code, as amended. The Planning Board cannot make a SEQR determination unless a complete Environmental Assessment Form (EAF), including Town of Amherst EAF Addendum, and any required supplementary information such as traffic impact studies, archaeological reports, wetland delineations or geotechnical reports, are submitted. SEQR issues may be discussed with Planning Department staff at a recommended pre-submittal meeting. Unlisted Actions require a Short EAF; Type I Actions require a Full EAF. The following is a link to the NYSDEC website and fillable forms with instructions*:*
   http://www.dec.ny.gov/permits/6191.html.

3. **Review by the Town Design Advisory Board (DAB) is required for Major Site Plans located in the following Mixed-Use zoning districts:**

   Traditional Infill 2.5 (TI-2.5)
   Traditional Infill 4 (TI-4)
   Shallow Corridor 3 (SC-3)
   Deep Corridor 3 (DC-3)
   Deep Corridor 5 (DC-5)
   Center 2.5 (CTR-2.5)
   Center 5 (CTR-5)
   Center 8 (CTR-8)

   The application for DAB review is required to be filed in conjunction with the major site plan application.

Attachment: SP-2022-02 application 042122 (25490 : Sp-2022-02)

4. The application shall be executed or consented to in writing by the owner of the property.

5. **Any variances from the Zoning Board of Appeals, or any decision from the Town Board (e.g. removal of deed restrictions) must be obtained prior to action by the Planning Board on a Site Plan application.**

6. Submittal of an application grants permission to Town staff and Planning Board members to access the parcel(s) under consideration.

7. All site plan drawings must be prepared by a Registered Architect, Professional Engineer, Landscape Architect, or Land Surveyor (as applicable) licensed to practice in New York State.

8. If you wish to include a Coordinated Sign Plan application with the site plan petition, a separate application must be completed. Contact the Planning Department for a copy of a Coordinated Sign Plan application package.

9. All drawings should be no larger than 24 in. x 36 in. If site characteristics warrant larger plan sheets, they may be accepted subject to Planning Department concurrence. All drawings must also reserve a 4 in. x 6 in. area in the lower right hand corner for official Town use.

APPLICATION PROCEDURES

1. Applicant secures application package from the Planning Department, 5583 Main Street, Williamsville, NY 14221. (716) 631-7051. Forms are also available online at: www.amherst.ny.us, (keyword: Planning).

2. Applicant prepares information as required on the Site Plan Submittal Checklist, attached. NOTE: Some proposals may not require all items on the checklist; please verify with the Planning Department.

3. Applicant schedules an appointment with the Planning Department to review the following:
   - a complete set of site plan drawings, preliminary building elevations and floor plans (no larger than 24" x 36" in size)
   - Environmental Assessment Form (EAF) & Town EAF Addendum
   - any supporting reports and materials
   - verification from the Town Assessor that the address in the application is correct

4. Applicant schedules an application submittal appointment with the Planning Department. NO SITE PLAN WILL BE ACCEPTED FOR REVIEW WITHOUT A PRE-SET SUBMITTAL APPOINTMENT.

5. At the submittal appointment, applicant provides fourteen (14) complete and collated sets of drawings and application information to the Planning Department **(materials will not be accepted unless folded into 9" x 12" in size),** including**:**
   - application form
   - Environmental Assessment Form (EAF)
   - supporting reports / materials
   - complete set of site plan drawings, preliminary building elevations and floor plans (**at least one (1) set of drawings must bear a raised or wet seal and signature of the design professional** who prepared the plans; the remaining copies may be submitted with a facsimile of the seal and signature)
   - digital files of all materials in pdf format
   - an 8½" x 11" reduction of the sketch plan or plat drawing (see Appendix B)

Attachment: SP-2022-02 application 042122 (25490 : Sp-2022-02)

6. After approval for filing by the Planning Department, applicant submits all necessary fees to the Town Clerk. **(See Schedule of Fees on first page of application and make checks payable to: Town of Amherst.)**

7. The applicant returns a copy of the filing receipt to the Planning Department.

8. The Planning Department transmits remaining thirteen (13) copies of the application and supporting materials to:
   - Assessor
   - Commissioner of Building
   - Town Engineer
   - Superintendent of Highways
   - Traffic/Safety Board
   - Fire Chiefs' Association
   - Plumbing Division
   - Right-of-Way Agent
   - Police Department (if applicable)
   - Zoning Enforcement Officer
   - Other Town and outside agencies, as applicable

9. Within 30 days of its receipt of the complete application for Site Plan approval, each agency completes its review and notifies the Planning Department in writing of its comments or recommendations as required by Ordinance.

10. The applicant may be required to submit revised plans, reports, or materials to address review agency comments. The procedures for submittal of revised plans are as follows:

    - A cover letter addressing all comments received to date is required.
    - "Highlight" the area of change on the drawings and provide a notation describing the change.
    - Revised plans/materials are required. Planning staff should be contacted to determine the number of sets needed.
    - All revised plans and materials must also be provided in an electronic format that contains pdf files of the revised information.

11. The Planning Board reviews the EAF to determine whether a Draft Environmental Impact Statement (DEIS) is required. The petitioner will be advised in the event that a DEIS is required and afforded the opportunity to prepare it. If the petitioner declines, the Planning Board will prepare the DEIS at the petitioner's expense. The public hearing will be held on the DEIS concurrently with the Planning Board hearing on the application.

12. Planning Board Meeting Procedures:

    The applicant or representative presents the project at the public hearing before the Planning Board and is available to answer any questions. The Planning Board may take any of the following actions:

    - Adjourn the hearing to a future Planning Board meeting (hearing remains open).
    - Close the hearing and table action on the site plan to a future Planning Board meeting. (The Planning Board may remove the item from the agenda until such time as all required information is provided.)
    - Close the hearing and make a decision on the site plan.

    All determinations on matters before the Planning Board are made after all public hearings on that meeting's agenda are completed.

Attachment: SP-2022-02 application 042122 (25490 : Sp-2022-02)

13. A copy of the Planning Board's determination will be provided to the applicant, his / her representative, the Building Commissioner and the Town Clerk approximately 1 week following the Planning Board meeting at which it was heard.

14. If the Planning Board approves a Site Plan with conditions, the Planning Department will work with the applicant to ensure that all conditions of the approval are satisfactorily addressed. When all conditions are satisfied, the applicant submits **seven (7) final copies** of the complete set of all site plan drawings, folded into 9" x 12". For site plans in the Mixed-Use zoning districts, building elevations will also be required.

    All 7 sets must have original wet seals and include the required 4 in. x 6 in area in the lower right hand corner for official Town use. These drawings will be stamped and signed "Approved" by the Planning Director and transmitted to Town Departments for their files and use.

15. A building permit will not be issued by the Building Department until the stamped and signed Site Plan is issued by the Planning Director.

NOTE: Please check with the Planning Department to determine the deadline date for filing applications. Due to the public hearing notice requirements and department reviews, no site plan application will be placed on the Planning Board agenda after the deadline for filing has closed. Scheduling may be delayed if an application is incomplete.

Project Description:

MULTI-TENANT BUILD-OUT AND PARKING LOT EXPANSION ONTO RIDGEWOOD DRIVE

Attachment: SP-2022-02 application 042122 (25490 : Sp-2022-02)

MAJOR SITE PLAN APPLICATION (con't) ***Page 3***

If this petition is an amendment to a previously approved site plan, please describe the proposed changes (include type and size of existing structures and number of existing parking spaces):

	existing	proposed	total
Gross Floor Area (non-residential):	29,350	4,400	33,750
Gross Floor Area Residential:			
Number of Residential Units:			
Number of Parking Spaces:	26	46	72

Acreage of Parcel: 1.24 AC

(list each parcel separately)

Frontage on Public Roads: 165.18'+333.61'+280.01'=778.8'

(list each road separately)

Existing Zoning District(s) GB - GENERAL BUSINESS

Attachment: SP-2022-02 application 042122 (25490 : Sp-2022-02)

Site Plan Submittal Requirements and Checklist

The following checklist outlines the information required by the Planning Department to accept a Site Plan application for review. ***It is strongly recommended that you make an appointment with Planning Staff to determine which items apply to your application***.

Item No.	Item	Submitted	Official use
I Basic Drawing Information			
1.0	**Drawing size not to exceed 24" x 36"**		
2.0	**Title of Drawing**		
3.0	**Name and address of Applicant**		
4.0	**Name of person preparing drawing**		
5.0	**Wet seal/raised seal and signature of NYS licensed architect, engineer, landscape architect, or surveyor (as applicable)**		
6.0	**Project address**		
7.0	**Zoning of subject property and adjacent parcels**		
8.0	**North point, scale, date, and revision date(s)**		
9.0	**4" x 6" reserved area in lower right hand corner for official Town use**		
II Structures, Paved Areas, & Open Space			
1.0	**Existing and Proposed Streets**		
1.1	Names of all existing and proposed streets		
1.2	Width and radii of proposed curb-cuts		
1.3	Existing curb-cuts on adjacent and opposite properties		
1.4	Show ROW width, pavement dimensions, lane widths, pavement markings, and proposed signage on proposed streets		
1.5	Show proposed ROW consistent with planned NYSDOT, Erie County, or Town road projects (if applicable)		
1.6	Show location of proposed cross access to adjacent parcels along with a draft easement		
1.7	Designation of Fire Lanes (if applicable)		
1.8	Fire apparatus access roads		
1.9	Label any proposed roads as public or private		
1.10	Location and dimensions of sidewalks		
1.11	Typical cross sections and profiles of proposed streets, pedestrian walkways, and bikeways		
2.0	**Proposed Structures**		
2.1	Location and complete dimensions of proposed structures		
2.2	Setback dimensions of structure(s) to all property lines		
2.3	Proposed use of structures		
2.4	Gross square feet area of each structure		
2.5	Location of all building entrances		
2.6	Indicate type of roof construction/materials		
2.7	Location, height, and design detail of existing and proposed fences and walls		
2.8	Location of light standards and building mounted lights		
2.9	Location of dumpster and detail of dumpster enclosure with gate		
2.10	Layout and dimensions of the lot(s) proposed for development		

Attachment: SP-2022-02 application 042122 (25490 : Sp-2022-02)

Town of Amherst Planning Department 5583 Main Street Williamsville-NY-14221
(716) 631-7051- Fax: (716) 631-7153

Item No.	Item	Submitted	Official use
II Structures, Paved Areas, & Open Space (cont'd)			
3.0	**Floor Plans with individual rooms and spaces labeled** (fully dimensioned)		
4.0	**Building elevations with height dimensions from finished grade to the highest point of the roof and to midpoint of gable or hip of a pitched roof.** (fully dimensioned)		
4.1	Show screening of mechanical equipment		
5.0	**Parking/Loading/Stacking Areas**		
5.1	Location and complete dimensions of all paved areas		
5.2	Setback dimensions of all paved areas to property lines		
5.3	Dimension of typical parking space and drive aisles		
5.4	Location and layout of handicapped parking spaces & access aisles		
5.5	Detail of vertical signage for handicapped parking and access aisles		
5.6	Indicate minimum parking requirement & number of spaces provided		
5.7	Proposed signage for directing and guiding traffic		
5.8	Curb cut permits from NYS, Erie County, or Town (if applicable)		
5.9	Pedestrian connections (from proposed structures to public sidewalk network)		
6.0	**Location and proposed development of all open spaces, including parks, playgrounds, and open reservations**		
III Utilities and Drainage			
1.0	**Engineers Report** (bound separately from the Stormwater Pollution Prevention Plan [SWPPP])		
1.1	Stamped/sealed and signed by NYS licensed architect or professional engineer		
1.2	Proposed water service sizing, RPZ pressure and fire safety flow and pressure calculations		
1.3	Proposed sanitary sewer facility load calculations (avg. & peak flows) including calculation of the peaking factor		
1.4	Proposed storm drainage facility calculations (see information included with this application)		
2.0	**Grading Plan**		
2.1	Existing and proposed grades indicated (proposed grades may not exceed 1 on 3)		
3.0	**Water Service**		
3.1	Location, size and material of existing and proposed facilities		
3.2	Location of existing and proposed fire hydrant location(s)		
3.3	Indicate use of sprinklers, location of Fire Department connection, and proposed fire protection systems		
3.4	Existing and proposed meter/RPZ size and location		
3.5	Applicable construction details		
4.0	**Sanitary Sewers**		
4.1	Locations, sizes, slopes, inverts, and materials of all existing and proposed facilities		

Attachment: SP-2022-02 application 042122 (25490 : Sp-2022-02)

Town of Amherst Planning Department 5583 Main Street Williamsville-NY-14221
(716) 631-7051- Fax: (716) 631-7153

Item No.		Submitted	Official use
III Utilities and Drainage (cont'd)			
4.2	Applicable construction details		
4.3	Proposed water/oil/grease interceptor sizing calculations by a professional engineer (if applicable)		
5.0	**Storm Drainage**		
5.1	Locations, sizes, slopes, inverts, and materials of existing and proposed storm drainage facilities		
5.2	Connection of roof drains to proposed drainage system		
5.3	Applicable Town Standard construction details		
5.4	Existing and proposed swales and ditches		
5.5	Detention area cross-section and high-level elevations		
5.6	County and State approval for tie-in to existing sewers		
6.0	**Stormwater Pollution Prevention Plan (SWPPP) as applicable** (bound separately from the Engineer's Report) **See attached checklist.**		
7.0	**Natural Gas Service**		
8.0	**Location of transformers, generators and other mechanical equipment; include detail drawings (if applicable)**		
9.0	**Downstream Sanitary Capacity Analysis (DSCA) Report** (must be submitted if proposed average flows are greater than 2,500 gallons per day)		
9.1	The DSCA Report must include a detailed downstream sewer capacity analysis and the calculations of and commitment to (via Developer commitment letter) the required financial contribution to the Town's I/I mitigation fund based on peak flow conditions. The contribution must be based on $250 per gallon per minute of mitigated flow		
IV Lighting Plan			
1.0	**Photometric plan showing light spread in foot candles at property lines**		
1.1	Detail of all light standards, including dimension of height from finished grade		
1.2	Detail of all exterior lighting fixtures		
V Landscape Plan			
1.0	**Wet/raised seal and signature of a licensed Landscape Architect**		
2.0	**Provide a calculation of the total Parking area and a calculation of interior parking area in square feet and as a percentage**		
3.0	**Indicate location, size, number and type of proposed landscape materials**		
4.0	**Indicate location, type and size of <u>all</u> existing trees 4" caliper or larger and indicate which will be removed or retained**		
VI Other Required Information/General Requirements			
1.0	**Complete boundary survey that includes all existing structures, acreage, legal description with reference to a property line, street, or other known feature, and easements plotted to scale by a NYS licensed land surveyor**		

Attachment: SP-2022-02 application 042122 (25490 : Sp-2022-02)

Town of Amherst Planning Department 5583 Main Street Williamsville-NY-14221
(716) 631-7051- Fax: (716) 631-7153

Item No.		Submitted	Official Use
VI Other Required Information/General Requirements (cont'd)			
1.1	Copies of all easements, reciprocal access agreement or similar leag documents		
2.0	**Topographic Survey with a 30 ft. buffer outside all property lines by a NYS licensed land surveyor**		
3.0	**Draft of any deed restrictions, covenants, provisions for home associations and common ownership, and reciprocal easement agreements (as applicable).**		
4.0	**For assessment purposes, state intent to apply for condominium status (if applicable).**		
5.0	**Completed and signed Environmental Assessment Form**		
5.1	Soil boring report and geotechnical report prepared by a qualified Professional Engineer (if applicable)		
5.2	Traffic Impact Study (if applicable)		
5.3	Archaeological survey (if applicable		
5.4	Wetland Delineation report (if applicable)		
6.0	**Show existing zoning(s) of both the subject property and adjacent parcels on the Site Plan and the Landscape Plan**		
7.0	**Location of NYSDEC wetlands (including buffer area) and/or federal wetlands; indicate jurisdictional status**		
8.0	**Location of Floodway and floodplain** (if applicable)		
9.0	**Documentation pertaining to any conditions of zonings, including copies of required deed restrictions; indicate date of rezoning and the parcel address under which it was rezoned (if applicable)**		
10.0	**Documentation related to any required variances granted by the ZBA**		
11.0	**For residential site plans, provide a statement from the appropriate school district that adequate school sites and facilities are available.**		
12.0	**8 1/2" X 11" reduction of primary site plan drawing (see appendix "B" of application package for specifications)**		
13.0	**A CD containing a PDF of all site plan drawings (Must also be provided with revised drawings)**		
VII Additional Required Information for Projects in the Mixed Use Districts			
1.0	**Design Advisory Board Application**		
1.1	Required for Major Site Plan		
1.2	Required at the Planning Directors Discretion for Minor Site Plans		
2.0	**Block & Street Network Plan**		
2.1	Designation of Core, Local & Alley streets		
2.2	Dimensions of Blocks		
3.0	**Block Usage Plan (as applicable)**		
3.1	Designation of site usage for each block including open space areas		
4.0	**Phasing Plan**

TOWN OF AMHERST
State Environmental Quality Review
ENVIRONMENTAL ASSESSMENT FORM
-- ADDENDUM --

1. For each applicable category of proposed <u>new</u> structures, including additions to existing structures, provide the following information for all soil types on the project site (*according to Soil Survey of Erie County, NY; Table 11, Building Site Development, pp 294-305):*

Soil Name	Shallow excavations	Dwellings without basements	Dwellings with basements	Small commercial buildings	Local roads and streets
Urban Soil	severe	severe	severe	severe	severe

2. If the Soil survey indicates either "severe" or "moderate" suitability for the proposed types of construction, a geotechnical and hydrological analysis based on one test per 3.5 acres of project area must be provided (per Town Board resolution, 3/17/03, amended 6/16/03).

   ____ Geotechnical report attached _____ Not applicable

3. Is your property located: On Youngs Road between Dodge and Klein Roads? □ Yes X No
   On Wehrle Dr. between Spindrift Dr. and Oakwood Rd? □ Yes X No
   If so, the property may be within an area of the Town that is affected by a moratorium on connections to the sanitary sewer system.

4. Are there alternative locations on the site for this project? □ Yes X No

5. Location and size of real property owned by petitioner within one (1) mile of subject proposal:
   No

6. Are you aware of current or future plans or intentions by others in the Town of Amherst to develop property within 1000± ft. of the present project request: □ Yes X No
   Describe

   (Potential environmental impacts from adjacent or nearby projects undergoing the approval process will receive a coordinated environmental review to determine cumulative effects on common receivers (e.g. traffic and drainage corridors) and other relevant environmental concerns.)

7. Maximum number of vehicular trips to be generated per peak hour upon completion of project Reference traffic study
   Source:

8. Will blasting occur during construction? □ Yes X No

9. Does the project propose to connect and be tributary to the public sanitary sewer system? X Yes □ No

10. Proposed net additional gallons per day (gpd) of sanitary sewer discharge upon completion of project:
    _1120_____ average flow _4400_____ peak flow.
    (Average flows of 2,500 gpd or greater will require an Engineer's Report that includes a detailed downstream sewer capacity analysis and the identification of and commitment to required I/I offset work during peak wastewater flow conditions.)

11. Based on the Town's *2011 Reconnaissance Level Survey of Historic Resources,* is your property 'blue-rated' for historic significance? □ Yes X No

Attachment: SP-2022-02 application 042122 (25490 : Sp-2022-02)

Short Environmental Assessment Form
Part 1 - Project Information

Instructions for Completing

Part 1 – Project Information. The applicant or project sponsor is responsible for the completion of Part 1. Responses become part of the application for approval or funding, are subject to public review, and may be subject to further verification. Complete Part 1 based on information currently available. If additional research or investigation would be needed to fully respond to any item, please answer as thoroughly as possible based on current information.

Complete all items in Part 1. You may also provide any additional information which you believe will be needed by or useful to the lead agency; attach additional pages as necessary to supplement any item.

Part 1 – Project and Sponsor Information

Name of Action or Project:
Shatkin School of Dentistry / Philipps Bros Supply

Project Location (describe, and attach a location map):
2525 Kensington Ave at Bentham Pkwy and Ridgewood Drive

Brief Description of Proposed Action:
Shatkin School of Dentistry at Daemen College & Institute for Mobility and Technology on 1.2 acre existing developed parcel -plus- redevelopment of Ridgewood Drive into a new private paved surface parking lot.

Name of Applicant or Sponsor:	Telephone: 716-839-4800
Pat Philipps	E-Mail: pphilipps@philippsbros.com

Address:
2525 Kensington Avenue

City/PO:	State:	Zip Code:
Amherst	NY	14226

	NO	YES
1. Does the proposed action only involve the legislative adoption of a plan, local law, ordinance, administrative rule, or regulation? If Yes, attach a narrative description of the intent of the proposed action and the environmental resources that may be affected in the municipality and proceed to Part 2. If no, continue to question 2.	☑	☐
2. Does the proposed action require a permit, approval or funding from any other government Agency? If Yes, list agency(s) name and permit or approval: Amherst Site Plan, building permit	☐	☑

3. a. Total acreage of the site of the proposed action? 1.24 acres
   b. Total acreage to be physically disturbed? 0.50 acres
   c. Total acreage (project site and any contiguous properties) owned or controlled by the applicant or project sponsor? 1.24 acres

4. Check all land uses that occur on, are adjoining or near the proposed action:

5. ☐ Urban ☐ Rural (non-agriculture) ☐ Industrial ☑ Commercial ☑ Residential (suburban)
   ☐ Forest ☐ Agriculture ☐ Aquatic ☐ Other(Specify):
   ☐ Parkland

Attachment: SP-2022-02 application 042122 (25490 : Sp-2022-02)

	NO	YES	N/A
5. Is the proposed action,			
a. A permitted use under the zoning regulations?	☐	☐	☑
b. Consistent with the adopted comprehensive plan?	☐	☐	☑

	NO	YES
6. Is the proposed action consistent with the predominant character of the existing built or natural landscape?	☐	☑
7. Is the site of the proposed action located in, or does it adjoin, a state listed Critical Environmental Area?	NO	YES
If Yes, identify: _____	☑	☐
8. a. Will the proposed action result in a substantial increase in traffic above present levels?	☑	☐
b. Are public transportation services available at or near the site of the proposed action?	☐	☑
c. Are any pedestrian accommodations or bicycle routes available on or near the site of the proposed action?	☐	☑
9. Does the proposed action meet or exceed the state energy code requirements?	NO	YES
If the proposed action will exceed requirements, describe design features and technologies:		
REFER TO ARCHITECTURAL SET	☐	☑
10. Will the proposed action connect to an existing public/private water supply?	NO	YES
If No, describe method for providing potable water: _____	☐	☑
11. Will the proposed action connect to existing wastewater utilities?	NO	YES
If No, describe method for providing wastewater treatment: _____	☐	☑
12. a. Does the project site contain, or is it substantially contiguous to, a building, archaeological site, or district which is listed on the National or State Register of Historic Places, or that has been determined by the Commissioner of the NYS Office of Parks, Recreation and Historic Preservation to be eligible for listing on the State Register of Historic Places?	☑	☐
b. Is the project site, or any portion of it, located in or adjacent to an area designated as sensitive for archaeological sites on the NY State Historic Preservation Office (SHPO) archaeological site inventory?	☐	☑
13. a. Does any portion of the site of the proposed action, or lands adjoining the proposed action, contain wetlands or other waterbodies regulated by a federal, state or local agency?	NO	YES
	☑	☐
b. Would the proposed action physically alter, or encroach into, any existing wetland or waterbody?	☑	☐
If Yes, identify the wetland or waterbody and extent of alterations in square feet or acres: _____		

Attachment: SP-2022-02 application 042122 (25490 : Sp-2022-02)

14. Identify the typical habitat types that occur on, or are likely to be found on the project site. Check all that apply:

☐ Shoreline ☐ Forest ☐ Agricultural/grasslands ☐ Early mid-successional
☐ Wetland ☐ Urban ☑ Suburban

	NO	YES
15. Does the site of the proposed action contain any species of animal, or associated habitats, listed by the State or Federal government as threatened or endangered?	☑	☐
16. Is the project site located in the 100-year flood plan?	☑	☐
17. Will the proposed action create storm water discharge, either from point or non-point sources?	☐	☑
If Yes,		
a. Will storm water discharges flow to adjacent properties?	☑	☐
b. Will storm water discharges be directed to established conveyance systems (runoff and storm drains)?	☐	☑
If Yes, briefly describe: EXISTING PUBLIC DRAINAGE IN RIDGEWOOD DRIVE		
18. Does the proposed action include construction or other activities that would result in the impoundment of water or other liquids (e.g., retention pond, waste lagoon, dam)?	☑	☐
If Yes, explain the purpose and size of the impoundment:		
19. Has the site of the proposed action or an adjoining property been the location of an active or closed solid waste management facility?	☑	☐
If Yes, describe:		
20. Has the site of the proposed action or an adjoining property been the subject of remediation (ongoing or completed) for hazardous waste?	☑	☐
If Yes, describe:		

I CERTIFY THAT THE INFORMATION PROVIDED ABOVE IS TRUE AND ACCURATE TO THE BEST OF MY KNOWLEDGE

EAF Mapper Summary Report

Monday, February 14, 2022 1:50 PM

Disclaimer: The EAF Mapper is a screening tool intended to assist project sponsors and reviewing agencies in preparing an environmental assessment form (EAF). Not all questions asked in the EAF are answered by the EAF Mapper. Additional information on any EAF question can be obtained by consulting the EAF Workbooks. Although the EAF Mapper provides the most up-to-date digital data available to DEC, you may also need to contact local or other data sources in order to obtain data not provided by the Mapper. Digital data is not a substitute for agency determinations.

Part 1 / Question 7 [Critical Environmental Area]	No
Part 1 / Question 12a [National or State Register of Historic Places or State Eligible Sites]	No
Part 1 / Question 12b [Archeological Sites]	Yes
Part 1 / Question 13a [Wetlands or Other Regulated Waterbodies]	No
Part 1 / Question 15 [Threatened or Endangered Animal]	No
Part 1 / Question 16 [100 Year Flood Plain]	No
Part 1 / Question 20 [Remediation Site]	No

March 28 2022

5583 Main Street Williamsville NY 14221
Town of Amherst Planning Department

STIEGLITZ SNYDER ARCHITECTURE

RE: 2525 Kensington Avenue – Philipps Bros. Supply / The Shatkin School of Dentistry and Parking expansion.

Dear Mr. Gary Palumbo,

We are submitting to the Planning Department our response to Major Site Plan review comments submitted by the following Departments:

Amherst Fire Chief Comments March 16 2022:

1. What fuel is used for generator? If diesel, provide specs on tank and quantity.

Fuel type is Diesel. See accompanying documents for tank specifications.

2. fire lane no parking signs are required on north side of the building

Signage will be provided.

3-Show location of fire department connection. Should be located on street side of building

Fire department connection will be provided at northwest corner of the building just north of the loading doc.

Engineering Department Comments March 9 2022:

1.An executed copy of the proposed access easement from the adjacent parcel to the north must be copied to this office prior to issuance of any town of Amherst plumbing permits for this project.

To be resolved with Town Board.

Attachment: SP-2022-02 application 042122 (25490 : Sp-2022-02)

2. An executed copy of the Town of Amherst License Agreement / Land lease regarding the use and improvement of Ridgewood drive must be copied to this office prior to the issuance of any Town of Amherst Plumbing permits for this project.

To be resolved with Town Board.

Planning Department comments March 7 2022:

Zoning Enforcement Officer Review:

Item #1

Owner/applicant to pursue 0 feet setback at proposed canopy addition location. We are requesting an Area Variance from the Ridgewood Drive Right-of-way.

Item #2

Owner/applicant to pursue 0 feet area setback for paved parking at the right-of-ways and north property line. We are requesting an Area Variance.

Item #3

Existing parking lot modified to comply with minimum size and spacing of car-parks and including a new curbed and landscaped end cap.

Item #4

Owner/applicant to pursue 0 feet setback at proposed trash enclosure location. We are requesting an Area Variance from the Ridgewood Drive and Bentham Pkwy Right-of-way.

Item #5

Landscape plan is sealed by NYS licensed Landscape Architect.

Item #6

Additional landscape screening is provided to screen Transformer and Generator. See accompanying transformer photo (similar size transformer will be used) and diesel fuel generator and tank.

Attachment: SP-2022-02 application 042122 (25490 : Sp-2022-02)

Item #7

A foundation planting bed is now shown cut-out from the existing sidewalk fronting the west wall of the existing facility. Shrubs are added in the planting schedule.

Item #8

Site Lighting Plan – the intent is to illuminate Ridgewood Drive parking lot for safety. See accompanying revised drawing for lighting at south end of parking.

Item #9

Alternative parking analysis – See accompanying Traffic Study prepared by SRF Associates.

Planning Department Staff Review:

Item #1

Owner/Applicant will work with the Town of Amherst Board to remove parking restriction on Ridgewood Drive.

Item #2

Owner/Applicant will provide a license agreement for maintenance and use of Ridgewood Drive right of way.

Item #3

Boulders stones in the Kensington Avenue Right- of- way are shown to be removed.

Item #4

Northerly curb cut and driveway on Kensington Ave. is required for Fire Truck access along the north side of the building therefore we do not suggest removing this curb cut. We would agree to remove the southerly curb cut if deemed necessary however, we did not receive comment from NYSDOT to determine what concerns they may have, and therefore have not modified the site plan for such.

Attachment: SP-2022-02 application 042122 (25490 : Sp-2022-02)

Item #5

See accompanying transformer photo (similar size transformer will be used) and diesel fuel generator and tank.

Item #6

See accompanying cut sheets for site and building mounted lighting fixtures.

Item #7

No other site features are anticipated.

Item #8

We hereby request a waiver for the sidewalk requirement along Ridgewood Drive. The area of concern contains proposed foundation plantings instead to augment the façade treatment.

Item #9

Signage will be submitted under separate cover for review by the Town of Amherst.

Item #10

SEAF – see accompanying document with applicant's name.

Item #11

See accompanying Application complete with Item #1, #5 and #7.

Item #12

We have provided 4"x6" in the lower right hand corner of all drawings that did not have the space available for Town use.

Item #13

An 8 1/2" x11" reduction of the modified site plan is included.

Attachment: SP-2022-02 application 042122 (25490 : Sp-2022-02)

Landscape Architect Review:

Item #1

Bollards surrounding explosive mechanical equipment will contain a plastic covering *color safety yellow* for visible warning to motorists to avoid impact. Disguising bollards in this application is not recommended.

Item #2

Ridgewood Drive right-of-way contains various underground utilities, including ECWA water on each side of the roadway, that must remain as-is. We do not recommend planting trees atop these public utilities.

Item #3

Additional landscaping screening is shown on the south side of the transformer and west side of the generator to further restrict view from the public roadway.

Item #4

We do not intend to install landscaping on Thruway property. There is approximately 4-ft between the right-of-way/edge of pavement and the Thruway fence remaining that is shown re-planted as lawn.

Item #5

Existing trees or shrubs are shown with a legend for removals, if any. Brush shall be cleared from along the Thruway fence.

Item #6

See Item #5 – note on plan indicates where contractor is to protect or remove existing plantings.

Attachment: SP-2022-02 application 042122 (25490 : Sp-2022-02)

Highway Dept. Review March 24 2022:

Item #1 – Applicant has requested abandonment of the portion of Ridgewood Drive running north of Bentham Pkwy. However, the underlying utilities including storm sewers, shall remain owned and maintained by the Town of Amherst.

End of comments.

If you would like to discuss these comments further, please don't hesitate to contact me at 716-222-3040 or via e-mail at jmolek@stieglitzsnyder.com.

Sincerely,

STIEGLITZ SNYDER ARCHITECTURE

Joseph Molek, RA

Project Architect

ENGINEERS

I. SUMMARY

This project includes a mixed-use redevelopment and internal expansion in an existing 1-story retail/warehouse facility to include a dental school on a 1.2± acre parcel located at Kensington Avenue, Bentham Pkwy. and Ridgewood Drive in the Town of Amherst, New York. The GB-zoned site is located adjacent to the north terminal end of Ridgewood Drive, to which the applicant is requesting abandonment, and proposed replacement with a paved parking lot in a land-lease. The subject parcel is currently fully developed with replacement utility services planned for the uprated occupancy.

Sanitary wastewater is currently conveyed by 4-inch gravity piping from the building to an 8-inch public sewer found in Ridgewood Drive. New interior plumbing and partial replacement of the existing 4inch PVC lateral is planned.

New water service for domestic and fire-protection use of the multi-tenant build-out shall replace the existing tap and connect to the 6-inch main found in Kensington Ave. A new 6-inch tap with 4-inch DIP tee reducing to 3-inch and running to the water meter room and 6-inch DIP fire protection runs together in the same trench. The Erie County Water Authority (ECWA) regulates the water main. Metering and backflow prevention for the private services are contained within the facility mechanical room with application made by others.

Currently, storm water runoff generated by the site flows overland towards and into the existing surrounding roadway drainage systems. Replacement receivers are proposed for redevelopment of Ridgewood Drive from a roadway to a perpendicular car-park. New storm piping shall connect to existing manholes. One manhole rim is proposed to be raised-up to new grade of the proposed parking lot.

This development will not result in an increase in impervious surfaces on this site and does not involve soil disturbance greater than one (1) acre, thus stormwater detention is not provided. The site is not located within a 100-year floodplain. The site is currently fully developed and does not contain wetland.

II. SANITARY SEWER SERVICE

The existing public 8-inch gravity sanitary sewer located on the west side of Ridgewood Drive will provide a sanitary sewer connection point. All public utilities within Ridgewood Drive shall remain operational and accessible for maintenance during and after reconstruction. One public sewer manhole rim is proposed to be raised-up to new grade of the proposed parking lot.

A replacement for the private 4-inch PVC (SDR35) sewer lateral will be installed to the proposed building sanitary sewer entry point at the north wall of the building from the existing tap per the building plumbing plans. The proposed facilities will generate a calculated 1120 gal/day (gpd) average of residential wastewater load* as per the following:

Day School: (30 empl x 15 gpd)+(52 students x 10 gpd) ~ 970
Existing retail/warehouse: (10 empl x 15 gpd) ~ 150

*Reference “NYS Design Standards for Intermediate Sized Treatment Works, March 2014”

III. WATER SERVICE

A new 6-inch water line for domestic and fire-protection will be connected to the existing 6-inch public main located on the east side (near side) of Kensington Ave. The following data pertains to the public watermain and private demands:

- Subsurface investigations indicates a somewhat shallow, till overburden on weathered shale bedrock. The presence of bedrock measurement approx. 7-ft below grade is indicated.
- The static pressure of the existing 6-inch public main is reported by ECWA as __ psi, and a residual (open hydrant) reading of __ psi. (Note that a recent pressure test is not available and a new test cannot be made at this time and until spring thaw)
- New domestic demand is limited to the proposed uses as a day school and retail/warehouse facility. New fire-protection demand design shall be by the building fire-protection engineer which may include a booster pump as required.

Erie County Water Authority (ECWA) governs the proposed tap and backflow prevention. ECWA provides the tapping sleeve and valve and the 4-inch gate valve and 6-inch gate valve installed at the property line. Metering and backflow prevention is contained within the facility. Meter set is also provided by ECWA. A Backflow Prevention Application shall be provided under separate cover on behalf of the water customer.

Attachment: SP-2022-02 application 042122 (25490 : Sp-2022-02)

IV. STORMWATER MANAGEMENT

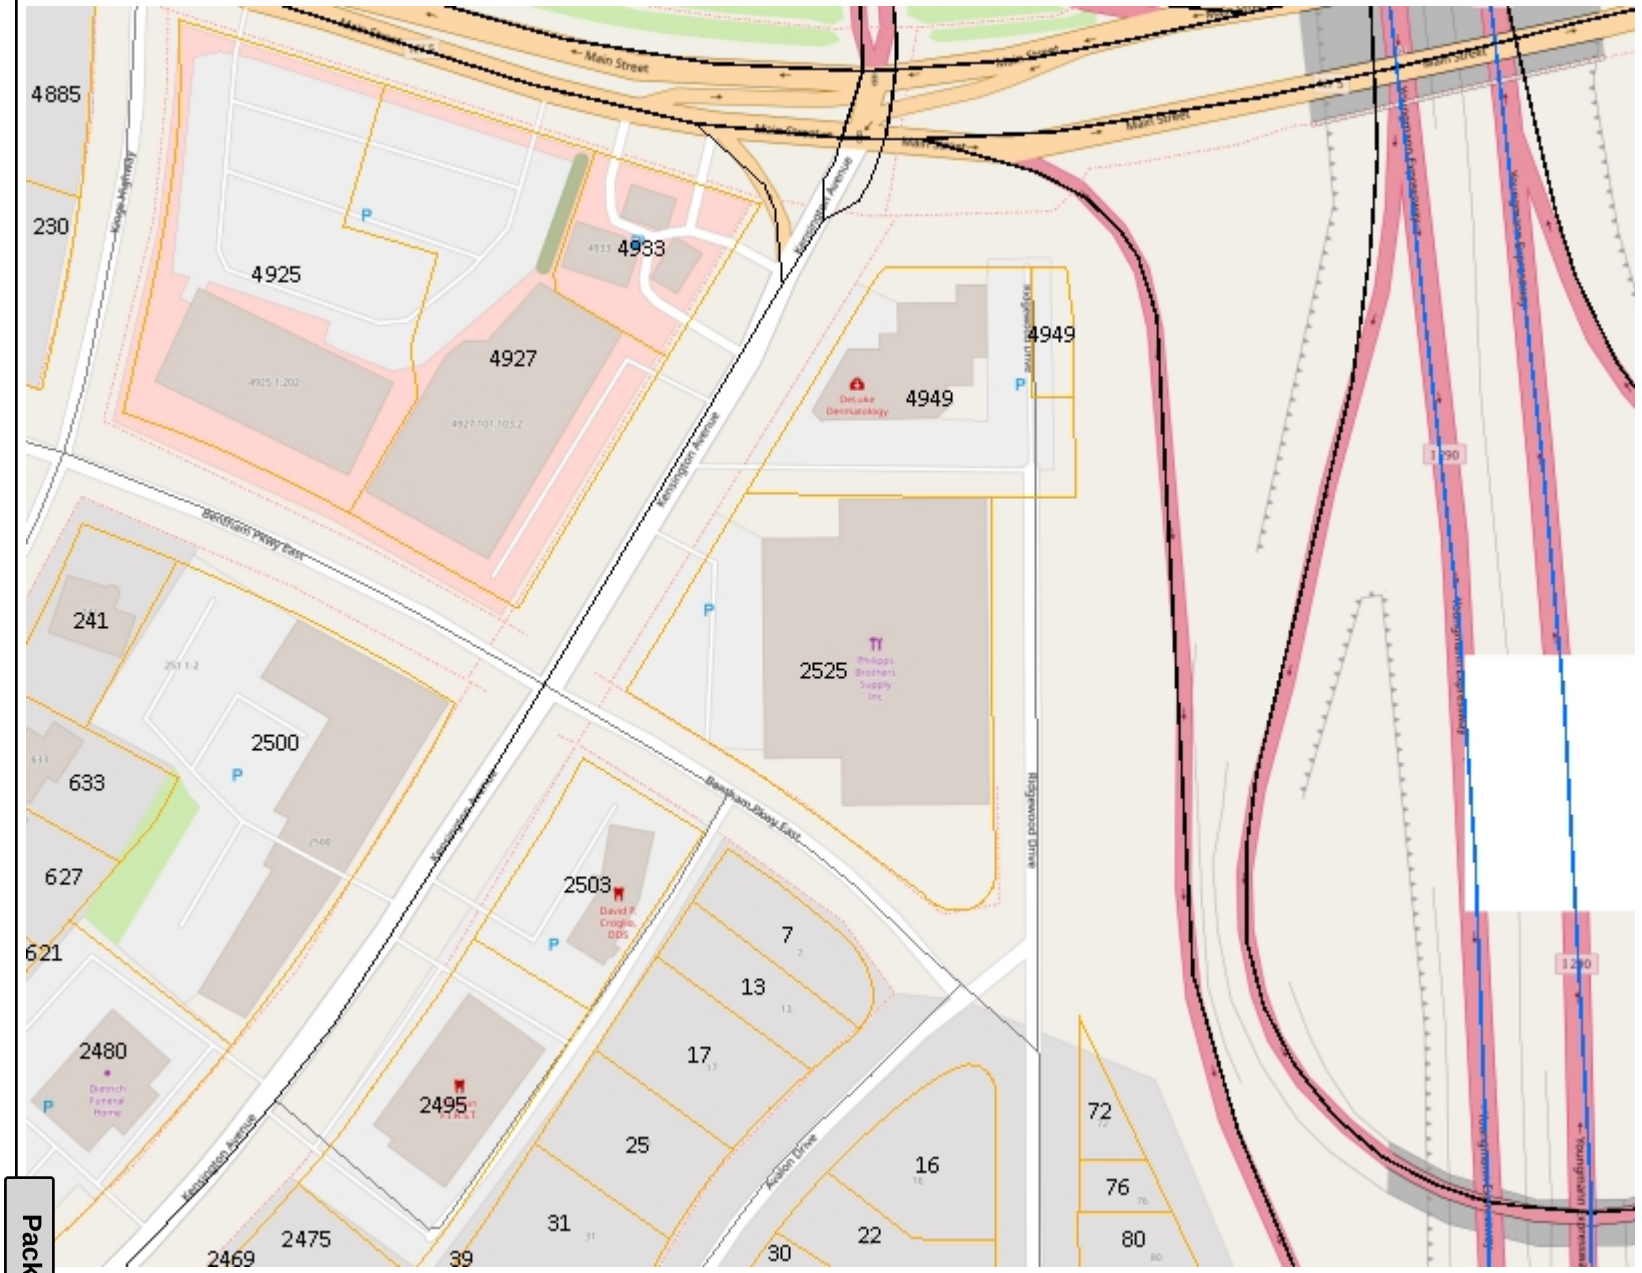
I. Existing (Pre-Development) Conditions

The subject parcel is currently built-out with building and pavements. No on-site stormwater receivers were found. Ridgewood Drive contains curb inlets and storm piping conveyances owned and maintained by the Town of Amherst.

II. Proposed (Post-Development) Conditions

The proposed development includes the construction of a new canopy entry structure and associated paved parking in a land-lease agreement to use Ridgewood Drive as a car-park. Storm water receivers are replaced, existing piping abandoned, with new piping connections made to existing manholes. Storm pipe sizing for conveyance of the 10-year storm event is included in Appendix A for new drainage in Ridgewood Drive.

V. PERMITS



The proposed construction of the building addition, abandonment of public rights-of-way, new parking areas and drainage must receive approval from the Town of Amherst. An application for backflow prevention for private service must be made to the Erie County Water Authority (ECWA).

ATTN: Dr. Todd Shatkin, DDS

RE: Geotechnical Engineering Report
Proposed Mezzanine & Canopy at
Shatkin School of Dentistry
2525 Kensington Avenue
Town of Amherst, Erie Co., New York 14226

Dr. Shatkin:

This report presents the findings of the subsurface investigation program and geotechnical engineering recommendations for the above referenced project. The geographic orientation of the project site is illustrated on the U.S. Geologic Survey (USGS) site location map in Figure No. 1. The project site is illustrated in Figure No. 2, entitled "Test Boring and Concrete Core Location Plan", which includes: the approximate location of one exterior test boring and two interior concrete floor slab cores that were drilled by Buffalo Drilling Company, Inc. (BDC); relative ground surface elevations; and additional site details.

EXPLORATION METHODS

Sampling Method: A truck-mounted CME 55 rotary drill rig was used to drill one boring to shallow auger refusal by using 4-1/4 inch inside diameter (ID), continuous flight hollow stem augers. Samples were recovered by driving a standard split-spoon sampler (2-foot long by 1-3/8 inch inside diameter) 24 inches with a 140-pound hammer falling 30 inches per blow per the American Society of Testing and Materials (ASTM) Standard D1586. The number of blows from six to 18 inches of penetration is defined as the Standard Penetration Test (SPT) N-value. Auger refusal, which may infer the top of bedrock, was encountered approximately seven feet below ground surface. Inside the existing structure, an electric core machine with six-inch ID, diamond impregnated bit was used to core through the concrete floor slab to gain access to subsurface soils at two locations, C-1 and C-2. Subsurface samples were retrieved via hand sampler beneath concrete floor slab.

Bedrock was confirmed by coring boring B-1 to a depth of approximately five feet below auger refusal. Bedrock coring efforts were done with an Nx-sized (2-1/8-inch I.D.) core barrel and impregnated diamond bit in accordance with ASTM Method D2113.

Attachment: SP-2022-02 application 042122 (25490 : Sp-2022-02)

Any encountered groundwater conditions are documented in the field on the driller's logs for each test boring. If indicators of groundwater are observed on the sampling equipment, the depth to groundwater is also checked and measured through the hollow stem augers at the completion of the sampling efforts.

Classification: The retrieved soil samples were initially logged in the field by the driller, and a portion of each sample was placed and sealed in a glass jar. The boring logs, which are included in Appendix A, were based upon the field logs and a second visual classification of recovered samples in the laboratory by a geologist. Classification/identification of samples, as noted on the boring logs, is based on the Unified Soil Classification System (USCS) in ASTM D2487/D2488. Refer to Appendix B entitled, "Geotechnical Reference Standards", for an explanation of the terminology that is used for soil and rock descriptions.

Each rock core was examined on a run-by-run basis to determine the percentage of core recovery and Rock Quality Designation (RQD). Core recovery percentage is the ratio of the sample length recovered divided by the length of the core run times 100 percent. RQD is defined as the total length of all pieces of core that are greater than four inches divided by the length of the core run times 100 percent. Core recovery and RQD percentages are noted on the boring logs.

Each core sample of the existing concrete floor slab was observed, measured, and photographed for review. Details can be found on the test boring/core logs C-1 and C-2 in Appendix A and the photographs are available in Appendix C, entitled "Floor Slab Core Photographs".

SITE AND SUBSURFACE CONDITIONS

General: The proposed site for development is the existing Phipps Brothers Supply, Inc. building addressed as 2525 Kensington Avenue, in the Town of Amherst, Erie County, New York. The project will include the construction of an interior mezzanine and an exterior canopy over the drop off area along the east side of the building. The site topography is generally flat across test boring locations.

Subsurface Soil Conditions: In general, subsurface conditions, underlying the exterior asphalt pavement or interior concrete floor slab, consist of one to two feet of granular fill material atop naturally deposited cohesive/fine-grained glacial till that extends to auger refusal.

Beneath the asphalt at B-1, granular fill material was encountered and extends two feet below ground surface. This fill consists of fine to coarse-grained sand to gravel sized crushed limestone and is believed to be the aggregate base course for the asphalt pavement. Relative density of the granular fill is medium dense with moisture contents of retrieved samples noted to be in a moist state. Beneath interior concrete floor slab at boring/cores C-1 and C-2, the granular fill is a loose to medium dense silty sand with trace quantities of gravel. This fill is described as a spent foundry sand typical of the metal casting industry which has a historic common reuse in this region as concrete slab/rigid pavement base layers.

Attachment: SP-2022-02 application 042122 (25490 : Sp-2022-02)

Beneath the fills, a naturally deposited cohesive/fine-grained glacial till exists and extends to auger refusal at B-1 and the remain depths advanced at C-1 and C-2. The till generally consists of slightly to moderately plastic, silt and clay with lesser amounts of sub-rounded fine-sized to coarse-sized sand and gravel. The consistency of this soil is primarily stiff to hard with moisture contents of retrieved samples noted to be moist. Spoon refusal conditions are also noted in the lower depths of the unit closer to soil bedrock interface. The proposed footing bearing grades for the proposed structures are assumed to be within this soil.

Bedrock: Auger refusal, which is generally inferred to be the top of the apparent bedrock surface, was encountered at B-1 approximately seven feet below ground surface. Confirmatory rock coring was advanced five feet beneath the refusal condition and bedrock samples collected. The bedrock type is the Onondaga Limestone, which is described as hard, slightly weathered, medium dark gray, thinly bedded, porous and calcareous limestone. Percent recovery is lightly more than 50 percent with rock quality designations (RQD) noted as 30 percent. These RQD values suggest that the rock is poor quality.

Groundwater: Groundwater was not encountered during subsurface exploration efforts. Note that the groundwater readings were taken at the completion of drilling efforts and, therefore, an adequate amount of time for the groundwater level to recharge to static conditions was probably not allowed. Fluctuations in the groundwater level may occur due to other factors than those present during field operations.

EARTHQUAKE/SEISMIC CONSIDERATIONS

Site Class Definition: For the given site conditions, the most applicable site definition is Site Class C, in accordance with Section 1613.2.2 of Building Code of New York State © 2020 and listed in Table 20.3-1 of Chapter 20 of American Society of Civil Engineers (ASCE) Standard 7-16.

Liquefaction Potential: For the Site Class C, the design spectral response acceleration parameters S_{DS}, at 0.2 seconds, and S_{D1}, at one second, are 0.146g and 0.045g (g = 32.2 feet/sec^2), respectively, for this part of Erie County, New York (see Appendix D). These values have a two percent probability of being exceeded in 50 years. Based upon the above conditions and an approximate magnitude 6.0 earthquake on the Richter Scale, the potential for liquefaction or settlement of Site Class C soil is considered extremely low.

Attachment: SP-2022-02 application 042122 (25490 : Sp-2022-02)

FOUNDATION DESIGN AND CONSTRUCTION RECOMMENDATIONS

General: This section will present and discuss recommendations on foundation design and construction and placement of controlled fills, and subgrade and base layer requirements for concrete floor slabs.

As shown in Figure No. 2, a mezzanine will be constructed inside the northern warehouse portion of the existing building. Additionally, a canopy will be constructed to cover the drop off area at the rear of the structure. The existing ground surface is generally flat across the development area and final exterior grades are assumed to closely match the existing at relative elevation 100.00 ± feet. The maximum design exterior and interior column loads are not expected to exceed 100 kips. The maximum live floor load is taken as 100 pounds per square foot (psf).

Site Preparation and Earthwork: General site preparation will include the demolition and complete removal of any encountered foundations and floor slabs, and removing all unsuitable surficial material (i.e., asphalt pavement, concrete, brick, expansive slag, organic or topsoil layer, and construction and demolition-like fill) to a depth where firm, granular or cohesive fills or naturally occurring soils are encountered. It is recommended, particularly in the location of the proposed structure, that any slag and/or cinder/ash containing material, if encountered, should be tested to determine the expansion and corrosion characteristics (where applicable for direct or potential contact with foundation elements and buried utilities) of these materials prior to their use on-site. Any rubble-like and brick fill, boulders, or wood fill in particular, if encountered, will require undercutting. Building pad and paved areas are to be proof rolled with a fully loaded ten-wheel dump truck. All encountered soft and disturbed zones should be undercut and stabilized with granular fill that is placed in compacted lifts prior to placement of additional fill materials above. Refer to Appendix E entitled "General Earthwork Specification" for definition of the fill types and gradations, recommended minimum compaction requirements for various site developments, and placement and compaction methods. The NYS Department of Transportation (NYSDOT) specification numbers for typical aggregate subbase/base course components that are included in the select granular fill category as are as follows: Item No. 304.12 (Metric) Subbase Course, Type 2 (< 2-inch maximum size), which is preferred; or Item No. 304.14 (Metric) Subbase Course, Type 4 (< 2-inch maximum size).

It is unknown if any former residential/commercial structures existed at the project site for the proposed renovations and if any former footings and foundation walls may be buried at the proposed site. Septic tank and system locations and the abandonment conditions or practices are normally unknown. If encountered during site development, it is recommended that any tanks and systems should be properly removed/treated/remediated relative to the proposed development and under the applicable local and state regulations. The remaining cavities, from the aforementioned items, should be backfilled with select/approved granular fill that is placed in thin lifts and compacted to the minimum recommendation, as presented in this report, for the proposed development at that cavity location.

Attachment: SP-2022-02 application 042122 (25490 : Sp-2022-02)

Shallow Foundation: The recommended foundation type is shallow footings. Individual interior and exterior spread column footings would bear at an elevation of 42-inches or lower below final grade, at relative elevation 96.50 ± feet or lower. A 42-inches minimum footing depth (as required by local or New York State code) is needed to provide adequate protection from frost for exterior footings.

The exterior and interior footings are recommended to bear at the same relative elevation on stable, naturally deposited, stiff (Nvalues > 10 blows) cohesive/fine-grained glacial till or on thin layers of thoroughly compacted (minimum of 95 percent of the maximum dry density by ASTM D 1557) select/approved granular fill that is placed on approved subgrade. If needed, a geotextile strength and filter fabric (such as, Mirafi 600X) may be used to line the excavation bottom for the purpose of stabilizing the excavation and placement of the select/approved granular fill. Alternatively, in heated buildings the interior footings are recommended to bear two and one-half feet or lower below finish floor at relative elevation 97.50 ± feet and on the same soil/fill conditions as the exterior footings.

Undercut areas beneath proposed foundations must extend laterally beyond each vertically projected edge of the foundation by a minimum distance equal to one-half the total depth of the undercut or equating to a slope of two vertical to one horizontal from the bottom foundation corner. The undercuts and placement of compacted select/approved granular fill are required to ensure a suitable and more uniform bearing media for the footings, and to prevent unacceptable differential settlements.

Column footings should have a minimum three-foot width. Based on the above described conditions, the recommended maximum net allowable foundation bearing pressure is 2,500 pounds per square foot (psf) of bearing area. All footings for the proposed building are recommended to be designed near the same contact pressure. The recommended maximum net allowable foundation bearing pressure is based on generally accepted design methods for cohesive/fine-grained soil conditions. Based on the provisions of the above recommendations and estimated design requirements and utilization of proper construction procedures and experienced field supervision and testing personnel, total and differential settlements are estimated to be less than one inch and 3/4's inch, respectively. Refer to Appendix D for additional foundation design and construction details.

Additional Foundation Considerations: In addition to the above, the following recommendations will provide additional assurances with regard to proper foundation construction.

a) All fill placed beneath, adjacent, or above foundations must comply with the "General Earthwork Specification", included as Appendix E.

Attachment: SP-2022-02 application 042122 (25490 : Sp-2022-02)

b) Backfill of foundations with approved select granular fill must be completed prior to placement of substantial superstructure loads, except for basement walls or substructure areas that may additionally require superstructure loads and possibly internal bracing.

c) The upper silty materials may rut and “pump” if exposed to excessive surface water and repeated construction traffic. Proper site management and fill placement operations are needed to minimize costly undercuts and subgrade repairs prior to placement of concrete slabs and asphalt pavement. It is noted that construction during wet/rainy and/or Fall and Spring conditions may require added precautions and possibly a thicker base layer to maintain a stable subgrade condition.

d) Step footings, if utilized, should have a rise to run ratio of 1:2, with a two-foot maximum rise and a four-foot minimum run between steps or as recommended by the design structural engineer.

e) The recommended at rest (rigid wall), active, and passive static earth pressure coefficients for unsaturated, select granular sandy gravel fill against an earth retaining structure/wall are 0.76, 0.24, and 2.8 (with an ultimate value of 4.2), respectively. The respective equivalent static lateral fluid pressures are recommended to be 90, 30 and 330 (with an ultimate value of 500) pounds per square foot (psf) per foot depth which are based upon a moist, compacted unit backfill weight of 120 pounds per cubic foot (pcf). The at rest value would account for the average expected compaction induced stresses and/or the potential influences of hydrostatic pressure. The static lateral fluid pressures can be directly proportioned for other unit weights.

Stabilization of Excavations: The trench/excavation sidewall stability concerns can be addressed with the Occupational Safety and Health Act (OSHA) requirements as set forth in Subpart P of 29 CFR Part 1926, Sections 1926.650 to 1926.652. In lieu of a properly designed shoring system, side slopes of the trench excavation should be one on one (vertical to horizontal distance) or flatter in cohesive soils or one on one and one-half or flatter in the granular materials, as required by OSHA.

Water must not be allowed to accumulate or pond on exposed foundation bearing grades. Surface water and groundwater from within the excavation must be either pumped, diverted or channelized by gravity flow to effectuate the construction of the proposed foundation. Pockets of localized perched groundwater may seasonally be expected to be encountered at footing and/or footing undercut bearing grades. At these locations, dewatering with surface sumps may be required to maintain stable side slopes and excavation bottom.

Attachment: SP-2022-02 application 042122 (25490 : Sp-2022-02)

Concrete Interior Floor Slab(s)/Pad: A geotextile fabric (such as, Mirafi 600X or equal) that separates the subgrade and the approved/select granular base layer is recommended for sensitive cohesive/fine-grained/silty subgrade soil/fills. This approach will stabilize and provide a workable building pad condition with minimal required repairs. The approved subgrades will most likely consist of stiff or better/thoroughly compacted (i.e., minimum 92 percent of the maximum dry density by ASTM D 1557) cohesive silt and clay, and/or a thoroughly compacted imported select/approved granular fill.

Above the approved subgrades, a minimum eight-inch thick for lightly loaded areas and minimum 12-inch thick for heavily loaded areas select granular fill (i.e., number two crusher run stone or equal) layer is recommended as the base course for concrete floor slabs. The NYSDOT specification numbers for typical aggregate subbase/base course components are Item No. 304.12 (Metric) Subbase Course, Type 2 (< 2-inch maximum), which is preferred, or Item No. 304.14 (Metric) Subbase Course, Type 4 (< 2-inch maximum). This select granular base layer would be compacted to a minimum 95 percent of the maximum dry density by ASTM D 1557. The floor slabs in any lightly loaded areas are recommended to have a minimum four-inch thickness, while heavily loaded areas are recommended to have a minimum six-inch thickness or as determined by the design structural engineer. The floor slab reinforcement should be provided through placement of wire mesh or plastic fibers and is also as determined by the design structural engineer.

At the discretion of the design architect, a vapor barrier may be considered for use in the proposed structure. The use of a thin gravel cushion, as a capillary break, or a thin sand cushion over a vapor barrier that is placed beneath the concrete slab(s) are at the discretion of the design architect/engineer or as required by local code. Gradations of gravels that are satisfactory capillary breaks include 1 ¼-inch or ¾-inch crushed stone or aggregate per the ASTM D2321 Types IA, IB and II with less than 5 % fines. A number two crusher run stone may also be applicable, but the gradation and material property specifications must qualify.

At the assumed final site grade and based upon the thickness and character of the underlying natural soils, the subgrade modulus is recommended not to exceed 150 pounds per cubic inch (pci). A Poisson Ratio of 0.4 is recommended for design purposes. Isolation of the floor slabs from the footings-piers-columns and walls do appear to be warranted. Based upon the subgrade modulus and slab mechanical properties and thickness, the design structural engineer may accordingly adjust the granular aggregate base thickness.

Attachment: SP-2022-02 application 042122 (25490 : Sp-2022-02)

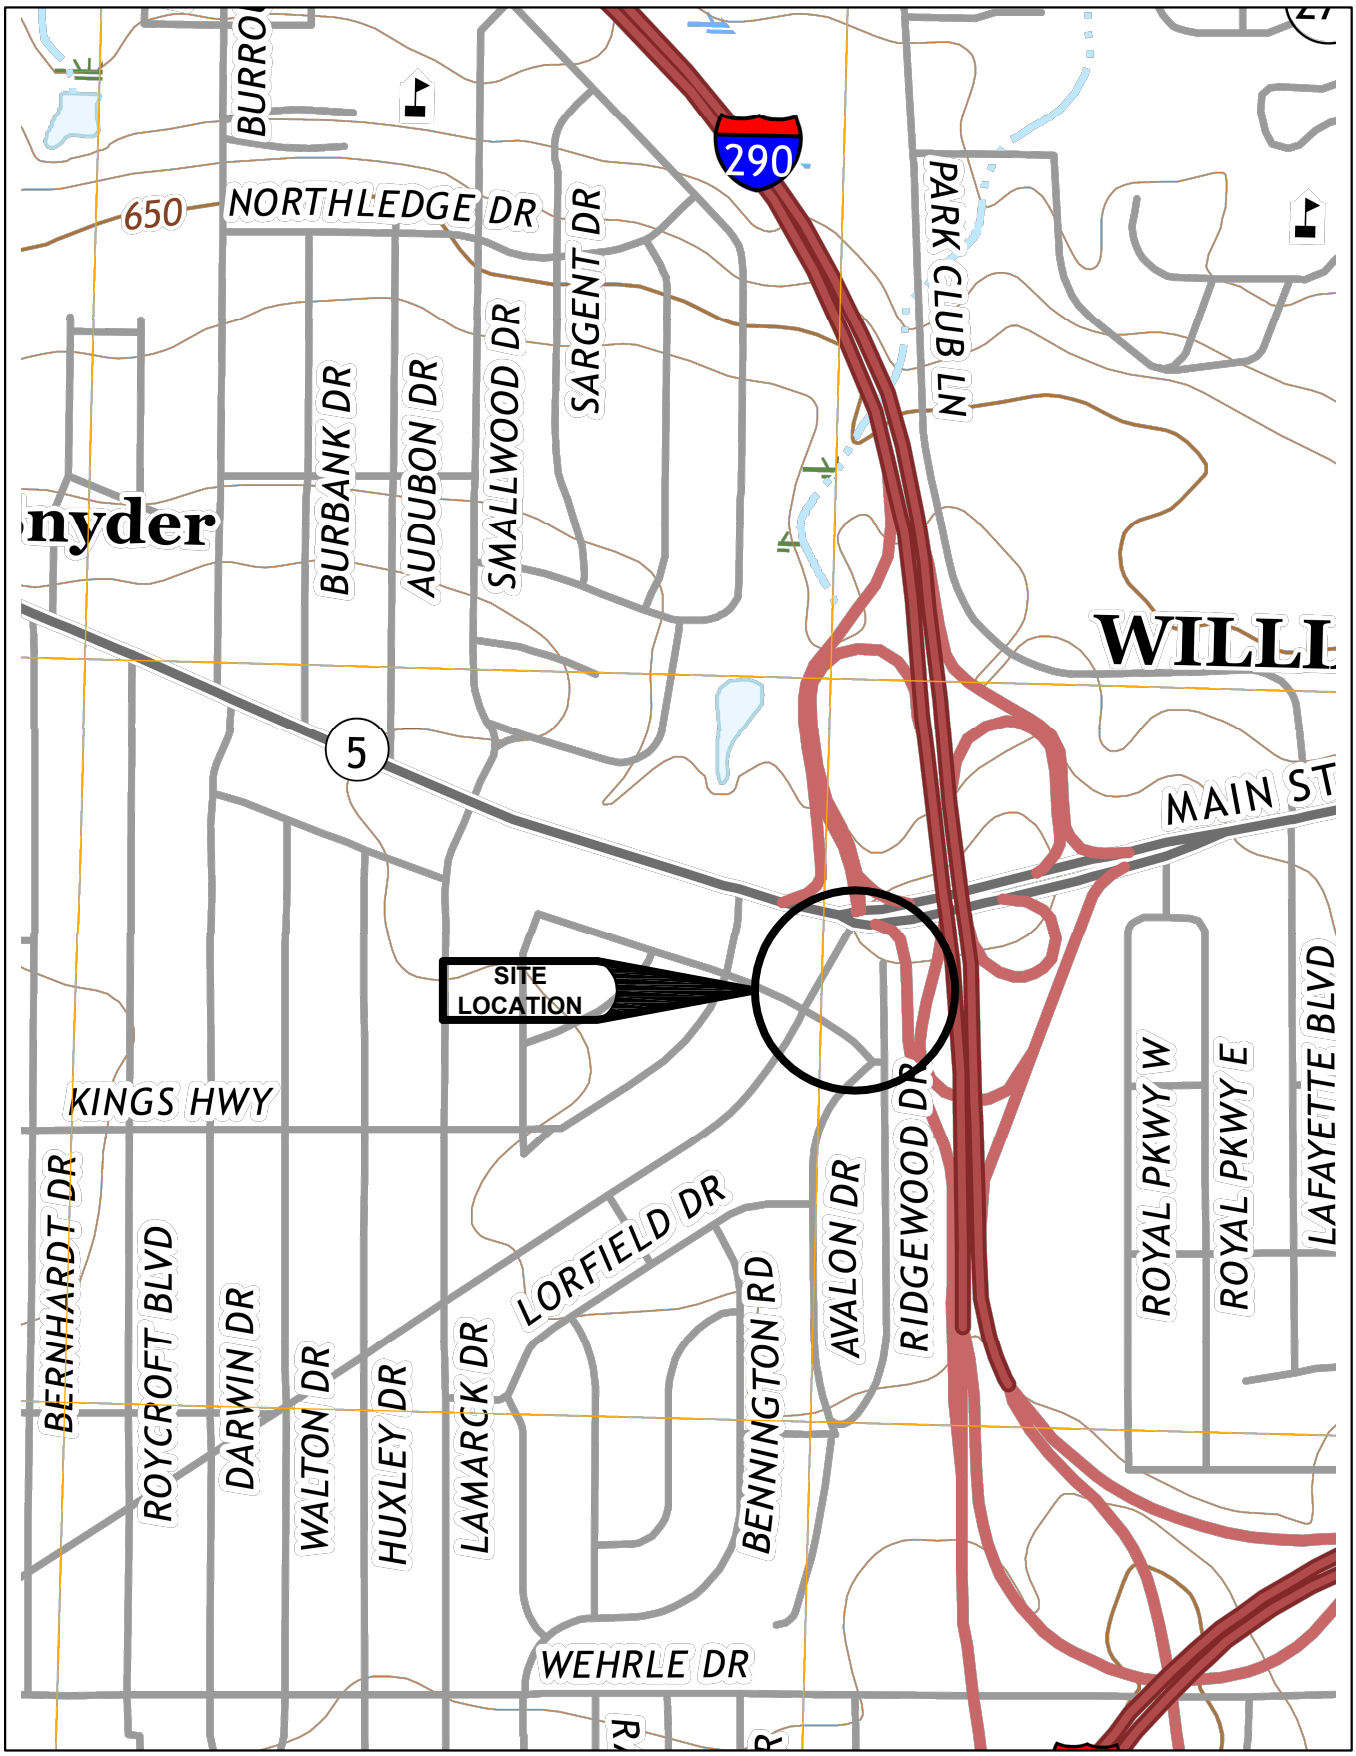
Exterior Concrete Slabs-On-Grade/Pad/Parking and Roadway Facilities: The characteristics of the cohesive natural glacial till, and the known frost penetration in Western New York require that specific attention is provided to the design and construction of paved roadway and parking areas. For new pavement sections, isolated pockets of surficial silty/cohesive/fine-grained soil/fill may be encountered and may be too soft and wet in the proposed parking and roadway areas. These types of soil/fill may be adequately conditioned (i.e., dried and blended) and compacted (i.e., minimum 90 percent compaction) to support necessary construction equipment and normal pavement section. Otherwise, the removal/undercutting of the silty/cohesive/fine-grained soil/fill to a firm, approved subgrade and subsequent placement and compaction of select or approved granular fill will be required in order to accommodate the recommended pavement sections.

For new pavement sections, it is recommended that the subgrade surface is adequately graded and/or underdrains are installed to prevent water accumulation. Above the approved subgrade surface (i.e., minimum 90 percent compaction), a minimum eight-inch thick select granular layer is recommended as the base course for lightly traveled roadway and parking areas (standard duty section). A geotextile filter and strength fabric (such as, Mirafi 600X or equal) on silty/cohesive/fine-grained soil subgrades and minimum 12-inch thick base course are recommended for all truck routes and heavily traveled roadways (heavy duty section). If “pumping” of the silty/cohesive/fine-grained soil subgrade occurs or is difficult to stabilize during construction, an increase in the base thickness to that of the heavy-duty section and/or a geotextile filter and strength fabric is recommended to be placed on the prepared and approved subgrade for the standard duty section. The NYS Department of Transportation (NYSDOT) specification numbers for typical aggregate subbase/base course components are Item No. 304.12 (Metric) Subbase Course, Type 2 (< 2-inch maximum size), which is preferred, or Item No. 304.14 (Metric) Subbase Course, Type 4 (< 2-inch maximum size). The granular aggregate base layer is recommended to be compacted to at least 95 percent of maximum dry density by ASTM D1557.

The thickness of top and binder course layers should be determined in accordance with AASHTO methods. In summary, the minimum recommended asphalt thicknesses for the heavy-duty section and standard duty section are three and one-half inches and three inches, respectively. The top and binder course layers are recommended to be designed and constructed in accordance with New York State Department of Transportation Standard Specification.

Attachment: SP-2022-02 application 042122 (25490 : Sp-2022-02)

Limitations, Field Inspections and Monitoring: This report is based on the preliminary information that is provided by project representatives and the subsurface conditions that were encountered at the test boring locations. Due to the nature of the investigation method, test pit excavation will provide a greater level of delineation of the subsurface soil/fill/rock conditions than can be defined by the test boring data alone. As detailed in Appendix F "Limitations", modification regarding proposed building/structure locations and other site developments can result in changes to provided recommendations. It is recommended that the geotechnical engineer be provided the opportunity to generally review the final detailed design and contract specifications. Required earthwork and foundation construction should be done under the supervision of experienced construction personnel and in a manner consistent with proven methods. All site work should be carefully monitored and tested by experienced geotechnical personnel to assure compliance with earthwork and foundation construction specifications.



Thank you for the opportunity to assist on this project. If questions should arise, please call the undersigned at your earliest convenience.

Very truly yours,
BARRON & ASSOCIATES, INC.
and
BUFFALO DRILLING COMPANY, INC.

PROJECT:

EXAMPLE

DRILLER:
SAMPLING METHODS:
DATE STARTED:
DATE COMPLETED:

TYPE OF DRILL RIG:
SIZE AND TYPE OF BIT:
SURFACE ELEVATION (ft.):
GROUNDWATER DEPTH (ft.):
(measured at completion unless indicated below)

Elevation/ Depth (feet)	Soil Symbols Sampler Symbols Field Test Data	Sample No. : Range	N-Value	% REC (RQD)	Soil and Rock Description / Remarks
100 — 0	1 1 1 2 / 6 8 11 14	S-1 : 0.0'- 2.0'	2	50	Dk. brown, soft, CLAY, some Silt, little f. Sand, tr. Gravel, tr. Roots, tr. Organic matter, mod. plastic, wet (CL)
		S-2 : 2.0'- 4.0'	19	50	Brown, m. dense f. SAND, some Silt, tr. Gravel, tr. Clay, tr. Roots, non-plastic, moist (SM)

Elevation/Depth: The depth column provides the vertical scale of the boring log in feet below ground surface.

Sample No. : Range: Disturbed samples are identified with “S” preceding the sample number. Undisturbed (Shelby-tube) samples are identified with “U” preceding the sample number. Rock core samples identified with “C” preceding the core run. The range of elevation/depth where the sample was taken is identified in one-tenth foot increments.

N-value: The Standard Penetration Test N-value, as specified by ASTM D1586, is defined as the number of blows required by a 140-pound hammer falling 30 inches, each blow, to drive a 2-in outside diameter split-spoon sampler 12 inches.

% REC (RQD): “Percent Recovery” is the length of samples recovered divided by the total length sampled. The result is numerically expressed as a percent. The Rock Quality Designation (RQD) is the total length of places >4 inches divided by the total length of core run.

Soil and Rock Description / Remarks: This column denotes the exact depth of recovery and general documentation of drilling efforts. Description and classification are based on visual inspection of samples and boring operations. The stratum lines shown on the boring logs are based upon interpretation and may not represent precise subsurface conditions. Water-level readings have been made in the drill holes at time under conditions stated on the boring logs. Fluctuations in the water level may occur due to other factors than those present the time measurement was taken. See attached sheet.

Soil and Rock Description / Remarks: Terminology Used for Soil Description

Density Description of Granular Soil

Number of Blows per ft., N	*Relative Density*
0 - 4	Very Loose
4 - 10	Loose
10 - 30	Medium
30 - 50	Dense
Over 50	Very Dense

Abbreviations Used in Soil Sample Classification

f - fine	v - very
m - medium	gr - gray
c - coarse	bn - brown
f/m - fine to medium	yel - yellow
f/c - fine to coarse	sl - slight
tr - trace	dk - dark

Consistency Description of Cohesive Soil

Number of Blows per ft., N	*Consistency*
Below 2	Very Soft
2 - 4	Soft
4 - 8	Medium
8 - 15	Stiff
15 - 30	Very Stiff
Over 30	Hard

Bedding

Parting	Less than 0.02 ft.
Band	0.02 - 0.2 ft.
Thin bed	0.2 - 0.5 ft.
Medium bed	0.5 - 1.0 ft.
Thick bed	1.0 - 2.0 ft.
Massive	Over 2.0 ft.

Grain Size

	Passing / Retained on
Boulder	LARGE / 12-in sieve
Cobble	12-in / 3-in sieve
Gravel	3-in sieve / No. 4 sieve
	No. 4 sieve / No. 10 sieve
Sand	No. 10 sieve / No. 40 sieve
	No. 40 sieve / No. 200 sieve
Silt	No. 200 sieve / 0.005 mm sieve
Clay	Smaller than 0.005 mm

Hardness

Very Soft or Plastic	Can be indented with thumb
Soft	Can be scratched with fingernail
Moderately Hard	Can be scratched with knife
Hard	Difficulty to scratch with knife
Very hard	Cannot be scratched with knife

Percentage Terminology Used in Soil Classification

Trace	0 - 10 %	Some	20 - 35 %
Little	10 - 20 %	And	35 - 50 %

Moisture

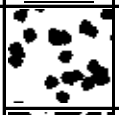
Dry	Absence of moisture, dusty, dry to the touch.
Moisture	Small quantity of moisture. Soil usually above groundwater level.
Wet	Moisture noticeable to the touch. Soil may be below groundwater level.
Saturated	Visible free water, usually soil is below groundwater level.

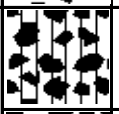
Plasticity

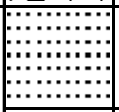
Non-plastic	An 1/8-in thread cannot be rolled at any water content.
Slight plasticity	Thread can be barley rolled.
Moderate plasticity	Thread is easy to roll and little time is required to reach the plastic limit (PL).
Plasticity	Considerable time is required to reach PL. Thread can be re-rolled several times after reaching the PL.

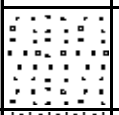
Crystallinity or Texture

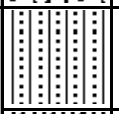
Dense	Crystals are to small they cannot be distinguished with the naked eye.
Very Fine Crystalline	Crystals barely discernable with the naked eye.
Crystalline	Crystals are medium size, up to 1/8-in diameter.
Very Coarsely Crystalline	Crystals larger than 1/8-in diameter.

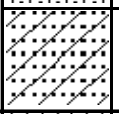


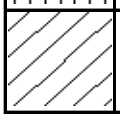


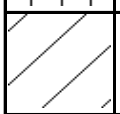


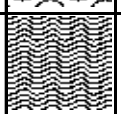


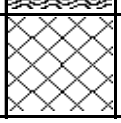












Voids

Porous	Smaller than pinhead. Their presence is indicated by the degree of absorbency.
Pitted	Pinhead size to 1/4 in. If thin walls separate the individuals pits, the core may be described as honeycomb.
Vug	1/4 inch to the diameter of the core. The upper limit will vary with core size.
Cavity	Larger than the diameter of the core.

Soil Classification Chart: Unified Soil Classification System (USCS)

Major Divisions			Pattern	USCS ID	Typical Descriptions
Coarse-Grained Soils: More than 50% of material larger than No. 200 sieve	**Gravels**: More than 50% of coarse fraction larger than No. 4 sieve	Clean Gravels (little or no fines)		GW	Well-graded gravels, gravel-sand mixtures, little or no fines
				GP	Poorly-graded gravels, gravel-sand mixtures, little or no fines
		Gravels with appreciable amounts of fines		GM	Silty gravels, gravel-sand-silt mixtures
				GC	Clayey gravels, gravel-sand-silt mixtures
	Sands: Less than 50% of coarse fraction larger than No. 4 sieve	Clean sands (little or no fines)		SW	Well-graded sands, gravelly sands, little or no fines
				SP	Poorly-graded sands, gravelly sands, little or no fines
		Sand with appreciable amount of fines		SM	Silty sands, silt-sand mixtures
				SC	Clayey sands, sand-clay mixtures
Fine-Grained Soils: Less than 50% of material larger than No. 200 sieve	**Silts and Clays, Low plasticity**: Liquid Limit < 50%			ML	Inorganic silts and very fine sands, rock flour, silty or clayey fine sands or clayey silts with slight plasticity
				CL	Inorganic clays of low to medium plasticity, gravely clays, sandy clays, silty clays, lean clays
				OL	Organic silts and organic silty clays of low plasticity
	Silts and Clays, High plasticity: Liquid Limit > 50%			MH	Inorganic silts, micaceous or diatomaceous fine sand or silty soils
				CH	Inorganic clays of high plasticity, fat clays
				OH	Organic clays of medium to high plasticity, organic silts
Highly Organic Soils				Pt	Peat, humus, swamp soils with organic contents
Miscellaneous Fill				FILL	Miscellaneous fill may belong in any division but is identified as FILL

APPENDIX D

ENGINEERING COMPUTATIONS AND SCHEMATICS

Attachment: SP-2022-02 application 042122 (25490 : Sp-2022-02)

"PROFILE OF BORINGS"

Note: Bear footings on stable, natural, stiff (Nvalues > 10 blows) cohesive glacial till (CL-Till) or on an approved select granular fill section placed in loose lifts no greater than 12 inches thick and compacted to 95% of max. dry density as per ASTM D15574.

Exterior footings to bear minimum 42" below final grade (relative elevation 96.50 +/- ft.) or as specified by local code. Interior footings of heated structures to bear minimum 30" below finished floor (relative elevation 97.50 +/- ft.).

On Above Conditions: USE Q_{ALLOW} = 2,500

B&A JOB NO.: 21-599

DATE: 10/14/21

LATERAL EARTH PRESSURE ON GENERIC BLOCK FOUNDATIONS FOR SIGNS, FREE-STANDING RETAINING WALLS, OR BELOW GRADE/BASEMENT/TANK/POOL RETAINING WALLS (Less Than 20 Feet High)

a) Porous filter media, in contact with the basement/below grade foundation wall or retaining walls, protects and is in contact with a minimum 4 inch diameter perforated drainage pipes at the footing/base of the foundation/structural wall (exterior backfill side and interior basement side) and/or weep pipes through the wall, as needed and as applicable.

b) Where recommended, a geotextile filter fabric will protect the gravel filter media from the earth backfill. Overlap unsewn seams as per the manufacturer's recommendations.

c) Waterproof earth side of wall, as is customarily provided in practice.

d) Drainage pipes are connected to an appropriately designed collector pipe, conveyance, and/or sump pump system as is applicable for the intended purpose of the wall and as customarily provided/installed in practice.

e) For potential groundwater table conditions above the top of the basement slab-on-grade condition, install continuous waterstops (with no joints in stop) at wall and floor construction joints, as is customarily provided in practice. Interior intermediate drainage pipes beneath the slab, that are spaced on-center and in both directions, do appear to be needed.

f) Assume a uniformly graded, clean coarse sand or sandy gravel backfills:

* equivalent N-value in a dense state: $(N_1)_{60}$ = 40 blows/foot
* friction angle: ϕ' = 38 degrees {Teng, pg. 12}
* average in-place densities: moist - γ_m = 120 pcf
  saturated - γ_{sat} = 132 pcf submerged - $\gamma' = (\gamma_{sat} - \gamma_w)$ = 70 pcf

g) Assume at base of wall/footing, coefficient of friction against sliding (f_s) at base of wall (Refer to Teng, pg. 320-1):

f_s = tan (0.58 x ϕ') = 0.40 (AREA silty soil to silty coarse-grained soil)

h) Use equivalent fluid pressure design approach {Hough, pg. 249 and NAVFAC pg. 7-10-9}:

* at rest pressure coefficient - K_0 = 1 - sin (ϕ') = 0.38
* effective lateral pressure of soil - γ'_l = K_o x γ' = 26.6 pcf
* hydrostatic pressure - γ_w = 62.4 pcf
* equivalent fluid pressure with water level at the top of the grade at the wall - γ_{eo} = $\gamma'_l + \gamma_w$ = 89 pcf (say 90 pcf)
* equivalent fluid pressure with compaction induced lateral stress increase (W&F, pg 409) - γ_{eo} = 2 x K_o x γ_m = 91 pcf (say 90 pcf)
* active pressure case - K_a = [1 - sin (ϕ')] / [1 + sin (ϕ')] = 0.24
  γ_{ea} = K_a x γ_m = 29 pcf (say 30 pcf)
* passive pressure case - K_p = [1 + sin (ϕ')] / [1 - sin (ϕ')] = 4.2
  γ_{ep} = K_p x γ_m = 504 pcf (say 330 pcf with a F.S. = 1.5)

			Thoroughly Compacted ⇒⇒ Uniformly Graded & Clean Coarse Sand or Sandy Gravel Fill	Non-Plastic Silty Sand or Sandy Silt Fill	
USE:	Earth Pressure Coefficient	Static Active =	0.24	0.33	
		Static At-Rest =	0.76	1.00	
		Static Passive =	2.80	2.00	(with F.S. = 1.5)
		Static Passive =	4.20	3.00	(with F.S. = 1.0)
USE:	Equivalent Fluid Pressure	Static Active =	30 pcf		
		Static At-Rest =	90 pcf (for rigid walls)		
		Static Passive =	330 pcf (with F.S. = 1.5)	[500 pcf with (with F.S. = 1.0)]	

[For earthquakes, structural engineer may elect to use the above Static Passive case instead of the below Earthquake Lateral Load for Non-Yielding Wall movement into the soil backfill.]

USE: Simplified Model for Earthquake Lateral Load/Ft. Wall Length @ 0.6 H_{bw} above base. Loads for Non-Yielding Wall.

H_{bw} = Earth Height Behind Wall (feet)

Reduce load by 33% for Yielding Wall (active case) = (6.8 psf / foot) x H_{bw}^2 (NYS, S_{ds} = 0.25 g)

(γ_m = 120 pcf for S_{ds} value. Add to Static At Rest/ Active Pressure/Load for unsaturated backfill case) = (13.5 psf / foot) x H_{bw}^2 (NYS, S_{ds} = 0.50 g)

= (17.5 psf / foot) x H_{bw}^2 (NEern NYS, $S_{ds} \leq 0.65$ g)

[Above for Site Class C to E soils. Interpolate for other S_{ds} values.
Use 1.75 x values for walls on Class B/A rock or on rigid foundation base. (FEMA NEHRP Guidelines)]

Saturated/Liquified Soil During Earthquake = 132 pcf
(Equivalent Fluid Pressure. Add to inertial hydrodynamic pressure, not presented here.)

{For looser/denser backfills, adjust above pressures by the ratio = new density / 120 pcf or / 132 pcf (for saturated case)}

USE:	Coefficient of Friction Against Sliding (f_s)	= 0.45	(on compacted NYSDOT Item #304.12 or #304.14 gravels)
	(use lowest f_s with no underlying weaker layers)	= 0.35	(on compacted granular soil & non-plastic silt)
		= 0.20	(slab-on-grade on polyethylene on granular fill)
	[with a F.S. = 1.0]	= 0.60/0.50	(on clean, rough, & sound bedrock/smooth bedrock)

GENERAL EARTHWORK SPECIFICATIONS

1. GENERAL

1.1. SITE AND SUBSURFACE CONDITIONS

1.1.1. Overview

This specification is included as a courtesy to the clients of *Barron & Associates, PC* and addresses earthwork site preparation. Additions and modifications are necessary to create a job-specific specification. This specification may serve as a basis for the development for a technical specification under Division 31 (Earthwork) and Division 32 (Exterior Improvements).

1.1.2. Site Conditions

The site-specific conditions are described under separate cover or may be available from the OWNER.

1.1.3. Subsurface Conditions

The site-specific subsurface conditions are described under separate cover or may be available from the OWNER.

1.2. REFERENCES

1.2.1. American Standard for Testing and Measurement (ASTM)

- ASTM C136 Standard Test Method for Sieve Analysis of Fine and Coarse Aggregates
- ASTM D6938 Standard Test Methods for In-Place Density and Water Content of Soil and Soil-Aggregate by Nuclear Methods (Shallow Depth)
- ASTM D7928 Standard Test Method for Particle-Size Distribution (Gradation) of Fine-Grained Soils Using the Sedimentation (Hydrometer) Analysis
- ASTM D1140 Standard Test Methods for Determining the Amount of Material Finer than 75-µm (No. 200) Sieve in Soils by Washing

1.3. DEFINITIONS

1.3.1. Unacceptable Material

Soil material containing debris, wood, scrap material, vegetation, refuse, soft unsound particles, and other organic, frozen, deleterious, or objectionable materials. Contaminated soils shall be properly documented and removed or remediated on site. If necessary, remediation procedure will be defined by the OWNER.

1.3.2. Unsuitable Material

Brown, organic topsoil and underlying soft pockets of organic silt or wet, reworked silty clay.

1.3.3. Ordinary Fill

Friable soil containing no stone greater than two-thirds loose lift thickness and no unacceptable or unsuitable materials. In general, existing random fill is expected to be acceptable for reuse as ordinary fill given proper sorting, blending, drying, and controlled placement methods.

1.3.4. Granular Fill

Ordinary fill meeting the designation of ASTM D2487 classification of GW with a maximum of 10 percent by weight passing ASTM D1140, No. 200 sieve.

1.3.5. Select Granular Fill

Clean, uncoated soil which contains no unacceptable materials and conforms to the gradation requirements defined in Table A: Select Granular Fill.

Table A: Select Granular Fill

Sieve Size	Percent Finer by Weight
⅔ of the loose lift thickness	100
No. 10	30 - 95
No. 40	10 - 70
No. 200	0 - 15

Attachment: SP-2022-02 application 042122 (25490 : Sp-2022-02)

1.3.6. Sand and Gravel

Clean, hard, durable, uncoated particle of sand and gravel, free from lumps of clay, containing no unacceptable matter, and conforming to gradation requirements of Table B: Sand and Gravel.

Table B: Sand and Gravel	
Sieve Size	Percent Finer by Weight
*	100
No. 4	50 - 85
No. 10	
No. 40	10 - 35
No. 100	
No. 200	0 - 8

* Job-Specific. To be determined by the ENGINEER

1.3.7. Crushed Stone

Clean, durable, sharp-angled fragments of rock or crushed gravel stone of uniform quality, containing no unacceptable matter, free from coatings, and conforming to gradation requirements of Table C: Crushed Stone.

Table C: Crushed Stone		
Sieve Size	Percent Finer by Weight	
	¾-inch Stone	1 ¼-inch Stone
1 ½-inch		100
1 ¼-inch		85 - 100
1-inch	100	
¾-inch	90 - 100	10 - 40
⅝-inch		
½-inch	10 - 50	0 - 8
⅜-inch	0 - 20	
No. 4	0 - 5	

1.3.8. Flowable Fill

Also known as Controlled Low Strength Material – Controlled Density Fill (CLSM-CDF), this material is available under a variety of producer names (e.g., K-Krete©, M-Crete, Flash Fill©, Flowable Mortar, Unshrinkable Fill, etc.). This non-settling backfill mixture is most commonly used for its flowable characteristics, its support strength under traffic loads, and its removability at a later date. The material may be produced on-site or off-site. In either case, the producer

Attachment: SP-2022-02 application 042122 (25490 : Sp-2022-02)

of such materials and the product must meet certain certification criteria. Such information is beyond the scope of this specification and will be considered on a site-specific basis.

Flowable fill may be acceptable for use as a backfill for utility trenches of other low-lying areas which require a compacted granular fill. Its use and warranty of performance is left to the CONTRACTOR in such applications.

The use of flowable fill under load-bearing structural components in place of properly placed and compacted granular fill is NOT common and is questionable. The localized use of such material may have profound effects on the performance of a foundation system. Site-specific conditions and the extent of anticipated use of flowable fill must be examined by geotechnical engineer. Cost of such consultation shall be borne by the CONTRACTOR unless specifically directed by the OWNER to seek such consultation. Without such consultation, warranty of performance for such use is left to the CONTRACTOR.

1.4. SUBMITTALS

The following submittals shall be provided in accordance with approved submittals procedures.

(1) Fill Source: Provide name and source locations of fill material.

(2) Field Test Reports: Field tests will be performed by OWNER's Representative as needed. CONTRACTOR may be required to perform such tests on proposed off-site fill materials.

(a) Fill material grain size analyses per ASTM C136, D7928, D1140, D2487

(b) Moisture/Density test results per ASTM D2216

(c) Liquid limit, plastic limit, and plasticity index per ASTM D4318

(d) Compaction/Density test results per ASTM D6938 and D1557

(3) Sample: Geotextile fabric

2. PRODUCTS

Geotextile Fabric: Mirafi 600X or equal. (Also referred to as synthetic fabric).

3. EXECUTION

3.1. PROTECTION

3.1.1. General

Manner of excavation shall minimize disturbance of underlying natural ground. If deemed necessary by the Engineer, alter construction procedures to reduce subgrade disturbance.

Attachment: SP-2022-02 application 042122 (25490 : Sp-2022-02)

Excavate areas which have been excessively disturbed to firm ground and backfill with properly compacted granular fill.

3.1.2. Roads and Walks

Keep roads and walks free of dirt and debris at all times.

3.1.3. Trees, Shrubs, and Existing Facilities

Protect from any damage all vegetation and facilities identified to remain.

3.1.4. Utility Lines

Locate all utilities within the area of disturbance prior to the start of work. Show locations on initial plans. Protect utility lines from damage. Notify the ENGINEER immediately of damage to or an encounter with an unknown utility. Damage to utility lines are to be repaired by the CONTRACTOR at no additional cost. The CONTRACTOR shall have underground utility owners stake out utility locations prior to the start of clearing and excavation operations.

3.2. VERIFICATION OF CONDITIONS / PROOF-ROLLING

Prior to placement of the initial layer of fill over the natural ground, proof-roll the exposed natural ground above the groundwater table elevation by making two passes with a fully-loaded ten-wheel truck. Excavate unstable areas detected by this process and replace with compacted granular fill.

3.3. PREPARATION

3.3.1. Surface Preparation

Within the site limits indicated on the drawings, excavate all unsuitable material to firm natural ground in the manner specified herein. Follow a construction procedure which permits visual identification of firm natural ground. In the even that groundwater is encountered, the ENGINEER may require that the size of the open excavation be limited to that which can be handled by open pumping to allow visual inspection of the excavation bottom and the performance of backfill operations to be conducted in a dry state.

Excavation of unsuitable material shall be limited to the greater of the following:

- A distance of 5 feet beyond building lines or
- The area defined by a one-horizontal to one-vertical line sloping down from the outside bottom edge of exterior footings to firm natural ground.

Attachment: SP-2022-02 application 042122 (25490 : Sp-2022-02)

3.4. PLACEMENT AND COMPACTION

3.4.1. General

Place fill in accordance with Table D: Compaction Alternatives. These alternatives are provided as minimum compaction standards only and in no way relieve the CONTRACTOR of his obligation to achieve any specified degree of compaction by whatever means may be necessary.

Grade to provide positive drainage and a smooth surface which will readily shed water. To the extent practicable, compact each layer to the specified density on the same day placed. Place fill in horizontal layers. Where horizontal layers meet a natural slope, key layer into slope by cutting a bench.

Fill that is too wet for proper compaction: Disc, harrow, or otherwise dry to proper moisture content for compaction to the required density.

Fill that is too dry for proper compaction: Uniformly apply water over the surface of the loose layer in sufficient quantity to allow compaction to the required density.

Table D: Compaction Alternatives

Compaction Method	Maximum Stone Size	Maximum Loose Lift Thickness (inches)		Maximum Number of Passes	
		Below Structure and Pavements	Less-Critical Areas	Below Structure and Pavements	Less-Critical Areas
Hand operated vibratory plate of light roller in confined areas.	3	4	4	4	4
Hand operated vibratory drum rollers weighing at least 1,000 pounds in confined areas.	4	6	8	4	4
Loaded 10-wheel truck or D-8 crawler.	6	10	12	4	2
Light vibratory drum roller; Min. weight at drum 8,000lbs; Min. dynamic force 10,000lbs.	8	12	12	6	2
Minimum vibratory drum; Min. weight at drum 10,000lbs; Min. dynamic force 20,000lbs.	8	18	18	6	4

Attachment: SP-2022-02 application 042122 (25490 : Sp-2022-02)

3.4.2. Dewatering

Provide adequate pumping and drainage facilities to keep excavated areas sufficiently dry of groundwater and surface run-off. Dewatering shall avoid adversely affection construction procedures or causing excessive disturbance of underlying natural ground. Drain all pumped water in such a manner as to avoid damage to adjacent property.

If requested by the ENGINEER, place a 6-inch to 12-inch layer of sand and gravel or crushed stone over the natural underlying soil to stabilize area which have been disturbed due to groundwater seepage pressures and to expedite dewatering operations. Particular attention shall be given areas under proposed foundations.

3.5. FIELD QUALITY CONTROL

3.5.1. Compaction Requirements

Allow the ENGINEER sufficient time to make necessary observations and tests. Base the degree of compaction on maximum dry density as determined by ASTM D1557. The minimum degree of compaction for placed fill shall be as indicated in Table E: Compaction Requirements.

Table E: Compaction Requirements

Area	Minimum Degree of Compaction (%)
Below foundation.	95
Pavement and building subbase and base courses.	95
Below building slab base course and above bottom of foundation.	92
Below pavement subbase and base courses.	90
Trench backfill outside of building.	90
Trench backfill inside of building.	Refer to one of the above- listed categories
Ordinary fill within 5 feet of grade.	90
Vegetated areas below 5 feet of grade.	85

3.5.2. Testing

Site work should be monitored and tested by geotechnical ENGINEER or his representative and in accordance with requirements of the design team to assure compliance with earthwork and foundation construction specifications.

Attachment: SP-2022-02 application 042122 (25490 : Sp-2022-02)

The owner will retain a geotechnical ENGINEER or his representative to perform on-site observations and testing during this phase of construction operations. The geotechnical ENGINEER or his representative will:

- Observe excavation and dewatering of building and controlled fill areas;
- Observe backfill and compaction within building and controlled fill areas;
- Laboratory test and analyze fill material; and
- Observe construction – and performing water content, gradation, and compaction tests.

On a timely basis, the CONTRACTOR will receive copies of test results submitted to the OWNER. In addition, during construction the geotechnical ENGINEER will advise the OWNER and CONTRACTOR in writing of conditions which fail to conform to the Contract Documents. The CONTRACTOR shall take immediate action to remedy indicated deficiencies.

The geotechnical ENGINEER or his representative will not supervise or direct the actual work of the CONTRACTOR or employees and representatives of the CONTRACTOR. The presence of, observations by, and testing performed by the geotechnical ENGINEER or his representatives shall not excuse the CONTRACTOR from defects discovered in the work.

APPENDIX F

LIMITATIONS

LIMITATIONS

1. This report is based on the data that was obtained from the subsurface explorations and on the design of the proposed interior mezzanine and exterior canopy as submitted to the geotechnical engineer. A geotechnical engineer, who is experienced in foundation construction and earthwork, should be engaged to review the final design and specifications in order to determine whether any change in concept may have any effect on the validity of the conclusions presented herein, and whether these conclusions have, in fact, been implemented in the design and specifications.

2. The subsurface conditions, including thickness, between the exploration locations are approximate and simplified representations of the strata and transitions. There is the possibility that variations in soil and rock conditions and boundaries will be encountered during construction. In order to permit correlation between the exploratory soil data and the actual soil conditions encountered during construction and so as to assess conformance with the plans and specifications as originally contemplated, it is recommended that a geotechnical engineer, who is experienced in foundation construction and earthwork monitoring, should be retained to perform continuous construction review during the site preparation and foundation construction operations.

3. The subsurface exploration logs and subsurface conditions may aid in estimating material quality and quantities, such as topsoil/organic matter, fills, natural soils, and rock, but are not to be relied upon as the exclusive means for bid preparation purposes. It is the responsibility of the contractor to perform any additional site examinations and explorations and to prepare an accurate bid.

4. Disclaimers:

   a. In the event that any changes in the nature, design or location of the structure are planned, the conclusions that are contained in this report shall not be considered valid unless the changes are reviewed and the conclusions of this report are modified or verified in writing.

   b. The geotechnical engineering report has been prepared for this project by Barron & Associates, P.C. This report is for assistance in design only and is not a sufficient basis on which to prepare an accurate bid.

   c. This report has been prepared for the exclusive use of Dr. Todd Shatkin (Shatkin School of Dentistry), and their designated design representatives, for specific application to the construction of an interior mezzanine and exterior drop off canopy at 2525 Kensington Avenue, in the Town of Amherst, New York and in accordance with generally accepted geotechnical engineering practice. No other warranty, expressed or implied, is made.

February 22, 2022

RE: Proposed Shatkin School of Dentistry, Town of Amherst, NY
Shared Parking Demand Assessment Letter

Dear Mr. Ulatowski:

This technical letter provides a Shared Parking Demand Assessment related to the proposed project located at 2525 Kensington Avenue in the Town of Amherst, NY in connection with a request for the approval of an Alternate Parking Study per Section 7-1-7A of the Zoning Code.

When evaluating the parking supply needs for the proposed project, our firm projected the parking demand considering shared parking (mixed-use) principles using nationally accepted methodology developed, in part, by the Urban Land Institute (ULI), Institute of Transportation Engineers (ITE), International Council of Shopping Centers (ICSC), and National Parking Association (NPA). Specifically, the assessment includes an estimation of future parking demands for the proposed project using national standards for similar developments, as documented by the ITE Parking Generation Manual (5th Edition).

This evaluation then provides a comparison to Town requirements, as set forth within Section 7-1-6A of the Town of Amherst's Zoning Code.

All supporting materials are included as an attachment to this letter.

PROJECT DESCRIPTION

Currently, the ±29,350 square foot (SF) building is owned and occupied by Phillips Brothers Supply, a business that has been in operation for over 30 years. Under the proposed development Phillips Brothers Supply will have ±5,736 SF of retail space and ±12,019 SF of warehouse space.

Shatkin Dental Health is developing the remaining ±12,253 SF which includes a ±4,400 SF of a new mezzanine that will be constructed within part of the existing warehouse space for a total of ±16,653 SF. The Shatkin Dental Health space will be used for a new dental (±7,853 SF) school associated with Daemen College and an out-patient rehab center also associated with Daemen College (±4,000 SF).

The project will provide 75 surface parking spaces.

Relative to the proposed uses, the following information was obtained from the applicant:

Daemen College Dental School (8-hour day)
Employees: 8 general staff and 10 teaching staff.

Attachment: SP-2022-02 application 042122 (25490 : Sp-2022-02)

Students: 40 students for 8 hours each day. Each student will have four patients total throughout the day. (Many students will be bussed from the main campus.)

Daemen College IMIT (9-hour day)
Staff: 12 general staff, 12 students.
Visitors: Six patients per hour plus allow for an accompanying family member with each patient.

PARKING REQUIREMENTS IN THE TOWN OF AMHERST ZONING CODE

Section 7-1-6A of the Zoning Code sets forth the off-street parking requirements for different categories of land uses. Strict application of the parking requirements per Section 7-1-6A of the Zoning Code is depicted in **Table 1**.

TABLE 1: TOWN CODE PARKING REQUIREMENTS

USE TYPE	REQUIRED PARKING RATIO	SIZE	TOTAL REQUIRED PARKING SPACES
Retail Sales, >2,000 SF and <25,000 SF	5.5 per 1,000 SF of net floor area	±4,302 SF	24
Warehouse	1 per 1,000 SF of gross floor area	±12,019 SF	12
Medical Office	1 per 150 SF of net floor area	±8,889 SF	60
Total Parking Spaces Required			**96**

Notes:
1. Net Floor Area = For a multistory, multiple tenant building — 75 percent of gross floor area.

Strict application of the off-street parking standards in the Zoning Code results in a parking requirement of 96 spaces, as depicted in **Table 1**. The total number of parking spaces to be provided is 75 spaces. Thus, there is a deficit of 21 parking spaces per strict application of Section 7-1-6A of the Zoning Code.

SHARED PARKING PRINCIPLES

Shared parking studies are conducted to establish the total number of spaces necessary by mixed-use developments to effectively serve expected parking demands. The shared parking concept builds upon the premise that land uses in a mixed-use development often do not share the same peak demand period, so spaces can be shared between the different land uses during different peak periods. Each land use typically has a peak demand period where it would occupy the maximum number of spaces that the use requires and an off-peak period where a lesser percentage of the maximum spaces would be occupied; be it by time of day, day of week, or even month of the year. This allows for the project to provide fewer spaces than would be required if the land uses on a project site were to be treated separately with individual parking demands. The concept of shared parking is well recognized within the real estate and regulatory community and is proven to work.

SHARED PARKING METHODOLOGY

To estimate the number of parking spaces required for the proposed project, this assessment used ULI and ITE methodology for shared parking. This methodology is utilized by transportation engineers and planners when evaluating the parking demand for a mixed-use project. The ULI Shared Parking 3rd Edition includes state-of-the-art practice methodologies for determining parking demand in these types of projects. Accompanying the publication is an interactive Shared Parking Calculation Model (Model) that is used to estimate the shared parking demand. However, given that the Model does not

Attachment: SP-2022-02 application 042122 (25490 : Sp-2022-02)

have a warehouse land use, parking accumulation percentages for each land use were obtained from the ITE Parking Generation Manual.

The peak hour demand is projected to occur at 10:00 AM on a typical weekday. The projected peak hour demand for the mixed-use project (i.e., the busiest hour of the busiest weekday) is ±77 spaces. Parking demand accumulations are presented in **Table 2**.

TABLE 2: SHARED PARKING DEMAND PROJECTIONS

LAND USE	SIZE	PARKING DEMAND	
		UNADJUSTED DEMAND	**SHARED DEMAND**
Warehouse (ITE LUC 150)	±12,019 SF	5	**4**
Hardware Supplies (ITE LUC 862)	±5,736 SF	19	**19**
Medical Office (ITE LUC 720)	±15,995 SF	54	**54**
Total Parking Spaces		78	**77**
Shared Parking Reduction		**1.28%**	

Note:
1. ITE LUC = ITE Land Use Code

When considering the site's 75 total parking spaces, there is a projected deficit of two parking spaces. However, it should be noted that the parking demands of the proposed land use may vary given that students may campus busing instead of private vehicles.

Attachment: SP-2022-02 application 042122 (25490 : Sp-2022-02)

CONCLUSIONS AND RECOMMENDATIONS

This detailed analysis assessed the projected shared parking demands associated with the proposed mixed-use project. The following summarizes the findings of this assessment:

1. The proposed project consists of retail hardware supply, warehouse, and medical office space.

2. The proposed project will provide 75 total parking spaces.

3. Strict application of the unshared off-street parking standards in the Zoning Code results in a parking requirement of 96 spaces.

4. The peak hour demand is projected to occur at 10:00 AM on a typical weekday. The projected peak hour demand for the mixed-use project (i.e., the busiest hour of the busiest weekday) is ±77 spaces.

5. When considering the site's 75 total parking spaces, there is a projected deficit of two parking spaces. However, it should be noted that the parking demands of the proposed land use may vary given that students may campus busing instead of private vehicles.

6. Transportation Demand Management (TDM) strategies may be considered to reduce the parking demands during the peak period. They include, but are not limited to:

    a. Carpooling
    b. Off-site parking agreements
    c. Promoting non-motorized travel (e.g., install bike racks, NFTA transit)

If you have any questions or require additional information, please do not hesitate to contact our office.

Sincerely,
SRF Associates, D.P.C.

David Kruse, AICP, PTP
Senior Transportation Planner

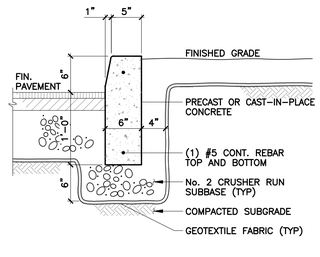
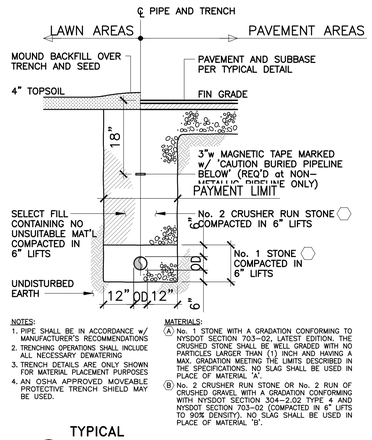
GENERAL SITE NOTES

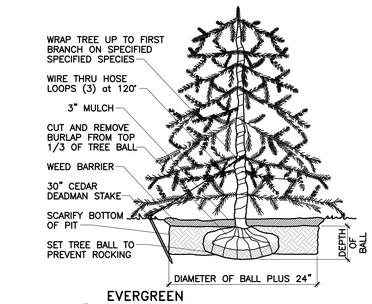


1. ALL WATERLINE, SANITARY SEWER AND OTHER WORK WITHIN THE R.O.W. SHALL BE IN ACCORDANCE WITH THE LATEST RULES AND REGULATIONS OF THE TOWN OF AMHERST, THE ERIE COUNTY WATER AUTHORITY AND NYSDOT SPECIFICATIONS.
2. INSTALL ALL MATERIALS TO THE MANUFACTURER'S RECOMMENDATIONS AND BEST STANDARDS OF THE TRADE INVOLVED.
3. SUBSTITUTIONS SHALL BE MADE ONLY WITH OWNER APPROVAL AND SHALL BE EQUIVALENT QUALITY TO WHAT IS SPECIFIED.
4. WORK SHALL BE COMPLETED IN STRICT ACCORDANCE WITH ALL LOCAL CODES AND OSHA SAFETY RULES AND REGULATIONS.
5. VERIFY ALL EXISTING CONDITIONS AND DIMENSIONS AT THE SITE. NOTIFY OWNER OF ANY DISCREPANCIES IN CONDITIONS SHOWN ON THE DRAWINGS PRIOR TO PROCEEDING WITH THE WORK.
6. CONTRACTORS SHALL BE RESPONSIBLE FOR THE PROTECTION OF ANY EXISTING STRUCTURES TO REMAIN AND ANY FINISH MATERIAL INSTALLED WHILE WORKING ON OTHER COMPONENTS.
7. CONTRACTOR SHALL KEEP THE JOB SITE FREE OF DEBRIS AND MAKE FINAL CLEANUP TO THE SATISFACTION OF THE OWNER.
8. CONTRACTOR SHALL ASCERTAIN THE LOCATION OF ALL UTILITIES PRIOR TO CONSTRUCTION SO THAT THIS WORK DOES NOT DISTURB EXISTING LINES AND/OR INSTALLATIONS. COORDINATE ALL WORK WITH THE APPLICABLE UTILITY COMPANIES.
9. CONTRACTOR SHALL OBTAIN AND PAY FOR ALL PERMITS NECESSARY TO PERFORM THE WORK.
10. DURING CONSTRUCTION, THE CONTRACTOR SHALL MAINTAIN CONTROL OF EROSION FROM THE SITE. SEE PROJECT EROSION CONTROL PLAN AND SWPPP MANUAL.
11. REFER TO ARCHITECTURAL DRAWINGS FOR EXACT BUILDING DIMENSIONS, FEATURES AND UTILITY CONNECTIONS.
12. ALL UTILITY TRENCHES UNDER PAVEMENT, CURBS, SIDEWALKS, AND DRIVEWAYS SHALL BE FULLY BACKFILLED WITH No 2 CRUSHER RUN STONE AND PROPERLY COMPACTED TO AVOID SETTLEMENT.
13. CONTRACTOR SHALL REPLACE IN KIND ANY EXISTING IMPROVEMENTS TO REMAIN THAT ARE DAMAGED DURING CONSTRUCTION. THIS SHALL INCLUDE, BUT NOT BE LIMITED TO, CURBS, ROAD PAVEMENTS, SIDEWALKS, AND EXISTING UTILITIES.

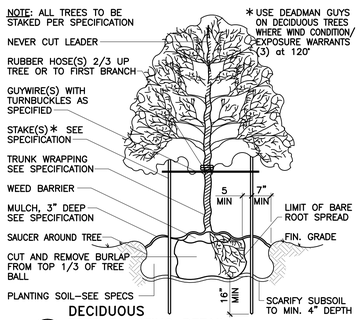


CONTROL JOINT IN EXTERIOR CONC PAVEMENT

HANDICAP ACCESS RAMP



TYPICAL CONCRETE CURB



NOTES:
1. PIPE SHALL BE IN ACCORDANCE w/ MANUFACTURER'S RECOMMENDATIONS
2. TRENCHING OPERATIONS SHALL INCLUDE ALL NECESSARY DEWATERING.
3. TRENCH DETAILS ARE ONLY SHOWN FOR MATERIAL PLACEMENT PURPOSES
4. AN OSHA APPROVED MOVEABLE PROTECTIVE TRENCH SHIELD MAY BE USED.

MATERIALS:
(A) No. 1 STONE WITH A GRADATION CONFORMING TO NYSDOT SECTION 703-02, LATEST EDITION. THE CRUSHED STONE SHALL BE WELL GRADED WITH NO PARTICLES LARGER THAN (1) INCH AND HAVING A MAX. GRADATION MEETING THE LIMITS DESCRIBED IN THE SPECIFICATIONS. NO SLAG SHALL BE USED IN PLACE OF MATERIAL 'A'.
(B) No. 2 CRUSHER RUN STONE OR No. 2 RUN OF CRUSHED GRAVEL WITH A GRADATION CONFORMING WITH NYSDOT SECTION 304-2.02 TYPE 4 AND NYSDOT SECTION 703-02 (COMPACTED IN 6" LIFTS TO 95% DENSITY). NO SLAG SHALL BE USED IN PLACE OF MATERIAL 'B'.

NOTES:

1. CONTRACTOR SHALL TAKE ALL REASONABLE MEASURES TO PROTECT EXISTING TREES AND PLANTINGS INDICATED TO REMAIN FROM ALL TYPES OF ROOT, TRUNK AND LIMB DAMAGE DURING DEMOLITION AND CONSTRUCTION.
2. EXISTING PLANTED AREAS SHALL REMAIN UNLESS OTHERWISE NOTED.
3. ALL DISTURBED AREAS SHALL RECEIVE 4" MIN. TOPSOIL AND GRASS SEED UNLESS OTHERWISE NOTED.
4. TREE AND SHRUB BEDS SHALL BE COVERED WITH 3" OF HARDWOOD MULCH. ALL ROOTS AND STONES OVER 1 1/2" SHALL BE REMOVED PRIOR TO SEEDING/ PLANTING.
5. ALL STREET AND ISLAND TREES SHALL HAVE FIRST BRANCHING at 6–FOOT MIN.
6. IF A CONFLICT EXISTS BETWEEN THE PLAN AND PLANTING SCHEDULE, THE PLAN SHALL GOVERN.
7. REFER TO ARCHITECTURAL DRAWINGS FOR ALL BUILDING DIMENSIONS, FEATURES & UTILITY CONNECTIONS
8. REFER TO GRADING AND UTILITY PLAN(S) FOR ADDITIONAL INFORMATION NOT SHOWN HEREIN.

Standard Features

- Kohler Co. provides one-source responsibility for the generating system and accessories.
- The generator set and its components are prototype-tested, factory-built, and production-tested.
- The 60 Hz generator set offers a UL 2200 listing.
- The generator set accepts rated load in one step.
- The 60 Hz generator set meets NFPA 110, Level 1, when equipped with the necessary accessories and installed per NFPA standards.
- A one-year limited warranty covers all generator set systems and components. Two- and five-year extended limited warranties are also available.
- Alternator features:
  - The unique Fast-Response® X excitation system delivers excellent voltage response and short-circuit capability using a rare-earth, permanent magnet (PM)-excited alternator.
    (4S13X alternator)
  - The unique Fast-Response® II excitation system delivers excellent voltage response and short-circuit capability using a permanent magnet (PM)-excited alternator.
    (4UA9 and 4UA13 alternators)
  - The brushless, rotating-field alternator has broadrange reconnectability.
- Other features:
  - Kohler designed controllers for one-source system integration and remote communication. See Controllers on page 3.
  - The low coolant level shutdown prevents overheating (standard on radiator models only).
  - Integral vibration isolation eliminates the need for under-unit vibration spring isolators.
- Multiple circuit breaker configurations.
- Mount up to three circuit breakers to allow circuit protection of selected priority loads.

RATINGS: All three-phase units are rated at 0.8 power factor. All single-phase units are rated at 1.0 power factor. *Standby Ratings:* The standby rating is applicable to varying loads for the duration of a power outage. There is no overload capability for this rating. *Prime Power Ratings:* At varying load, the number of generator set operating hours is unlimited. A 10% overload capacity is available for one hour in twelve. Ratings are in accordance with ISO-8528-1 and ISO-3046-1. For limited running time and continuous ratings, consult the factory. Obtain technical information bulletin (TIB-101) for ratings guidelines, complete ratings definitions, and site condition derates. The generator set manufacturer reserves the right to change the design or specifications without notice and without any obligation or liability whatsoever.

Attachment: SP-2022-02 drawings 042122 (25490 : Sp-2022-02)

Alternator Specifications

Specifications	Alternator
Manufacturer	Kohler
Type	4-Pole, Rotating-Field
Exciter type	Brushless, Permanent-Magnet
Leads: quantity, type	
4SX, 4UA	12, Reconnectable
Voltage regulator	Solid State, Volts/Hz
Insulation:	NEMA MG1
Material	Class H
Temperature rise	130°C, Standby
Bearing: quantity, type	1, Sealed
Coupling	Flexible Disc
Amortisseur windings	Full
Voltage regulation, no-load to full-load	Controller Dependent
One-step load acceptance	100% of Rating
Unbalanced load capability	100% of Rated Standby Current

- NEMA MG1, IEEE, and ANSI standards compliance for temperature rise and motor starting.
- Sustained short-circuit current of up to 300% of the rated current for up to 10 seconds.
- Sustained short-circuit current enabling downstream circuit breakers to trip without collapsing the alternator field.
- Self-ventilated and dripproof construction.
- Windings are vacuum-impregnated with epoxy varnish for dependability and long life.
- Superior voltage waveform from a two-thirds pitch stator and skewed rotor.

Specifications		Alternator
Peak motor starting kVA:		(35% dip for voltages below)
480 V	4S13X (12 lead)	570
480 V	4UA9 (12 lead)	700
480 V	4UA13 (12 lead)	960

Application Data

Engine

Engine Specifications	
Manufacturer	John Deere
Engine model	6068HFG85A
Engine type	4-Cycle, Turbocharged, Charge Air-Cooled
Cylinder arrangement	6 Inline
Displacement, L (cu. in.)	6.8 (415)
Bore and stroke, mm (in.)	106 x 127 (4.19 x 5.00)
Compression ratio	17.0:1
Piston speed, m/min. (ft./min.)	457 (1500)
Main bearings: quantity, type	7, Replaceable Insert
Rated rpm	1800
Max. power at rated rpm, kWm (BHP)	235 (315)
Cylinder head material	Cast Iron
Crankshaft material	Forged Steel
Valve material:	
Intake	Chromium-Silicon Steel
Exhaust	Stainless Steel
Governor: type, make/model	JDEC Electronic L14 Denso HP3
Frequency regulation, no-load to full-load	Isochronous
Frequency regulation, steady state	±0.25%
Frequency	Fixed
Air cleaner type, all models	Dry

Exhaust

Exhaust System	
Exhaust manifold type	Dry
Exhaust flow at rated kW, m^3/min. (cfm)	42.8 (1510)
Exhaust temperature at rated kW, dry exhaust, °C (°F)	527 (980)
Maximum allowable back pressure, kPa (in. Hg)	Min. 4 (1.2) Max. 10 (3.0)
Exhaust outlet size at engine hookup, mm (in.)	98 (3.86)

Engine Electrical

Engine Electrical System	
Battery charging alternator:	24 Volt
Ground (negative/positive)	Negative
Volts (DC)	24
Ampere rating	45
Starter motor rated voltage (DC)	24
Battery, recommended cold cranking amps (CCA):	
Quantity, CCA rating each	Two, 925
Battery voltage (DC)	12

Fuel

Fuel System	
Fuel supply line, min. ID, mm (in.)	11.0 (0.44)
Fuel return line, min. ID, mm (in.)	6.0 (0.25)
Max. lift, fuel pump: type, m (ft.)	Mechanical, 1.8 (6.0)
Max. fuel flow, Lph (gph)	92.7 (24.5)
Max. return line restriction, kPa (in. Hg)	20 (5.9)
Fuel prime pump	Manual
Fuel filter	
Primary	30 Microns
Secondary	2 Microns @ 98% Efficiency
Water Separator	Yes
Recommended fuel	#2 Diesel

Lubrication

Lubricating System	
Type	Full Pressure
Oil pan capacity, L (qt.) §	32.5 (34.4)
Oil pan capacity with filter, L (qt.) §	33.4 (35.3)
Oil filter: quantity, type §	1, Cartridge
Oil cooler	Water-Cooled

§ Kohler recommends the use of Kohler Genuine oil and filters.

Attachment: SP-2022-02 drawings 042122 (25490 : Sp-2022-02)

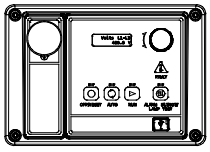
Application Data

Cooling

Radiator System	
Ambient temperature, °C (°F) *	50 (122)
Engine jacket water capacity, L (gal.)	11.3 (3.0)
Radiator system capacity, including engine, L (gal.)	27.6 (7.3)
Engine jacket water flow, Lpm (gpm)	230.9 (61)
Heat rejected to cooling water at rated kW, dry exhaust, kW (Btu/min.)	94.2 (5360)
Heat rejected to air charge cooler at rated kW, dry exhaust, kW (Btu/min.)	56.1 (3190)
Water pump type	Centrifugal
Fan diameter, including blades, mm (in.)	787 (31)
Fan, kWm (HP)	8.6 (11.5)
Max. restriction of cooling air, intake and discharge side of radiator, kPa (in. H_2O)	0.125 (0.5)

* Enclosure with enclosed silencer reduces ambient temperature capability by 5°C (9°F).

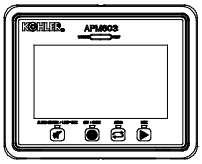
Operation Requirements



Air Requirements	
Radiator-cooled cooling air, m^3/min. (scfm)‡	368.1 (13000)
Combustion air, m^3/min. (cfm)	17.6 (620)
Heat rejected to ambient air:	
Engine, kW (Btu/min.)	46.9 (2670)
Alternator, kW (Btu/min.)	18.5 (1050)

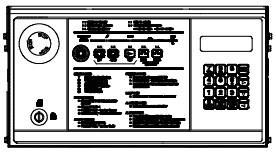
‡ Air density = 1.20 kg/m^3 (0.075 lbm/ft^3)

Fuel Consumption



Diesel, Lph (gph) at % load	Standby Rating	
100%	58.0	(15.3)
75%	43.3	(11.4)
50%	31.4	(8.3)
25%	19.7	(5.2)
Diesel, Lph (gph) at % load	**Prime Rating**	
100%	50.1	(13.2)
75%	36.1	(9.5)
50%	25.7	(6.8)
25%	16.6	(4.4)

Controllers



APM402 Controller
Provides advanced control, system monitoring, and system diagnostics for optimum performance and compatibility.
- Digital display and menu control provide easy local data access
- Measurements are selectable in metric or English units
- Remote communication thru a PC via network or serial configuration
- Controller supports Modbus® protocol
- Integrated hybrid voltage regulator with ±0.5% regulation
- Built-in alternator thermal overload protection
- NFPA 110 Level 1 capability

Refer to G6-161 for additional controller features and accessories.

APM603 Controller
Provides advanced control, system monitoring, and system diagnostics for optimum performance and compatibility.
- 7-inch graphic display with touch screen and menu control provides easy local data access
- Measurements are selectable in metric or English units
- Paralleling capability to control up to 8 generators on an isolated bus with first-on logic, synchronizer, kW and kVAR load sharing, and protective relays
  Note: Parallel with other APM603 controllers only
- Generator management to turn paralleled generators off and on as required by load demand
- Load management to connect and disconnect loads as required
- Controller supports Modbus® RTU, Modbus® TCP, SNMP and BACnet®
- Integrated voltage regulator with ±0.25% regulation
- Built-in alternator thermal overload protection
- UL-listed overcurrent protective device
- NFPA 110 Level 1 capability

Refer to G6-162 for additional controller features and accessories.

Decision-Maker® 6000 Paralleling Controller
Provides advanced control, system monitoring, and system diagnostics with remote monitoring capabilities for paralleling multiple generator sets.
- Paralleling capability to control up to 8 generators on an isolated bus with first-on logic, synchronizer, kW and kVAR load sharing, and protective relays
  Note: Parallel with other Decision-Maker® 6000 controllers only
- Digital display and keypad provide easy local data access
- Measurements are selectable in metric or English units
- Remote communication thru a PC via network or modem configuration
- Controller supports Modbus® protocol
- Integrated voltage regulator with ±0.25% regulation
- Built-in alternator thermal overload protection
- NFPA 110 Level 1 capability

Refer to G6-107 for additional controller features and accessories.

Modbus® is a registered trademark of Schneider Electric.

BACnet® is a registered trademark of ASHRAE.

Standard Features

- Alternator Protection
- Battery Rack and Cables
- Customer Connection
  (standard with Decision-Maker® 6000 controller only)
- Local Emergency Stop Switch
- Oil Drain Extension
- Operation and Installation Literature

Available Options

Circuit Breakers

Type

- ❑ Magnetic Trip
- ❑ Thermal Magnetic Trip
- ❑ Electronic Trip (LI)
- ❑ Electronic Trip with Short Time (LSI)
- ❑ Electronic Trip with Ground Fault (LSIG)

Rating

- ❑ 80%
- ❑ 100%

Operation

- ❑ Manual
- ❑ Electrically Operated (for paralleling)

Circuit Breaker Mounting

- ❑ Generator Mounted
- ❑ Remote Mounted
- ❑ Bus Bar (for remote mounted breakers)

Enclosures for Remote Mounted Circuit Breakers

- ❑ NEMA 1
- ❑ NEMA 3R

Approvals and Listings

- ❑ California OSHPD Pre- Approval
- ❑ CSA Certified
- ❑ IBC Seismic Certification
- ❑ UL 2200 Listing
- ❑ Hurricane Rated Enclosure

Enclosed Unit

- ❑ Sound Enclosure (with enclosed critical silencer)
- ❑ Weather Enclosure (with enclosed critical silencer)

Open Unit

- ❑ Exhaust Silencer, Critical (kit: PA-354809)
- ❑ Flexible Exhaust Connector, Stainless Steel

Fuel System

- ❑ Flexible Fuel Lines
- ❑ Fuel Pressure Gauge
- ❑ Subbase Fuel Tanks

Controller

- ❑ Common Failure Relay
  (Decision-Maker® 6000 and APM603 controllers only)
- ❑ Decision-Maker® Paralleling System (DPS)
  (Decision-Maker® 6000 controller only)
- ❑ Dry Contact (isolated alarm)
  (Decision-Maker® 6000 controller only)
- ❑ Two Input/Five Output Module (APM402 controller only)
- ❑ Four Input/Fifteen Output Module (APM603 controller only)
- ❑ Lockable Emergency Stop Switch
- ❑ Remote Emergency Stop Switch
- ❑ Remote Serial Annunciator Panel
- ❑ Run Relay (standard with APM603, optional with others)
- ❑ Manual Key Switch (APM603 controller only)
- ❑ Manual Speed Adjust (APM402 controller only)

Cooling System

- ❑ Block Heater, 1800 W, 90- 120 V, 1 Ph
- ❑ Block Heater, 2000 W, 190- 240 V, 1 Ph
  Required for ambient temperature below 0°C (32°F)
- ❑ Radiator Duct Flange

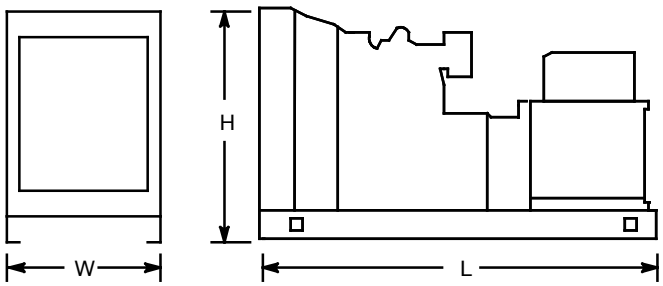
Electrical System

- ❑ Generator Heater
- ❑ Battery
- ❑ Battery Charger, Equalize/Float Type
- ❑ Battery Heater

Miscellaneous

- ❑ Air Cleaner, Heavy Duty
- ❑ Air Cleaner Restriction Indicator
- ❑ Certified Test Report
- ❑ Crankcase Emissions Canister
- ❑ Engine Fluids Added
- ❑ Rated Power Factor Testing
- ❑ Rodent Guards

Literature



- ❑ General Maintenance
- ❑ NFPA 110
- ❑ Overhaul
- ❑ Production

Warranty

- ❑ 2-Year Basic Limited Warranty
- ❑ 5-Year Basic Limited Warranty
- ❑ 5-Year Comprehensive Limited Warranty

Dimensions and Weights

Overall Size, L x W x H, mm (in.):	3000 x 1300 x 1672 (118.1 x 51.2 x 65.8)
Weight (radiator model), wet, kg (lb.):	1923 (4240)

NOTES:

1. Customer is responsible for engineering analysis to confirm pole and fixture compatibility for all applications. Refer to our white paper WP513001EN for additional support information.
2. DesignLights Consortium® Qualified. Refer to www.designlights.org Qualified Products List under Family Models for details.
3. Coastal construction finish salt spray tested to over 5,000-hours per ASTM B117, with a scribe rating of 9 per ASTM D1654. Not available with TH option.
4. Not compatible with MS/4-LXX or MS/1-LXX sensors.
5. Not compatible with extended quick mount arm (QMEA).
6. Not compatible with standard quick mount arm (QM) or extended quick mount arm (QMEA).
7. Requires the use of an internal step down transformer when combined with sensor options. Not available with sensor at 1200mA. Not available in combination with the HA high ambient and sensor options at 1A.
8. 480V must utilize Wye system only. Per NEC, not for use with ungrounded systems, impedance grounded systems or corner grounded systems (commonly known as Three Phase Three Wire Delta, Three Phase High Leg Delta and Three Phase Corner Grounded Delta systems.)
9. May be required when two or more luminaires are oriented on a 90° or 120° drilling pattern. Refer to arm mounting requirement table.
10. Factory installed.
11. Maximum 8 light squares.
12. Maximum 6 light squares.
13. Requires ZW or ZD receptacle.
14. Narrow-band 590nm +/- 5nm for wildlife and observatory use. Choose drive current A; supplied at 500mA drive current only. Available with 5WQ, 5MQ, SL2, SL3 and SL4 distributions. Can be used with HSS option.
15. Set of 4 pcs. One set required per Light Square.
16. Not available with HA option.
17. 2L is not available with MS, MS/X or MS/DIM at 347V or 480V. 2L in SA2 through SA4 requires a larger housing, normally used for SA5 or SA6. Extended arm option may be required when mounting two or more fixtures per pole at 90° or 120°. Refer to arm mounting requirement table.
18. Not available with Enlighted wireless sensors.
19. Cannot be used with other control options.
20. Low voltage control lead brought out 18″ outside fixture.
21. Not available if any "MS" sensor is selected. Motion sensor has an integral photocell.
22. Requires the use of BPC photocontrol or the PR7 or PR photocontrol receptacle with photocontrol accessory. See After Hours Dim supplemental guide for additional information.
23. Not for use with T4FT, T4W or SL4 optics. See IES files for details.
24. The FSIR-100 configuration tool is required to adjust parameters including high and low modes, sensitivity, time delay, cutoff and more. Consult your lighting representative at Cooper Lighting Solutions for more information.
25. Replace X with number of Light Squares operating in low output mode.
26. Enlighted wireless sensors are factory installed only requiring network components LWP-EM-1, LWP-GW-1 and LWP-PoE8 in appropriate quantities.
27. Not available with house side shield (HSS).
28. Not for use with 5NQ, 5MQ, 5WQ or RW optics. A black trim plate is used when HSS is selected.
29. CE is not available with the LWR, MS, MS/X, MS/DIM, BPC, PR or PR7 options. Available in 120-277V only.
30. One required for each Light Square.
31. Requires PR7.
32. Replace XX with sensor color (WH, BZ or BK.)
33. WAC Gateway required to enable field-configurability: Order WAC-PoE and WPOE-120 (10V to PoE injector) power supply if needed.
34. Smart device with mobile application required to change system defaults. See controls section for details.
35. Only product configurations with these designated prefixes are built to be compliant with the Buy American Act of 1933 (BAA) or Trade Agreements Act of 1979 (TAA), respectively. Please refer to DOMESTIC PREFERENCES website for more information. Components shipped separately may be separately analyzed under domestic preference requirements.
36. For BAA or TAA requirements, Accessories sold separately will be separately analyzed under domestic preference requirements. Consult factory for further information.
37. Available for 7-10 squares.

Product Specifications

Construction

- Extruded aluminum driver enclosure
- Heavy-wall, die-cast aluminum end caps
- Die-cast aluminum heat sinks
- Patent pending interlocking housing and heat sink

Optics

- Patented, high-efficiency injection-molded AccuLED Optics technology
- 16 optical distributions
- 3 shielding options including HSS, GRS and PFS
- IDA Certified (3000K CCT and warmer only)

Electrical

- LED drivers are mounted to removable tray assembly for ease of maintenance
- Standard with 0-10V dimming
- Standard with Cooper Lighting Solutions proprietary circuit module designed to withstand 10kV of transient line surge
- Suitable for operation in -40°C to 40°C ambient environments. Optional 50°C high ambient (HA) configuration.

Mounting

- Standard extruded arm includes internal bolt guides and round pole adapter
- Extended arms (EA and QMEA) may be required in 90° or 120° pole mount configurations, see arm mounting requirements table
- Mast arm (MA) factory installed
- Wall mount (WM) option available
- Quick mount arm (QM and QMEA) includes pole adapter and factory installed fixture mount for fast installation to square or round poles

Finish

- Super housing durable TGIC polyester powder coat paint, 2.5 mil nominal thickness
- Heat sink is powder coated black
- RAL and custom color matches available
- Coastal Construction (CC) option available

Warranty

- Five year warranty

Energy and Performance Data

Lumen Maintenance (TM-21)

Drive Current	Ambient Temperature	25,000 hours*	50,000 hours*	60,000 hours*	100,000 hours**	Theoretical L70 hours**
Up to 1A	25°C	99.4%	99.0%	98.9%	98.3%	> 2.4M

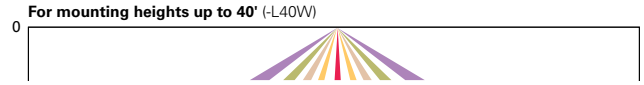
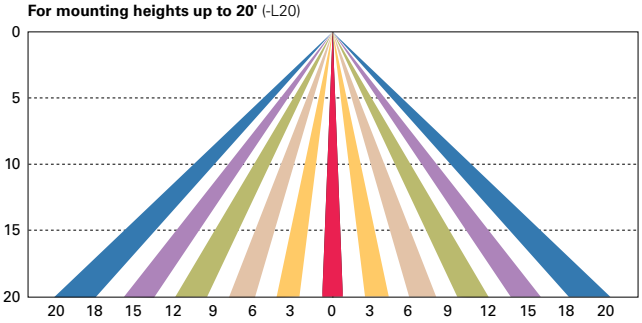
Control Options

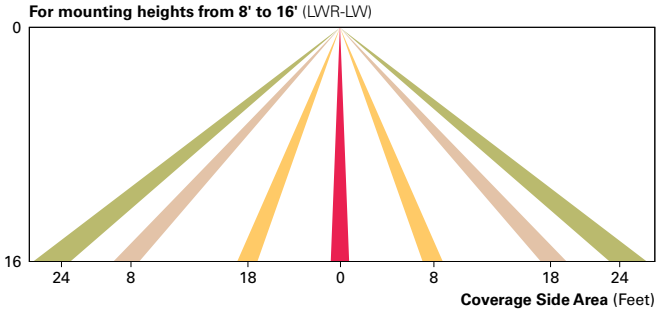


0-10V (DIM)
This fixture is offered standard with 0-10V dimming driver(s). The DIM option provides 0-10V dimming wire leads for use with a lighting control panel or other control method.

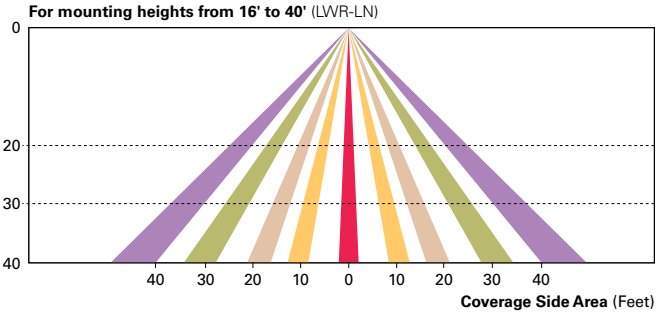


Photocontrol (BPC, PR and PR7)
Optional button-type photocontrol (BPC) and photocontrol receptacles (PR and PR7) provide a flexible solution to enable "dusk-to-dawn" lighting by sensing light levels. Advanced control systems compatible with NEMA 7-pin standards can be utilized with the PR7 receptacle.

After Hours Dim (AHD)
This feature allows photocontrol-enabled luminaires to achieve additional energy savings by dimming during scheduled portions of the night. The dimming profile will automatically take effect after a "dusk-to-dawn" period has been calculated from the photocontrol input. Specify the desired dimming profile for a simple, factory-shipped dimming solution requiring no external control wiring. Reference the After Hours Dim supplemental guide for additional information.

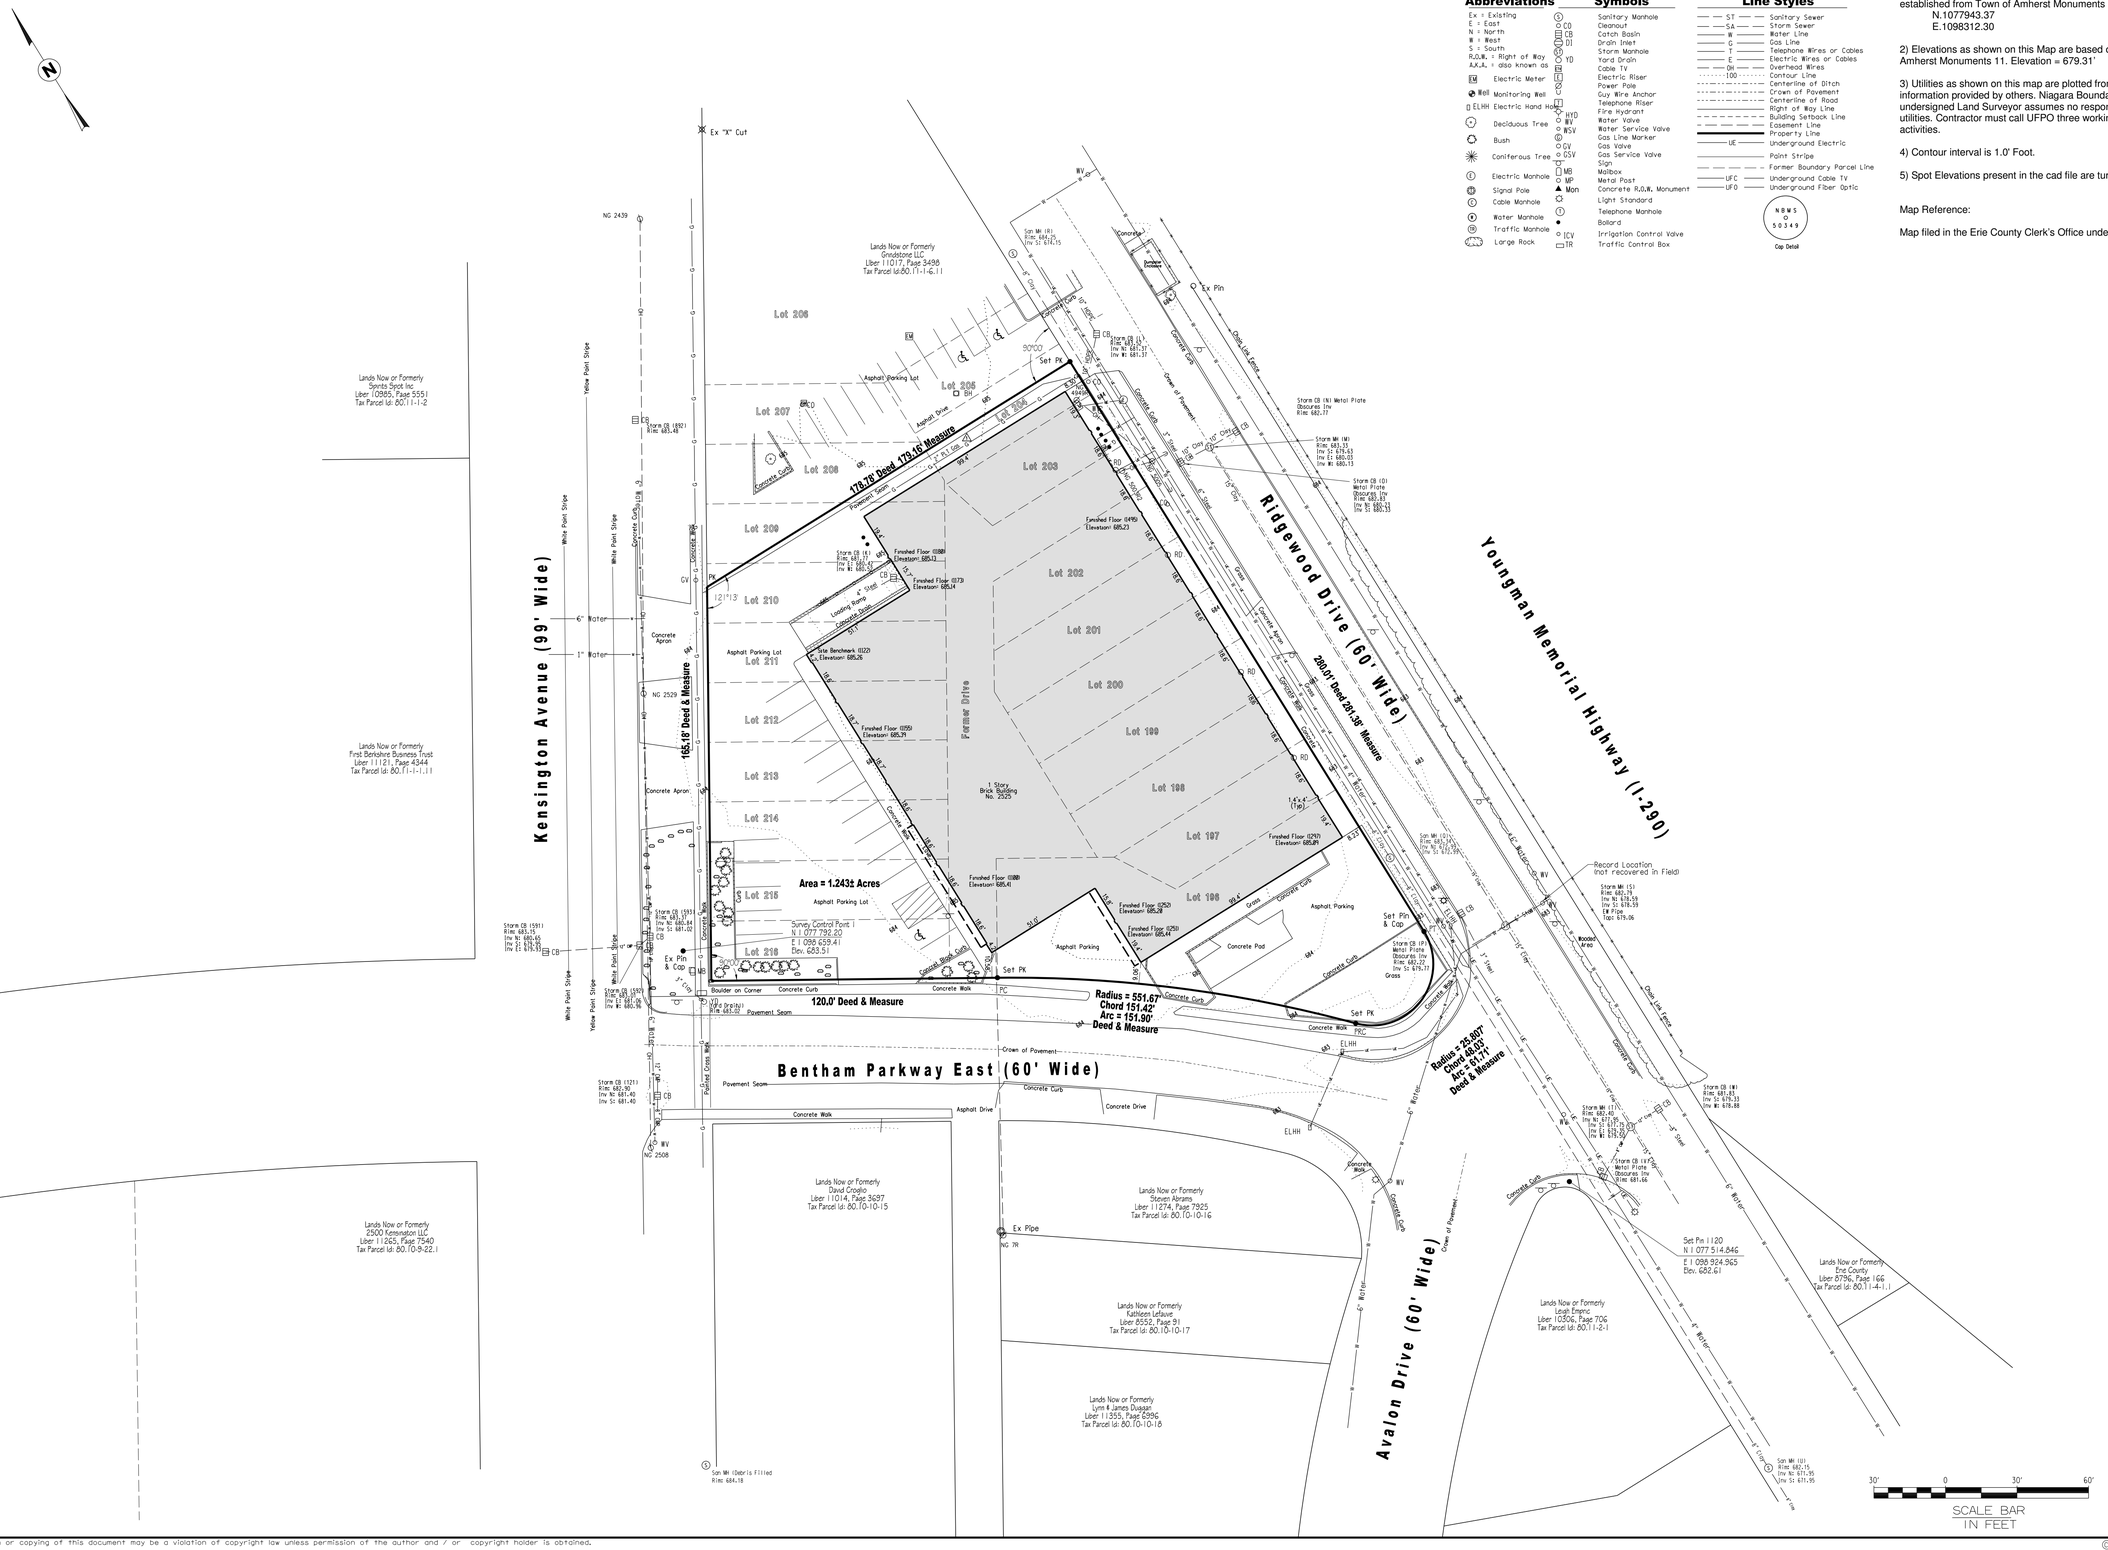


Dimming Occupancy Sensor (SPB, MS/DIM-LXX, MS/X-LXX and MS-LXX)
These sensors are factory installed in the luminaire housing. When the SPB or MS/DIM sensor options are selected, the occupancy sensor is connected to a dimming driver and the entire luminaire dims when there is no activity detected. When activity is detected, the luminaire returns to full light output. The MS/DIM sensor is factory preset to dim down to approximately 50 percent power with a time delay of five minutes. The MS-LXX sensor is factory preset to turn the luminaire off after five minutes of no activity. The MS/X-LXX is also preset for five minutes and only controls the specified number of light engines to maintain steady output from the remaining light engines. SPB motion sensors require the Sensor Configuration mobile application by Wattstopper to change factory default dimming level, time delay, sensitivity and other parameters. Available for iOS and Android devices. The SPB sensor is factory preset to dim down to approximately 10% power with a time delay of five minutes. The MS/DIM occupancy sensors require the FSIR-100 programming tool to adjust factory defaults.



Enlighted Wireless Control and Monitoring System (LWR-LW and LWR-LN)
Enlighted is a connected lighting solution that combines a broad selection of energy-efficient LED luminaires with a powerful integrated wireless sensor system. The sensor controls the lighting system in compliance with the latest energy codes and collects valuable data about building performance and use. Software applications turn the granular data into information through energy dashboards and specialized apps that make it simple and help optimize the use of building resources, beyond lighting.

WaveLinx Wireless Outdoor Lighting Control Module (WOLC-7P-10A)
The 7-pin wireless outdoor lighting control module enables WaveLinx to control outdoor area, site and flood lighting. WaveLinx controls outdoor lighting using schedules to provide ON, OFF and dimming controls based on astronomic or time schedules based on a 7 day week.



LumenSafe Integrated Network Security Camera (LD)
Cooper Lighting Solutions brings ease of camera deployment to a whole new level. No additional wiring is needed beyond providing line power to the luminaire. A variety of networking options allows security integrators to design the optimal solution for active surveillance. As the ideal solution to meet the needs for active surveillance, the LumenSafe integrated network camera is a streamlined, outdoor-ready fixed dome that provides HDTV 1080p video. This IP camera is optimally designed for deployment in the video management system or security software platform of choice.

Synapse (DIM10)
SimplySNAP integrated wireless controls system by Synapse. Includes factory installed DIM10 Synapse control module and MS/DC motion sensor; requires additional Synapse system components for operation. Contact Synapse at www.synapsewireless.com for product support, warranty and terms and conditions.

SUBJECT: MAJOR SITE PLAN REVIEW, **SP-2022-02**; PROPOSED PHILIPPS BROS./SHATKIN SCHOOL OF DENTISTRY AND PARKING EXPANSION; PROPERTY LOCATED AT **2525 KENSINGTON AVENUE**.

Dear Sir/Madam:

At its meeting of April 21, 2022 the Planning Board voted to **adjourn** the subject site plan at your request.

This request will be placed on the Planning Board agenda for the May 19, 2022 meeting.

Please submit revised plans or required materials by May 6, 2022 so they may be reviewed prior to the meeting.

Should you have any questions regarding the Planning Board's decision, please do not hesitate to call us.

Very truly yours,

Daniel C. Howard, AICP
Planning Director

RE: 2525 Kensington Avenue

Dear Mr. Thomas Voigt,

We are submitting to the Planning Department our application and supporting documents related to 2525 Kensington Avenue based on comments made by the Town of Amherst individual departments in April,

All documents submitted herein, contain responses to each item in question along with related changes to drawings and forms based on the comments.

Please review accompanying documents for overall compliance and variances that will be required for this application.

We look forward in working further with the Town of Amherst towards further development of this key medical and educational hub.

If you would like to discuss this application further, please don't hesitate to contact me at 716-222-3040 or via e-mail at jmolek@stieglitzsnyder.com.

Sincerely,

STIEGLITZ SNYDER ARCHITECTURE

Joseph Molek, RA

Project Architect

STIEGLITZ SNYDER ARCHITECTURE

RE: 2525 Kensington Avenue – Philipps Bros. Supply / The Shatkin School of Dentistry and Parking expansion.

Dear Mr. Gary Palumbo,

We are submitting to the Planning Department our response to Major Site Plan review comments submitted by the following Departments:

Engineering Department comments April 6 2022:

Item #1

Executed copy for access easement from adjacent parcel to the north is in progress.

Item #2

Executed copy of the Town of Amherst License Agreement / Land Lease regarding use of Ridgewood drive in progress.

Traffic Safety comments April 6 2022:

Item #1

Cross walk had been provided for Handicapped spaces located on east side of ridgewood drive.

Item #2

Cross walk had been provided at southwest corner of site from Ridgewood to patio beside refuse enclosure.

Item #3

We are providing landscape rather than walkway because, large amounts of snow tends to slide of the bowed roof. Therefore, we prefer not to have a sidewalk and put walkers at risk.

Item #4

Boulders stones in the Kensington Avenue Right- of- way are annotated to be removed as noted on drawing SP104.

Attachment: SP-2022-02 application 051922 (25490 : Sp-2022-02)

Planning Department comments April 1 2022:

Zoning Enforcement Officer Review:

Item #1

Owner/applicant to pursue a variance of 1'-6' minimum setback at proposed canopy addition along Ridgewood Drive. We require a canopy covering to protect users of the building from snow sliding off the top off the bow truss roof. The snow is an ongoing issue in which snow guards cannot stop the snow from sliding off the roof.

Item #2

We have removed the single parking space along Bentham Drive and plan to leave a existing non-conforming.

Parking along Ridgewood Drive to be part of legal approvals.

Item #3

We have adjusted plans to accommodate a 5'-0" setback for garbage enclosure

Item #4

The transformer height will be a maximum height of 5'-0" high. Landscape Plantings (Emerald Arborvitaes) at planted height will be 4'-0" tall. These planting will grow beyond 5'-0" within a couple years.

Item #5

Photometric plan to be coordinated with legal department. Either lighting to be a mix of pole mounted and wall mounted, which is preferred. But this will depend on the outcome of Ridgewood Drive and the owner of building.

Item #6

Parking count has increased as per plan but it will not be possible to comply with off-street parking study.

Planning Department Staff Review:

Item #1

Condition of approval by Town Board and legal department.

Attachment: SP-2022-02 application 051922 (25490 : Sp-2022-02)

Item #2

Owner/Applicant will provide a license agreement for maintenance and use of Ridgewood Drive right of way.

Item #3

Boulders stones in the Kensington Avenue Right- of- way are annotated to be removed as noted on drawing SP104.

Item #4

Northerly curb cut and driveway on Kensington Ave. is required for Fire Truck access along the north side of the building therefore we do not suggest removing this curb cut. We would agree to remove the southerly curb cut if deemed necessary however, we did not receive comment from NYSDOT to determine what concerns they may have, and therefore have not modified the site plan for such.

Item #5

Transformer is part of National Grid design. We currently do not have their final design but we anticipate a 5'-0" tall transformer and will screen the transformer with 4'-0" tall Emerald Arborvitae's as shown on landscape plan L101. See accompanying transformer photo (similar size transformer will be used) and diesel fuel generator and tank. The planted 4'-0" tall arborvitaes will grow within a couple years to 5'-0" tall and continually become taller

Item #6

Diesel Generator is indicated on the drawings which will be screened with 5'-0" tall Emerald Arborvitae's as shown on landscape plan L101.

Condensing units will be placed on rooftop of main building. all Rooftop equipment will be screened by awning covering facing Kensington avenue. The awning covering will extend past the roofline in order to cover all condensing units and mechanical units. See West Elevation and North Elevation on drawing A300.

Electric Meters are located on the north side of the building. See general location on drawing A300.

Item #7

We hereby request a waiver for the sidewalk requirement along Ridgewood Drive. The area of concern contains proposed foundation plantings instead to augment the façade treatment.

Attachment: SP-2022-02 application 051922 (25490 : Sp-2022-02)

Item #8

Signage will be submitted under separate cover for review by the Town of Amherst.

Landscape Architect Review:

Item #1

Bollards surrounding explosive mechanical equipment will contain a plastic covering *color safety yellow* for visible warning to motorists to avoid impact. Disguising bollards in this application is not recommended.

Item #2

Ridgewood Drive right-of-way contains various underground utilities along the full length of Ridgewood Drive under the proposed parking / landscaped islands (see attached site survey prepared by Niagara Boundary), including ECWA water on each side of the roadway, that must remain as-is. We do not recommend planting trees atop these public utilities.

Item #3

Diesel Generator is indicated on the drawings which will be screened with 5'-0" tall Emerald Arborvitae's as shown on landscape plan L101.

Condensing units will be placed on rooftop of main building. all Rooftop equipment will be screened by awning covering facing Kensington avenue. The awning covering will extend past the roofline in order to cover all condensing units and mechanical units. See West Elevation and North Elevation on drawing A300.

Item #4

We do not intend to install landscaping along Thruway property. There is approximately 4-ft between the right-of-way/edge of pavement and the Thruway fence remaining that is shown re-planted as lawn.

Item #5

All existing trees or shrubs are shown with a legend for removals on drawing SP104. Brush shall be cleared from along the Thruway fence. The accompanying image shows various shrubs to be removed. No large trees are located on the Ridgewood drive side of the site, only on the thruway side.

Attachment: SP-2022-02 application 051922 (25490 : Sp-2022-02)

All other existing shrubs and plantings on this site to be preserved.

End of comments.

If you would like to discuss these comments further, please don't hesitate to contact me at 716-222-3040 or via e-mail at jmolek@stieglitzsnyder.com.

Sincerely,

STIEGLITZ SNYDER ARCHITECTURE

Joseph Molek, RA

Project Architect

Attachment: SP-2022-02 application 051922 (25490 : Sp-2022-02)

TOWN OF AMHERST

APPLICATION & REVIEW PROCEDURE

MAJOR SITE PLAN

MATERIALS MUST BE PROVIDED IN AN ELECTRONIC FORMAT THAT CONTAINS PDF FILES OF THE APPLICATION, EAF, SITE PLAN DRAWING SET SURVEY, LANDSCAPE PLAN, PRELIMINARY BUILDING FLOO PLANS / ELEVATIONS & ANY OTHER SUPPORTING INFORMATION. THIS MUST BE SUBMITTED WITH YOUR APPLICATION. APPLICATIONS WILL NOT BE TRANSMITTED WITHOUT THIS ELECTRONIC INFORMATION.

THIS ALSO APPLIES TO REVISED MATERIALS THAT AR SUBMITTED.

This application package includes the following:

- Application Procedures
- Application Form & Checklist
- Stormwater Pollution Prevention Plan Checklist
- Appendix A Town of Amherst EAF Addendum
- Appendix B Criteria for Required 8½" x 11" Sketches
- Appendix C Erie Sewer District No. 5 – Commercial / Industrial New & Existing Buildings Requirements

- IMPORTANT-

1. A pre-submittal consultation with Planning Department staff is *strongly recommended* prior to submitting an application. The pre-submittal meeting gives the applicant an opportunity to discuss with staff such items as:
   - classifying the action as a major site plan, minor site plan, or minor site plan adjustment;
   - determining what specific information will be required to be submitted with the application;
   - identifying and discussing issues that must be addressed as part of the SEQR review;
   - identifying any potential variances required to implement the project as proposed.

   An appointment is required for all meetings with Planning Department staff.

2. This site plan petition is subject to the requirements of 6 NYCRR Part 617, State Environmental Quality Review Act (SEQR), and Chapter 104 of the Town of Amherst Code, as amended. The Planning Board cannot make a SEQR determination unless a complete Environmental Assessment Form (EAF), including Town of Amherst EAF Addendum, and any required supplementary information such as traffic impact studies, archaeological reports, wetland delineations or geotechnical reports, are submitted. SEQR issues may be discussed with Planning Department staff at a recommended pre-submittal meeting. Unlisted Actions require a Short EAF; Type I Actions require a Full EAF. The following is a link to the NYSDEC website and fillable forms with instructions*:*
   http://www.dec.ny.gov/permits/6191.html.

3. **Review by the Town Design Advisory Board (DAB) is required for Major Site Plans located in the following Mixed-Use zoning districts:**

   Traditional Infill 2.5 (TI-2.5)
   Traditional Infill 4 (TI-4)
   Shallow Corridor 3 (SC-3)
   Deep Corridor 3 (DC-3)
   Deep Corridor 5 (DC-5)
   Center 2.5 (CTR-2.5)
   Center 5 (CTR-5)
   Center 8 (CTR-8)

   The application for DAB review is required to be filed in conjunction with the major site plan application.

Attachment: SP-2022-02 application 051922 (25490 : Sp-2022-02)

4. The application shall be executed or consented to in writing by the owner of the property.

5. **Any variances from the Zoning Board of Appeals, or any decision from the Town Board (e.g. removal of deed restrictions) must be obtained prior to action by the Planning Board on a Site Plan application.**

6. Submittal of an application grants permission to Town staff and Planning Board members to access the parcel(s) under consideration.

7. All site plan drawings must be prepared by a Registered Architect, Professional Engineer, Landscape Architect, or Land Surveyor (as applicable) licensed to practice in New York State.

8. If you wish to include a Coordinated Sign Plan application with the site plan petition, a separate application must be completed. Contact the Planning Department for a copy of a Coordinated Sign Plan application package.

9. All drawings should be no larger than 24 in. x 36 in. If site characteristics warrant larger plan sheets, they may be accepted subject to Planning Department concurrence. All drawings must also reserve a 4 in. x 6 in. area in the lower right hand corner for official Town use.

APPLICATION PROCEDURES

1. Applicant secures application package from the Planning Department, 5583 Main Street, Williamsville, NY 14221. (716) 631-7051. Forms are also available online at: www.amherst.ny.us, (keyword: Planning).

2. Applicant prepares information as required on the Site Plan Submittal Checklist, attached. NOTE: Some proposals may not require all items on the checklist; please verify with the Planning Department.

3. Applicant schedules an appointment with the Planning Department to review the following:
   - a complete set of site plan drawings, preliminary building elevations and floor plans (no larger than 24" x 36" in size)
   - Environmental Assessment Form (EAF) & Town EAF Addendum
   - any supporting reports and materials
   - verification from the Town Assessor that the address in the application is correct

4. Applicant schedules an application submittal appointment with the Planning Department. NO SITE PLAN WILL BE ACCEPTED FOR REVIEW WITHOUT A PRE-SET SUBMITTAL APPOINTMENT.

5. At the submittal appointment, applicant provides fourteen (14) complete and collated sets of drawings and application information to the Planning Department **(materials will not be accepted unless folded into 9" x 12" in size),** including**:**
   - application form
   - Environmental Assessment Form (EAF)
   - supporting reports / materials
   - complete set of site plan drawings, preliminary building elevations and floor plans (**at least one (1) set of drawings must bear a raised or wet seal and signature of the design professional** who prepared the plans; the remaining copies may be submitted with a facsimile of the seal and signature)
   - digital files of all materials in pdf format
   - an 8½" x 11" reduction of the sketch plan or plat drawing (see Appendix B)

Attachment: SP-2022-02 application 051922 (25490 : Sp-2022-02)

6. After approval for filing by the Planning Department, applicant submits all necessary fees to the Town Clerk. **(See Schedule of Fees on first page of application and make checks payable to: Town of Amherst.)**

7. The applicant returns a copy of the filing receipt to the Planning Department.

8. The Planning Department transmits remaining thirteen (13) copies of the application and supporting materials to:
   - Assessor
   - Commissioner of Building
   - Town Engineer
   - Superintendent of Highways
   - Traffic/Safety Board
   - Fire Chiefs' Association
   - Plumbing Division
   - Right-of-Way Agent
   - Police Department (if applicable)
   - Zoning Enforcement Officer
   - Other Town and outside agencies, as applicable

9. Within 30 days of its receipt of the complete application for Site Plan approval, each agency completes its review and notifies the Planning Department in writing of its comments or recommendations as required by Ordinance.

10. The applicant may be required to submit revised plans, reports, or materials to address review agency comments. The procedures for submittal of revised plans are as follows:

    - A cover letter addressing all comments received to date is required.
    - "Highlight" the area of change on the drawings and provide a notation describing the change.
    - Revised plans/materials are required. Planning staff should be contacted to determine the number of sets needed.
    - All revised plans and materials must also be provided in an electronic format that contains pdf files of the revised information.

11. The Planning Board reviews the EAF to determine whether a Draft Environmental Impact Statement (DEIS) is required. The petitioner will be advised in the event that a DEIS is required and afforded the opportunity to prepare it. If the petitioner declines, the Planning Board will prepare the DEIS at the petitioner's expense. The public hearing will be held on the DEIS concurrently with the Planning Board hearing on the application.

12. Planning Board Meeting Procedures:

    The applicant or representative presents the project at the public hearing before the Planning Board and is available to answer any questions. The Planning Board may take any of the following actions:

    - Adjourn the hearing to a future Planning Board meeting (hearing remains open).
    - Close the hearing and table action on the site plan to a future Planning Board meeting. (The Planning Board may remove the item from the agenda until such time as all required information is provided.)
    - Close the hearing and make a decision on the site plan.

    All determinations on matters before the Planning Board are made after all public hearings on that meeting's agenda are completed.

Attachment: SP-2022-02 application 051922 (25490 : Sp-2022-02)

13. A copy of the Planning Board's determination will be provided to the applicant, his / her representative, the Building Commissioner and the Town Clerk approximately 1 week following the Planning Board meeting at which it was heard.

14. If the Planning Board approves a Site Plan with conditions, the Planning Department will work with the applicant to ensure that all conditions of the approval are satisfactorily addressed. When all conditions are satisfied, the applicant submits **seven (7) final copies** of the complete set of all site plan drawings, folded into 9" x 12". For site plans in the Mixed-Use zoning districts, building elevations will also be required.

    All 7 sets must have original wet seals and include the required 4 in. x 6 in area in the lower right hand corner for official Town use. These drawings will be stamped and signed "Approved" by the Planning Director and transmitted to Town Departments for their files and use.

15. A building permit will not be issued by the Building Department until the stamped and signed Site Plan is issued by the Planning Director.

NOTE: Please check with the Planning Department to determine the deadline date for filing applications. Due to the public hearing notice requirements and department reviews, no site plan application will be placed on the Planning Board agenda after the deadline for filing has closed. Scheduling may be delayed if an application is incomplete.

Site Plan Submittal Requirements and Checklist

The following checklist outlines the information required by the Planning Department to accept a Site Plan application for review. ***It is strongly recommended that you make an appointment with Planning Staff to determine which items apply to your application***.

Item No.	Item	Submitted	Official use
I Basic Drawing Information			
1.0	**Drawing size not to exceed 24" x 36"**		
2.0	**Title of Drawing**		
3.0	**Name and address of Applicant**		
4.0	**Name of person preparing drawing**		
5.0	**Wet seal/raised seal and signature of NYS licensed architect, engineer, landscape architect, or surveyor (as applicable)**		
6.0	**Project address**		
7.0	**Zoning of subject property and adjacent parcels**		
8.0	**North point, scale, date, and revision date(s)**		
9.0	**4" x 6" reserved area in lower right hand corner for official Town use**		
II Structures, Paved Areas, & Open Space			
1.0	**Existing and Proposed Streets**		
1.1	Names of all existing and proposed streets		
1.2	Width and radii of proposed curb-cuts		
1.3	Existing curb-cuts on adjacent and opposite properties		
1.4	Show ROW width, pavement dimensions, lane widths, pavement markings, and proposed signage on proposed streets		
1.5	Show proposed ROW consistent with planned NYSDOT, Erie County, or Town road projects (if applicable)		
1.6	Show location of proposed cross access to adjacent parcels along with a draft easement		
1.7	Designation of Fire Lanes (if applicable)		
1.8	Fire apparatus access roads		
1.9	Label any proposed roads as public or private		
1.10	Location and dimensions of sidewalks		
1.11	Typical cross sections and profiles of proposed streets, pedestrian walkways, and bikeways		
2.0	**Proposed Structures**		
2.1	Location and complete dimensions of proposed structures		
2.2	Setback dimensions of structure(s) to all property lines		
2.3	Proposed use of structures		
2.4	Gross square feet area of each structure		
2.5	Location of all building entrances		
2.6	Indicate type of roof construction/materials		
2.7	Location, height, and design detail of existing and proposed fences and walls		
2.8	Location of light standards and building mounted lights		
2.9	Location of dumpster and detail of dumpster enclosure with gate		
2.10	Layout and dimensions of the lot(s) proposed for development		

Attachment: SP-2022-02 application 051922 (25490 : Sp-2022-02)

Town of Amherst Planning Department 5583 Main Street Williamsville-NY-14221
(716) 631-7051- Fax: (716) 631-7153

Item No.	Item	Submitted	Official use
II Structures, Paved Areas, & Open Space (cont'd)			
3.0	**Floor Plans with individual rooms and spaces labeled** (fully dimensioned)		
4.0	**Building elevations with height dimensions from finished grade to the highest point of the roof and to midpoint of gable or hip of a pitched roof.** (fully dimensioned)		
4.1	Show screening of mechanical equipment		
5.0	**Parking/Loading/Stacking Areas**		
5.1	Location and complete dimensions of all paved areas		
5.2	Setback dimensions of all paved areas to property lines		
5.3	Dimension of typical parking space and drive aisles		
5.4	Location and layout of handicapped parking spaces & access aisles		
5.5	Detail of vertical signage for handicapped parking and access aisles		
5.6	Indicate minimum parking requirement & number of spaces provided		
5.7	Proposed signage for directing and guiding traffic		
5.8	Curb cut permits from NYS, Erie County, or Town (if applicable)		
5.9	Pedestrian connections (from proposed structures to public sidewalk network)		
6.0	**Location and proposed development of all open spaces, including parks, playgrounds, and open reservations**		
III Utilities and Drainage			
1.0	**Engineers Report** (bound separately from the Stormwater Pollution Prevention Plan [SWPPP])		
1.1	Stamped/sealed and signed by NYS licensed architect or professional engineer		
1.2	Proposed water service sizing, RPZ pressure and fire safety flow and pressure calculations		
1.3	Proposed sanitary sewer facility load calculations (avg. & peak flows) including calculation of the peaking factor		
1.4	Proposed storm drainage facility calculations (see information included with this application)		
2.0	**Grading Plan**		
2.1	Existing and proposed grades indicated (proposed grades may not exceed 1 on 3)		
3.0	**Water Service**		
3.1	Location, size and material of existing and proposed facilities		
3.2	Location of existing and proposed fire hydrant location(s)		
3.3	Indicate use of sprinklers, location of Fire Department connection, and proposed fire protection systems		
3.4	Existing and proposed meter/RPZ size and location		
3.5	Applicable construction details		
4.0	**Sanitary Sewers**		
4.1	Locations, sizes, slopes, inverts, and materials of all existing and proposed facilities		

Attachment: SP-2022-02 application 051922 (25490 : Sp-2022-02)

Town of Amherst Planning Department 5583 Main Street Williamsville-NY-14221
(716) 631-7051- Fax: (716) 631-7153

Item No.		Submitted	Official use
III Utilities and Drainage (cont'd)			
4.2	Applicable construction details		
4.3	Proposed water/oil/grease interceptor sizing calculations by a professional engineer (if applicable)		
5.0	**Storm Drainage**		
5.1	Locations, sizes, slopes, inverts, and materials of existing and proposed storm drainage facilities		
5.2	Connection of roof drains to proposed drainage system		
5.3	Applicable Town Standard construction details		
5.4	Existing and proposed swales and ditches		
5.5	Detention area cross-section and high-level elevations		
5.6	County and State approval for tie-in to existing sewers		
6.0	**Stormwater Pollution Prevention Plan (SWPPP) as applicable** (bound separately from the Engineer's Report) **See attached checklist.**		
7.0	**Natural Gas Service**		
8.0	**Location of transformers, generators and other mechanical equipment; include detail drawings (if applicable)**		
9.0	**Downstream Sanitary Capacity Analysis (DSCA) Report** (must be submitted if proposed average flows are greater than 2,500 gallons per day)		
9.1	The DSCA Report must include a detailed downstream sewer capacity analysis and the calculations of and commitment to (via Developer commitment letter) the required financial contribution to the Town's I/I mitigation fund based on peak flow conditions. The contribution must be based on $250 per gallon per minute of mitigated flow		
IV Lighting Plan			
1.0	**Photometric plan showing light spread in foot candles at property lines**		
1.1	Detail of all light standards, including dimension of height from finished grade		
1.2	Detail of all exterior lighting fixtures		
V Landscape Plan			
1.0	**Wet/raised seal and signature of a licensed Landscape Architect**		
2.0	**Provide a calculation of the total Parking area and a calculation of interior parking area in square feet and as a percentage**		
3.0	**Indicate location, size, number and type of proposed landscape materials**		
4.0	**Indicate location, type and size of <u>all</u> existing trees 4" caliper or larger and indicate which will be removed or retained**		
VI Other Required Information/General Requirements			
1.0	**Complete boundary survey that includes all existing structures, acreage, legal description with reference to a property line, street, or other known feature, and easements plotted to scale by a NYS licensed land surveyor**		

Attachment: SP-2022-02 application 051922 (25490 : Sp-2022-02)

Town of Amherst Planning Department 5583 Main Street Williamsville-NY-14221
(716) 631-7051- Fax: (716) 631-7153

Item No.		Submitted	Official Use
VI Other Required Information/General Requirements (cont'd)			
1.1	Copies of all easements, reciprocal access agreement or similar leag documents		
2.0	**Topographic Survey with a 30 ft. buffer outside all property lines by a NYS licensed land surveyor**		
3.0	**Draft of any deed restrictions, covenants, provisions for home associations and common ownership, and reciprocal easement agreements (as applicable).**		
4.0	**For assessment purposes, state intent to apply for condominium status (if applicable).**		
5.0	**Completed and signed Environmental Assessment Form**		
5.1	Soil boring report and geotechnical report prepared by a qualified Professional Engineer (if applicable)		
5.2	Traffic Impact Study (if applicable)		
5.3	Archaeological survey (if applicable		
5.4	Wetland Delineation report (if applicable)		
6.0	**Show existing zoning(s) of both the subject property and adjacent parcels on the Site Plan and the Landscape Plan**		
7.0	**Location of NYSDEC wetlands (including buffer area) and/or federal wetlands; indicate jurisdictional status**		
8.0	**Location of Floodway and floodplain** (if applicable)		
9.0	**Documentation pertaining to any conditions of zonings, including copies of required deed restrictions; indicate date of rezoning and the parcel address under which it was rezoned (if applicable)**		
10.0	**Documentation related to any required variances granted by the ZBA**		
11.0	**For residential site plans, provide a statement from the appropriate school district that adequate school sites and facilities are available.**		
12.0	**8 1/2" X 11" reduction of primary site plan drawing (see appendix "B" of application package for specifications)**		
13.0	**A CD containing a PDF of all site plan drawings (Must also be provided with revised drawings)**		
VII Additional Required Information for Projects in the Mixed Use Districts			
1.0	**Design Advisory Board Application**		
1.1	Required for Major Site Plan		
1.2	Required at the Planning Directors Discretion for Minor Site Plans		
2.0	**Block & Street Network Plan**		
2.1	Designation of Core, Local & Alley streets		
2.2	Dimensions of Blocks		
3.0	**Block Usage Plan (as applicable)**		
3.1	Designation of site usage for each block including open space areas		
4.0	**Phasing Plan**

TOWN OF AMHERST
State Environmental Quality Review
ENVIRONMENTAL ASSESSMENT FORM
-- ADDENDUM --

1. For each applicable category of proposed <u>new</u> structures, including additions to existing structures, provide the following information for all soil types on the project site (*according to Soil Survey of Erie County, NY; Table 11, Building Site Development, pp 294-305):*

Soil Name	Shallow excavations	Dwellings without basements	Dwellings with basements	Small commercial buildings	Local roads and streets
Urban Soil	severe	severe	severe	severe	severe

2. If the Soil survey indicates either "severe" or "moderate" suitability for the proposed types of construction, a geotechnical and hydrological analysis based on one test per 3.5 acres of project area must be provided (per Town Board resolution, 3/17/03, amended 6/16/03).

   ____ Geotechnical report attached _____ Not applicable

3. Is your property located: On Youngs Road between Dodge and Klein Roads? □ Yes X No
   On Wehrle Dr. between Spindrift Dr. and Oakwood Rd? □ Yes X No
   If so, the property may be within an area of the Town that is affected by a moratorium on connections to the sanitary sewer system.

4. Are there alternative locations on the site for this project? □ Yes X No

5. Location and size of real property owned by petitioner within one (1) mile of subject proposal:
   No

6. Are you aware of current or future plans or intentions by others in the Town of Amherst to develop property within 1000± ft. of the present project request: □ Yes X No
   Describe_____
   (Potential environmental impacts from adjacent or nearby projects undergoing the approval process will receive a coordinated environmental review to determine cumulative effects on common receivers (e.g. traffic and drainage corridors) and other relevant environmental concerns.)

7. Maximum number of vehicular trips to be generated per peak hour upon completion of project Reference traffic study
   Source: _____

8. Will blasting occur during construction? □ Yes X No

9. Does the project propose to connect and be tributary to the public sanitary sewer system? X Yes □ No

10. Proposed net additional gallons per day (gpd) of sanitary sewer discharge upon completion of project:
    _1120_____ average flow _4400_____ peak flow.
    (Average flows of 2,500 gpd or greater will require an Engineer's Report that includes a detailed downstream sewer capacity analysis and the identification of and commitment to required I/I offset work during peak wastewater flow conditions.)

11. Based on the Town's *2011 Reconnaissance Level Survey of Historic Resources,* is your property 'blue-rated' for historic significance? □ Yes X No

Attachment: SP-2022-02 application 051922 (25490 : Sp-2022-02)

TOWN OF AMHERST

APPLICATION & REVIEW PROCEDURE

MAJOR SITE PLAN

MATERIALS MUST BE PROVIDED IN AN ELECTRONIC FORMAT THAT CONTAINS PDF FILES OF THE APPLICATION, EAF, SITE PLAN DRAWING SET SURVEY, LANDSCAPE PLAN, PRELIMINARY BUILDING FLOO PLANS / ELEVATIONS & ANY OTHER SUPPORTING INFORMATION. THIS MUST BE SUBMITTED WITH YOUR APPLICATION. APPLICATIONS WILL NOT BE TRANSMITTED WITHOUT THIS ELECTRONIC INFORMATION.

THIS ALSO APPLIES TO REVISED MATERIALS THAT AR SUBMITTED.

This application package includes the following:

- Application Procedures
- Application Form & Checklist
- Stormwater Pollution Prevention Plan Checklist
- Appendix A Town of Amherst EAF Addendum
- Appendix B Criteria for Required 8½" x 11" Sketches
- Appendix C Erie Sewer District No. 5 – Commercial / Industrial New & Existing Buildings Requirements

- IMPORTANT-

1. A pre-submittal consultation with Planning Department staff is *strongly recommended* prior to submitting an application. The pre-submittal meeting gives the applicant an opportunity to discuss with staff such items as:
   - classifying the action as a major site plan, minor site plan, or minor site plan adjustment;
   - determining what specific information will be required to be submitted with the application;
   - identifying and discussing issues that must be addressed as part of the SEQR review;
   - identifying any potential variances required to implement the project as proposed.

   An appointment is required for all meetings with Planning Department staff.

2. This site plan petition is subject to the requirements of 6 NYCRR Part 617, State Environmental Quality Review Act (SEQR), and Chapter 104 of the Town of Amherst Code, as amended. The Planning Board cannot make a SEQR determination unless a complete Environmental Assessment Form (EAF), including Town of Amherst EAF Addendum, and any required supplementary information such as traffic impact studies, archaeological reports, wetland delineations or geotechnical reports, are submitted. SEQR issues may be discussed with Planning Department staff at a recommended pre-submittal meeting. Unlisted Actions require a Short EAF; Type I Actions require a Full EAF. The following is a link to the NYSDEC website and fillable forms with instructions*:*
   http://www.dec.ny.gov/permits/6191.html.

3. **Review by the Town Design Advisory Board (DAB) is required for Major Site Plans located in the following Mixed-Use zoning districts:**

   Traditional Infill 2.5 (TI-2.5)
   Traditional Infill 4 (TI-4)
   Shallow Corridor 3 (SC-3)
   Deep Corridor 3 (DC-3)
   Deep Corridor 5 (DC-5)
   Center 2.5 (CTR-2.5)
   Center 5 (CTR-5)
   Center 8 (CTR-8)

   The application for DAB review is required to be filed in conjunction with the major site plan application.

Attachment: SP-2022-02 application 051922 (25490 : Sp-2022-02)

4. The application shall be executed or consented to in writing by the owner of the property.

5. **Any variances from the Zoning Board of Appeals, or any decision from the Town Board (e.g. removal of deed restrictions) must be obtained prior to action by the Planning Board on a Site Plan application.**

6. Submittal of an application grants permission to Town staff and Planning Board members to access the parcel(s) under consideration.

7. All site plan drawings must be prepared by a Registered Architect, Professional Engineer, Landscape Architect, or Land Surveyor (as applicable) licensed to practice in New York State.

8. If you wish to include a Coordinated Sign Plan application with the site plan petition, a separate application must be completed. Contact the Planning Department for a copy of a Coordinated Sign Plan application package.

9. All drawings should be no larger than 24 in. x 36 in. If site characteristics warrant larger plan sheets, they may be accepted subject to Planning Department concurrence. All drawings must also reserve a 4 in. x 6 in. area in the lower right hand corner for official Town use.

APPLICATION PROCEDURES

1. Applicant secures application package from the Planning Department, 5583 Main Street, Williamsville, NY 14221. (716) 631-7051. Forms are also available online at: www.amherst.ny.us, (keyword: Planning).

2. Applicant prepares information as required on the Site Plan Submittal Checklist, attached. NOTE: Some proposals may not require all items on the checklist; please verify with the Planning Department.

3. Applicant schedules an appointment with the Planning Department to review the following:
   - a complete set of site plan drawings, preliminary building elevations and floor plans (no larger than 24" x 36" in size)
   - Environmental Assessment Form (EAF) & Town EAF Addendum
   - any supporting reports and materials
   - verification from the Town Assessor that the address in the application is correct

4. Applicant schedules an application submittal appointment with the Planning Department. NO SITE PLAN WILL BE ACCEPTED FOR REVIEW WITHOUT A PRE-SET SUBMITTAL APPOINTMENT.

5. At the submittal appointment, applicant provides fourteen (14) complete and collated sets of drawings and application information to the Planning Department **(materials will not be accepted unless folded into 9" x 12" in size),** including**:**
   - application form
   - Environmental Assessment Form (EAF)
   - supporting reports / materials
   - complete set of site plan drawings, preliminary building elevations and floor plans (**at least one (1) set of drawings must bear a raised or wet seal and signature of the design professional** who prepared the plans; the remaining copies may be submitted with a facsimile of the seal and signature)
   - digital files of all materials in pdf format
   - an 8½" x 11" reduction of the sketch plan or plat drawing (see Appendix B)

Attachment: SP-2022-02 application 051922 (25490 : Sp-2022-02)

6. After approval for filing by the Planning Department, applicant submits all necessary fees to the Town Clerk. **(See Schedule of Fees on first page of application and make checks payable to: Town of Amherst.)**

7. The applicant returns a copy of the filing receipt to the Planning Department.

8. The Planning Department transmits remaining thirteen (13) copies of the application and supporting materials to:
   - Assessor
   - Commissioner of Building
   - Town Engineer
   - Superintendent of Highways
   - Traffic/Safety Board
   - Fire Chiefs' Association
   - Plumbing Division
   - Right-of-Way Agent
   - Police Department (if applicable)
   - Zoning Enforcement Officer
   - Other Town and outside agencies, as applicable

9. Within 30 days of its receipt of the complete application for Site Plan approval, each agency completes its review and notifies the Planning Department in writing of its comments or recommendations as required by Ordinance.

10. The applicant may be required to submit revised plans, reports, or materials to address review agency comments. The procedures for submittal of revised plans are as follows:

    - A cover letter addressing all comments received to date is required.
    - "Highlight" the area of change on the drawings and provide a notation describing the change.
    - Revised plans/materials are required. Planning staff should be contacted to determine the number of sets needed.
    - All revised plans and materials must also be provided in an electronic format that contains pdf files of the revised information.

11. The Planning Board reviews the EAF to determine whether a Draft Environmental Impact Statement (DEIS) is required. The petitioner will be advised in the event that a DEIS is required and afforded the opportunity to prepare it. If the petitioner declines, the Planning Board will prepare the DEIS at the petitioner's expense. The public hearing will be held on the DEIS concurrently with the Planning Board hearing on the application.

12. Planning Board Meeting Procedures:

    The applicant or representative presents the project at the public hearing before the Planning Board and is available to answer any questions. The Planning Board may take any of the following actions:

    - Adjourn the hearing to a future Planning Board meeting (hearing remains open).
    - Close the hearing and table action on the site plan to a future Planning Board meeting. (The Planning Board may remove the item from the agenda until such time as all required information is provided.)
    - Close the hearing and make a decision on the site plan.

    All determinations on matters before the Planning Board are made after all public hearings on that meeting's agenda are completed.

Attachment: SP-2022-02 application 051922 (25490 : Sp-2022-02)

13. A copy of the Planning Board's determination will be provided to the applicant, his / her representative, the Building Commissioner and the Town Clerk approximately 1 week following the Planning Board meeting at which it was heard.

14. If the Planning Board approves a Site Plan with conditions, the Planning Department will work with the applicant to ensure that all conditions of the approval are satisfactorily addressed. When all conditions are satisfied, the applicant submits **seven (7) final copies** of the complete set of all site plan drawings, folded into 9" x 12". For site plans in the Mixed-Use zoning districts, building elevations will also be required.

    All 7 sets must have original wet seals and include the required 4 in. x 6 in area in the lower right hand corner for official Town use. These drawings will be stamped and signed "Approved" by the Planning Director and transmitted to Town Departments for their files and use.

15. A building permit will not be issued by the Building Department until the stamped and signed Site Plan is issued by the Planning Director.

NOTE: Please check with the Planning Department to determine the deadline date for filing applications. Due to the public hearing notice requirements and department reviews, no site plan application will be placed on the Planning Board agenda after the deadline for filing has closed. Scheduling may be delayed if an application is incomplete.

Site Plan Submittal Requirements and Checklist

The following checklist outlines the information required by the Planning Department to accept a Site Plan application for review. ***It is strongly recommended that you make an appointment with Planning Staff to determine which items apply to your application***.

Item No.	Item	Submitted	Official use
I Basic Drawing Information			
1.0	**Drawing size not to exceed 24" x 36"**		
2.0	**Title of Drawing**		
3.0	**Name and address of Applicant**		
4.0	**Name of person preparing drawing**		
5.0	**Wet seal/raised seal and signature of NYS licensed architect, engineer, landscape architect, or surveyor (as applicable)**		
6.0	**Project address**		
7.0	**Zoning of subject property and adjacent parcels**		
8.0	**North point, scale, date, and revision date(s)**		
9.0	**4" x 6" reserved area in lower right hand corner for official Town use**		
II Structures, Paved Areas, & Open Space			
1.0	**Existing and Proposed Streets**		
1.1	Names of all existing and proposed streets		
1.2	Width and radii of proposed curb-cuts		
1.3	Existing curb-cuts on adjacent and opposite properties		
1.4	Show ROW width, pavement dimensions, lane widths, pavement markings, and proposed signage on proposed streets		
1.5	Show proposed ROW consistent with planned NYSDOT, Erie County, or Town road projects (if applicable)		
1.6	Show location of proposed cross access to adjacent parcels along with a draft easement		
1.7	Designation of Fire Lanes (if applicable)		
1.8	Fire apparatus access roads		
1.9	Label any proposed roads as public or private		
1.10	Location and dimensions of sidewalks		
1.11	Typical cross sections and profiles of proposed streets, pedestrian walkways, and bikeways		
2.0	**Proposed Structures**		
2.1	Location and complete dimensions of proposed structures		
2.2	Setback dimensions of structure(s) to all property lines		
2.3	Proposed use of structures		
2.4	Gross square feet area of each structure		
2.5	Location of all building entrances		
2.6	Indicate type of roof construction/materials		
2.7	Location, height, and design detail of existing and proposed fences and walls		
2.8	Location of light standards and building mounted lights		
2.9	Location of dumpster and detail of dumpster enclosure with gate		
2.10	Layout and dimensions of the lot(s) proposed for development		

Attachment: SP-2022-02 application 051922 (25490 : Sp-2022-02)

Town of Amherst Planning Department 5583 Main Street Williamsville-NY-14221
(716) 631-7051- Fax: (716) 631-7153

Item No.	Item	Submitted	Official use
II Structures, Paved Areas, & Open Space (cont'd)			
3.0	**Floor Plans with individual rooms and spaces labeled** (fully dimensioned)		
4.0	**Building elevations with height dimensions from finished grade to the highest point of the roof and to midpoint of gable or hip of a pitched roof.** (fully dimensioned)		
4.1	Show screening of mechanical equipment		
5.0	**Parking/Loading/Stacking Areas**		
5.1	Location and complete dimensions of all paved areas		
5.2	Setback dimensions of all paved areas to property lines		
5.3	Dimension of typical parking space and drive aisles		
5.4	Location and layout of handicapped parking spaces & access aisles		
5.5	Detail of vertical signage for handicapped parking and access aisles		
5.6	Indicate minimum parking requirement & number of spaces provided		
5.7	Proposed signage for directing and guiding traffic		
5.8	Curb cut permits from NYS, Erie County, or Town (if applicable)		
5.9	Pedestrian connections (from proposed structures to public sidewalk network)		
6.0	**Location and proposed development of all open spaces, including parks, playgrounds, and open reservations**		
III Utilities and Drainage			
1.0	**Engineers Report** (bound separately from the Stormwater Pollution Prevention Plan [SWPPP])		
1.1	Stamped/sealed and signed by NYS licensed architect or professional engineer		
1.2	Proposed water service sizing, RPZ pressure and fire safety flow and pressure calculations		
1.3	Proposed sanitary sewer facility load calculations (avg. & peak flows) including calculation of the peaking factor		
1.4	Proposed storm drainage facility calculations (see information included with this application)		
2.0	**Grading Plan**		
2.1	Existing and proposed grades indicated (proposed grades may not exceed 1 on 3)		
3.0	**Water Service**		
3.1	Location, size and material of existing and proposed facilities		
3.2	Location of existing and proposed fire hydrant location(s)		
3.3	Indicate use of sprinklers, location of Fire Department connection, and proposed fire protection systems		
3.4	Existing and proposed meter/RPZ size and location		
3.5	Applicable construction details		
4.0	**Sanitary Sewers**		
4.1	Locations, sizes, slopes, inverts, and materials of all existing and proposed facilities		

Attachment: SP-2022-02 application 051922 (25490 : Sp-2022-02)

Town of Amherst Planning Department 5583 Main Street Williamsville-NY-14221
(716) 631-7051- Fax: (716) 631-7153

Item No.		Submitted	Official use
III Utilities and Drainage (cont'd)			
4.2	Applicable construction details		
4.3	Proposed water/oil/grease interceptor sizing calculations by a professional engineer (if applicable)		
5.0	**Storm Drainage**		
5.1	Locations, sizes, slopes, inverts, and materials of existing and proposed storm drainage facilities		
5.2	Connection of roof drains to proposed drainage system		
5.3	Applicable Town Standard construction details		
5.4	Existing and proposed swales and ditches		
5.5	Detention area cross-section and high-level elevations		
5.6	County and State approval for tie-in to existing sewers		
6.0	**Stormwater Pollution Prevention Plan (SWPPP) as applicable** (bound separately from the Engineer's Report) **See attached checklist.**		
7.0	**Natural Gas Service**		
8.0	**Location of transformers, generators and other mechanical equipment; include detail drawings (if applicable)**		
9.0	**Downstream Sanitary Capacity Analysis (DSCA) Report** (must be submitted if proposed average flows are greater than 2,500 gallons per day)		
9.1	The DSCA Report must include a detailed downstream sewer capacity analysis and the calculations of and commitment to (via Developer commitment letter) the required financial contribution to the Town's I/I mitigation fund based on peak flow conditions. The contribution must be based on $250 per gallon per minute of mitigated flow		
IV Lighting Plan			
1.0	**Photometric plan showing light spread in foot candles at property lines**		
1.1	Detail of all light standards, including dimension of height from finished grade		
1.2	Detail of all exterior lighting fixtures		
V Landscape Plan			
1.0	**Wet/raised seal and signature of a licensed Landscape Architect**		
2.0	**Provide a calculation of the total Parking area and a calculation of interior parking area in square feet and as a percentage**		
3.0	**Indicate location, size, number and type of proposed landscape materials**		
4.0	**Indicate location, type and size of <u>all</u> existing trees 4" caliper or larger and indicate which will be removed or retained**		
VI Other Required Information/General Requirements			
1.0	**Complete boundary survey that includes all existing structures, acreage, legal description with reference to a property line, street, or other known feature, and easements plotted to scale by a NYS licensed land surveyor**		

Attachment: SP-2022-02 application 051922 (25490 : Sp-2022-02)

Town of Amherst Planning Department 5583 Main Street Williamsville-NY-14221
(716) 631-7051- Fax: (716) 631-7153

Item No.		Submitted	Official Use
VI Other Required Information/General Requirements (cont'd)			
1.1	Copies of all easements, reciprocal access agreement or similar leag documents		
2.0	**Topographic Survey with a 30 ft. buffer outside all property lines by a NYS licensed land surveyor**		
3.0	**Draft of any deed restrictions, covenants, provisions for home associations and common ownership, and reciprocal easement agreements (as applicable).**		
4.0	**For assessment purposes, state intent to apply for condominium status (if applicable).**		
5.0	**Completed and signed Environmental Assessment Form**		
5.1	Soil boring report and geotechnical report prepared by a qualified Professional Engineer (if applicable)		
5.2	Traffic Impact Study (if applicable)		
5.3	Archaeological survey (if applicable		
5.4	Wetland Delineation report (if applicable)		
6.0	**Show existing zoning(s) of both the subject property and adjacent parcels on the Site Plan and the Landscape Plan**		
7.0	**Location of NYSDEC wetlands (including buffer area) and/or federal wetlands; indicate jurisdictional status**		
8.0	**Location of Floodway and floodplain** (if applicable)		
9.0	**Documentation pertaining to any conditions of zonings, including copies of required deed restrictions; indicate date of rezoning and the parcel address under which it was rezoned (if applicable)**		
10.0	**Documentation related to any required variances granted by the ZBA**		
11.0	**For residential site plans, provide a statement from the appropriate school district that adequate school sites and facilities are available.**		
12.0	**8 1/2" X 11" reduction of primary site plan drawing (see appendix "B" of application package for specifications)**		
13.0	**A CD containing a PDF of all site plan drawings (Must also be provided with revised drawings)**		
VII Additional Required Information for Projects in the Mixed Use Districts			
1.0	**Design Advisory Board Application**		
1.1	Required for Major Site Plan		
1.2	Required at the Planning Directors Discretion for Minor Site Plans		
2.0	**Block & Street Network Plan**		
2.1	Designation of Core, Local & Alley streets		
2.2	Dimensions of Blocks		
3.0	**Block Usage Plan (as applicable)**		
3.1	Designation of site usage for each block including open space areas		
4.0	**Phasing Plan**

TOWN OF AMHERST
State Environmental Quality Review
ENVIRONMENTAL ASSESSMENT FORM
-- ADDENDUM --

1. For each applicable category of proposed <u>new</u> structures, including additions to existing structures, provide the following information for all soil types on the project site (*according to Soil Survey of Erie County, NY; Table 11, Building Site Development, pp 294-305):*

Soil Name	Shallow excavations	Dwellings without basements	Dwellings with basements	Small commercial buildings	Local roads and streets
Urban Soil	severe	severe	severe	severe	severe

2. If the Soil survey indicates either "severe" or "moderate" suitability for the proposed types of construction, a geotechnical and hydrological analysis based on one test per 3.5 acres of project area must be provided (per Town Board resolution, 3/17/03, amended 6/16/03).

   ____ Geotechnical report attached _____ Not applicable

3. Is your property located: On Youngs Road between Dodge and Klein Roads? □ Yes X No
   On Wehrle Dr. between Spindrift Dr. and Oakwood Rd? □ Yes X No
   If so, the property may be within an area of the Town that is affected by a moratorium on connections to the sanitary sewer system.

4. Are there alternative locations on the site for this project? □ Yes X No

5. Location and size of real property owned by petitioner within one (1) mile of subject proposal:
   No

6. Are you aware of current or future plans or intentions by others in the Town of Amherst to develop property within 1000± ft. of the present project request: □ Yes X No
   Describe

   (Potential environmental impacts from adjacent or nearby projects undergoing the approval process will receive a coordinated environmental review to determine cumulative effects on common receivers (e.g. traffic and drainage corridors) and other relevant environmental concerns.)

7. Maximum number of vehicular trips to be generated per peak hour upon completion of project Reference traffic study
   Source:

8. Will blasting occur during construction? □ Yes X No

9. Does the project propose to connect and be tributary to the public sanitary sewer system? X Yes □ No

10. Proposed net additional gallons per day (gpd) of sanitary sewer discharge upon completion of project:
    _1120_____ average flow _4400_____ peak flow.
    (Average flows of 2,500 gpd or greater will require an Engineer's Report that includes a detailed downstream sewer capacity analysis and the identification of and commitment to required I/I offset work during peak wastewater flow conditions.)

11. Based on the Town's *2011 Reconnaissance Level Survey of Historic Resources,* is your property 'blue-rated' for historic significance? □ Yes X No

Attachment: SP-2022-02 application 051922 (25490 : Sp-2022-02)

Short Environmental Assessment Form
Part 1 - Project Information

Instructions for Completing

Part 1 – Project Information. The applicant or project sponsor is responsible for the completion of Part 1. Responses become part of the application for approval or funding, are subject to public review, and may be subject to further verification. Complete Part 1 based on information currently available. If additional research or investigation would be needed to fully respond to any item, please answer as thoroughly as possible based on current information.

Complete all items in Part 1. You may also provide any additional information which you believe will be needed by or useful to the lead agency; attach additional pages as necessary to supplement any item.

Part 1 – Project and Sponsor Information

Name of Action or Project:
Shatkin School of Dentistry / Philipps Bros Supply

Project Location (describe, and attach a location map):
2525 Kensington Ave at Bentham Pkwy and Ridgewood Drive

Brief Description of Proposed Action:
Shatkin School of Dentistry at Daemen College & Institute for Mobility and Technology on 1.2 acre existing developed parcel -plus- redevelopment of Ridgewood Drive into a new private paved surface parking lot.

Name of Applicant or Sponsor:	Telephone: 716-839-4800
Pat Philipps	E-Mail: pphilipps@philippsbros.com

Address:
2525 Kensington Avenue

City/PO:	State:	Zip Code:
Amherst	NY	14226

	NO	YES
1. Does the proposed action only involve the legislative adoption of a plan, local law, ordinance, administrative rule, or regulation? If Yes, attach a narrative description of the intent of the proposed action and the environmental resources that may be affected in the municipality and proceed to Part 2. If no, continue to question 2.	☑	☐
2. Does the proposed action require a permit, approval or funding from any other government Agency? If Yes, list agency(s) name and permit or approval: Amherst Site Plan, building permit	☐	☑

3. a. Total acreage of the site of the proposed action? 1.24 acres
   b. Total acreage to be physically disturbed? 0.50 acres
   c. Total acreage (project site and any contiguous properties) owned or controlled by the applicant or project sponsor? 1.24 acres

4. Check all land uses that occur on, are adjoining or near the proposed action:

5. ☐ Urban ☐ Rural (non-agriculture) ☐ Industrial ☑ Commercial ☑ Residential (suburban)
   ☐ Forest ☐ Agriculture ☐ Aquatic ☐ Other(Specify):
   ☐ Parkland

Attachment: SP-2022-02 application 051922 (25490 : Sp-2022-02)

	NO	YES	N/A
5. Is the proposed action,			
a. A permitted use under the zoning regulations?	☐	☐	☑
b. Consistent with the adopted comprehensive plan?	☐	☐	☑

	NO	YES
6. Is the proposed action consistent with the predominant character of the existing built or natural landscape?	☐	☑
7. Is the site of the proposed action located in, or does it adjoin, a state listed Critical Environmental Area?	NO	YES
If Yes, identify: _____	☑	☐
8. a. Will the proposed action result in a substantial increase in traffic above present levels?	☑	☐
b. Are public transportation services available at or near the site of the proposed action?	☐	☑
c. Are any pedestrian accommodations or bicycle routes available on or near the site of the proposed action?	☐	☑
9. Does the proposed action meet or exceed the state energy code requirements?	NO	YES
If the proposed action will exceed requirements, describe design features and technologies:		
REFER TO ARCHITECTURAL SET	☐	☑
10. Will the proposed action connect to an existing public/private water supply?	NO	YES
If No, describe method for providing potable water: _____	☐	☑
11. Will the proposed action connect to existing wastewater utilities?	NO	YES
If No, describe method for providing wastewater treatment: _____	☐	☑
12. a. Does the project site contain, or is it substantially contiguous to, a building, archaeological site, or district which is listed on the National or State Register of Historic Places, or that has been determined by the Commissioner of the NYS Office of Parks, Recreation and Historic Preservation to be eligible for listing on the State Register of Historic Places?	☑	☐	
b. Is the project site, or any portion of it, located in or adjacent to an area designated as sensitive for archaeological sites on the NY State Historic Preservation Office (SHPO) archaeological site inventory?	☐	☑	
13. a. Does any portion of the site of the proposed action, or lands adjoining the proposed action, contain wetlands or other waterbodies regulated by a federal, state or local agency?	☑	☐	
b. Would the proposed action physically alter, or encroach into, any existing wetland or waterbody?	☑	☐	
If Yes, identify the wetland or waterbody and extent of alterations in square feet or acres: _____			

Attachment: SP-2022-02 application 051922 (25490 : Sp-2022-02)

14. Identify the typical habitat types that occur on, or are likely to be found on the project site. Check all that apply:

☐ Shoreline ☐ Forest ☐ Agricultural/grasslands ☐ Early mid-successional
☐ Wetland ☐ Urban ☑ Suburban

	NO	YES
15. Does the site of the proposed action contain any species of animal, or associated habitats, listed by the State or Federal government as threatened or endangered?	☑	☐
16. Is the project site located in the 100-year flood plan?	☑	☐
17. Will the proposed action create storm water discharge, either from point or non-point sources?	☐	☑
If Yes,		
a. Will storm water discharges flow to adjacent properties?	☑	☐
b. Will storm water discharges be directed to established conveyance systems (runoff and storm drains)?	☐	☑
If Yes, briefly describe: EXISTING PUBLIC DRAINAGE IN RIDGEWOOD DRIVE		
18. Does the proposed action include construction or other activities that would result in the impoundment of water or other liquids (e.g., retention pond, waste lagoon, dam)?	☑	☐
If Yes, explain the purpose and size of the impoundment:		
19. Has the site of the proposed action or an adjoining property been the location of an active or closed solid waste management facility?	☑	☐
If Yes, describe:		
20. Has the site of the proposed action or an adjoining property been the subject of remediation (ongoing or completed) for hazardous waste?	☑	☐
If Yes, describe:

5583 Main Street Williamsville NY 14221
Town of Amherst Planning Department

STIEGLITZ SNYDER ARCHITECTURE

RE: 2525 Kensington Avenue – Philipps Bros. Supply / The Shatkin School of Dentistry and Parking expansion.

Dear Mr. Gary Palumbo,

We are submitting to the Planning Department our response to Major Site Plan review comments submitted by the following Departments:

Amherst Fire Chief Comments March 16 2022:

1. What fuel is used for generator? If diesel, provide specs on tank and quantity.

Fuel type is Diesel. See accompanying documents for tank specifications.

2. fire lane no parking signs are required on north side of the building

Signage will be provided.

3-Show location of fire department connection. Should be located on street side of building

Fire department connection will be provided at northwest corner of the building just north of the loading doc.

Engineering Department Comments March 9 2022:

1.An executed copy of the proposed access easement from the adjacent parcel to the north must be copied to this office prior to issuance of any town of Amherst plumbing permits for this project.

To be resolved with Town Board.

Attachment: SP-2022-02 application 051922 (25490 : Sp-2022-02)

2. An executed copy of the Town of Amherst License Agreement / Land lease regarding the use and improvement of Ridgewood drive must be copied to this office prior to the issuance of any Town of Amherst Plumbing permits for this project.

To be resolved with Town Board.

Planning Department comments March 7 2022:

Zoning Enforcement Officer Review:

Item #1

Owner/applicant to pursue 0 feet setback at proposed canopy addition location. We are requesting an Area Variance from the Ridgewood Drive Right-of-way.

Item #2

Owner/applicant to pursue 0 feet area setback for paved parking at the right-of-ways and north property line. We are requesting an Area Variance.

Item #3

Existing parking lot modified to comply with minimum size and spacing of car-parks and including a new curbed and landscaped end cap.

Item #4

Owner/applicant to pursue 0 feet setback at proposed trash enclosure location. We are requesting an Area Variance from the Ridgewood Drive and Bentham Pkwy Right-of-way.

Item #5

Landscape plan is sealed by NYS licensed Landscape Architect.

Item #6

Additional landscape screening is provided to screen Transformer and Generator. See accompanying transformer photo (similar size transformer will be used) and diesel fuel generator and tank.

Attachment: SP-2022-02 application 051922 (25490 : Sp-2022-02)

Item #7

A foundation planting bed is now shown cut-out from the existing sidewalk fronting the west wall of the existing facility. Shrubs are added in the planting schedule.

Item #8

Site Lighting Plan – the intent is to illuminate Ridgewood Drive parking lot for safety. See accompanying revised drawing for lighting at south end of parking.

Item #9

Alternative parking analysis – See accompanying Traffic Study prepared by SRF Associates.

Planning Department Staff Review:

Item #1

Owner/Applicant will work with the Town of Amherst Board to remove parking restriction on Ridgewood Drive.

Item #2

Owner/Applicant will provide a license agreement for maintenance and use of Ridgewood Drive right of way.

Item #3

Boulders stones in the Kensington Avenue Right- of- way are shown to be removed.

Item #4

Northerly curb cut and driveway on Kensington Ave. is required for Fire Truck access along the north side of the building therefore we do not suggest removing this curb cut. We would agree to remove the southerly curb cut if deemed necessary however, we did not receive comment from NYSDOT to determine what concerns they may have, and therefore have not modified the site plan for such.

Attachment: SP-2022-02 application 051922 (25490 : Sp-2022-02)

Item #5

See accompanying transformer photo (similar size transformer will be used) and diesel fuel generator and tank.

Item #6

See accompanying cut sheets for site and building mounted lighting fixtures.

Item #7

No other site features are anticipated.

Item #8

We hereby request a waiver for the sidewalk requirement along Ridgewood Drive. The area of concern contains proposed foundation plantings instead to augment the façade treatment.

Item #9

Signage will be submitted under separate cover for review by the Town of Amherst.

Item #10

SEAF – see accompanying document with applicant's name.

Item #11

See accompanying Application complete with Item #1, #5 and #7.

Item #12

We have provided 4"x6" in the lower right hand corner of all drawings that did not have the space available for Town use.

Item #13

An 8 1/2" x11" reduction of the modified site plan is included.

Attachment: SP-2022-02 application 051922 (25490 : Sp-2022-02)

Landscape Architect Review:

Item #1

Bollards surrounding explosive mechanical equipment will contain a plastic covering *color safety yellow* for visible warning to motorists to avoid impact. Disguising bollards in this application is not recommended.

Item #2

Ridgewood Drive right-of-way contains various underground utilities, including ECWA water on each side of the roadway, that must remain as-is. We do not recommend planting trees atop these public utilities.

Item #3

Additional landscaping screening is shown on the south side of the transformer and west side of the generator to further restrict view from the public roadway.

Item #4

We do not intend to install landscaping on Thruway property. There is approximately 4-ft between the right-of-way/edge of pavement and the Thruway fence remaining that is shown re-planted as lawn.

Item #5

Existing trees or shrubs are shown with a legend for removals, if any. Brush shall be cleared from along the Thruway fence.

Item #6

See Item #5 – note on plan indicates where contractor is to protect or remove existing plantings.

Attachment: SP-2022-02 application 051922 (25490 : Sp-2022-02)

Highway Dept. Review March 24 2022:

Item #1 – Applicant has requested abandonment of the portion of Ridgewood Drive running north of Bentham Pkwy. However, the underlying utilities including storm sewers, shall remain owned and maintained by the Town of Amherst.

End of comments.

If you would like to discuss these comments further, please don't hesitate to contact me at 716-222-3040 or via e-mail at jmolek@stieglitzsnyder.com.

Sincerely,

STIEGLITZ SNYDER ARCHITECTURE

I. SUMMARY

This project includes a mixed-use redevelopment and internal expansion in an existing 1-story retail/warehouse facility to include a dental school on a 1.2± acre parcel located at Kensington Avenue, Bentham Pkwy. and Ridgewood Drive in the Town of Amherst, New York. The GB-zoned site is located adjacent to the north terminal end of Ridgewood Drive, to which the applicant is requesting abandonment, and proposed replacement with a paved parking lot in a land-lease. The subject parcel is currently fully developed with replacement utility services planned for the uprated occupancy.

Sanitary wastewater is currently conveyed by 4-inch gravity piping from the building to an 8-inch public sewer found in Ridgewood Drive. New interior plumbing and partial replacement of the existing 4inch PVC lateral is planned.

New water service for domestic and fire-protection use of the multi-tenant build-out shall replace the existing tap and connect to the 6-inch main found in Kensington Ave. A new 6-inch tap with 4-inch DIP tee reducing to 3-inch and running to the water meter room and 6-inch DIP fire protection runs together in the same trench. The Erie County Water Authority (ECWA) regulates the water main. Metering and backflow prevention for the private services are contained within the facility mechanical room with application made by others.

Currently, storm water runoff generated by the site flows overland towards and into the existing surrounding roadway drainage systems. Replacement receivers are proposed for redevelopment of Ridgewood Drive from a roadway to a perpendicular car-park. New storm piping shall connect to existing manholes. One manhole rim is proposed to be raised-up to new grade of the proposed parking lot.

This development will not result in an increase in impervious surfaces on this site and does not involve soil disturbance greater than one (1) acre, thus stormwater detention is not provided. The site is not located within a 100-year floodplain. The site is currently fully developed and does not contain wetland.

II. SANITARY SEWER SERVICE

The existing public 8-inch gravity sanitary sewer located on the west side of Ridgewood Drive will provide a sanitary sewer connection point. All public utilities within Ridgewood Drive shall remain operational and accessible for maintenance during and after reconstruction. One public sewer manhole rim is proposed to be raised-up to new grade of the proposed parking lot.

A replacement for the private 4-inch PVC (SDR35) sewer lateral will be installed to the proposed building sanitary sewer entry point at the north wall of the building from the existing tap per the building plumbing plans. The proposed facilities will generate a calculated 1120 gal/day (gpd) average of residential wastewater load* as per the following:

Day School: (30 empl x 15 gpd)+(52 students x 10 gpd) ~ 970
Existing retail/warehouse: (10 empl x 15 gpd) ~ 150

*Reference "NYS Design Standards for Intermediate Sized Treatment Works, March 2014"

III. WATER SERVICE

A new 6-inch water line for domestic and fire-protection will be connected to the existing 6-inch public main located on the east side (near side) of Kensington Ave. The following data pertains to the public watermain and private demands:

- Subsurface investigations indicates a somewhat shallow, till overburden on weathered shale bedrock. The presence of bedrock measurement approx. 7-ft below grade is indicated.
- The static pressure of the existing 6-inch public main is reported by ECWA as __ psi, and a residual (open hydrant) reading of __ psi. (Note that a recent pressure test is not available and a new test cannot be made at this time and until spring thaw)
- New domestic demand is limited to the proposed uses as a day school and retail/warehouse facility. New fire-protection demand design shall be by the building fire-protection engineer which may include a booster pump as required.

Erie County Water Authority (ECWA) governs the proposed tap and backflow prevention. ECWA provides the tapping sleeve and valve and the 4-inch gate valve and 6-inch gate valve installed at the property line. Metering and backflow prevention is contained within the facility. Meter set is also provided by ECWA. A Backflow Prevention Application shall be provided under separate cover on behalf of the water customer.

Attachment: SP-2022-02 application 051922 (25490 : Sp-2022-02)

IV. STORMWATER MANAGEMENT

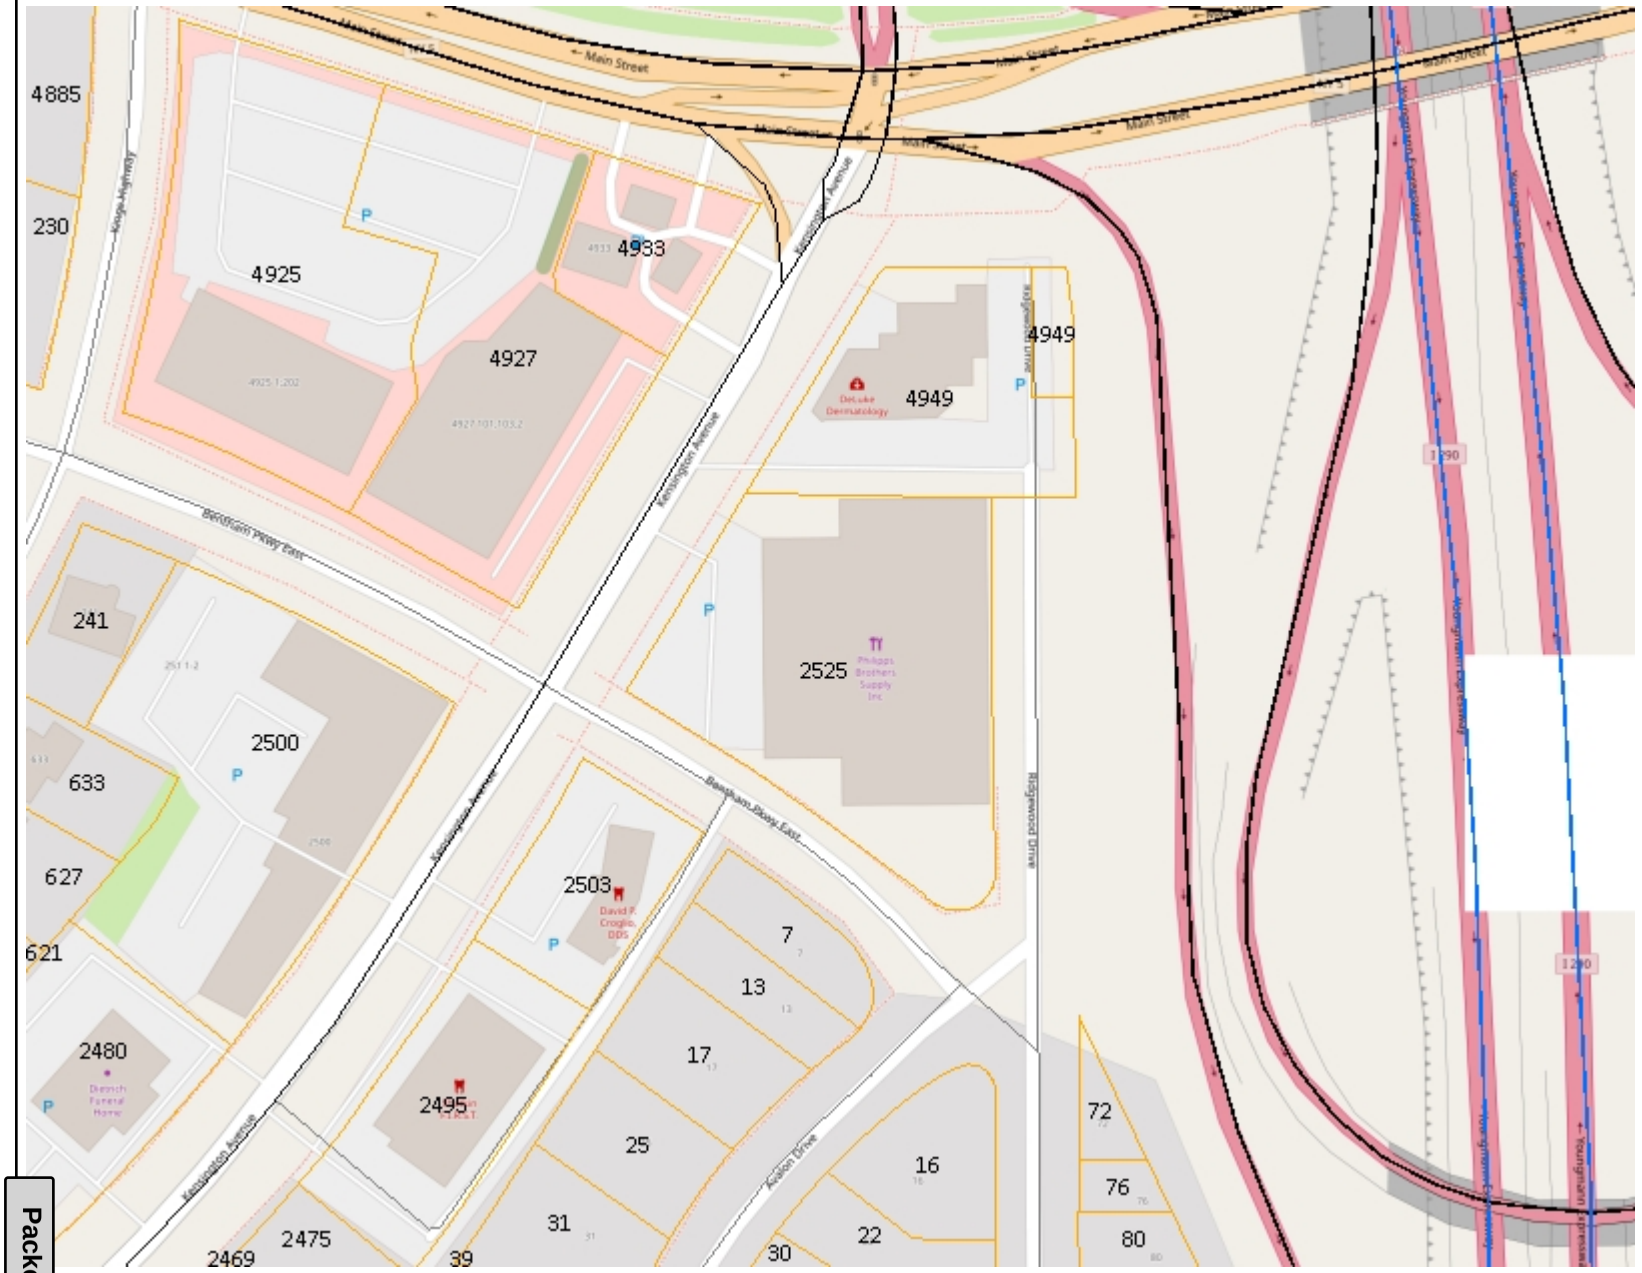
I. Existing (Pre-Development) Conditions

The subject parcel is currently built-out with building and pavements. No on-site stormwater receivers were found. Ridgewood Drive contains curb inlets and storm piping conveyances owned and maintained by the Town of Amherst.

II. Proposed (Post-Development) Conditions

The proposed development includes the construction of a new canopy entry structure and associated paved parking in a land-lease agreement to use Ridgewood Drive as a car-park. Storm water receivers are replaced, existing piping abandoned, with new piping connections made to existing manholes. Storm pipe sizing for conveyance of the 10-year storm event is included in Appendix A for new drainage in Ridgewood Drive.

V. PERMITS



The proposed construction of the building addition, abandonment of public rights-of-way, new parking areas and drainage must receive approval from the Town of Amherst. An application for backflow prevention for private service must be made to the Erie County Water Authority (ECWA).

ATTN: Dr. Todd Shatkin, DDS

RE: Geotechnical Engineering Report
Proposed Mezzanine & Canopy at
Shatkin School of Dentistry
2525 Kensington Avenue
Town of Amherst, Erie Co., New York 14226

Dr. Shatkin:

This report presents the findings of the subsurface investigation program and geotechnical engineering recommendations for the above referenced project. The geographic orientation of the project site is illustrated on the U.S. Geologic Survey (USGS) site location map in Figure No. 1. The project site is illustrated in Figure No. 2, entitled "Test Boring and Concrete Core Location Plan", which includes: the approximate location of one exterior test boring and two interior concrete floor slab cores that were drilled by Buffalo Drilling Company, Inc. (BDC); relative ground surface elevations; and additional site details.

EXPLORATION METHODS

Sampling Method: A truck-mounted CME 55 rotary drill rig was used to drill one boring to shallow auger refusal by using 4-1/4 inch inside diameter (ID), continuous flight hollow stem augers. Samples were recovered by driving a standard split-spoon sampler (2-foot long by 1-3/8 inch inside diameter) 24 inches with a 140-pound hammer falling 30 inches per blow per the American Society of Testing and Materials (ASTM) Standard D1586. The number of blows from six to 18 inches of penetration is defined as the Standard Penetration Test (SPT) N-value. Auger refusal, which may infer the top of bedrock, was encountered approximately seven feet below ground surface. Inside the existing structure, an electric core machine with six-inch ID, diamond impregnated bit was used to core through the concrete floor slab to gain access to subsurface soils at two locations, C-1 and C-2. Subsurface samples were retrieved via hand sampler beneath concrete floor slab.

Bedrock was confirmed by coring boring B-1 to a depth of approximately five feet below auger refusal. Bedrock coring efforts were done with an Nx-sized (2-1/8-inch I.D.) core barrel and impregnated diamond bit in accordance with ASTM Method D2113.

Attachment: SP-2022-02 application 051922 (25490 : Sp-2022-02)

Any encountered groundwater conditions are documented in the field on the driller's logs for each test boring. If indicators of groundwater are observed on the sampling equipment, the depth to groundwater is also checked and measured through the hollow stem augers at the completion of the sampling efforts.

Classification: The retrieved soil samples were initially logged in the field by the driller, and a portion of each sample was placed and sealed in a glass jar. The boring logs, which are included in Appendix A, were based upon the field logs and a second visual classification of recovered samples in the laboratory by a geologist. Classification/identification of samples, as noted on the boring logs, is based on the Unified Soil Classification System (USCS) in ASTM D2487/D2488. Refer to Appendix B entitled, "Geotechnical Reference Standards", for an explanation of the terminology that is used for soil and rock descriptions.

Each rock core was examined on a run-by-run basis to determine the percentage of core recovery and Rock Quality Designation (RQD). Core recovery percentage is the ratio of the sample length recovered divided by the length of the core run times 100 percent. RQD is defined as the total length of all pieces of core that are greater than four inches divided by the length of the core run times 100 percent. Core recovery and RQD percentages are noted on the boring logs.

Each core sample of the existing concrete floor slab was observed, measured, and photographed for review. Details can be found on the test boring/core logs C-1 and C-2 in Appendix A and the photographs are available in Appendix C, entitled "Floor Slab Core Photographs".

SITE AND SUBSURFACE CONDITIONS

General: The proposed site for development is the existing Phipps Brothers Supply, Inc. building addressed as 2525 Kensington Avenue, in the Town of Amherst, Erie County, New York. The project will include the construction of an interior mezzanine and an exterior canopy over the drop off area along the east side of the building. The site topography is generally flat across test boring locations.

Subsurface Soil Conditions: In general, subsurface conditions, underlying the exterior asphalt pavement or interior concrete floor slab, consist of one to two feet of granular fill material atop naturally deposited cohesive/fine-grained glacial till that extends to auger refusal.

Beneath the asphalt at B-1, granular fill material was encountered and extends two feet below ground surface. This fill consists of fine to coarse-grained sand to gravel sized crushed limestone and is believed to be the aggregate base course for the asphalt pavement. Relative density of the granular fill is medium dense with moisture contents of retrieved samples noted to be in a moist state. Beneath interior concrete floor slab at boring/cores C-1 and C-2, the granular fill is a loose to medium dense silty sand with trace quantities of gravel. This fill is described as a spent foundry sand typical of the metal casting industry which has a historic common reuse in this region as concrete slab/rigid pavement base layers.

Attachment: SP-2022-02 application 051922 (25490 : Sp-2022-02)

Beneath the fills, a naturally deposited cohesive/fine-grained glacial till exists and extends to auger refusal at B-1 and the remain depths advanced at C-1 and C-2. The till generally consists of slightly to moderately plastic, silt and clay with lesser amounts of sub-rounded fine-sized to coarse-sized sand and gravel. The consistency of this soil is primarily stiff to hard with moisture contents of retrieved samples noted to be moist. Spoon refusal conditions are also noted in the lower depths of the unit closer to soil bedrock interface. The proposed footing bearing grades for the proposed structures are assumed to be within this soil.

Bedrock: Auger refusal, which is generally inferred to be the top of the apparent bedrock surface, was encountered at B-1 approximately seven feet below ground surface. Confirmatory rock coring was advanced five feet beneath the refusal condition and bedrock samples collected. The bedrock type is the Onondaga Limestone, which is described as hard, slightly weathered, medium dark gray, thinly bedded, porous and calcareous limestone. Percent recovery is lightly more than 50 percent with rock quality designations (RQD) noted as 30 percent. These RQD values suggest that the rock is poor quality.

Groundwater: Groundwater was not encountered during subsurface exploration efforts. Note that the groundwater readings were taken at the completion of drilling efforts and, therefore, an adequate amount of time for the groundwater level to recharge to static conditions was probably not allowed. Fluctuations in the groundwater level may occur due to other factors than those present during field operations.

EARTHQUAKE/SEISMIC CONSIDERATIONS

Site Class Definition: For the given site conditions, the most applicable site definition is Site Class C, in accordance with Section 1613.2.2 of Building Code of New York State © 2020 and listed in Table 20.3-1 of Chapter 20 of American Society of Civil Engineers (ASCE) Standard 7-16.

Liquefaction Potential: For the Site Class C, the design spectral response acceleration parameters S_{DS}, at 0.2 seconds, and S_{D1}, at one second, are 0.146g and 0.045g (g = 32.2 feet/sec^2), respectively, for this part of Erie County, New York (see Appendix D). These values have a two percent probability of being exceeded in 50 years. Based upon the above conditions and an approximate magnitude 6.0 earthquake on the Richter Scale, the potential for liquefaction or settlement of Site Class C soil is considered extremely low.

Attachment: SP-2022-02 application 051922 (25490 : Sp-2022-02)

FOUNDATION DESIGN AND CONSTRUCTION RECOMMENDATIONS

General: This section will present and discuss recommendations on foundation design and construction and placement of controlled fills, and subgrade and base layer requirements for concrete floor slabs.

As shown in Figure No. 2, a mezzanine will be constructed inside the northern warehouse portion of the existing building. Additionally, a canopy will be constructed to cover the drop off area at the rear of the structure. The existing ground surface is generally flat across the development area and final exterior grades are assumed to closely match the existing at relative elevation 100.00 ± feet. The maximum design exterior and interior column loads are not expected to exceed 100 kips. The maximum live floor load is taken as 100 pounds per square foot (psf).

Site Preparation and Earthwork: General site preparation will include the demolition and complete removal of any encountered foundations and floor slabs, and removing all unsuitable surficial material (i.e., asphalt pavement, concrete, brick, expansive slag, organic or topsoil layer, and construction and demolition-like fill) to a depth where firm, granular or cohesive fills or naturally occurring soils are encountered. It is recommended, particularly in the location of the proposed structure, that any slag and/or cinder/ash containing material, if encountered, should be tested to determine the expansion and corrosion characteristics (where applicable for direct or potential contact with foundation elements and buried utilities) of these materials prior to their use on-site. Any rubble-like and brick fill, boulders, or wood fill in particular, if encountered, will require undercutting. Building pad and paved areas are to be proof rolled with a fully loaded ten-wheel dump truck. All encountered soft and disturbed zones should be undercut and stabilized with granular fill that is placed in compacted lifts prior to placement of additional fill materials above. Refer to Appendix E entitled "General Earthwork Specification" for definition of the fill types and gradations, recommended minimum compaction requirements for various site developments, and placement and compaction methods. The NYS Department of Transportation (NYSDOT) specification numbers for typical aggregate subbase/base course components that are included in the select granular fill category as are as follows: Item No. 304.12 (Metric) Subbase Course, Type 2 (< 2-inch maximum size), which is preferred; or Item No. 304.14 (Metric) Subbase Course, Type 4 (< 2-inch maximum size).

It is unknown if any former residential/commercial structures existed at the project site for the proposed renovations and if any former footings and foundation walls may be buried at the proposed site. Septic tank and system locations and the abandonment conditions or practices are normally unknown. If encountered during site development, it is recommended that any tanks and systems should be properly removed/treated/remediated relative to the proposed development and under the applicable local and state regulations. The remaining cavities, from the aforementioned items, should be backfilled with select/approved granular fill that is placed in thin lifts and compacted to the minimum recommendation, as presented in this report, for the proposed development at that cavity location.

Attachment: SP-2022-02 application 051922 (25490 : Sp-2022-02)

Shallow Foundation: The recommended foundation type is shallow footings. Individual interior and exterior spread column footings would bear at an elevation of 42-inches or lower below final grade, at relative elevation 96.50 ± feet or lower. A 42-inches minimum footing depth (as required by local or New York State code) is needed to provide adequate protection from frost for exterior footings.

The exterior and interior footings are recommended to bear at the same relative elevation on stable, naturally deposited, stiff (Nvalues > 10 blows) cohesive/fine-grained glacial till or on thin layers of thoroughly compacted (minimum of 95 percent of the maximum dry density by ASTM D 1557) select/approved granular fill that is placed on approved subgrade. If needed, a geotextile strength and filter fabric (such as, Mirafi 600X) may be used to line the excavation bottom for the purpose of stabilizing the excavation and placement of the select/approved granular fill. Alternatively, in heated buildings the interior footings are recommended to bear two and one-half feet or lower below finish floor at relative elevation 97.50 ± feet and on the same soil/fill conditions as the exterior footings.

Undercut areas beneath proposed foundations must extend laterally beyond each vertically projected edge of the foundation by a minimum distance equal to one-half the total depth of the undercut or equating to a slope of two vertical to one horizontal from the bottom foundation corner. The undercuts and placement of compacted select/approved granular fill are required to ensure a suitable and more uniform bearing media for the footings, and to prevent unacceptable differential settlements.

Column footings should have a minimum three-foot width. Based on the above described conditions, the recommended maximum net allowable foundation bearing pressure is 2,500 pounds per square foot (psf) of bearing area. All footings for the proposed building are recommended to be designed near the same contact pressure. The recommended maximum net allowable foundation bearing pressure is based on generally accepted design methods for cohesive/fine-grained soil conditions. Based on the provisions of the above recommendations and estimated design requirements and utilization of proper construction procedures and experienced field supervision and testing personnel, total and differential settlements are estimated to be less than one inch and 3/4's inch, respectively. Refer to Appendix D for additional foundation design and construction details.

Additional Foundation Considerations: In addition to the above, the following recommendations will provide additional assurances with regard to proper foundation construction.

a) All fill placed beneath, adjacent, or above foundations must comply with the "General Earthwork Specification", included as Appendix E.

Attachment: SP-2022-02 application 051922 (25490 : Sp-2022-02)

b) Backfill of foundations with approved select granular fill must be completed prior to placement of substantial superstructure loads, except for basement walls or substructure areas that may additionally require superstructure loads and possibly internal bracing.

c) The upper silty materials may rut and "pump" if exposed to excessive surface water and repeated construction traffic. Proper site management and fill placement operations are needed to minimize costly undercuts and subgrade repairs prior to placement of concrete slabs and asphalt pavement. It is noted that construction during wet/rainy and/or Fall and Spring conditions may require added precautions and possibly a thicker base layer to maintain a stable subgrade condition.

d) Step footings, if utilized, should have a rise to run ratio of 1:2, with a two-foot maximum rise and a four-foot minimum run between steps or as recommended by the design structural engineer.

e) The recommended at rest (rigid wall), active, and passive static earth pressure coefficients for unsaturated, select granular sandy gravel fill against an earth retaining structure/wall are 0.76, 0.24, and 2.8 (with an ultimate value of 4.2), respectively. The respective equivalent static lateral fluid pressures are recommended to be 90, 30 and 330 (with an ultimate value of 500) pounds per square foot (psf) per foot depth which are based upon a moist, compacted unit backfill weight of 120 pounds per cubic foot (pcf). The at rest value would account for the average expected compaction induced stresses and/or the potential influences of hydrostatic pressure. The static lateral fluid pressures can be directly proportioned for other unit weights.

Stabilization of Excavations: The trench/excavation sidewall stability concerns can be addressed with the Occupational Safety and Health Act (OSHA) requirements as set forth in Subpart P of 29 CFR Part 1926, Sections 1926.650 to 1926.652. In lieu of a properly designed shoring system, side slopes of the trench excavation should be one on one (vertical to horizontal distance) or flatter in cohesive soils or one on one and one-half or flatter in the granular materials, as required by OSHA.

Water must not be allowed to accumulate or pond on exposed foundation bearing grades. Surface water and groundwater from within the excavation must be either pumped, diverted or channelized by gravity flow to effectuate the construction of the proposed foundation. Pockets of localized perched groundwater may seasonally be expected to be encountered at footing and/or footing undercut bearing grades. At these locations, dewatering with surface sumps may be required to maintain stable side slopes and excavation bottom.

Attachment: SP-2022-02 application 051922 (25490 : Sp-2022-02)

Concrete Interior Floor Slab(s)/Pad: A geotextile fabric (such as, Mirafi 600X or equal) that separates the subgrade and the approved/select granular base layer is recommended for sensitive cohesive/fine-grained/silty subgrade soil/fills. This approach will stabilize and provide a workable building pad condition with minimal required repairs. The approved subgrades will most likely consist of stiff or better/thoroughly compacted (i.e., minimum 92 percent of the maximum dry density by ASTM D 1557) cohesive silt and clay, and/or a thoroughly compacted imported select/approved granular fill.

Above the approved subgrades, a minimum eight-inch thick for lightly loaded areas and minimum 12-inch thick for heavily loaded areas select granular fill (i.e., number two crusher run stone or equal) layer is recommended as the base course for concrete floor slabs. The NYSDOT specification numbers for typical aggregate subbase/base course components are Item No. 304.12 (Metric) Subbase Course, Type 2 (< 2-inch maximum), which is preferred, or Item No. 304.14 (Metric) Subbase Course, Type 4 (< 2-inch maximum). This select granular base layer would be compacted to a minimum 95 percent of the maximum dry density by ASTM D 1557. The floor slabs in any lightly loaded areas are recommended to have a minimum four-inch thickness, while heavily loaded areas are recommended to have a minimum six-inch thickness or as determined by the design structural engineer. The floor slab reinforcement should be provided through placement of wire mesh or plastic fibers and is also as determined by the design structural engineer.

At the discretion of the design architect, a vapor barrier may be considered for use in the proposed structure. The use of a thin gravel cushion, as a capillary break, or a thin sand cushion over a vapor barrier that is placed beneath the concrete slab(s) are at the discretion of the design architect/engineer or as required by local code. Gradations of gravels that are satisfactory capillary breaks include 1 ¼-inch or ¾-inch crushed stone or aggregate per the ASTM D2321 Types IA, IB and II with less than 5 % fines. A number two crusher run stone may also be applicable, but the gradation and material property specifications must qualify.

At the assumed final site grade and based upon the thickness and character of the underlying natural soils, the subgrade modulus is recommended not to exceed 150 pounds per cubic inch (pci). A Poisson Ratio of 0.4 is recommended for design purposes. Isolation of the floor slabs from the footings-piers-columns and walls do appear to be warranted. Based upon the subgrade modulus and slab mechanical properties and thickness, the design structural engineer may accordingly adjust the granular aggregate base thickness.

Attachment: SP-2022-02 application 051922 (25490 : Sp-2022-02)

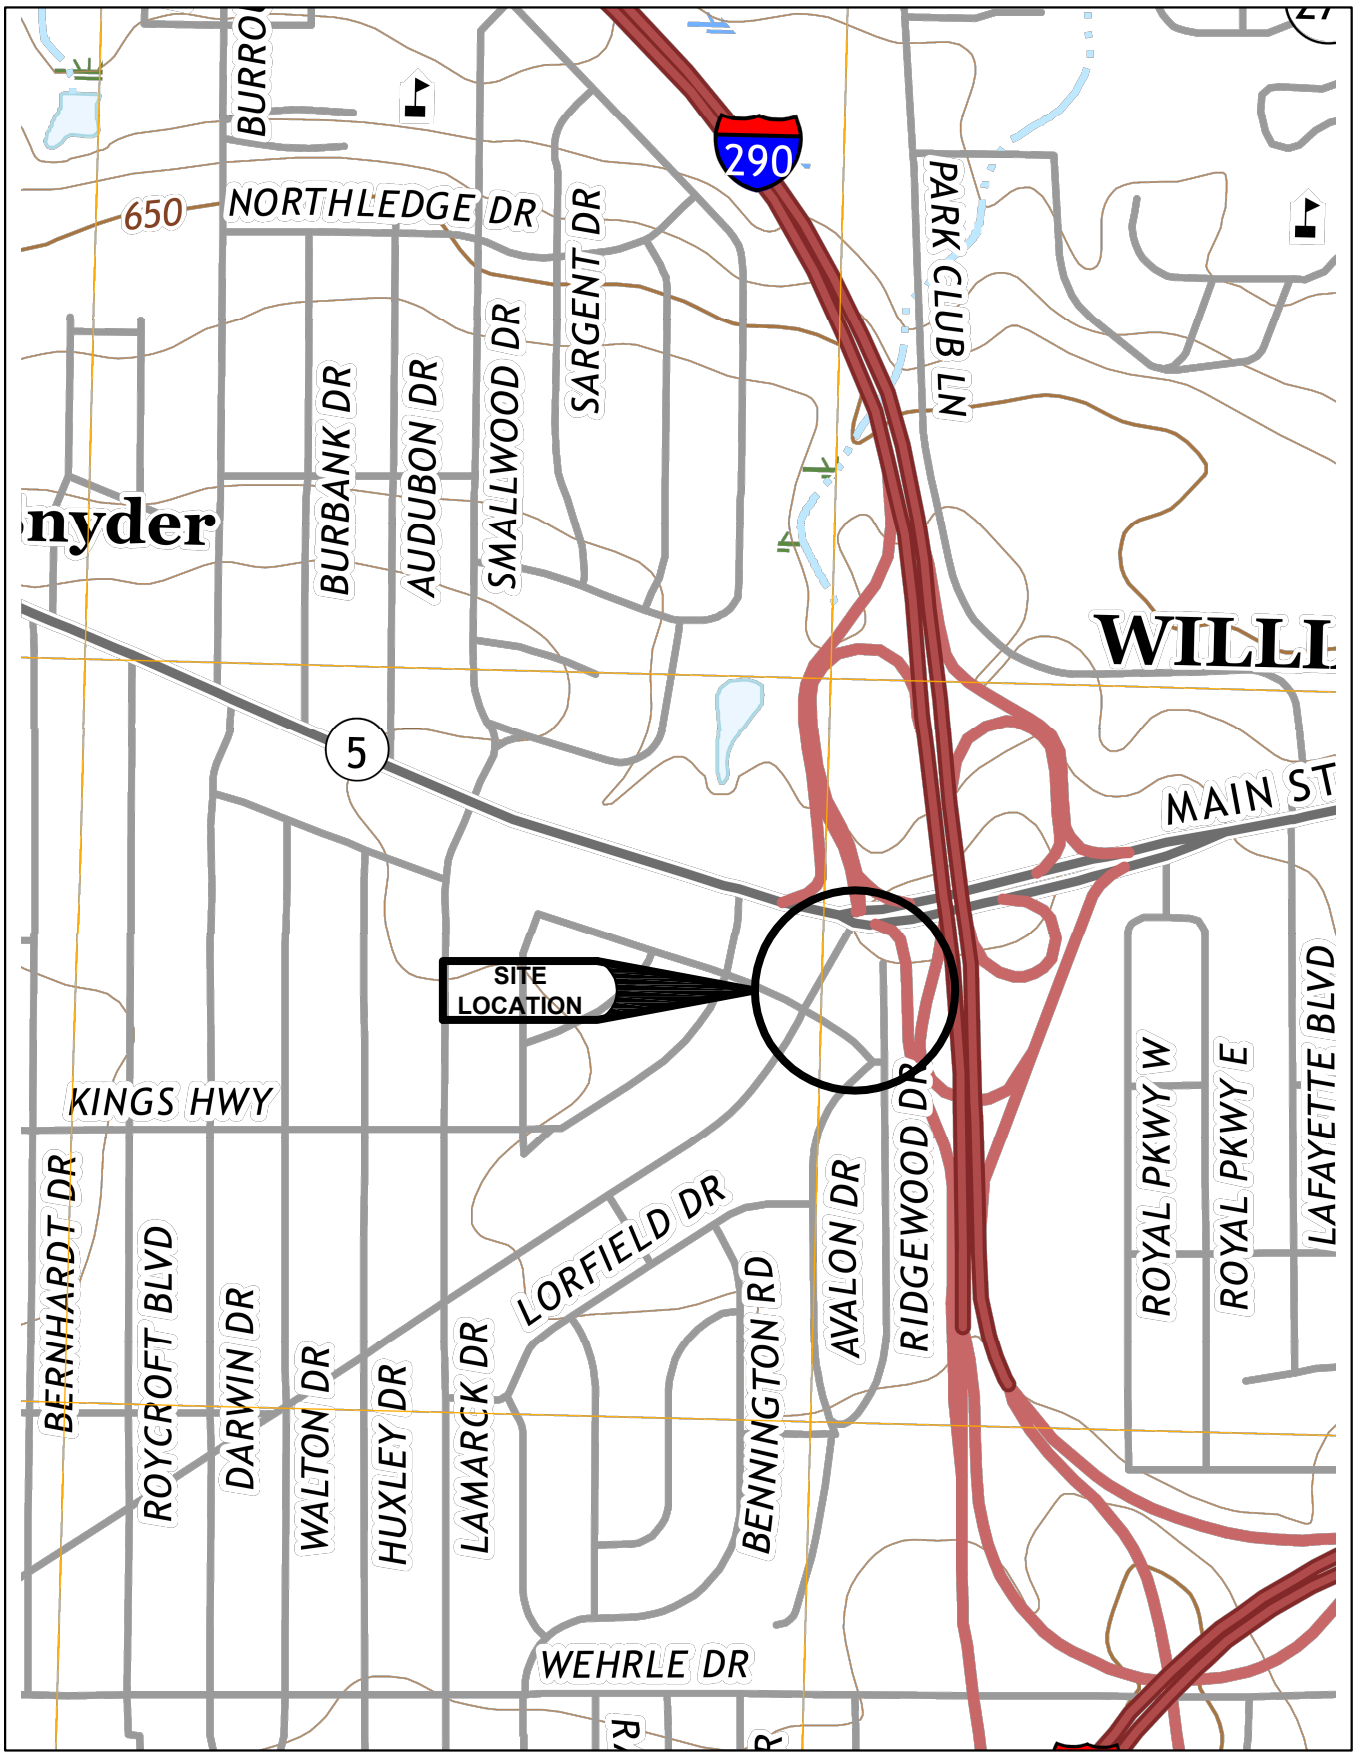
Exterior Concrete Slabs-On-Grade/Pad/Parking and Roadway Facilities: The characteristics of the cohesive natural glacial till, and the known frost penetration in Western New York require that specific attention is provided to the design and construction of paved roadway and parking areas. For new pavement sections, isolated pockets of surficial silty/cohesive/fine-grained soil/fill may be encountered and may be too soft and wet in the proposed parking and roadway areas. These types of soil/fill may be adequately conditioned (i.e., dried and blended) and compacted (i.e., minimum 90 percent compaction) to support necessary construction equipment and normal pavement section. Otherwise, the removal/undercutting of the silty/cohesive/fine-grained soil/fill to a firm, approved subgrade and subsequent placement and compaction of select or approved granular fill will be required in order to accommodate the recommended pavement sections.

For new pavement sections, it is recommended that the subgrade surface is adequately graded and/or underdrains are installed to prevent water accumulation. Above the approved subgrade surface (i.e., minimum 90 percent compaction), a minimum eight-inch thick select granular layer is recommended as the base course for lightly traveled roadway and parking areas (standard duty section). A geotextile filter and strength fabric (such as, Mirafi 600X or equal) on silty/cohesive/fine-grained soil subgrades and minimum 12-inch thick base course are recommended for all truck routes and heavily traveled roadways (heavy duty section). If “pumping” of the silty/cohesive/fine-grained soil subgrade occurs or is difficult to stabilize during construction, an increase in the base thickness to that of the heavy-duty section and/or a geotextile filter and strength fabric is recommended to be placed on the prepared and approved subgrade for the standard duty section. The NYS Department of Transportation (NYSDOT) specification numbers for typical aggregate subbase/base course components are Item No. 304.12 (Metric) Subbase Course, Type 2 (< 2-inch maximum size), which is preferred, or Item No. 304.14 (Metric) Subbase Course, Type 4 (< 2-inch maximum size). The granular aggregate base layer is recommended to be compacted to at least 95 percent of maximum dry density by ASTM D1557.

The thickness of top and binder course layers should be determined in accordance with AASHTO methods. In summary, the minimum recommended asphalt thicknesses for the heavy-duty section and standard duty section are three and one-half inches and three inches, respectively. The top and binder course layers are recommended to be designed and constructed in accordance with New York State Department of Transportation Standard Specification.

Attachment: SP-2022-02 application 051922 (25490 : Sp-2022-02)

Limitations, Field Inspections and Monitoring: This report is based on the preliminary information that is provided by project representatives and the subsurface conditions that were encountered at the test boring locations. Due to the nature of the investigation method, test pit excavation will provide a greater level of delineation of the subsurface soil/fill/rock conditions than can be defined by the test boring data alone. As detailed in Appendix F "Limitations", modification regarding proposed building/structure locations and other site developments can result in changes to provided recommendations. It is recommended that the geotechnical engineer be provided the opportunity to generally review the final detailed design and contract specifications. Required earthwork and foundation construction should be done under the supervision of experienced construction personnel and in a manner consistent with proven methods. All site work should be carefully monitored and tested by experienced geotechnical personnel to assure compliance with earthwork and foundation construction specifications.



Thank you for the opportunity to assist on this project. If questions should arise, please call the undersigned at your earliest convenience.

Very truly yours,
BARRON & ASSOCIATES, INC.
and

JOB No.: BORING No.:

PROJECT:

EXAMPLE

DRILLER:
SAMPLING METHODS:
DATE STARTED:
DATE COMPLETED:

TYPE OF DRILL RIG:
SIZE AND TYPE OF BIT:
SURFACE ELEVATION (ft.):
GROUNDWATER DEPTH (ft.):
(measured at completion unless indicated below)

Elevation/ Depth (feet)	Soil Symbols Sampler Symbols Field Test Data	Sample No. : Range	N-Value	% REC (RQD)	Soil and Rock Description / Remarks
100 — 0	1 1 1 2 / 6 8 11 14	S-1 : 0.0'- 2.0'	2	50	Dk. brown, soft, CLAY, some Silt, little f. Sand, tr. Gravel, tr. Roots, tr. Organic matter, mod. plastic, wet (CL)
		S-2 : 2.0'- 4.0'	19	50	Brown, m. dense f. SAND, some Silt, tr. Gravel, tr. Clay, tr. Roots, non-plastic, moist (SM)

Elevation/Depth: The depth column provides the vertical scale of the boring log in feet below ground surface.

Sample No. : Range: Disturbed samples are identified with “S” preceding the sample number. Undisturbed (Shelby-tube) samples are identified with “U” preceding the sample number. Rock core samples identified with “C” preceding the core run. The range of elevation/depth where the sample was taken is identified in one-tenth foot increments.

N-value: The Standard Penetration Test N-value, as specified by ASTM D1586, is defined as the number of blows required by a 140-pound hammer falling 30 inches, each blow, to drive a 2-in outside diameter split-spoon sampler 12 inches.

% REC (RQD): “Percent Recovery” is the length of samples recovered divided by the total length sampled. The result is numerically expressed as a percent. The Rock Quality Designation (RQD) is the total length of places >4 inches divided by the total length of core run.

Soil and Rock Description / Remarks: This column denotes the exact depth of recovery and general documentation of drilling efforts. Description and classification are based on visual inspection of samples and boring operations. The stratum lines shown on the boring logs are based upon interpretation and may not represent precise subsurface conditions. Water-level readings have been made in the drill holes at time under conditions stated on the boring logs. Fluctuations in the water level may occur due to other factors than those present the time measurement was taken. See attached sheet.

Soil and Rock Description / Remarks: Terminology Used for Soil Description

Density Description of Granular Soil

Number of Blows per ft., N	*Relative Density*
0 - 4	Very Loose
4 - 10	Loose
10 - 30	Medium
30 - 50	Dense
Over 50	Very Dense

Abbreviations Used in Soil Sample Classification

f - fine	v - very
m - medium	gr - gray
c - coarse	bn - brown
f/m - fine to medium	yel - yellow
f/c - fine to coarse	sl - slight
tr - trace	dk - dark

Consistency Description of Cohesive Soil

Number of Blows per ft., N	*Consistency*
Below 2	Very Soft
2 - 4	Soft
4 - 8	Medium
8 - 15	Stiff
15 - 30	Very Stiff
Over 30	Hard

Bedding

Parting	Less than 0.02 ft.
Band	0.02 - 0.2 ft.
Thin bed	0.2 - 0.5 ft.
Medium bed	0.5 - 1.0 ft.
Thick bed	1.0 - 2.0 ft.
Massive	Over 2.0 ft.

Grain Size

	Passing / Retained on
Boulder	LARGE / 12-in sieve
Cobble	12-in / 3-in sieve
Gravel	3-in sieve / No. 4 sieve
	No. 4 sieve / No. 10 sieve
Sand	No. 10 sieve / No. 40 sieve
	No. 40 sieve / No. 200 sieve
Silt	No. 200 sieve / 0.005 mm sieve
Clay	Smaller than 0.005 mm

Hardness

Very Soft or Plastic	Can be indented with thumb
Soft	Can be scratched with fingernail
Moderately Hard	Can be scratched with knife
Hard	Difficulty to scratch with knife
Very hard	Cannot be scratched with knife

Percentage Terminology Used in Soil Classification

Trace	0 - 10 %	Some	20 - 35 %
Little	10 - 20 %	And	35 - 50 %

Moisture

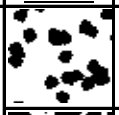
Dry	Absence of moisture, dusty, dry to the touch.
Moisture	Small quantity of moisture. Soil usually above groundwater level.
Wet	Moisture noticeable to the touch. Soil may be below groundwater level.
Saturated	Visible free water, usually soil is below groundwater level.

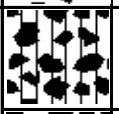
Plasticity

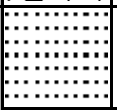
Non-plastic	An 1/8-in thread cannot be rolled at any water content.
Slight plasticity	Thread can be barley rolled.
Moderate plasticity	Thread is easy to roll and little time is required to reach the plastic limit (PL).
Plasticity	Considerable time is required to reach PL. Thread can be re-rolled several times after reaching the PL.

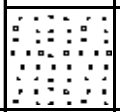
Crystallinity or Texture

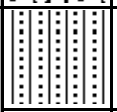
Dense	Crystals are to small they cannot be distinguished with the naked eye.
Very Fine Crystalline	Crystals barely discernable with the naked eye.
Crystalline	Crystals are medium size, up to 1/8-in diameter.
Very Coarsely Crystalline	Crystals larger than 1/8-in diameter.

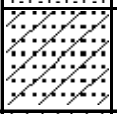


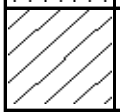


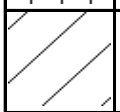


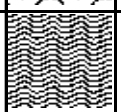


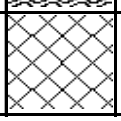












Voids

Porous	Smaller than pinhead. Their presence is indicated by the degree of absorbency.
Pitted	Pinhead size to 1/4 in. If thin walls separate the individuals pits, the core may be described as honeycomb.
Vug	1/4 inch to the diameter of the core. The upper limit will vary with core size.
Cavity	Larger than the diameter of the core.

Soil Classification Chart: Unified Soil Classification System (USCS)

Major Divisions			Pattern	USCS ID	Typical Descriptions
Coarse-Grained Soils: More than 50% of material larger than No. 200 sieve	**Gravels**: More than 50% of coarse fraction larger than No. 4 sieve	Clean Gravels (little or no fines)		GW	Well-graded gravels, gravel-sand mixtures, little or no fines
				GP	Poorly-graded gravels, gravel-sand mixtures, little or no fines
		Gravels with appreciable amounts of fines		GM	Silty gravels, gravel-sand-silt mixtures
				GC	Clayey gravels, gravel-sand-silt mixtures
	Sands: Less than 50% of coarse fraction larger than No. 4 sieve	Clean sands (little or no fines)		SW	Well-graded sands, gravelly sands, little or no fines
				SP	Poorly-graded sands, gravelly sands, little or no fines
		Sand with appreciable amount of fines		SM	Silty sands, silt-sand mixtures
				SC	Clayey sands, sand-clay mixtures
Fine-Grained Soils: Less than 50% of material larger than No. 200 sieve	**Silts and Clays, Low plasticity**: Liquid Limit < 50%			ML	Inorganic silts and very fine sands, rock flour, silty or clayey fine sands or clayey silts with slight plasticity
				CL	Inorganic clays of low to medium plasticity, gravely clays, sandy clays, silty clays, lean clays
				OL	Organic silts and organic silty clays of low plasticity
	Silts and Clays, High plasticity: Liquid Limit > 50%			MH	Inorganic silts, micaceous or diatomaceous fine sand or silty soils
				CH	Inorganic clays of high plasticity, fat clays
				OH	Organic clays of medium to high plasticity, organic silts
Highly Organic Soils				Pt	Peat, humus, swamp soils with organic contents
Miscellaneous Fill				FILL	Miscellaneous fill may belong in any division but is identified as FILL

APPENDIX D

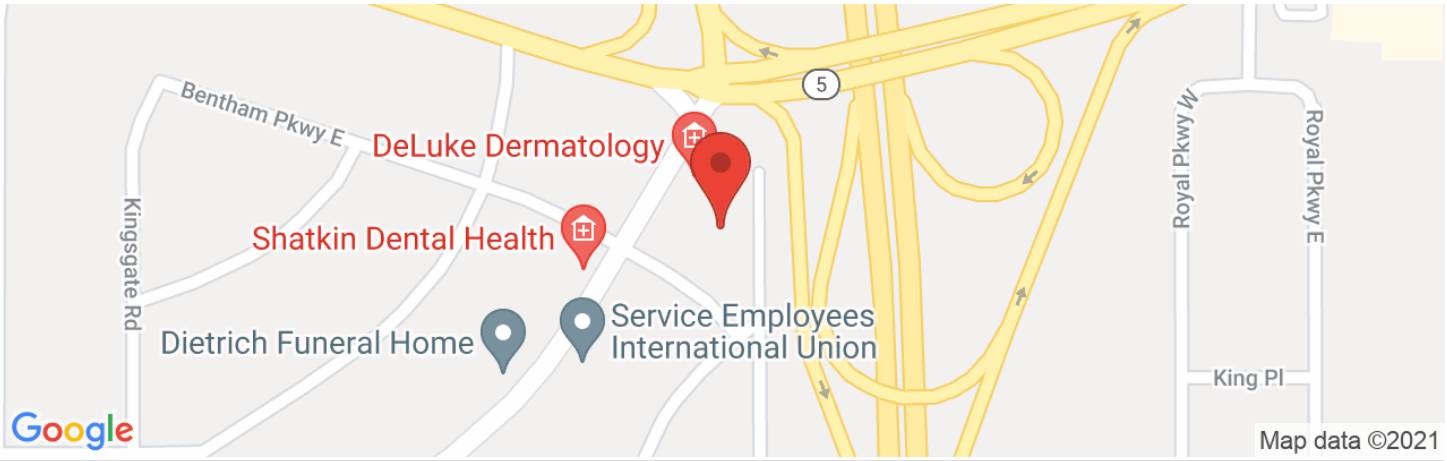
ENGINEERING COMPUTATIONS AND SCHEMATICS

Attachment: SP-2022-02 application 051922 (25490 : Sp-2022-02)

"PROFILE OF BORINGS"

Note: Bear footings on stable, natural, stiff (Nvalues > 10 blows) cohesive glacial till (CL-Till) or on an approved select granular fill section placed in loose lifts no greater than 12 inches thick and compacted to 95% of max. dry density as per ASTM D15574.

Exterior footings to bear minimum 42" below final grade (relative elevation 96.50 +/- ft.) or as specified by local code. Interior footings of heated structures to bear minimum 30" below finished floor (relative elevation 97.50 +/- ft.).



On Above Conditions: USE Q_{ALLOW} = 2,500

B&A JOB NO.: 21-599

DATE: 10/14/21

LATERAL EARTH PRESSURE ON GENERIC BLOCK FOUNDATIONS FOR SIGNS, FREE-STANDING RETAINING WALLS, OR BELOW GRADE/BASEMENT/TANK/POOL RETAINING WALLS (Less Than 20 Feet High)

a) Porous filter media, in contact with the basement/below grade foundation wall or retaining walls, protects and is in contact with a minimum 4 inch diameter perforated drainage pipes at the footing/base of the foundation/structural wall (exterior backfill side and interior basement side) and/or weep pipes through the wall, as needed and as applicable.

b) Where recommended, a geotextile filter fabric will protect the gravel filter media from the earth backfill. Overlap unsewn seams as per the manufacturer's recommendations.

c) Waterproof earth side of wall, as is customarily provided in practice.

d) Drainage pipes are connected to an appropriately designed collector pipe, conveyance, and/or sump pump system as is applicable for the intended purpose of the wall and as customarily provided/installed in practice.

e) For potential groundwater table conditions above the top of the basement slab-on-grade condition, install continuous waterstops (with no joints in stop) at wall and floor construction joints, as is customarily provided in practice. Interior intermediate drainage pipes beneath the slab, that are spaced on-center and in both directions, do appear to be needed.

f) Assume a uniformly graded, clean coarse sand or sandy gravel backfills:

* equivalent N-value in a dense state: $(N_1)_{60}$ = 40 blows/foot
* friction angle: ϕ' = 38 degrees {Teng, pg. 12}
* average in-place densities: moist - γ_m = 120 pcf
  saturated - γ_{sat} = 132 pcf submerged - $\gamma' = (\gamma_{sat} - \gamma_w)$ = 70 pcf

g) Assume at base of wall/footing, coefficient of friction against sliding (f_s) at base of wall (Refer to Teng, pg. 320-1):

f_s = tan (0.58 x ϕ') = 0.40 (AREA silty soil to silty coarse-grained soil)

h) Use equivalent fluid pressure design approach {Hough, pg. 249 and NAVFAC pg. 7-10-9}:

* at rest pressure coefficient - K_0 = 1 - sin (ϕ') = 0.38
* effective lateral pressure of soil - γ'_l = K_o x γ' = 26.6 pcf
* hydrostatic pressure - γ_w = 62.4 pcf
* equivalent fluid pressure with water level at the top of the grade at the wall - γ_{eo} = $\gamma'_l + \gamma_w$ = 89 pcf (say 90 pcf)
* equivalent fluid pressure with compaction induced lateral stress increase (W&F, pg 409) - γ_{eo} = 2 x K_o x γ_m = 91 pcf (say 90 pcf)
* active pressure case - K_a = [1 - sin (ϕ')] / [1 + sin (ϕ')] = 0.24
  γ_{ea} = K_a x γ_m = 29 pcf (say 30 pcf)
* passive pressure case - K_p = [1 + sin (ϕ')] / [1 - sin (ϕ')] = 4.2
  γ_{ep} = K_p x γ_m = 504 pcf (say 330 pcf with a F.S. = 1.5)

			Thoroughly Compacted ⇒⇒ Uniformly Graded & Clean Coarse Sand or Sandy Gravel Fill	Non-Plastic Silty Sand or Sandy Silt Fill	
USE:	Earth Pressure Coefficient	Static Active =	0.24	0.33	
		Static At-Rest =	0.76	1.00	
		Static Passive =	2.80	2.00	(with F.S. = 1.5)
		Static Passive =	4.20	3.00	(with F.S. = 1.0)
USE:	Equivalent Fluid Pressure	Static Active =	30 pcf		
		Static At-Rest =	90 pcf (for rigid walls)		
		Static Passive =	330 pcf (with F.S. = 1.5)	[500 pcf with (with F.S. = 1.0)]	

[For earthquakes, structural engineer may elect to use the above Static Passive case instead of the below Earthquake Lateral Load for Non-Yielding Wall movement into the soil backfill.]

USE: Simplified Model for Earthquake Lateral Load/Ft. Wall Length @ 0.6 H_{bw} above base. Loads for Non-Yielding Wall.

H_{bw} = Earth Height Behind Wall (feet)

Reduce load by 33% for Yielding Wall (active case) = (6.8 psf / foot) x H_{bw}^2 (NYS, S_{ds} = 0.25 g)

(γ_m = 120 pcf for S_{ds} value. Add to Static At Rest/ Active Pressure/Load for unsaturated backfill case) = (13.5 psf / foot) x H_{bw}^2 (NYS, S_{ds} = 0.50 g)

= (17.5 psf / foot) x H_{bw}^2 (NEern NYS, $S_{ds} \leq 0.65$ g)

[Above for Site Class C to E soils. Interpolate for other S_{ds} values.
Use 1.75 x values for walls on Class B/A rock or on rigid foundation base. (FEMA NEHRP Guidelines)]

Saturated/Liquified Soil During Earthquake = 132 pcf
(Equivalent Fluid Pressure. Add to inertial hydrodynamic pressure, not presented here.)

{For looser/denser backfills, adjust above pressures by the ratio = new density / 120 pcf or / 132 pcf (for saturated case)}

USE:	Coefficient of Friction Against Sliding (f_s)	= 0.45	(on compacted NYSDOT Item #304.12 or #304.14 gravels)
	(use lowest f_s with no underlying weaker layers)	= 0.35	(on compacted granular soil & non-plastic silt)
		= 0.20	(slab-on-grade on polyethylene on granular fill)
	[with a F.S. = 1.0]	= 0.60/0.50	(on clean, rough, & sound bedrock/smooth bedrock)
	Min. Factor of Safety Against Sliding	= 1.5	*[Rev.9-30-09]*

GENERAL EARTHWORK SPECIFICATIONS

1. GENERAL

1.1. SITE AND SUBSURFACE CONDITIONS

1.1.1. Overview

This specification is included as a courtesy to the clients of *Barron & Associates, PC* and addresses earthwork site preparation. Additions and modifications are necessary to create a job-specific specification. This specification may serve as a basis for the development for a technical specification under Division 31 (Earthwork) and Division 32 (Exterior Improvements).

1.1.2. Site Conditions

The site-specific conditions are described under separate cover or may be available from the OWNER.

1.1.3. Subsurface Conditions

The site-specific subsurface conditions are described under separate cover or may be available from the OWNER.

1.2. REFERENCES

1.2.1. American Standard for Testing and Measurement (ASTM)

- ASTM C136 Standard Test Method for Sieve Analysis of Fine and Coarse Aggregates
- ASTM D6938 Standard Test Methods for In-Place Density and Water Content of Soil and Soil-Aggregate by Nuclear Methods (Shallow Depth)
- ASTM D7928 Standard Test Method for Particle-Size Distribution (Gradation) of Fine-Grained Soils Using the Sedimentation (Hydrometer) Analysis
- ASTM D1140 Standard Test Methods for Determining the Amount of Material Finer than 75-µm (No. 200) Sieve in Soils by Washing
- ASTM D1557 Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Modified Effort (56,000 ft-lbf/ft^3 (2,700 kN-m/m^3))
- ASTM D2216 Standard Test Methods for Laboratory Determination of Water (Moisture) Content of Soil and Rock by Mass
- ASTM D2487 Standard Practice for Classification of Soils for Engineering Purposes (Unified Soil Classification System)

Attachment: SP-2022-02 application 051922 (25490 : Sp-2022-02)

- ASTM D4318 Standard Test Methods for Liquid Limit, Plastic Limit, and Plasticity Index of Soils
- ASTM D1883 Standard Test Method for California Bearing Ratio (CBR) of Laboratory-Compacted Soils

1.2.2. Other

- 2018 International Building Code (IBC)
- 2020 Building Code of New York State
- 2020 Residential Code of New York State
- 2021 MasterSpec

1.3. DEFINITIONS

1.3.1. Unacceptable Material

Soil material containing debris, wood, scrap material, vegetation, refuse, soft unsound particles, and other organic, frozen, deleterious, or objectionable materials. Contaminated soils shall be properly documented and removed or remediated on site. If necessary, remediation procedure will be defined by the OWNER.

1.3.2. Unsuitable Material

Brown, organic topsoil and underlying soft pockets of organic silt or wet, reworked silty clay.

1.3.3. Ordinary Fill

Friable soil containing no stone greater than two-thirds loose lift thickness and no unacceptable or unsuitable materials. In general, existing random fill is expected to be acceptable for reuse as ordinary fill given proper sorting, blending, drying, and controlled placement methods.

1.3.4. Granular Fill

Ordinary fill meeting the designation of ASTM D2487 classification of GW with a maximum of 10 percent by weight passing ASTM D1140, No. 200 sieve.

1.3.5. Select Granular Fill

Clean, uncoated soil which contains no unacceptable materials and conforms to the gradation requirements defined in Table A: Select Granular Fill.

Table A: Select Granular Fill

Sieve Size	Percent Finer by Weight
⅔ of the loose lift thickness	100
No. 10	30 - 95
No. 40	10 - 70
No. 200	0 - 15

Attachment: SP-2022-02 application 051922 (25490 : Sp-2022-02)

1.3.6. Sand and Gravel

Clean, hard, durable, uncoated particle of sand and gravel, free from lumps of clay, containing no unacceptable matter, and conforming to gradation requirements of Table B: Sand and Gravel.

Table B: Sand and Gravel	
Sieve Size	Percent Finer by Weight
*	100
No. 4	50 - 85
No. 10	
No. 40	10 - 35
No. 100	
No. 200	0 - 8

* Job-Specific. To be determined by the ENGINEER

1.3.7. Crushed Stone

Clean, durable, sharp-angled fragments of rock or crushed gravel stone of uniform quality, containing no unacceptable matter, free from coatings, and conforming to gradation requirements of Table C: Crushed Stone.

Table C: Crushed Stone		
Sieve Size	Percent Finer by Weight	
	¾-inch Stone	1 ¼-inch Stone
1 ½-inch		100
1 ¼-inch		85 - 100
1-inch	100	
¾-inch	90 - 100	10 - 40
⅝-inch		
½-inch	10 - 50	0 - 8
⅜-inch	0 - 20	
No. 4	0 - 5	

1.3.8. Flowable Fill

Also known as Controlled Low Strength Material – Controlled Density Fill (CLSM-CDF), this material is available under a variety of producer names (e.g., K-Krete©, M-Crete, Flash Fill©, Flowable Mortar, Unshrinkable Fill, etc.). This non-settling backfill mixture is most commonly used for its flowable characteristics, its support strength under traffic loads, and its removability at a later date. The material may be produced on-site or off-site. In either case, the producer

Attachment: SP-2022-02 application 051922 (25490 : Sp-2022-02)

of such materials and the product must meet certain certification criteria. Such information is beyond the scope of this specification and will be considered on a site-specific basis.

Flowable fill may be acceptable for use as a backfill for utility trenches of other low-lying areas which require a compacted granular fill. Its use and warranty of performance is left to the CONTRACTOR in such applications.

The use of flowable fill under load-bearing structural components in place of properly placed and compacted granular fill is NOT common and is questionable. The localized use of such material may have profound effects on the performance of a foundation system. Site-specific conditions and the extent of anticipated use of flowable fill must be examined by geotechnical engineer. Cost of such consultation shall be borne by the CONTRACTOR unless specifically directed by the OWNER to seek such consultation. Without such consultation, warranty of performance for such use is left to the CONTRACTOR.

1.4. SUBMITTALS

The following submittals shall be provided in accordance with approved submittals procedures.

(1) Fill Source: Provide name and source locations of fill material.

(2) Field Test Reports: Field tests will be performed by OWNER's Representative as needed. CONTRACTOR may be required to perform such tests on proposed off-site fill materials.

(a) Fill material grain size analyses per ASTM C136, D7928, D1140, D2487

(b) Moisture/Density test results per ASTM D2216

(c) Liquid limit, plastic limit, and plasticity index per ASTM D4318

(d) Compaction/Density test results per ASTM D6938 and D1557

(3) Sample: Geotextile fabric

2. PRODUCTS

Geotextile Fabric: Mirafi 600X or equal. (Also referred to as synthetic fabric).

3. EXECUTION

3.1. PROTECTION

3.1.1. General

Manner of excavation shall minimize disturbance of underlying natural ground. If deemed necessary by the Engineer, alter construction procedures to reduce subgrade disturbance.

Attachment: SP-2022-02 application 051922 (25490 : Sp-2022-02)

Excavate areas which have been excessively disturbed to firm ground and backfill with properly compacted granular fill.

3.1.2. Roads and Walks

Keep roads and walks free of dirt and debris at all times.

3.1.3. Trees, Shrubs, and Existing Facilities

Protect from any damage all vegetation and facilities identified to remain.

3.1.4. Utility Lines

Locate all utilities within the area of disturbance prior to the start of work. Show locations on initial plans. Protect utility lines from damage. Notify the ENGINEER immediately of damage to or an encounter with an unknown utility. Damage to utility lines are to be repaired by the CONTRACTOR at no additional cost. The CONTRACTOR shall have underground utility owners stake out utility locations prior to the start of clearing and excavation operations.

3.2. VERIFICATION OF CONDITIONS / PROOF-ROLLING

Prior to placement of the initial layer of fill over the natural ground, proof-roll the exposed natural ground above the groundwater table elevation by making two passes with a fully-loaded ten-wheel truck. Excavate unstable areas detected by this process and replace with compacted granular fill.

3.3. PREPARATION

3.3.1. Surface Preparation

Within the site limits indicated on the drawings, excavate all unsuitable material to firm natural ground in the manner specified herein. Follow a construction procedure which permits visual identification of firm natural ground. In the even that groundwater is encountered, the ENGINEER may require that the size of the open excavation be limited to that which can be handled by open pumping to allow visual inspection of the excavation bottom and the performance of backfill operations to be conducted in a dry state.

Excavation of unsuitable material shall be limited to the greater of the following:

- A distance of 5 feet beyond building lines or
- The area defined by a one-horizontal to one-vertical line sloping down from the outside bottom edge of exterior footings to firm natural ground.

Attachment: SP-2022-02 application 051922 (25490 : Sp-2022-02)

3.4. PLACEMENT AND COMPACTION

3.4.1. General

Place fill in accordance with Table D: Compaction Alternatives. These alternatives are provided as minimum compaction standards only and in no way relieve the CONTRACTOR of his obligation to achieve any specified degree of compaction by whatever means may be necessary.

Grade to provide positive drainage and a smooth surface which will readily shed water. To the extent practicable, compact each layer to the specified density on the same day placed. Place fill in horizontal layers. Where horizontal layers meet a natural slope, key layer into slope by cutting a bench.

Fill that is too wet for proper compaction: Disc, harrow, or otherwise dry to proper moisture content for compaction to the required density.

Fill that is too dry for proper compaction: Uniformly apply water over the surface of the loose layer in sufficient quantity to allow compaction to the required density.

Table D: Compaction Alternatives

Compaction Method	Maximum Stone Size	Maximum Loose Lift Thickness (inches)		Maximum Number of Passes	
		Below Structure and Pavements	Less-Critical Areas	Below Structure and Pavements	Less-Critical Areas
Hand operated vibratory plate of light roller in confined areas.	3	4	4	4	4
Hand operated vibratory drum rollers weighing at least 1,000 pounds in confined areas.	4	6	8	4	4
Loaded 10-wheel truck or D-8 crawler.	6	10	12	4	2
Light vibratory drum roller; Min. weight at drum 8,000lbs; Min. dynamic force 10,000lbs.	8	12	12	6	2
Minimum vibratory drum; Min. weight at drum 10,000lbs; Min. dynamic force 20,000lbs.	8	18	18	6	4

Attachment: SP-2022-02 application 051922 (25490 : Sp-2022-02)

3.4.2. Dewatering

Provide adequate pumping and drainage facilities to keep excavated areas sufficiently dry of groundwater and surface run-off. Dewatering shall avoid adversely affection construction procedures or causing excessive disturbance of underlying natural ground. Drain all pumped water in such a manner as to avoid damage to adjacent property.

If requested by the ENGINEER, place a 6-inch to 12-inch layer of sand and gravel or crushed stone over the natural underlying soil to stabilize area which have been disturbed due to groundwater seepage pressures and to expedite dewatering operations. Particular attention shall be given areas under proposed foundations.

3.5. FIELD QUALITY CONTROL

3.5.1. Compaction Requirements

Allow the ENGINEER sufficient time to make necessary observations and tests. Base the degree of compaction on maximum dry density as determined by ASTM D1557. The minimum degree of compaction for placed fill shall be as indicated in Table E: Compaction Requirements.

Table E: Compaction Requirements

Area	Minimum Degree of Compaction (%)
Below foundation.	95
Pavement and building subbase and base courses.	95
Below building slab base course and above bottom of foundation.	92
Below pavement subbase and base courses.	90
Trench backfill outside of building.	90
Trench backfill inside of building.	Refer to one of the above- listed categories
Ordinary fill within 5 feet of grade.	90
Vegetated areas below 5 feet of grade.	85

3.5.2. Testing

Site work should be monitored and tested by geotechnical ENGINEER or his representative and in accordance with requirements of the design team to assure compliance with earthwork and foundation construction specifications.

Attachment: SP-2022-02 application 051922 (25490 : Sp-2022-02)

The owner will retain a geotechnical ENGINEER or his representative to perform on-site observations and testing during this phase of construction operations. The geotechnical ENGINEER or his representative will:

- Observe excavation and dewatering of building and controlled fill areas;
- Observe backfill and compaction within building and controlled fill areas;
- Laboratory test and analyze fill material; and
- Observe construction – and performing water content, gradation, and compaction tests.

On a timely basis, the CONTRACTOR will receive copies of test results submitted to the OWNER. In addition, during construction the geotechnical ENGINEER will advise the OWNER and CONTRACTOR in writing of conditions which fail to conform to the Contract Documents. The CONTRACTOR shall take immediate action to remedy indicated deficiencies.

The geotechnical ENGINEER or his representative will not supervise or direct the actual work of the CONTRACTOR or employees and representatives of the CONTRACTOR. The presence of, observations by, and testing performed by the geotechnical ENGINEER or his representatives shall not excuse the CONTRACTOR from defects discovered in the work.

APPENDIX F

LIMITATIONS

LIMITATIONS

1. This report is based on the data that was obtained from the subsurface explorations and on the design of the proposed interior mezzanine and exterior canopy as submitted to the geotechnical engineer. A geotechnical engineer, who is experienced in foundation construction and earthwork, should be engaged to review the final design and specifications in order to determine whether any change in concept may have any effect on the validity of the conclusions presented herein, and whether these conclusions have, in fact, been implemented in the design and specifications.

2. The subsurface conditions, including thickness, between the exploration locations are approximate and simplified representations of the strata and transitions. There is the possibility that variations in soil and rock conditions and boundaries will be encountered during construction. In order to permit correlation between the exploratory soil data and the actual soil conditions encountered during construction and so as to assess conformance with the plans and specifications as originally contemplated, it is recommended that a geotechnical engineer, who is experienced in foundation construction and earthwork monitoring, should be retained to perform continuous construction review during the site preparation and foundation construction operations.

3. The subsurface exploration logs and subsurface conditions may aid in estimating material quality and quantities, such as topsoil/organic matter, fills, natural soils, and rock, but are not to be relied upon as the exclusive means for bid preparation purposes. It is the responsibility of the contractor to perform any additional site examinations and explorations and to prepare an accurate bid.

4. Disclaimers:

   a. In the event that any changes in the nature, design or location of the structure are planned, the conclusions that are contained in this report shall not be considered valid unless the changes are reviewed and the conclusions of this report are modified or verified in writing.

   b. The geotechnical engineering report has been prepared for this project by Barron & Associates, P.C. This report is for assistance in design only and is not a sufficient basis on which to prepare an accurate bid.

   c. This report has been prepared for the exclusive use of Dr. Todd Shatkin (Shatkin School of Dentistry), and their designated design representatives, for specific application to the construction of an interior mezzanine and exterior drop off canopy at 2525 Kensington Avenue, in the Town of Amherst, New York and in accordance with generally accepted geotechnical engineering practice. No other warranty, expressed or implied, is made.

RE: Proposed Shatkin School of Dentistry, Town of Amherst, NY
Shared Parking Demand Assessment Letter

Dear Mr. Ulatowski:

This technical letter provides a Shared Parking Demand Assessment related to the proposed project located at 2525 Kensington Avenue in the Town of Amherst, NY in connection with a request for the approval of an Alternate Parking Study per Section 7-1-7A of the Zoning Code.

When evaluating the parking supply needs for the proposed project, our firm projected the parking demand considering shared parking (mixed-use) principles using nationally accepted methodology developed, in part, by the Urban Land Institute (ULI), Institute of Transportation Engineers (ITE), International Council of Shopping Centers (ICSC), and National Parking Association (NPA). Specifically, the assessment includes an estimation of future parking demands for the proposed project using national standards for similar developments, as documented by the ITE Parking Generation Manual (5th Edition).

This evaluation then provides a comparison to Town requirements, as set forth within Section 7-1-6A of the Town of Amherst's Zoning Code.

All supporting materials are included as an attachment to this letter.

PROJECT DESCRIPTION

Currently, the ±29,350 square foot (SF) building is owned and occupied by Phillips Brothers Supply, a business that has been in operation for over 30 years. Under the proposed development Phillips Brothers Supply will have ±5,736 SF of retail space and ±12,019 SF of warehouse space.

Shatkin Dental Health is developing the remaining ±12,253 SF which includes a ±4,400 SF of a new mezzanine that will be constructed within part of the existing warehouse space for a total of ±16,653 SF. The Shatkin Dental Health space will be used for a new dental (±7,853 SF) school associated with Daemen College and an out-patient rehab center also associated with Daemen College (±4,000 SF).

The project will provide 75 surface parking spaces.

Relative to the proposed uses, the following information was obtained from the applicant:

Daemen College Dental School (8-hour day)
Employees: 8 general staff and 10 teaching staff.

Attachment: SP-2022-02 application 051922 (25490 : Sp-2022-02)

Students: 40 students for 8 hours each day. Each student will have four patients total throughout the day. (Many students will be bussed from the main campus.)

Daemen College IMIT (9-hour day)
Staff: 12 general staff, 12 students.
Visitors: Six patients per hour plus allow for an accompanying family member with each patient.

PARKING REQUIREMENTS IN THE TOWN OF AMHERST ZONING CODE

Section 7-1-6A of the Zoning Code sets forth the off-street parking requirements for different categories of land uses. Strict application of the parking requirements per Section 7-1-6A of the Zoning Code is depicted in **Table 1**.

TABLE 1: TOWN CODE PARKING REQUIREMENTS

USE TYPE	REQUIRED PARKING RATIO	SIZE	TOTAL REQUIRED PARKING SPACES
Retail Sales, >2,000 SF and <25,000 SF	5.5 per 1,000 SF of net floor area	±4,302 SF	24
Warehouse	1 per 1,000 SF of gross floor area	±12,019 SF	12
Medical Office	1 per 150 SF of net floor area	±8,889 SF	60
Total Parking Spaces Required			**96**

Notes:
1. Net Floor Area = For a multistory, multiple tenant building — 75 percent of gross floor area.

Strict application of the off-street parking standards in the Zoning Code results in a parking requirement of 96 spaces, as depicted in **Table 1**. The total number of parking spaces to be provided is 75 spaces. Thus, there is a deficit of 21 parking spaces per strict application of Section 7-1-6A of the Zoning Code.

SHARED PARKING PRINCIPLES

Shared parking studies are conducted to establish the total number of spaces necessary by mixed-use developments to effectively serve expected parking demands. The shared parking concept builds upon the premise that land uses in a mixed-use development often do not share the same peak demand period, so spaces can be shared between the different land uses during different peak periods. Each land use typically has a peak demand period where it would occupy the maximum number of spaces that the use requires and an off-peak period where a lesser percentage of the maximum spaces would be occupied; be it by time of day, day of week, or even month of the year. This allows for the project to provide fewer spaces than would be required if the land uses on a project site were to be treated separately with individual parking demands. The concept of shared parking is well recognized within the real estate and regulatory community and is proven to work.

SHARED PARKING METHODOLOGY

To estimate the number of parking spaces required for the proposed project, this assessment used ULI and ITE methodology for shared parking. This methodology is utilized by transportation engineers and planners when evaluating the parking demand for a mixed-use project. The ULI Shared Parking 3rd Edition includes state-of-the-art practice methodologies for determining parking demand in these types of projects. Accompanying the publication is an interactive Shared Parking Calculation Model (Model) that is used to estimate the shared parking demand. However, given that the Model does not

Attachment: SP-2022-02 application 051922 (25490 : Sp-2022-02)

have a warehouse land use, parking accumulation percentages for each land use were obtained from the ITE Parking Generation Manual.

The peak hour demand is projected to occur at 10:00 AM on a typical weekday. The projected peak hour demand for the mixed-use project (i.e., the busiest hour of the busiest weekday) is ±77 spaces. Parking demand accumulations are presented in **Table 2**.

TABLE 2: SHARED PARKING DEMAND PROJECTIONS

LAND USE	SIZE	PARKING DEMAND	
		UNADJUSTED DEMAND	**SHARED DEMAND**
Warehouse (ITE LUC 150)	±12,019 SF	5	**4**
Hardware Supplies (ITE LUC 862)	±5,736 SF	19	**19**
Medical Office (ITE LUC 720)	±15,995 SF	54	**54**
Total Parking Spaces		78	**77**
Shared Parking Reduction		**1.28%**	

Note:
1. ITE LUC = ITE Land Use Code

When considering the site's 75 total parking spaces, there is a projected deficit of two parking spaces. However, it should be noted that the parking demands of the proposed land use may vary given that students may campus busing instead of private vehicles.

Attachment: SP-2022-02 application 051922 (25490 : Sp-2022-02)

CONCLUSIONS AND RECOMMENDATIONS

This detailed analysis assessed the projected shared parking demands associated with the proposed mixed-use project. The following summarizes the findings of this assessment:

1. The proposed project consists of retail hardware supply, warehouse, and medical office space.

2. The proposed project will provide 75 total parking spaces.

3. Strict application of the unshared off-street parking standards in the Zoning Code results in a parking requirement of 96 spaces.

4. The peak hour demand is projected to occur at 10:00 AM on a typical weekday. The projected peak hour demand for the mixed-use project (i.e., the busiest hour of the busiest weekday) is ±77 spaces.

5. When considering the site's 75 total parking spaces, there is a projected deficit of two parking spaces. However, it should be noted that the parking demands of the proposed land use may vary given that students may campus busing instead of private vehicles.

6. Transportation Demand Management (TDM) strategies may be considered to reduce the parking demands during the peak period. They include, but are not limited to:

    a. Carpooling
    b. Off-site parking agreements
    c. Promoting non-motorized travel (e.g., install bike racks, NFTA transit)

If you have any questions or require additional information, please do not hesitate to contact our office.

Sincerely,
SRF Associates, D.P.C.

David Kruse, AICP, PTP
Senior Transportation Planner

N

NOTES:

1. CONTRACTOR SHALL TAKE ALL REASONABLE MEASURES TO PROTECT EXISTING TREES AND PLANTINGS INDICATED TO REMAIN FROM ALL TYPES OF ROOT, TRUNK AND LIMB DAMAGE DURING DEMOLITION AND CONSTRUCTION.
2. EXISTING PLANTED AREAS SHALL REMAIN UNLESS OTHERWISE NOTED.
3. ALL DISTURBED AREAS SHALL RECEIVE 4" MIN. TOPSOIL AND GRASS SEED UNLESS OTHERWISE NOTED.
4. TREE AND SHRUB BEDS SHALL BE COVERED WITH 3" OF HARDWOOD MULCH. ALL ROOTS AND STONES OVER 1 1/2" SHALL BE REMOVED PRIOR TO SEEDING/ PLANTING.
5. ALL STREET AND ISLAND TREES SHALL HAVE FIRST BRANCHING at 6–FOOT MIN.
6. IF A CONFLICT EXISTS BETWEEN THE PLAN AND PLANTING SCHEDULE, THE PLAN SHALL GOVERN.
7. REFER TO ARCHITECTURAL DRAWINGS FOR ALL BUILDING DIMENSIONS, FEATURES & UTILITY CONNECTIONS
8. REFER TO GRADING AND UTILITY PLAN(S) FOR ADDITIONAL INFORMATION NOT SHOWN HEREIN.

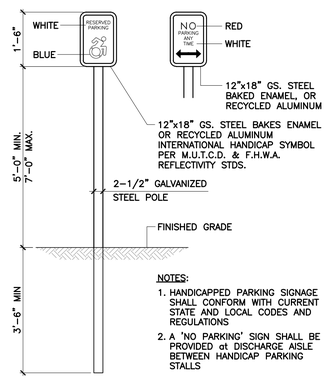
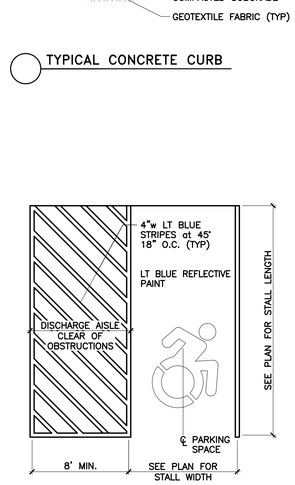
GENERAL SITE NOTES

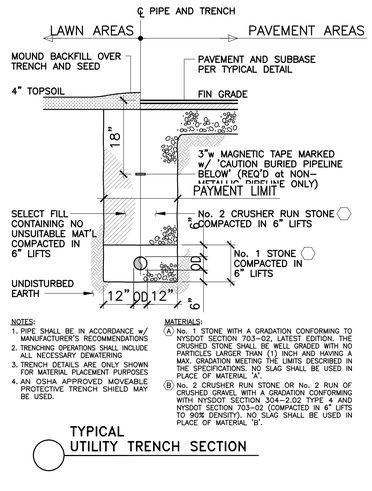


1. ALL WATERLINE, SANITARY SEWER AND OTHER WORK WITHIN THE R.O.W. SHALL BE IN ACCORDANCE WITH THE LATEST RULES AND REGULATIONS OF THE TOWN OF AMHERST, THE ERIE COUNTY WATER AUTHORITY AND NYSDOT SPECIFICATIONS.
2. INSTALL ALL MATERIALS TO THE MANUFACTURER'S RECOMMENDATIONS AND BEST STANDARDS OF THE TRADE INVOLVED.
3. SUBSTITUTIONS SHALL BE MADE ONLY WITH OWNER APPROVAL AND SHALL BE EQUIVALENT QUALITY TO WHAT IS SPECIFIED.
4. WORK SHALL BE COMPLETED IN STRICT ACCORDANCE WITH ALL LOCAL CODES AND OSHA SAFETY RULES AND REGULATIONS.
5. VERIFY ALL EXISTING CONDITIONS AND DIMENSIONS AT THE SITE. NOTIFY OWNER OF ANY DISCREPANCIES IN CONDITIONS SHOWN ON THE DRAWINGS PRIOR TO PROCEEDING WITH THE WORK.
6. CONTRACTORS SHALL BE RESPONSIBLE FOR THE PROTECTION OF ANY EXISTING STRUCTURES TO REMAIN AND ANY FINISH MATERIAL INSTALLED WHILE WORKING ON OTHER COMPONENTS.
7. CONTRACTOR SHALL KEEP THE JOB SITE FREE OF DEBRIS AND MAKE FINAL CLEANUP TO THE SATISFACTION OF THE OWNER.
8. CONTRACTOR SHALL ASCERTAIN THE LOCATION OF ALL UTILITIES PRIOR TO CONSTRUCTION SO THAT THIS WORK DOES NOT DISTURB EXISTING LINES AND/OR INSTALLATIONS. COORDINATE ALL WORK WITH THE APPLICABLE UTILITY COMPANIES.
9. CONTRACTOR SHALL OBTAIN AND PAY FOR ALL PERMITS NECESSARY TO PERFORM THE WORK.
10. DURING CONSTRUCTION, THE CONTRACTOR SHALL MAINTAIN CONTROL OF EROSION FROM THE SITE. SEE PROJECT EROSION CONTROL PLAN AND SWPPP MANUAL.
11. REFER TO ARCHITECTURAL DRAWINGS FOR EXACT BUILDING DIMENSIONS, FEATURES AND UTILITY CONNECTIONS.
12. ALL UTILITY TRENCHES UNDER PAVEMENT, CURBS, SIDEWALKS, AND DRIVEWAYS SHALL BE FULLY BACKFILLED WITH No 2 CRUSHER RUN STONE AND PROPERLY COMPACTED TO AVOID SETTLEMENT.
13. CONTRACTOR SHALL REPLACE IN KIND ANY EXISTING IMPROVEMENTS TO REMAIN THAT ARE DAMAGED DURING CONSTRUCTION. THIS SHALL INCLUDE, BUT NOT BE LIMITED TO, CURBS, ROAD PAVEMENTS, SIDEWALKS, AND EXISTING UTILITIES.

TYPICAL CONCRETE CURB

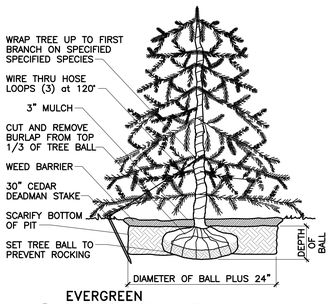


HANDICAP ACCESS RAMP

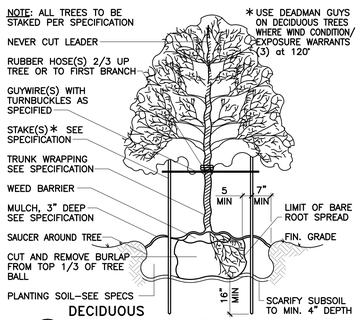


NOTES:
1. HANDICAPPED PARKING SIGNAGE SHALL CONFORM WITH CURRENT STATE AND LOCAL CODES AND REGULATIONS
2. A 'NO PARKING' SIGN SHALL BE PROVIDED at DISCHARGE AISLE BETWEEN HANDICAP PARKING STALLS

HANDICAPPED PARKING SIGNAGE
LOCATED IN LAWN AREAS



HANDICAP SYMBOL DETAIL



NOTES:
1. PIPE SHALL BE IN ACCORDANCE w/ MANUFACTURER'S RECOMMENDATIONS
2. TRENCHING OPERATIONS SHALL INCLUDE ALL NECESSARY DEWATERING.
3. TRENCH DETAILS ARE ONLY SHOWN FOR MATERIAL PLACEMENT PURPOSES
4. AN OSHA APPROVED MOVEABLE PROTECTIVE TRENCH SHIELD MAY BE USED.

MATERIALS:
(A) No. 1 STONE WITH A GRADATION CONFORMING TO NYSDOT SECTION 703-02, LATEST EDITION. THE CRUSHED STONE SHALL BE WELL GRADED WITH NO PARTICLES LARGER THAN (1) INCH AND HAVING A MAX. GRADATION MEETING THE LIMITS DESCRIBED IN THE SPECIFICATIONS. NO SLAG SHALL BE USED IN PLACE OF MATERIAL 'A'.
(B) No. 2 CRUSHER RUN STONE OR No. 2 RUN OF CRUSHED GRAVEL WITH A GRADATION CONFORMING WITH NYSDOT SECTION 304-2.02 TYPE 4 AND NYSDOT SECTION 703-02 (COMPACTED IN 6" LIFTS TO 95% DENSITY). NO SLAG SHALL BE USED IN PLACE OF MATERIAL 'B'.

Standard Features

- Kohler Co. provides one-source responsibility for the generating system and accessories.
- The generator set and its components are prototype-tested, factory-built, and production-tested.
- The 60 Hz generator set offers a UL 2200 listing.
- The generator set accepts rated load in one step.
- The 60 Hz generator set meets NFPA 110, Level 1, when equipped with the necessary accessories and installed per NFPA standards.
- A one-year limited warranty covers all generator set systems and components. Two- and five-year extended limited warranties are also available.
- Alternator features:
  - The unique Fast-Response® X excitation system delivers excellent voltage response and short-circuit capability using a rare-earth, permanent magnet (PM)-excited alternator.
    (4S13X alternator)
  - The unique Fast-Response® II excitation system delivers excellent voltage response and short-circuit capability using a permanent magnet (PM)-excited alternator.
    (4UA9 and 4UA13 alternators)
  - The brushless, rotating-field alternator has broadrange reconnectability.
- Other features:
  - Kohler designed controllers for one-source system integration and remote communication. See Controllers on page 3.
  - The low coolant level shutdown prevents overheating (standard on radiator models only).
  - Integral vibration isolation eliminates the need for under-unit vibration spring isolators.
- Multiple circuit breaker configurations.
- Mount up to three circuit breakers to allow circuit protection of selected priority loads.

RATINGS: All three-phase units are rated at 0.8 power factor. All single-phase units are rated at 1.0 power factor. *Standby Ratings:* The standby rating is applicable to varying loads for the duration of a power outage. There is no overload capability for this rating. *Prime Power Ratings:* At varying load, the number of generator set operating hours is unlimited. A 10% overload capacity is available for one hour in twelve. Ratings are in accordance with ISO-8528-1 and ISO-3046-1. For limited running time and continuous ratings, consult the factory. Obtain technical information bulletin (TIB-101) for ratings guidelines, complete ratings definitions, and site condition derates. The generator set manufacturer reserves the right to change the design or specifications without notice and without any obligation or liability whatsoever.

Attachment: SP-2022-02 drawings 051922 (25490 : Sp-2022-02)

Alternator Specifications

Specifications	Alternator
Manufacturer	Kohler
Type	4-Pole, Rotating-Field
Exciter type	Brushless, Permanent-Magnet
Leads: quantity, type	
4SX, 4UA	12, Reconnectable
Voltage regulator	Solid State, Volts/Hz
Insulation:	NEMA MG1
Material	Class H
Temperature rise	130°C, Standby
Bearing: quantity, type	1, Sealed
Coupling	Flexible Disc
Amortisseur windings	Full
Voltage regulation, no-load to full-load	Controller Dependent
One-step load acceptance	100% of Rating
Unbalanced load capability	100% of Rated Standby Current

- NEMA MG1, IEEE, and ANSI standards compliance for temperature rise and motor starting.
- Sustained short-circuit current of up to 300% of the rated current for up to 10 seconds.
- Sustained short-circuit current enabling downstream circuit breakers to trip without collapsing the alternator field.
- Self-ventilated and dripproof construction.
- Windings are vacuum-impregnated with epoxy varnish for dependability and long life.
- Superior voltage waveform from a two-thirds pitch stator and skewed rotor.

Specifications		Alternator
Peak motor starting kVA:		(35% dip for voltages below)
480 V	4S13X (12 lead)	570
480 V	4UA9 (12 lead)	700
480 V	4UA13 (12 lead)	960

Application Data

Engine

Engine Specifications	
Manufacturer	John Deere
Engine model	6068HFG85A
Engine type	4-Cycle, Turbocharged, Charge Air-Cooled
Cylinder arrangement	6 Inline
Displacement, L (cu. in.)	6.8 (415)
Bore and stroke, mm (in.)	106 x 127 (4.19 x 5.00)
Compression ratio	17.0:1
Piston speed, m/min. (ft./min.)	457 (1500)
Main bearings: quantity, type	7, Replaceable Insert
Rated rpm	1800
Max. power at rated rpm, kWm (BHP)	235 (315)
Cylinder head material	Cast Iron
Crankshaft material	Forged Steel
Valve material:	
Intake	Chromium-Silicon Steel
Exhaust	Stainless Steel
Governor: type, make/model	JDEC Electronic L14 Denso HP3
Frequency regulation, no-load to full-load	Isochronous
Frequency regulation, steady state	±0.25%
Frequency	Fixed
Air cleaner type, all models	Dry

Exhaust

Exhaust System	
Exhaust manifold type	Dry
Exhaust flow at rated kW, m^3/min. (cfm)	42.8 (1510)
Exhaust temperature at rated kW, dry exhaust, °C (°F)	527 (980)
Maximum allowable back pressure, kPa (in. Hg)	Min. 4 (1.2) Max. 10 (3.0)
Exhaust outlet size at engine hookup, mm (in.)	98 (3.86)

Engine Electrical

Engine Electrical System	
Battery charging alternator:	24 Volt
Ground (negative/positive)	Negative
Volts (DC)	24
Ampere rating	45
Starter motor rated voltage (DC)	24
Battery, recommended cold cranking amps (CCA):	
Quantity, CCA rating each	Two, 925
Battery voltage (DC)	12

Fuel

Fuel System	
Fuel supply line, min. ID, mm (in.)	11.0 (0.44)
Fuel return line, min. ID, mm (in.)	6.0 (0.25)
Max. lift, fuel pump: type, m (ft.)	Mechanical, 1.8 (6.0)
Max. fuel flow, Lph (gph)	92.7 (24.5)
Max. return line restriction, kPa (in. Hg)	20 (5.9)
Fuel prime pump	Manual
Fuel filter	
Primary	30 Microns
Secondary	2 Microns @ 98% Efficiency
Water Separator	Yes
Recommended fuel	#2 Diesel

Lubrication

Lubricating System	
Type	Full Pressure
Oil pan capacity, L (qt.) §	32.5 (34.4)
Oil pan capacity with filter, L (qt.) §	33.4 (35.3)
Oil filter: quantity, type §	1, Cartridge
Oil cooler	Water-Cooled

§ Kohler recommends the use of Kohler Genuine oil and filters.

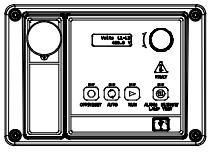
Attachment: SP-2022-02 drawings 051922 (25490 : Sp-2022-02)

Application Data

Cooling

Radiator System	
Ambient temperature, °C (°F) *	50 (122)
Engine jacket water capacity, L (gal.)	11.3 (3.0)
Radiator system capacity, including engine, L (gal.)	27.6 (7.3)
Engine jacket water flow, Lpm (gpm)	230.9 (61)
Heat rejected to cooling water at rated kW, dry exhaust, kW (Btu/min.)	94.2 (5360)
Heat rejected to air charge cooler at rated kW, dry exhaust, kW (Btu/min.)	56.1 (3190)
Water pump type	Centrifugal
Fan diameter, including blades, mm (in.)	787 (31)
Fan, kWm (HP)	8.6 (11.5)
Max. restriction of cooling air, intake and discharge side of radiator, kPa (in. H_2O)	0.125 (0.5)

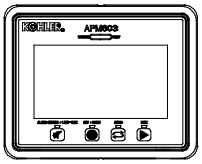
* Enclosure with enclosed silencer reduces ambient temperature capability by 5°C (9°F).



Operation Requirements

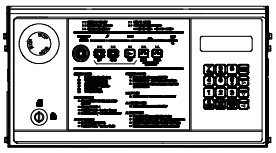
Air Requirements	
Radiator-cooled cooling air, m^3/min. (scfm)‡	368.1 (13000)
Combustion air, m^3/min. (cfm)	17.6 (620)
Heat rejected to ambient air:	
Engine, kW (Btu/min.)	46.9 (2670)
Alternator, kW (Btu/min.)	18.5 (1050)

‡ Air density = 1.20 kg/m^3 (0.075 lbm/ft^3)



Fuel Consumption		
Diesel, Lph (gph) at % load	**Standby Rating**	
100%	58.0	(15.3)
75%	43.3	(11.4)
50%	31.4	(8.3)
25%	19.7	(5.2)
Diesel, Lph (gph) at % load	**Prime Rating**	
100%	50.1	(13.2)
75%	36.1	(9.5)
50%	25.7	(6.8)
25%	16.6	(4.4)

Controllers



APM402 Controller
Provides advanced control, system monitoring, and system diagnostics for optimum performance and compatibility.
- Digital display and menu control provide easy local data access
- Measurements are selectable in metric or English units
- Remote communication thru a PC via network or serial configuration
- Controller supports Modbus® protocol
- Integrated hybrid voltage regulator with ±0.5% regulation
- Built-in alternator thermal overload protection
- NFPA 110 Level 1 capability

Refer to G6-161 for additional controller features and accessories.

APM603 Controller
Provides advanced control, system monitoring, and system diagnostics for optimum performance and compatibility.
- 7-inch graphic display with touch screen and menu control provides easy local data access
- Measurements are selectable in metric or English units
- Paralleling capability to control up to 8 generators on an isolated bus with first-on logic, synchronizer, kW and kVAR load sharing, and protective relays
  Note: Parallel with other APM603 controllers only
- Generator management to turn paralleled generators off and on as required by load demand
- Load management to connect and disconnect loads as required
- Controller supports Modbus® RTU, Modbus® TCP, SNMP and BACnet®
- Integrated voltage regulator with ±0.25% regulation
- Built-in alternator thermal overload protection
- UL-listed overcurrent protective device
- NFPA 110 Level 1 capability

Refer to G6-162 for additional controller features and accessories.

Decision-Maker® 6000 Paralleling Controller
Provides advanced control, system monitoring, and system diagnostics with remote monitoring capabilities for paralleling multiple generator sets.
- Paralleling capability to control up to 8 generators on an isolated bus with first-on logic, synchronizer, kW and kVAR load sharing, and protective relays
  Note: Parallel with other Decision-Maker® 6000 controllers only
- Digital display and keypad provide easy local data access
- Measurements are selectable in metric or English units
- Remote communication thru a PC via network or modem configuration
- Controller supports Modbus® protocol
- Integrated voltage regulator with ±0.25% regulation
- Built-in alternator thermal overload protection
- NFPA 110 Level 1 capability

Refer to G6-107 for additional controller features and accessories.

Modbus® is a registered trademark of Schneider Electric.

BACnet® is a registered trademark of ASHRAE.

Standard Features

- Alternator Protection
- Battery Rack and Cables
- Customer Connection (standard with Decision-Maker® 6000 controller only)
- Local Emergency Stop Switch
- Oil Drain Extension
- Operation and Installation Literature

Available Options

Circuit Breakers

Type

- ❑ Magnetic Trip
- ❑ Thermal Magnetic Trip
- ❑ Electronic Trip (LI)
- ❑ Electronic Trip with Short Time (LSI)
- ❑ Electronic Trip with Ground Fault (LSIG)

Rating

- ❑ 80%
- ❑ 100%

Operation

- ❑ Manual
- ❑ Electrically Operated (for paralleling)

Circuit Breaker Mounting

- ❑ Generator Mounted
- ❑ Remote Mounted
- ❑ Bus Bar (for remote mounted breakers)

Enclosures for Remote Mounted Circuit Breakers

- ❑ NEMA 1
- ❑ NEMA 3R

Approvals and Listings

- ❑ California OSHPD Pre- Approval
- ❑ CSA Certified
- ❑ IBC Seismic Certification
- ❑ UL 2200 Listing
- ❑ Hurricane Rated Enclosure

Enclosed Unit

- ❑ Sound Enclosure (with enclosed critical silencer)
- ❑ Weather Enclosure (with enclosed critical silencer)

Open Unit

- ❑ Exhaust Silencer, Critical (kit: PA-354809)
- ❑ Flexible Exhaust Connector, Stainless Steel

Fuel System

- ❑ Flexible Fuel Lines
- ❑ Fuel Pressure Gauge
- ❑ Subbase Fuel Tanks

Controller

- ❑ Common Failure Relay (Decision-Maker® 6000 and APM603 controllers only)
- ❑ Decision-Maker® Paralleling System (DPS) (Decision-Maker® 6000 controller only)
- ❑ Dry Contact (isolated alarm) (Decision-Maker® 6000 controller only)
- ❑ Two Input/Five Output Module (APM402 controller only)
- ❑ Four Input/Fifteen Output Module (APM603 controller only)
- ❑ Lockable Emergency Stop Switch
- ❑ Remote Emergency Stop Switch
- ❑ Remote Serial Annunciator Panel
- ❑ Run Relay (standard with APM603, optional with others)
- ❑ Manual Key Switch (APM603 controller only)
- ❑ Manual Speed Adjust (APM402 controller only)

Cooling System

- ❑ Block Heater, 1800 W, 90- 120 V, 1 Ph
- ❑ Block Heater, 2000 W, 190- 240 V, 1 Ph Required for ambient temperature below 0°C (32°F)
- ❑ Radiator Duct Flange

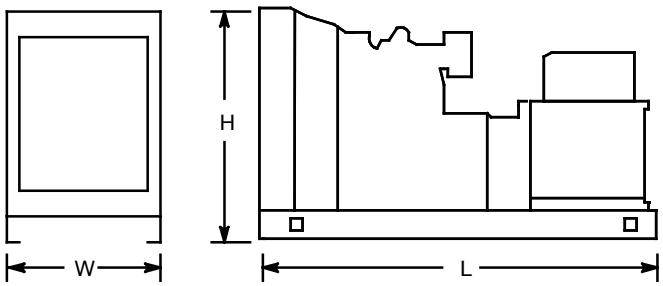
Electrical System

- ❑ Generator Heater
- ❑ Battery
- ❑ Battery Charger, Equalize/Float Type
- ❑ Battery Heater

Miscellaneous

- ❑ Air Cleaner, Heavy Duty
- ❑ Air Cleaner Restriction Indicator
- ❑ Certified Test Report
- ❑ Crankcase Emissions Canister
- ❑ Engine Fluids Added
- ❑ Rated Power Factor Testing
- ❑ Rodent Guards

Literature



- ❑ General Maintenance
- ❑ NFPA 110
- ❑ Overhaul
- ❑ Production

Warranty

- ❑ 2-Year Basic Limited Warranty
- ❑ 5-Year Basic Limited Warranty
- ❑ 5-Year Comprehensive Limited Warranty

Dimensions and Weights

Overall Size, L x W x H, mm (in.):	3000 x 1300 x 1672 (118.1 x 51.2 x 65.8)
Weight (radiator model), wet, kg (lb.):	1923 (4240)

NOTE: This drawing is provided for reference only and should not be used for planning installation. Contact your local distributor for more detailed information.

NOTES:

1. Customer is responsible for engineering analysis to confirm pole and fixture compatibility for all applications. Refer to our white paper WP513001EN for additional support information.
2. DesignLights Consortium® Qualified. Refer to www.designlights.org Qualified Products List under Family Models for details.
3. Coastal construction finish salt spray tested to over 5,000-hours per ASTM B117, with a scribe rating of 9 per ASTM D1654. Not available with TH option.
4. Not compatible with MS/4-LXX or MS/1-LXX sensors.
5. Not compatible with extended quick mount arm (QMEA).
6. Not compatible with standard quick mount arm (QM) or extended quick mount arm (QMEA).
7. Requires the use of an internal step down transformer when combined with sensor options. Not available with sensor at 1200mA. Not available in combination with the HA high ambient and sensor options at 1A.
8. 480V must utilize Wye system only. Per NEC, not for use with ungrounded systems, impedance grounded systems or corner grounded systems (commonly known as Three Phase Three Wire Delta, Three Phase High Leg Delta and Three Phase Corner Grounded Delta systems.)
9. May be required when two or more luminaires are oriented on a 90° or 120° drilling pattern. Refer to arm mounting requirement table.
10. Factory installed.
11. Maximum 8 light squares.
12. Maximum 6 light squares.
13. Requires ZW or ZD receptacle.
14. Narrow-band 590nm +/- 5nm for wildlife and observatory use. Choose drive current A; supplied at 500mA drive current only. Available with 5WQ, 5MQ, SL2, SL3 and SL4 distributions. Can be used with HSS option.
15. Set of 4 pcs. One set required per Light Square.
16. Not available with HA option.
17. 2L is not available with MS, MS/X or MS/DIM at 347V or 480V. 2L in SA2 through SA4 requires a larger housing, normally used for SA5 or SA6. Extended arm option may be required when mounting two or more fixtures per pole at 90° or 120°. Refer to arm mounting requirement table.
18. Not available with Enlighted wireless sensors.
19. Cannot be used with other control options.
20. Low voltage control lead brought out 18" outside fixture.
21. Not available if any "MS" sensor is selected. Motion sensor has an integral photocell.
22. Requires the use of BPC photocontrol or the PR7 or PR photocontrol receptacle with photocontrol accessory. See After Hours Dim supplemental guide for additional information.
23. Not for use with T4FT, T4W or SL4 optics. See IES files for details.
24. The FSIR-100 configuration tool is required to adjust parameters including high and low modes, sensitivity, time delay, cutoff and more. Consult your lighting representative at Cooper Lighting Solutions for more information.
25. Replace X with number of Light Squares operating in low output mode.
26. Enlighted wireless sensors are factory installed only requiring network components LWP-EM-1, LWP-GW-1 and LWP-PoE8 in appropriate quantities.
27. Not available with house side shield (HSS).
28. Not for use with 5NQ, 5MQ, 5WQ or RW optics. A black trim plate is used when HSS is selected.
29. CE is not available with the LWR, MS, MS/X, MS/DIM, BPC, PR or PR7 options. Available in 120-277V only.
30. One required for each Light Square.
31. Requires PR7.
32. Replace XX with sensor color (WH, BZ or BK.)
33. WAC Gateway required to enable field-configurability: Order WAC-PoE and WPOE-120 (10V to PoE injector) power supply if needed.
34. Smart device with mobile application required to change system defaults. See controls section for details.
35. Only product configurations with these designated prefixes are built to be compliant with the Buy American Act of 1933 (BAA) or Trade Agreements Act of 1979 (TAA), respectively. Please refer to DOMESTIC PREFERENCES website for more information. Components shipped separately may be separately analyzed under domestic preference requirements.
36. For BAA or TAA requirements, Accessories sold separately will be separately analyzed under domestic preference requirements. Consult factory for further information.
37. Available for 7-10 squares.

Product Specifications

Construction

- Extruded aluminum driver enclosure
- Heavy-wall, die-cast aluminum end caps
- Die-cast aluminum heat sinks
- Patent pending interlocking housing and heat sink

Optics

- Patented, high-efficiency injection-molded AccuLED Optics technology
- 16 optical distributions
- 3 shielding options including HSS, GRS and PFS
- IDA Certified (3000K CCT and warmer only)

Electrical

- LED drivers are mounted to removable tray assembly for ease of maintenance
- Standard with 0-10V dimming
- Standard with Cooper Lighting Solutions proprietary circuit module designed to withstand 10kV of transient line surge
- Suitable for operation in -40°C to 40°C ambient environments. Optional 50°C high ambient (HA) configuration.

Mounting

- Standard extruded arm includes internal bolt guides and round pole adapter
- Extended arms (EA and QMEA) may be required in 90° or 120° pole mount configurations, see arm mounting requirements table
- Mast arm (MA) factory installed
- Wall mount (WM) option available
- Quick mount arm (QM and QMEA) includes pole adapter and factory installed fixture mount for fast installation to square or round poles

Finish

- Super housing durable TGIC polyester powder coat paint, 2.5 mil nominal thickness
- Heat sink is powder coated black
- RAL and custom color matches available
- Coastal Construction (CC) option available

Warranty

- Five year warranty

Energy and Performance Data

Lumen Maintenance (TM-21)

Drive Current	Ambient Temperature	25,000 hours*	50,000 hours*	60,000 hours*	100,000 hours**	Theoretical L70 hours**

Attachment: SP-2022-02 drawings 051922 (25490 : Sp-2022-02)

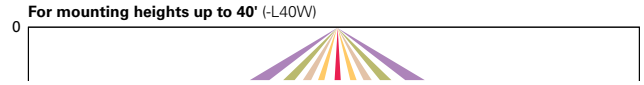
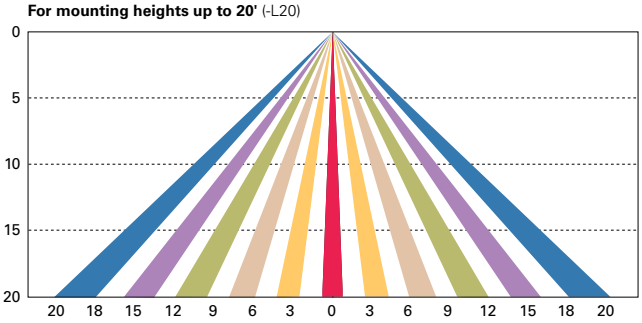
Control Options

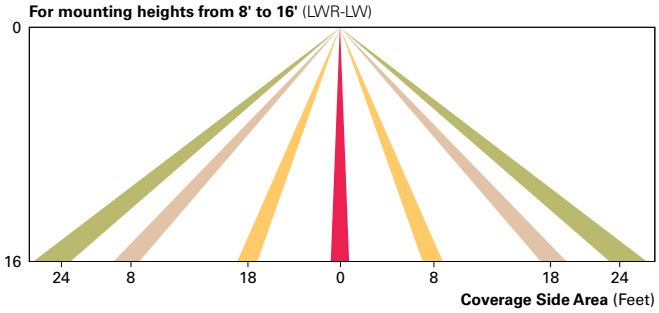


0-10V (DIM)
This fixture is offered standard with 0-10V dimming driver(s). The DIM option provides 0-10V dimming wire leads for use with a lighting control panel or other control method.

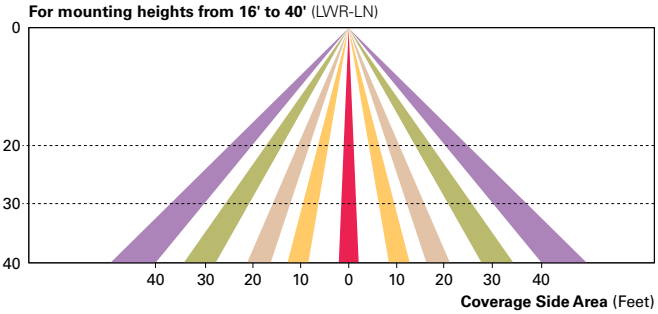


Photocontrol (BPC, PR and PR7)
Optional button-type photocontrol (BPC) and photocontrol receptacles (PR and PR7) provide a flexible solution to enable "dusk-to-dawn" lighting by sensing light levels. Advanced control systems compatible with NEMA 7-pin standards can be utilized with the PR7 receptacle.

After Hours Dim (AHD)
This feature allows photocontrol-enabled luminaires to achieve additional energy savings by dimming during scheduled portions of the night. The dimming profile will automatically take effect after a "dusk-to-dawn" period has been calculated from the photocontrol input. Specify the desired dimming profile for a simple, factory-shipped dimming solution requiring no external control wiring. Reference the After Hours Dim supplemental guide for additional information.



Dimming Occupancy Sensor (SPB, MS/DIM-LXX, MS/X-LXX and MS-LXX)
These sensors are factory installed in the luminaire housing. When the SPB or MS/DIM sensor options are selected, the occupancy sensor is connected to a dimming driver and the entire luminaire dims when there is no activity detected. When activity is detected, the luminaire returns to full light output. The MS/DIM sensor is factory preset to dim down to approximately 50 percent power with a time delay of five minutes. The MS-LXX sensor is factory preset to turn the luminaire off after five minutes of no activity. The MS/X-LXX is also preset for five minutes and only controls the specified number of light engines to maintain steady output from the remaining light engines. SPB motion sensors require the Sensor Configuration mobile application by Wattstopper to change factory default dimming level, time delay, sensitivity and other parameters. Available for iOS and Android devices. The SPB sensor is factory preset to dim down to approximately 10% power with a time delay of five minutes. The MS/DIM occupancy sensors require the FSIR-100 programming tool to adjust factory defaults.



Enlighted Wireless Control and Monitoring System (LWR-LW and LWR-LN)
Enlighted is a connected lighting solution that combines a broad selection of energy-efficient LED luminaires with a powerful integrated wireless sensor system. The sensor controls the lighting system in compliance with the latest energy codes and collects valuable data about building performance and use. Software applications turn the granular data into information through energy dashboards and specialized apps that make it simple and help optimize the use of building resources, beyond lighting.

WaveLinx Wireless Outdoor Lighting Control Module (WOLC-7P-10A)
The 7-pin wireless outdoor lighting control module enables WaveLinx to control outdoor area, site and flood lighting. WaveLinx controls outdoor lighting using schedules to provide ON, OFF and dimming controls based on astronomic or time schedules based on a 7 day week.

LumenSafe Integrated Network Security Camera (LD)
Cooper Lighting Solutions brings ease of camera deployment to a whole new level. No additional wiring is needed beyond providing line power to the luminaire. A variety of networking options allows security integrators to design the optimal solution for active surveillance. As the ideal solution to meet the needs for active surveillance, the LumenSafe integrated network camera is a streamlined, outdoor-ready fixed dome that provides HDTV 1080p video. This IP camera is optimally designed for deployment in the video management system or security software platform of choice.

Synapse (DIM10)
SimplySNAP integrated wireless controls system by Synapse. Includes factory installed DIM10 Synapse control module and MS/DC motion sensor; requires additional Synapse system components for operation. Contact Synapse at www.synapsewireless.com for product support, warranty and terms and conditions.

Notes:

1) North as Shown on this Map is True North at 78°35' Meridian of West Longitude, as based on the New York State Plane Coordinate System NAD 83/92 HARN, West Zone 3103, as established from Town of Amherst Monuments 11.
N.1077943.37
E.1098312.30

2) Elevations as shown on this Map are based on NAVD 88, as established from Town of Amherst Monuments 11. Elevation = 679.31'

3) Utilities as shown on this map are plotted from field locations of visble structures and information provided by others. Niagara Boundary & Mapping Services, along with the undersigned Land Surveyor assumes no responsibility as to the accuracy of underground utilities. Contractor must call UFPO three working days prior to any excavation construction activities.

4) Contour interval is 1.0' Foot.

5) Spot Elevations present in the cad file are turned off for clarity.

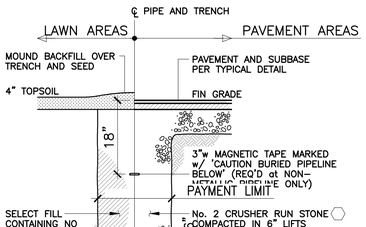
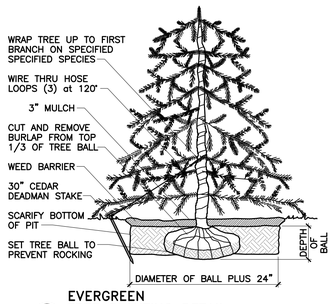
GENERAL SITE NOTES

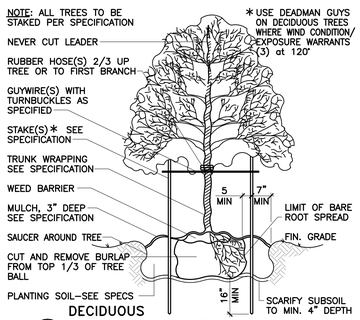


1. ALL WATERLINE, SANITARY SEWER AND OTHER WORK WITHIN THE R.O.W. SHALL BE IN ACCORDANCE WITH THE LATEST RULES AND REGULATIONS OF THE TOWN OF AMHERST, THE ERIE COUNTY WATER AUTHORITY AND NYSDOT SPECIFICATIONS.
2. INSTALL ALL MATERIALS TO THE MANUFACTURER'S RECOMMENDATIONS AND BEST STANDARDS OF THE TRADE INVOLVED.
3. SUBSTITUTIONS SHALL BE MADE ONLY WITH OWNER APPROVAL AND SHALL BE EQUIVALENT QUALITY TO WHAT IS SPECIFIED.
4. WORK SHALL BE COMPLETED IN STRICT ACCORDANCE WITH ALL LOCAL CODES AND OSHA SAFETY RULES AND REGULATIONS.
5. VERIFY ALL EXISTING CONDITIONS AND DIMENSIONS AT THE SITE. NOTIFY OWNER OF ANY DISCREPANCIES IN CONDITIONS SHOWN ON THE DRAWINGS PRIOR TO PROCEEDING WITH THE WORK.
6. CONTRACTORS SHALL BE RESPONSIBLE FOR THE PROTECTION OF ANY EXISTING STRUCTURES TO REMAIN AND ANY FINISH MATERIAL INSTALLED WHILE WORKING ON OTHER COMPONENTS.
7. CONTRACTOR SHALL KEEP THE JOB SITE FREE OF DEBRIS AND MAKE FINAL CLEANUP TO THE SATISFACTION OF THE OWNER.
8. CONTRACTOR SHALL ASCERTAIN THE LOCATION OF ALL UTILITIES PRIOR TO CONSTRUCTION SO THAT THIS WORK DOES NOT DISTURB EXISTING LINES AND/OR INSTALLATIONS. COORDINATE ALL WORK WITH THE APPLICABLE UTILITY COMPANIES.
9. CONTRACTOR SHALL OBTAIN AND PAY FOR ALL PERMITS NECESSARY TO PERFORM THE WORK.
10. DURING CONSTRUCTION, THE CONTRACTOR SHALL MAINTAIN CONTROL OF EROSION FROM THE SITE. SEE PROJECT EROSION CONTROL PLAN AND SWPPP MANUAL.
11. REFER TO ARCHITECTURAL DRAWINGS FOR EXACT BUILDING DIMENSIONS, FEATURES AND UTILITY CONNECTIONS.
12. ALL UTILITY TRENCHES UNDER PAVEMENT, CURBS, SIDEWALKS, AND DRIVEWAYS SHALL BE FULLY BACKFILLED WITH No 2 CRUSHER RUN STONE AND PROPERLY COMPACTED TO AVOID SETTLEMENT.
13. CONTRACTOR SHALL REPLACE IN KIND ANY EXISTING IMPROVEMENTS TO REMAIN THAT ARE DAMAGED DURING CONSTRUCTION. THIS SHALL INCLUDE, BUT NOT BE LIMITED TO, CURBS, ROAD PAVEMENTS, SIDEWALKS, AND EXISTING UTILITIES.

HANDICAP ACCESS RAMP



TYPICAL CONCRETE CURB



NOTES:
1. PIPE SHALL BE IN ACCORDANCE w/ MANUFACTURER'S RECOMMENDATIONS
2. TRENCHING OPERATIONS SHALL INCLUDE ALL NECESSARY DEWATERING.
3. TRENCH DETAILS ARE ONLY SHOWN FOR MATERIAL PLACEMENT PURPOSES
4. AN OSHA APPROVED MOVEABLE PROTECTIVE TRENCH SHIELD MAY BE USED.

MATERIALS:
(A) No. 1 STONE WITH A GRADATION CONFORMING TO NYSDOT SECTION 703-02, LATEST EDITION. THE CRUSHED STONE SHALL BE WELL GRADED WITH NO PARTICLES LARGER THAN (1) INCH AND HAVING A MAX. GRADATION MEETING THE LIMITS DESCRIBED IN THE SPECIFICATIONS. NO SLAG SHALL BE USED IN PLACE OF MATERIAL 'A'.
(B) No. 2 CRUSHER RUN STONE OR No. 2 RUN OF CRUSHED GRAVEL WITH A GRADATION CONFORMING WITH NYSDOT SECTION 304-2.02 TYPE 4 AND NYSDOT SECTION 703-02 (COMPACTED IN 6" LIFTS TO 95% DENSITY). NO SLAG SHALL BE USED IN PLACE OF MATERIAL 'B'.

Standard Features

- Kohler Co. provides one-source responsibility for the generating system and accessories.
- The generator set and its components are prototype-tested, factory-built, and production-tested.
- The 60 Hz generator set offers a UL 2200 listing.
- The generator set accepts rated load in one step.
- The 60 Hz generator set meets NFPA 110, Level 1, when equipped with the necessary accessories and installed per NFPA standards.
- A one-year limited warranty covers all generator set systems and components. Two- and five-year extended limited warranties are also available.
- Alternator features:
  - The unique Fast-Response® X excitation system delivers excellent voltage response and short-circuit capability using a rare-earth, permanent magnet (PM)-excited alternator.
    (4S13X alternator)
  - The unique Fast-Response® II excitation system delivers excellent voltage response and short-circuit capability using a permanent magnet (PM)-excited alternator.
    (4UA9 and 4UA13 alternators)
  - The brushless, rotating-field alternator has broadrange reconnectability.
- Other features:
  - Kohler designed controllers for one-source system integration and remote communication. See Controllers on page 3.
  - The low coolant level shutdown prevents overheating (standard on radiator models only).
  - Integral vibration isolation eliminates the need for under-unit vibration spring isolators.
- Multiple circuit breaker configurations.
- Mount up to three circuit breakers to allow circuit protection of selected priority loads.

RATINGS: All three-phase units are rated at 0.8 power factor. All single-phase units are rated at 1.0 power factor. *Standby Ratings:* The standby rating is applicable to varying loads for the duration of a power outage. There is no overload capability for this rating. *Prime Power Ratings:* At varying load, the number of generator set operating hours is unlimited. A 10% overload capacity is available for one hour in twelve. Ratings are in accordance with ISO-8528-1 and ISO-3046-1. For limited running time and continuous ratings, consult the factory. Obtain technical information bulletin (TIB-101) for ratings guidelines, complete ratings definitions, and site condition derates. The generator set manufacturer reserves the right to change the design or specifications without notice and without any obligation or liability whatsoever.

Attachment: SP-2022-02 drawings 051922 (25490 : Sp-2022-02)

Alternator Specifications

Specifications	Alternator
Manufacturer	Kohler
Type	4-Pole, Rotating-Field
Exciter type	Brushless, Permanent-Magnet
Leads: quantity, type	
4SX, 4UA	12, Reconnectable
Voltage regulator	Solid State, Volts/Hz
Insulation:	NEMA MG1
Material	Class H
Temperature rise	130°C, Standby
Bearing: quantity, type	1, Sealed
Coupling	Flexible Disc
Amortisseur windings	Full
Voltage regulation, no-load to full-load	Controller Dependent
One-step load acceptance	100% of Rating
Unbalanced load capability	100% of Rated Standby Current

- NEMA MG1, IEEE, and ANSI standards compliance for temperature rise and motor starting.
- Sustained short-circuit current of up to 300% of the rated current for up to 10 seconds.
- Sustained short-circuit current enabling downstream circuit breakers to trip without collapsing the alternator field.
- Self-ventilated and dripproof construction.
- Windings are vacuum-impregnated with epoxy varnish for dependability and long life.
- Superior voltage waveform from a two-thirds pitch stator and skewed rotor.

Specifications		Alternator
Peak motor starting kVA:		(35% dip for voltages below)
480 V	4S13X (12 lead)	570
480 V	4UA9 (12 lead)	700
480 V	4UA13 (12 lead)	960

Application Data

Engine

Engine Specifications	
Manufacturer	John Deere
Engine model	6068HFG85A
Engine type	4-Cycle, Turbocharged, Charge Air-Cooled
Cylinder arrangement	6 Inline
Displacement, L (cu. in.)	6.8 (415)
Bore and stroke, mm (in.)	106 x 127 (4.19 x 5.00)
Compression ratio	17.0:1
Piston speed, m/min. (ft./min.)	457 (1500)
Main bearings: quantity, type	7, Replaceable Insert
Rated rpm	1800
Max. power at rated rpm, kWm (BHP)	235 (315)
Cylinder head material	Cast Iron
Crankshaft material	Forged Steel
Valve material:	
Intake	Chromium-Silicon Steel
Exhaust	Stainless Steel
Governor: type, make/model	JDEC Electronic L14 Denso HP3
Frequency regulation, no-load to full-load	Isochronous
Frequency regulation, steady state	±0.25%
Frequency	Fixed
Air cleaner type, all models	Dry

Exhaust

Exhaust System	
Exhaust manifold type	Dry
Exhaust flow at rated kW, m^3/min. (cfm)	42.8 (1510)
Exhaust temperature at rated kW, dry exhaust, °C (°F)	527 (980)
Maximum allowable back pressure, kPa (in. Hg)	Min. 4 (1.2) Max. 10 (3.0)
Exhaust outlet size at engine hookup, mm (in.)	98 (3.86)

Engine Electrical

Engine Electrical System	
Battery charging alternator:	24 Volt
Ground (negative/positive)	Negative
Volts (DC)	24
Ampere rating	45
Starter motor rated voltage (DC)	24
Battery, recommended cold cranking amps (CCA):	
Quantity, CCA rating each	Two, 925
Battery voltage (DC)	12

Fuel

Fuel System	
Fuel supply line, min. ID, mm (in.)	11.0 (0.44)
Fuel return line, min. ID, mm (in.)	6.0 (0.25)
Max. lift, fuel pump: type, m (ft.)	Mechanical, 1.8 (6.0)
Max. fuel flow, Lph (gph)	92.7 (24.5)
Max. return line restriction, kPa (in. Hg)	20 (5.9)
Fuel prime pump	Manual
Fuel filter	
Primary	30 Microns
Secondary	2 Microns @ 98% Efficiency
Water Separator	Yes
Recommended fuel	#2 Diesel

Lubrication

Lubricating System	
Type	Full Pressure
Oil pan capacity, L (qt.) §	32.5 (34.4)
Oil pan capacity with filter, L (qt.) §	33.4 (35.3)
Oil filter: quantity, type §	1, Cartridge
Oil cooler	Water-Cooled

§ Kohler recommends the use of Kohler Genuine oil and filters.

Attachment: SP-2022-02 drawings 051922 (25490 : Sp-2022-02)

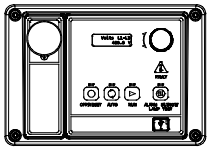
Application Data

Cooling

Radiator System	
Ambient temperature, °C (°F) *	50 (122)
Engine jacket water capacity, L (gal.)	11.3 (3.0)
Radiator system capacity, including engine, L (gal.)	27.6 (7.3)
Engine jacket water flow, Lpm (gpm)	230.9 (61)
Heat rejected to cooling water at rated kW, dry exhaust, kW (Btu/min.)	94.2 (5360)
Heat rejected to air charge cooler at rated kW, dry exhaust, kW (Btu/min.)	56.1 (3190)
Water pump type	Centrifugal
Fan diameter, including blades, mm (in.)	787 (31)
Fan, kWm (HP)	8.6 (11.5)
Max. restriction of cooling air, intake and discharge side of radiator, kPa (in. H_2O)	0.125 (0.5)

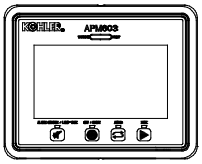
* Enclosure with enclosed silencer reduces ambient temperature capability by 5°C (9°F).



Operation Requirements

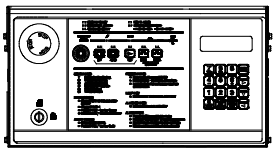
Air Requirements	
Radiator-cooled cooling air, m^3/min. (scfm)‡	368.1 (13000)
Combustion air, m^3/min. (cfm)	17.6 (620)
Heat rejected to ambient air:	
Engine, kW (Btu/min.)	46.9 (2670)
Alternator, kW (Btu/min.)	18.5 (1050)

‡ Air density = 1.20 kg/m^3 (0.075 lbm/ft^3)



Fuel Consumption		
Diesel, Lph (gph) at % load	**Standby Rating**	
100%	58.0	(15.3)
75%	43.3	(11.4)
50%	31.4	(8.3)
25%	19.7	(5.2)
Diesel, Lph (gph) at % load	**Prime Rating**	
100%	50.1	(13.2)
75%	36.1	(9.5)
50%	25.7	(6.8)
25%	16.6	(4.4)

Controllers



APM402 Controller
Provides advanced control, system monitoring, and system diagnostics for optimum performance and compatibility.
- Digital display and menu control provide easy local data access
- Measurements are selectable in metric or English units
- Remote communication thru a PC via network or serial configuration
- Controller supports Modbus® protocol
- Integrated hybrid voltage regulator with ±0.5% regulation
- Built-in alternator thermal overload protection
- NFPA 110 Level 1 capability

Refer to G6-161 for additional controller features and accessories.

APM603 Controller
Provides advanced control, system monitoring, and system diagnostics for optimum performance and compatibility.
- 7-inch graphic display with touch screen and menu control provides easy local data access
- Measurements are selectable in metric or English units
- Paralleling capability to control up to 8 generators on an isolated bus with first-on logic, synchronizer, kW and kVAR load sharing, and protective relays
  Note: Parallel with other APM603 controllers only
- Generator management to turn paralleled generators off and on as required by load demand
- Load management to connect and disconnect loads as required
- Controller supports Modbus® RTU, Modbus® TCP, SNMP and BACnet®
- Integrated voltage regulator with ±0.25% regulation
- Built-in alternator thermal overload protection
- UL-listed overcurrent protective device
- NFPA 110 Level 1 capability

Refer to G6-162 for additional controller features and accessories.

Decision-Maker® 6000 Paralleling Controller
Provides advanced control, system monitoring, and system diagnostics with remote monitoring capabilities for paralleling multiple generator sets.
- Paralleling capability to control up to 8 generators on an isolated bus with first-on logic, synchronizer, kW and kVAR load sharing, and protective relays
  Note: Parallel with other Decision-Maker® 6000 controllers only
- Digital display and keypad provide easy local data access
- Measurements are selectable in metric or English units
- Remote communication thru a PC via network or modem configuration
- Controller supports Modbus® protocol
- Integrated voltage regulator with ±0.25% regulation
- Built-in alternator thermal overload protection
- NFPA 110 Level 1 capability

Refer to G6-107 for additional controller features and accessories.

Modbus® is a registered trademark of Schneider Electric.

BACnet® is a registered trademark of ASHRAE.

Standard Features

- Alternator Protection
- Battery Rack and Cables
- Customer Connection
  (standard with Decision-Maker® 6000 controller only)
- Local Emergency Stop Switch
- Oil Drain Extension
- Operation and Installation Literature

Available Options

Circuit Breakers

Type

- ❑ Magnetic Trip
- ❑ Thermal Magnetic Trip
- ❑ Electronic Trip (LI)
- ❑ Electronic Trip with Short Time (LSI)
- ❑ Electronic Trip with Ground Fault (LSIG)

Rating

- ❑ 80%
- ❑ 100%

Operation

- ❑ Manual
- ❑ Electrically Operated (for paralleling)

Circuit Breaker Mounting

- ❑ Generator Mounted
- ❑ Remote Mounted
- ❑ Bus Bar (for remote mounted breakers)

Enclosures for Remote Mounted Circuit Breakers

- ❑ NEMA 1
- ❑ NEMA 3R

Approvals and Listings

- ❑ California OSHPD Pre- Approval
- ❑ CSA Certified
- ❑ IBC Seismic Certification
- ❑ UL 2200 Listing
- ❑ Hurricane Rated Enclosure

Enclosed Unit

- ❑ Sound Enclosure (with enclosed critical silencer)
- ❑ Weather Enclosure (with enclosed critical silencer)

Open Unit

- ❑ Exhaust Silencer, Critical (kit: PA-354809)
- ❑ Flexible Exhaust Connector, Stainless Steel

Fuel System

- ❑ Flexible Fuel Lines
- ❑ Fuel Pressure Gauge
- ❑ Subbase Fuel Tanks

Controller

- ❑ Common Failure Relay
  (Decision-Maker® 6000 and APM603 controllers only)
- ❑ Decision-Maker® Paralleling System (DPS)
  (Decision-Maker® 6000 controller only)
- ❑ Dry Contact (isolated alarm)
  (Decision-Maker® 6000 controller only)
- ❑ Two Input/Five Output Module (APM402 controller only)
- ❑ Four Input/Fifteen Output Module (APM603 controller only)
- ❑ Lockable Emergency Stop Switch
- ❑ Remote Emergency Stop Switch
- ❑ Remote Serial Annunciator Panel
- ❑ Run Relay (standard with APM603, optional with others)
- ❑ Manual Key Switch (APM603 controller only)
- ❑ Manual Speed Adjust (APM402 controller only)

Cooling System

- ❑ Block Heater, 1800 W, 90- 120 V, 1 Ph
- ❑ Block Heater, 2000 W, 190- 240 V, 1 Ph
  Required for ambient temperature below 0°C (32°F)
- ❑ Radiator Duct Flange

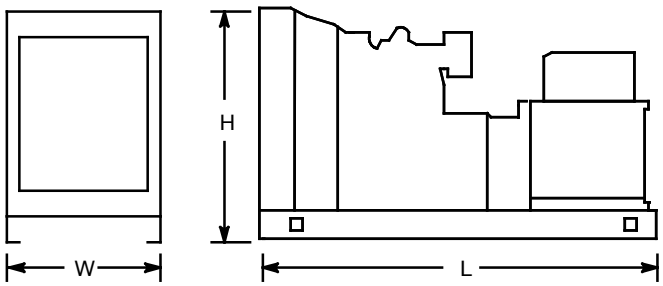
Electrical System

- ❑ Generator Heater
- ❑ Battery
- ❑ Battery Charger, Equalize/Float Type
- ❑ Battery Heater

Miscellaneous

- ❑ Air Cleaner, Heavy Duty
- ❑ Air Cleaner Restriction Indicator
- ❑ Certified Test Report
- ❑ Crankcase Emissions Canister
- ❑ Engine Fluids Added
- ❑ Rated Power Factor Testing
- ❑ Rodent Guards

Literature



- ❑ General Maintenance
- ❑ NFPA 110
- ❑ Overhaul
- ❑ Production

Warranty

- ❑ 2-Year Basic Limited Warranty
- ❑ 5-Year Basic Limited Warranty
- ❑ 5-Year Comprehensive Limited Warranty

Dimensions and Weights

Tenon **FSIR-100**=Wireless Configuration Tool for Occupancy Sensor [24] **GLEON-MT1**=Field Installed Mesh Top for 1-4 Light Squares **GLEON-MT2**=Field Installed Mesh Top for 5-6 Light Squares **GLEON-MT3**=Field Installed Mesh Top for 7-8 Light Squares **GLEON-MT4**=Field Installed Mesh Top for 9-10 Light Squares **GLEON-QM**=Quick Mount Arm Kit [11] **GLEON-QMEA**=Quick Mount Extended Arm Kit [12] **LS/HSS**=Field Installed House Side Shield [28, 30] **LS/GRSBK**=Glare Reducing Shield, Black [23, 30] **LS/GRSWH**=Glare Reducing Shield, White [23, 30] **LS/PFS**=Perimeter Shield, Black [15] **WOLC-7P-10A**=WaveLinx Outdoor Control Module [19, 31] **SWPD4-XX**=Wavelinx Wireless Sensor, 7′–15′ Mounting Height [13, 19, 32, 33] **SWPD5-XX**=Wavelinx Wireless Sensor, 15′–40′ Mounting Height [13, 19, 32, 33]

NOTES:

1. Customer is responsible for engineering analysis to confirm pole and fixture compatibility for all applications. Refer to our white paper WP513001EN for additional support information.
2. DesignLights Consortium® Qualified. Refer to www.designlights.org Qualified Products List under Family Models for details.
3. Coastal construction finish salt spray tested to over 5,000-hours per ASTM B117, with a scribe rating of 9 per ASTM D1654. Not available with TH option.
4. Not compatible with MS/4-LXX or MS/1-LXX sensors.
5. Not compatible with extended quick mount arm (QMEA).
6. Not compatible with standard quick mount arm (QM) or extended quick mount arm (QMEA).
7. Requires the use of an internal step down transformer when combined with sensor options. Not available with sensor at 1200mA. Not available in combination with the HA high ambient and sensor options at 1A.
8. 480V must utilize Wye system only. Per NEC, not for use with ungrounded systems, impedance grounded systems or corner grounded systems (commonly known as Three Phase Three Wire Delta, Three Phase High Leg Delta and Three Phase Corner Grounded Delta systems.)
9. May be required when two or more luminaires are oriented on a 90° or 120° drilling pattern. Refer to arm mounting requirement table.
10. Factory installed.
11. Maximum 8 light squares.
12. Maximum 6 light squares.
13. Requires ZW or ZD receptacle.
14. Narrow-band 590nm +/- 5nm for wildlife and observatory use. Choose drive current A; supplied at 500mA drive current only. Available with 5WQ, 5MQ, SL2, SL3 and SL4 distributions. Can be used with HSS option.
15. Set of 4 pcs. One set required per Light Square.
16. Not available with HA option.
17. 2L is not available with MS, MS/X or MS/DIM at 347V or 480V. 2L in SA2 through SA4 requires a larger housing, normally used for SA5 or SA6. Extended arm option may be required when mounting two or more fixtures per pole at 90° or 120°. Refer to arm mounting requirement table.
18. Not available with Enlighted wireless sensors.
19. Cannot be used with other control options.
20. Low voltage control lead brought out 18" outside fixture.
21. Not available if any "MS" sensor is selected. Motion sensor has an integral photocell.
22. Requires the use of BPC photocontrol or the PR7 or PR photocontrol receptacle with photocontrol accessory. See After Hours Dim supplemental guide for additional information.
23. Not for use with T4FT, T4W or SL4 optics. See IES files for details.
24. The FSIR-100 configuration tool is required to adjust parameters including high and low modes, sensitivity, time delay, cutoff and more. Consult your lighting representative at Cooper Lighting Solutions for more information.
25. Replace X with number of Light Squares operating in low output mode.
26. Enlighted wireless sensors are factory installed only requiring network components LWP-EM-1, LWP-GW-1 and LWP-PoE8 in appropriate quantities.
27. Not available with house side shield (HSS).
28. Not for use with 5NQ, 5MQ, 5WQ or RW optics. A black trim plate is used when HSS is selected.
29. CE is not available with the LWR, MS, MS/X, MS/DIM, BPC, PR or PR7 options. Available in 120-277V only.
30. One required for each Light Square.
31. Requires PR7.
32. Replace XX with sensor color (WH, BZ or BK.)
33. WAC Gateway required to enable field-configurability: Order WAC-PoE and WPOE-120 (10V to PoE injector) power supply if needed.
34. Smart device with mobile application required to change system defaults. See controls section for details.
35. Only product configurations with these designated prefixes are built to be compliant with the Buy American Act of 1933 (BAA) or Trade Agreements Act of 1979 (TAA), respectively. Please refer to DOMESTIC PREFERENCES website for more information. Components shipped separately may be separately analyzed under domestic preference requirements.
36. For BAA or TAA requirements, Accessories sold separately will be separately analyzed under domestic preference requirements. Consult factory for further information.
37. Available for 7-10 squares.

Product Specifications

Construction

- Extruded aluminum driver enclosure
- Heavy-wall, die-cast aluminum end caps
- Die-cast aluminum heat sinks
- Patent pending interlocking housing and heat sink

Optics

- Patented, high-efficiency injection-molded AccuLED Optics technology
- 16 optical distributions
- 3 shielding options including HSS, GRS and PFS
- IDA Certified (3000K CCT and warmer only)

Electrical

- LED drivers are mounted to removable tray assembly for ease of maintenance
- Standard with 0-10V dimming
- Standard with Cooper Lighting Solutions proprietary circuit module designed to withstand 10kV of transient line surge
- Suitable for operation in -40°C to 40°C ambient environments. Optional 50°C high ambient (HA) configuration.

Mounting

- Standard extruded arm includes internal bolt guides and round pole adapter
- Extended arms (EA and QMEA) may be required in 90° or 120° pole mount configurations, see arm mounting requirements table
- Mast arm (MA) factory installed
- Wall mount (WM) option available
- Quick mount arm (QM and QMEA) includes pole adapter and factory installed fixture mount for fast installation to square or round poles

Finish

- Super housing durable TGIC polyester powder coat paint, 2.5 mil nominal thickness
- Heat sink is powder coated black
- RAL and custom color matches available
- Coastal Construction (CC) option available

Warranty

- Five year warranty

Energy and Performance Data

Lumen Maintenance (TM-21)

Drive Current	Ambient Temperature	25,000 hours*	50,000 hours*	60,000 hours*	100,000 hours**	Theoretical L70 hours**
Up to 1A	25°C	99.4%	99.0%	98.9%	98.3%	> 2.4M

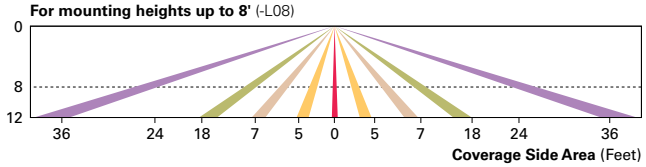
Control Options

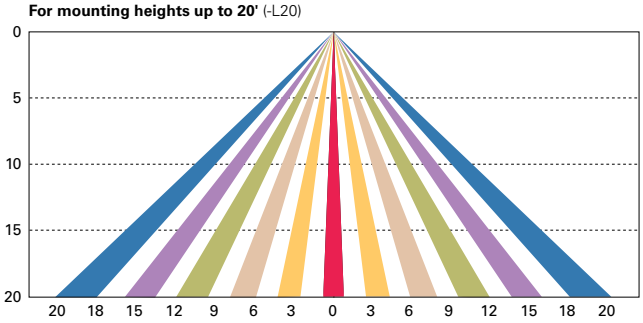


0-10V (DIM)
This fixture is offered standard with 0-10V dimming driver(s). The DIM option provides 0-10V dimming wire leads for use with a lighting control panel or other control method.

Photocontrol (BPC, PR and PR7)
Optional button-type photocontrol (BPC) and photocontrol receptacles (PR and PR7) provide a flexible solution to enable "dusk-to-dawn" lighting by sensing light levels. Advanced control systems compatible with NEMA 7-pin standards can be utilized with the PR7 receptacle.

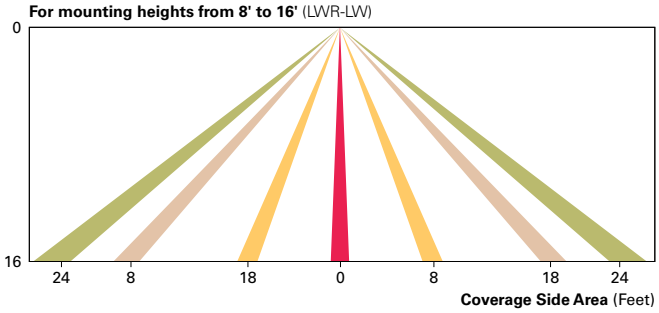
After Hours Dim (AHD)
This feature allows photocontrol-enabled luminaires to achieve additional energy savings by dimming during scheduled portions of the night. The dimming profile will automatically take effect after a "dusk-to-dawn" period has been calculated from the photocontrol input. Specify the desired dimming profile for a simple, factory-shipped dimming solution requiring no external control wiring. Reference the After Hours Dim supplemental guide for additional information.

Dimming Occupancy Sensor (SPB, MS/DIM-LXX, MS/X-LXX and MS-LXX)
These sensors are factory installed in the luminaire housing. When the SPB or MS/DIM sensor options are selected, the occupancy sensor is connected to a dimming driver and the entire luminaire dims when there is no activity detected. When activity is detected, the luminaire returns to full light output. The MS/DIM sensor is factory preset to dim down to approximately 50 percent power with a time delay of five minutes. The MS-LXX sensor is factory preset to turn the luminaire off after five minutes of no activity. The MS/X-LXX is also preset for five minutes and only controls the specified number of light engines to maintain steady output from the remaining light engines. SPB motion sensors require the Sensor Configuration mobile application by Wattstopper to change factory default dimming level, time delay, sensitivity and other parameters. Available for iOS and Android devices. The SPB sensor is factory preset to dim down to approximately 10% power with a time delay of five minutes. The MS/DIM occupancy sensors require the FSIR-100 programming tool to adjust factory defaults.

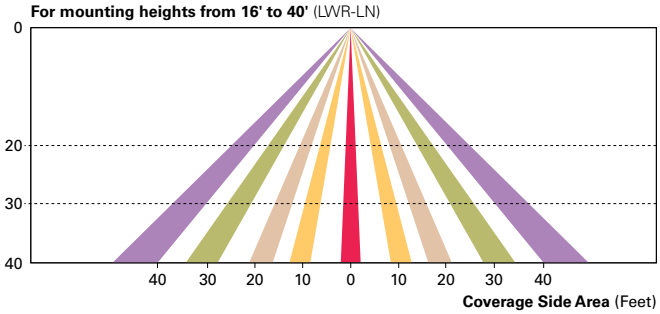


For mounting heights up to 8' (-L08)

For mounting heights up to 40' (-L40W)



For mounting heights up to 20' (-L20)



Enlighted Wireless Control and Monitoring System (LWR-LW and LWR-LN)
Enlighted is a connected lighting solution that combines a broad selection of energy-efficient LED luminaires with a powerful integrated wireless sensor system. The sensor controls the lighting system in compliance with the latest energy codes and collects valuable data about building performance and use. Software applications turn the granular data into information through energy dashboards and specialized apps that make it simple and help optimize the use of building resources, beyond lighting.

For mounting heights from 8' to 16' (LWR-LW)

For mounting heights from 16' to 40' (LWR-LN)

WaveLinx Wireless Outdoor Lighting Control Module (WOLC-7P-10A)
The 7-pin wireless outdoor lighting control module enables WaveLinx to control outdoor area, site and flood lighting. WaveLinx controls outdoor lighting using schedules to provide ON, OFF and dimming controls based on astronomic or time schedules based on a 7 day week.

LumenSafe Integrated Network Security Camera (LD)
Cooper Lighting Solutions brings ease of camera deployment to a whole new level. No additional wiring is needed beyond providing line power to the luminaire. A variety of networking options allows security integrators to design the optimal solution for active surveillance. As the ideal solution to meet the needs for active surveillance, the LumenSafe integrated network camera is a streamlined, outdoor-ready fixed dome that provides HDTV 1080p video. This IP camera is optimally designed for deployment in the video management system or security software platform of choice.

Synapse (DIM10)
SimplySNAP integrated wireless controls system by Synapse. Includes factory installed DIM10 Synapse control module and MS/DC motion sensor; requires additional Synapse system components for operation. Contact Synapse at www.synapsewireless.com for product support, warranty and terms and conditions.

SEQR
Negative Declaration

NOTICE OF DETERMINATION OF NON-SIGNIFICANCE

Lead Agency: Town of Amherst Planning Board

Project: SP-2022-02

Address: 5583 Main Street
Williamsville, NY 14221
(716) 631-7051

Date:

This notice is issued pursuant to Part 617 and Local Law #3-82, as amended, of the implementing regulations pertaining to Article 8 (State Environmental Quality Review) of the Environmental Conservation Law.

The Lead Agency has determined that the proposed action described below will not have a significant adverse effect on the environment.

Title of Action: Site Plan Review – SP-2022-02

SEQR Status: Unlisted

Description of Action: Proposed conversion of a portion of the existing 29,350 s.f. Philips Bros. retail/warehouse building for the Shatkin School of Dentistry at Daemen University (16,253 s.f..). Project includes an approximately 4,000 s.f. second floor addition, as well as redevelopment of Ridgewood Drive for private parking under a license agreement with the Town. Work will include the site improvements not specifically stated above, including, stormwater, utilities, grading, lighting, paving, and landscaping.

Location: 2525 Kensington Avenue, Amherst, Erie County

Petitioner: Philipps Brothers Supply Inc.

Attachment: SP-2022-02_draft neg dec_051922 (25490 : Sp-2022-02)

Reasons Supporting This Determination

Based on information submitted by the applicant including a Full Environmental Assessment Form (EAF) - Part I, (as amended) and a complete site plan application, a preliminary staff analysis was undertaken. Compared to the criteria listed in Section 617.7, all indications are that this action will not have a significant impact on the environment, as follows:

1. The project is not expected to cause a substantial adverse change in existing air quality, ground or surface water quality or quantity, or noise levels; a substantial increase in solid waste production; or a substantial increase in the potential for erosion, flooding, leaching or drainage problems. The Engineering Department on April 6, 2022 & April 28, 2022 reviewed the: Grading, Drainage and Utility Plans submitted on March 30, 2022 & April 25, 2022; Engineer's Report submitted on February 22, 2022; Erosion Control Plan submitted on March 30, 2022 and Geotechnical Report prepared by Barron & Associates, P.C. submitted on February 22, 2022.

2. The project will not result in the removal or destruction of large quantities of vegetation or fauna; or in significant adverse impacts to fish or wildlife species, habitats or other natural resources. The Planning Department reviewed a Landscape Plan submitted on March 30, 2022 & April 25, 2022 and determined that it meets or exceeds Zoning Ordinance requirements for greenspace. The Landscape Plan has or will have met all Zoning Ordinance and Town requirements for landscaping.

3. The project is not expected to create any material conflict with the Town Comprehensive Plan. The Building Department in their review of March 22, 2022 and the Planning Department in their review of April 1, 2022 has reviewed the application documents, along with the Geotechnical Report submitted on February 22, 2022 and determined in their review of March 22, 2022 that the subject project has or will have met all International Building Code - 2018 and Zoning Ordinance regulations.

4. The project is within an area identified by the State as having potential archaeological or historical significance. However, the site has been previously disturbed, therefore, the project will not impair the character or quality of important historical resources.

5. The project will not impair the character or quality of important aesthetic resources or of existing community or neighborhood character. The project is located in the General Business (GB) zoning district; neighboring uses are commercial, office and residential and zoned for commercial and residential use; therefore, the project is consistent with surrounding land use.

6. The proposed subject development will include a second floor addition for the continuation of the retail/warehouse use and dental school which will not cause a major change in the use of either the quantity or type of energy.

Attachment: SP-2022-02_draft neg dec_051922 (25490 : Sp-2022-02)

7. The project will not create any hazard to human health. The Fire Chief's Association on March 16, 2022 & May 3, 2022 has reviewed the project and has no objection to the approval of the site plan, as all requirements of this agency has or will have been met.

8. The project will not cause a substantial change in the use, or intensity of use, of land including agricultural, open space or recreational resources, or in its capacity to support existing uses as the approximate 4,400 s.f. (15%) increase in floor area will be consistent with the scale of surrounding land uses.

9. The proposed dental school may increase the number of people using the site over its previous level of use, this increase is not anticipated to result in a significant impact.

10. Review by the Town Traffic/Safety Board dated April 6, 2022 indicate/indicates that significant negative traffic impacts are not expected to result from the proposed project. The Erie County Division of Highways is requesting that the applicant prepare a signal warrant analysis to determine if a traffic signal may be necessary at Bentham Parkway East.

11. A coordinated review of the project has been undertaken by Town Departments including, in addition to those mentioned above, Highway on April 7, 2022 & May 4, 2022, Assessor on March 23, 2022, Plumbing Division on March 9, 2022, and Right-of-Way Agent on March 31, 2022. These reviews did not identify any potential significant adverse environmental issues and indicated that the proposal will not have a significant damaging impact on the environment.

12. Issues not specifically mentioned above and/or those not specifically reviewed were not raised by Town departments, outside agencies or the public and are not determined to cause significant negative environmental impacts.

DRAFT (5/19/22)
TOWN OF AMHERST
PLANNING BOARD
SITE PLAN RESOLUTION
SP-2022-02

PETITIONER

Philipps Bros. Supply Inc.
2525 Kensington Avenue
Amherst, NY 14226

PROPERTY LOCATION

2525 Kensington Avenue

WHEREAS, the Town of Amherst Planning Board on Thursday, May 19, 2022 held a public hearing on a Site Plan for a building addition and parking expansion (Philipps Bros./Shatkin School of Dentistry, and

WHEREAS, the Planning Board reviewed the plans and specifications for the proposed project, and

WHEREAS, the Site Plan was referred to the Town's various review agencies, and

WHEREAS, in accordance with Section 8-7-9 of the Zoning Ordinance, the Planning Board finds that:

A. The proposed site plan is consistent with the development plan if one is required.

B. The proposed site plan is consistent with the purpose and specific requirements of the Zoning Ordinance and generally consistent with the policies of the Comprehensive Plan.

C. Adequate services and utilities will be available prior to occupancy.

D. The site plan is consistent with all other applicable laws.

E. Pursuant to Local Law #3-82, as amended, the Planning Board has determined that the requirements of SEQR are complete and that the subject proposal is not expected to have a significant adverse effect on the environment.

F. Review by the US Army Corps of Engineers under Section 404 of the Clean Water Act may be waived because the parcel is developed.

NOW THEREFORE BE IT RESOLVED that in accordance with 6 NYCRR, Part 617 and Local Law #3-82, as amended, the Planning Board has issued a Negative Declaration attached hereto, and

BE IT FURTHER RESOLOVED that the Planning Board, in accordance with Part II, Chapter 83, Part IX, Section 1-2 of Town Law waives sidewalks required along Ridgewood Drive until required at some future time by the Town Board, and

DRAFT (5/19/22)
TOWN OF AMHERST
PLANNING BOARD
SITE PLAN RESOLUTION
SP-2022-02

PETITIONER	PROPERTY LOCATION
Philipps Bros. Supply Inc.	2525 Kensington Avenue

BE IT FURTHER RESOLVED that the Planning Board, in accordance with Section 8-7 of the Zoning Ordinance approves said Site Plan subject to the following conditions:

1. That the comments of the Zoning Enforcement Officer (ZEO) in the letter dated April 1, 2022 be addressed to the ZEO's satisfaction.

2. The requirements of §203-4-4-2 B of the Town Code are met for the proposed canopy or otherwise varied by the Town Zoning Board of Appeals as permitted by §203-9-3-2 of Town Code a minimum of 8.23 feet.

3. That the comments of the Planning Department in their letter dated April 1, 2022 be addressed to the Department's satisfaction.

4. That the comments of the Fire Chiefs' Association in their letter dated May 3, 2022 be addressed to their satisfaction.

5. That the comments of the Traffic Safety Board in their letter of May 5, 2022 be addressed to their satisfaction.

6. That a License Agreement/Land Lease regarding the use and improvement of Ridgewood Drive for private parking be approved by the Town Attorney and Highway superintendent.

7. That the consideration of signs is specifically excluded from this approval as they require a separate review and approval by the Town.

8. That all dumpsters/trash containers and all mechanical equipment, utility structures, multiple meter boards, generators, and similar appurtenances, including those which are mounted on any part of a primary structure shall be appropriately screened with a fence, wall, and/or landscaping. Provide gate on dumpster enclosure that shall be closed whenever dumpster is not being serviced, enclosure shall be high enough to screen the dumpster(s) within.

9. That as-built record drawings, including location of utilities, be provided to the Engineering Department prior to issuance of a Certificate of Occupancy by the Building Department.

SUBJECT: MAJOR SITE PLAN REVIEW, **SP-2022-02**; PROPOSED PHILIPPS BROS./SHATKIN SCHOOL OF DENTISTRY AND PARKING EXPANSION; PROPERTY LOCATED AT **2525 KENSINGTON AVENUE**.

Dear Sir/Madam:

At its meeting of May 19, 2022 the Planning Board voted to **adjourn** the subject site plan at your request until additional materials addressing parking, signal warrant analysis and receipt of revised plans.

This request will be placed on the next available Planning Board agenda once these materials are received by this Department.

Please submit revised plans or required materials at your convenience so they may be reviewed prior to being placed on a Planning Board agenda.

Should you have any questions regarding the Planning Board's decision, please do not hesitate to call us.

Very truly yours,

Daniel C. Howard, AICP
Planning Director

TOWN OF AMHERST

APPLICATION & REVIEW PROCEDURE

MAJOR SITE PLAN

MATERIALS MUST BE PROVIDED IN AN ELECTRONIC FORMAT THAT CONTAINS PDF FILES OF THE APPLICATION, EAF, SITE PLAN DRAWING SET SURVEY, LANDSCAPE PLAN, PRELIMINARY BUILDING FLOO PLANS / ELEVATIONS & ANY OTHER SUPPORTING INFORMATION. THIS MUST BE SUBMITTED WITH YOUR APPLICATION. APPLICATIONS WILL NOT BE TRANSMITTED WITHOUT THIS ELECTRONIC INFORMATION.

THIS ALSO APPLIES TO REVISED MATERIALS THAT AR SUBMITTED.

This application package includes the following:

- Application Procedures
- Application Form & Checklist
- Stormwater Pollution Prevention Plan Checklist
- Appendix A Town of Amherst EAF Addendum
- Appendix B Criteria for Required 8½" x 11" Sketches
- Appendix C Erie Sewer District No. 5 – Commercial / Industrial New & Existing Buildings Requirements

- IMPORTANT-

1. A pre-submittal consultation with Planning Department staff is *strongly recommended* prior to submitting an application. The pre-submittal meeting gives the applicant an opportunity to discuss with staff such items as:
   - classifying the action as a major site plan, minor site plan, or minor site plan adjustment;
   - determining what specific information will be required to be submitted with the application;
   - identifying and discussing issues that must be addressed as part of the SEQR review;
   - identifying any potential variances required to implement the project as proposed.

   An appointment is required for all meetings with Planning Department staff.

2. This site plan petition is subject to the requirements of 6 NYCRR Part 617, State Environmental Quality Review Act (SEQR), and Chapter 104 of the Town of Amherst Code, as amended. The Planning Board cannot make a SEQR determination unless a complete Environmental Assessment Form (EAF), including Town of Amherst EAF Addendum, and any required supplementary information such as traffic impact studies, archaeological reports, wetland delineations or geotechnical reports, are submitted. SEQR issues may be discussed with Planning Department staff at a recommended pre-submittal meeting. Unlisted Actions require a Short EAF; Type I Actions require a Full EAF. The following is a link to the NYSDEC website and fillable forms with instructions*:*
   http://www.dec.ny.gov/permits/6191.html.

3. **Review by the Town Design Advisory Board (DAB) is required for Major Site Plans located in the following Mixed-Use zoning districts:**

   Traditional Infill 2.5 (TI-2.5)
   Traditional Infill 4 (TI-4)
   Shallow Corridor 3 (SC-3)
   Deep Corridor 3 (DC-3)
   Deep Corridor 5 (DC-5)
   Center 2.5 (CTR-2.5)
   Center 5 (CTR-5)
   Center 8 (CTR-8)

   The application for DAB review is required to be filed in conjunction with the major site plan application.

Attachment: SP-2022-02 application102022 (25490 : Sp-2022-02)

4. The application shall be executed or consented to in writing by the owner of the property.

5. **Any variances from the Zoning Board of Appeals, or any decision from the Town Board (e.g. removal of deed restrictions) must be obtained prior to action by the Planning Board on a Site Plan application.**

6. Submittal of an application grants permission to Town staff and Planning Board members to access the parcel(s) under consideration.

7. All site plan drawings must be prepared by a Registered Architect, Professional Engineer, Landscape Architect, or Land Surveyor (as applicable) licensed to practice in New York State.

8. If you wish to include a Coordinated Sign Plan application with the site plan petition, a separate application must be completed. Contact the Planning Department for a copy of a Coordinated Sign Plan application package.

9. All drawings should be no larger than 24 in. x 36 in. If site characteristics warrant larger plan sheets, they may be accepted subject to Planning Department concurrence. All drawings must also reserve a 4 in. x 6 in. area in the lower right hand corner for official Town use.

APPLICATION PROCEDURES

1. Applicant secures application package from the Planning Department, 5583 Main Street, Williamsville, NY 14221. (716) 631-7051. Forms are also available online at: www.amherst.ny.us, (keyword: Planning).

2. Applicant prepares information as required on the Site Plan Submittal Checklist, attached. NOTE: Some proposals may not require all items on the checklist; please verify with the Planning Department.

3. Applicant schedules an appointment with the Planning Department to review the following:
   - a complete set of site plan drawings, preliminary building elevations and floor plans (no larger than 24" x 36" in size)
   - Environmental Assessment Form (EAF) & Town EAF Addendum
   - any supporting reports and materials
   - verification from the Town Assessor that the address in the application is correct

4. Applicant schedules an application submittal appointment with the Planning Department. NO SITE PLAN WILL BE ACCEPTED FOR REVIEW WITHOUT A PRE-SET SUBMITTAL APPOINTMENT.

5. At the submittal appointment, applicant provides fourteen (14) complete and collated sets of drawings and application information to the Planning Department **(materials will not be accepted unless folded into 9" x 12" in size),** including**:**
   - application form
   - Environmental Assessment Form (EAF)
   - supporting reports / materials
   - complete set of site plan drawings, preliminary building elevations and floor plans (**at least one (1) set of drawings must bear a raised or wet seal and signature of the design professional** who prepared the plans; the remaining copies may be submitted with a facsimile of the seal and signature)
   - digital files of all materials in pdf format
   - an 8½" x 11" reduction of the sketch plan or plat drawing (see Appendix B)

Attachment: SP-2022-02 application102022 (25490 : Sp-2022-02)

6. After approval for filing by the Planning Department, applicant submits all necessary fees to the Town Clerk. **(See Schedule of Fees on first page of application and make checks payable to: Town of Amherst.)**

7. The applicant returns a copy of the filing receipt to the Planning Department.

8. The Planning Department transmits remaining thirteen (13) copies of the application and supporting materials to:
   - Assessor
   - Commissioner of Building
   - Town Engineer
   - Superintendent of Highways
   - Traffic/Safety Board
   - Fire Chiefs' Association
   - Plumbing Division
   - Right-of-Way Agent
   - Police Department (if applicable)
   - Zoning Enforcement Officer
   - Other Town and outside agencies, as applicable

9. Within 30 days of its receipt of the complete application for Site Plan approval, each agency completes its review and notifies the Planning Department in writing of its comments or recommendations as required by Ordinance.

10. The applicant may be required to submit revised plans, reports, or materials to address review agency comments. The procedures for submittal of revised plans are as follows:

    - A cover letter addressing all comments received to date is required.
    - "Highlight" the area of change on the drawings and provide a notation describing the change.
    - Revised plans/materials are required. Planning staff should be contacted to determine the number of sets needed.
    - All revised plans and materials must also be provided in an electronic format that contains pdf files of the revised information.

11. The Planning Board reviews the EAF to determine whether a Draft Environmental Impact Statement (DEIS) is required. The petitioner will be advised in the event that a DEIS is required and afforded the opportunity to prepare it. If the petitioner declines, the Planning Board will prepare the DEIS at the petitioner's expense. The public hearing will be held on the DEIS concurrently with the Planning Board hearing on the application.

12. Planning Board Meeting Procedures:

    The applicant or representative presents the project at the public hearing before the Planning Board and is available to answer any questions. The Planning Board may take any of the following actions:

    - Adjourn the hearing to a future Planning Board meeting (hearing remains open).
    - Close the hearing and table action on the site plan to a future Planning Board meeting. (The Planning Board may remove the item from the agenda until such time as all required information is provided.)
    - Close the hearing and make a decision on the site plan.

    All determinations on matters before the Planning Board are made after all public hearings on that meeting's agenda are completed.

Attachment: SP-2022-02 application102022 (25490 : Sp-2022-02)

13. A copy of the Planning Board's determination will be provided to the applicant, his / her representative, the Building Commissioner and the Town Clerk approximately 1 week following the Planning Board meeting at which it was heard.

14. If the Planning Board approves a Site Plan with conditions, the Planning Department will work with the applicant to ensure that all conditions of the approval are satisfactorily addressed. When all conditions are satisfied, the applicant submits **seven (7) final copies** of the complete set of all site plan drawings, folded into 9" x 12". For site plans in the Mixed-Use zoning districts, building elevations will also be required.

    All 7 sets must have original wet seals and include the required 4 in. x 6 in area in the lower right hand corner for official Town use. These drawings will be stamped and signed "Approved" by the Planning Director and transmitted to Town Departments for their files and use.

15. A building permit will not be issued by the Building Department until the stamped and signed Site Plan is issued by the Planning Director.

NOTE: Please check with the Planning Department to determine the deadline date for filing applications. Due to the public hearing notice requirements and department reviews, no site plan application will be placed on the Planning Board agenda after the deadline for filing has closed. Scheduling may be delayed if an application is incomplete.

Site Plan Submittal Requirements and Checklist

The following checklist outlines the information required by the Planning Department to accept a Site Plan application for review. ***It is strongly recommended that you make an appointment with Planning Staff to determine which items apply to your application***.

Item No.	Item	Submitted	Official use
I Basic Drawing Information			
1.0	**Drawing size not to exceed 24" x 36"**		
2.0	**Title of Drawing**		
3.0	**Name and address of Applicant**		
4.0	**Name of person preparing drawing**		
5.0	**Wet seal/raised seal and signature of NYS licensed architect, engineer, landscape architect, or surveyor (as applicable)**		
6.0	**Project address**		
7.0	**Zoning of subject property and adjacent parcels**		
8.0	**North point, scale, date, and revision date(s)**		
9.0	**4" x 6" reserved area in lower right hand corner for official Town use**		
II Structures, Paved Areas, & Open Space			
1.0	**Existing and Proposed Streets**		
1.1	Names of all existing and proposed streets		
1.2	Width and radii of proposed curb-cuts		
1.3	Existing curb-cuts on adjacent and opposite properties		
1.4	Show ROW width, pavement dimensions, lane widths, pavement markings, and proposed signage on proposed streets		
1.5	Show proposed ROW consistent with planned NYSDOT, Erie County, or Town road projects (if applicable)		
1.6	Show location of proposed cross access to adjacent parcels along with a draft easement		
1.7	Designation of Fire Lanes (if applicable)		
1.8	Fire apparatus access roads		
1.9	Label any proposed roads as public or private		
1.10	Location and dimensions of sidewalks		
1.11	Typical cross sections and profiles of proposed streets, pedestrian walkways, and bikeways		
2.0	**Proposed Structures**		
2.1	Location and complete dimensions of proposed structures		
2.2	Setback dimensions of structure(s) to all property lines		
2.3	Proposed use of structures		
2.4	Gross square feet area of each structure		
2.5	Location of all building entrances		
2.6	Indicate type of roof construction/materials		
2.7	Location, height, and design detail of existing and proposed fences and walls		
2.8	Location of light standards and building mounted lights		
2.9	Location of dumpster and detail of dumpster enclosure with gate		
2.10	Layout and dimensions of the lot(s) proposed for development		

Attachment: SP-2022-02 application102022 (25490 : Sp-2022-02)

Town of Amherst Planning Department 5583 Main Street Williamsville-NY-14221
(716) 631-7051- Fax: (716) 631-7153

Item No.	Item	Submitted	Official use
II Structures, Paved Areas, & Open Space (cont'd)			
3.0	**Floor Plans with individual rooms and spaces labeled** (fully dimensioned)		
4.0	**Building elevations with height dimensions from finished grade to the highest point of the roof and to midpoint of gable or hip of a pitched roof.** (fully dimensioned)		
4.1	Show screening of mechanical equipment		
5.0	**Parking/Loading/Stacking Areas**		
5.1	Location and complete dimensions of all paved areas		
5.2	Setback dimensions of all paved areas to property lines		
5.3	Dimension of typical parking space and drive aisles		
5.4	Location and layout of handicapped parking spaces & access aisles		
5.5	Detail of vertical signage for handicapped parking and access aisles		
5.6	Indicate minimum parking requirement & number of spaces provided		
5.7	Proposed signage for directing and guiding traffic		
5.8	Curb cut permits from NYS, Erie County, or Town (if applicable)		
5.9	Pedestrian connections (from proposed structures to public sidewalk network)		
6.0	**Location and proposed development of all open spaces, including parks, playgrounds, and open reservations**		
III Utilities and Drainage			
1.0	**Engineers Report** (bound separately from the Stormwater Pollution Prevention Plan [SWPPP])		
1.1	Stamped/sealed and signed by NYS licensed architect or professional engineer		
1.2	Proposed water service sizing, RPZ pressure and fire safety flow and pressure calculations		
1.3	Proposed sanitary sewer facility load calculations (avg. & peak flows) including calculation of the peaking factor		
1.4	Proposed storm drainage facility calculations (see information included with this application)		
2.0	**Grading Plan**		
2.1	Existing and proposed grades indicated (proposed grades may not exceed 1 on 3)		
3.0	**Water Service**		
3.1	Location, size and material of existing and proposed facilities		
3.2	Location of existing and proposed fire hydrant location(s)		
3.3	Indicate use of sprinklers, location of Fire Department connection, and proposed fire protection systems		
3.4	Existing and proposed meter/RPZ size and location		
3.5	Applicable construction details		
4.0	**Sanitary Sewers**		
4.1	Locations, sizes, slopes, inverts, and materials of all existing and proposed facilities		

Attachment: SP-2022-02 application102022 (25490 : Sp-2022-02)

Town of Amherst Planning Department 5583 Main Street Williamsville-NY-14221
(716) 631-7051- Fax: (716) 631-7153

Item No.		Submitted	Official use
III Utilities and Drainage (cont'd)			
4.2	Applicable construction details		
4.3	Proposed water/oil/grease interceptor sizing calculations by a professional engineer (if applicable)		
5.0	**Storm Drainage**		
5.1	Locations, sizes, slopes, inverts, and materials of existing and proposed storm drainage facilities		
5.2	Connection of roof drains to proposed drainage system		
5.3	Applicable Town Standard construction details		
5.4	Existing and proposed swales and ditches		
5.5	Detention area cross-section and high-level elevations		
5.6	County and State approval for tie-in to existing sewers		
6.0	**Stormwater Pollution Prevention Plan (SWPPP) as applicable** (bound separately from the Engineer's Report) **See attached checklist.**		
7.0	**Natural Gas Service**		
8.0	**Location of transformers, generators and other mechanical equipment; include detail drawings (if applicable)**		
9.0	**Downstream Sanitary Capacity Analysis (DSCA) Report** (must be submitted if proposed average flows are greater than 2,500 gallons per day)		
9.1	The DSCA Report must include a detailed downstream sewer capacity analysis and the calculations of and commitment to (via Developer commitment letter) the required financial contribution to the Town's I/I mitigation fund based on peak flow conditions. The contribution must be based on $250 per gallon per minute of mitigated flow		
IV Lighting Plan			
1.0	**Photometric plan showing light spread in foot candles at property lines**		
1.1	Detail of all light standards, including dimension of height from finished grade		
1.2	Detail of all exterior lighting fixtures		
V Landscape Plan			
1.0	**Wet/raised seal and signature of a licensed Landscape Architect**		
2.0	**Provide a calculation of the total Parking area and a calculation of interior parking area in square feet and as a percentage**		
3.0	**Indicate location, size, number and type of proposed landscape materials**		
4.0	**Indicate location, type and size of <u>all</u> existing trees 4" caliper or larger and indicate which will be removed or retained**		
VI Other Required Information/General Requirements			
1.0	**Complete boundary survey that includes all existing structures, acreage, legal description with reference to a property line, street, or other known feature, and easements plotted to scale by a NYS licensed land surveyor**

TOWN OF AMHERST
State Environmental Quality Review
ENVIRONMENTAL ASSESSMENT FORM
-- ADDENDUM --

1. For each applicable category of proposed <u>new</u> structures, including additions to existing structures, provide the following information for all soil types on the project site (*according to Soil Survey of Erie County, NY; Table 11, Building Site Development, pp 294-305):*

Soil Name	Shallow excavations	Dwellings without basements	Dwellings with basements	Small commercial buildings	Local roads and streets
Urban Soil	severe	severe	severe	severe	severe

2. If the Soil survey indicates either "severe" or "moderate" suitability for the proposed types of construction, a geotechnical and hydrological analysis based on one test per 3.5 acres of project area must be provided (per Town Board resolution, 3/17/03, amended 6/16/03).

   ____ Geotechnical report attached _____ Not applicable

3. Is your property located: On Youngs Road between Dodge and Klein Roads? □ Yes X No
   On Wehrle Dr. between Spindrift Dr. and Oakwood Rd? □ Yes X No
   If so, the property may be within an area of the Town that is affected by a moratorium on connections to the sanitary sewer system.

4. Are there alternative locations on the site for this project? □ Yes X No

5. Location and size of real property owned by petitioner within one (1) mile of subject proposal:
   No

6. Are you aware of current or future plans or intentions by others in the Town of Amherst to develop property within 1000± ft. of the present project request: □ Yes X No
   Describe

   (Potential environmental impacts from adjacent or nearby projects undergoing the approval process will receive a coordinated environmental review to determine cumulative effects on common receivers (e.g. traffic and drainage corridors) and other relevant environmental concerns.)

7. Maximum number of vehicular trips to be generated per peak hour upon completion of project Reference traffic study
   Source:

8. Will blasting occur during construction? □ Yes X No

9. Does the project propose to connect and be tributary to the public sanitary sewer system? X Yes □ No

10. Proposed net additional gallons per day (gpd) of sanitary sewer discharge upon completion of project:
    _1120_____ average flow _4400_____ peak flow.
    (Average flows of 2,500 gpd or greater will require an Engineer's Report that includes a detailed downstream sewer capacity analysis and the identification of and commitment to required I/I offset work during peak wastewater flow conditions.)

11. Based on the Town's *2011 Reconnaissance Level Survey of Historic Resources,* is your property 'blue-rated' for historic significance? □ Yes X No

Attachment: SP-2022-02 application102022 (25490 : Sp-2022-02)

Short Environmental Assessment Form
Part 1 - Project Information

Instructions for Completing

Part 1 – Project Information. The applicant or project sponsor is responsible for the completion of Part 1. Responses become part of the application for approval or funding, are subject to public review, and may be subject to further verification. Complete Part 1 based on information currently available. If additional research or investigation would be needed to fully respond to any item, please answer as thoroughly as possible based on current information.

Complete all items in Part 1. You may also provide any additional information which you believe will be needed by or useful to the lead agency; attach additional pages as necessary to supplement any item.

Part 1 – Project and Sponsor Information

Name of Action or Project:
Shatkin School of Dentistry / Philipps Bros Supply

Project Location (describe, and attach a location map):
2525 Kensington Ave at Bentham Pkwy and Ridgewood Drive

Brief Description of Proposed Action:
Shatkin School of Dentistry at Daemen College & Institute for Mobility and Technology on 1.2 acre existing developed parcel -plus- redevelopment of Ridgewood Drive into a new private paved surface parking lot.

Name of Applicant or Sponsor:	Telephone: 716-839-4800
Pat Philipps	E-Mail: pphilipps@philippsbros.com

Address:
2525 Kensington Avenue

City/PO:	State:	Zip Code:
Amherst	NY	14226

	NO	YES
1. Does the proposed action only involve the legislative adoption of a plan, local law, ordinance, administrative rule, or regulation? If Yes, attach a narrative description of the intent of the proposed action and the environmental resources that may be affected in the municipality and proceed to Part 2. If no, continue to question 2.	☑	☐
2. Does the proposed action require a permit, approval or funding from any other government Agency? If Yes, list agency(s) name and permit or approval: Amherst Site Plan, building permit	☐	☑

3. a. Total acreage of the site of the proposed action? 1.24 acres
   b. Total acreage to be physically disturbed? 0.50 acres
   c. Total acreage (project site and any contiguous properties) owned or controlled by the applicant or project sponsor? 1.24 acres

4. Check all land uses that occur on, are adjoining or near the proposed action:

5. ☐ Urban ☐ Rural (non-agriculture) ☐ Industrial ☑ Commercial ☑ Residential (suburban)
   ☐ Forest ☐ Agriculture ☐ Aquatic ☐ Other(Specify):
   ☐ Parkland

Attachment: SP-2022-02 application102022 (25490 : Sp-2022-02)

	NO	YES	N/A
5. Is the proposed action,			
a. A permitted use under the zoning regulations?	☐	☐	☑
b. Consistent with the adopted comprehensive plan?	☐	☐	☑

	NO	YES
6. Is the proposed action consistent with the predominant character of the existing built or natural landscape?	☐	☑
7. Is the site of the proposed action located in, or does it adjoin, a state listed Critical Environmental Area?	NO	YES
If Yes, identify: _____	☑	☐
8. a. Will the proposed action result in a substantial increase in traffic above present levels?	☑	☐
b. Are public transportation services available at or near the site of the proposed action?	☐	☑
c. Are any pedestrian accommodations or bicycle routes available on or near the site of the proposed action?	☐	☑
9. Does the proposed action meet or exceed the state energy code requirements?	NO	YES
If the proposed action will exceed requirements, describe design features and technologies:		
REFER TO ARCHITECTURAL SET	☐	☑
10. Will the proposed action connect to an existing public/private water supply?	NO	YES
If No, describe method for providing potable water: _____	☐	☑
11. Will the proposed action connect to existing wastewater utilities?	NO	YES
If No, describe method for providing wastewater treatment: _____	☐	☑
12. a. Does the project site contain, or is it substantially contiguous to, a building, archaeological site, or district which is listed on the National or State Register of Historic Places, or that has been determined by the Commissioner of the NYS Office of Parks, Recreation and Historic Preservation to be eligible for listing on the State Register of Historic Places?	☑	☐
b. Is the project site, or any portion of it, located in or adjacent to an area designated as sensitive for archaeological sites on the NY State Historic Preservation Office (SHPO) archaeological site inventory?	☐	☑
13. a. Does any portion of the site of the proposed action, or lands adjoining the proposed action, contain wetlands or other waterbodies regulated by a federal, state or local agency?	☑	☐
b. Would the proposed action physically alter, or encroach into, any existing wetland or waterbody?	☑	☐
If Yes, identify the wetland or waterbody and extent of alterations in square feet or acres: _____		

Attachment: SP-2022-02 application102022 (25490 : Sp-2022-02)

14. Identify the typical habitat types that occur on, or are likely to be found on the project site. Check all that apply:

☐ Shoreline ☐ Forest ☐ Agricultural/grasslands ☐ Early mid-successional

☐ Wetland ☐ Urban ☑ Suburban

	NO	YES
15. Does the site of the proposed action contain any species of animal, or associated habitats, listed by the State or Federal government as threatened or endangered?	☑	☐
16. Is the project site located in the 100-year flood plan?	☑	☐
17. Will the proposed action create storm water discharge, either from point or non-point sources?	☐	☑
If Yes,		
a. Will storm water discharges flow to adjacent properties?	☑	☐
b. Will storm water discharges be directed to established conveyance systems (runoff and storm drains)?	☐	☑
If Yes, briefly describe: EXISTING PUBLIC DRAINAGE IN RIDGEWOOD DRIVE		
18. Does the proposed action include construction or other activities that would result in the impoundment of water or other liquids (e.g., retention pond, waste lagoon, dam)?	☑	☐
If Yes, explain the purpose and size of the impoundment:		
19. Has the site of the proposed action or an adjoining property been the location of an active or closed solid waste management facility?	☑	☐
If Yes, describe:		
20. Has the site of the proposed action or an adjoining property been the subject of remediation (ongoing or completed) for hazardous waste?	☑	☐
If Yes, describe:		

I CERTIFY THAT THE INFORMATION PROVIDED ABOVE IS TRUE AND ACCURATE TO THE BEST OF MY KNOWLEDGE

RE: Proposed Shatkin School of Dentistry, Town of Amherst, NY
Signal Warrant Analysis Letter

Dear Ms. Wilkolaski:

This study performed a traffic signal warrant analysis at the Kensington Avenue/Bentham Parkway intersection. Turning movement counts were performed by SRF Associates at the study intersection on Tuesday, June 2, 2022, from 7:00 AM to 7:00 PM.

The need for a traffic signal is determined by comprehensive investigation of existing traffic conditions and physical characteristics at the location. The Standard Specifications Update for the adoption of the National MUTCD (FHWA) and the New York State Supplement were reviewed to investigate the need for a traffic control signal at this location. There are nine (9) warrants, and they are as follows:

Warrant 1	Eight-Hour Vehicular Volume
Warrant 2	Four-Hour Vehicular Volume
Warrant 3	Peak Hour Vehicular Volume
Warrant 4	Pedestrian Volume
Warrant 5	School Crossing
Warrant 6	Coordinated Signal System
Warrant 7	Crash Experience
Warrant 8	Roadway Network
Warrant 9	Intersection Near a Grade Crossing

All supporting materials are included in the Attachments. Prior to applying warrants, the MUTCD suggests consideration of the effects of right-turn volumes on the minor street approach, and a reduction taken in the number of right turning vehicles, where appropriate. A certain number of right-turn vehicles will execute a right-turn on the red (RTOR) indication without actuating a traffic signal (if one were in place). Generally, up to 25% of right-turn vehicles may be assumed to execute at RTOR maneuver and should, therefore, be subtracted for the purposes of the warrant analysis. However, for purposes of this analysis, no adjustments were made to remain conservative. The posted speed limit on Kensington Avenue is 35 MPH, thus 100% thresholds in Table 4C-1, Figure 4C-1, and Figure 4C-3 are used as a basis for analysis.

1. Warrant 1 is subdivided into Condition A and Condition B. The Minimum Vehicular Volume, Condition A, is intended for application at locations where a large volume of intersecting traffic is the principal reason to consider installing a traffic control signal. The Interruption of Continuous Traffic, Condition B, is intended for application at locations where Condition A is

Attachment: SP-2022-02 application102022 (25490 : Sp-2022-02)

not satisfied and where the traffic volume on a major street is so heavy that traffic on a minor intersecting street suffers excessive delay or conflict in entering or crossing the major street. These conditions are satisfied when, for each of any eight hours of an average day, anticipated volumes on the artery and side road are more than the minimum values presented in Tables 4C-1 in the MUTCD. **Based upon these calculations, Conditions A and B are not satisfied.**

2. Warrant 2, the Four-Hour Vehicular Volume signal warrant conditions, are intended to be applied where the volume of intersecting traffic is the principal reason to consider installing a traffic control signal. This warrant stipulates that for any four hours of a day, minimum threshold volumes are met on the artery and side road. **This warrant is partially satisfied for two of the four hours.**

3. Warrant 3 is intended for application where minor street traffic suffers undue delay in entering or crossing the major street for one hour of the day. It stipulates that the warrant shall be applied in unusual cases (high-occupancy vehicle facilities – i.e., shopping centers, office parks) where a large number of vehicles discharge over a short period of time. **This warrant is not satisfied.**

4. Warrant 4 is met when pedestrians experience excessive delay in crossing the major street because the traffic volumes are so heavy. The intersection currently has low pedestrian activity. **This warrant is not satisfied.**

5. Warrant 5 is met when a sufficient number of gaps in traffic do not exist for certain size and frequency of school children to cross the major roadway. **This warrant is not satisfied.**

6. Warrant 6 is met when a traffic signal is needed to maintain progressive movement and vehicle platooning in a coordinated signal system. **This warrant is not satisfied.**

7. Warrant 7 is intended for application where the severity and frequency of crashes are the principal reasons to consider installing a traffic control signal. The need for a traffic control signal shall be considered if *all* of the following criteria are met:

    a. Adequate trial of alternatives with satisfactory observance and enforcement has failed to reduce crash frequency. **Condition A is not satisfied.**

    b. Five (5) or more reported crashes, of types susceptible to correction by a traffic signal, to have occurred within a 12-month period, each crash involving a personal injury or property damage. Five (5) crashes were documented in the crash analysis over a 12-month period. One crash was animal-related, and one was a medical condition. The three remaining crashes were right angle (2) in the eastbound and westbound directions. These drivers failed to yield the right of way. The last crash was a northbound rear end incident in which the driver of the trailing vehicle was following too closely. **Condition B is not satisfied.**

    Given that both Conditions A and B are not satisfied, this warrant is not satisfied.

8. Warrant 8 is met when a traffic signal might encourage concentration and organization of traffic flow on a roadway network. This warrant primarily focuses on two major intersecting roadways, which is not the case at the study intersection. **This warrant is not satisfied.**

Attachment: SP-2022-02 application102022 (25490 : Sp-2022-02)

9. Warrant 9 is applicable when an intersection is located near an at-grade rail crossing. **This warrant is not satisfied.**

TABLE 1: TRAFFIC SIGNAL WARRANT SUMMARY

WARRANT	SATISFACTION OF WARRANTS
1A – Eight-Hour Condition A	NOT SATISFIED
1B – Eight-Hour Condition B	NOT SATISFIED
2 – Four-Hour	NOT SATISFIED
3 – Peak-Hour	NOT SATISFIED
4 – Pedestrian Volume	NOT SATISFIED
5 – School Crossing	NOT SATISFIED
6 – Coordinated Signal System	NOT SATISFIED
7 – Crash Experience	NOT SATISFIED
8 – Roadway Network	NOT SATISFIED
9 – Intersection Near a Grade Crossing	NOT SATISFIED

Table 1 summarizes the signal warrants at the study intersection under full build conditions and the results of the investigation. The results show that a three-color traffic signal is not warranted.

If you have any questions or require additional information, please do not hesitate to contact our office.

Sincerely,
SRF Associates, D.P.C.

David Kruse, AICP, PTP
Senior Transportation Planner

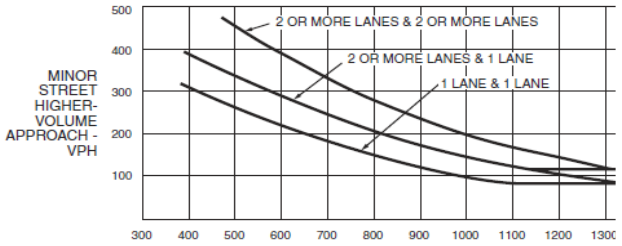
Table 4C-1. Warrant 1, Eight-Hour Vehicular Volume

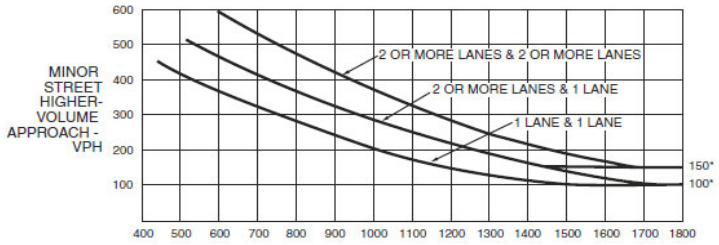
Condition A—Minimum Vehicular Volume



Number of lanes for moving traffic on each approach		Vehicles per hour on major street (total of both approaches)				Vehicles per hour on higher-volume minor-street approach (one direction only)			
Major Street	Minor Street	100%[a]	80%[b]	70%[c]	56%[d]	100%[a]	80%[b]	70%[c]	56%[d]
1	1	500	400	350	280	150	120	105	84
2 or more	1	600	480	420	336	150	120	105	84
2 or more	2 or more	600	480	420	336	200	160	140	112
1	2 or more	500	400	350	280	200	160	140	112

Condition B—Interruption of Continuous Traffic

Number of lanes for moving traffic on each approach		Vehicles per hour on major street (total of both approaches)				Vehicles per hour on higher-volume minor-street approach (one direction only)			
Major Street	Minor Street	100%[a]	80%[b]	70%[c]	56%[d]	100%[a]	80%[b]	70%[c]	56%[d]
1	1	750	600	525	420	75	60	53	42
2 or more	1	900	720	630	504	75	60	53	42
2 or more	2 or more	900	720	630	504	100	80	70	56
1	2 or more	750	600	525	420	100	80	70	56



[a] Basic minimum hourly volume
[b] Used for combination of Conditions A and B after adequate trial of other remedial measures
[c] May be used when the major-street speed exceeds 40 mph or in an isolated community with a population of less than 10,000
[d] May be used for combination of Conditions A and B after adequate trial of other remedial measures when the major-street speed exceeds 40 mph or in an isolated community with a population of less than 10,000

Figure 4C-1. Warrant 2, Four-Hour Vehicular Volume

*Note: 115 vph applies as the lower threshold volume for a minor-street approach with two or more lanes and 80 vph applies as the lower threshold volume for a minor-street approach with one lane.

Figure 4C-3. Warrant 3, Peak Hour

*Note: 150 vph applies as the lower threshold volume for a minor-street approach with two or more lanes and 100 vph applies as the lower threshold volume for a minor-street approach with one lane.

RE: Proposed Shatkin School of Dentistry, Town of Amherst, NY
Shared Parking Demand Assessment Letter

Dear Mr. Ulatowski:

This technical letter provides a Shared Parking Demand Assessment related to the proposed project located at 2525 Kensington Avenue in the Town of Amherst, NY in connection with a request for the approval of an Alternate Parking Study per Section 7-1-7A of the Zoning Code.

When evaluating the parking supply needs for the proposed project, our firm projected the parking demand considering shared parking (mixed-use) principles using nationally accepted methodology developed, in part, by the Urban Land Institute (ULI), Institute of Transportation Engineers (ITE), International Council of Shopping Centers (ICSC), and National Parking Association (NPA). Specifically, the assessment includes an estimation of future parking demands for the proposed project using national standards for similar developments, as documented by the ITE Parking Generation Manual (5th Edition).

This evaluation then provides a comparison to Town requirements, as set forth within Section 7-1-6A of the Town of Amherst's Zoning Code.

All supporting materials are included as an attachment to this letter.

PROJECT DESCRIPTION

Currently, the ±29,350 square foot (SF) building is owned and occupied by Phillips Brothers Supply, a business that has been in operation for over 30 years. Under the proposed development Phillips Brothers Supply will have ±5,662 SF of retail space and ±11,928 SF of warehouse space.

Shatkin Dental Health is developing ±16,160 SF of space which includes a ±4,400 SF of a new mezzanine that will be constructed within part of the existing warehouse space. The Shatkin Dental Health space will be used for a new dental school associated with Daemen College.

The project will provide 79 surface parking spaces and 10 bicycle parking spaces.

Relative to the proposed uses, the following information was obtained from the applicant:

Daemen College Dental School (8-hour day)
Employees: 8 general staff and 10 teaching staff.

Attachment: SP-2022-02 application102022 (25490 : Sp-2022-02)

Students: 40-45 students for 8 hours each day. Students are classified by year (e.g., year one, year two, year three). Year one consists of approximately 20-25 students; year two consists of approximately 20-25 students; and year three consists of approximately 20 students. Year one students will not use the proposed facility. Year two and three students will use the site. Based upon information provided by the applicant and Daemen University, all students traveling to the site will use a shuttle service.

According to the applicant, at most there will be 21 patients at one time and 21 patients will occur four times during day.

PARKING REQUIREMENTS IN THE TOWN OF AMHERST ZONING CODE

Section 7-1-6A of the Zoning Code sets forth the off-street parking requirements for different categories of land uses. Strict application of the parking requirements per Section 7-1-6A of the Zoning Code is depicted in **Table 1**.

TABLE 1: TOWN CODE PARKING REQUIREMENTS

USE TYPE	REQUIRED PARKING RATIO	SIZE	TOTAL REQUIRED PARKING SPACES
Retail Sales, >2,000 SF and <25,000 SF	5.5 per 1,000 SF of net floor area	±4,247 SF	24
Warehouse	1 per 1,000 SF of gross floor area	±11,928 SF	12
Medical Office	1 per 150 SF of net floor area	±12,120 SF	81
Total Parking Spaces Required			**117**

Note:
1. Net Floor Area = For a multistory, multiple tenant building — 75 percent of gross floor area.

Strict application of the off-street parking standards in the Zoning Code results in a parking requirement of 117 spaces, as depicted in **Table 1**. The total number of parking spaces to be provided is 79 spaces. Thus, there is a deficit of 38 parking spaces per strict application of Section 7-1-6A of the Zoning Code.

SHARED PARKING PRINCIPLES

Shared parking studies are conducted to establish the total number of spaces necessary by mixed-use developments to effectively serve expected parking demands. The shared parking concept builds upon the premise that land uses in a mixed-use development often do not share the same peak demand period, so spaces can be shared between the different land uses during different peak periods. Each land use typically has a peak demand period where it would occupy the maximum number of spaces that the use requires and an off-peak period where a lesser percentage of the maximum spaces would be occupied; be it by time of day, day of week, or even month of the year. This allows for the project to provide fewer spaces than would be required if the land uses on a project site were to be treated separately with individual parking demands. The concept of shared parking is well recognized within the real estate and regulatory community and is proven to work.

SHARED PARKING METHODOLOGY

To estimate the number of parking spaces required for the proposed project, this assessment used ULI and ITE methodology for shared parking. This methodology is utilized by transportation engineers and planners when evaluating the parking demand for a mixed-use project. The ULI Shared Parking 3rd Edition includes state-of-the-art practice methodologies for determining parking demand in these types of projects. Accompanying the publication is an interactive Shared Parking Calculation Model

Attachment: SP-2022-02 application102022 (25490 : Sp-2022-02)

(Model) that is used to estimate the shared parking demand. However, given that the Model does not have a warehouse land use, parking accumulation percentages for each land use were obtained from the ITE Parking Generation Manual.

Based upon the information provided by the applicant, there will be a maximum of 18 dental school staff utilizing on-site parking. The students will be shuttled to the site. Additionally, up to 21 patients may be on-site at any one time (up to four times a day). Therefore, based upon all site uses, a conservative 62 spaces may be expected to be required to meet the demands generated by the proposed dental school.

The peak hour demand is projected to occur at 10:00 AM on a typical weekday. The projected peak hour demand for the project (i.e., the busiest hour of the busiest weekday) is ±61 spaces. Parking demand accumulations are presented in **Table 2**.

TABLE 2: SHARED PARKING DEMAND PROJECTIONS

LAND USE	SIZE	PARKING DEMAND	
		UNADJUSTED DEMAND	**SHARED DEMAND**
Warehouse (ITE LUC 150)	±11,928 SF	5	**4**
Hardware Supplies (ITE LUC 862)	±5,662 SF	18	**18**
Proposed Dental School	43 employees	39	**39**
Total Parking Demand		62	**61**
Shared Parking Reduction		**1.61%**	

Notes:
1. ITE LUC = ITE Land Use Code
2. 43 employees for the dental school considers the 18 full time staff. The remaining parking demands are generated by 21 patients.

A separate analysis of parking demand projections was calculated using ITE data (Land Use Code 720) for the proposed dental school. **Table 3** depicts the shared demand projections using the results from **Table 2** and the ITE projections.

TABLE 3: PARKING DEMAND COMPARISON

LAND USE	SIZE	SHARED PARKING DEMAND	
		TABLE 2 ANALYSIS	ITE ANALYSIS
Warehouse (ITE LUC 150)	±11,928 SF	4	4
Hardware Supplies (ITE LUC 862)	±5,662 SF	18	18
Proposed Dental School (ITE LUC 720)	±16,160 SF	39	52
Total Parking Demand		**62**	**74**

When considering the site's 79 total parking spaces, there is sufficient space to accommodate the projected demands when considering rates developed using projected site visitors and employees (shown in **Table 2**), as well as the ITE parking rates (shown in **Table 3**).

It is important to note that the Applicant has worked with Daemen University to provide shuttle services for all students working on-site. This is a change from the May 2022 letter whereby a portion of

Attachment: SP-2022-02 application102022 (25490 : Sp-2022-02)

students would be shuttled to the site. These efforts allow for the projected parking demands to be entirely accommodated on-site without creating a potentially adverse impact on the surrounding neighborhood.

CONCLUSIONS

This detailed analysis assessed the projected shared parking demands associated with the proposed mixed-use project. The following summarizes the findings of this assessment:

1. The proposed project consists of retail hardware supply, warehouse, and medical-dental office space.

2. The project will provide 79 surface parking spaces and 10 bicycle parking spaces.

3. Strict application of the unshared off-street parking standards in the Zoning Code results in a parking requirement of 117 spaces.

4. The peak hour demand is projected to occur at 10:00 AM on a typical weekday. The projected peak hour demand for the mixed-use project (i.e., the busiest hour of the busiest weekday) is ±61 spaces.

5. A separate analysis of parking demand projections was calculated using ITE data (Land Use Code 720) for the proposed dental school. The total parking demand using ITE data is 74 spaces.

6. When considering the site's 79 total parking spaces, there is sufficient space to accommodate the projected demands when considering rates developed using projected site visitors and employees (shown in **Table 2**), as well as the ITE parking rates (shown in **Table 3**).

If you have any questions or require additional information, please do not hesitate to contact our office.

Sincerely,
SRF Associates, D.P.C.

David Kruse, AICP, PTP

I. SUMMARY

This project includes a mixed-use redevelopment and internal expansion in an existing 1-story retail/warehouse facility to include a dental school on a 1.2± acre parcel located at Kensington Avenue, Bentham Pkwy. and Ridgewood Drive in the Town of Amherst, New York. The GB-zoned site is located adjacent to the north terminal end of Ridgewood Drive, to which the applicant is requesting abandonment, and proposed replacement with a paved parking lot in a land-lease. The subject parcel is currently fully developed with replacement utility services planned for the uprated occupancy.

Sanitary wastewater is currently conveyed by 4-inch gravity piping from the building to an 8-inch public sewer found in Ridgewood Drive. New interior plumbing and partial replacement of the existing 4inch PVC lateral is planned.

New water service for domestic and fire-protection use of the multi-tenant build-out shall replace the existing tap and connect to the 6-inch main found in Kensington Ave. A new 6-inch tap with 4-inch DIP tee reducing to 3-inch and running to the water meter room and 6-inch DIP fire protection runs together in the same trench. The Erie County Water Authority (ECWA) regulates the water main. Metering and backflow prevention for the private services are contained within the facility mechanical room with application made by others.

Currently, storm water runoff generated by the site flows overland towards and into the existing surrounding roadway drainage systems. Replacement receivers are proposed for redevelopment of Ridgewood Drive from a roadway to a perpendicular car-park. New storm piping shall connect to existing manholes. One manhole rim is proposed to be raised-up to new grade of the proposed parking lot.

This development will not result in an increase in impervious surfaces on this site and does not involve soil disturbance greater than one (1) acre, thus stormwater detention is not provided. The site is not located within a 100-year floodplain. The site is currently fully developed and does not contain wetland.

Attachment: SP-2022-02 application102022 (25490 : Sp-2022-02)

II. SANITARY SEWER SERVICE

The existing public 8-inch gravity sanitary sewer located on the west side of Ridgewood Drive will provide a sanitary sewer connection point. All public utilities within Ridgewood Drive shall remain operational and accessible for maintenance during and after reconstruction. One public sewer manhole rim is proposed to be raised-up to new grade of the proposed parking lot.

A replacement for the private 4-inch PVC (SDR35) sewer lateral will be installed to the proposed building sanitary sewer entry point at the north wall of the building from the existing tap per the building plumbing plans. The proposed facilities will generate a calculated 1120 gal/day (gpd) average of residential wastewater load* as per the following:

Day School: (30 empl x 15 gpd)+(52 students x 10 gpd) ~ 970
Existing retail/warehouse: (10 empl x 15 gpd) ~ 150

*Reference “NYS Design Standards for Intermediate Sized Treatment Works, March 2014”

III. WATER SERVICE

A new 6-inch water line for domestic and fire-protection will be connected to the existing 6-inch public main located on the east side (near side) of Kensington Ave. The following data pertains to the public watermain and private demands:

- Subsurface investigations indicates a somewhat shallow, till overburden on weathered shale bedrock. The presence of bedrock measurement approx. 7-ft below grade is indicated.
- The static pressure of the existing 6-inch public main is reported by ECWA as __ psi, and a residual (open hydrant) reading of __ psi. (Note that a recent pressure test is not available and a new test cannot be made at this time and until spring thaw)
- New domestic demand is limited to the proposed uses as a day school and retail/warehouse facility. New fire-protection demand design shall be by the building fire-protection engineer which may include a booster pump as required.

Erie County Water Authority (ECWA) governs the proposed tap and backflow prevention. ECWA provides the tapping sleeve and valve and the 4-inch gate valve and 6-inch gate valve installed at the property line. Metering and backflow prevention is contained within the facility. Meter set is also provided by ECWA. A Backflow Prevention Application shall be provided under separate cover on behalf of the water customer.

Attachment: SP-2022-02 application102022 (25490 : Sp-2022-02)

IV. STORMWATER MANAGEMENT

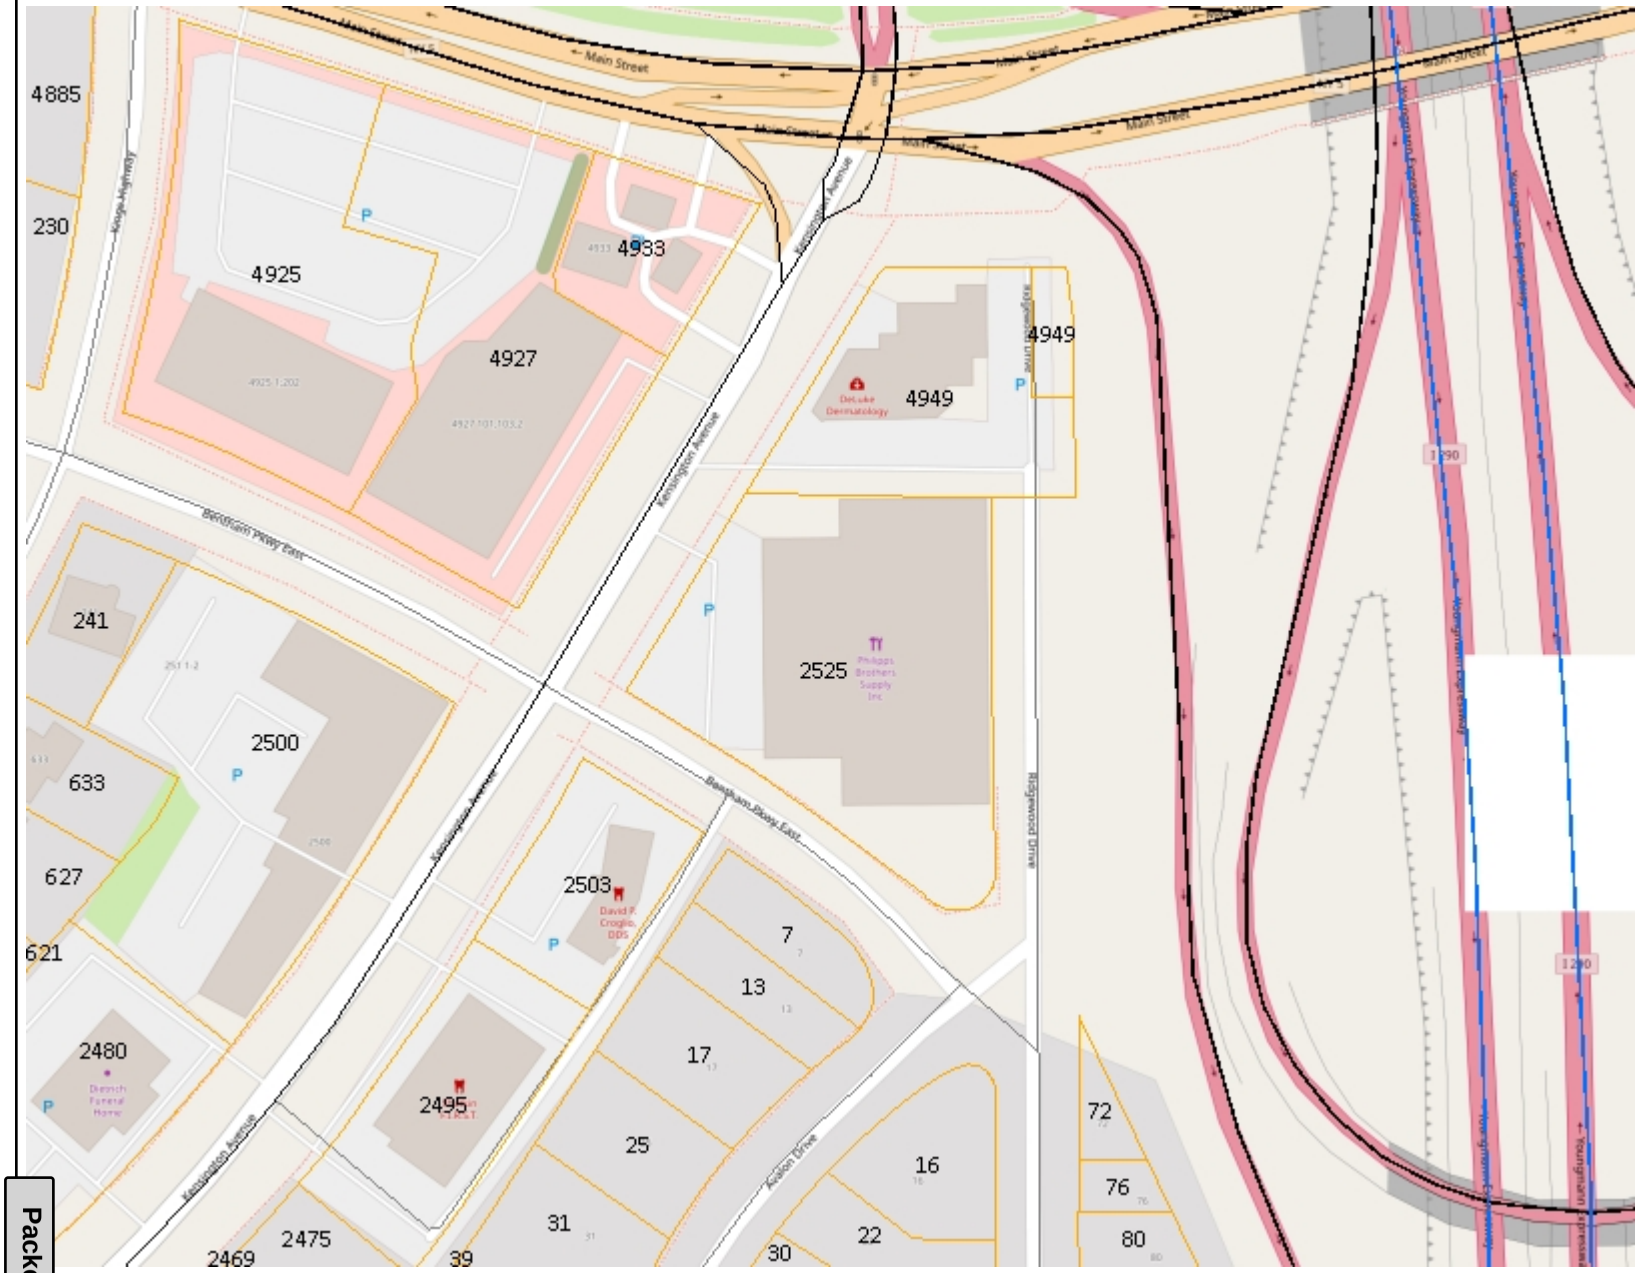
I. Existing (Pre-Development) Conditions

The subject parcel is currently built-out with building and pavements. No on-site stormwater receivers were found. Ridgewood Drive contains curb inlets and storm piping conveyances owned and maintained by the Town of Amherst.

II. Proposed (Post-Development) Conditions

The proposed development includes the construction of a new canopy entry structure and associated paved parking in a land-lease agreement to use Ridgewood Drive as a car-park. Storm water receivers are replaced, existing piping abandoned, with new piping connections made to existing manholes. Storm pipe sizing for conveyance of the 10-year storm event is included in Appendix A for new drainage in Ridgewood Drive.

V. PERMITS



The proposed construction of the building addition, abandonment of public rights-of-way, new parking areas and drainage must receive approval from the Town of Amherst. An application for backflow prevention for private service must be made to the Erie County Water Authority (ECWA).

ATTN: Dr. Todd Shatkin, DDS

RE: Geotechnical Engineering Report
Proposed Mezzanine & Canopy at
Shatkin School of Dentistry
2525 Kensington Avenue
Town of Amherst, Erie Co., New York 14226

Dr. Shatkin:

This report presents the findings of the subsurface investigation program and geotechnical engineering recommendations for the above referenced project. The geographic orientation of the project site is illustrated on the U.S. Geologic Survey (USGS) site location map in Figure No. 1. The project site is illustrated in Figure No. 2, entitled "Test Boring and Concrete Core Location Plan", which includes: the approximate location of one exterior test boring and two interior concrete floor slab cores that were drilled by Buffalo Drilling Company, Inc. (BDC); relative ground surface elevations; and additional site details.

EXPLORATION METHODS

Sampling Method: A truck-mounted CME 55 rotary drill rig was used to drill one boring to shallow auger refusal by using 4-1/4 inch inside diameter (ID), continuous flight hollow stem augers. Samples were recovered by driving a standard split-spoon sampler (2-foot long by 1-3/8 inch inside diameter) 24 inches with a 140-pound hammer falling 30 inches per blow per the American Society of Testing and Materials (ASTM) Standard D1586. The number of blows from six to 18 inches of penetration is defined as the Standard Penetration Test (SPT) N-value. Auger refusal, which may infer the top of bedrock, was encountered approximately seven feet below ground surface. Inside the existing structure, an electric core machine with six-inch ID, diamond impregnated bit was used to core through the concrete floor slab to gain access to subsurface soils at two locations, C-1 and C-2. Subsurface samples were retrieved via hand sampler beneath concrete floor slab.

Bedrock was confirmed by coring boring B-1 to a depth of approximately five feet below auger refusal. Bedrock coring efforts were done with an Nx-sized (2-1/8-inch I.D.) core barrel and impregnated diamond bit in accordance with ASTM Method D2113.

Attachment: SP-2022-02 application102022 (25490 : Sp-2022-02)

Any encountered groundwater conditions are documented in the field on the driller's logs for each test boring. If indicators of groundwater are observed on the sampling equipment, the depth to groundwater is also checked and measured through the hollow stem augers at the completion of the sampling efforts.

Classification: The retrieved soil samples were initially logged in the field by the driller, and a portion of each sample was placed and sealed in a glass jar. The boring logs, which are included in Appendix A, were based upon the field logs and a second visual classification of recovered samples in the laboratory by a geologist. Classification/identification of samples, as noted on the boring logs, is based on the Unified Soil Classification System (USCS) in ASTM D2487/D2488. Refer to Appendix B entitled, "Geotechnical Reference Standards", for an explanation of the terminology that is used for soil and rock descriptions.

Each rock core was examined on a run-by-run basis to determine the percentage of core recovery and Rock Quality Designation (RQD). Core recovery percentage is the ratio of the sample length recovered divided by the length of the core run times 100 percent. RQD is defined as the total length of all pieces of core that are greater than four inches divided by the length of the core run times 100 percent. Core recovery and RQD percentages are noted on the boring logs.

Each core sample of the existing concrete floor slab was observed, measured, and photographed for review. Details can be found on the test boring/core logs C-1 and C-2 in Appendix A and the photographs are available in Appendix C, entitled "Floor Slab Core Photographs".

SITE AND SUBSURFACE CONDITIONS

General: The proposed site for development is the existing Phipps Brothers Supply, Inc. building addressed as 2525 Kensington Avenue, in the Town of Amherst, Erie County, New York. The project will include the construction of an interior mezzanine and an exterior canopy over the drop off area along the east side of the building. The site topography is generally flat across test boring locations.

Subsurface Soil Conditions: In general, subsurface conditions, underlying the exterior asphalt pavement or interior concrete floor slab, consist of one to two feet of granular fill material atop naturally deposited cohesive/fine-grained glacial till that extends to auger refusal.

Beneath the asphalt at B-1, granular fill material was encountered and extends two feet below ground surface. This fill consists of fine to coarse-grained sand to gravel sized crushed limestone and is believed to be the aggregate base course for the asphalt pavement. Relative density of the granular fill is medium dense with moisture contents of retrieved samples noted to be in a moist state. Beneath interior concrete floor slab at boring/cores C-1 and C-2, the granular fill is a loose to medium dense silty sand with trace quantities of gravel. This fill is described as a spent foundry sand typical of the metal casting industry which has a historic common reuse in this region as concrete slab/rigid pavement base layers.

Attachment: SP-2022-02 application102022 (25490 : Sp-2022-02)

Beneath the fills, a naturally deposited cohesive/fine-grained glacial till exists and extends to auger refusal at B-1 and the remain depths advanced at C-1 and C-2. The till generally consists of slightly to moderately plastic, silt and clay with lesser amounts of sub-rounded fine-sized to coarse-sized sand and gravel. The consistency of this soil is primarily stiff to hard with moisture contents of retrieved samples noted to be moist. Spoon refusal conditions are also noted in the lower depths of the unit closer to soil bedrock interface. The proposed footing bearing grades for the proposed structures are assumed to be within this soil.

Bedrock: Auger refusal, which is generally inferred to be the top of the apparent bedrock surface, was encountered at B-1 approximately seven feet below ground surface. Confirmatory rock coring was advanced five feet beneath the refusal condition and bedrock samples collected. The bedrock type is the Onondaga Limestone, which is described as hard, slightly weathered, medium dark gray, thinly bedded, porous and calcareous limestone. Percent recovery is lightly more than 50 percent with rock quality designations (RQD) noted as 30 percent. These RQD values suggest that the rock is poor quality.

Groundwater: Groundwater was not encountered during subsurface exploration efforts. Note that the groundwater readings were taken at the completion of drilling efforts and, therefore, an adequate amount of time for the groundwater level to recharge to static conditions was probably not allowed. Fluctuations in the groundwater level may occur due to other factors than those present during field operations.

EARTHQUAKE/SEISMIC CONSIDERATIONS

Site Class Definition: For the given site conditions, the most applicable site definition is Site Class C, in accordance with Section 1613.2.2 of Building Code of New York State © 2020 and listed in Table 20.3-1 of Chapter 20 of American Society of Civil Engineers (ASCE) Standard 7-16.

Liquefaction Potential: For the Site Class C, the design spectral response acceleration parameters S_{DS}, at 0.2 seconds, and S_{D1}, at one second, are 0.146g and 0.045g (g = 32.2 feet/sec^2), respectively, for this part of Erie County, New York (see Appendix D). These values have a two percent probability of being exceeded in 50 years. Based upon the above conditions and an approximate magnitude 6.0 earthquake on the Richter Scale, the potential for liquefaction or settlement of Site Class C soil is considered extremely low.

Attachment: SP-2022-02 application102022 (25490 : Sp-2022-02)

FOUNDATION DESIGN AND CONSTRUCTION RECOMMENDATIONS

General: This section will present and discuss recommendations on foundation design and construction and placement of controlled fills, and subgrade and base layer requirements for concrete floor slabs.

As shown in Figure No. 2, a mezzanine will be constructed inside the northern warehouse portion of the existing building. Additionally, a canopy will be constructed to cover the drop off area at the rear of the structure. The existing ground surface is generally flat across the development area and final exterior grades are assumed to closely match the existing at relative elevation 100.00 ± feet. The maximum design exterior and interior column loads are not expected to exceed 100 kips. The maximum live floor load is taken as 100 pounds per square foot (psf).

Site Preparation and Earthwork: General site preparation will include the demolition and complete removal of any encountered foundations and floor slabs, and removing all unsuitable surficial material (i.e., asphalt pavement, concrete, brick, expansive slag, organic or topsoil layer, and construction and demolition-like fill) to a depth where firm, granular or cohesive fills or naturally occurring soils are encountered. It is recommended, particularly in the location of the proposed structure, that any slag and/or cinder/ash containing material, if encountered, should be tested to determine the expansion and corrosion characteristics (where applicable for direct or potential contact with foundation elements and buried utilities) of these materials prior to their use on-site. Any rubble-like and brick fill, boulders, or wood fill in particular, if encountered, will require undercutting. Building pad and paved areas are to be proof rolled with a fully loaded ten-wheel dump truck. All encountered soft and disturbed zones should be undercut and stabilized with granular fill that is placed in compacted lifts prior to placement of additional fill materials above. Refer to Appendix E entitled "General Earthwork Specification" for definition of the fill types and gradations, recommended minimum compaction requirements for various site developments, and placement and compaction methods. The NYS Department of Transportation (NYSDOT) specification numbers for typical aggregate subbase/base course components that are included in the select granular fill category as are as follows: Item No. 304.12 (Metric) Subbase Course, Type 2 (< 2-inch maximum size), which is preferred; or Item No. 304.14 (Metric) Subbase Course, Type 4 (< 2-inch maximum size).

It is unknown if any former residential/commercial structures existed at the project site for the proposed renovations and if any former footings and foundation walls may be buried at the proposed site. Septic tank and system locations and the abandonment conditions or practices are normally unknown. If encountered during site development, it is recommended that any tanks and systems should be properly removed/treated/remediated relative to the proposed development and under the applicable local and state regulations. The remaining cavities, from the aforementioned items, should be backfilled with select/approved granular fill that is placed in thin lifts and compacted to the minimum recommendation, as presented in this report, for the proposed development at that cavity location.

Attachment: SP-2022-02 application102022 (25490 : Sp-2022-02)

Shallow Foundation: The recommended foundation type is shallow footings. Individual interior and exterior spread column footings would bear at an elevation of 42-inches or lower below final grade, at relative elevation 96.50 ± feet or lower. A 42-inches minimum footing depth (as required by local or New York State code) is needed to provide adequate protection from frost for exterior footings.

The exterior and interior footings are recommended to bear at the same relative elevation on stable, naturally deposited, stiff (Nvalues > 10 blows) cohesive/fine-grained glacial till or on thin layers of thoroughly compacted (minimum of 95 percent of the maximum dry density by ASTM D 1557) select/approved granular fill that is placed on approved subgrade. If needed, a geotextile strength and filter fabric (such as, Mirafi 600X) may be used to line the excavation bottom for the purpose of stabilizing the excavation and placement of the select/approved granular fill. Alternatively, in heated buildings the interior footings are recommended to bear two and one-half feet or lower below finish floor at relative elevation 97.50 ± feet and on the same soil/fill conditions as the exterior footings.

Undercut areas beneath proposed foundations must extend laterally beyond each vertically projected edge of the foundation by a minimum distance equal to one-half the total depth of the undercut or equating to a slope of two vertical to one horizontal from the bottom foundation corner. The undercuts and placement of compacted select/approved granular fill are required to ensure a suitable and more uniform bearing media for the footings, and to prevent unacceptable differential settlements.

Column footings should have a minimum three-foot width. Based on the above described conditions, the recommended maximum net allowable foundation bearing pressure is 2,500 pounds per square foot (psf) of bearing area. All footings for the proposed building are recommended to be designed near the same contact pressure. The recommended maximum net allowable foundation bearing pressure is based on generally accepted design methods for cohesive/fine-grained soil conditions. Based on the provisions of the above recommendations and estimated design requirements and utilization of proper construction procedures and experienced field supervision and testing personnel, total and differential settlements are estimated to be less than one inch and 3/4's inch, respectively. Refer to Appendix D for additional foundation design and construction details.

Additional Foundation Considerations: In addition to the above, the following recommendations will provide additional assurances with regard to proper foundation construction.

a) All fill placed beneath, adjacent, or above foundations must comply with the "General Earthwork Specification", included as Appendix E.

Attachment: SP-2022-02 application102022 (25490 : Sp-2022-02)

b) Backfill of foundations with approved select granular fill must be completed prior to placement of substantial superstructure loads, except for basement walls or substructure areas that may additionally require superstructure loads and possibly internal bracing.

c) The upper silty materials may rut and “pump” if exposed to excessive surface water and repeated construction traffic. Proper site management and fill placement operations are needed to minimize costly undercuts and subgrade repairs prior to placement of concrete slabs and asphalt pavement. It is noted that construction during wet/rainy and/or Fall and Spring conditions may require added precautions and possibly a thicker base layer to maintain a stable subgrade condition.

d) Step footings, if utilized, should have a rise to run ratio of 1:2, with a two-foot maximum rise and a four-foot minimum run between steps or as recommended by the design structural engineer.

e) The recommended at rest (rigid wall), active, and passive static earth pressure coefficients for unsaturated, select granular sandy gravel fill against an earth retaining structure/wall are 0.76, 0.24, and 2.8 (with an ultimate value of 4.2), respectively. The respective equivalent static lateral fluid pressures are recommended to be 90, 30 and 330 (with an ultimate value of 500) pounds per square foot (psf) per foot depth which are based upon a moist, compacted unit backfill weight of 120 pounds per cubic foot (pcf). The at rest value would account for the average expected compaction induced stresses and/or the potential influences of hydrostatic pressure. The static lateral fluid pressures can be directly proportioned for other unit weights.

Stabilization of Excavations: The trench/excavation sidewall stability concerns can be addressed with the Occupational Safety and Health Act (OSHA) requirements as set forth in Subpart P of 29 CFR Part 1926, Sections 1926.650 to 1926.652. In lieu of a properly designed shoring system, side slopes of the trench excavation should be one on one (vertical to horizontal distance) or flatter in cohesive soils or one on one and one-half or flatter in the granular materials, as required by OSHA.

Water must not be allowed to accumulate or pond on exposed foundation bearing grades. Surface water and groundwater from within the excavation must be either pumped, diverted or channelized by gravity flow to effectuate the construction of the proposed foundation. Pockets of localized perched groundwater may seasonally be expected to be encountered at footing and/or footing undercut bearing grades. At these locations, dewatering with surface sumps may be required to maintain stable side slopes and excavation bottom.

Attachment: SP-2022-02 application102022 (25490 : Sp-2022-02)

Concrete Interior Floor Slab(s)/Pad: A geotextile fabric (such as, Mirafi 600X or equal) that separates the subgrade and the approved/select granular base layer is recommended for sensitive cohesive/fine-grained/silty subgrade soil/fills. This approach will stabilize and provide a workable building pad condition with minimal required repairs. The approved subgrades will most likely consist of stiff or better/thoroughly compacted (i.e., minimum 92 percent of the maximum dry density by ASTM D 1557) cohesive silt and clay, and/or a thoroughly compacted imported select/approved granular fill.

Above the approved subgrades, a minimum eight-inch thick for lightly loaded areas and minimum 12-inch thick for heavily loaded areas select granular fill (i.e., number two crusher run stone or equal) layer is recommended as the base course for concrete floor slabs. The NYSDOT specification numbers for typical aggregate subbase/base course components are Item No. 304.12 (Metric) Subbase Course, Type 2 (< 2-inch maximum), which is preferred, or Item No. 304.14 (Metric) Subbase Course, Type 4 (< 2-inch maximum). This select granular base layer would be compacted to a minimum 95 percent of the maximum dry density by ASTM D 1557. The floor slabs in any lightly loaded areas are recommended to have a minimum four-inch thickness, while heavily loaded areas are recommended to have a minimum six-inch thickness or as determined by the design structural engineer. The floor slab reinforcement should be provided through placement of wire mesh or plastic fibers and is also as determined by the design structural engineer.

At the discretion of the design architect, a vapor barrier may be considered for use in the proposed structure. The use of a thin gravel cushion, as a capillary break, or a thin sand cushion over a vapor barrier that is placed beneath the concrete slab(s) are at the discretion of the design architect/engineer or as required by local code. Gradations of gravels that are satisfactory capillary breaks include 1 ¼-inch or ¾-inch crushed stone or aggregate per the ASTM D2321 Types IA, IB and II with less than 5 % fines. A number two crusher run stone may also be applicable, but the gradation and material property specifications must qualify.

At the assumed final site grade and based upon the thickness and character of the underlying natural soils, the subgrade modulus is recommended not to exceed 150 pounds per cubic inch (pci). A Poisson Ratio of 0.4 is recommended for design purposes. Isolation of the floor slabs from the footings-piers-columns and walls do appear to be warranted. Based upon the subgrade modulus and slab mechanical properties and thickness, the design structural engineer may accordingly adjust the granular aggregate base thickness.

Attachment: SP-2022-02 application102022 (25490 : Sp-2022-02)

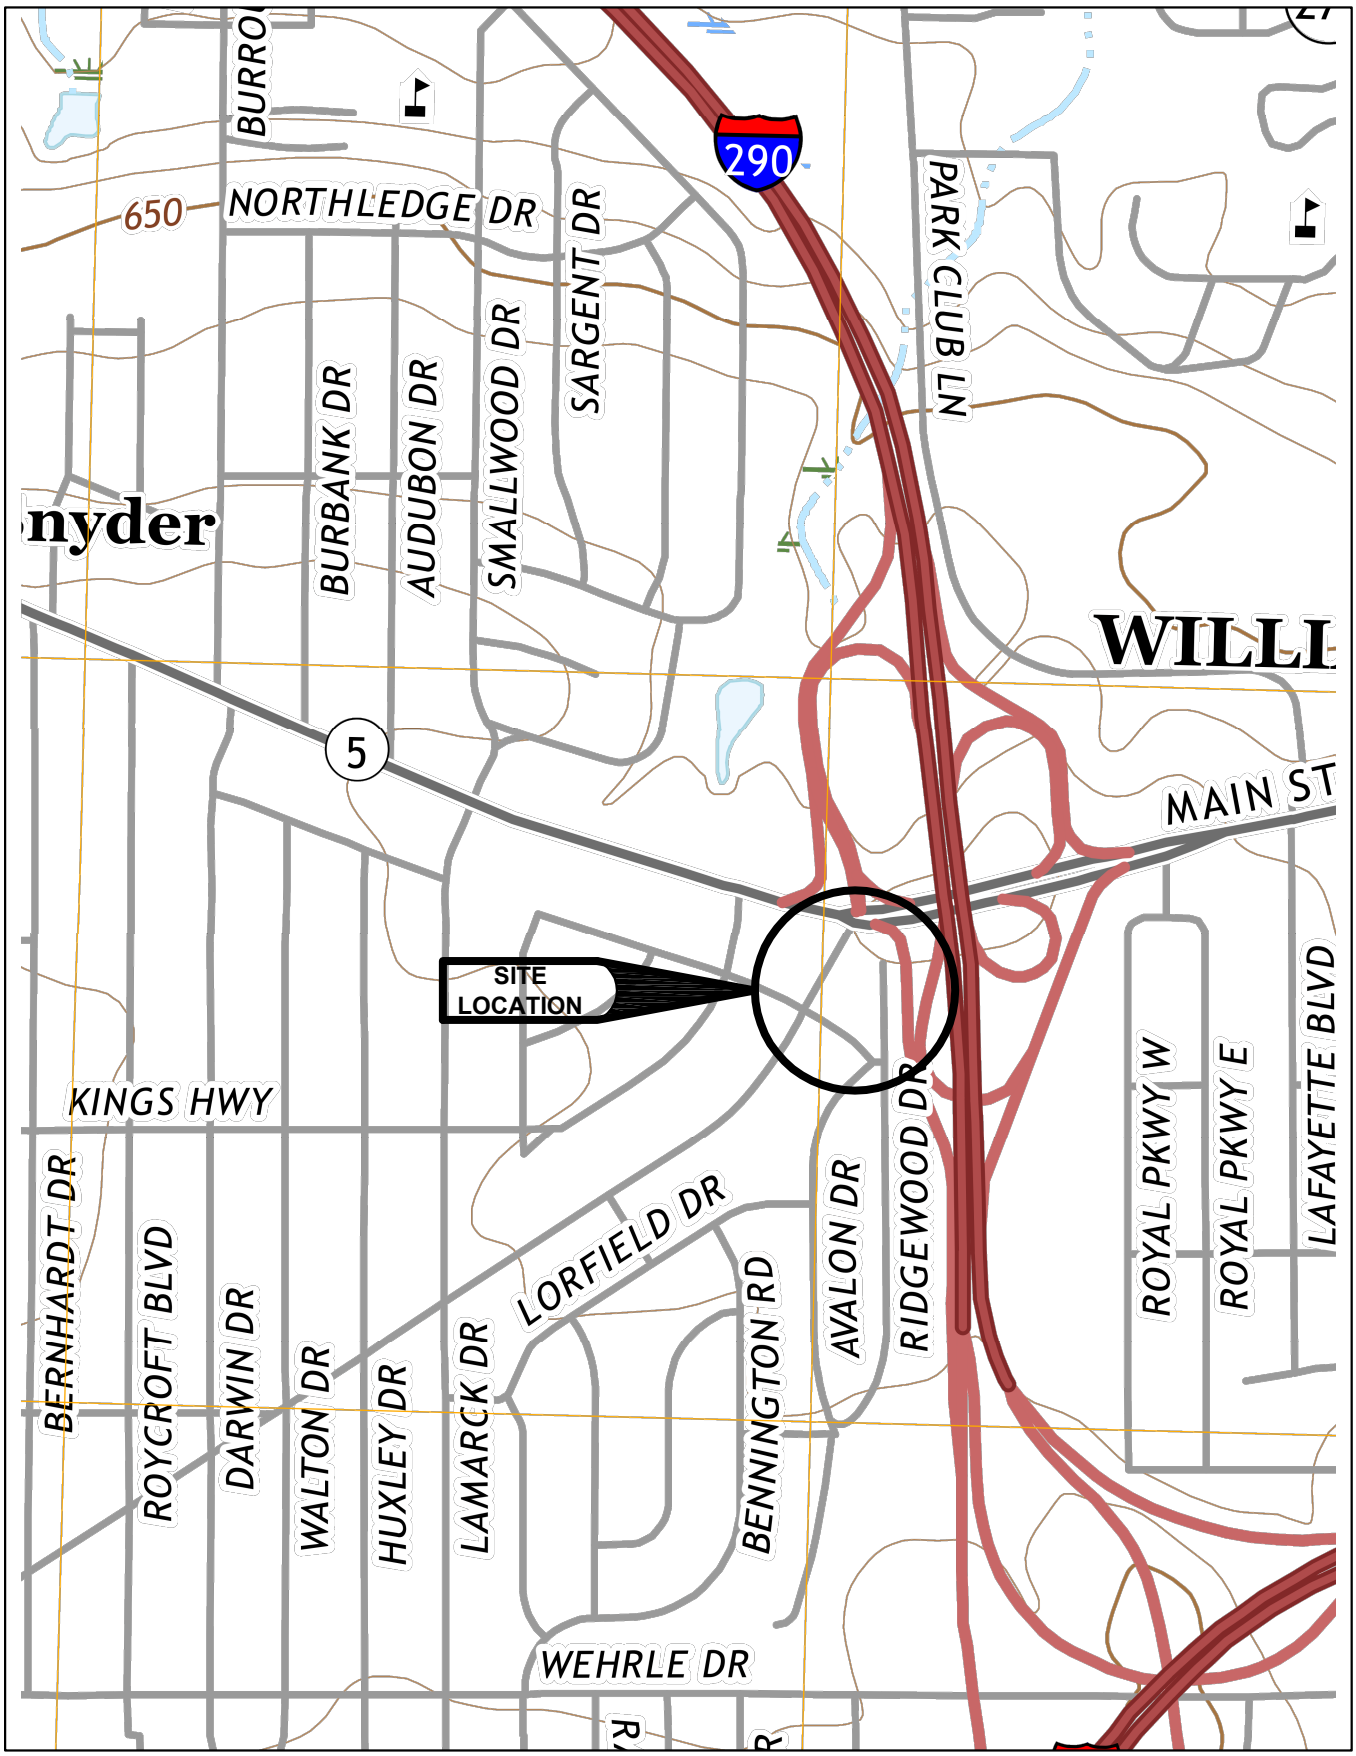
Exterior Concrete Slabs-On-Grade/Pad/Parking and Roadway Facilities: The characteristics of the cohesive natural glacial till, and the known frost penetration in Western New York require that specific attention is provided to the design and construction of paved roadway and parking areas. For new pavement sections, isolated pockets of surficial silty/cohesive/fine-grained soil/fill may be encountered and may be too soft and wet in the proposed parking and roadway areas. These types of soil/fill may be adequately conditioned (i.e., dried and blended) and compacted (i.e., minimum 90 percent compaction) to support necessary construction equipment and normal pavement section. Otherwise, the removal/undercutting of the silty/cohesive/fine-grained soil/fill to a firm, approved subgrade and subsequent placement and compaction of select or approved granular fill will be required in order to accommodate the recommended pavement sections.

For new pavement sections, it is recommended that the subgrade surface is adequately graded and/or underdrains are installed to prevent water accumulation. Above the approved subgrade surface (i.e., minimum 90 percent compaction), a minimum eight-inch thick select granular layer is recommended as the base course for lightly traveled roadway and parking areas (standard duty section). A geotextile filter and strength fabric (such as, Mirafi 600X or equal) on silty/cohesive/fine-grained soil subgrades and minimum 12-inch thick base course are recommended for all truck routes and heavily traveled roadways (heavy duty section). If “pumping” of the silty/cohesive/fine-grained soil subgrade occurs or is difficult to stabilize during construction, an increase in the base thickness to that of the heavy-duty section and/or a geotextile filter and strength fabric is recommended to be placed on the prepared and approved subgrade for the standard duty section. The NYS Department of Transportation (NYSDOT) specification numbers for typical aggregate subbase/base course components are Item No. 304.12 (Metric) Subbase Course, Type 2 (< 2-inch maximum size), which is preferred, or Item No. 304.14 (Metric) Subbase Course, Type 4 (< 2-inch maximum size). The granular aggregate base layer is recommended to be compacted to at least 95 percent of maximum dry density by ASTM D1557.

The thickness of top and binder course layers should be determined in accordance with AASHTO methods. In summary, the minimum recommended asphalt thicknesses for the heavy-duty section and standard duty section are three and one-half inches and three inches, respectively. The top and binder course layers are recommended to be designed and constructed in accordance with New York State Department of Transportation Standard Specification.

Attachment: SP-2022-02 application102022 (25490 : Sp-2022-02)

Limitations, Field Inspections and Monitoring: This report is based on the preliminary information that is provided by project representatives and the subsurface conditions that were encountered at the test boring locations. Due to the nature of the investigation method, test pit excavation will provide a greater level of delineation of the subsurface soil/fill/rock conditions than can be defined by the test boring data alone. As detailed in Appendix F "Limitations", modification regarding proposed building/structure locations and other site developments can result in changes to provided recommendations. It is recommended that the geotechnical engineer be provided the opportunity to generally review the final detailed design and contract specifications. Required earthwork and foundation construction should be done under the supervision of experienced construction personnel and in a manner consistent with proven methods. All site work should be carefully monitored and tested by experienced geotechnical personnel to assure compliance with earthwork and foundation construction specifications.



Thank you for the opportunity to assist on this project. If questions should arise, please call the undersigned at your earliest convenience.

Very truly yours,
BARRON & ASSOCIATES, INC.

		S-2 : 2.0'- 4.0'	19	50	Brown, m. dense f. SAND, some Silt, tr. Gravel, tr. Clay, tr. Roots, non-plastic, moist (SM)

Elevation/Depth: The depth column provides the vertical scale of the boring log in feet below ground surface.

Sample No. : Range: Disturbed samples are identified with “S” preceding the sample number. Undisturbed (Shelby-tube) samples are identified with “U” preceding the sample number. Rock core samples identified with “C” preceding the core run. The range of elevation/depth where the sample was taken is identified in one-tenth foot increments.

N-value: The Standard Penetration Test N-value, as specified by ASTM D1586, is defined as the number of blows required by a 140-pound hammer falling 30 inches, each blow, to drive a 2-in outside diameter split-spoon sampler 12 inches.

% REC (RQD): “Percent Recovery” is the length of samples recovered divided by the total length sampled. The result is numerically expressed as a percent. The Rock Quality Designation (RQD) is the total length of places >4 inches divided by the total length of core run.

Soil and Rock Description / Remarks: This column denotes the exact depth of recovery and general documentation of drilling efforts. Description and classification are based on visual inspection of samples and boring operations. The stratum lines shown on the boring logs are based upon interpretation and may not represent precise subsurface conditions. Water-level readings have been made in the drill holes at time under conditions stated on the boring logs. Fluctuations in the water level may occur due to other factors than those present the time measurement was taken. See attached sheet.

Clarence, NY 14031 www.barronandassociatespc.com

Soil and Rock Description / Remarks: Terminology Used for Soil Description

Density Description of Granular Soil

Number of Blows per ft., N	*Relative Density*
0 - 4	Very Loose
4 - 10	Loose
10 - 30	Medium
30 - 50	Dense
Over 50	Very Dense

Abbreviations Used in Soil Sample Classification

f - fine	v - very
m - medium	gr - gray
c - coarse	bn - brown
f/m - fine to medium	yel - yellow
f/c - fine to coarse	sl - slight
tr - trace	dk - dark

Consistency Description of Cohesive Soil

Number of Blows per ft., N	*Consistency*
Below 2	Very Soft
2 - 4	Soft
4 - 8	Medium
8 - 15	Stiff
15 - 30	Very Stiff
Over 30	Hard

Bedding

Parting	Less than 0.02 ft.
Band	0.02 - 0.2 ft.
Thin bed	0.2 - 0.5 ft.
Medium bed	0.5 - 1.0 ft.
Thick bed	1.0 - 2.0 ft.
Massive	Over 2.0 ft.

Grain Size

	Passing / Retained on
Boulder	LARGE / 12-in sieve
Cobble	12-in / 3-in sieve
Gravel	3-in sieve / No. 4 sieve
	No. 4 sieve / No. 10 sieve
Sand	No. 10 sieve / No. 40 sieve
	No. 40 sieve / No. 200 sieve
Silt	No. 200 sieve / 0.005 mm sieve
Clay	Smaller than 0.005 mm

Hardness

Very Soft or Plastic	Can be indented with thumb
Soft	Can be scratched with fingernail
Moderately Hard	Can be scratched with knife
Hard	Difficulty to scratch with knife
Very hard	Cannot be scratched with knife

Percentage Terminology Used in Soil Classification

Trace	0 - 10 %	Some	20 - 35 %
Little	10 - 20 %	And	35 - 50 %

Moisture

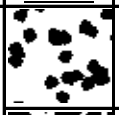
Dry	Absence of moisture, dusty, dry to the touch.
Moisture	Small quantity of moisture. Soil usually above groundwater level.
Wet	Moisture noticeable to the touch. Soil may be below groundwater level.
Saturated	Visible free water, usually soil is below groundwater level.

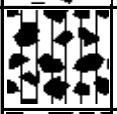
Plasticity

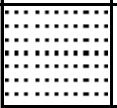
Non-plastic	An 1/8-in thread cannot be rolled at any water content.
Slight plasticity	Thread can be barley rolled.
Moderate plasticity	Thread is easy to roll and little time is required to reach the plastic limit (PL).
Plasticity	Considerable time is required to reach PL. Thread can be re-rolled several times after reaching the PL.

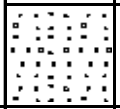
Crystallinity or Texture

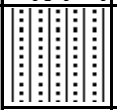
Dense	Crystals are to small they cannot be distinguished with the naked eye.
Very Fine Crystalline	Crystals barely discernable with the naked eye.
Crystalline	Crystals are medium size, up to 1/8-in diameter.
Very Coarsely Crystalline	Crystals larger than 1/8-in diameter.

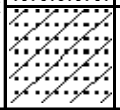


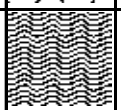


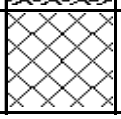












Voids

Porous	Smaller than pinhead. Their presence is indicated by the degree of absorbency.
Pitted	Pinhead size to 1/4 in. If thin walls separate the individuals pits, the core may be described as honeycomb.
Vug	1/4 inch to the diameter of the core. The upper limit will vary with core size.
Cavity	Larger than the diameter of the core.

Soil Classification Chart: Unified Soil Classification System (USCS)

Major Divisions			Pattern	USCS ID	Typical Descriptions
Coarse-Grained Soils: More than 50% of material larger than No. 200 sieve	**Gravels**: More than 50% of coarse fraction larger than No. 4 sieve	Clean Gravels (little or no fines)		GW	Well-graded gravels, gravel-sand mixtures, little or no fines
				GP	Poorly-graded gravels, gravel-sand mixtures, little or no fines
		Gravels with appreciable amounts of fines		GM	Silty gravels, gravel-sand-silt mixtures
				GC	Clayey gravels, gravel-sand-silt mixtures
	Sands: Less than 50% of coarse fraction larger than No. 4 sieve	Clean sands (little or no fines)		SW	Well-graded sands, gravelly sands, little or no fines
				SP	Poorly-graded sands, gravelly sands, little or no fines
		Sand with appreciable amount of fines		SM	Silty sands, silt-sand mixtures
				SC	Clayey sands, sand-clay mixtures
Fine-Grained Soils: Less than 50% of material larger than No. 200 sieve	**Silts and Clays, Low plasticity**: Liquid Limit < 50%			ML	Inorganic silts and very fine sands, rock flour, silty or clayey fine sands or clayey silts with slight plasticity
				CL	Inorganic clays of low to medium plasticity, gravely clays, sandy clays, silty clays, lean clays
				OL	Organic silts and organic silty clays of low plasticity
	Silts and Clays, High plasticity: Liquid Limit > 50%			MH	Inorganic silts, micaceous or diatomaceous fine sand or silty soils
				CH	Inorganic clays of high plasticity, fat clays
				OH	Organic clays of medium to high plasticity, organic silts
Highly Organic Soils				Pt	Peat, humus, swamp soils with organic contents
Miscellaneous Fill				FILL	Miscellaneous fill may belong in any division but is identified as FILL

B&A JOB NO.: 21-599

DATE: 10/14/21

LATERAL EARTH PRESSURE ON GENERIC BLOCK FOUNDATIONS FOR SIGNS, FREE-STANDING RETAINING WALLS, OR BELOW GRADE/BASEMENT/TANK/POOL RETAINING WALLS (Less Than 20 Feet High)

a) Porous filter media, in contact with the basement/below grade foundation wall or retaining walls, protects and is in contact with a minimum 4 inch diameter perforated drainage pipes at the footing/base of the foundation/structural wall (exterior backfill side and interior basement side) and/or weep pipes through the wall, as needed and as applicable.

b) Where recommended, a geotextile filter fabric will protect the gravel filter media from the earth backfill. Overlap unsewn seams as per the manufacturer's recommendations.

c) Waterproof earth side of wall, as is customarily provided in practice.

d) Drainage pipes are connected to an appropriately designed collector pipe, conveyance, and/or sump pump system as is applicable for the intended purpose of the wall and as customarily provided/installed in practice.

e) For potential groundwater table conditions above the top of the basement slab-on-grade condition, install continuous waterstops (with no joints in stop) at wall and floor construction joints, as is customarily provided in practice. Interior intermediate drainage pipes beneath the slab, that are spaced on-center and in both directions, do appear to be needed.

f) Assume a uniformly graded, clean coarse sand or sandy gravel backfills:

* equivalent N-value in a dense state: $(N_1)_{60}$ = 40 blows/foot
* friction angle: ϕ' = 38 degrees {Teng, pg. 12}
* average in-place densities: moist - γ_m = 120 pcf
  saturated - γ_{sat} = 132 pcf submerged - $\gamma' = (\gamma_{sat} - \gamma_w)$ = 70 pcf

g) Assume at base of wall/footing, coefficient of friction against sliding (f_s) at base of wall (Refer to Teng, pg. 320-1):

f_s = tan (0.58 x ϕ') = 0.40 (AREA silty soil to silty coarse-grained soil)

h) Use equivalent fluid pressure design approach {Hough, pg. 249 and NAVFAC pg. 7-10-9}:

* at rest pressure coefficient - K_0 = 1 - sin (ϕ') = 0.38
* effective lateral pressure of soil - γ'_l = K_o x γ' = 26.6 pcf
* hydrostatic pressure - γ_w = 62.4 pcf
* equivalent fluid pressure with water level - at the top of the grade at the wall γ_{eo} = $\gamma'_l + \gamma_w$ = 89 pcf (say 90 pcf)
* equivalent fluid pressure with compaction induced lateral stress increase (W&F, pg 409) γ_{eo} = 2 x K_o x γ_m = 91 pcf (say 90 pcf)
* active pressure case - K_a = [1 - sin (ϕ')] / [1 + sin (ϕ')] = 0.24
  γ_{ea} = K_a x γ_m = 29 pcf (say 30 pcf)
* passive pressure case - K_p = [1 + sin (ϕ')] / [1 - sin (ϕ')] = 4.2
  γ_{ep} = K_p x γ_m = 504 pcf (say 330 pcf with a F.S. = 1.5)

			Thoroughly Compacted ⇒⇒ Uniformly Graded & Clean Coarse Sand or Sandy Gravel Fill	Non-Plastic Silty Sand or Sandy Silt Fill	
USE:	Earth Pressure Coefficient	Static Active =	0.24	0.33	
		Static At-Rest =	0.76	1.00	
		Static Passive =	2.80	2.00	(with F.S. = 1.5)
		Static Passive =	4.20	3.00	(with F.S. = 1.0)
USE:	Equivalent Fluid Pressure	Static Active =	30 pcf		
		Static At-Rest =	90 pcf (for rigid walls)		
		Static Passive =	330 pcf (with F.S. = 1.5)	[500 pcf with (with F.S. = 1.0)]	

[For earthquakes, structural engineer may elect to use the above Static Passive case instead of the below Earthquake Lateral Load for Non-Yielding Wall movement into the soil backfill.]

USE: Simplified Model for Earthquake Lateral Load/Ft. Wall Length @ 0.6 H_{bw} above base. Loads for Non-Yielding Wall. H_{bw} = Earth Height Behind Wall (feet)

Reduce load by 33% for Yielding Wall (active case) = (6.8 psf / foot) x H_{bw}^2 (NYS, S_{ds} = 0.25 g)
(γ_m = 120 pcf for S_{ds} value. Add to Static At Rest/ Active Pressure/Load for unsaturated backfill case) = (13.5 psf / foot) x H_{bw}^2 (NYS, S_{ds} = 0.50 g)
= (17.5 psf / foot) x H_{bw}^2 (NEern NYS, $S_{ds} \leq 0.65$ g)

[Above for Site Class C to E soils. Interpolate for other S_{ds} values.
Use 1.75 x values for walls on Class B/A rock or on rigid foundation base. (FEMA NEHRP Guidelines)]

Saturated/Liquified Soil During Earthquake = 132 pcf
(Equivalent Fluid Pressure. Add to inertial hydrodynamic pressure, not presented here.)

{For looser/denser backfills, adjust above pressures by the ratio = new density / 120 pcf or / 132 pcf (for saturated case)}

USE:	Coefficient of Friction Against Sliding (f_s)	= 0.45	(on compacted NYSDOT Item #304.12 or #304.14 gravels)
	(use lowest f_s with no underlying weaker layers)	= 0.35	(on compacted granular soil & non-plastic silt)
		= 0.20	(slab-on-grade on polyethylene on granular fill)
	[with a F.S. = 1.0]	= 0.60/0.50	(on clean, rough, & sound bedrock/smooth bedrock)
	Min. Factor of Safety Against Sliding	= 1.5	*[Rev.9-30-09]*

GENERAL EARTHWORK SPECIFICATIONS

1. GENERAL

1.1. SITE AND SUBSURFACE CONDITIONS

1.1.1. Overview

This specification is included as a courtesy to the clients of *Barron & Associates, PC* and addresses earthwork site preparation. Additions and modifications are necessary to create a job-specific specification. This specification may serve as a basis for the development for a technical specification under Division 31 (Earthwork) and Division 32 (Exterior Improvements).

1.1.2. Site Conditions

The site-specific conditions are described under separate cover or may be available from the OWNER.

1.1.3. Subsurface Conditions

The site-specific subsurface conditions are described under separate cover or may be available from the OWNER.

1.2. REFERENCES

1.2.1. American Standard for Testing and Measurement (ASTM)

- ASTM C136 Standard Test Method for Sieve Analysis of Fine and Coarse Aggregates
- ASTM D6938 Standard Test Methods for In-Place Density and Water Content of Soil and Soil-Aggregate by Nuclear Methods (Shallow Depth)
- ASTM D7928 Standard Test Method for Particle-Size Distribution (Gradation) of Fine-Grained Soils Using the Sedimentation (Hydrometer) Analysis
- ASTM D1140 Standard Test Methods for Determining the Amount of Material Finer than 75-µm (No. 200) Sieve in Soils by Washing
- ASTM D1557 Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Modified Effort (56,000 ft-lbf/ft^3 (2,700 kN-m/m^3))
- ASTM D2216 Standard Test Methods for Laboratory Determination of Water (Moisture) Content of Soil and Rock by Mass
- ASTM D2487 Standard Practice for Classification of Soils for Engineering Purposes (Unified Soil Classification System)

Attachment: SP-2022-02 application102022 (25490 : Sp-2022-02)

- ASTM D4318 Standard Test Methods for Liquid Limit, Plastic Limit, and Plasticity Index of Soils
- ASTM D1883 Standard Test Method for California Bearing Ratio (CBR) of Laboratory-Compacted Soils

- 2020 Building Code of New York State
- 2020 Residential Code of New York State
- 2021 MasterSpec

1.3. DEFINITIONS

1.3.1. Unacceptable Material

Soil material containing debris, wood, scrap material, vegetation, refuse, soft unsound particles, and other organic, frozen, deleterious, or objectionable materials. Contaminated soils shall be properly documented and removed or remediated on site. If necessary, remediation procedure will be defined by the OWNER.

1.3.2. Unsuitable Material

Brown, organic topsoil and underlying soft pockets of organic silt or wet, reworked silty clay.

1.3.3. Ordinary Fill

Friable soil containing no stone greater than two-thirds loose lift thickness and no unacceptable or unsuitable materials. In general, existing random fill is expected to be acceptable for reuse as ordinary fill given proper sorting, blending, drying, and controlled placement methods.

1.3.4. Granular Fill

Ordinary fill meeting the designation of ASTM D2487 classification of GW with a maximum of 10 percent by weight passing ASTM D1140, No. 200 sieve.

1.3.5. Select Granular Fill

Clean, uncoated soil which contains no unacceptable materials and conforms to the gradation requirements defined in Table A: Select Granular Fill.

Table A: Select Granular Fill

Sieve Size	Percent Finer by Weight
⅔ of the loose lift thickness	100
No. 10	30 - 95
No. 40	10 - 70
No. 200	0 - 15

Attachment: SP-2022-02 application102022 (25490 : Sp-2022-02)

1.3.6. Sand and Gravel

Clean, hard, durable, uncoated particle of sand and gravel, free from lumps of clay, containing no unacceptable matter, and conforming to gradation requirements of Table B: Sand and Gravel.

Table B: Sand and Gravel	
Sieve Size	Percent Finer by Weight
*	100
No. 4	50 - 85
No. 10	
No. 40	10 - 35
No. 100	
No. 200	0 - 8

* Job-Specific. To be determined by the ENGINEER

1.3.7. Crushed Stone

Clean, durable, sharp-angled fragments of rock or crushed gravel stone of uniform quality, containing no unacceptable matter, free from coatings, and conforming to gradation requirements of Table C: Crushed Stone.

Table C: Crushed Stone		
Sieve Size	Percent Finer by Weight	
	¾-inch Stone	1 ¼-inch Stone
1 ½-inch		100
1 ¼-inch		85 - 100
1-inch	100	
¾-inch	90 - 100	10 - 40
⅝-inch		
½-inch	10 - 50	0 - 8
⅜-inch	0 - 20	
No. 4	0 - 5	

1.3.8. Flowable Fill

Also known as Controlled Low Strength Material – Controlled Density Fill (CLSM-CDF), this material is available under a variety of producer names (e.g., K-Krete©, M-Crete, Flash Fill©, Flowable Mortar, Unshrinkable Fill, etc.). This non-settling backfill mixture is most commonly used for its flowable characteristics, its support strength under traffic loads, and its removability at a later date. The material may be produced on-site or off-site. In either case, the producer

Attachment: SP-2022-02 application102022 (25490 : Sp-2022-02)

of such materials and the product must meet certain certification criteria. Such information is beyond the scope of this specification and will be considered on a site-specific basis.

Flowable fill may be acceptable for use as a backfill for utility trenches of other low-lying areas which require a compacted granular fill. Its use and warranty of performance is left to the CONTRACTOR in such applications.

The use of flowable fill under load-bearing structural components in place of properly placed and compacted granular fill is NOT common and is questionable. The localized use of such material may have profound effects on the performance of a foundation system. Site-specific conditions and the extent of anticipated use of flowable fill must be examined by geotechnical engineer. Cost of such consultation shall be borne by the CONTRACTOR unless specifically directed by the OWNER to seek such consultation. Without such consultation, warranty of performance for such use is left to the CONTRACTOR.

1.4. SUBMITTALS

The following submittals shall be provided in accordance with approved submittals procedures.

(1) Fill Source: Provide name and source locations of fill material.

(2) Field Test Reports: Field tests will be performed by OWNER's Representative as needed. CONTRACTOR may be required to perform such tests on proposed off-site fill materials.

(a) Fill material grain size analyses per ASTM C136, D7928, D1140, D2487

(b) Moisture/Density test results per ASTM D2216

(c) Liquid limit, plastic limit, and plasticity index per ASTM D4318

(d) Compaction/Density test results per ASTM D6938 and D1557

(3) Sample: Geotextile fabric

2. PRODUCTS

Geotextile Fabric: Mirafi 600X or equal. (Also referred to as synthetic fabric).

3. EXECUTION

3.1. PROTECTION

3.1.1. General

Manner of excavation shall minimize disturbance of underlying natural ground. If deemed necessary by the Engineer, alter construction procedures to reduce subgrade disturbance.

Attachment: SP-2022-02 application102022 (25490 : Sp-2022-02)

Excavate areas which have been excessively disturbed to firm ground and backfill with properly compacted granular fill.

3.1.2. Roads and Walks

Keep roads and walks free of dirt and debris at all times.

3.1.3. Trees, Shrubs, and Existing Facilities

Protect from any damage all vegetation and facilities identified to remain.

3.1.4. Utility Lines

Locate all utilities within the area of disturbance prior to the start of work. Show locations on initial plans. Protect utility lines from damage. Notify the ENGINEER immediately of damage to or an encounter with an unknown utility. Damage to utility lines are to be repaired by the CONTRACTOR at no additional cost. The CONTRACTOR shall have underground utility owners stake out utility locations prior to the start of clearing and excavation operations.

3.2. VERIFICATION OF CONDITIONS / PROOF-ROLLING

Prior to placement of the initial layer of fill over the natural ground, proof-roll the exposed natural ground above the groundwater table elevation by making two passes with a fully-loaded ten-wheel truck. Excavate unstable areas detected by this process and replace with compacted granular fill.

3.3. PREPARATION

3.3.1. Surface Preparation

Within the site limits indicated on the drawings, excavate all unsuitable material to firm natural ground in the manner specified herein. Follow a construction procedure which permits visual identification of firm natural ground. In the even that groundwater is encountered, the ENGINEER may require that the size of the open excavation be limited to that which can be handled by open pumping to allow visual inspection of the excavation bottom and the performance of backfill operations to be conducted in a dry state.

Excavation of unsuitable material shall be limited to the greater of the following:

- A distance of 5 feet beyond building lines or
- The area defined by a one-horizontal to one-vertical line sloping down from the outside bottom edge of exterior footings to firm natural ground.

Attachment: SP-2022-02 application102022 (25490 : Sp-2022-02)

3.4. PLACEMENT AND COMPACTION

3.4.1. General

Place fill in accordance with Table D: Compaction Alternatives. These alternatives are provided as minimum compaction standards only and in no way relieve the CONTRACTOR of his obligation to achieve any specified degree of compaction by whatever means may be necessary.

Grade to provide positive drainage and a smooth surface which will readily shed water. To the extent practicable, compact each layer to the specified density on the same day placed. Place fill in horizontal layers. Where horizontal layers meet a natural slope, key layer into slope by cutting a bench.

Fill that is too wet for proper compaction: Disc, harrow, or otherwise dry to proper moisture content for compaction to the required density.

Fill that is too dry for proper compaction: Uniformly apply water over the surface of the loose layer in sufficient quantity to allow compaction to the required density.

Table D: Compaction Alternatives

Compaction Method	Maximum Stone Size	Maximum Loose Lift Thickness (inches)		Maximum Number of Passes	
		Below Structure and Pavements	Less-Critical Areas	Below Structure and Pavements	Less-Critical Areas
Hand operated vibratory plate of light roller in confined areas.	3	4	4	4	4
Hand operated vibratory drum rollers weighing at least 1,000 pounds in confined areas.	4	6	8	4	4
Loaded 10-wheel truck or D-8 crawler.	6	10	12	4	2
Light vibratory drum roller; Min. weight at drum 8,000lbs; Min. dynamic force 10,000lbs.	8	12	12	6	2

Attachment: SP-2022-02 application102022 (25490 : Sp-2022-02)

3.4.2. Dewatering

Provide adequate pumping and drainage facilities to keep excavated areas sufficiently dry of groundwater and surface run-off. Dewatering shall avoid adversely affection construction procedures or causing excessive disturbance of underlying natural ground. Drain all pumped water in such a manner as to avoid damage to adjacent property.

If requested by the ENGINEER, place a 6-inch to 12-inch layer of sand and gravel or crushed stone over the natural underlying soil to stabilize area which have been disturbed due to groundwater seepage pressures and to expedite dewatering operations. Particular attention shall be given areas under proposed foundations.

3.5. FIELD QUALITY CONTROL

3.5.1. Compaction Requirements

Allow the ENGINEER sufficient time to make necessary observations and tests. Base the degree of compaction on maximum dry density as determined by ASTM D1557. The minimum degree of compaction for placed fill shall be as indicated in Table E: Compaction Requirements.

Table E: Compaction Requirements

Area	Minimum Degree of Compaction (%)
Below foundation.	95
Pavement and building subbase and base courses.	95
Below building slab base course and above bottom of foundation.	92
Below pavement subbase and base courses.	90
Trench backfill outside of building.	90
Trench backfill inside of building.	Refer to one of the above- listed categories
Ordinary fill within 5 feet of grade.	90
Vegetated areas below 5 feet of grade.	85

3.5.2. Testing

Site work should be monitored and tested by geotechnical ENGINEER or his representative and in accordance with requirements of the design team to assure compliance with earthwork and foundation construction specifications.

Attachment: SP-2022-02 application102022 (25490 : Sp-2022-02)

The owner will retain a geotechnical ENGINEER or his representative to perform on-site observations and testing during this phase of construction operations. The geotechnical ENGINEER or his representative will:

- Observe excavation and dewatering of building and controlled fill areas;
- Observe backfill and compaction within building and controlled fill areas;
- Laboratory test and analyze fill material; and
- Observe construction – and performing water content, gradation, and compaction tests.

On a timely basis, the CONTRACTOR will receive copies of test results submitted to the OWNER. In addition, during construction the geotechnical ENGINEER will advise the OWNER and CONTRACTOR in writing of conditions which fail to conform to the Contract Documents. The CONTRACTOR shall take immediate action to remedy indicated deficiencies.

The geotechnical ENGINEER or his representative will not supervise or direct the actual work of the CONTRACTOR or employees and representatives of the CONTRACTOR. The presence of, observations by, and testing performed by the geotechnical ENGINEER or his representatives shall not excuse the CONTRACTOR from defects discovered in the work.

APPENDIX F

LIMITATIONS

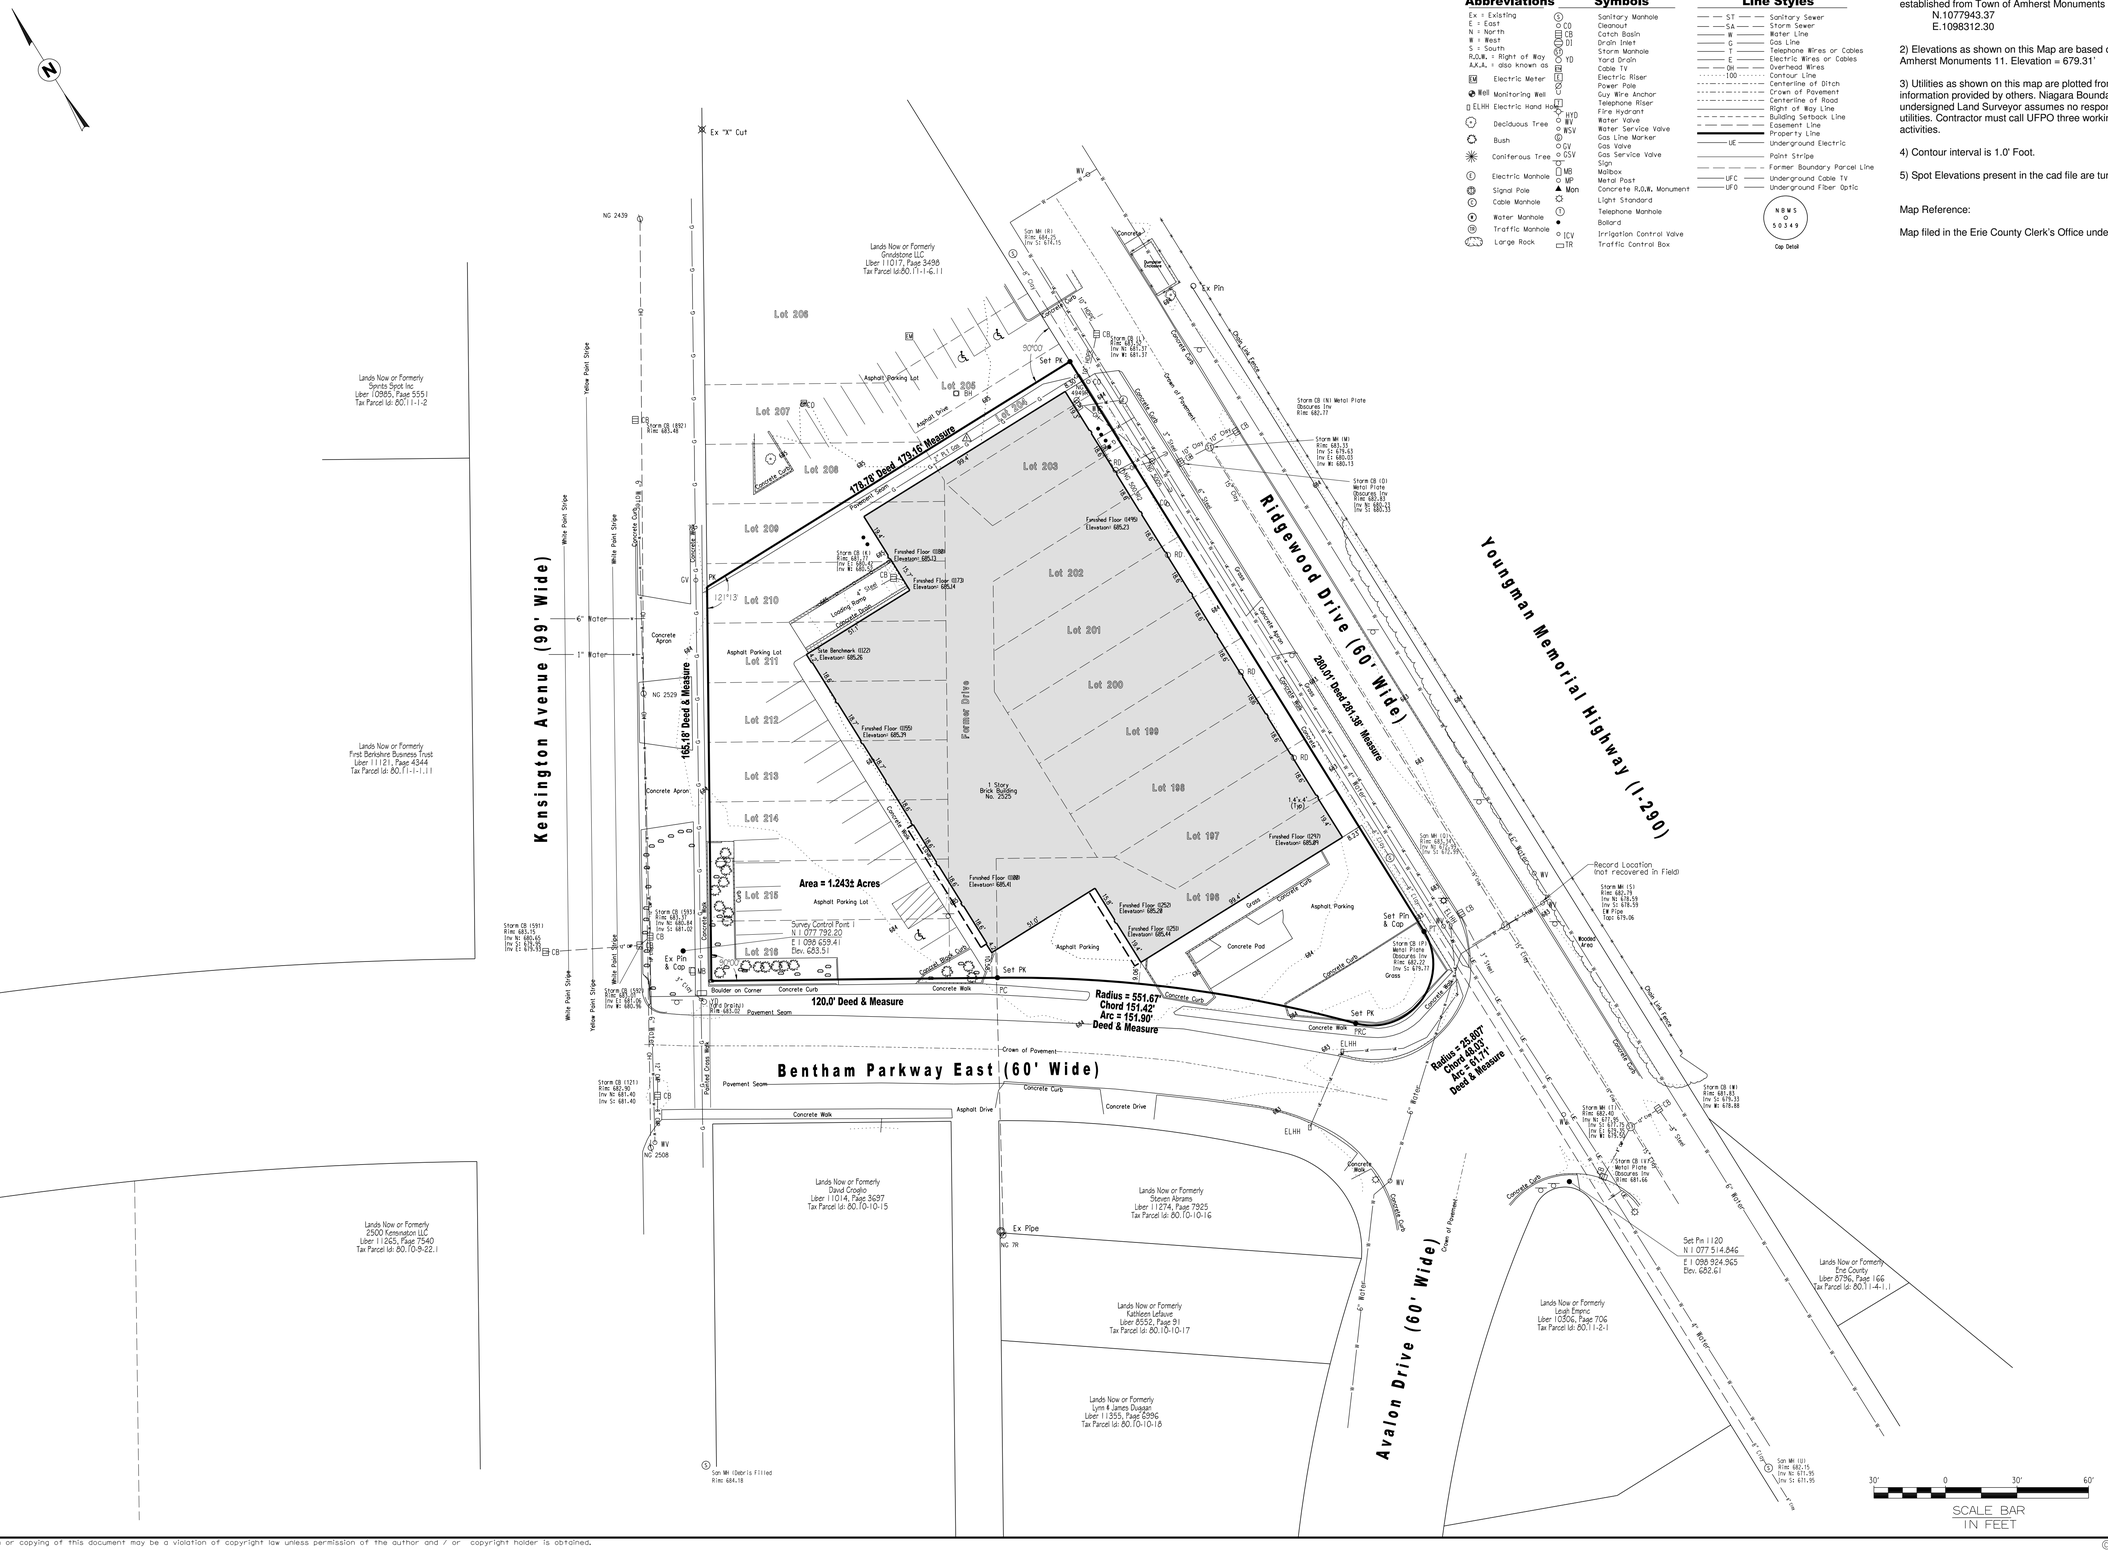
Attachment: SP-2022-02 application102022 (25490 : Sp-2022-02)

LIMITATIONS

1. This report is based on the data that was obtained from the subsurface explorations and on the design of the proposed interior mezzanine and exterior canopy as submitted to the geotechnical engineer. A geotechnical engineer, who is experienced in foundation construction and earthwork, should be engaged to review the final design and specifications in order to determine whether any change in concept may have any effect on the validity of the conclusions presented herein, and whether these conclusions have, in fact, been implemented in the design and specifications.

2. The subsurface conditions, including thickness, between the exploration locations are approximate and simplified representations of the strata and transitions. There is the possibility that variations in soil and rock conditions and boundaries will be encountered during construction. In order to permit correlation between the exploratory soil data and the actual soil conditions encountered during construction and so as to assess conformance with the plans and specifications as originally contemplated, it is recommended that a geotechnical engineer, who is experienced in foundation construction and earthwork monitoring, should be retained to perform continuous construction review during the site preparation and foundation construction operations.

3. The subsurface exploration logs and subsurface conditions may aid in estimating material quality and quantities, such as topsoil/organic matter, fills, natural soils, and rock, but are not to be relied upon as the exclusive means for bid preparation purposes. It is the responsibility of the contractor to perform any additional site examinations and explorations and to prepare an accurate bid.



4. Disclaimers:

   a. In the event that any changes in the nature, design or location of the structure are planned, the conclusions that are contained in this report shall not be considered valid unless the changes are reviewed and the conclusions of this report are modified or verified in writing.

   b. The geotechnical engineering report has been prepared for this project by Barron & Associates, P.C. This report is for assistance in design only and is not a sufficient basis on which to prepare an accurate bid.

   c. This report has been prepared for the exclusive use of Dr. Todd Shatkin (Shatkin School of Dentistry), and their designated design representatives, for specific application to the construction of an interior mezzanine and exterior drop off canopy at 2525 Kensington Avenue, in the Town of Amherst, New York and in accordance with generally accepted geotechnical engineering practice. No other warranty, expressed or implied, is made.

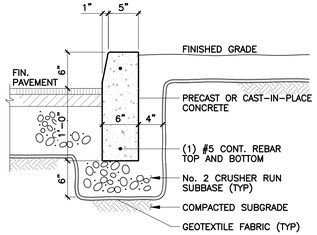
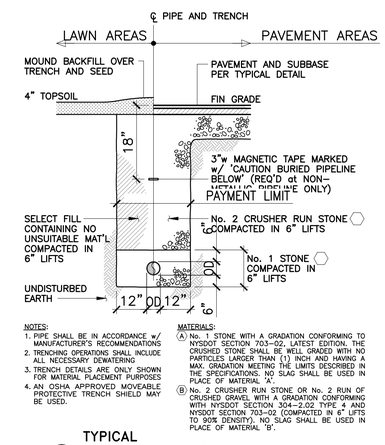
GENERAL SITE NOTES

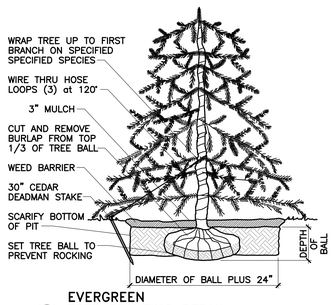


1. ALL WORK SHALL BE IN ACCORDANCE WITH THE LATEST RULES AND REGULATIONS OF THE TOWN OF AMHERST, THE ERIE COUNTY WATER AUTHORITY, ERIE COUNTY DPW, AND NYSDOT SPECIFICATIONS.
2. INSTALL ALL MATERIALS TO THE MANUFACTURER'S RECOMMENDATIONS AND BEST STANDARDS OF THE TRADE INVOLVED.
3. SUBSTITUTIONS SHALL BE MADE ONLY WITH OWNER APPROVAL AND SHALL BE EQUIVALENT QUALITY TO WHAT IS SPECIFIED.
4. WORK SHALL BE COMPLETED IN STRICT ACCORDANCE WITH ALL LOCAL CODES AND OSHA SAFETY RULES AND REGULATIONS.
5. VERIFY ALL EXISTING CONDITIONS AND DIMENSIONS AT THE SITE. NOTIFY OWNER OF ANY DISCREPANCIES IN CONDITIONS SHOWN ON THE DRAWINGS PRIOR TO PROCEEDING WITH THE WORK.
6. CONTRACTORS SHALL BE RESPONSIBLE FOR THE PROTECTION OF ANY EXISTING STRUCTURES TO REMAIN AND ANY FINISH MATERIAL INSTALLED WHILE WORKING ON OTHER COMPONENTS.
7. CONTRACTOR SHALL KEEP THE JOB SITE FREE OF DEBRIS AND MAKE FINAL CLEANUP TO THE SATISFACTION OF THE OWNER.
8. CONTRACTOR SHALL ASCERTAIN THE LOCATION OF ALL UTILITIES PRIOR TO CONSTRUCTION SO THAT THIS WORK DOES NOT DISTURB EXISTING LINES AND/OR INSTALLATIONS. COORDINATE ALL WORK WITH THE APPLICABLE UTILITY COMPANIES.
9. CONTRACTOR SHALL OBTAIN AND PAY FOR ALL PERMITS NECESSARY TO PERFORM THE WORK INCLUDING BUT NOT LIMITED TO ERIE COUNTY HIGHWAY WORK PERMIT.
10. DURING CONSTRUCTION, THE CONTRACTOR SHALL MAINTAIN CONTROL OF EROSION FROM THE SITE. SEE PROJECT EROSION CONTROL PLAN AND SWPPP MANUAL.
11. REFER TO ARCHITECTURAL DRAWINGS FOR EXACT BUILDING DIMENSIONS, FEATURES AND UTILITY CONNECTIONS.
12. ALL UTILITY TRENCHES UNDER PAVEMENT, CURBS, SIDEWALKS, AND DRIVEWAYS SHALL BE FULLY BACKFILLED WITH No 2 CRUSHER RUN STONE AND PROPERLY COMPACTED TO AVOID SETTLEMENT.
13. CONTRACTOR SHALL REPLACE IN KIND ANY EXISTING IMPROVEMENTS TO REMAIN THAT ARE DAMAGED DURING CONSTRUCTION. THIS SHALL INCLUDE, BUT NOT BE LIMITED TO, CURBS, ROAD PAVEMENTS, SIDEWALKS, AND EXISTING UTILITIES.

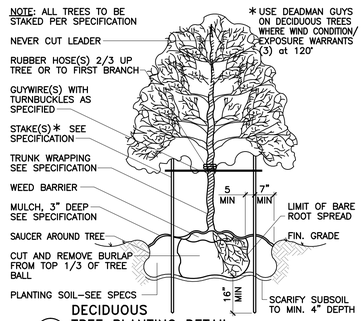


6 CONTROL JOINT IN EXTERIOR CONC PAVEMENT

10 HANDICAP ACCESS RAMP



9 TYPICAL CONCRETE CURB



NOTES:
1. PIPE SHALL BE IN ACCORDANCE w/ MANUFACTURER'S RECOMMENDATIONS
2. TRENCHING OPERATIONS SHALL INCLUDE ALL NECESSARY DEWATERING
3. TRENCH DETAILS ARE ONLY SHOWN FOR MATERIAL PLACEMENT PURPOSES
4. AN OSHA APPROVED MOVEABLE PROTECTIVE TRENCH SHIELD MAY BE USED.

MATERIALS:
(A) No. 1 STONE WITH A GRADATION CONFORMING TO NYSDOT SECTION 703-02, LATEST EDITION. THE CRUSHED STONE SHALL BE WELL GRADED WITH NO PARTICLES LARGER THAN (1) INCH AND HAVING A MAX. GRADATION MEETING THE LIMITS DESCRIBED IN THE SPECIFICATIONS. NO SLAG SHALL BE USED IN PLACE OF MATERIAL 'A'.
(B) No. 2 CRUSHER RUN STONE OR No. 2 RUN OF CRUSHED GRAVEL WITH A GRADATION CONFORMING WITH NYSDOT SECTION 304-2.02 TYPE 4 AND NYSDOT SECTION 703-02 (COMPACTED IN 6" LIFTS TO 95% DENSITY). NO SLAG SHALL BE USED IN PLACE OF MATERIAL 'B'.

Standard Features

- Kohler Co. provides one-source responsibility for the generating system and accessories.
- The generator set and its components are prototype-tested, factory-built, and production-tested.
- The 60 Hz generator set offers a UL 2200 listing.
- The generator set accepts rated load in one step.
- The 60 Hz generator set meets NFPA 110, Level 1, when equipped with the necessary accessories and installed per NFPA standards.
- A one-year limited warranty covers all generator set systems and components. Two- and five-year extended limited warranties are also available.
- Alternator features:
  - The unique Fast-Response® X excitation system delivers excellent voltage response and short-circuit capability using a rare-earth, permanent magnet (PM)-excited alternator.
    (4S13X alternator)
  - The unique Fast-Response® II excitation system delivers excellent voltage response and short-circuit capability using a permanent magnet (PM)-excited alternator.
    (4UA9 and 4UA13 alternators)
  - The brushless, rotating-field alternator has broadrange reconnectability.
- Other features:
  - Kohler designed controllers for one-source system integration and remote communication. See Controllers on page 3.
  - The low coolant level shutdown prevents overheating (standard on radiator models only).
  - Integral vibration isolation eliminates the need for under-unit vibration spring isolators.
- Multiple circuit breaker configurations.
- Mount up to three circuit breakers to allow circuit protection of selected priority loads.

RATINGS: All three-phase units are rated at 0.8 power factor. All single-phase units are rated at 1.0 power factor. *Standby Ratings:* The standby rating is applicable to varying loads for the duration of a power outage. There is no overload capability for this rating. *Prime Power Ratings:* At varying load, the number of generator set operating hours is unlimited. A 10% overload capacity is available for one hour in twelve. Ratings are in accordance with ISO-8528-1 and ISO-3046-1. For limited running time and continuous ratings, consult the factory. Obtain technical information bulletin (TIB-101) for ratings guidelines, complete ratings definitions, and site condition derates. The generator set manufacturer reserves the right to change the design or specifications without notice and without any obligation or liability whatsoever.

Attachment: SP-2022-02 drawings 102022 (25490 : Sp-2022-02)

Alternator Specifications

Specifications	Alternator
Manufacturer	Kohler
Type	4-Pole, Rotating-Field
Exciter type	Brushless, Permanent-Magnet
Leads: quantity, type	
4SX, 4UA	12, Reconnectable
Voltage regulator	Solid State, Volts/Hz
Insulation:	NEMA MG1
Material	Class H
Temperature rise	130°C, Standby
Bearing: quantity, type	1, Sealed
Coupling	Flexible Disc
Amortisseur windings	Full
Voltage regulation, no-load to full-load	Controller Dependent
One-step load acceptance	100% of Rating
Unbalanced load capability	100% of Rated Standby Current

- NEMA MG1, IEEE, and ANSI standards compliance for temperature rise and motor starting.
- Sustained short-circuit current of up to 300% of the rated current for up to 10 seconds.
- Sustained short-circuit current enabling downstream circuit breakers to trip without collapsing the alternator field.
- Self-ventilated and dripproof construction.
- Windings are vacuum-impregnated with epoxy varnish for dependability and long life.
- Superior voltage waveform from a two-thirds pitch stator and skewed rotor.

Specifications		Alternator
Peak motor starting kVA:		(35% dip for voltages below)
480 V	4S13X (12 lead)	570
480 V	4UA9 (12 lead)	700
480 V	4UA13 (12 lead)	960

Application Data

Engine

Engine Specifications	
Manufacturer	John Deere
Engine model	6068HFG85A
Engine type	4-Cycle, Turbocharged, Charge Air-Cooled
Cylinder arrangement	6 Inline
Displacement, L (cu. in.)	6.8 (415)
Bore and stroke, mm (in.)	106 x 127 (4.19 x 5.00)
Compression ratio	17.0:1
Piston speed, m/min. (ft./min.)	457 (1500)
Main bearings: quantity, type	7, Replaceable Insert
Rated rpm	1800
Max. power at rated rpm, kWm (BHP)	235 (315)
Cylinder head material	Cast Iron
Crankshaft material	Forged Steel
Valve material:	
Intake	Chromium-Silicon Steel
Exhaust	Stainless Steel
Governor: type, make/model	JDEC Electronic L14 Denso HP3
Frequency regulation, no-load to full-load	Isochronous
Frequency regulation, steady state	±0.25%
Frequency	Fixed
Air cleaner type, all models	Dry

Exhaust

Exhaust System	
Exhaust manifold type	Dry
Exhaust flow at rated kW, m^3/min. (cfm)	42.8 (1510)
Exhaust temperature at rated kW, dry exhaust, °C (°F)	527 (980)
Maximum allowable back pressure, kPa (in. Hg)	Min. 4 (1.2) Max. 10 (3.0)
Exhaust outlet size at engine hookup, mm (in.)	98 (3.86)

Engine Electrical

Engine Electrical System	
Battery charging alternator:	24 Volt
Ground (negative/positive)	Negative
Volts (DC)	24
Ampere rating	45
Starter motor rated voltage (DC)	24
Battery, recommended cold cranking amps (CCA):	
Quantity, CCA rating each	Two, 925
Battery voltage (DC)	12

Fuel

Fuel System	
Fuel supply line, min. ID, mm (in.)	11.0 (0.44)
Fuel return line, min. ID, mm (in.)	6.0 (0.25)
Max. lift, fuel pump: type, m (ft.)	Mechanical, 1.8 (6.0)
Max. fuel flow, Lph (gph)	92.7 (24.5)
Max. return line restriction, kPa (in. Hg)	20 (5.9)
Fuel prime pump	Manual
Fuel filter	
Primary	30 Microns
Secondary	2 Microns @ 98% Efficiency
Water Separator	Yes
Recommended fuel	#2 Diesel

Lubrication

Lubricating System	
Type	Full Pressure
Oil pan capacity, L (qt.) §	32.5 (34.4)
Oil pan capacity with filter, L (qt.) §	33.4 (35.3)
Oil filter: quantity, type §	1, Cartridge
Oil cooler	Water-Cooled

§ Kohler recommends the use of Kohler Genuine oil and filters.

Attachment: SP-2022-02 drawings 102022 (25490 : Sp-2022-02)

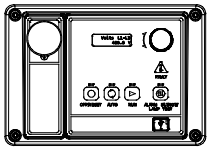
Application Data

Cooling

Radiator System	
Ambient temperature, °C (°F) *	50 (122)
Engine jacket water capacity, L (gal.)	11.3 (3.0)
Radiator system capacity, including engine, L (gal.)	27.6 (7.3)
Engine jacket water flow, Lpm (gpm)	230.9 (61)
Heat rejected to cooling water at rated kW, dry exhaust, kW (Btu/min.)	94.2 (5360)
Heat rejected to air charge cooler at rated kW, dry exhaust, kW (Btu/min.)	56.1 (3190)
Water pump type	Centrifugal
Fan diameter, including blades, mm (in.)	787 (31)
Fan, kWm (HP)	8.6 (11.5)
Max. restriction of cooling air, intake and discharge side of radiator, kPa (in. H_2O)	0.125 (0.5)

* Enclosure with enclosed silencer reduces ambient temperature capability by 5°C (9°F).

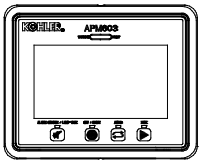
Operation Requirements



Air Requirements	
Radiator-cooled cooling air, m^3/min. (scfm)‡	368.1 (13000)
Combustion air, m^3/min. (cfm)	17.6 (620)
Heat rejected to ambient air:	
Engine, kW (Btu/min.)	46.9 (2670)
Alternator, kW (Btu/min.)	18.5 (1050)

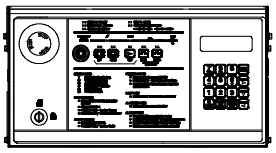
‡ Air density = 1.20 kg/m^3 (0.075 lbm/ft^3)

Fuel Consumption



Diesel, Lph (gph) at % load	Standby Rating	
100%	58.0	(15.3)
75%	43.3	(11.4)
50%	31.4	(8.3)
25%	19.7	(5.2)
Diesel, Lph (gph) at % load	**Prime Rating**	
100%	50.1	(13.2)
75%	36.1	(9.5)
50%	25.7	(6.8)
25%	16.6	(4.4)

Controllers



APM402 Controller
Provides advanced control, system monitoring, and system diagnostics for optimum performance and compatibility.
- Digital display and menu control provide easy local data access
- Measurements are selectable in metric or English units
- Remote communication thru a PC via network or serial configuration
- Controller supports Modbus® protocol
- Integrated hybrid voltage regulator with ±0.5% regulation
- Built-in alternator thermal overload protection
- NFPA 110 Level 1 capability

Refer to G6-161 for additional controller features and accessories.

APM603 Controller
Provides advanced control, system monitoring, and system diagnostics for optimum performance and compatibility.
- 7-inch graphic display with touch screen and menu control provides easy local data access
- Measurements are selectable in metric or English units
- Paralleling capability to control up to 8 generators on an isolated bus with first-on logic, synchronizer, kW and kVAR load sharing, and protective relays
  Note: Parallel with other APM603 controllers only
- Generator management to turn paralleled generators off and on as required by load demand
- Load management to connect and disconnect loads as required
- Controller supports Modbus® RTU, Modbus® TCP, SNMP and BACnet®
- Integrated voltage regulator with ±0.25% regulation
- Built-in alternator thermal overload protection
- UL-listed overcurrent protective device
- NFPA 110 Level 1 capability

Refer to G6-162 for additional controller features and accessories.

Decision-Maker® 6000 Paralleling Controller
Provides advanced control, system monitoring, and system diagnostics with remote monitoring capabilities for paralleling multiple generator sets.
- Paralleling capability to control up to 8 generators on an isolated bus with first-on logic, synchronizer, kW and kVAR load sharing, and protective relays
  Note: Parallel with other Decision-Maker® 6000 controllers only
- Digital display and keypad provide easy local data access
- Measurements are selectable in metric or English units
- Remote communication thru a PC via network or modem configuration
- Controller supports Modbus® protocol
- Integrated voltage regulator with ±0.25% regulation
- Built-in alternator thermal overload protection
- NFPA 110 Level 1 capability

Refer to G6-107 for additional controller features and accessories.

Modbus® is a registered trademark of Schneider Electric.

BACnet® is a registered trademark of ASHRAE.

NOTES:

1. Customer is responsible for engineering analysis to confirm pole and fixture compatibility for all applications. Refer to our white paper WP513001EN for additional support information.
2. DesignLights Consortium® Qualified. Refer to www.designlights.org Qualified Products List under Family Models for details.
3. Coastal construction finish salt spray tested to over 5,000-hours per ASTM B117, with a scribe rating of 9 per ASTM D1654. Not available with TH option.
4. Not compatible with MS/4-LXX or MS/1-LXX sensors.
5. Not compatible with extended quick mount arm (QMEA).
6. Not compatible with standard quick mount arm (QM) or extended quick mount arm (QMEA).
7. Requires the use of an internal step down transformer when combined with sensor options. Not available with sensor at 1200mA. Not available in combination with the HA high ambient and sensor options at 1A.
8. 480V must utilize Wye system only. Per NEC, not for use with ungrounded systems, impedance grounded systems or corner grounded systems (commonly known as Three Phase Three Wire Delta, Three Phase High Leg Delta and Three Phase Corner Grounded Delta systems.)
9. May be required when two or more luminaires are oriented on a 90° or 120° drilling pattern. Refer to arm mounting requirement table.
10. Factory installed.
11. Maximum 8 light squares.
12. Maximum 6 light squares.
13. Requires ZW or ZD receptacle.
14. Narrow-band 590nm +/- 5nm for wildlife and observatory use. Choose drive current A; supplied at 500mA drive current only. Available with 5WQ, 5MQ, SL2, SL3 and SL4 distributions. Can be used with HSS option.
15. Set of 4 pcs. One set required per Light Square.
16. Not available with HA option.
17. 2L is not available with MS, MS/X or MS/DIM at 347V or 480V. 2L in SA2 through SA4 requires a larger housing, normally used for SA5 or SA6. Extended arm option may be required when mounting two or more fixtures per pole at 90° or 120°. Refer to arm mounting requirement table.
18. Not available with Enlighted wireless sensors.
19. Cannot be used with other control options.
20. Low voltage control lead brought out 18" outside fixture.
21. Not available if any "MS" sensor is selected. Motion sensor has an integral photocell.
22. Requires the use of BPC photocontrol or the PR7 or PR photocontrol receptacle with photocontrol accessory. See After Hours Dim supplemental guide for additional information.
23. Not for use with T4FT, T4W or SL4 optics. See IES files for details.
24. The FSIR-100 configuration tool is required to adjust parameters including high and low modes, sensitivity, time delay, cutoff and more. Consult your lighting representative at Cooper Lighting Solutions for more information.
25. Replace X with number of Light Squares operating in low output mode.
26. Enlighted wireless sensors are factory installed only requiring network components LWP-EM-1, LWP-GW-1 and LWP-PoE8 in appropriate quantities.
27. Not available with house side shield (HSS).
28. Not for use with 5NQ, 5MQ, 5WQ or RW optics. A black trim plate is used when HSS is selected.
29. CE is not available with the LWR, MS, MS/X, MS/DIM, BPC, PR or PR7 options. Available in 120-277V only.
30. One required for each Light Square.
31. Requires PR7.
32. Replace XX with sensor color (WH, BZ or BK.)
33. WAC Gateway required to enable field-configurability: Order WAC-PoE and WPOE-120 (10V to PoE injector) power supply if needed.
34. Smart device with mobile application required to change system defaults. See controls section for details.
35. Only product configurations with these designated prefixes are built to be compliant with the Buy American Act of 1933 (BAA) or Trade Agreements Act of 1979 (TAA), respectively. Please refer to DOMESTIC PREFERENCES website for more information. Components shipped separately may be separately analyzed under domestic preference requirements.
36. For BAA or TAA requirements, Accessories sold separately will be separately analyzed under domestic preference requirements. Consult factory for further information.
37. Available for 7-10 squares.

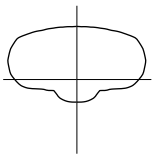
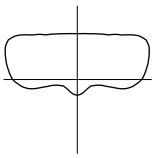
Optical Distributions

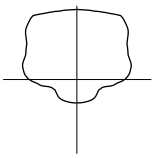
Asymmetric Area Distributions



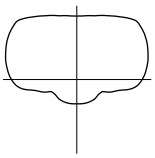
T2 (Type II)



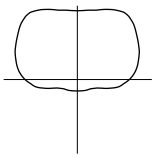
SL2 (Type II with Spill Control)



T3 (Type III)

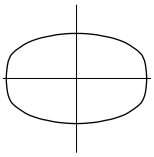


SL3 (Type III with Spill Control)

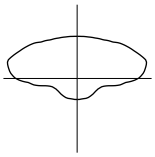


T4FT (Type IV Forward Throw)

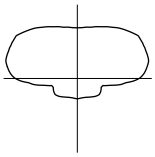
T4W (Type IV Wide)



SL4 (Type IV with Spill Control)

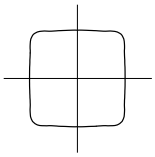


Asymmetric Roadway Distributions

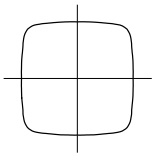


RW (Rectangular Wide Type I)

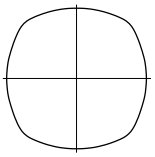
T2R (Type II Roadway)



T3R (Type III Roadway)

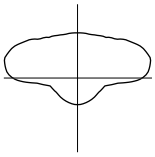


Symmetric Distributions

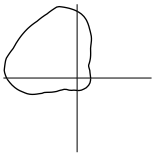


5NQ (Type V Square Narrow)

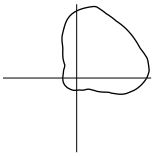
5MQ (Type V Square Medium)



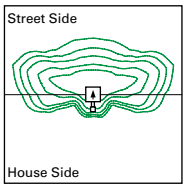
5WQ (Type V Square Wide)



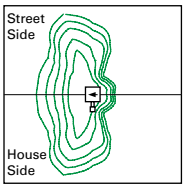
Specialized Distributions



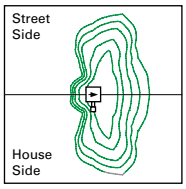
AFL (Automotive Frontline)



SLL (90° Spill Light Eliminator Left)



SLR (90° Spill Light Eliminator Right)



Rotated Optics

Standard

Optics Rotated Left @ 90° [L90]

Optics Rotated Right @ 90° [R90]

Product Specifications

Construction

- Extruded aluminum driver enclosure
- Heavy-wall, die-cast aluminum end caps
- Die-cast aluminum heat sinks
- Patent pending interlocking housing and heat sink

Optics

- Patented, high-efficiency injection-molded AccuLED Optics technology
- 16 optical distributions
- 3 shielding options including HSS, GRS and PFS
- IDA Certified (3000K CCT and warmer only)

Electrical

- LED drivers are mounted to removable tray assembly for ease of maintenance
- Standard with 0-10V dimming
- Standard with Cooper Lighting Solutions proprietary circuit module designed to withstand 10kV of transient line surge
- Suitable for operation in -40°C to 40°C ambient environments. Optional 50°C high ambient (HA) configuration.

Mounting

- Standard extruded arm includes internal bolt guides and round pole adapter
- Extended arms (EA and QMEA) may be required in 90° or 120° pole mount configurations, see arm mounting requirements table
- Mast arm (MA) factory installed
- Wall mount (WM) option available
- Quick mount arm (QM and QMEA) includes pole adapter and factory installed fixture mount for fast installation to square or round poles

Finish

- Super housing durable TGIC polyester powder coat paint, 2.5 mil nominal thickness
- Heat sink is powder coated black
- RAL and custom color matches available
- Coastal Construction (CC) option available

Warranty

- Five year warranty

Energy and Performance Data

Lumen Maintenance (TM-21)

Drive Current	Ambient Temperature	25,000 hours*	50,000 hours*	60,000 hours*	100,000 hours**	Theoretical L70 hours**
Up to 1A	25°C	99.4%	99.0%	98.9%	98.3%	> 2.4M
	40°C	98.7%	98.3%	98.1%	97.4%	> 1.9M

Attachment: SP-2022-02 drawings 102022 (25490 : Sp-2022-02)

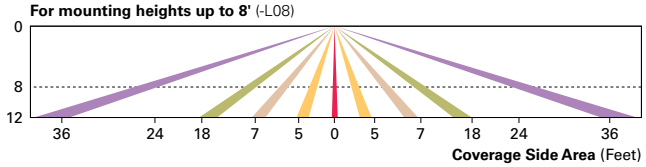
Control Options

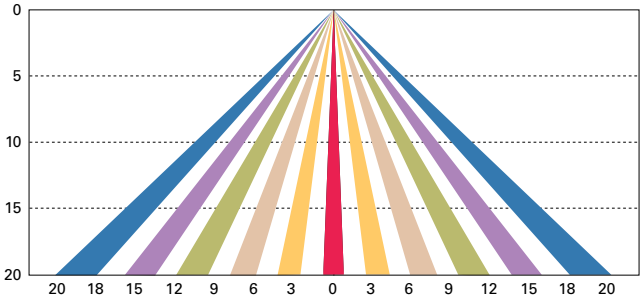


0-10V (DIM)
This fixture is offered standard with 0-10V dimming driver(s). The DIM option provides 0-10V dimming wire leads for use with a lighting control panel or other control method.

Photocontrol (BPC, PR and PR7)
Optional button-type photocontrol (BPC) and photocontrol receptacles (PR and PR7) provide a flexible solution to enable "dusk-to-dawn" lighting by sensing light levels. Advanced control systems compatible with NEMA 7-pin standards can be utilized with the PR7 receptacle.

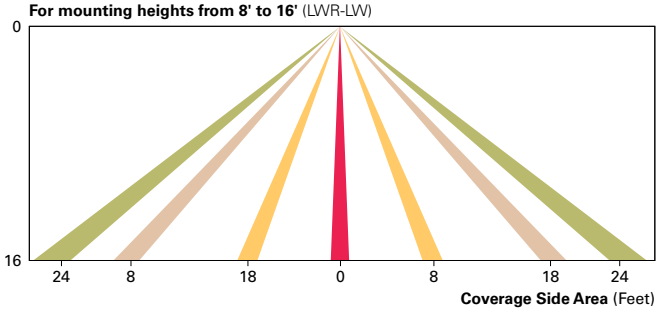
After Hours Dim (AHD)
This feature allows photocontrol-enabled luminaires to achieve additional energy savings by dimming during scheduled portions of the night. The dimming profile will automatically take effect after a "dusk-to-dawn" period has been calculated from the photocontrol input. Specify the desired dimming profile for a simple, factory-shipped dimming solution requiring no external control wiring. Reference the After Hours Dim supplemental guide for additional information.

Dimming Occupancy Sensor (SPB, MS/DIM-LXX, MS/X-LXX and MS-LXX)
These sensors are factory installed in the luminaire housing. When the SPB or MS/DIM sensor options are selected, the occupancy sensor is connected to a dimming driver and the entire luminaire dims when there is no activity detected. When activity is detected, the luminaire returns to full light output. The MS/DIM sensor is factory preset to dim down to approximately 50 percent power with a time delay of five minutes. The MS-LXX sensor is factory preset to turn the luminaire off after five minutes of no activity. The MS/X-LXX is also preset for five minutes and only controls the specified number of light engines to maintain steady output from the remaining light engines. SPB motion sensors require the Sensor Configuration mobile application by Wattstopper to change factory default dimming level, time delay, sensitivity and other parameters. Available for iOS and Android devices. The SPB sensor is factory preset to dim down to approximately 10% power with a time delay of five minutes. The MS/DIM occupancy sensors require the FSIR-100 programming tool to adjust factory defaults.

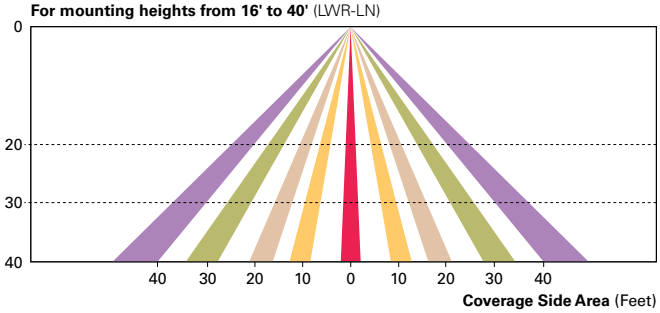


For mounting heights up to 8' (-L08)

For mounting heights up to 40' (-L40W)



For mounting heights up to 20' (-L20)



Enlighted Wireless Control and Monitoring System (LWR-LW and LWR-LN)
Enlighted is a connected lighting solution that combines a broad selection of energy-efficient LED luminaires with a powerful integrated wireless sensor system. The sensor controls the lighting system in compliance with the latest energy codes and collects valuable data about building performance and use. Software applications turn the granular data into information through energy dashboards and specialized apps that make it simple and help optimize the use of building resources, beyond lighting.

For mounting heights from 8' to 16' (LWR-LW)

For mounting heights from 16' to 40' (LWR-LN)

WaveLinx Wireless Outdoor Lighting Control Module (WOLC-7P-10A)
The 7-pin wireless outdoor lighting control module enables WaveLinx to control outdoor area, site and flood lighting. WaveLinx controls outdoor lighting using schedules to provide ON, OFF and dimming controls based on astronomic or time schedules based on a 7 day week.

LumenSafe Integrated Network Security Camera (LD)
Cooper Lighting Solutions brings ease of camera deployment to a whole new level. No additional wiring is needed beyond providing line power to the luminaire. A variety of networking options allows security integrators to design the optimal solution for active surveillance. As the ideal solution to meet the needs for active surveillance, the LumenSafe integrated network camera is a streamlined, outdoor-ready fixed dome that provides HDTV 1080p video. This IP camera is optimally designed for deployment in the video management system or security software platform of choice.

Synapse (DIM10)
SimplySNAP integrated wireless controls system by Synapse. Includes factory installed DIM10 Synapse control module and MS/DC motion sensor; requires additional Synapse system components for operation. Contact Synapse at www.synapsewireless.com for product support, warranty and terms and conditions.

DRAFT

(10/20/2022)

SEQR
Negative Declaration

NOTICE OF DETERMINATION OF NON-SIGNIFICANCE

Lead Agency: Town of Amherst
Planning Board

Project: SP-2022-02

Address: 5583 Main Street
Williamsville, NY 14221
(716) 631-7051

Date:

This notice is issued pursuant to Part 617 of the implementing regulations pertaining to Article 8 (State Environmental Quality Review) of the Environmental Conservation Law, and to Chapter 104 of the Town Code, as amended.

The Lead Agency has determined that the proposed action described below will not have a significant adverse effect on the environment.

Title of Action: Site Plan Review

SEQR Status: Unlisted

Description of Action: Proposed conversion of a portion of the existing 29,350 s.f. Philips Bros. retail/warehouse building for the Shatkin School of Dentistry (16,253 s.f..). Project includes an approximately 4,000 s.f. second floor **build-out** ~~addition~~, as well as redevelopment of Ridgewood Drive for private parking under a license agreement with the Town. Work will include the site improvements not specifically stated above, including, stormwater, utilities, grading, lighting, paving, and landscaping.

Location: 2525 Kensington Avenue, Amherst, Erie County

Petitioner: Philipps Brothers Supply Inc.

Attachment: SP-2022-02_draft neg dec_102022 (25490 : Sp-2022-02)

Reasons Supporting This Determination

Based on information submitted by the applicant including a Full Environmental Assessment Form (EAF) - Part 1, (as amended), **EAF Part 2** and a complete site plan application, a preliminary staff analysis was undertaken. Compared to the criteria listed in Section 617.7, all indications are that this action will not have a significant impact on the environment, as follows:

1. The project is not expected to cause a substantial adverse change in existing air quality, ground or surface water quality or quantity, or noise levels; a substantial increase in solid waste production; or a substantial increase in the potential for erosion, flooding, leaching or drainage problems. The Engineering Department on **September 26, 2022** reviewed the: Grading, Drainage and Utility Plans submitted on **September 23, 2022**; Engineer's Report submitted on February 22, 2022; Erosion Control Plan submitted on March 30, 2022 and Geotechnical Report prepared by Barron & Associates, P.C. submitted on February 22, 2022.

2. The project will not result in the removal or destruction of large quantities of vegetation or fauna; or in significant adverse impacts to fish or wildlife species, habitats or other natural resources. The Planning Department reviewed a Landscape Plan submitted on **September 23, 2022** and determined that it meets or exceeds Zoning Ordinance requirements for greenspace. The Landscape Plan has met all Zoning Ordinance and Town requirements for landscaping.

3. The project is not expected to create any material conflict with the Town Comprehensive Plan. The Building Department in their review of March 22, 2022 and the Planning Department in their review of **September 29, 2022** has reviewed the application documents, along with the Geotechnical Report submitted on February 22, 2022 and determined in their review of March 22, 2022 that the subject project has or will have met all International Building Code - 2018 and Zoning Ordinance regulations.

4. The project is within an area identified by the State as having potential archaeological or historical significance. However, the site has been previously disturbed, therefore, the project will not impair the character or quality of important historical resources.

5. The project will not impair the character or quality of important aesthetic resources or of existing community or neighborhood character. The project is located in the General Business (GB) zoning district; neighboring uses are commercial, office and residential and zoned for commercial and residential use; therefore, the project is consistent with surrounding land use.

6. The proposed subject development will include a **build-out of the** second floor for the continuation of the retail/warehouse use and dental school which will not cause a major change in the use of either the quantity or type of energy.

7. The project will not create any hazard to human health. The Fire Chief's Association on **September 27, 2022** has reviewed the project and has no objection to the approval of the site plan, as all requirements of this agency has or will have been met.

Attachment: SP-2022-02_draft neg dec_102022 (25490 : Sp-2022-02)

8. The project will not cause a substantial change in the use, or intensity of use, of land including agricultural, open space or recreational resources, or in its capacity to support existing uses as the approximate 4,400 s.f. (15%) increase in floor area will be consistent with the scale of surrounding land uses.

9. The proposed dental school may increase the number of people using the site over its previous level of use, this increase is not anticipated to result in a significant impact.

10. **A Signal Warrant Analysis dated July 27, 2022 concludes that a three-color signal is not warranted. Reviews by the Erie County Division of Highways dated September 27, 2022 and** the Town Traffic/Safety Board dated **October 3, 2022** indicate that there are no further traffic concerns. ~~The Erie County Division of Highways is requesting that the applicant prepare a signal warrant analysis to determine if a traffic signal may be necessary at Bentham Parkway East~~.

11. A coordinated review of the project has been undertaken by Town Departments including, in addition to those mentioned above, Highway on May 4, 2022, Assessor on March 23, 2022, Plumbing Division on March 9, 2022, and Right-of-Way Agent on May 10, 2022. These reviews did not identify any potential significant adverse environmental issues and indicated that the proposal will not have a significant damaging impact on the environment.

12. Issues not specifically mentioned above and/or those not specifically reviewed were not raised by Town departments, outside agencies or the public and are not determined to cause significant negative environmental impacts.

DRAFT (10/20/22)
TOWN OF AMHERST
PLANNING BOARD
SITE PLAN RESOLUTION
SP-2022-02

PETITIONER

Philipps Bros. Supply Inc.
2525 Kensington Avenue
Amherst, NY 14226

PROPERTY LOCATION

2525 Kensington Avenue

WHEREAS, the Town of Amherst Planning Board on Thursday, May 19, 2022 and October 20, 2022 held public hearings on a Site Plan for a building addition and parking expansion (Philipps Bros./Shatkin School of Dentistry, and

WHEREAS, the Planning Board reviewed the plans and specifications for the proposed project, and

WHEREAS, the Site Plan was referred to the Town's various review agencies, and

WHEREAS, in accordance with Section 8-7-9 of the Zoning Ordinance, the Planning Board finds that:

A. The proposed site plan is consistent with the development plan if one is required.

B. The proposed site plan is consistent with the purpose and specific requirements of the Zoning Ordinance and generally consistent with the policies of the Comprehensive Plan.

C. Adequate services and utilities will be available prior to occupancy.

D. The site plan is consistent with all other applicable laws.

E. Pursuant to Local Law #3-82, as amended, the Planning Board has determined that the requirements of SEQR are complete and that the subject proposal is not expected to have a significant adverse effect on the environment.

F. Review by the US Army Corps of Engineers under Section 404 of the Clean Water Act may be waived because the parcel is developed.

NOW THEREFORE BE IT RESOLVED that in accordance with 6 NYCRR, Part 617 and Local Law #3-82, as amended, the Planning Board has issued a Negative Declaration attached hereto, and

BE IT FURTHER RESOLVED that the Planning Board, in accordance with Section 8-7 of the Zoning Ordinance approves said Site Plan subject to the following conditions:

1. The requirements of §203-4-4-2 B of the Town Code are met for the proposed canopy location along the east property line or otherwise varied by the Town Zoning Board of Appeals as permitted by §203-8-13 of Town Code.

Attachment: SP-2022-02_draft resolution_102022 (25490 : Sp-2022-02)

DRAFT (10/20/22)
TOWN OF AMHERST
PLANNING BOARD
SITE PLAN RESOLUTION
SP-2022-02

PETITIONER	PROPERTY LOCATION
Philipps Bros. Supply Inc.	2525 Kensington Avenue

2. The requirements of §203-7-2 A (2) of the Town Code are met for the proposed foundation landscaping along the east side of the building or otherwise varied by the Town Zoning Board of Appeals as permitted by §203-8-13 of Town Code.

3. An updated parking analysis shall be performed and submitted within one year of occupancy to confirm adequacy of provided parking.

4. An analysis of pedestrian movements between the subject property and other facilities operated by the applicants shall be conducted within one year of occupancy to confirm if improvements are necessary to ensure safe pedestrian accommodations.

5. That the comments of the Planning Department in their letter dated September 29, 2022 be addressed to the Department's satisfaction.

6. That a License Agreement/Land Lease regarding the use and improvement of Ridgewood Drive for private parking be approved by the Town Attorney and Highway Superintendent and copies provided to the Planning Department prior to issuance of final approved site plans by the Planning Department.

7. That the consideration of signs is specifically excluded from this approval as they require a separate review and approval by the Town.

8. That all dumpsters/trash containers and all mechanical equipment, utility structures, multiple meter boards, generators, and similar appurtenances, including those which are mounted on any part of a primary structure shall be appropriately screened with a fence, wall, and/or landscaping. Provide gate on dumpster enclosure that shall be closed whenever dumpster is not being serviced, enclosure shall be high enough to screen the dumpster(s) within.

9. That as-built record drawings, including location of utilities, be provided to the Engineering Department prior to issuance of a Certificate of Occupancy by the Building Department.

The foregoing resolution was adopted by the Town of Amherst Planning Board, _____; moved by - _____; seconded by - _____; ayes _, noes _; absent - ____.

SUBJECT: MAJOR SITE PLAN REVIEW, **SP-2022-02**; PROPOSED PHILIPPS BROS./SHATKIN SCHOOL OF DENTISTRY AND PARKING EXPANSION; PROPERTY LOCATED AT **2525 KENSINGTON AVENUE**.

Dear Sir/Madam:

At its meeting of October 20, 2022 the Planning Board voted to adjourn the subject site plan until the Town Board makes a decision on a license agreement for use of the Town right-of-way (Ridgewood Drive) for the developments and public parking.

This request will be placed on the next available Planning Board agenda once a determination is received by this Department.

Should you have any questions regarding the Planning Board's decision, please do not hesitate to call us.

Very truly yours,

for Daniel C. Howard, AICP
Planning Director

Revised 1/23/2023
by J.Molek

TOWN OF AMHERST

APPLICATION & REVIEW PROCEDURE

MAJOR SITE PLAN

MATERIALS MUST BE PROVIDED IN AN ELECTRONIC FORMAT THAT CONTAINS PDF FILES OF THE APPLICATION, EAF, SITE PLAN DRAWING SET SURVEY, LANDSCAPE PLAN, PRELIMINARY BUILDING FLOO PLANS / ELEVATIONS & ANY OTHER SUPPORTING INFORMATION. THIS MUST BE SUBMITTED WITH YOUR APPLICATION. APPLICATIONS WILL NOT BE TRANSMITTED WITHOUT THIS ELECTRONIC INFORMATION.

THIS ALSO APPLIES TO REVISED MATERIALS THAT AR SUBMITTED.

This application package includes the following:

- Application Procedures
- Application Form & Checklist
- Stormwater Pollution Prevention Plan Checklist
- Appendix A Town of Amherst EAF Addendum
- Appendix B Criteria for Required 8½" x 11" Sketches
- Appendix C Erie Sewer District No. 5 – Commercial / Industrial New & Existing Buildings Requirements

- IMPORTANT-

1. A pre-submittal consultation with Planning Department staff is *strongly recommended* prior to submitting an application. The pre-submittal meeting gives the applicant an opportunity to discuss with staff such items as:
   - classifying the action as a major site plan, minor site plan, or minor site plan adjustment;
   - determining what specific information will be required to be submitted with the application;
   - identifying and discussing issues that must be addressed as part of the SEQR review;
   - identifying any potential variances required to implement the project as proposed.

   An appointment is required for all meetings with Planning Department staff.

2. This site plan petition is subject to the requirements of 6 NYCRR Part 617, State Environmental Quality Review Act (SEQR), and Chapter 104 of the Town of Amherst Code, as amended. The Planning Board cannot make a SEQR determination unless a complete Environmental Assessment Form (EAF), including Town of Amherst EAF Addendum, and any required supplementary information such as traffic impact studies, archaeological reports, wetland delineations or geotechnical reports, are submitted. SEQR issues may be discussed with Planning Department staff at a recommended pre-submittal meeting. Unlisted Actions require a Short EAF; Type I Actions require a Full EAF. The following is a link to the NYSDEC website and fillable forms with instructions*:*
   http://www.dec.ny.gov/permits/6191.html.

3. **Review by the Town Design Advisory Board (DAB) is required for Major Site Plans located in the following Mixed-Use zoning districts:**

   Traditional Infill 2.5 (TI-2.5)
   Traditional Infill 4 (TI-4)
   Shallow Corridor 3 (SC-3)
   Deep Corridor 3 (DC-3)
   Deep Corridor 5 (DC-5)
   Center 2.5 (CTR-2.5)
   Center 5 (CTR-5)
   Center 8 (CTR-8)

   The application for DAB review is required to be filed in conjunction with the major site plan application.

Attachment: SP-2022-02 applicaiton 042023 (25490 : Sp-2022-02)

4. The application shall be executed or consented to in writing by the owner of the property.

5. **Any variances from the Zoning Board of Appeals, or any decision from the Town Board (e.g. removal of deed restrictions) must be obtained prior to action by the Planning Board on a Site Plan application.**

6. Submittal of an application grants permission to Town staff and Planning Board members to access the parcel(s) under consideration.

7. All site plan drawings must be prepared by a Registered Architect, Professional Engineer, Landscape Architect, or Land Surveyor (as applicable) licensed to practice in New York State.

8. If you wish to include a Coordinated Sign Plan application with the site plan petition, a separate application must be completed. Contact the Planning Department for a copy of a Coordinated Sign Plan application package.

9. All drawings should be no larger than 24 in. x 36 in. If site characteristics warrant larger plan sheets, they may be accepted subject to Planning Department concurrence. All drawings must also reserve a 4 in. x 6 in. area in the lower right hand corner for official Town use.

APPLICATION PROCEDURES

1. Applicant secures application package from the Planning Department, 5583 Main Street, Williamsville, NY 14221. (716) 631-7051. Forms are also available online at: www.amherst.ny.us, (keyword: Planning).

2. Applicant prepares information as required on the Site Plan Submittal Checklist, attached. NOTE: Some proposals may not require all items on the checklist; please verify with the Planning Department.

3. Applicant schedules an appointment with the Planning Department to review the following:
   - a complete set of site plan drawings, preliminary building elevations and floor plans (no larger than 24" x 36" in size)
   - Environmental Assessment Form (EAF) & Town EAF Addendum
   - any supporting reports and materials
   - verification from the Town Assessor that the address in the application is correct

4. Applicant schedules an application submittal appointment with the Planning Department. NO SITE PLAN WILL BE ACCEPTED FOR REVIEW WITHOUT A PRE-SET SUBMITTAL APPOINTMENT.

5. At the submittal appointment, applicant provides fourteen (14) complete and collated sets of drawings and application information to the Planning Department **(materials will not be accepted unless folded into 9" x 12" in size),** including**:**
   - application form
   - Environmental Assessment Form (EAF)
   - supporting reports / materials
   - complete set of site plan drawings, preliminary building elevations and floor plans (**at least one (1) set of drawings must bear a raised or wet seal and signature of the design professional** who prepared the plans; the remaining copies may be submitted with a facsimile of the seal and signature)
   - digital files of all materials in pdf format
   - an 8½" x 11" reduction of the sketch plan or plat drawing (see Appendix B)

Attachment: SP-2022-02 applicaiton 042023 (25490 : Sp-2022-02)

6. After approval for filing by the Planning Department, applicant submits all necessary fees to the Town Clerk. **(See Schedule of Fees on first page of application and make checks payable to: Town of Amherst.)**

7. The applicant returns a copy of the filing receipt to the Planning Department.

8. The Planning Department transmits remaining thirteen (13) copies of the application and supporting materials to:
   - Assessor
   - Commissioner of Building
   - Town Engineer
   - Superintendent of Highways
   - Traffic/Safety Board
   - Fire Chiefs' Association
   - Plumbing Division
   - Right-of-Way Agent
   - Police Department (if applicable)
   - Zoning Enforcement Officer
   - Other Town and outside agencies, as applicable

9. Within 30 days of its receipt of the complete application for Site Plan approval, each agency completes its review and notifies the Planning Department in writing of its comments or recommendations as required by Ordinance.

10. The applicant may be required to submit revised plans, reports, or materials to address review agency comments. The procedures for submittal of revised plans are as follows:

    - A cover letter addressing all comments received to date is required.
    - "Highlight" the area of change on the drawings and provide a notation describing the change.
    - Revised plans/materials are required. Planning staff should be contacted to determine the number of sets needed.
    - All revised plans and materials must also be provided in an electronic format that contains pdf files of the revised information.

11. The Planning Board reviews the EAF to determine whether a Draft Environmental Impact Statement (DEIS) is required. The petitioner will be advised in the event that a DEIS is required and afforded the opportunity to prepare it. If the petitioner declines, the Planning Board will prepare the DEIS at the petitioner's expense. The public hearing will be held on the DEIS concurrently with the Planning Board hearing on the application.

12. Planning Board Meeting Procedures:

    The applicant or representative presents the project at the public hearing before the Planning Board and is available to answer any questions. The Planning Board may take any of the following actions:

    - Adjourn the hearing to a future Planning Board meeting (hearing remains open).
    - Close the hearing and table action on the site plan to a future Planning Board meeting. (The Planning Board may remove the item from the agenda until such time as all required information is provided.)
    - Close the hearing and make a decision on the site plan.

    All determinations on matters before the Planning Board are made after all public hearings on that meeting's agenda are completed.

Attachment: SP-2022-02 applicaiton 042023 (25490 : Sp-2022-02)

13. A copy of the Planning Board's determination will be provided to the applicant, his / her representative, the Building Commissioner and the Town Clerk approximately 1 week following the Planning Board meeting at which it was heard.

14. If the Planning Board approves a Site Plan with conditions, the Planning Department will work with the applicant to ensure that all conditions of the approval are satisfactorily addressed. When all conditions are satisfied, the applicant submits **seven (7) final copies** of the complete set of all site plan drawings, folded into 9" x 12". For site plans in the Mixed-Use zoning districts, building elevations will also be required.

    All 7 sets must have original wet seals and include the required 4 in. x 6 in area in the lower right hand corner for official Town use. These drawings will be stamped and signed "Approved" by the Planning Director and transmitted to Town Departments for their files and use.

15. A building permit will not be issued by the Building Department until the stamped and signed Site Plan is issued by the Planning Director.

NOTE: Please check with the Planning Department to determine the deadline date for filing applications. Due to the public hearing notice requirements and department reviews, no site plan application will be placed on the Planning Board agenda after the deadline for filing has closed. Scheduling may be delayed if an application is incomplete.

Site Plan Submittal Requirements and Checklist

The following checklist outlines the information required by the Planning Department to accept a Site Plan application for review. ***It is strongly recommended that you make an appointment with Planning Staff to determine which items apply to your application***.

Item No.	Item	Submitted	Official use
I Basic Drawing Information			
1.0	**Drawing size not to exceed 24" x 36"**		
2.0	**Title of Drawing**		
3.0	**Name and address of Applicant**		
4.0	**Name of person preparing drawing**		
5.0	**Wet seal/raised seal and signature of NYS licensed architect, engineer, landscape architect, or surveyor (as applicable)**		
6.0	**Project address**		
7.0	**Zoning of subject property and adjacent parcels**		
8.0	**North point, scale, date, and revision date(s)**		
9.0	**4" x 6" reserved area in lower right hand corner for official Town use**		
II Structures, Paved Areas, & Open Space			
1.0	**Existing and Proposed Streets**		
1.1	Names of all existing and proposed streets		
1.2	Width and radii of proposed curb-cuts		
1.3	Existing curb-cuts on adjacent and opposite properties		
1.4	Show ROW width, pavement dimensions, lane widths, pavement markings, and proposed signage on proposed streets		
1.5	Show proposed ROW consistent with planned NYSDOT, Erie County, or Town road projects (if applicable)		
1.6	Show location of proposed cross access to adjacent parcels along with a draft easement		
1.7	Designation of Fire Lanes (if applicable)		
1.8	Fire apparatus access roads		
1.9	Label any proposed roads as public or private		
1.10	Location and dimensions of sidewalks		
1.11	Typical cross sections and profiles of proposed streets, pedestrian walkways, and bikeways		
2.0	**Proposed Structures**		
2.1	Location and complete dimensions of proposed structures		
2.2	Setback dimensions of structure(s) to all property lines		
2.3	Proposed use of structures		
2.4	Gross square feet area of each structure		
2.5	Location of all building entrances		
2.6	Indicate type of roof construction/materials		
2.7	Location, height, and design detail of existing and proposed fences and walls		
2.8	Location of light standards and building mounted lights		
2.9	Location of dumpster and detail of dumpster enclosure with gate		
2.10	Layout and dimensions of the lot(s) proposed for development		

Attachment: SP-2022-02 applicaiton 042023 (25490 : Sp-2022-02)

Town of Amherst Planning Department 5583 Main Street Williamsville-NY-14221
(716) 631-7051- Fax: (716) 631-7153

Item No.	Item	Submitted	Official use
II Structures, Paved Areas, & Open Space (cont'd)			
3.0	**Floor Plans with individual rooms and spaces labeled** (fully dimensioned)		
4.0	**Building elevations with height dimensions from finished grade to the highest point of the roof and to midpoint of gable or hip of a pitched roof.** (fully dimensioned)		
4.1	Show screening of mechanical equipment		
5.0	**Parking/Loading/Stacking Areas**		
5.1	Location and complete dimensions of all paved areas		
5.2	Setback dimensions of all paved areas to property lines		
5.3	Dimension of typical parking space and drive aisles		
5.4	Location and layout of handicapped parking spaces & access aisles		
5.5	Detail of vertical signage for handicapped parking and access aisles		
5.6	Indicate minimum parking requirement & number of spaces provided		
5.7	Proposed signage for directing and guiding traffic		
5.8	Curb cut permits from NYS, Erie County, or Town (if applicable)		
5.9	Pedestrian connections (from proposed structures to public sidewalk network)		
6.0	**Location and proposed development of all open spaces, including parks, playgrounds, and open reservations**		
III Utilities and Drainage			
1.0	**Engineers Report** (bound separately from the Stormwater Pollution Prevention Plan [SWPPP])		
1.1	Stamped/sealed and signed by NYS licensed architect or professional engineer		
1.2	Proposed water service sizing, RPZ pressure and fire safety flow and pressure calculations		
1.3	Proposed sanitary sewer facility load calculations (avg. & peak flows) including calculation of the peaking factor		
1.4	Proposed storm drainage facility calculations (see information included with this application)		
2.0	**Grading Plan**		
2.1	Existing and proposed grades indicated (proposed grades may not exceed 1 on 3)		
3.0	**Water Service**		
3.1	Location, size and material of existing and proposed facilities		
3.2	Location of existing and proposed fire hydrant location(s)		
3.3	Indicate use of sprinklers, location of Fire Department connection, and proposed fire protection systems		
3.4	Existing and proposed meter/RPZ size and location		
3.5	Applicable construction details		
4.0	**Sanitary Sewers**		
4.1	Locations, sizes, slopes, inverts, and materials of all existing and proposed facilities		

Attachment: SP-2022-02 applicaiton 042023 (25490 : Sp-2022-02)

Town of Amherst Planning Department 5583 Main Street Williamsville-NY-14221
(716) 631-7051- Fax: (716) 631-7153

Item No.		Submitted	Official use
III Utilities and Drainage (cont'd)			
4.2	Applicable construction details		
4.3	Proposed water/oil/grease interceptor sizing calculations by a professional engineer (if applicable)		
5.0	**Storm Drainage**		
5.1	Locations, sizes, slopes, inverts, and materials of existing and proposed storm drainage facilities		
5.2	Connection of roof drains to proposed drainage system		
5.3	Applicable Town Standard construction details		
5.4	Existing and proposed swales and ditches		
5.5	Detention area cross-section and high-level elevations		
5.6	County and State approval for tie-in to existing sewers		
6.0	**Stormwater Pollution Prevention Plan (SWPPP) as applicable** (bound separately from the Engineer's Report) **See attached checklist.**		
7.0	**Natural Gas Service**		
8.0	**Location of transformers, generators and other mechanical equipment; include detail drawings (if applicable)**		
9.0	**Downstream Sanitary Capacity Analysis (DSCA) Report** (must be submitted if proposed average flows are greater than 2,500 gallons per day)		
9.1	The DSCA Report must include a detailed downstream sewer capacity analysis and the calculations of and commitment to (via Developer commitment letter) the required financial contribution to the Town's I/I mitigation fund based on peak flow conditions. The contribution must be based on $250 per gallon per minute of mitigated flow		
IV Lighting Plan			
1.0	**Photometric plan showing light spread in foot candles at property lines**		
1.1	Detail of all light standards, including dimension of height from finished grade		
1.2	Detail of all exterior lighting fixtures		
V Landscape Plan			
1.0	**Wet/raised seal and signature of a licensed Landscape Architect**		
2.0	**Provide a calculation of the total Parking area and a calculation of interior parking area in square feet and as a percentage**		
3.0	**Indicate location, size, number and type of proposed landscape materials**		
4.0	**Indicate location, type and size of <u>all</u> existing trees 4" caliper or larger and indicate which will be removed or retained**		
VI Other Required Information/General Requirements			
1.0	**Complete boundary survey that includes all existing structures, acreage, legal description with reference to a property line, street, or other known feature, and easements plotted to scale by a NYS licensed land surveyor**		

Attachment: SP-2022-02 applicaiton 042023 (25490 : Sp-2022-02)

(716) 631-7051- Fax: (716) 631-7153

Item No.		Submitted	Official Use
VI Other Required Information/General Requirements (cont'd)			
1.1	Copies of all easements, reciprocal access agreement or similar leag documents		
2.0	**Topographic Survey with a 30 ft. buffer outside all property lines by a NYS licensed land surveyor**		
3.0	**Draft of any deed restrictions, covenants, provisions for home associations and common ownership, and reciprocal easement agreements (as applicable).**		
4.0	**For assessment purposes, state intent to apply for condominium status (if applicable).**		
5.0	**Completed and signed Environmental Assessment Form**		
5.1	Soil boring report and geotechnical report prepared by a qualified Professional Engineer (if applicable)		
5.2	Traffic Impact Study (if applicable)		
5.3	Archaeological survey (if applicable		
5.4	Wetland Delineation report (if applicable)		
6.0	**Show existing zoning(s) of both the subject property and adjacent parcels on the Site Plan and the Landscape Plan**		
7.0	**Location of NYSDEC wetlands (including buffer area) and/or federal wetlands; indicate jurisdictional status**		
8.0	**Location of Floodway and floodplain** (if applicable)		
9.0	**Documentation pertaining to any conditions of zonings, including copies of required deed restrictions; indicate date of rezoning and the parcel address under which it was rezoned (if applicable)**		
10.0	**Documentation related to any required variances granted by the ZBA**		
11.0	**For residential site plans, provide a statement from the appropriate school district that adequate school sites and facilities are available.**		
12.0	**8 1/2" X 11" reduction of primary site plan drawing (see appendix "B" of application package for specifications)**		
13.0	**A CD containing a PDF of all site plan drawings (Must also be provided with revised drawings)**		
VII Additional Required Information for Projects in the Mixed Use Districts			
1.0	**Design Advisory Board Application**		
1.1	Required for Major Site Plan		
1.2	Required at the Planning Directors Discretion for Minor Site Plans		
2.0	**Block & Street Network Plan**		
2.1	Designation of Core, Local & Alley streets		
2.2	Dimensions of Blocks		
3.0	**Block Usage Plan (as applicable)**		
3.1	Designation of site usage for each block including open space areas		
4.0	**Phasing Plan**

TOWN OF AMHERST
State Environmental Quality Review
ENVIRONMENTAL ASSESSMENT FORM
-- ADDENDUM --

1. For each applicable category of proposed <u>new</u> structures, including additions to existing structures, provide the following information for all soil types on the project site (*according to Soil Survey of Erie County, NY; Table 11, Building Site Development, pp 294-305):*

Soil Name	Shallow excavations	Dwellings without basements	Dwellings with basements	Small commercial buildings	Local roads and streets
Urban Soil	severe	severe	severe	severe	severe

2. If the Soil survey indicates either "severe" or "moderate" suitability for the proposed types of construction, a geotechnical and hydrological analysis based on one test per 3.5 acres of project area must be provided (per Town Board resolution, 3/17/03, amended 6/16/03).

   ____ Geotechnical report attached _____ Not applicable

3. Is your property located: On Youngs Road between Dodge and Klein Roads? □ Yes X No
   On Wehrle Dr. between Spindrift Dr. and Oakwood Rd? □ Yes X No
   If so, the property may be within an area of the Town that is affected by a moratorium on connections to the sanitary sewer system.

4. Are there alternative locations on the site for this project? □ Yes X No

5. Location and size of real property owned by petitioner within one (1) mile of subject proposal:
   No

6. Are you aware of current or future plans or intentions by others in the Town of Amherst to develop property within 1000± ft. of the present project request: □ Yes X No
   Describe

   (Potential environmental impacts from adjacent or nearby projects undergoing the approval process will receive a coordinated environmental review to determine cumulative effects on common receivers (e.g. traffic and drainage corridors) and other relevant environmental concerns.)

7. Maximum number of vehicular trips to be generated per peak hour upon completion of project Reference traffic study
   Source:

8. Will blasting occur during construction? □ Yes X No

9. Does the project propose to connect and be tributary to the public sanitary sewer system? X Yes □ No

10. Proposed net additional gallons per day (gpd) of sanitary sewer discharge upon completion of project:
    _1120_____ average flow _4400_____ peak flow.
    (Average flows of 2,500 gpd or greater will require an Engineer's Report that includes a detailed downstream sewer capacity analysis and the identification of and commitment to required I/I offset work during peak wastewater flow conditions.)

11. Based on the Town's *2011 Reconnaissance Level Survey of Historic Resources,* is your property 'blue-rated' for historic significance? □ Yes X No

RE: 2525 Kensington Avenue

Dear Mr. Scott Marshall / Mr. Gary Palumbo,

We are submitting to the Planning Department our revised documents, our application and supporting documents related to 2525 Kensington Avenue based on comments made by the Town of Amherst individual departments from September to December 2023.

All documents submitted herein contain responses to each item in question along with related changes to drawings and forms based on the comments. Which include all new Civil drawings with appropriate revisions related to Town comments, updated shared parking study, letter from Daemen university substantiating the shuttling of students, and the revised photometrics plan including lighting cut sheets.

Also, included are revised application major and revised SEAF with changes only related to removal of IMIT Facility on the documents. The IMIT facility will no longer be part of this project herein.

Please review accompanying documents for overall compliance and variances that will be required for this application.

If you would like to discuss this application further, please don't hesitate to contact me at 716-222-3040 or via e-mail at jmolek@labellapc.com.

Sincerely,

STIEGLITZ SNYDER ARCHITECTURE a Labella Company.

Joseph Molek, RA

Project Architect

RE: 2525 Kensington Avenue – Philipps Bros. Supply / The Shatkin School of Dentistry and Parking expansion.

Dear Mr. Gary Palumbo,

We are submitting to the Planning Department our response to Major Site Plan review comments submitted by the following Departments:

Zoning Enforcement Officer Review Comments from December 2, 2022

Item #1

- *Landscaping requirement of 203-7-2 A (2) are not met along rear of building between building and proposed sidewalk. Replace gravel with foundation plantings.*

Gravel landscaping has been replaced with foundation plantings. See accompanying drawings SP101 and L101.

Item #2

- *Off Street Parking proposed for the dental /medical offices does not meet Section 7-1-6A of Chapter 203 of the Town Code. The ZEO received a revised parking analysis dated September 12,2022. Considering the revised shared paring demand assessment, the revised analysis has been accepted pursuant to Section 7-1-5 of the zoning ordinance with the following conditions:*

  A. *A minimum of 79 parking spaces shall be provided for the project, which includes those that are being provided within the Ridgewood Drive R.O.W.*

     See accompanying site drawings and Shared Parking Demand Assessment prepared by SRF Associates / Passero Associates January 25, 2023 for revised total of 83 parking spaces. Additional parking spaces are accounted for due to the elimination of parking islands along Ridgewood Drive which where shown on previous submissions.

  B. *A written commitment is provided from Daemen University to the Town, Assuring that all students will be shuttled to the site from the main campus to reduce parking demand.*

     See accompanying Letter from Daemen University / Dr. Greg Nayor dated January 18, 2023.

Attachment: SP-2022-02 applicaiton 042023 (25490 : Sp-2022-02)

C. *A re-analysis of parking be performed by the consultant within a year of occupancy to confirm adequacy of parking.*

Passero Associates will follow up with analysis of parking adequacy.

D. *Any Changes to the approved site plan which may affect future parking demands will require a new alternative parking analysis.*

Re-analysis of parking will occur if any changes to the busing of students or on site parking demands change.

Planning Department Staff Review Comments from December 2, 2022

Item #1

– *For the Planning Board's site plan review, the photometric plan (sheet EL-100) should only indicate and evaluate building-mounting lighting and not the proposed parking lot lighting. Lighting within the Ridgewood Drive right -of -way is under the jurisdiction of the Town Highway Superintendent and excluded from this site plan review. Please submit a photometric revised plan at full size, not 8 ½ x 11".*

See accompanying revised drawing EL-100 for lighting the sidewalk on the east side of building of 2525 Kensington Avenue.

Item #2

– *A local law will be required to remove the existing parking restriction currently in place on Ridgewood Drive. (it is understood that this is in process).*

Condition of approval by Town Board and legal department in process.

Item #3

- *The proposed license agreement for the use of and maintenance of the Ridgewood Drive right-of-way must be approved and filed with the Erie County Clerk's Office prior to issuance of final site plan approval. It is understood that a draft agreement has been submitted and reviewed by the Town Attorney, Action by the Town Board is required.*

Condition of approval by Town Board and legal department in process.

Item #4

- *As a continuous 5-foot sidewalk is shown on the revised site plan, the sidewalk waiver previously requested will no longer be considered.]*

A 5 foot sidewalk has been provided along the east side of 2525 Kensington and no waiver from the owner is necessary.

Attachment: SP-2022-02 applicaiton 042023 (25490 : Sp-2022-02)

Item #5

- *The specification sheets for the emergency generator and tank for a diesel fuel system, but the site plan calls for a natural gas fired generator. Please confirm the fuel to be used for the emergency generator. A fuel tank may change the overall height and locational criteria and may affect the minimum required screening.*

Generator and Tank are to be Diesel as per previously submitted cut sheets. See accompanying revised drawings SP101 of removal of annotation related to gas generator.

Item #6

- *The proposed island for emergency generator and transformer should be reduced in length by 4 feet to maintain a minimum of 24 foot drive isle on site per 203-7-1-9 A.2 of Town Code.*

See accompanying revised civil drawings for 24 foot wide clear drive lane.

Item #7

- *Sheet SP-104 indicates that existing brush and trees will be removed "to the fence line" on the east side of Ridgewood drive. Please note: the fence line is beyond the property line and site plan approval by Town does not include review or authorization of off-site work in the New York State Right-of-Way.*

Annotation has been revised for brush and tree removal to occur only within town right of way. See drawing SP104 note 3.

END OF COMMENTS

Sincerely,

STIEGLITZ SNYDER ARCHITECTURE

Joseph Molek, RA

Project Architect

Short Environmental Assessment Form
Part 1 - Project Information

Revised
1/23/2023
by J.Molek.

Instructions for Completing

Part 1 – Project Information. The applicant or project sponsor is responsible for the completion of Part 1. Responses become part of the application for approval or funding, are subject to public review, and may be subject to further verification. Complete Part 1 based on information currently available. If additional research or investigation would be needed to fully respond to any item, please answer as thoroughly as possible based on current information.

Complete all items in Part 1. You may also provide any additional information which you believe will be needed by or useful to the lead agency; attach additional pages as necessary to supplement any item.

Part 1 – Project and Sponsor Information

Name of Action or Project:
Shatkin School of Dentistry / Philipps Bros Supply

Project Location (describe, and attach a location map):
2525 Kensington Ave at Bentham Pkwy and Ridgewood Drive

Brief Description of Proposed Action:
Shatkin College of Dentistry at Daemen University on 1.2 acre existing developed parcel -plus- redevelopment of Ridgewood Drive into a new private paved surface parking lot.

Name of Applicant or Sponsor:	Telephone: 716-839-4800
Pat Philipps	E-Mail: pphilipps@philippsbros.com

Address:
2525 Kensington Avenue

City/PO:	State:	Zip Code:
Amherst	NY	14226

	NO	YES
1. Does the proposed action only involve the legislative adoption of a plan, local law, ordinance, administrative rule, or regulation? If Yes, attach a narrative description of the intent of the proposed action and the environmental resources that may be affected in the municipality and proceed to Part 2. If no, continue to question 2.	☑	☐
2. Does the proposed action require a permit, approval or funding from any other government Agency? If Yes, list agency(s) name and permit or approval: Amherst Site Plan, building permit	☐	☑

3. a. Total acreage of the site of the proposed action? 1.24 acres
   b. Total acreage to be physically disturbed? 0.50 acres
   c. Total acreage (project site and any contiguous properties) owned or controlled by the applicant or project sponsor? 1.24 acres

4. Check all land uses that occur on, are adjoining or near the proposed action:

5. ☐ Urban ☐ Rural (non-agriculture) ☐ Industrial ☑ Commercial ☑ Residential (suburban)
   ☐ Forest ☐ Agriculture ☐ Aquatic ☐ Other(Specify):
   ☐ Parkland

Attachment: SP-2022-02 applicaiton 042023 (25490 : Sp-2022-02)

	NO	YES	N/A
5. Is the proposed action,			
a. A permitted use under the zoning regulations?	☐	☐	☑
b. Consistent with the adopted comprehensive plan?	☐	☐	☑

	NO	YES
6. Is the proposed action consistent with the predominant character of the existing built or natural landscape?	☐	☑
7. Is the site of the proposed action located in, or does it adjoin, a state listed Critical Environmental Area?	NO	YES
If Yes, identify: _____	☑	☐
8. a. Will the proposed action result in a substantial increase in traffic above present levels?	☑	☐
b. Are public transportation services available at or near the site of the proposed action?	☐	☑
c. Are any pedestrian accommodations or bicycle routes available on or near the site of the proposed action?	☐	☑
9. Does the proposed action meet or exceed the state energy code requirements?	NO	YES
If the proposed action will exceed requirements, describe design features and technologies:		
REFER TO ARCHITECTURAL SET	☐	☑
10. Will the proposed action connect to an existing public/private water supply?	NO	YES
If No, describe method for providing potable water: _____	☐	☑
11. Will the proposed action connect to existing wastewater utilities?	NO	YES
If No, describe method for providing wastewater treatment: _____	☐	☑
12. a. Does the project site contain, or is it substantially contiguous to, a building, archaeological site, or district which is listed on the National or State Register of Historic Places, or that has been determined by the Commissioner of the NYS Office of Parks, Recreation and Historic Preservation to be eligible for listing on the State Register of Historic Places?	☑	☐
b. Is the project site, or any portion of it, located in or adjacent to an area designated as sensitive for archaeological sites on the NY State Historic Preservation Office (SHPO) archaeological site inventory?	☐	☑
13. a. Does any portion of the site of the proposed action, or lands adjoining the proposed action, contain wetlands or other waterbodies regulated by a federal, state or local agency?	NO	YES
	☑	☐
b. Would the proposed action physically alter, or encroach into, any existing wetland or waterbody?	☑	☐
If Yes, identify the wetland or waterbody and extent of alterations in square feet or acres: _____		

Attachment: SP-2022-02 applicaiton 042023 (25490 : Sp-2022-02)

14. Identify the typical habitat types that occur on, or are likely to be found on the project site. Check all that apply:

☐ Shoreline ☐ Forest ☐ Agricultural/grasslands ☐ Early mid-successional

☐ Wetland ☐ Urban ☑ Suburban

	NO	YES
15. Does the site of the proposed action contain any species of animal, or associated habitats, listed by the State or Federal government as threatened or endangered?	☑	☐
16. Is the project site located in the 100-year flood plan?	☑	☐
17. Will the proposed action create storm water discharge, either from point or non-point sources?	☐	☑
If Yes,		
a. Will storm water discharges flow to adjacent properties?	☑	☐
b. Will storm water discharges be directed to established conveyance systems (runoff and storm drains)?	☐	☑
If Yes, briefly describe: EXISTING PUBLIC DRAINAGE IN RIDGEWOOD DRIVE		
18. Does the proposed action include construction or other activities that would result in the impoundment of water or other liquids (e.g., retention pond, waste lagoon, dam)? If Yes, explain the purpose and size of the impoundment:	☑	☐
19. Has the site of the proposed action or an adjoining property been the location of an active or closed solid waste management facility? If Yes, describe:	☑	☐
20.Has the site of the proposed action or an adjoining property been the subject of remediation (ongoing or completed) for hazardous waste? If Yes, describe:	☑	☐

I CERTIFY THAT THE INFORMATION PROVIDED ABOVE IS TRUE AND ACCURATE TO THE BEST OF MY KNOWLEDGE

RE: Proposed Shatkin School of Dentistry, Town of Amherst, NY
Shared Parking Demand Assessment Letter

Dear Mr. Ulatowski:

This technical letter provides a Shared Parking Demand Assessment related to the proposed project located at 2525 Kensington Avenue in the Town of Amherst, NY in connection with a request for the approval of an Alternate Parking Study per Section 7-1-7A of the Zoning Code.

When evaluating the parking supply needs for the proposed project, our firm projected the parking demand considering shared parking (mixed-use) principles using nationally accepted methodology developed, in part, by the Urban Land Institute (ULI), Institute of Transportation Engineers (ITE), International Council of Shopping Centers (ICSC), and National Parking Association (NPA). Specifically, the assessment includes an estimation of future parking demands for the proposed project using national standards for similar developments, as documented by the ITE Parking Generation Manual (5th Edition).

This evaluation then provides a comparison to Town requirements, as set forth within Section 7-1-6A of the Town of Amherst's Zoning Code.

All supporting materials are included as an attachment to this letter.

PROJECT DESCRIPTION

Currently, the ±29,350 square foot (SF) building is owned and occupied by Phillips Brothers Supply, a business that has been in operation for over 30 years. Under the proposed development Phillips Brothers Supply will have ±5,662 SF of retail space and ±11,928 SF of warehouse space.

Shatkin Dental Health is developing ±16,160 SF of space which includes a ±4,400 SF of a new mezzanine that will be constructed within part of the existing warehouse space. The Shatkin Dental Health space will be used for a new dental school associated with Daemen College.

The project will provide 83 surface parking spaces and 10 bicycle parking spaces.

Relative to the proposed uses, the following information was obtained from the applicant:

Daemen College Dental School (8-hour day)
Employees: 8 general staff and 10 teaching staff.

Attachment: SP-2022-02 applicaiton 042023 (25490 : Sp-2022-02)

Students: 40-45 students for 8 hours each day. Students are classified by year (e.g., year one, year two, year three). Year one consists of approximately 20-25 students; year two consists of approximately 20-25 students; and year three consists of approximately 20 students. Year one students will not use the proposed facility. Year two and three students will use the site. Based upon information provided by the applicant and Daemen University, all students traveling to the site will use a shuttle service.

According to the applicant, at most there will be 21 patients at one time and 21 patients will occur four times during day.

PARKING REQUIREMENTS IN THE TOWN OF AMHERST ZONING CODE

Section 7-1-6A of the Zoning Code sets forth the off-street parking requirements for different categories of land uses. Strict application of the parking requirements per Section 7-1-6A of the Zoning Code is depicted in **Table 1**.

TABLE 1: TOWN CODE PARKING REQUIREMENTS

USE TYPE	REQUIRED PARKING RATIO	SIZE	TOTAL REQUIRED PARKING SPACES
Retail Sales, >2,000 SF and <25,000 SF	5.5 per 1,000 SF of net floor area	±4,247 SF	24
Warehouse	1 per 1,000 SF of gross floor area	±11,928 SF	12
Medical Office	1 per 150 SF of net floor area	±12,120 SF	81
Total Parking Spaces Required			**117**

Note:
1. Net Floor Area = For a multistory, multiple tenant building — 75 percent of gross floor area.

Strict application of the off-street parking standards in the Zoning Code results in a parking requirement of 117 spaces, as depicted in **Table 1**. The total number of parking spaces to be provided is 83 spaces. Thus, there is a deficit of 34 parking spaces per strict application of Section 7-1-6A of the Zoning Code.

SHARED PARKING PRINCIPLES

Shared parking studies are conducted to establish the total number of spaces necessary by mixed-use developments to effectively serve expected parking demands. The shared parking concept builds upon the premise that land uses in a mixed-use development often do not share the same peak demand period, so spaces can be shared between the different land uses during different peak periods. Each land use typically has a peak demand period where it would occupy the maximum number of spaces that the use requires and an off-peak period where a lesser percentage of the maximum spaces would be occupied; be it by time of day, day of week, or even month of the year. This allows for the project to provide fewer spaces than would be required if the land uses on a project site were to be treated separately with individual parking demands. The concept of shared parking is well recognized within the real estate and regulatory community and is proven to work.

SHARED PARKING METHODOLOGY

To estimate the number of parking spaces required for the proposed project, this assessment used ULI and ITE methodology for shared parking. This methodology is utilized by transportation engineers and planners when evaluating the parking demand for a mixed-use project. The ULI Shared Parking 3rd Edition includes state-of-the-art practice methodologies for determining parking demand in these types of projects. Accompanying the publication is an interactive Shared Parking Calculation Model

Attachment: SP-2022-02 applicaiton 042023 (25490 : Sp-2022-02)

(Model) that is used to estimate the shared parking demand. However, given that the Model does not have a warehouse land use, parking accumulation percentages for each land use were obtained from the ITE Parking Generation Manual.

Based upon the information provided by the applicant, there will be a maximum of 18 dental school staff utilizing on-site parking. The students will be shuttled to the site. Additionally, up to 21 patients may be on-site at any one time (up to four times a day). Therefore, based upon all site uses, a conservative 62 spaces may be expected to be required to meet the demands generated by the proposed dental school.

The peak hour demand is projected to occur at 10:00 AM on a typical weekday. The projected peak hour demand for the project (i.e., the busiest hour of the busiest weekday) is ±61 spaces. Parking demand accumulations are presented in **Table 2**.

TABLE 2: SHARED PARKING DEMAND PROJECTIONS

LAND USE	SIZE	PARKING DEMAND	
		UNADJUSTED DEMAND	**SHARED DEMAND**
Warehouse (ITE LUC 150)	±11,928 SF	5	**4**
Hardware Supplies (ITE LUC 862)	±5,662 SF	18	**18**
Proposed Dental School	43 employees	39	**39**
Total Parking Demand		62	**61**
Shared Parking Reduction		**1.61%**	

Notes:
1. ITE LUC = ITE Land Use Code
2. 43 employees for the dental school considers the 18 full time staff. The remaining parking demands are generated by 21 patients.

A separate analysis of parking demand projections was calculated using ITE data (Land Use Code 720) for the proposed dental school. **Table 3** depicts the shared demand projections using the results from **Table 2** and the ITE projections.

TABLE 3: PARKING DEMAND COMPARISON

LAND USE	SIZE	SHARED PARKING DEMAND	
		TABLE 2 ANALYSIS	ITE ANALYSIS
Warehouse (ITE LUC 150)	±11,928 SF	4	4
Hardware Supplies (ITE LUC 862)	±5,662 SF	18	18
Proposed Dental School (ITE LUC 720)	±16,160 SF	39	52
Total Parking Demand		**62**	**74**

When considering the site's 83 total parking spaces, there is sufficient space to accommodate the projected demands when considering rates developed using projected site visitors and employees (shown in **Table 2**), as well as the ITE parking rates (shown in **Table 3**).

It is important to note that the Applicant has worked with Daemen University to provide shuttle services for all students working on-site. This is a change from the May 2022 letter whereby a portion of

Attachment: SP-2022-02 applicaiton 042023 (25490 : Sp-2022-02)

students would be shuttled to the site. These efforts allow for the projected parking demands to be entirely accommodated on-site without creating a potentially adverse impact on the surrounding neighborhood.

CONCLUSIONS

This detailed analysis assessed the projected shared parking demands associated with the proposed mixed-use project. The following summarizes the findings of this assessment:

1. The proposed project consists of retail hardware supply, warehouse, and medical-dental office space.

2. The project will provide 83 surface parking spaces and 10 bicycle parking spaces.

3. Strict application of the unshared off-street parking standards in the Zoning Code results in a parking requirement of 117 spaces.

4. The peak hour demand is projected to occur at 10:00 AM on a typical weekday. The projected peak hour demand for the mixed-use project (i.e., the busiest hour of the busiest weekday) is ±61 spaces.

5. A separate analysis of parking demand projections was calculated using ITE data (Land Use Code 720) for the proposed dental school. The total parking demand using ITE data is 74 spaces.

6. When considering the site's 83 total parking spaces, there is sufficient space to accommodate the projected demands when considering rates developed using projected site visitors and employees (shown in **Table 2**), as well as the ITE parking rates (shown in **Table 3**).

If you have any questions or require additional information, please do not hesitate to contact our office.

Sincerely,

David Kruse, AICP, PTP
Senior Transportation Planner

DAEMEN
STUDENT AFFAIRS

January 18, 2023

Mr. Daniel J. Ulatowski, AICP
Principal Planner/ZEO
Town of Amherst Planning Department
5583 Main Street
Williamsville, New York 14221

Dear Mr. Ulatowski:

As you know, Daemen University is working with Shatkin Dental to utilize 2525 Kensington Ave as the new home of our proposed Shatkin College of Dentistry. Please be advised that Daemen University is fully committed to the dental college initiative currently under review by the New York State Department of Education (NYS DOE) and the Commission on Dental Accreditation (CODA) and in working to resolve any concerns held by the Town of Amherst amicably and in the best interest of all parties.

We understand that there are concerns about the additional parking needs for this location. While the site will be constructed with 83 spaces, Daemen will provide a dedicated shuttle for the 2nd and 3rd year students, 25 and 20 individuals, respectively, to be taken from Daemen's main campus at 4380 Main St, to the 2525 Kensington address, as well as Collegiate Village where many may be residing. We will ensure that the shuttle runs an adequate number of hours on a fixed schedule so that it is fully utilized by students.

We thank you for your support of this transformative initiative.

If I can be of further assistance, please do not hesitate to let me know.

Sincerely,

Dr. Greg Nayor
Senior Vice President for Strategic Initiatives

RE: Proposed Shatkin School of Dentistry, Town of Amherst, NY
Signal Warrant Analysis Letter

Dear Ms. Wilkolaski:

This study performed a traffic signal warrant analysis at the Kensington Avenue/Bentham Parkway intersection. Turning movement counts were performed by SRF Associates at the study intersection on Tuesday, June 2, 2022, from 7:00 AM to 7:00 PM.

The need for a traffic signal is determined by comprehensive investigation of existing traffic conditions and physical characteristics at the location. The Standard Specifications Update for the adoption of the National MUTCD (FHWA) and the New York State Supplement were reviewed to investigate the need for a traffic control signal at this location. There are nine (9) warrants, and they are as follows:

Warrant 1	Eight-Hour Vehicular Volume
Warrant 2	Four-Hour Vehicular Volume
Warrant 3	Peak Hour Vehicular Volume
Warrant 4	Pedestrian Volume
Warrant 5	School Crossing
Warrant 6	Coordinated Signal System
Warrant 7	Crash Experience
Warrant 8	Roadway Network
Warrant 9	Intersection Near a Grade Crossing

All supporting materials are included in the Attachments. Prior to applying warrants, the MUTCD suggests consideration of the effects of right-turn volumes on the minor street approach, and a reduction taken in the number of right turning vehicles, where appropriate. A certain number of right-turn vehicles will execute a right-turn on the red (RTOR) indication without actuating a traffic signal (if one were in place). Generally, up to 25% of right-turn vehicles may be assumed to execute at RTOR maneuver and should, therefore, be subtracted for the purposes of the warrant analysis. However, for purposes of this analysis, no adjustments were made to remain conservative. The posted speed limit on Kensington Avenue is 35 MPH, thus 100% thresholds in Table 4C-1, Figure 4C-1, and Figure 4C-3 are used as a basis for analysis.

1. Warrant 1 is subdivided into Condition A and Condition B. The Minimum Vehicular Volume, Condition A, is intended for application at locations where a large volume of intersecting traffic is the principal reason to consider installing a traffic control signal. The Interruption of Continuous Traffic, Condition B, is intended for application at locations where Condition A is

Attachment: SP-2022-02 applicaiton 042023 (25490 : Sp-2022-02)

not satisfied and where the traffic volume on a major street is so heavy that traffic on a minor intersecting street suffers excessive delay or conflict in entering or crossing the major street. These conditions are satisfied when, for each of any eight hours of an average day, anticipated volumes on the artery and side road are more than the minimum values presented in Tables 4C-1 in the MUTCD. **Based upon these calculations, Conditions A and B are not satisfied.**

2. Warrant 2, the Four-Hour Vehicular Volume signal warrant conditions, are intended to be applied where the volume of intersecting traffic is the principal reason to consider installing a traffic control signal. This warrant stipulates that for any four hours of a day, minimum threshold volumes are met on the artery and side road. **This warrant is partially satisfied for two of the four hours.**

3. Warrant 3 is intended for application where minor street traffic suffers undue delay in entering or crossing the major street for one hour of the day. It stipulates that the warrant shall be applied in unusual cases (high-occupancy vehicle facilities – i.e., shopping centers, office parks) where a large number of vehicles discharge over a short period of time. **This warrant is not satisfied.**

4. Warrant 4 is met when pedestrians experience excessive delay in crossing the major street because the traffic volumes are so heavy. The intersection currently has low pedestrian activity. **This warrant is not satisfied.**

5. Warrant 5 is met when a sufficient number of gaps in traffic do not exist for certain size and frequency of school children to cross the major roadway. **This warrant is not satisfied.**

6. Warrant 6 is met when a traffic signal is needed to maintain progressive movement and vehicle platooning in a coordinated signal system. **This warrant is not satisfied.**

7. Warrant 7 is intended for application where the severity and frequency of crashes are the principal reasons to consider installing a traffic control signal. The need for a traffic control signal shall be considered if *all* of the following criteria are met:

    a. Adequate trial of alternatives with satisfactory observance and enforcement has failed to reduce crash frequency. **Condition A is not satisfied.**

    b. Five (5) or more reported crashes, of types susceptible to correction by a traffic signal, to have occurred within a 12-month period, each crash involving a personal injury or property damage. Five (5) crashes were documented in the crash analysis over a 12-month period. One crash was animal-related, and one was a medical condition. The three remaining crashes were right angle (2) in the eastbound and westbound directions. These drivers failed to yield the right of way. The last crash was a northbound rear end incident in which the driver of the trailing vehicle was following too closely. **Condition B is not satisfied.**

    Given that both Conditions A and B are not satisfied, this warrant is not satisfied.

8. Warrant 8 is met when a traffic signal might encourage concentration and organization of traffic flow on a roadway network. This warrant primarily focuses on two major intersecting roadways, which is not the case at the study intersection. **This warrant is not satisfied.**

Attachment: SP-2022-02 applicaiton 042023 (25490 : Sp-2022-02)

9. Warrant 9 is applicable when an intersection is located near an at-grade rail crossing. **This warrant is not satisfied.**

TABLE 1: TRAFFIC SIGNAL WARRANT SUMMARY

WARRANT	SATISFACTION OF WARRANTS
1A – Eight-Hour Condition A	NOT SATISFIED
1B – Eight-Hour Condition B	NOT SATISFIED
2 – Four-Hour	NOT SATISFIED
3 – Peak-Hour	NOT SATISFIED
4 – Pedestrian Volume	NOT SATISFIED
5 – School Crossing	NOT SATISFIED
6 – Coordinated Signal System	NOT SATISFIED
7 – Crash Experience	NOT SATISFIED
8 – Roadway Network	NOT SATISFIED
9 – Intersection Near a Grade Crossing	NOT SATISFIED

Table 1 summarizes the signal warrants at the study intersection under full build conditions and the results of the investigation. The results show that a three-color traffic signal is not warranted.

If you have any questions or require additional information, please do not hesitate to contact our office.

Sincerely,
SRF Associates, D.P.C.

David Kruse, AICP, PTP
Senior Transportation Planner

Standard Features

- Kohler Co. provides one-source responsibility for the generating system and accessories.
- The generator set and its components are prototype-tested, factory-built, and production-tested.
- The 60 Hz generator set offers a UL 2200 listing.
- The generator set accepts rated load in one step.
- The 60 Hz generator set meets NFPA 110, Level 1, when equipped with the necessary accessories and installed per NFPA standards.
- A one-year limited warranty covers all generator set systems and components. Two- and five-year extended limited warranties are also available.
- Alternator features:
  - The unique Fast-Response® X excitation system delivers excellent voltage response and short-circuit capability using a rare-earth, permanent magnet (PM)-excited alternator.
    (4S13X alternator)
  - The unique Fast-Response® II excitation system delivers excellent voltage response and short-circuit capability using a permanent magnet (PM)-excited alternator.
    (4UA9 and 4UA13 alternators)
  - The brushless, rotating-field alternator has broadrange reconnectability.
- Other features:
  - Kohler designed controllers for one-source system integration and remote communication. See Controllers on page 3.
  - The low coolant level shutdown prevents overheating (standard on radiator models only).
  - Integral vibration isolation eliminates the need for under-unit vibration spring isolators.
- Multiple circuit breaker configurations.
- Mount up to three circuit breakers to allow circuit protection of selected priority loads.

RATINGS: All three-phase units are rated at 0.8 power factor. All single-phase units are rated at 1.0 power factor. *Standby Ratings:* The standby rating is applicable to varying loads for the duration of a power outage. There is no overload capability for this rating. *Prime Power Ratings:* At varying load, the number of generator set operating hours is unlimited. A 10% overload capacity is available for one hour in twelve. Ratings are in accordance with ISO-8528-1 and ISO-3046-1. For limited running time and continuous ratings, consult the factory. Obtain technical information bulletin (TIB-101) for ratings guidelines, complete ratings definitions, and site condition derates. The generator set manufacturer reserves the right to change the design or specifications without notice and without any obligation or liability whatsoever.

Attachment: SP-2022-02 drawings 042023 (25490 : Sp-2022-02)

Alternator Specifications

Specifications	Alternator
Manufacturer	Kohler
Type	4-Pole, Rotating-Field
Exciter type	Brushless, Permanent-Magnet
Leads: quantity, type	
4SX, 4UA	12, Reconnectable
Voltage regulator	Solid State, Volts/Hz
Insulation:	NEMA MG1
Material	Class H
Temperature rise	130°C, Standby
Bearing: quantity, type	1, Sealed
Coupling	Flexible Disc
Amortisseur windings	Full
Voltage regulation, no-load to full-load	Controller Dependent
One-step load acceptance	100% of Rating
Unbalanced load capability	100% of Rated Standby Current

- NEMA MG1, IEEE, and ANSI standards compliance for temperature rise and motor starting.
- Sustained short-circuit current of up to 300% of the rated current for up to 10 seconds.
- Sustained short-circuit current enabling downstream circuit breakers to trip without collapsing the alternator field.
- Self-ventilated and dripproof construction.
- Windings are vacuum-impregnated with epoxy varnish for dependability and long life.
- Superior voltage waveform from a two-thirds pitch stator and skewed rotor.

Specifications		Alternator
Peak motor starting kVA:		(35% dip for voltages below)
480 V	4S13X (12 lead)	570
480 V	4UA9 (12 lead)	700
480 V	4UA13 (12 lead)	960

Application Data

Engine

Engine Specifications	
Manufacturer	John Deere
Engine model	6068HFG85A
Engine type	4-Cycle, Turbocharged, Charge Air-Cooled
Cylinder arrangement	6 Inline
Displacement, L (cu. in.)	6.8 (415)
Bore and stroke, mm (in.)	106 x 127 (4.19 x 5.00)
Compression ratio	17.0:1
Piston speed, m/min. (ft./min.)	457 (1500)
Main bearings: quantity, type	7, Replaceable Insert
Rated rpm	1800
Max. power at rated rpm, kWm (BHP)	235 (315)
Cylinder head material	Cast Iron
Crankshaft material	Forged Steel
Valve material:	
Intake	Chromium-Silicon Steel
Exhaust	Stainless Steel
Governor: type, make/model	JDEC Electronic L14 Denso HP3
Frequency regulation, no-load to full-load	Isochronous
Frequency regulation, steady state	±0.25%
Frequency	Fixed
Air cleaner type, all models	Dry

Exhaust

Exhaust System	
Exhaust manifold type	Dry
Exhaust flow at rated kW, m^3/min. (cfm)	42.8 (1510)
Exhaust temperature at rated kW, dry exhaust, °C (°F)	527 (980)
Maximum allowable back pressure, kPa (in. Hg)	Min. 4 (1.2) Max. 10 (3.0)
Exhaust outlet size at engine hookup, mm (in.)	98 (3.86)

Engine Electrical

Engine Electrical System	
Battery charging alternator:	24 Volt
Ground (negative/positive)	Negative
Volts (DC)	24
Ampere rating	45
Starter motor rated voltage (DC)	24
Battery, recommended cold cranking amps (CCA):	
Quantity, CCA rating each	Two, 925
Battery voltage (DC)	12

Fuel

Fuel System	
Fuel supply line, min. ID, mm (in.)	11.0 (0.44)
Fuel return line, min. ID, mm (in.)	6.0 (0.25)
Max. lift, fuel pump: type, m (ft.)	Mechanical, 1.8 (6.0)
Max. fuel flow, Lph (gph)	92.7 (24.5)
Max. return line restriction, kPa (in. Hg)	20 (5.9)
Fuel prime pump	Manual
Fuel filter	
Primary	30 Microns
Secondary	2 Microns @ 98% Efficiency
Water Separator	Yes
Recommended fuel	#2 Diesel

Lubrication

Lubricating System	
Type	Full Pressure
Oil pan capacity, L (qt.) §	32.5 (34.4)
Oil pan capacity with filter, L (qt.) §	33.4 (35.3)
Oil filter: quantity, type §	1, Cartridge
Oil cooler	Water-Cooled

§ Kohler recommends the use of Kohler Genuine oil and filters.

Attachment: SP-2022-02 drawings 042023 (25490 : Sp-2022-02)

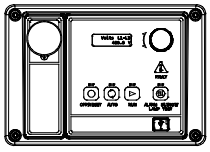
Application Data

Cooling

Radiator System	
Ambient temperature, °C (°F) *	50 (122)
Engine jacket water capacity, L (gal.)	11.3 (3.0)
Radiator system capacity, including engine, L (gal.)	27.6 (7.3)
Engine jacket water flow, Lpm (gpm)	230.9 (61)
Heat rejected to cooling water at rated kW, dry exhaust, kW (Btu/min.)	94.2 (5360)
Heat rejected to air charge cooler at rated kW, dry exhaust, kW (Btu/min.)	56.1 (3190)
Water pump type	Centrifugal
Fan diameter, including blades, mm (in.)	787 (31)
Fan, kWm (HP)	8.6 (11.5)
Max. restriction of cooling air, intake and discharge side of radiator, kPa (in. H_2O)	0.125 (0.5)

* Enclosure with enclosed silencer reduces ambient temperature capability by 5°C (9°F).

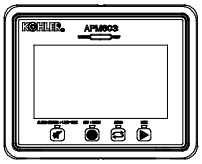
Operation Requirements



Air Requirements	
Radiator-cooled cooling air, m^3/min. (scfm)‡	368.1 (13000)
Combustion air, m^3/min. (cfm)	17.6 (620)
Heat rejected to ambient air:	
Engine, kW (Btu/min.)	46.9 (2670)
Alternator, kW (Btu/min.)	18.5 (1050)

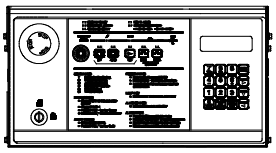
‡ Air density = 1.20 kg/m^3 (0.075 lbm/ft^3)

Fuel Consumption



Diesel, Lph (gph) at % load	Standby Rating	
100%	58.0	(15.3)
75%	43.3	(11.4)
50%	31.4	(8.3)
25%	19.7	(5.2)
Diesel, Lph (gph) at % load	**Prime Rating**	
100%	50.1	(13.2)
75%	36.1	(9.5)
50%	25.7	(6.8)
25%	16.6	(4.4)

Controllers



APM402 Controller
Provides advanced control, system monitoring, and system diagnostics for optimum performance and compatibility.
- Digital display and menu control provide easy local data access
- Measurements are selectable in metric or English units
- Remote communication thru a PC via network or serial configuration
- Controller supports Modbus® protocol
- Integrated hybrid voltage regulator with ±0.5% regulation
- Built-in alternator thermal overload protection
- NFPA 110 Level 1 capability

Refer to G6-161 for additional controller features and accessories.

APM603 Controller
Provides advanced control, system monitoring, and system diagnostics for optimum performance and compatibility.
- 7-inch graphic display with touch screen and menu control provides easy local data access
- Measurements are selectable in metric or English units
- Paralleling capability to control up to 8 generators on an isolated bus with first-on logic, synchronizer, kW and kVAR load sharing, and protective relays
  Note: Parallel with other APM603 controllers only
- Generator management to turn paralleled generators off and on as required by load demand
- Load management to connect and disconnect loads as required
- Controller supports Modbus® RTU, Modbus® TCP, SNMP and BACnet®
- Integrated voltage regulator with ±0.25% regulation
- Built-in alternator thermal overload protection
- UL-listed overcurrent protective device
- NFPA 110 Level 1 capability

Refer to G6-162 for additional controller features and accessories.

Decision-Maker® 6000 Paralleling Controller
Provides advanced control, system monitoring, and system diagnostics with remote monitoring capabilities for paralleling multiple generator sets.
- Paralleling capability to control up to 8 generators on an isolated bus with first-on logic, synchronizer, kW and kVAR load sharing, and protective relays
  Note: Parallel with other Decision-Maker® 6000 controllers only
- Digital display and keypad provide easy local data access
- Measurements are selectable in metric or English units
- Remote communication thru a PC via network or modem configuration
- Controller supports Modbus® protocol
- Integrated voltage regulator with ±0.25% regulation
- Built-in alternator thermal overload protection
- NFPA 110 Level 1 capability

Refer to G6-107 for additional controller features and accessories.

Modbus® is a registered trademark of Schneider Electric.

BACnet® is a registered trademark of ASHRAE.

Standard Features

- Alternator Protection
- Battery Rack and Cables
- Customer Connection (standard with Decision-Maker® 6000 controller only)
- Local Emergency Stop Switch
- Oil Drain Extension
- Operation and Installation Literature

Available Options

Circuit Breakers

Type

- ❑ Magnetic Trip
- ❑ Thermal Magnetic Trip
- ❑ Electronic Trip (LI)
- ❑ Electronic Trip with Short Time (LSI)
- ❑ Electronic Trip with Ground Fault (LSIG)

Rating

- ❑ 80%
- ❑ 100%

Operation

- ❑ Manual
- ❑ Electrically Operated (for paralleling)

Circuit Breaker Mounting

- ❑ Generator Mounted
- ❑ Remote Mounted
- ❑ Bus Bar (for remote mounted breakers)

Enclosures for Remote Mounted Circuit Breakers

- ❑ NEMA 1
- ❑ NEMA 3R

Approvals and Listings

- ❑ California OSHPD Pre- Approval
- ❑ CSA Certified
- ❑ IBC Seismic Certification
- ❑ UL 2200 Listing
- ❑ Hurricane Rated Enclosure

Enclosed Unit

- ❑ Sound Enclosure (with enclosed critical silencer)
- ❑ Weather Enclosure (with enclosed critical silencer)

Open Unit

- ❑ Exhaust Silencer, Critical (kit: PA-354809)
- ❑ Flexible Exhaust Connector, Stainless Steel

Fuel System

- ❑ Flexible Fuel Lines
- ❑ Fuel Pressure Gauge
- ❑ Subbase Fuel Tanks

Controller

- ❑ Common Failure Relay (Decision-Maker® 6000 and APM603 controllers only)
- ❑ Decision-Maker® Paralleling System (DPS) (Decision-Maker® 6000 controller only)
- ❑ Dry Contact (isolated alarm) (Decision-Maker® 6000 controller only)
- ❑ Two Input/Five Output Module (APM402 controller only)
- ❑ Four Input/Fifteen Output Module (APM603 controller only)
- ❑ Lockable Emergency Stop Switch
- ❑ Remote Emergency Stop Switch
- ❑ Remote Serial Annunciator Panel
- ❑ Run Relay (standard with APM603, optional with others)
- ❑ Manual Key Switch (APM603 controller only)
- ❑ Manual Speed Adjust (APM402 controller only)

Cooling System

- ❑ Block Heater, 1800 W, 90- 120 V, 1 Ph
- ❑ Block Heater, 2000 W, 190- 240 V, 1 Ph Required for ambient temperature below 0°C (32°F)
- ❑ Radiator Duct Flange

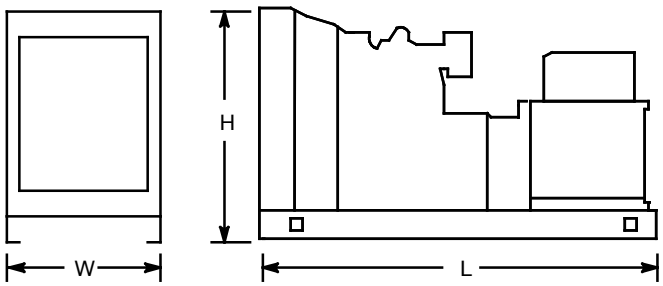
Electrical System

- ❑ Generator Heater
- ❑ Battery
- ❑ Battery Charger, Equalize/Float Type
- ❑ Battery Heater

Miscellaneous

- ❑ Air Cleaner, Heavy Duty
- ❑ Air Cleaner Restriction Indicator
- ❑ Certified Test Report
- ❑ Crankcase Emissions Canister
- ❑ Engine Fluids Added
- ❑ Rated Power Factor Testing
- ❑ Rodent Guards

Literature



- ❑ General Maintenance
- ❑ NFPA 110
- ❑ Overhaul
- ❑ Production

Warranty

- ❑ 2-Year Basic Limited Warranty
- ❑ 5-Year Basic Limited Warranty
- ❑ 5-Year Comprehensive Limited Warranty

Dimensions and Weights

Overall Size, L x W x H, mm (in.):	3000 x 1300 x 1672 (118.1 x 51.2 x 65.8)
Weight (radiator model), wet, kg (lb.):	1923 (4240)

NOTE: This drawing is provided for reference only and should not be used for planning installation. Contact your local distributor for more detailed information.

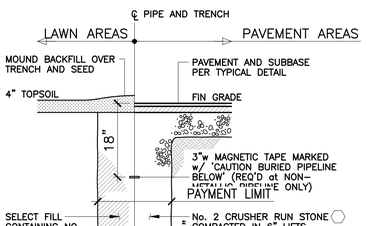
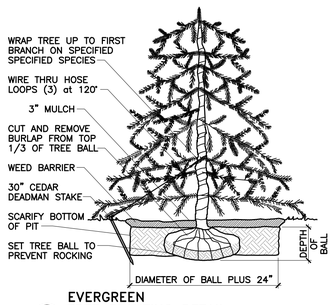
GENERAL SITE NOTES

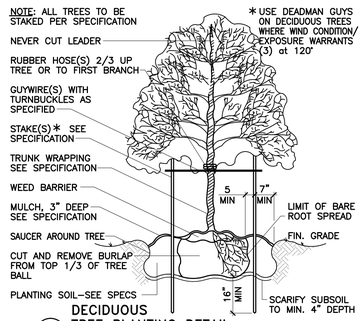


1. ALL WORK SHALL BE IN ACCORDANCE WITH THE LATEST RULES AND REGULATIONS OF THE TOWN OF AMHERST, THE ERIE COUNTY WATER AUTHORITY, ERIE COUNTY DPW, AND NYSDOT SPECIFICATIONS.
2. INSTALL ALL MATERIALS TO THE MANUFACTURER'S RECOMMENDATIONS AND BEST STANDARDS OF THE TRADE INVOLVED.
3. SUBSTITUTIONS SHALL BE MADE ONLY WITH OWNER APPROVAL AND SHALL BE EQUIVALENT QUALITY TO WHAT IS SPECIFIED.
4. WORK SHALL BE COMPLETED IN STRICT ACCORDANCE WITH ALL LOCAL CODES AND OSHA SAFETY RULES AND REGULATIONS.
5. VERIFY ALL EXISTING CONDITIONS AND DIMENSIONS AT THE SITE. NOTIFY OWNER OF ANY DISCREPANCIES IN CONDITIONS SHOWN ON THE DRAWINGS PRIOR TO PROCEEDING WITH THE WORK.
6. CONTRACTORS SHALL BE RESPONSIBLE FOR THE PROTECTION OF ANY EXISTING STRUCTURES TO REMAIN AND ANY FINISH MATERIAL INSTALLED WHILE WORKING ON OTHER COMPONENTS.
7. CONTRACTOR SHALL KEEP THE JOB SITE FREE OF DEBRIS AND MAKE FINAL CLEANUP TO THE SATISFACTION OF THE OWNER.
8. CONTRACTOR SHALL ASCERTAIN THE LOCATION OF ALL UTILITIES PRIOR TO CONSTRUCTION SO THAT THIS WORK DOES NOT DISTURB EXISTING LINES AND/OR INSTALLATIONS. COORDINATE ALL WORK WITH THE APPLICABLE UTILITY COMPANIES.
9. CONTRACTOR SHALL OBTAIN AND PAY FOR ALL PERMITS NECESSARY TO PERFORM THE WORK INCLUDING BUT NOT LIMITED TO ERIE COUNTY HIGHWAY WORK PERMIT.
10. DURING CONSTRUCTION, THE CONTRACTOR SHALL MAINTAIN CONTROL OF EROSION FROM THE SITE. SEE PROJECT EROSION CONTROL PLAN AND SWPPP MANUAL.
11. REFER TO ARCHITECTURAL DRAWINGS FOR EXACT BUILDING DIMENSIONS, FEATURES AND UTILITY CONNECTIONS.
12. ALL UTILITY TRENCHES UNDER PAVEMENT, CURBS, SIDEWALKS, AND DRIVEWAYS SHALL BE FULLY BACKFILLED WITH No 2 CRUSHER RUN STONE AND PROPERLY COMPACTED TO AVOID SETTLEMENT.
13. CONTRACTOR SHALL REPLACE IN KIND ANY EXISTING IMPROVEMENTS TO REMAIN THAT ARE DAMAGED DURING CONSTRUCTION. THIS SHALL INCLUDE, BUT NOT BE LIMITED TO, CURBS, ROAD PAVEMENTS, SIDEWALKS, AND EXISTING UTILITIES.

10 HANDICAP ACCESS RAMP



9 TYPICAL CONCRETE CURB



NOTES:
1. PIPE SHALL BE IN ACCORDANCE w/ MANUFACTURER'S RECOMMENDATIONS
2. TRENCHING OPERATIONS SHALL INCLUDE ALL NECESSARY DEWATERING
3. TRENCH DETAILS ARE ONLY SHOWN FOR MATERIAL PLACEMENT PURPOSES
4. AN OSHA APPROVED MOVEABLE PROTECTIVE TRENCH SHIELD MAY BE USED.

MATERIALS:
(A) No. 1 STONE WITH A GRADATION CONFORMING TO NYSDOT SECTION 703-02, LATEST EDITION. THE CRUSHED STONE SHALL BE WELL GRADED WITH NO PARTICLES LARGER THAN (1) INCH AND HAVING A MAX. GRADATION MEETING THE LIMITS DESCRIBED IN THE SPECIFICATIONS. NO SLAG SHALL BE USED IN PLACE OF MATERIAL 'A'.
(B) No. 2 CRUSHER RUN STONE OR No. 2 RUN OF CRUSHED GRAVEL WITH A GRADATION CONFORMING WITH NYSDOT SECTION 304-2.02 TYPE 4 AND NYSDOT SECTION 703-02 (COMPACTED IN 6" LIFTS TO 95% DENSITY). NO SLAG SHALL BE USED IN PLACE OF MATERIAL 'B'.

N

NOTES:

1. CONTRACTOR SHALL TAKE ALL REASONABLE MEASURES TO PROTECT EXISTING TREES AND PLANTINGS INDICATED TO REMAIN FROM ALL TYPES OF ROOT, TRUNK AND LIMB DAMAGE DURING DEMOLITION AND CONSTRUCTION.
2. EXISTING PLANTED AREAS SHALL REMAIN UNLESS OTHERWISE NOTED.
3. ALL DISTURBED AREAS SHALL RECEIVE 4" MIN. TOPSOIL AND GRASS SEED UNLESS OTHERWISE NOTED.
4. TREE AND SHRUB BEDS SHALL BE COVERED WITH 3" OF HARDWOOD MULCH. ALL ROOTS AND STONES OVER 1 1/2" SHALL BE REMOVED PRIOR TO SEEDING/ PLANTING.
5. ALL STREET AND ISLAND TREES SHALL HAVE FIRST BRANCHING at 6–FOOT MIN.
6. IF A CONFLICT EXISTS BETWEEN THE PLAN AND PLANTING SCHEDULE, THE PLAN SHALL GOVERN.
7. REFER TO ARCHITECTURAL DRAWINGS FOR ALL BUILDING DIMENSIONS, FEATURES & UTILITY CONNECTIONS
8. REFER TO GRADING AND UTILITY PLAN(S) FOR ADDITIONAL INFORMATION NOT SHOWN HEREIN.

LEGEND:

- INDICATES NEW TREE PLANTING PER SCHEDULE
- INDICATES NEW SHRUB PLANTING PER SCHEDULE
- EXISTING TREE/SHRUB TO REMAIN & BE PROTECTED THRU–OUT CONSTRUCTION
- EXISTING TREE/SHRUB TO BE REMOVED

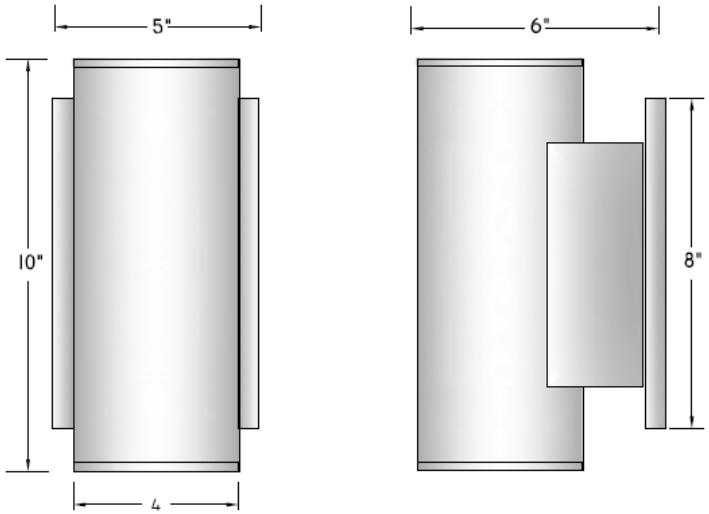
YRW 400 LED Series

Features and Characteristics

Alumilite designs reliable products produced with the best available materials, and we stand behind them with superior customer service. Please contact us for more information.

Housing: Heavy gauge extruded aluminum tube form the cylinder housing. For up and down version, with two LED modules, housing is 12" tall and the part # is YRW-2-400



Lens Assembly: Clear tempered glass lens is sealed in regressed cast aluminum frame. Optional with frosted glass "FG" or linear spread lens "SL".

Mounting Bracket: Extruded aluminum arm is internally welded to cast back plate. Arm is welded to housing. Steel zinc plated bracket mounts to wall surface and is attached to the cast plate with two stainless steel fasteners.

Module/Driver: Cree LED modules are incased in a cast aluminum housing and sealed with diffused lens. They provide industry-leading efficacy of 97 lm/W. 9w/850lm or 12w/1250lm are available in 3000, 3500 and 4000k and have a minimum CRI of 90. Drivers are 0-10v dimming with either 120 or 277 line voltage. Extruded aluminum heat sinking system provides optimal thermal management.

Finish: Polyester powder coating on all metal parts. Color to be specified.

Listing: Luminaire is ETL listed for use in wet locations and meets dark sky certification with no light above 90°.

Specifications

Series	Wattage/Lamp	Volts
YRW	9w/LED = 409/LED	120
Down Only	13w/LED = 413/LED	277
YRW-2-		
Up & Down		

Options	Finish
3000k = 30k	BZ = Bronze
3500k = 35k	BK = Black
4000k = 40k	WH = White
FG = Frosted Glass	SL = Silver
SL = Linear Spread Lens	CC = Custom Color

Example

Down light only, 9 watt, LED, 120v, Frosted Glass, 3500k, Bronze
YRW409/LED-120-FG/35k/BZ

Project: _____

Fixture Type: _____ Quantity: _____

Customer: _____

BL0131
Siteline Bollard

Weight: 12 lbs

Specifications

Material:
All parts are A356 cast aluminum and extruded aluminum. All mounting hardware shall be stainless steel or zinc plated steel.

Lens:
PMMA Optical Lens lens.

Mounting:
Standard anchor bolts are 3/8" x 10" x 2". Bolts, nuts and washers shall be hot dipped galvanized steel.

Bolt pattern diameter is 2 7/8".

Drivers:
Universal voltage 120-277 is standard. 0-10V, TRIAC and ELV dimming to 1% is standard.

See page 2 table for more LED engine and driver specifications.

Electrical:
20KA max/10KA nominal surge protection device is standard.

Certifications:
UL Listed for outdoor, wet location. UL1598 Standard for Safety for Lighting Luminaires.

Finish:
A polyester powder coat high quality finish.

Marine grade finish is available.

Modifications:
Consult factory for custom or modified designs.

LED SPECIFICATIONS -SMILE LED (CREE XLAMP)

- PMMA Optical Lens
- 12 High-power LEDs
- Efficacy ranges from 94-120 lm/W
- Distributions: Type I, II, III, V
- CCT: 2700K, 3000K, 3500K, 4000K
- Certifications: UL Recognized, RoHS, REACh
- CRI: >70 (2700K is >80)

SURGE SUPPRESSION

- A Surge Protection Device (SPD) is optional featuring a 20kA maximum discharge current 8/20µs Waveform (Imax); 10kA nominal discharge current 8/20µs Waveform (In) and thermally protected varistor technology.
- Meets IEEE C62.41.2 Location Category C High and US Dept of Energy MSSLC Model Spec.
- SPD shall be wired in series and will result in an open circuit during a fault state, resulting in the luminaire to turn off to protect system components thereby indicating SPD module replacement.

FINISHES

- A polyester powder coat high quality finish is electro-statically applied and baked at 430° for exceptional durability and color retention. Products undergo an intensive five-step cleansing and pretreatment process for maximum paint adhesion.
- Marine grade finish provides superior salt, humidity and UV protection. This coating withstands up to 3000 hours of continuous salt spray, comes with a 5-year warranty and is available in either a textured or gloss surface.

WARRANTY

See www.ANPlighting.com for complete fixture warranty.

LED warranty information

- 5 year limited warranty*

*Limited Warranty: A typical year is defined as 4380 hours of operation

DRIVER SPECIFICATIONS-ERP ESS SERIES(10W/18W ONLY)

- Universal Input 120-277V
- Dimming: 0-10V, TRIAC, ELV (Dims to 1%)
- Power Factor @ Full Load >90%
- THD @ Full Load <20%
- Constant Current Output 50/60Hz
- Operating Temperature: -30°C Minimum
- Lifetime: >50,000 hours
- Ingress Protection: IP66
- Certifications: UL Recognized, CE

DRIVER SPECIFICATION-ERP PHB SERIES (32W ONLY)

- Universal Input 120-277V
- Dimming: 0-10V, TRIAC, ELV (Dims to 1%)
- Power Factor @ Full Load >90%
- THD @ Full Load <20%
- Constant Current Output 50/60Hz
- Operating Temperature: -10°C Minimum
- Lifetime: >50,000 hours
- Certifications: UL Recognized, CE

SPECIFICATIONS -IR-TEC LMD-109 OCCUPANCY SENSOR

- Sensor Type: High Frequency Doppler (HFD)
- 360º Detection Range, Approximately 15 (30' Diameter)
- Line Voltage Sensor: 120 / 240 / 277 VAC, 50/60 Hz
- Factory Defaults:
- Dim Levels: High / 30%
- Motion Time Delay: 5 min
- For other settings, consult factory

NOTICE OF DETERMINATION OF NON-SIGNIFICANCE

Lead Agency:	Town of Amherst Planning Board	**Project:**	SP-2022-02
Address:	5583 Main Street Williamsville, NY 14221 (716) 631-7051	**Date:**	April 20, 2023

This notice is issued pursuant to Part 617 of the implementing regulations pertaining to Article 8 (State Environmental Quality Review) of the Environmental Conservation Law, and to Chapter 104 of the Town Code, as amended.

The Lead Agency has determined that the proposed action described below will not have a significant adverse effect on the environment.

Title of Action: Site Plan Review

SEQR Status: Unlisted

Description of Action: Proposed conversion of a portion of the existing 29,350 s.f. Philips Bros. retail/warehouse building for the Shatkin School of Dentistry (16,253 s.f..). Project includes an approximately 4,000 s.f. second floor build-out, as well as redevelopment of Ridgewood Drive for private parking under a license agreement with the Town. Work will include the site improvements not specifically stated above, including, stormwater, utilities, grading, lighting, paving, and landscaping.

Location: 2525 Kensington Avenue, Amherst, Erie County

Petitioner: Philipps Brothers Supply Inc.

'23 APR 26 PM12:5

Attachment: SP-2022-02_signed_neg_dec_042023 (25490 : Sp-2022-02)

REASONS SUPPORTING THIS DETERMINATION

Based on information submitted by the applicant including a Full Environmental Assessment Form (EAF) - Part 1, (as amended), EAF Part 2 and a complete site plan application, a preliminary staff analysis was undertaken. Compared to the criteria listed in Section 617.7, all indications are that this action will not have a significant impact on the environment, as follows:

1. The project is not expected to cause a substantial adverse change in existing air quality, ground or surface water quality or quantity, or noise levels; a substantial increase in solid waste production; or a substantial increase in the potential for erosion, flooding, leaching or drainage problems. The Engineering Department on February 22, 2023 reviewed the: Grading, Drainage and Utility Plans submitted on January 31, 2023; Engineer's Report submitted on February 22, 2022; Erosion Control Plan submitted on January 31, 2023 and Geotechnical Report prepared by Barron & Associates, P.C. submitted on February 22, 2022.

2. The project will not result in the removal or destruction of large quantities of vegetation or fauna; or in significant adverse impacts to fish or wildlife species, habitats or other natural resources. The Planning Department reviewed a Landscape Plan submitted on January 31, 2023 and determined that it meets or exceeds Zoning Ordinance requirements for greenspace. The Landscape Plan has met all Zoning Ordinance and Town requirements for landscaping.

3. The project is not expected to create any material conflict with the Town Comprehensive Plan. The Building Department in their review of September 28, 2022 and the Planning Department in their review of March 27, 2023 has reviewed the application documents, along with the Geotechnical Report submitted on February 22, 2022 and determined in their review of September 28, 2022 that the subject project has or will have met all International Building Code - 2018 and Zoning Ordinance regulations.

4. The project is within an area identified by the State as having potential archaeological or historical significance. However, the site has been previously disturbed, therefore, the project will not impair the character or quality of important historical resources.

5. The project will not impair the character or quality of important aesthetic resources or of existing community or neighborhood character. The project is located in the General Business (GB) zoning district; neighboring uses are commercial, office and residential and zoned for commercial and residential use; therefore, the project is consistent with surrounding land use.

6. The proposed subject development will include a build-out of the second floor for the continuation of the retail/warehouse use and dental school which will not cause a major change in the use of either the quantity or type of energy.

7. The project will not create any hazard to human health. The Fire Chief's Association on March 16, 2023 has reviewed the project and has no objection to the approval of the site plan, as all requirements of this agency has or will have been met.

Attachment: SP-2022-02_signed_neg_dec_042023 (25490 : Sp-2022-02)

'23 APR 26 PM12:57

8. The project will not cause a substantial change in the use, or intensity of use, of land including agricultural, open space or recreational resources, or in its capacity to support existing uses as the approximate 4,400 s.f. (15%) increase in floor area will be consistent with the scale of surrounding land uses.

9. The proposed dental school may increase the number of people using the site over its previous level of use, this increase is not anticipated to result in a significant impact.

10. A Signal Warrant Analysis dated July 27, 2022 concludes that a three-color signal is not warranted. Reviews by the Erie County Division of Highways dated November 1, 2022 and the Town Traffic/Safety Board dated February 3, 2023 indicate that there are no further traffic concerns.

11. A coordinated review of the project has been undertaken by Town Departments including, in addition to those mentioned above, Highway on April 7, 2022, Assessor on March 23, 2022, Plumbing Division on March 9, 2022, and Right-of-Way Agent on February 9, 2023. These reviews did not identify any potential significant adverse environmental issues and indicated that the proposal will not have a significant damaging impact on the environment.

12. Issues not specifically mentioned above and/or those not specifically reviewed were not raised by Town departments, outside agencies or the public and are not determined to cause significant negative environmental impacts.

Planning Board Approval April 20, 2023
Moved by Chmiel; Seconded by Raffaele; Ayes 7, Noes 0.

TOWN OF AMHERST
PLANNING BOARD
SITE PLAN RESOLUTION
SP-2022-02

PETITIONER

Philipps Bros. Supply Inc.
2525 Kensington Avenue
Amherst, NY 14226

PROPERTY LOCATION

2525 Kensington Avenue

WHEREAS, the Town of Amherst Planning Board on Thursday, April 20, 2023 held a public hearing on a Site Plan for a building addition and parking expansion (Philipps Bros./Shatkin School of Dentistry, and

WHEREAS, the Planning Board reviewed the plans and specifications for the proposed project, and

WHEREAS, the Site Plan was referred to the Town's various review agencies, and

WHEREAS, in accordance with Section 8-7-9 of the Zoning Ordinance, the Planning Board finds that:

A. The proposed site plan is consistent with the development plan if one is required.

B. The proposed site plan is consistent with the purpose and specific requirements of the Zoning Ordinance and generally consistent with the policies of the Comprehensive Plan.

C. Adequate services and utilities will be available prior to occupancy.

D. The site plan is consistent with all other applicable laws.

E. Pursuant to Local Law #3-82, as amended, the Planning Board has determined that the requirements of SEQR are complete and that the subject proposal is not expected to have a significant adverse effect on the environment.

F. Review by the US Army Corps of Engineers under Section 404 of the Clean Water Act may be waived because the parcel is developed.

NOW THEREFORE BE IT RESOLVED that in accordance with 6 NYCRR, Part 617 and Local Law #3-82, as amended, the Planning Board has issued a Negative Declaration attached hereto, and

BE IT FURTHER RESOLVED that the Planning Board, in accordance with Section 8-7 of the Zoning Ordinance approves said Site Plan subject to the following conditions:

SITE PLAN RESOLUTION
SP-2022-02

PETITIONER	PROPERTY LOCATION
Philipps Bros. Supply Inc.	2525 Kensington Avenue

1. That the conditions be met as stated in the Traffic Safety Board approval letter dated February 3, 2023.

2. That the condition be met as stated in the Erie County DPW letter dated October 31, 2022.

3. That the conditions of the alternative parking plan be met as stated by the Zoning Enforcement Officer in the Planning Department letter dated March 31, 2022, bulleted below:

    - A minimum of 79 parking spaces shall be provided for the project which include those that are being provided within the Ridgewood Drive R.O.W.
    - A re-analysis of parking be performed by the consultant within a year of occupancy to confirm adequacy of parking.
    - Any changes to the approved site plan which may affect future parking demands will require a new alternative parking analysis.

4. That all dumpsters/trash containers and all mechanical equipment, utility structures, multiple meter boards, generators, and similar appurtenances, including those which are mounted on any part of a primary structure shall be appropriately screened with a fence, wall, and/or landscaping. Provide gate on dumpster enclosure that shall be closed whenever dumpster is not being serviced, enclosure shall be high enough to screen the dumpster(s) within.

5. That as-built record drawings, including location of utilities, be provided to the Engineering Department prior to issuance of a Certificate of Occupancy by the Building Department.

6. That the requirements be met as stated in the Planning Department letter dated March 27, 2023, be addressed to the satisfaction of the department.

7. That the Ridgewood Drive right-of-way be appropriately signed for public parking.

8. That adequate shuttle service between Daemon University and the site be provided in perpetuity for the life of the proposed dental school.

TOWN OF AMHERST

APPLICATION & REVIEW PROCEDURE

MAJOR SITE PLAN

MATERIALS MUST BE PROVIDED IN AN ELECTRONIC FORMAT THAT CONTAINS PDF FILES OF THE APPLICATION, EAF, SITE PLAN DRAWING SET SURVEY, LANDSCAPE PLAN, PRELIMINARY BUILDING FLOO PLANS / ELEVATIONS & ANY OTHER SUPPORTING INFORMATION. THIS MUST BE SUBMITTED WITH YOUR APPLICATION. APPLICATIONS WILL NOT BE TRANSMITTED WITHOUT THIS ELECTRONIC INFORMATION.

THIS ALSO APPLIES TO REVISED MATERIALS THAT AR SUBMITTED.

This application package includes the following:

- Application Procedures
- Application Form & Checklist
- Stormwater Pollution Prevention Plan Checklist
- Appendix A Town of Amherst EAF Addendum
- Appendix B Criteria for Required 8½" x 11" Sketches
- Appendix C Erie Sewer District No. 5 – Commercial / Industrial New & Existing Buildings Requirements

- IMPORTANT-

1. A pre-submittal consultation with Planning Department staff is *strongly recommended* prior to submitting an application. The pre-submittal meeting gives the applicant an opportunity to discuss with staff such items as:
   - classifying the action as a major site plan, minor site plan, or minor site plan adjustment;
   - determining what specific information will be required to be submitted with the application;
   - identifying and discussing issues that must be addressed as part of the SEQR review;
   - identifying any potential variances required to implement the project as proposed.

   An appointment is required for all meetings with Planning Department staff.

2. This site plan petition is subject to the requirements of 6 NYCRR Part 617, State Environmental Quality Review Act (SEQR), and Chapter 104 of the Town of Amherst Code, as amended. The Planning Board cannot make a SEQR determination unless a complete Environmental Assessment Form (EAF), including Town of Amherst EAF Addendum, and any required supplementary information such as traffic impact studies, archaeological reports, wetland delineations or geotechnical reports, are submitted. SEQR issues may be discussed with Planning Department staff at a recommended pre-submittal meeting. Unlisted Actions require a Short EAF; Type I Actions require a Full EAF. The following is a link to the NYSDEC website and fillable forms with instructions*:*
   http://www.dec.ny.gov/permits/6191.html.

3. **Review by the Town Design Advisory Board (DAB) is required for Major Site Plans located in the following Mixed-Use zoning districts:**

   Traditional Infill 2.5 (TI-2.5)
   Traditional Infill 4 (TI-4)
   Shallow Corridor 3 (SC-3)
   Deep Corridor 3 (DC-3)
   Deep Corridor 5 (DC-5)
   Center 2.5 (CTR-2.5)
   Center 5 (CTR-5)
   Center 8 (CTR-8)

   The application for DAB review is required to be filed in conjunction with the major site plan application.

Attachment: SP-1987-64A application 042023 (27196 : Sp-1987-64A)

4. The application shall be executed or consented to in writing by the owner of the property.

5. **Any variances from the Zoning Board of Appeals, or any decision from the Town Board (e.g. removal of deed restrictions) must be obtained prior to action by the Planning Board on a Site Plan application.**

6. Submittal of an application grants permission to Town staff and Planning Board members to access the parcel(s) under consideration.

7. All site plan drawings must be prepared by a Registered Architect, Professional Engineer, Landscape Architect, or Land Surveyor (as applicable) licensed to practice in New York State.

8. If you wish to include a Coordinated Sign Plan application with the site plan petition, a separate application must be completed. Contact the Planning Department for a copy of a Coordinated Sign Plan application package.

9. All drawings should be no larger than 24 in. x 36 in. If site characteristics warrant larger plan sheets, they may be accepted subject to Planning Department concurrence. All drawings must also reserve a 4 in. x 6 in. area in the lower right hand corner for official Town use.

APPLICATION PROCEDURES

1. Applicant secures application package from the Planning Department, 5583 Main Street, Williamsville, NY 14221. (716) 631-7051. Forms are also available online at: www.amherst.ny.us, (keyword: Planning).

2. Applicant prepares information as required on the Site Plan Submittal Checklist, attached. NOTE: Some proposals may not require all items on the checklist; please verify with the Planning Department.

3. Applicant schedules an appointment with the Planning Department to review the following:
   - a complete set of site plan drawings, preliminary building elevations and floor plans (no larger than 24" x 36" in size)
   - Environmental Assessment Form (EAF) & Town EAF Addendum
   - any supporting reports and materials
   - verification from the Town Assessor that the address in the application is correct

4. Applicant schedules an application submittal appointment with the Planning Department. NO SITE PLAN WILL BE ACCEPTED FOR REVIEW WITHOUT A PRE-SET SUBMITTAL APPOINTMENT.

5. At the submittal appointment, applicant provides fourteen (14) complete and collated sets of drawings and application information to the Planning Department **(materials will not be accepted unless folded into 9" x 12" in size),** including**:**
   - application form
   - Environmental Assessment Form (EAF)
   - supporting reports / materials
   - complete set of site plan drawings, preliminary building elevations and floor plans (**at least one (1) set of drawings must bear a raised or wet seal and signature of the design professional** who prepared the plans; the remaining copies may be submitted with a facsimile of the seal and signature)
   - digital files of all materials in pdf format
   - an 8½" x 11" reduction of the sketch plan or plat drawing (see Appendix B)

Attachment: SP-1987-64A application 042023 (27196 : Sp-1987-64A)

6. After approval for filing by the Planning Department, applicant submits all necessary fees to the Town Clerk. **(See Schedule of Fees on first page of application and make checks payable to: Town of Amherst.)**

7. The applicant returns a copy of the filing receipt to the Planning Department.

8. The Planning Department transmits remaining thirteen (13) copies of the application and supporting materials to:
   - Assessor
   - Commissioner of Building
   - Town Engineer
   - Superintendent of Highways
   - Traffic/Safety Board
   - Fire Chiefs' Association
   - Plumbing Division
   - Right-of-Way Agent
   - Police Department (if applicable)
   - Zoning Enforcement Officer
   - Other Town and outside agencies, as applicable

9. Within 30 days of its receipt of the complete application for Site Plan approval, each agency completes its review and notifies the Planning Department in writing of its comments or recommendations as required by Ordinance.

10. The applicant may be required to submit revised plans, reports, or materials to address review agency comments. The procedures for submittal of revised plans are as follows:

    - A cover letter addressing all comments received to date is required.
    - "Highlight" the area of change on the drawings and provide a notation describing the change.
    - Revised plans/materials are required. Planning staff should be contacted to determine the number of sets needed.
    - All revised plans and materials must also be provided in an electronic format that contains pdf files of the revised information.

11. The Planning Board reviews the EAF to determine whether a Draft Environmental Impact Statement (DEIS) is required. The petitioner will be advised in the event that a DEIS is required and afforded the opportunity to prepare it. If the petitioner declines, the Planning Board will prepare the DEIS at the petitioner's expense. The public hearing will be held on the DEIS concurrently with the Planning Board hearing on the application.

12. Planning Board Meeting Procedures:

    The applicant or representative presents the project at the public hearing before the Planning Board and is available to answer any questions. The Planning Board may take any of the following actions:

    - Adjourn the hearing to a future Planning Board meeting (hearing remains open).
    - Close the hearing and table action on the site plan to a future Planning Board meeting. (The Planning Board may remove the item from the agenda until such time as all required information is provided.)
    - Close the hearing and make a decision on the site plan.

    All determinations on matters before the Planning Board are made after all public hearings on that meeting's agenda are completed.

Attachment: SP-1987-64A application 042023 (27196 : Sp-1987-64A)

13. A copy of the Planning Board's determination will be provided to the applicant, his / her representative, the Building Commissioner and the Town Clerk approximately 1 week following the Planning Board meeting at which it was heard.

14. If the Planning Board approves a Site Plan with conditions, the Planning Department will work with the applicant to ensure that all conditions of the approval are satisfactorily addressed. When all conditions are satisfied, the applicant submits **seven (7) final copies** of the complete set of all site plan drawings, folded into 9" x 12". For site plans in the Mixed-Use zoning districts, building elevations will also be required.

    All 7 sets must have original wet seals and include the required 4 in. x 6 in area in the lower right hand corner for official Town use. These drawings will be stamped and signed "Approved" by the Planning Director and transmitted to Town Departments for their files and use.

15. A building permit will not be issued by the Building Department until the stamped and signed Site Plan is issued by the Planning Director.

NOTE: Please check with the Planning Department to determine the deadline date for filing applications. Due to the public hearing notice requirements and department reviews, no site plan application will be placed on the Planning Board agenda after the deadline for filing has closed. Scheduling may be delayed if an application is incomplete.

Site Plan Submittal Requirements and Checklist

The following checklist outlines the information required by the Planning Department to accept a Site Plan application for review. ***It is strongly recommended that you make an appointment with Planning Staff to determine which items apply to your application***.

Item No.	Item	Submitted	Official use
I Basic Drawing Information			
1.0	**Drawing size not to exceed 24" x 36"**		
2.0	**Title of Drawing**		
3.0	**Name and address of Applicant**		
4.0	**Name of person preparing drawing**		
5.0	**Wet seal/raised seal and signature of NYS licensed architect, engineer, landscape architect, or surveyor (as applicable)**		
6.0	**Project address**		
7.0	**Zoning of subject property and adjacent parcels**		
8.0	**North point, scale, date, and revision date(s)**		
9.0	**4" x 6" reserved area in lower right hand corner for official Town use**		
II Structures, Paved Areas, & Open Space			
1.0	**Existing and Proposed Streets**		
1.1	Names of all existing and proposed streets		
1.2	Width and radii of proposed curb-cuts		
1.3	Existing curb-cuts on adjacent and opposite properties		
1.4	Show ROW width, pavement dimensions, lane widths, pavement markings, and proposed signage on proposed streets		
1.5	Show proposed ROW consistent with planned NYSDOT, Erie County, or Town road projects (if applicable)		
1.6	Show location of proposed cross access to adjacent parcels along with a draft easement		
1.7	Designation of Fire Lanes (if applicable)		
1.8	Fire apparatus access roads		
1.9	Label any proposed roads as public or private		
1.10	Location and dimensions of sidewalks		
1.11	Typical cross sections and profiles of proposed streets, pedestrian walkways, and bikeways		
2.0	**Proposed Structures**		
2.1	Location and complete dimensions of proposed structures		
2.2	Setback dimensions of structure(s) to all property lines		
2.3	Proposed use of structures		
2.4	Gross square feet area of each structure		
2.5	Location of all building entrances		
2.6	Indicate type of roof construction/materials		
2.7	Location, height, and design detail of existing and proposed fences and walls		
2.8	Location of light standards and building mounted lights		
2.9	Location of dumpster and detail of dumpster enclosure with gate		
2.10	Layout and dimensions of the lot(s) proposed for development		

Attachment: SP-1987-64A application 042023 (27196 : Sp-1987-64A)

Town of Amherst Planning Department 5583 Main Street Williamsville-NY-14221
(716) 631-7051- Fax: (716) 631-7153

Item No.	Item	Submitted	Official use
II Structures, Paved Areas, & Open Space (cont'd)			
3.0	**Floor Plans with individual rooms and spaces labeled** (fully dimensioned)		
4.0	**Building elevations with height dimensions from finished grade to the highest point of the roof and to midpoint of gable or hip of a pitched roof.** (fully dimensioned)		
4.1	Show screening of mechanical equipment		
5.0	**Parking/Loading/Stacking Areas**		
5.1	Location and complete dimensions of all paved areas		
5.2	Setback dimensions of all paved areas to property lines		
5.3	Dimension of typical parking space and drive aisles		
5.4	Location and layout of handicapped parking spaces & access aisles		
5.5	Detail of vertical signage for handicapped parking and access aisles		
5.6	Indicate minimum parking requirement & number of spaces provided		
5.7	Proposed signage for directing and guiding traffic		
5.8	Curb cut permits from NYS, Erie County, or Town (if applicable)		
5.9	Pedestrian connections (from proposed structures to public sidewalk network)		
6.0	**Location and proposed development of all open spaces, including parks, playgrounds, and open reservations**		
III Utilities and Drainage			
1.0	**Engineers Report** (bound separately from the Stormwater Pollution Prevention Plan [SWPPP])		
1.1	Stamped/sealed and signed by NYS licensed architect or professional engineer		
1.2	Proposed water service sizing, RPZ pressure and fire safety flow and pressure calculations		
1.3	Proposed sanitary sewer facility load calculations (avg. & peak flows) including calculation of the peaking factor		
1.4	Proposed storm drainage facility calculations (see information included with this application)		
2.0	**Grading Plan**		
2.1	Existing and proposed grades indicated (proposed grades may not exceed 1 on 3)		
3.0	**Water Service**		
3.1	Location, size and material of existing and proposed facilities		
3.2	Location of existing and proposed fire hydrant location(s)		
3.3	Indicate use of sprinklers, location of Fire Department connection, and proposed fire protection systems		
3.4	Existing and proposed meter/RPZ size and location		
3.5	Applicable construction details		
4.0	**Sanitary Sewers**		
4.1	Locations, sizes, slopes, inverts, and materials of all existing and proposed facilities		

Attachment: SP-1987-64A application 042023 (27196 : Sp-1987-64A)

Town of Amherst Planning Department 5583 Main Street Williamsville-NY-14221

Item No.		Submitted	Official use
III Utilities and Drainage (cont'd)			
4.2	Applicable construction details		
4.3	Proposed water/oil/grease interceptor sizing calculations by a professional engineer (if applicable)		
5.0	**Storm Drainage**		
5.1	Locations, sizes, slopes, inverts, and materials of existing and proposed storm drainage facilities		
5.2	Connection of roof drains to proposed drainage system		
5.3	Applicable Town Standard construction details		
5.4	Existing and proposed swales and ditches		
5.5	Detention area cross-section and high-level elevations		
5.6	County and State approval for tie-in to existing sewers		
6.0	**Stormwater Pollution Prevention Plan (SWPPP) as applicable** (bound separately from the Engineer's Report) **See attached checklist.**		
7.0	**Natural Gas Service**		
8.0	**Location of transformers, generators and other mechanical equipment; include detail drawings (if applicable)**		
9.0	**Downstream Sanitary Capacity Analysis (DSCA) Report** (must be submitted if proposed average flows are greater than 2,500 gallons per day)		
9.1	The DSCA Report must include a detailed downstream sewer capacity analysis and the calculations of and commitment to (via Developer commitment letter) the required financial contribution to the Town's I/I mitigation fund based on peak flow conditions. The contribution must be based on $250 per gallon per minute of mitigated flow		
IV Lighting Plan			
1.0	**Photometric plan showing light spread in foot candles at property lines**		
1.1	Detail of all light standards, including dimension of height from finished grade		
1.2	Detail of all exterior lighting fixtures		
V Landscape Plan			
1.0	**Wet/raised seal and signature of a licensed Landscape Architect**		
2.0	**Provide a calculation of the total Parking area and a calculation of interior parking area in square feet and as a percentage**		
3.0	**Indicate location, size, number and type of proposed landscape materials**		
4.0	**Indicate location, type and size of <u>all</u> existing trees 4" caliper or larger and indicate which will be removed or retained**		
VI Other Required Information/General Requirements			
1.0	**Complete boundary survey that includes all existing structures, acreage, legal description with reference to a property line, street, or other known feature, and easements plotted to scale by a NYS licensed land surveyor**		

Attachment: SP-1987-64A application 042023 (27196 : Sp-1987-64A)

Town of Amherst Planning Department 5583 Main Street Williamsville-NY-14221
(716) 631-7051- Fax: (716) 631-7153

Item No.		Submitted	Official Use
VI Other Required Information/General Requirements (cont'd)			
1.1	Copies of all easements, reciprocal access agreement or similar leag documents		
2.0	**Topographic Survey with a 30 ft. buffer outside all property lines by a NYS licensed land surveyor**		
3.0	**Draft of any deed restrictions, covenants, provisions for home associations and common ownership, and reciprocal easement agreements (as applicable).**		
4.0	**For assessment purposes, state intent to apply for condominium status (if applicable).**		
5.0	**Completed and signed Environmental Assessment Form**		
5.1	Soil boring report and geotechnical report prepared by a qualified Professional Engineer (if applicable)		
5.2	Traffic Impact Study (if applicable)		
5.3	Archaeological survey (if applicable		
5.4	Wetland Delineation report (if applicable)		
6.0	**Show existing zoning(s) of both the subject property and adjacent parcels on the Site Plan and the Landscape Plan**		
7.0	**Location of NYSDEC wetlands (including buffer area) and/or federal wetlands; indicate jurisdictional status**		
8.0	**Location of Floodway and floodplain** (if applicable)		
9.0	**Documentation pertaining to any conditions of zonings, including copies of required deed restrictions; indicate date of rezoning and the parcel address under which it was rezoned (if applicable)**		
10.0	**Documentation related to any required variances granted by the ZBA**		
11.0	**For residential site plans, provide a statement from the appropriate school district that adequate school sites and facilities are available.**		
12.0	**8 1/2" X 11" reduction of primary site plan drawing (see appendix "B" of application package for specifications)**		
13.0	**A CD containing a PDF of all site plan drawings (Must also be provided with revised drawings)**		
VII Additional Required Information for Projects in the Mixed Use Districts			
1.0	**Design Advisory Board Application**		
1.1	Required for Major Site Plan		
1.2	Required at the Planning Directors Discretion for Minor Site Plans		
2.0	**Block & Street Network Plan**		
2.1	Designation of Core, Local & Alley streets		
2.2	Dimensions of Blocks		
3.0	**Block Usage Plan (as applicable)**		
3.1	Designation of site usage for each block including open space areas		
4.0	**Phasing Plan**		

Attachment: SP-1987-64A application 042023 (27196 : Sp-1987-64A)

(716) 631-7051- Fax: (716) 631-7153

TOWN OF AMHERST ATTACHMENT
State Environmental Quality Review
ENVIRONMENTAL ASSESSMENT FORM

1. For each applicable category of proposed new structures, including additions to existing structures, provide the following information for all soil types on the project site (*according to Soil Survey of Erie County, NY; Table 11, Building Site Development, pp 294-305):*

Soil Name	Shallow excavations	Dwellings without basements	Dwellings with basements	Small commercial buildings	Local roads and streets
Lamson Very Fine Sandy Loam	✔				
Raynham Silt Loam 0-3% Slope	✔			✔	

2. If the Soil survey indicates either "severe" or "moderate" suitability for the proposed types of construction, a geotechnical and hydrological analysis based on one test per 3.5 acres of project area must be provided (per Town Board resolution, 3/17/03, amended 6/16/03).

_____ Geotechnical report attached ✔ Not applicable

3. Is your property located: On Youngs Road between Dodge and Klein Roads? ☐ Yes ☑ No
On Wehrle Dr. between Spindrift Dr. and Oakwood Rd? ☐ Yes ☑ No

If so, the property may be within an area of the Town that is affected by a moratorium on connections to the sanitary sewer system.

4. Are there alternative locations on the site for this project? ☐ Yes ☑ No

5. Location and size of real property owned by petitioner within one (1) mile of subject proposal:
2.2 +/- acre project site, at 80 Creekside Dr Amherst, NY

6. Are you aware of current or future plans or intentions by others in the Town of Amherst to develop property within 1000± ft. of the present project request: ☐ Yes ☑ No

Describe_____

(Potential environmental impacts from adjacent or nearby projects undergoing the approval process will receive a coordinated environmental review to determine cumulative effects on common receivers (e.g. traffic and drainage corridors) and other relevant environmental concerns.)

7. Maximum number of vehicular trips to be generated per hour upon completion of project 3 (weekday pm peak)
Source: ITE Trip Generator

8. Will blasting occur during construction? ☐ Yes ☑ No

9. Does the project propose to connect and be tributary to the public sanitary sewer system? ☐ Yes ☑ No

10. Proposed net additional gallons per day (gpd) of sanitary sewer discharge upon completion of project:

30 average flow 120 peak flow.

(Please note that average flows of 2,500 gpd or greater will require an Engineer's Report that includes a detailed downstream sewer capacity analysis and the identification of and commitment to required I/I offset work during peak wastewater flow conditions.)

Williamsville, NY 14221

Re: Proposed Warehouse Addition
80 Creekside Drive
Amherst, NY 14228

Dear Scott:

On behalf of our client, 80 Creekside Drive, LLC, please find enclosed the following documents for processing and review:

(7) Revised Plan Set
(3) Revised Engineer's Report
(3) Revised Short EAF
(3) Geotechnical Report

The following sections of this letter have been prepared for the purpose of responding to the written comments from the Town of Amherst regarding the application and approval process for the proposed warehouse addition. For convenience, each of the written comments received from the Town of Amherst below are in *italics*, followed by a response.

Engineering Department 3/2/23:

1. Plans must be revised to include drainage inlets and associated construction detail(s).

Response: **Project area is proposed to sheet drain stormwater runoff to proposed detention pond.**

2. Engineer's Report must be revised to indicate planned water/sanitary use, if any.

Response: **Water and sewer lines will be tapped off of existing interior building. The engineering report has been revised to reflect this.**

3. The plan must also indicate that all vegetation must be removed from the swale along the eastern property line.

Attachment: SP-1987-64A application 042023 (27196 : Sp-1987-64A)

Response: The plan has been revised, please refer to sheet L-100.

Zoning Enforcement Officer Review 3/14/23:

1. Unable to determine compliance with §203-4-9-2 B of Town Code for the building height as no elevations were provided and unable to determine the accuracy of the allotted square footages of the building as no floor plan was provided.

Response: Included in this submittal are copies of the building floor plans at elevations.

2. *Unable to determine compliance with §203-7-1-6 A of Town Code (required parking) as no floor plan of the proposed addition and existing building were provided. It appears that the parking calculations do not account for all or part of the existing building (10,000± sq.ft.) If necessary, provide the required amount of parking stalls per §203-7-1 of Town Code on the site plan.*

Response:

3. The required landscape area adjacent to the proposed building is not provided on the north and west sides of the proposed building addition in accordance with per §203-7-2-3 A (2) of Town Code. Further, provide the locations of any exterior doors for the building addition on the site plan drawings.

Response: There are no proposed exterior doors for the addition. Landscape plan has been updated to on the north and west sides of the proposed addition. Please refer to Sheet L-100.

4. The required buffer and screening is not provided along the west property line opposite the proposed building addition and south of the existing vegetation shown to remain. Provide a low impact screen as required by §203-7-2-4 B of Town Code in this area.

Response: Landscape plan has been updated to reflect those changes. Please refer to Sheet L-100

5. The existing vegetation shown to remain on site will count towards the buffer and screening requirement subject to the requirements of §203-7-2-4 B (1) (a) or §203-7-2-4 B (3) (a) of Town Code as applicable.

Response: Comment Noted

Attachment: SP-1987-64A application 042023 (27196 : Sp-1987-64A)

6. Unable to determine compliance with §203-7-3-4 D of Town Code for lighting levels at the adjacent property boundaries. Revise the lighting plan to demonstrate the lighting level in foot candles at the adjacent property lines or to a point where zero foot-candles of light are being emitted.

Response: Lighting plan has been revised. Please refer to Sheet LP-100.

7. No details of the proposed light fixtures were provided that indicates that the fixtures are dark sky compliant and full-cutoff at 90 degrees per §203-7-3-5 A (1) of Town Code.

Response: Lighting plan has been revised to include lighting detail for OPF Optiform Luminaire. Please refer to Sheet LP-100.

8. Indicate all areas of any proposed outdoor storage on site including storage trailers, pursuant to §203-7-4 of Town Code.

Response: There are no additional proposed outdoor storage on site. Please refer to site plan Sheet C-100

Planning Department Staff Review 3/14/23:

1. Indicate the zoning districts on the site plan for the properties which abut the subject development.

Response: Site plan has been revised to show adjacent properties zoning districts. Please refer to Sheet C-100.

2. Revised the title of the Planting Schedule on Sheet L-100 to illustrate the correct project address.

Response: Landscape plan has been revised. Please refer to Sheet L-100.

3. During a site visit on March 10, 2023, Planning Staff identified the following;

> *a. A dumpster was identified on the site and not shown on the plans. If the dumpster is to remain on the site provide its location on the site plan drawings, demonstrating compliance with §203-7-2-4 D of Town Code. Further, provide a detail of the required enclosure for review.*
>
> **Response: Site plan has been updated to indicate the location of the proposed dumpster enclosure. Please refer to Sheet C-100.**

Attachment: SP-1987-64A application 042023 (27196 : Sp-1987-64A)

b. The presence of cars parked outside of the delineated parking spaces on site infers the need for additional parking to be provided.

Response: Site layout has been updated to show eight (8) additional parking spaces. Please refer to Sheet C-100.

4. As required by §203-7-2-4 (C) of Town Code; All dumpsters/trash containers and all mechanical equipment, utility structures, multiple meter boards, generators, RPZ's and similar appurtenances, including those which are mounted on any part of a primary structure shall be appropriately screened with a fence, wall, and/or landscaping. Such screening shall be shown on the plans submitted for review.

Response: Comment Noted

5. On the plans indicate any other site features that may be proposed such, as generators, hot boxes, condenser units, multiple meter boards, external grease interceptors, fire pits, grilling areas, patios etc. and provide the associated details.

Response: There are no proposed site features such as generators, hot boxes, condenser units, multiple meter boards, external grease interceptors, fire pits, grilling areas, patios etc. Please refer to Sheet C-100.

6. Per Town Code, Four (4) foot wide concrete sidewalks are required along the Creekside Drive frontage of the parcel and be continuous across all driveway openings unless waived by the Planning Board. If a waiver is requested, provide the request in writing.

Response: Response to this comment will serve as the applicants request of a sidewalk waiver.

7. Correct the Town of Amherst attachment to the SEQR EAF for item #1. The soil types on the site and listed on the form should all indicate "severe". Check geotechnical report attached" in item 2.

Response: EAF has been revised.

8. The required geotechnical report must be submitted prior to the Planning Board making a SEQR determination.

Response: A geotechnical report will be attached with this submission.

9. Provide the required reserved 4"x6" area in the lower right hand corner of all drawings for official Town use.

Attachment: SP-1987-64A application 042023 (27196 : Sp-1987-64A)

Response: **Due to the drawing title block, site data, legend, scale bar, notes, etc. the reserved 4"x6" area may not be directly located in the bottom right corner of the drawings but is provided on all plans near the bottom left corners.**

10. Please provide an $8\frac{1}{2}$" x 11" reduction of the site plan and an electronic version of any revised plans, amended or additional materials submitted for review.

Response: **An electronic version will be submitted with this submission.**

Landscape Architect Review 3/14/23:

1. Petitioner and petitioner's contractor shall take all reasonable measures to protect existing trees which are to be preserved from all possible types of root, trunk, and limb damage; including but not limited to retaining walls which prevent filling on top of roots or excavating tree roots as required by §203-7-2-3 (B) (3) of Town Code.

Response: **Comment Noted**

2. All previously required trees and shrubs from the previously approved site plan must be alive and in a vigorous condition as per Zoning Ordinance 7-2-7. All dead or missing plants shall be re-placed or re-planted in the locations shown on the plan.

Response: **Comment Noted**

3. As per zoning ordinance 7-2-4 (C) (I) Non-single-family residential properties which may be viewed from residential uses, public streets or public park areas shall screen all roof, ground and wall mounted mechanical equipment (utility structures, multiple meter boards, generators, air condi-tioning units, backflow preventer [RPZ] hot boxes, etc.) from view at ground level of the property line.

Response: **Comment Noted**

If you should have any questions regarding this letter, please contact me at (716) 550-3342. Thank you.

Sincerely,

Long Nguyen |Civil Engineer

Short Environmental Assessment Form
Part 1 - Project Information

Instructions for Completing

Part 1 – Project Information. The applicant or project sponsor is responsible for the completion of Part 1. Responses become part of the application for approval or funding, are subject to public review, and may be subject to further verification. Complete Part 1 based on information currently available. If additional research or investigation would be needed to fully respond to any item, please answer as thoroughly as possible based on current information.

Complete all items in Part 1. You may also provide any additional information which you believe will be needed by or useful to the lead agency; attach additional pages as necessary to supplement any item.

Part 1 – Project and Sponsor Information

Name of Action or Project:
Proposed Warehouse Addition

Project Location (describe, and attach a location map):
80 Creekside Drive Town of Amherst Erie County

Brief Description of Proposed Action:
Construction of a 10,525 sf warehouse addition and associated site improvements.

Name of Applicant or Sponsor:	Telephone: 716-842-3165, ext 103
80 Creekside Drive, LLC c/o Christopher Wood, PE Carmina Wood Design	E-Mail: cwood@carminawooddesign.com

Address:
487 Main St

City/PO:	State:	Zip Code:
Buffalo	NY	14203

	NO	YES
1. Does the proposed action only involve the legislative adoption of a plan, local law, ordinance, administrative rule, or regulation? If Yes, attach a narrative description of the intent of the proposed action and the environmental resources that may be affected in the municipality and proceed to Part 2. If no, continue to question 2.	☑	☐
2. Does the proposed action require a permit, approval or funding from any other government Agency? If Yes, list agency(s) name and permit or approval:	☑	☐

3. a. Total acreage of the site of the proposed action? 2.2 acres
   b. Total acreage to be physically disturbed? 0.8 +/- acres
   c. Total acreage (project site and any contiguous properties) owned or controlled by the applicant or project sponsor? 2.2 acres

4. Check all land uses that occur on, are adjoining or near the proposed action:

5. ☐ Urban ☐ Rural (non-agriculture) ☑ Industrial ☑ Commercial ☐ Residential (suburban)
   ☐ Forest ☐ Agriculture ☐ Aquatic ☐ Other(Specify):
   ☐ Parkland

Attachment: SP-1987-64A application 042023 (27196 : Sp-1987-64A)

	NO	YES	N/A
5. Is the proposed action,			
a. A permitted use under the zoning regulations?	☐	☑	☐
b. Consistent with the adopted comprehensive plan?	☐	☑	☐

	NO	YES
6. Is the proposed action consistent with the predominant character of the existing built or natural landscape?	☐	☑
7. Is the site of the proposed action located in, or does it adjoin, a state listed Critical Environmental Area?	NO	YES
If Yes, identify: _____	☑	☐
8. a. Will the proposed action result in a substantial increase in traffic above present levels?	NO	YES
	☑	☐
b. Are public transportation services available at or near the site of the proposed action?	☑	☐
c. Are any pedestrian accommodations or bicycle routes available on or near the site of the proposed action?	☑	☐
9. Does the proposed action meet or exceed the state energy code requirements?	NO	YES
If the proposed action will exceed requirements, describe design features and technologies: _____ _____	☐	☑
10. Will the proposed action connect to an existing public/private water supply?	NO	YES
If No, describe method for providing potable water: _____ _____	☐	☑
11. Will the proposed action connect to existing wastewater utilities?	NO	YES
If No, describe method for providing wastewater treatment: _____ _____	☐	☑
12. a. Does the project site contain, or is it substantially contiguous to, a building, archaeological site, or district which is listed on the National or State Register of Historic Places, or that has been determined by the Commissioner of the NYS Office of Parks, Recreation and Historic Preservation to be eligible for listing on the State Register of Historic Places?	NO	YES
	☑	☐
Regarding item b. below, the site has previously been disturbed b. Is the project site, or any portion of it, located in or adjacent to an area designated as sensitive for archaeological sites on the NY State Historic Preservation Office (SHPO) archaeological site inventory?	☐	☑
13. a. Does any portion of the site of the proposed action, or lands adjoining the proposed action, contain wetlands or other waterbodies regulated by a federal, state or local agency?	NO	YES
	☐	☑
b. Would the proposed action physically alter, or encroach into, any existing wetland or waterbody?	☑	☐
If Yes, identify the wetland or waterbody and extent of alterations in square feet or acres: _____ Note that wetlands are not present on site _____ _____		

Attachment: SP-1987-64A application 042023 (27196 : Sp-1987-64A)

14. Identify the typical habitat types that occur on, or are likely to be found on the project site. Check all that apply:

☐ Shoreline ☐ Forest ☐ Agricultural/grasslands ☐ Early mid-successional
☐ Wetland ☐ Urban ☑ Suburban

	NO	YES
15. Does the site of the proposed action contain any species of animal, or associated habitats, listed by the State or Federal government as threatened or endangered?	☑	☐
16. Is the project site located in the 100-year flood plan?	☐	☑
17. Will the proposed action create storm water discharge, either from point or non-point sources?	☐	☑
If Yes,		
a. Will storm water discharges flow to adjacent properties?	☑	☐
b. Will storm water discharges be directed to established conveyance systems (runoff and storm drains)?	☐	☑
If Yes, briefly describe:		
storm water from the proposed project will discharge to an existing on-site ditch and ultimately the drainage system on Creekside Drive.		
18. Does the proposed action include construction or other activities that would result in the impoundment of water or other liquids (e.g., retention pond, waste lagoon, dam)?	☑	☐
If Yes, explain the purpose and size of the impoundment:		
19. Has the site of the proposed action or an adjoining property been the location of an active or closed solid waste management facility?	☑	☐
If Yes, describe:		
20.Has the site of the proposed action or an adjoining property been the subject of remediation (ongoing or completed) for hazardous waste?	☑	☐
If Yes, describe:		

I CERTIFY THAT THE INFORMATION PROVIDED ABOVE IS TRUE AND ACCURATE TO THE BEST OF MY KNOWLEDGE

Proposed Warehouse Addition
80 Creekside Drive
Town of Amherst, NY 14228

3/26/2023

Section 1 - Location & Description

This project is the redevelopment of a 2.2-acre site located at 80 Creekside Dr in the Town of Amherst and is currently zoned 'RD – Research and Development'. Construction will consist of a proposed 10,525 GSF 1-story warehouse addition with associated utility and landscaping improvements on the north side of the site. The existing site consists of a 10,486 SF medical equipment manufacturer facility and a 16 space parking lot. The majority of the existing surface stormwater generated within the project area sheet drains from the west side of the site to the east side into an existing ditch and eventually to existing catching basins around the outside of the site. The proposed site development area to be disturbed for this project is approximately 0.84 acres in total when construction is completed.

Section 2 – Storm Sewer Service

The stormwater runoff from the proposed project area for this proposed development will be routed through the proposed storm sewer system consisting of a detention pond and smooth interior HDPE pipes. Perimeter drains around the proposed warehouse addition will collect roof runoff and will be directed into the detention pond. The proposed hydrology for the re-development project area will consist of a combination of overland sheet flow and pipe channel flow. A proposed 6" culvert will control runoff from the detention pond into an existing ditch on site.

NYSDOT Requirement:
The NYSDOT requires that runoff from the proposed 25-yr storm event be less than the existing 10-yr storm event runoff rate.

Design Criteria
Storm pipes: 10-year storm
Detention: Comparison of the existing 10-year vs. the proposed 25-year runoff.

Event	Ex Runoff (cfs)	Prop Runoff (cfs)
10-yr	***0.88***	0.59
25-yr	1.74	***0.75***

See Appendix B for Storm Water Calculations

Section 3 – Water System

The proposed water service for the warehouse addition will be tapped off of the existing building interior.

Section 4 – Sanitary Sewer Service

The proposed sanitary sewer service for the warehouse addition will be tapped off of the existing building interior.

Section 5 – Erosion Control Summary

Stabilization Practices
Stabilization practices for this site include:

A. Land clearing activities shall be done only in areas where earthwork will be performed and shall progress as earthwork is needed.
B. Use of stabilization fabric for all slopes having a slope greater than 1V:3H.
C. Permanent seeding and planting of all unpaved areas using the hydromulching grass seeding technique.
D. Mulching exposed areas.
E. Frequent watering to minimize wind erosion during construction.

Attachment: SP-1987-64A application 042023 (27196 : Sp-1987-64A)

Structural Practices
Structural practices for this site include:

A. Inlet protection using a method detailed in the Construction Documents
B. Perimeter protection using temporary silt fence
C. Temporary stone wash off areas

Sequence of Major Activities

The Contractor will be responsible for implementing the following erosion control and storm water management control measures. The Contractor may designate these tasks to certain subcontractors as he sees fit, but the ultimate responsibility for implementing these controls and ensuring their proper functioning remains with the Contractor. The order of activities will be as follows:

A. Install perimeter silt fences in the locations shown on the Demo & Erosion Control Plan sheet.
B. Demolition of existing building shown on the Demo & Erosion Control Plan sheet
C. Commence site grading.
D. Disturbed areas of the site where construction activity has ceased for more than 14 days shall be temporarily seeded and watered.
E. Construction of building.
F. Installation of proposed utilities.
G. Finalize pavement subgrade preparation.
H. Construct all curb, drainage inlets, storm sewer pipes and storm sewer manholes, as shown on the plans. Install temporary inlet protection at the locations of all new inlets.
I. Dust control.
J. Remove inlet protection around inlets and manholes no more than 48 hours prior to placing stabilized base course.
K. Install base material as required for pavement.
L. Carry out final grading and seeding and planting.
M. Remove silt fencing only after all paving is complete and exposed surfaces are stabilized.

Preface

Soil surveys contain information that affects land use planning in survey areas. They highlight soil limitations that affect various land uses and provide information about the properties of the soils in the survey areas. Soil surveys are designed for many different users, including farmers, ranchers, foresters, agronomists, urban planners, community officials, engineers, developers, builders, and home buyers. Also, conservationists, teachers, students, and specialists in recreation, waste disposal, and pollution control can use the surveys to help them understand, protect, or enhance the environment.

Various land use regulations of Federal, State, and local governments may impose special restrictions on land use or land treatment. Soil surveys identify soil properties that are used in making various land use or land treatment decisions. The information is intended to help the land users identify and reduce the effects of soil limitations on various land uses. The landowner or user is responsible for identifying and complying with existing laws and regulations.

Although soil survey information can be used for general farm, local, and wider area planning, onsite investigation is needed to supplement this information in some cases. Examples include soil quality assessments (http://www.nrcs.usda.gov/wps/portal/nrcs/main/soils/health/) and certain conservation and engineering applications. For more detailed information, contact your local USDA Service Center (https://offices.sc.egov.usda.gov/locator/app?agency=nrcs) or your NRCS State Soil Scientist (http://www.nrcs.usda.gov/wps/portal/nrcs/detail/soils/contactus/?cid=nrcs142p2_053951).

Great differences in soil properties can occur within short distances. Some soils are seasonally wet or subject to flooding. Some are too unstable to be used as a foundation for buildings or roads. Clayey or wet soils are poorly suited to use as septic tank absorption fields. A high water table makes a soil poorly suited to basements or underground installations.

The National Cooperative Soil Survey is a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local agencies. The Natural Resources Conservation Service (NRCS) has leadership for the Federal part of the National Cooperative Soil Survey.

Information about soils is updated periodically. Updated information is available through the NRCS Web Soil Survey, the site for official soil survey information.

How Soil Surveys Are Made

Soil surveys are made to provide information about the soils and miscellaneous areas in a specific area. They include a description of the soils and miscellaneous areas and their location on the landscape and tables that show soil properties and limitations affecting various uses. Soil scientists observed the steepness, length, and shape of the slopes; the general pattern of drainage; the kinds of crops and native plants; and the kinds of bedrock. They observed and described many soil profiles. A soil profile is the sequence of natural layers, or horizons, in a soil. The profile extends from the surface down into the unconsolidated material in which the soil formed or from the surface down to bedrock. The unconsolidated material is devoid of roots and other living organisms and has not been changed by other biological activity.

Currently, soils are mapped according to the boundaries of major land resource areas (MLRAs). MLRAs are geographically associated land resource units that share common characteristics related to physiography, geology, climate, water resources, soils, biological resources, and land uses (USDA, 2006). Soil survey areas typically consist of parts of one or more MLRA.

The soils and miscellaneous areas in a survey area occur in an orderly pattern that is related to the geology, landforms, relief, climate, and natural vegetation of the area. Each kind of soil and miscellaneous area is associated with a particular kind of landform or with a segment of the landform. By observing the soils and miscellaneous areas in the survey area and relating their position to specific segments of the landform, a soil scientist develops a concept, or model, of how they were formed. Thus, during mapping, this model enables the soil scientist to predict with a considerable degree of accuracy the kind of soil or miscellaneous area at a specific location on the landscape.

Commonly, individual soils on the landscape merge into one another as their characteristics gradually change. To construct an accurate soil map, however, soil scientists must determine the boundaries between the soils. They can observe only a limited number of soil profiles. Nevertheless, these observations, supplemented by an understanding of the soil-vegetation-landscape relationship, are sufficient to verify predictions of the kinds of soil in an area and to determine the boundaries.

Soil scientists recorded the characteristics of the soil profiles that they studied. They noted soil color, texture, size and shape of soil aggregates, kind and amount of rock fragments, distribution of plant roots, reaction, and other features that enable them to identify soils. After describing the soils in the survey area and determining their properties, the soil scientists assigned the soils to taxonomic classes (units). Taxonomic classes are concepts. Each taxonomic class has a set of soil characteristics with precisely defined limits. The classes are used as a basis for comparison to classify soils systematically. Soil taxonomy, the system of taxonomic classification used in the United States, is based mainly on the kind and character of soil properties and the arrangement of horizons within the profile. After the soil

Attachment: SP-1987-64A application 042023 (27196 : Sp-1987-64A)

scientists classified and named the soils in the survey area, they compared the individual soils with similar soils in the same taxonomic class in other areas so that they could confirm data and assemble additional data based on experience and research.

The objective of soil mapping is not to delineate pure map unit components; the objective is to separate the landscape into landforms or landform segments that have similar use and management requirements. Each map unit is defined by a unique combination of soil components and/or miscellaneous areas in predictable proportions. Some components may be highly contrasting to the other components of the map unit. The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The delineation of such landforms and landform segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, onsite investigation is needed to define and locate the soils and miscellaneous areas.

Soil scientists make many field observations in the process of producing a soil map. The frequency of observation is dependent upon several factors, including scale of mapping, intensity of mapping, design of map units, complexity of the landscape, and experience of the soil scientist. Observations are made to test and refine the soil-landscape model and predictions and to verify the classification of the soils at specific locations. Once the soil-landscape model is refined, a significantly smaller number of measurements of individual soil properties are made and recorded. These measurements may include field measurements, such as those for color, depth to bedrock, and texture, and laboratory measurements, such as those for content of sand, silt, clay, salt, and other components. Properties of each soil typically vary from one point to another across the landscape.

Observations for map unit components are aggregated to develop ranges of characteristics for the components. The aggregated values are presented. Direct measurements do not exist for every property presented for every map unit component. Values for some properties are estimated from combinations of other properties.

While a soil survey is in progress, samples of some of the soils in the area generally are collected for laboratory analyses and for engineering tests. Soil scientists interpret the data from these analyses and tests as well as the field-observed characteristics and the soil properties to determine the expected behavior of the soils under different uses. Interpretations for all of the soils are field tested through observation of the soils in different uses and under different levels of management. Some interpretations are modified to fit local conditions, and some new interpretations are developed to meet local needs. Data are assembled from other sources, such as research information, production records, and field experience of specialists. For example, data on crop yields under defined levels of management are assembled from farm records and from field or plot experiments on the same kinds of soil.

Predictions about soil behavior are based not only on soil properties but also on such variables as climate and biological activity. Soil conditions are predictable over long periods of time, but they are not predictable from year to year. For example, soil scientists can predict with a fairly high degree of accuracy that a given soil will have a high water table within certain depths in most years, but they cannot predict that a high water table will always be at a specific level in the soil on a specific date.

After soil scientists located and identified the significant natural bodies of soil in the survey area, they drew the boundaries of these bodies on aerial photographs and

Attachment: SP-1987-64A application 042023 (27196 : Sp-1987-64A)

identified each as a specific map unit. Aerial photographs show trees, buildings, fields, roads, and rivers, all of which help in locating boundaries accurately.

Soil Map

The soil map section includes the soil map for the defined area of interest, a list of soil map units on the map and extent of each map unit, and cartographic symbols displayed on the map. Also presented are various metadata about data used to produce the map, and a description of each soil map unit.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:15,800.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Erie County, New York
Survey Area Data: Version 22, Sep 10, 2022

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Jul 4, 2020—Jul 10, 2020

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

RaA	Raynham silt loam, 0 to 3 percent slopes	5.9	95.1%
Totals for Area of Interest		**6.2**	**100.0%**

Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or landform segments that have similar use and management requirements. The delineation of such segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, however,

Attachment: SP-1987-64A application 042023 (27196 : Sp-1987-64A)

onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

Erie County, New York

Lc—Lamson very fine sandy loam

Map Unit Setting

National map unit symbol: 9rmr
Elevation: 50 to 1,100 feet
Mean annual precipitation: 36 to 48 inches
Mean annual air temperature: 45 to 50 degrees F
Frost-free period: 115 to 195 days
Farmland classification: Not prime farmland

Map Unit Composition

Lamson and similar soils: 75 percent
Minor components: 25 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Lamson

Setting

Landform: Depressions
Landform position (two-dimensional): Toeslope
Landform position (three-dimensional): Tread
Down-slope shape: Concave
Across-slope shape: Concave
Parent material: Deltaic or glaciolacustrine deposits with a high content of fine and very fine sand

Typical profile

H1 - 0 to 9 inches: very fine sandy loam
H2 - 9 to 40 inches: fine sandy loam
H3 - 40 to 60 inches: loamy very fine sand

Properties and qualities

Slope: 0 to 3 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Very poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Moderately high to high (0.57 to 5.95 in/hr)
Depth to water table: About 0 to 6 inches
Frequency of flooding: None
Frequency of ponding: None
Calcium carbonate, maximum content: 15 percent
Available water supply, 0 to 60 inches: Moderate (about 7.0 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 5w
Hydrologic Soil Group: A/D
Ecological site: F101XY007NY - Wet Outwash
Hydric soil rating: Yes

Minor Components

RaA—Raynham silt loam, 0 to 3 percent slopes

Map Unit Setting

National map unit symbol: 9rpc
Elevation: 50 to 500 feet
Mean annual precipitation: 36 to 48 inches
Mean annual air temperature: 45 to 50 degrees F
Frost-free period: 115 to 195 days
Farmland classification: Prime farmland if drained

Map Unit Composition

Raynham and similar soils: 75 percent
Minor components: 25 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Raynham

Setting

Landform: Lake plains
Landform position (two-dimensional): Footslope
Landform position (three-dimensional): Tread
Down-slope shape: Concave
Across-slope shape: Linear
Parent material: Glaciolacustrine, eolian, or old alluvial deposits, comprised mainly of silt and very fine sand

Typical profile

H1 - 0 to 8 inches: silt loam
H2 - 8 to 26 inches: silt loam
H3 - 26 to 42 inches: silt loam
H4 - 42 to 60 inches: stratified fine sand to silt loam

Attachment: SP-1987-64A application 042023 (27196 : Sp-1987-64A)

Properties and qualities

Slope: 0 to 3 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Somewhat poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Moderately low to moderately high (0.06 to 0.20 in/hr)
Depth to water table: About 6 to 24 inches
Frequency of flooding: None
Frequency of ponding: None
Calcium carbonate, maximum content: 15 percent
Available water supply, 0 to 60 inches: Moderate (about 8.9 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 3w
Hydrologic Soil Group: C/D
Ecological site: F101XY010NY - Wet Lake Plain Depression

Soil Information for All Uses

Soil Properties and Qualities

The Soil Properties and Qualities section includes various soil properties and qualities displayed as thematic maps with a summary table for the soil map units in the selected area of interest. A single value or rating for each map unit is generated by aggregating the interpretive ratings of individual map unit components. This aggregation process is defined for each property or quality.

Soil Qualities and Features

Soil qualities are behavior and performance attributes that are not directly measured, but are inferred from observations of dynamic conditions and from soil properties. Example soil qualities include natural drainage, and frost action. Soil features are attributes that are not directly part of the soil. Example soil features include slope and depth to restrictive layer. These features can greatly impact the use and management of the soil.

Hydrologic Soil Group

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Attachment: SP-1987-64A application 042023 (27196 : Sp-1987-64A)

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

Amherst, New York 14228

Attn: Joe Manzella
President

Subject: **Proposed 10,000 SF Addition**
80 Creekside Drive, Amherst, New York
Geotechnical Engineering Services Proposal
GGEA 22-9160

Dear Mr. Manzella:

This letter constitutes a formal proposal by Glynn Group Engineering & Architecture, PLLC (GGEA) to provide geotechnical engineering services relative to the construction of a 10,000 square foot addition to the existing building located at 80 Creekside Drive in the Town of Amherst, New York. GGEA will provide services as follows:

- Perform a site visit to examine site topography and establish five (5) soil boring locations within the footprint of the proposed addition.
- Clear underground utilities with Dig Safe NY.
- Mobilize drilling subcontractor, Earth Dimensions Inc. (EDI), with a truck mounted drill rig and support crew.
- Provide SPT soil sampling at each boring location in accordance with ASTM D1586 "Standard Test Method for Penetration Test and Split-Barrel Sampling of Soils". Three borings will be advanced to auger refusal (estimated 40 feet on bedrock) and two borings will be advanced to a depth of 15 feet.
- Provide soil boring logs (prepared by EDI) to include SPT data, N values, soil classification, refusal depth and encountered groundwater conditions.
- Perform laboratory analysis on select recovered soil samples to establish design properties.
- Prepare a geotechnical report to include subsurface conditions and design parameters, allowable bearing capacity, groundwater data, seismic site class, slab on grade recommendations, foundation recommendations and construction recommendations.

GLYNN GROUP ENGINEERING & ARCHITECTURE, PLLC
415 South Transit Street, Lockport, New York 14094

GGEA Services	
Site Visit and Boring Layout	$ 450.00
Subcontractor Management (10 % of Subcontractor Fee)	$ 395.00
Laboratory Analysis	$ 750.00
Geotechnical Report	$ 1,650.00
Subcontracted Drilling Services	$ 3,950.00
Total Estimated Cost	**$ 7,195.00**

GGEA will proceed upon notification from the client and execution of the Authorization/Agreement. Please contact GGEA if you should have any comments or questions.

Sincerely,
G. Edward Lover, P.G.
Senior Geologist
/gel

CLARIFICATIONS:

1. Payment in full will be due in advance, prior to scheduling initial site visit and drilling.
2. The site is presumed clear and accessible by a truck mounted drill rig.
3. Caution will be exercised during drilling operations, however neither GGEA nor EDI are responsible for restorative landscaping.
4. GGEA's scope is specific to the services identified in this proposal. Any services not specifically identified are excluded.

AUTHORIZATION/AGREEMENT

By executing this document, undersigned agrees and acknowledges the provision of this proposal and the Standard Terms and Conditions for Field and Engineering Services.

Standard Terms & Conditions for Services

1. Scope – Services to be provided by Glynn Geotechnical Engineering (hereinafter "GGE") or Glynn Group Engineering & Architecture, PLLC (hereinafter "GGEA") are expressly limited to the scope as set forth in the written proposal and as recognized by generally accepted industry standards, subject to the terms and conditions of these standards.

2. Additional Services – Additional services include making revisions in drawings, specifications, engineering reports, calculations or other documents at the request of the client when such revisions are inconsistent with prior verbal or written instructions of the client or due to other causes not solely within the control of GGE or GGEA. If such revisions are required, the additional effort will be invoiced on the basis of GGE's or GGEA's then current fee schedule. Additional services also include, but are not limited to **1.)** resolution of construction related problems resulting from unauthorized changes and/or construction errors, **2.)** assistance with lawsuits or construction claims, **3.)** review of alternate designs or alternate material submittals **4.)** revisions resulting from changes and / or errors in information supplied by client or client's agent and 5.) postponing or interruption of the project schedule.

3. Confidentiality – Strict confidentiality is maintained in connection with our services to clients. In any instance where information is subpoenaed by law and must be released to a regulatory or legal body, the client shall be promptly notified. Client agrees it will not use GGE's or GGEA's name and/or data in any manner which might cause harm to GGE's or GGEA's reputation and/or business. Under no circumstance is the name of Glynn Geotechnical Engineering or Glynn Group Engineering and Architecture, PLLC to be published, either alone or in association with that of any other party, without prior written approval of GGE or GGEA.

4. Payment Terms – Payment in advance is required for all clients except those with established credit arrangements with GGE or GGEA. For clients with established credit, terms are net 30 days. A 1.5% per month service charge will be applied to all unpaid balances. In the event of default in payment for services rendered, the client will be invoiced and will pay reasonable interest, collection and/or legal fees. GGE or GGEA reserves the right to withhold project services in the event of a delinquent account. Client is hereby barred from making a breach of contract claim as a result of GGE or GGEA withholding services. Plans, specifications, reports and all other instruments of professional service remain the sole property of GGE or GGEA until such time as full payment is made.

5. Billing – All fees will be invoiced directly to the client, in the amount as calculated from hourly rates or the lump sum fee stated in the written proposal, plus any hourly billing for extra services and expenses. Unless specifically included, overnight courier costs and all travel expenses – airfare, lodging, parking fees, taxi, rental cars, meals while traveling, and subcontractor will be invoiced as an additional cost plus a 10% service fee. Mileage will be invoiced per mile for project travel, portal to portal. The billing of a third party will not be accepted without a statement, signed by the third party, which acknowledges and accepts payment responsibility and agreement with these terms and conditions.

6. Contractual Limit – Notwithstanding specific design/buil projects, GGE or GGEA will be responsible only to the client an shall not be signatory to the contract for construction between th contractor/construction manager and the owner.

7. Construction Responsibility – GGE or GGEA will not l responsible for construction means, methods, technique sequences or procedures of construction. GGE or GGEA will n direct any construction forces in the performance of work. GGE GGEA will not assume any responsibility for safety practices on th project site. Client shall provide safe working conditions for GG or GGEA employees. GGE or GGEA may refuse to perfor services where uncontrolled hazards exist. Party responsible f construction shall be knowledgeable and experienced with th required work effort. It is not the responsibility of GGE or GGE to teach or provide instructions related to construction mean methods, or procedures.

8. Site Access – The client must provide reasonable site access ar repairs to the site, if required. Performance of soil testing activiti will likely cause damage to existing surfaces. GGE or GGEA w not be responsible for the replacement or repair of landscaping the cleaning of paved surfaces.

9. Engineering Service – GGE or GGEA is an engineeri professional firm. Our instruments of professional service consi of test results, reports, studies, plans, specifications, designs ar other similar output. We do not provide consumer produc materials, or construction services. We are not a contractor subcontractor in the normal context of the word.

10. Disputes – Subject to the provisions regarding indemnificatic as provided below, in the event of a dispute, controversy or claim client, or anyone claiming by, through or under client, or thi party, arising out of or relating to the performance of proje related services to the client by GGE or GGEA, client sh compensate GGE or GGEA for all costs associated with resoluti of any dispute or controversy, or the defense of any clai Compensation will include but not be limited to all reasonal salary costs, overhead, profit, legal fees and disbursemen consultant fees, court fees, and interest. In the event that any for of dispute resolution occurs, the prevailing party shall be entitled recover all reasonable costs incurred in defense of the clai including, but not limited to, salary costs, overhead, profit, cou costs, attorney fees, expert fees, interest and other claim relat costs. If the results of any form of dispute resolution determi shared responsibility for a claim, the client will compensate GGE GGEA in accordance with their share of responsibility assessed them.

11. Permits – When identified in the proposal and/or scope services to be provided, GGE or GGEA will endeavor to ass client in obtaining permits and/or approval from buildi departments, regulatory agencies and similar authorities to the b of GGE's or GGEA's ability in consideration of the fee charged f the service and the satisfaction of published requirements. GGE GGEA does not guarantee that approvals will be obtained throu the efforts of GGE or GGEA.

Attachment: SP-1987-64A application 042023 (27196 : Sp-1987-64A)

Standard Terms & Conditions for Services

12. Sole Agreement – This document and the written proposal constitute the agreement of the parties, except as noted below. All prior negotiations and agreements between the parties hereto relating to the transactions, and services contemplated hereby are superseded by this agreement, and there are no representations, warranties, understandings or agreements with respect to such transactions, or services other than those expressly set forth herein. However, in the event GGE or GGEA subsequently executes a purchase order issued by client, GGE's or GGEA's terms and conditions shall remain in force and shall supersede any conflicting provisions of client's purchase order, regardless of when client's purchase order is executed by GGE or GGEA.

13. Limit of Liability – To the fullest extent permitted by law, GGE's or GGEA's liability is limited to the amount of GGE's or GGEA's compensation.

14. Intellectual Property – Drawings, specifications, procedures, methods, work plans and other documents, including those in electronic form, prepared by GGE or GGEA and GGE's or GGEA's consultants are instruments of service for use solely with respect to a specific project. GGE or GGEA and GGE's or GGEA's consultants shall be deemed the authors and owners of their respective instruments of service and shall retain all common law, statutory and other reserved rights, including copyrights. Upon execution of an agreement, GGE or GGEA grants to the client a nonexclusive license to reproduce GGE's or GGEA's instruments of service in pdf format only, solely for the purposes of constructing, using and maintaining, expanding, correcting any construction deficiencies, or making any renovations, modifications or repairs to the specific project. Client shall engage a licensed professional to prepare design documents for renovations, modifications or repairs to the specific project. Documents may only be utilized for a specific singular project. Use on subsequent projects is not permitted unless GGE or GGEA is compensated for the service. Client shall assume all risk associated with use and interpretation of electronic documents. Nothing in this agreement obligates GGE or GGEA to provide full digital instruments of service.

15. Indemnification – GGE or GGEA shall indemnify and hold harmless client from and against all claims, cause of actions, liabilities, damages, judgments and any other costs, including reasonable attorney's fees and court costs, attributed to property damage and/or bodily injury, including death, arising out of or resulting from the negligent acts or omissions by GGE or GGEA. However, in the event liability is shared by GGE or GGEA and the client, the client and GGE or GGEA shall contribute in the amount of their proportionate share for all actions, claims, liability, damages, expenses or judgments. In consideration of the foregoing indemnification by GGE or GGEA, client shall indemnify and hold harmless GGE or GGEA from and against all claims, cause of actions, losses, liabilities, damages, judgments and any other costs, including reasonable attorney's fees and court costs, attributed to property damage and/or bodily injury, including death, arising out of or resulting from the negligent acts or omissions of or intentional misconduct by client.

16. Engineer's Responsibility – GGE or GGEA shall perform the scope of services in accordance with professional engineering ethics, published codes and regulations, generally accepted standards of scope and care in the industry relative to the fee charged, the location of the project and the time frame of the service. As required by law or public mandate; submittals, reports and design documents shall bear the seal of a licensed professional engineer.

17. Client's Responsibility – Client shall furnish to GGE or GGEA all available information relative to the project. Electronic drawing files shall be provided in full digital AutoCAD format. All project information required by GGE or GGEA shall be provided at the client's expense and GGE or GGEA shall be entitled to rely on the accuracy and completeness thereof. Client shall pay all fees associated with filing all applications. Client shall provide input to GGE or GGEA on a timely basis, including but not limited to review of the project deliverables. In the event the client becomes aware of any fault or defect in the project, or non-conformance with the documents, prompt written notice shall be given to GGE or GGEA. Client shall review and acknowledge all reports, design documents, and other deliverables; plus assure that the scope and responsibilities of construction are recognized and accepted by Client's Construction Manager, Contractor, Subcontractor, and other project entities. GGE or GGEA will not be responsible for construction and/or design errors, omissions, or faults of any kind resulting from the actions or inactions of others. Client shall designate a single project contact person.

18. Termination – Either party, upon not less than seven days written notice, may terminate the agreement and/or the accepted written proposal. The client is liable for the complete payment of the fee for GGE's or GGEA's services, expenses and termination expenses up to the date the termination or suspension notice is received. Termination and/or suspension expenses including, but not limited to reasonable legal fees are in addition to compensation for basic and additional services, and include those expenses directly related to termination and/or suspension. Failure of the client to make payment to GGE or GGEA, in accordance with this agreement shall be considered non-performance and cause for termination by GGE or GGEA. If the Client fails to pay GGE or GGEA for services and expenses, GGE or GGEA may upon 7 days notice to the client, suspend performance of services. In the event of a suspension of services, GGE or GGEA shall have no liability to the client for delays or damages including, but not limited to loss of use and profits caused by the suspension of services. Client is hereby barred from making a breach of contract claim as a result of GGE or GGEA terminating an agreement under this clause.

19. Severability – If any of the terms or conditions are found, by competent jurisdiction, to be unenforceable, invalid, or illegal, the remaining terms and conditions shall remain in force.

UTILITIES

The underground utilities shown have been located from field survey information & existing drawings. The surveyor makes no guarantee that the underground utilities shown comprise all such utilities in the area, either in service or abandoned. The surveyor further does not warrant that the underground utilities shown are in the exact location indicated although he does certify that they are located as accurately as possible from the information available. This surveyor has not physically located the underground utilities.

Note: Underground Utility Information has been ordered from the respective utility companies. As the information is received, this map will be amended to reflect said information.

All Rights Reserved. Reuse of these documents without the expressed written permission of CARMINAWOOD DESIGN is prohibited. WARNING it is a violation of article 145 section 7209 of the NYS Education Law for any person, unless acting under the direction of a licensed professional engineer or licensed architect, to alter any item on this drawing. If altered the alterer shall affix his or her seal, signature, the date,the notation 'Altered By' and a specific description of the alteration.

CONSTRUCTION SPECIFICATIONS

1. STONE SIZE - USE 2" STONE, OR RECLAIMED OR RECYCLED CONCRETE EQUIVALENT.
2. LENGTH - NOT LESS THAN 50 FEET (EXCEPT ON A SINGLE RESIDENCE LOT WHERE A 30 FOOT MINIMUM LENGTH WOULD APPLY).
3. THICKNESS - NOT LESS THAN SIX (6) INCHES.
4. WIDTH - TWELVE (12) FOOT MINIMUM, BUT NOT LESS THAN THE FULL WIDTH AT POINTS WHERE INGRESS OR EGRESS OCCURS. TWENTY-FOUR (24) FOOT IF SINGLE ENTRANCE TO SITE.
5. FILTER CLOTH - WILL BE PLACED OVER THE ENTIRE AREA PRIOR TO PLACING OF STONE.
6. SURFACE WATER - ALL SURFACE WATER FLOWING OR DIVERTED TOWARD CONSTRUCTION ENTRANCES SHALL BE PIPED ACROSS THE ENTRANCE. IF PIPING IS IMPRACTICAL, A MOUNTABLE BERM WITH 5:1 SLOPES WILL BE PERMITTED.
7. MAINTENANCE - THE ENTRANCE SHALL BE MAINTAINED IN A CONDITION WHICH WILL PREVENT TRACKING OR FLOWING OF SEDIMENT ONTO PUBLIC RIGHTS-OF-WAY, ALL SEDIMENT SPILLED, DROPPED, WASHED OR TRACTED ONTO PUBLIC RIGHTS-OF-WAY MUST BE REMOVED IMMEDIATELY.
8. WHEN WASHING IS REQUIRED, IT SHALL BE DONE ON A AREA STABILIZED WITH STONE AND WHICH DRAINS INTO AN APPROVED SEDIMENT TRAPPING DEVICE.
9. PERIODIC INSPECTION AND NEEDED MAINTENANCE SHALL BE PROVIDED AFTER EACH RAIN.

STABILIZED CONSTRUCTION ENTRANCE DETAIL

NOT TO SCALE

SEQUENCE OF MAJOR ACTIVITIES

THE CONTRACTOR WILL BE RESPONSIBLE FOR IMPLEMENTING THE FOLLOWING EROSION CONTROL AND STORM WATER MANAGEMENT CONTROL MEASURES. THE CONTRACTOR MAY DESIGNATE THESE TASKS TO CERTAIN SUBCONTRACTORS AS HE SEES FIT, BUT THE ULTIMATE RESPONSIBILITY FOR IMPLEMENTING THESE CONTROLS AND ENSURING THEIR PROPER FUNCTIONING REMAINS WITH THE CONTRACTOR. THE ORDER OF ACTIVITIES WILL BE AS FOLLOWS:

A. INSTALL STABILIZED CONSTRUCTION ENTRANCE

B. INSTALL PERIMETER SILT FENCES/SILT SOCK IN THE LOCATIONS SHOWN ON THE DEMOLITION AND EROSION CONTROL PLAN SHEET.

C. CLEAR & GRUB SITE.

D. INSTALLATION OF UNDERGROUND DETENTION BASIN.

E. COMMENCE SITE GRADING.

F. DISTURBED AREAS OF THE SITE WHERE CONSTRUCTION ACTIVITY HAS CEASED FOR MORE THAN 14 DAYS SHALL BE TEMPORARILY SEEDED AND WATERED.

G. CONSTRUCTION OF BUILDINGS.

H. INSTALLATION OF PROPOSED UTILITIES.

I. FINALIZE PAVEMENT SUBGRADE PREPARATION.

J. CONSTRUCT ALL CURB, DRAINAGE INLETS, STORM SEWER PIPES AND STORM SEWER MANHOLES, AS SHOWN ON PLANS. INSTALL TEMPORARY INLET PROTECTION AT THE LOCATION OF ALL INLETS.

K. DUCT CONTROL.

L. REMOVE INLET PROTECTION AROUND INLETS AND MANHOLES NO MORE THAN 48 HOURS PRIOR TO PLACING STABILIZED BASE COURSE.

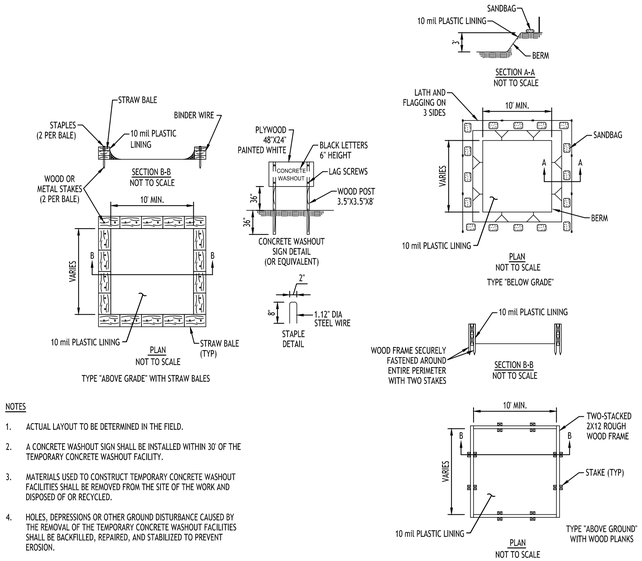
M. INSTALL BASE MATERIAL AS REQUIRED FOR PAVEMENT.

N. CARRY OUT FINAL GRADING AND SEEDING AND PLANTINGS.

O. CLEAN STORM SYSTEM FOLLOWING CONSTRUCTION, CLEAN UNDERGROUND DETENTION BASIN AS PER MANUFACTURER RECOMMENDATIONS.

P. REMOVE SILT FENCE/SILT SOCK ONLY AFTER ALL PAVING IS COMPLETE AND EXPOSED SURFACES ARE STABILIZED.

Q. REMOVE TEMPORARY CONSTRUCTION EXITS ONLY PRIOR TO PAVEMENT CONSTRUCTION IN THESE AREAS.



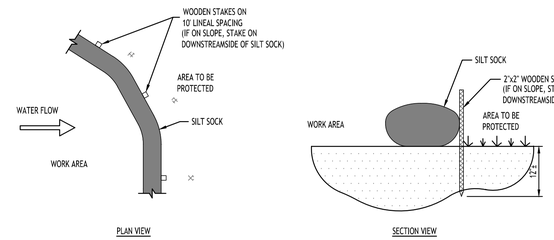
STABILIZATION NOTES

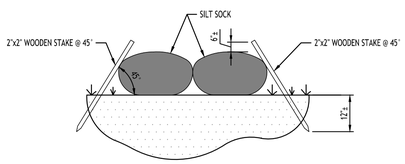
1. ANY SEEDING METHOD MAY BE USED THAT WILL PROVIDE UNIFORM APPLICATION OF SEED TO THE AREA AND RESULT IN RELATIVELY GOOD SOIL TO SEED CONTACT.
   - 1.1. NYSDEC RECOMMENDS IF WORKING IN SPRING/SUMMER/EARLY FALL, SEED THE REQUIRED AREA WITH RYEGRASS (ANNUAL OR PERENNIAL) AT 30 LBS. PER ACRE (APPROX. 0.7 LB./1,000 SF).
   - 1.2. NYSDEC RECOMMENDS IF WORKING IN LATE FALL/EARLY WINTER, SEED THE REQUIRED AREA WITH 'AROOSTOOK' WINTER RYE (CEREAL RYE) AT 100 LBS. PER ACRE (APPROX. 2.5 LB./1,000 SF).
2. NYSDEC RECOMMENDS TO MULCH THE REQUIRED AREA WITH HAY OR STRAW 2 TONS/ACRE (APPROX. 90 LB./1000 SF). QUALITY OF HAY OR STRAW MULCH ALLOWABLE WILL BE DETERMINED BASED ON LONG TERM USE AND VISUAL CONCERNS. MULCH ANCHORING WILL BE REQUIRED WHERE WIND OR AREAS OF CONCENTRATED WATER ARE OF CONCERN. WOOD FIBER HYDROMULCH OR OTHER SPRAYABLE PRODUCTS APPROVED FOR EROSION CONTROL (NYLON WEB OR MESH) MAY BE USED IF APPLIED ACCORDING TO MANUFACTURED SPECIFICATION.

CREEKSIDE (80' WIDE) DRIVE

Demolition & Erosion Control Plan

SCALE: 1"=30'





NOTES

1. ACTUAL LAYOUT TO BE DETERMINED IN THE FIELD.
2. A CONCRETE WASHOUT SIGN SHALL BE INSTALLED WITHIN 30' OF THE TEMPORARY CONCRETE WASHOUT FACILITY.
3. MATERIALS USED TO CONSTRUCT TEMPORARY CONCRETE WASHOUT FACILITIES SHALL BE REMOVED FROM THE SITE OF THE WORK AND DISPOSED OF OR RECYCLED.
4. HOLES, DEPRESSIONS OR OTHER GROUND DISTURBANCE CAUSED BY THE REMOVAL OF THE TEMPORARY CONCRETE WASHOUT FACILITIES SHALL BE BACKFILLED, REPAIRED, AND STABILIZED TO PREVENT EROSION.

CONCRETE WASHOUT DETAIL

NOT TO SCALE

NOTES:

CONTRACTOR SHALL INSPECT AND MAINTAIN SILT SOCK AS NEEDED DURING THE DURATION OF CONSTRUCTION PROJECT.

CONTRACTOR SHALL REMOVE SEDIMENT COLLECTED AT THE BASE OF THE SILT SOCK WHEN IT HAS REACHED ½ OF THE EXPOSED HEIGHT OF THE SILT SOCK. ALTERNATIVELY, RATHER THAN CREATE A SOIL DISTURBING ACTIVITY, THE ENGINEER MAY CALL FOR ADDITIONAL SILT SOCK TO BE ADDED AT AREAS OF HIGH SEDIMENTATION, PLACED IMMEDIATELY ON TOP OF THE EXISTING SEDIMENT LADEN SILT SOCK.

SILT SOCK SHALL BE OVERLAPPED 12" AT JOINTS AND STAKED ON EACH SIDE OF THE SOCK AT A 45° ANGLE

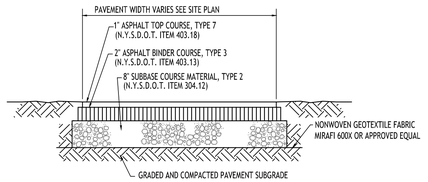
Site Data

SITE AREA = 2.2 AC
ZONED: RD
BUILDING: 10,525 G.S.F. WAREHOUSE ADDITION
EXISTING: 300 SF OFFICE + 10,186 SF WAREHOUSE

	REQUIRED	PROVIDED
SETBACKS - BUILDING		
FRONT	20 FT	N/A
SIDE (AUBTTING R/ABUTTING COMM.)	30 FT / 15 FT	15' MIN.
REAR (ABUTTING R/ABUTTING COMM.)	30 FT / 15 FT	177.25' MIN.
SETBACKS - PARKING		
FRONT	25 FT	N/A
SIDE (AUBTTING R/ABUTTING COMM.)	25 FT / 10 FT	10' MIN.
REAR (AUBTTING R/ABUTTING COMM.)	25 FT / 10 FT	N/A
PARKING		
# OF SPACES - SEE CALCULATION BELOW	23	24
PARKING SPACE SIZE	9' x 19'	9' x 19'
MAX. BUILDING HEIGHT	65 FT	30 FT
LANDSCAPING		
INTERIOR PARKING AREA (5%)	0.04 AC	> 0.04 AC

PARKING CALCULATION:

WAREHOUSE:
REQ'D = 1 SPACE PER 1,000 G.S.F or 1 SPACE PER EMPLOYEE WHICHEVER IS GREATER
10 EMPLOYEE x 1 SPACE/EMPLOYEE = 21 SPACES REQ'D

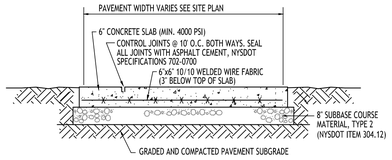


OFFICE:
REQ'D = 1 SPACE PER 200 N.S.F
N.S.F. = 90% OF G.S.F. = 300 G.S.F. x 0.9 = 270 N.S.F
(270) N.S.F./200 = 2 SPACES REQ'D

GENERAL NOTS:

1. INSTALL ALL MATERIALS TO MANUFACTURER'S RECOMMENDATIONS AND BEST STANDARDS OF TRADE INVOLVED.
2. SUBSTITUTIONS SHALL BE MADE ONLY WITH OWNER'S APPROVAL AND BE OF EQUIVALENT QUALITY TO WHAT IS SPECIFIED.
3. WORK SHALL BE COMPLETED IN STRICT ACCORDANCE WITH ALL LOCAL CODES AND OSHA SAFETY RULES AND REGULATIONS.
4. VERIFY ALL EXISTING CONDITIONS AND DIMENSIONS AT THE SITE. NOTIFY OWNER & ENGINEER OF DISCREPANCIES IN CONDITIONS SHOWN ON DRAWINGS PRIOR TO PROCEEDING WITH THE WORK.
5. CONTRACTOR SHALL BE RESPONSIBLE FOR PROTECTION OF ANY EXISTING STRUCTURES TO REMAIN AND ANY FINISH MATERIAL INSTALLED WHILE WORKING ON OTHER COMPONENTS.
6. CONTRACTOR SHALL KEEP JOB FREE OF DEBRIS AND MAKE FINAL CLEANUP TO SATISFACTION OF OWNER.
7. CONTRACTOR SHALL ASCERTAIN THE LOCATION OF ALL UTILITIES PRIOR TO CONSTRUCTION SO THAT THIS WORK WILL NOT DISTURB EXISTING LINES AND/OR INSTALLATIONS. COORDINATE ALL WORK WITH THE APPLICABLE UTILITY COMPANIES.
8. ALL OTHER PERMITS REQUIRED BY STATE OF NEW YORK, COUNTY OF ERIE, AND TOWN OF AMHERST ARE THE RESPONSIBILITY OF THE CONTRACTOR/DEVELOPER/OWNER.

SITE NOTES:



1. ALL RADII SHALL BE 3'-0" UNLESS OTHERWISE NOTED.
2. ALL DISTURBED AREAS SHALL HAVE 4" MIN. OF TOPSOIL AND SEED. FOR DISTURBED AREAS WITHIN NYSDOT R.O.W. DISTURBED AREAS SHALL BE RESTORED USING ITEM 610.1402 - TOPSOIL ROADSIDE AND ITEM 610.1602 - TURF ESTABLISHMENT.
3. ALL DIMENSIONS FROM PROPERTY LINES SHALL BE MEASURED PERPENDICULAR TO THE PROPERTY LINE.
4. CENTER ENTRANCE SIDEWALKS ON DOOR OPENINGS.
5. BUILDING DIMENSIONS ARE APPROXIMATE, REFER TO ARCHITECTURAL DRAWINGS FOR LAYOUT DIMENSIONS.
6. KNOX KEY BOX TO BE INSTALLED TO ALLOW FIRE DEPARTMENT ACCESS TO BUILDING KEYS, LOCATION TO BE COORDINATED WITH OWNER AND TOWN.
7. ALL EDGES OF PAVEMENT SHALL BE CURVED.
8. ALL SIDEWALKS ARE 5' WIDE UNLESS OTHERWISE NOTED.

NOTE: CONSTRUCTION METHODS FOR ASPHALT PAVEMENT SHALL CONFORM TO NYSDOT STANDARD SPECIFICATION 401-3, WITH SUBBASE CONSTRUCTION METHODS CONFORMING TO NYSDOT STANDARD SPECIFICATION 304-3.

UTILITY NOTES:

1. CONTRACTOR TO FIELD VERIFY ALL STORM AND SANITARY LOCATIONS/INVERTS PRIOR TO CONSTRUCTION.
2. PROVIDE FITTINGS AND BLOCKING AS NECESSARY AT ALL BENDS IN WATER LINES.
3. ANY EXISTING UTILITIES WHICH ARE TO BE ABANDONED AND FALL UNDER PAVEMENT OR BUILDINGS SHALL BE REMOVED VS. BEING ABANDONED UNLESS THOSE UTILITIES ARE FILLED WITH FLOWABLE FILL.
4. EXISTING WATER, GAS AND SANITARY LINES SHOWN ARE APPROXIMATE. CONTRACTOR TO FIELD VERIFY LOCATION/SIZE/CONDITION BEFORE CONSTRUCTION.
5. A MINIMUM OF 10 FEET HORIZONTAL AND 18 INCHES OF VERTICAL SEPARATION MUST BE MAINTAINED BETWEEN ALL SANITARY SEWER AND WATER SERVICES.
6. THE ERIE COUNTY WATER AUTHORITY (ECWA) IS TO BE NOTIFIED A MINIMUM OF 48-HOURS PRIOR TO STARTING THE CONNECTION FOR THE NEW WATER SERVICE.
7. SELECT BACKFILL IS REQUIRED FOR ALL UTILITIES (GAS, WATER, STORM, SANITARY) THAT CROSS THROUGH PAVEMENT AREAS.
8. ALL SANITARY SEWER CONSTRUCTION SHALL ADHERE TO ERIE COUNTY SEWER SPECIFICATIONS AND DETAILS, AND ERIE COUNTY DEPARTMENT OF HEALTH RULES AND REGULATIONS.
9. ALL OTHER REQUIRED PERMITS BY THE STATE OF NEW YORK, ERIE COUNTY, OR TOWN OF AMHERST ARE THE RESPONSIBILITY OF THE CONTRACTOR.

SEQR
Negative Declaration

NOTICE OF DETERMINATION OF NON-SIGNIFICANCE

Lead Agency:	Town of Amherst Planning Board	**Project:**	SP-1987-64_A
Address:	5583 Main Street Williamsville, NY 14221 (716) 631-7051	**Date:**	April 20, 2023

This notice is issued pursuant to Part 617 and Local Law #3-82, as amended, of the implementing regulations pertaining to Article 8 (State Environmental Quality Review) of the Environmental Conservation Law.

The Lead Agency has determined that the proposed action described below will not have a significant adverse effect on the environment.

Title of Action: Site Plan Review

SEQR Status: Unlisted Action

Description of Action: This project consists of a 10,525 square foot building addition on the north side of an existing warehousing building. The addition is 1-story (16.5 feet tall) and is constructed of steel siding and a metal roof. Other site work includes the addition of 8 parking stalls adjacent to the building addition and a dumpster enclosure. A new stormwater detention pond is also included in the site work to offset the additional pavement required in order to facilitate the building addition. Work will include the site improvements not specifically stated above, including, stormwater, utilities, grading, lighting, paving, and landscaping.

Location: 80 Creekside Drive, Amherst, Erie County

'23 APR 26 PM12:51

Petitioner: 80 Creekside Drive, LLC

Attachment: SP-1987-64_A_signed_neg_dec_042023 (27196 : Sp-1987-64A)

Reasons Supporting This Determination

Based on information submitted by the applicant including a Full Environmental Assessment Form (EAF) - Part I, (as amended) and a complete site plan application, a preliminary staff analysis was undertaken. Compared to the criteria listed in Section 617.7, all indications are that this action will not have a significant impact on the environment, as follows:

1. The project is not expected to cause a substantial adverse change in existing air quality, ground or surface water quality or quantity, or noise levels; a substantial increase in solid waste production; or a substantial increase in the potential for erosion, flooding, leaching or drainage problems. The Engineering Department on April 6, 2023 reviewed the Grading, Drainage and Utility Plans submitted on March 30, 2023, Engineer's Report submitted on March 30, 2023, and Erosion Control Plan submitted on March 30, 2023. Based on its review of these documents, the Department has determined that the project has or will have met all applicable requirements and has no objection to its approval. A letter from Mark Dean, AIA project architect, submitted April 20, 2023 states that no significant impacts to the soils are expected to occur based on the scope of the project. A Geotechnical report prepared by Vanderhorst Geotechnical Engineering, P.C. dated August 22, 1997 for a property located at 2865 Niagara Falls Boulevard (within 350 feet of the subject site) was reviewed by the Town of Amherst Building Department as part of the site plan review process for that site. A full Geotechnical Report will be provided by the applicant prior to the issuance of any building permits for the proposed 10,525 square foot building addition. Based on the presence of previously reviewed Geotechnical Report for a neighboring site as well as a letter from the project architect, a significant impact to the soils for the proposed project is not anticipated.

2. The project will not result in the removal or destruction of large quantities of vegetation or fauna; or in significant adverse impacts to fish or wildlife species, habitats or other natural resources. The Planning Department reviewed a Landscape Plan submitted on March 30, 2023 and determined that it meets or exceeds Zoning Ordinance requirements for greenspace. The Landscape Plan has or will have met all Zoning Ordinance and Town requirements for landscaping.

3. The project is not expected to create any substantive conflict with the Town Comprehensive Plan. The Planning Department in their review of March 31, 2023, the Zoning Enforcement Officer in his/her review of March 31, 2023 have reviewed the application documents and Building Department in their review of April 5, 2023 has reviewed the application documents and determined that the subject project has or will have met all International Building Code – 2018 and Zoning Ordinance regulations.

4. The project is within an area identified by the State as having potential archaeological or historical significance. However, the site has been previously disturbed, therefore, the project will not impair the character or quality of important historical resources.

5. The project will not impair the character or quality of important aesthetic resources or of existing community or neighborhood character. The project is located in the Research & Development (RD) zoning district; neighboring uses are single-family residential to the north zoned Residential District 3 (R-3), multifamily residential to the south zoned Multi-Family Residential District 5 (MFR-5), vacant land to the east zoned RD and a warehousing/self-storage facility to the west zoned RD; therefore, the project is consistent with surrounding land use.

Attachment: SP-1987-64_A_signed_neg_dec_042023 (27196 : Sp-1987-64A)

6. The proposed subject development will include a 10,525 square foot building addition on the north side of an existing warehousing building which will not cause a major change in the use of either the quantity or type of energy.

7. The project will not create any hazard to human health. The Fire Chief's Association on March 31, 2023, has reviewed the project and has no objection to the approval of the site plan, as all requirements of this agency have or will have been met.

8. The project will not cause a substantial change in the use, or intensity of use, of land including agricultural, open space or recreational resources, or in its capacity to support existing uses. A 10,525 square foot building addition on the north side of an existing warehousing building will be consistent with the scale of surrounding land uses.

9. The function of the proposed 10,525 square foot building addition on the north side of an existing warehousing building will not significantly increase the number of people using the site over its previous level of use.

10. Review by the Town Traffic/Safety Board dated March 2, 2023, indicates that significant negative traffic impacts are not expected to result from the proposed project.

11. A coordinated review of the project has been undertaken by Town Departments, in addition to those mentioned above, Plumbing Division on March 1, 2023, and Right-of-Way Agent on March 13, 2023. These reviews have not identified any significant environmental issues and indicate that the proposal will not have a significant damaging impact on the environment.

12. Issues not specifically mentioned above and/or those not specifically reviewed were not raised by Town departments, outside agencies or the public and are not determined to cause significant negative environmental impacts.

Planning Board Approval April 20, 2023
Moved by: Giuliani; Seconded by: Gill; Ayes 7; Noes 0.

TOWN OF AMHERST
PLANNING BOARD
SITE PLAN RESOLUTION
SP-1987-64_A

PETITIONER

80 Creekside Drive, LLC
c/o Chris Wood
Carmina Wood Design
487 Main Street
Buffalo, NY 14023

PROPERTY LOCATION

80 Creekside Drive

WHEREAS, the Town of Amherst Planning Board on Thursday, April 20, 2023 held a public hearing on a Site Plan for a 10,525 square foot building addition on the north side of an existing warehousing building, and

WHEREAS, the Planning Board reviewed the plans and specifications for the proposed project, and

WHEREAS, the Site Plan was referred to the Town's various review agencies, and

WHEREAS, in accordance with Section 8-7-9 of the Zoning Ordinance, the Planning Board finds that:

A. The proposed site plan is consistent with the development plan if one is required.

B. The proposed site plan is consistent with the purpose and specific requirements of the Zoning Ordinance and generally consistent with the policies of the Comprehensive Plan.

C. Adequate services and utilities will be available prior to occupancy.

D. The site plan is consistent with all other applicable laws.

E. Pursuant to Local Law #3-82, as amended, the Planning Board has determined that the requirements of SEQR are complete and that the subject proposal is not expected to have a significant adverse effect on the environment.

F. Review by the US Army Corps of Engineers under Section 404 of the Clean Water Act may be waived because the parcel is developed.

NOW THEREFORE BE IT RESOLVED that in accordance with 6 NYCRR, Part 617 and Local Law #3-82, as amended, the Planning Board has issued a Negative Declaration attached hereto, and

NOW THEREFORE BE IT FURTHER RESOLOVED that the Planning Board, in accordance with Part II, Chapter 83, Part IX, Section 1-2 of Town Law waives sidewalks required along the Creekside Drive frontage of the parcel until required at some future time by the Town Board, and

TOWN OF AMHERST
PLANNING BOARD
SITE PLAN RESOLUTION
SP-1987-64_A

PETITIONER	PROPERTY LOCATION
80 Creekside Drive, LLC	80 Creekside Drive

NOW THEREFORE BE IT FURTHER RESOLVED that the Planning Board, in accordance with Section 8-7 of the Zoning Ordinance approves said Site Plan subject to the following conditions:

1. That the petitioner provide a Geotechnical Report for review and approval by the Building Department, prior to the issuance of any building permits.

2. That the petitioner provide a revised Engineer's Report to indicate if any additional water/sanitary use is planned within the building addition. If additional water/sanitary use is anticipated, the additional use must be quantified as average and peak flows as per the current NYSDEC design standards.

3. That the petitioner satisfy the requirements of the Fire Chief's Association outlined in their letter dated March 31, 2023, to the satisfaction of the Association.

4. That the petitioner satisfy the requirements of the Zoning Enforcement Officer outlined in the officers letter dated March 31, 2023 to the satisfaction of that officer.

5. That the petitioner satisfy the requirements of the Planning Department outlined in their letter dated March 31, 2023 to the satisfaction of that department.

6. That the petitioner satisfy the requirements of the Building Department outlined in their letter dated April 5, 2023 to the satisfaction of that department.

7. That sidewalks be installed along the Creekside Drive frontage at a time when the adjacent parcel to the east at 140 Creekside Drive is developed and sidewalks are required.

8. That the consideration of signs is specifically excluded from this approval as they require a separate review and approval by the Town.

9. That all dumpsters/trash containers and all mechanical equipment, utility structures, multiple meter boards, generators, and similar appurtenances, including those which are mounted on any part of a primary structure shall be appropriately screened with a fence, wall, and/or landscaping. Provide gate on dumpster enclosure that shall be closed whenever dumpster is not being serviced, enclosure shall be high enough to screen the dumpster(s) within.

10. That as-built record drawings, including location of utilities, be provided to the Engineering Department prior to issuance of a Certificate of Occupancy by the Building Department.

6. **Representative** (Architect, Engineer, Landscape Architect, Surveyor or Attorney):

Name: Sean W. Hopkins, Esq., Hopkins Sorgi & McCarthy PLLC

Address: 5500 Main Street, Suite 343
Williamsville, New York 14221
City State Zip Code

Attachment: Z-2023-01 application 042023 (27184 : Z-2023-01)

7. Petitioner's interest in property

_____Option to purchase

__X__Owner

_____Other (explain) _____

8. The following are all others having an interest in this application and join herein with the petitioner named above: (describe extent of interest; attach sheets as needed)

Not Applicable.

9. Attach Survey and Legal description of land to be rezoned. The Survey must be prepared by a New York State Licensed Land Surveyor. Legal description of property to be rezoned from OB to MFR-5 attached as Exhibit "1" and a copy of the survey prepared by GPI Engineering & Surveying is provided at Exhibit "2" Full-size copy of the survey is also attached to this Application.

10. Said property has the following deed restrictions or Covenants: (attach copy)

Liber 11341 Page 2501

Copy of Declaration of Restrictions as recorded on February 21, 2019 attached as Exhibit "3".

11. Information on proposed project:

A. Description of the character of the proposed development:

See Exhibit "4". A reduced-size copy the Site Plan prepared by Carmina Wood Design is provided at Exhibit "6" and a full-size copy is also attached to this Application.

B. Rationale for rezoning request:

1. Why was this site chosen?

See Exhibit "4"

Attachment: Z-2023-01 application 042023 (27184 : Z-2023-01)

2. Why cannot land be used with the existing zoning?

See Exhibit "4".

3. How will this rezoning impact surrounding properties?

See Exhibit "4".

4. How will this rezoning impact the school system?

See Exhibit "4".

12. Quantitative Data:

A. Total # of dwelling units: 48 Attached Residential Units

B. Distribution of dwelling units by type: Attached Townhomes

C. Gross Residential Density per acre: 4.04 units per acre

D. Total amount of Open Space: Approximately 5.2 acres

E. Proposed Non-Residential Floor Area: Not Applicable

13. Development Schedule:

Start: Project under construction.

Finish: To be based on demand for the attached residential units.

Stages (# of): Based on market demand

14. If any portion of the proposed development is planned to be sold or leased, please describe:

The upscale residential units are for sale.

Attachment: Z-2023-01 application 042023 (27184 : Z-2023-01)

15. Open Space ownership and maintenance provisions (if applicable):

Greenspace and landscaping will be privately owned and maintained.

16. Basis for Findings (Sec. 8-3-5 of the Town Zoning Code) (Attach sheets and supplemental materials as necessary.)

A. The proposed zoning and development plan must be generally consistent with the policies of the Comprehensive Plan and the Town Zoning Ordinance.

1. State in detail why the proposed zoning is consistent with the adopted Town of Amherst Bicentennial Comprehensive Plan. Cite specific sections, maps, and/or figures in the plan that support the proposed zoning at this location (The Comprehensive Plan document is available at the Planning Department, Town Clerk's Office, Amherst libraries, or at www.amherst.ny.us). Add sheets as needed.

See Exhibit "7".

2. Pursuant to NYS Town Law Section 272a(11), "all Town land use regulations must be in accordance with a comprehensive plan adopted pursuant to this Section." The Town Board adopted the Comprehensive Plan pursuant to NYS Town Law 272 on January 2, 2007. If the rezoning is approved, the Town Board may require the Plan to be amended, as applicable.

Cite all text, map, and / or figures that must be amended to support the proposed zoning at this location (attach pages as necessary) and provide detailed suggested amendments.

See Exhibit "7".

Attachment: Z-2023-01 application 042023 (27184 : Z-2023-01)

3. State why the proposed zoning is consistent with intent and objectives (Sec. 1-2-2) of the Zoning Ordinance:

See Exhibit "7".

B. Adequate Services and Utilities are available or are proposed to be made available with the construction of the development:

1. Sanitary Sewer
   Yes.
2. Storm Sewer/Drainage
   Yes.
3. Water
   Yes.
4. Other Yes.

C. Compatibility with the present zoning and conforming uses of nearby property and with the character of the neighborhood:

See Exhibit "7".

D. Suitability of the subject property for uses permitted by the current versus the proposed district:

See Exhibit "7".

Attachment: Z-2023-01 application 042023 (27184 : Z-2023-01)

E. Whether the proposed change tends to improve the balance of uses, or meets a specific demand in the Town:

See Exhibit "7".

17. The petitioner encloses herewith the sum of $ 1,265.00 to pay the fee, and consents to the placement of a sign(s) at the described location identifying this request for a period of time to be determined by the Town Clerk.

18. The undersigned certifies that all information required to be disclosed pursuant to Section 809 of the General Municipal Law (see below) is as follows:

The undersigned swears or affirms that all statements made herein are true, that all drawings submitted correctly show the situation involved in this petition.

[Authorization of Owner of the Project Site is attached.]

N.Y.S. General Municipal Law - Section 809 Disclosure in certain applications:

1. Every application, petition or request submitted for a variance, amendment, change of zoning, approval of a plat, exemption from a plat or official map, license or permit, pursuant to the provision of any ordinance, local law, rule or regulation constituting the zoning and planning regulations of a municipality shall state the name, residence and the nature and extent of the interest of any state office or any office or employee of such municipality or of a municipality of which such municipality is a part, in the person, partnership or association making such application, petition or request (hereinafter called the applicant) to the extent known to such applicant.

Attachment: Z-2023-01 application 042023 (27184 : Z-2023-01)

2. For the purpose of this section an officer or employee shall be deemed to have an interest in the applicant when he, his spouse, or their brothers, sisters, parents, children, grandchildren, or the spouse of any of them

   (a) is the applicant, or
   (b) is an officer, director, partner or employee of the applicant, or
   (c) legally or beneficially owns or controls stock of a corporate applicant or is a member of a partnership or association applicant, or
   (d) is a party to an agreement with such an applicant, express or implied, whereby he may receive any payment or other benefit, whether or not for services rendered, dependent or contingent upon the favorable approval of such applicant, petition or request.

3. In the county of Nassau the provisions of subdivisions one and two of this section shall also apply to a party officer. "Party Officer" shall mean any person holding any position or office, whether by election, appointment or otherwise, in any party as defined by subdivision four or section two of the election law.

4. Ownership of less than five per cent of the stock of a corporation whose stock is listed on the New York or American Stock Exchanges shall not constitute an interest for the purposes of this section.

5. A person who knowingly and intentionally violates this section shall be guilty of a misdemeanor.

DECLARATION OF RESTRICTIONS

THIS DECLARATION OF RESTRICTIONS (***"Declaration"***) is made as of the 20th day of February, 2019 by **ESSEX HOMES OF WNY, INC.** (hereinafter ***"Declarant"***) under facts and circumstances summarized by the following recitals:

WHEREAS, the Declarant is the owner of real property consisting of 2350 Sweet Home Road as more particularly described in the metes and bounds legal description of 2350 Sweet Home Road attached hereto as **Schedule "A";**

WHEREAS, the Declarant is the owner of real property consisting of a portion of 2360 Sweet Home Road comprised of approximately 10.22 acres as more particularly described in the metes and bounds legal description of a portion of 2360 Sweet Home Road attached hereto as **Schedule "B";**

WHEREAS, in December of 2016, RAS Development I LLC submitted an application with the Town of Amherst requesting that the Town Board of the Town of Amherst (***"Town Board"***) amend the zoning classification of approximately 7.14 acres of a portion of 2360 Sweet Home Road from Office Building District (***"OB"***) to Multifamily Residential District Five (***"MFR-5"***);

WHEREAS, in September of 2017, RAS Development I LLC submitted an application with the Town of Amherst requesting that the Town Board of the Town of Amherst (***"Town Board"***) amend the zoning classification of 2350 Sweet Home Road from General Business District (***"GB"***) to Multifamily Residential District Five (***"MFR-5"***);

WHEREAS, during its meeting held on March 19, 2018, the Town Board adopted Resolution No. 2018-241 for the purpose of approving an amendment of the zoning classification of 2350 Sweet Home Road from GB to MFR-5 subject to eighteen (18) conditions as contained in Resolution No. 2018-241;

WHEREAS, during its meeting held on March 19, 2018, the Town Board adopted Resolution No. 2018-242 for the purpose of approving an amendment of the zoning classification of a portion of 2360 Sweet Home Road from OB to MFR-5 subject to eighteen (18) conditions as contained in Resolution No. 2018-242;

WHEREAS, the conditions contained in Resolutions 2018-241 and 2018-242 as adopted by the Town Board on March 19, 2018 are identical;

WHEREAS, pursuant to Condition No. 18 as contained in Resolutions 2018-241 and 2018-242, Conditions No. 1 to 14 as imposed by the Town Board on March 19, 2018 are to be subject to a Declaration of Restrictions recorded at the Erie County Clerk's Office;

Attachment: Z-2023-01 application 042023 (27184 : Z-2023-01)

WHEREAS, Conditions No. 1 to 14 as contained in Resolutions 2018-241 and 2018-242, Conditions No. 1 to 14 as imposed by the Town Board on March 19, 2018 are as follows:

1. That the 5.2 acres of Permanent Open Space as depicted on the Concept Plan prepared by Carmina Wood Morris DPC dated November 16, 2017 shall not be developed as any buildings or other above ground structures, and shall remain permanently undeveloped.

2. That the residential development of the project site shall not consist of an apartment complex comprised of rental units but instead shall consist of residential units for sale.

3. That the maximum allowable density of the residential development on the project site shall be 48 units.

4. The residential buildings to be constructed on the project site shall be limited to single-story residential units with second story loft space in the front portion of the buildings such that there shall not be any second story windows provided for the second story loft space on the rear portion of the buildings.

5. That maximum allowable height of any building on the project site as measured from finished grade to the peak of the building shall be 30 ft.

6. That there shall be a maximum of four attached residential units in any residential building on the project site.

7. That the minimum setback of the residential buildings on the project site from the southern boundary and western boundary of the project site shall be 35 feet.

8. That the minimum setback of Building No. 5 as depicted on the Concept Plan prepared by Carmina Wood Morris DPC dated November 16, 2017 from the northern boundary of 574 North Ellicott Creek Road shall be 109 feet.

9. That the minimum setback of Building No. 6 as depicted on the Concept Plan prepared by Carmina Wood Morris DPC dated November 16, 2017 from the southern boundary of the project site shall be 137 feet.

10. That a solid high quality vinyl fence with a natural color (not white) with a minimum height of six feet as measured from finished grade shall be installed along portions of the eastern, western and the southern boundary of the project site as depicted on the Concept Plan prepared by Carmina Wood Morris DPC dated November 16, 2017.

11. That extensive landscaping as required by the High Impact Screening standard as defined in the Town of Amherst Zoning Code shall be provided along the southern side and the portion of the western side of 2360 Sweet Home Road to be developed

Attachment: Z-2023-01 application 042023 (27184 : Z-2023-01)

for residential purposes. The Landscaping Plan to be prepared by a licensed landscape architect during the site plan review stage for the residential project on 2360 Sweet Home Road shall be prepared based on consideration of input received by the Petitioner from the owners of the parcels directly south of the project site at 566, 574, 598 and 620 North Ellicott Creek Road and the owner of the parcel west of the project site at 550 North Ellicott Creek Road.

12. That the Lighting Plan to be prepared during the site plan review stage for the residential project on the project site shall demonstrate that the residential project will not result in any lighting spillover onto the parcels contiguous to the project site utilized for residential purposes at 550, 566, 574, 598 and 620 North Ellicott Creek Road. There shall not be any light poles installed on the project site with a height that exceeds 15 feet.

13. That there shall not be an internal driveway located on the Sweet Home Road frontage of the parcel at 2350 Sweet Home Road that connects to the northern side of the parcel at 2360 Sweet Home Road.

14. That with the exception of a driveway that will only service a two-unit building to be located along the North Ellicott Creek Road frontage that is depicted as Building No. 13 on the Concept Plan prepared by Carmina Wood Morris DPC dated November 16, 2017, there shall not be any driveway or roadway connection from the project site onto North Ellicott Creek Road.

WHEREAS, a metes and bounds legal description of the 5.2 acres of Permanent Open Space referenced above in Condition No. 1, as contained in Resolutions 2018-241 and 2018-242 adopted by the Town Board on March 19, 2018, consisting of a portion of 2360 Sweet Home Road, is attached as **Schedule "C"** (hereinafter ***"Permanent Open Space"***);

WHEREAS, in July of 2018, RAS Development I LLC filed an Application for relief of Zoning Condition No. 14 as contained in Resolutions 2018-241 and 2018-242 for the purpose of seeking to allow a gated emergency access driveway to be installed connecting 2350 Sweet Home Road and a portion of 2360 Sweet Home to North Ellicott Creek Road;

WHEREAS, during its meeting held on October 1, 2018, the Town Board adopted Resolution No. 2018-1046 for the purpose of approving the requested Relief of Zoning Condition No. 14 as contained in Resolutions 2018-241 and 2018-242 to allow a gated emergency access driveway to be installed connecting to North Ellicott Creek Road subject to six (6) conditions as follows:

1. The gated emergency access connection will not be accessible by the future residents of the project nor the public and will only be accessible by emergency personnel.

Attachment: Z-2023-01 application 042023 (27184 : Z-2023-01)

2. Pursuant to the Town Code, all property owners within 600 ft. of the project site will receive written notice from the Town of any future proposed amendment of any of the zoning conditions.

3. The amended Zoning Condition No. 14 will be incorporated into the Declaration of Restrictions to be recorded at the Erie County Clerk's Office.

4. That the gated emergency access driveway to North Ellicott Creek Road be paved with a hard surface and not constructed of grass pavers.

5. That the gated emergency access driveway to North Ellicott Creek Road be straightened as much as possible.

6. That the final site plan be fully compliant with fire code.

NOW, THEREFORE, in exchange for good and valuable consideration the sufficiency of which is acknowledged, the Declarant agrees to restrict the future use of 2350 Sweet Home Road as described in **Schedule "A"**, a portion of 2360 Sweet Home Road as described in **Schedule "B"** including the Permanent Open Space consisting of a portion of 2360 Sweet Home Road as described in **Schedule "C"**, in accordance with the conditions as set forth in Resolutions No. 2018-241 and 2018-242 as adopted by the Town Board on March 19, 2018 and the conditions set forth in Resolution 2018-1046 as follows:

1. That the 5.2 acres of Permanent Open Space as depicted on the Concept Plan prepared by Carmina Wood Morris DPC dated November 16, 2017 and described in the attached **Schedule "C"** shall not be developed as any buildings or other above ground structures and shall remain permanently undeveloped.

2. That the residential development of the project site shall not consist of an apartment complex comprised of rental units but instead shall consist of residential units for sale.

3. That the maximum allowable density of the residential development on the project site shall be 48 units.

4. The residential buildings to be constructed on the project site shall be limited to single-story residential units with second story loft space in the front portion of the buildings such that there shall not be any second story windows provided for the second story loft space on the rear portion of the buildings.

5. That maximum allowable height of any building on the project site as measured from finished grade to the peak of the building shall be 30 ft.

6. That there shall be a maximum of four attached residential units in any residential building on the project site.

Attachment: Z-2023-01 application 042023 (27184 : Z-2023-01)

7. That the minimum setback of the residential buildings on the project site from the southern boundary and western boundary of the project site shall be 35 feet.

8. That the minimum setback of Building No. 5 as depicted on the Concept Plan prepared by Carmina Wood Morris DPC dated November 16, 2017 from the northern boundary of 574 North Ellicott Creek Road shall be 109 feet.

9. That the minimum setback of Building No. 6 as depicted on the Concept Plan prepared by Carmina Wood Morris DPC dated November 16, 2017 from the southern boundary of the project site shall be 137 feet.

10. That a solid high quality vinyl fence with a natural color (not white) with a minimum height of six feet as measured from finished grade shall be installed along portions of the eastern, western and the southern boundary of the project site as depicted on the Concept Plan prepared by Carmina Wood Morris DPC dated November 16, 2017.

11. That extensive landscaping as required by the High Impact Screening standard as defined in the Town of Amherst Zoning Code shall be provided along the southern side and the portion of the western side of 2360 Sweet Home Road to be developed for residential purposes. The Landscaping Plan to be prepared by a licensed landscape architect during the site plan review stage for the residential project on 2360 Sweet Home Road shall be prepared based on consideration of input received by the Petitioner from the owners of the parcels directly south of the project site at 566, 574, 598 and 620 North Ellicott Creek Road and the owner of the parcel west of the project site at 550 North Ellicott Creek Road.

12. That the Lighting Plan to be prepared during the site plan review stage for the residential project on the project site shall demonstrate that the residential project will not result in any lighting spillover onto the parcels contiguous to the project site utilized for residential purposes at 550, 566, 574, 598 and 620 North Ellicott Creek Road. There shall not be any light poles installed on the project site with a height that exceeds 15 feet.

13. That there shall not be an internal driveway located on the Sweet Home Road frontage of the parcel at 2350 Sweet Home Road that connects to the northern side of the parcel at 2360 Sweet Home Road.

14. That with the exception of a driveway that will only service a two-unit building to be located along the North Ellicott Creek Road frontage that is depicted as Building No. 13 on the Concept Plan prepared by Carmina Wood Morris DPC dated November 16, 2017 and a gated emergency access only driveway connection to North Ellicott Creek Road, there shall not be any driveway or roadway connection from the project site onto North Ellicott Creek Road.

Attachment: Z-2023-01 application 042023 (27184 : Z-2023-01)

15. The gated emergency access connection to North Ellicott Creek Road will not be accessible by the future residents of the project nor the public and will only be accessible by emergency personnel.

16. That the gated emergency access driveway to North Ellicott Creek Road be paved with a hard surface and not constructed of grass pavers.

The restrictions being established herein pursuant to the conditions contained in Resolutions No. 2018-241 and 2018-242 as adopted by the Town Board on March 19, 2018 and Resolution No. 2018-1046 as adopted by the Town Board on October 1, 2018 shall be binding on all parties claiming thereunder and shall run and touch the land except that the recorded restriction can be changed, modified or eliminated by a majority vote of the Town Board.

RESPONSES TO QUESTION 11 OF REZONING APPLICATION FOR PORTION OF 2350 SWEET HOME ROAD FROM OB TO MFR-5

Question 11(A): Description of the character of the proposed development:

Response to Question 11(A): The residential project as previously approved by the Planning Board consists of 48 upscale attached residential units with attached garages for sale as depicted on the Site Plan prepared by Carmina Wood Design. The Project Sponsor is seeking the necessary approvals consisting of the rezoning of a small portion of the Project Site from OB to MFR-5 and relief of the Declaration of Restrictions recorded on February 21, 2019 to accommodate the proposed minor modifications to the approved project layout consisting primarily of first floor sunrooms to be constructed on the rear side of the attached townhome buildings on the southern and western boundaries of the Project Site as depicted on the Site Plan [Drawing C-100 – Date: 12/16/22] prepared by Carmina Wood Morris DPC. A reduced-size copy of the Site Plan is provided at **Exhibit "6"** and a full-size copy is also attached to this Application. A draft of the Amended Declaration of Restrictions is provided at **Exhibit "8"**.[1]

Question 11(B)(1): Rationale for rezoning request: 1. What was this site chosen?

Response to Question 11(B)(1): The majority of the Project Site is currently zoned MFR-5 in accordance with decisions issued by the Town Board on March 19, 2018. The Project Sponsor is seeking to amend a small portion of the Project Site from OB to MFR-5 to accommodate minor modifications to the approved project layout. It is important to mention that a large portion of the Project Site

[1] A copy of the Declaration of Restrictions recorded at the Erie County Clerk's Office on February 21, 2019 is provided at **Exhibit "3"**.

Attachment: Z-2023-01 application 042023 (27184 : Z-2023-01)

will consist of Permanent Open Space to ensure the residential project is consistent with the character of the surrounding vicinity.[2]

Question 11(B)(2): Why cannot land be used with the existing zoning?

Response to Question 11(B)(2): The Project Site is currently being developed in the accordance with the existing MFR-5 zoning of a majority of the Project Site that was approved by the Town Board on March 19, 2018.

Question 11(B)(3): How will this rezoning impact surrounding properties?

Response to Question 11(B)(3): The proposed rezoning of a small portion of the Project Site from OB to MFR-5 and the requested relief of the Declaration of Restriction in order to accommodate minor modifications to the approved project layout will have any adverse impacts on surrounding properties.

Question 11(B)(4): How will this rezoning impact the school system?

Response to Question 11(B)(4): The project will continue to have positive impacts on the school district. The approved residential project consisting of attached townhomes for sale will not result in any significant increased demand for educational services since the target market for the residential units is empty nesters, seniors and young professionals.

[2] The approximately 5.2 acres of Permanent Open Space shall remain undeveloped in accordance with the Declarations of Restrictions recorded on at the Erie County Clerk's Office on February 21, 2019.

Short Environmental Assessment Form
Part 1 - Project Information

Prepared By: Sean Hopkins, Esq.
Hopkins Sorgi & McCarthy PLLC
5500 Main Street, Suite 343
Williamsville, NY 14221
Tel: 510-4338
E-mail: shopkins@hsmlegal.com

Instructions for Completing

Part 1 - Project Information. The applicant or project sponsor is responsible for the completion of Part 1. Responses become part of the application for approval or funding, are subject to public review, and may be subject to further verification. Complete Part 1 based on information currently available. If additional research or investigation would be needed to fully respond to any item, please answer as thoroughly as possible based on current information.

Complete all items in Part 1. You may also provide any additional information which you believe will be needed by or useful to the lead agency; attach additional pages as necessary to supplement any item.

Part 1 - Project and Sponsor Information

Name of Action or Project:
Villas at Essex Woods Project

Project Location (describe, and attach a location map):
2350 Sweet Home Road - Town of Amherst - Erie County

Brief Description of Proposed Action:
The action involves the rezoning of approximately 0.17 acres of the Project Site from Office Building District ("OB") to Multifamily Residential District Five ("MFR-5") and a request to modify a Declaration of Restrictions containing zoning conditions imposed by the Town of Amherst Town Board to accommodate minor modifications to the previously approved residential project consisting of 48 attached residential units for sale including the addition of single-story sun rooms on the rear sides of the approved buildings. The project layout is depicted on the Site Plan [Drawing C-100] prepared by Carmina Wood Design dated December 16, 2022. The project is an Unlisted Action pursuant to the State Environmental Quality Review Act ("SEQRA") since the impact do not cross any of the thresholds for a Type I action per 6 NYCRR Part 617.4. It is important to mention that the Town Board, Planning Board and Zoning Board of Appeals have all previously issued negative declarations pursuant to the SEQRA with respect to the approved residential project that is currently under construction.

Name of Applicant or Sponsor:	Telephone: 716.510-4338
Essex Homes of WNY, Inc. c/o Sean W. Hopkins, Esq.	E-Mail: shopkins@hsmlegal.com

Address:
Hopkins Sorgi & McCarthy PLLC - 5500 Main Street, Suite 343

City/PO:	State:	Zip Code:
Williamsville	NY	14221

	NO	YES
1. Does the proposed action only involve the legislative adoption of a plan, local law, ordinance, administrative rule, or regulation? If Yes, attach a narrative description of the intent of the proposed action and the environmental resources that may be affected in the municipality and proceed to Part 2. If no, continue to question 2.	☑	☐
2. Does the proposed action require a permit, approval or funding from any other governmental Agency? If Yes, list agency(s) name and permit or approval: Town Board - Rezoning, Zoning Board of Appeals - Area Variances; Planning Department - Minor Site Plan Amendment	☐	☑

3.a. Total acreage of the site of the proposed action? 11.89 acres
b. Total acreage to be physically disturbed? .12 acres
c. Total acreage (project site and any contiguous properties) owned or controlled by the applicant or project sponsor? 11.89 acres

4. Check all land uses that occur on, adjoining and near the proposed action.
☐ Urban ☐ Rural (non-agriculture) ☐ Industrial ☑ Commercial ☑ Residential (suburban)
☐ Forest ☐ Agriculture ☐ Aquatic ☐ Other (specify): _____
☐ Parkland

Attachment: Z-2023-01 application 042023 (27184 : Z-2023-01)

	NO	YES	N/A
5. Is the proposed action, a. A permitted use under the zoning regulations? [Project Sponsor is seeking to amend the zoning classification of .17 acres of the Project Site from OB to MFR-5 to accomodate single-story sun rooms on the rear side of attached townhome buildings.]	☐	☑	☐
b. Consistent with the adopted comprehensive plan?	☐	☑	☐

	NO	YES
6. Is the proposed action consistent with the predominant character of the existing built or natural landscape?	☐	☑
7. Is the site of the proposed action located in, or does it adjoin, a state listed Critical Environmental Area? If Yes, identify:	☑	☐
8. a. Will the proposed action result in a substantial increase in traffic above present levels?	☑	☐
b. Are public transportation service(s) available at or near the site of the proposed action?	☑	☐
c. Are any pedestrian accommodations or bicycle routes available on or near site of the proposed action?	☐	☑
9. Does the proposed action meet or exceed the state energy code requirements? If the proposed action will exceed requirements, describe design features and technologies:	☐	☑
10. Will the proposed action connect to an existing public/private water supply? If No, describe method for providing potable water:	☐	☑
11. Will the proposed action connect to existing wastewater utilities? If No, describe method for providing wastewater treatment:	☐	☑
12. a. Does the site contain a structure that is listed on either the State or National Register of Historic Places?	☑	☐
b. Is the proposed action located in an archeological sensitive area? [SHPO issued a No Impact determination for the Project Site on April 21, 2005.]	☐	☑
13. a. Does any portion of the site of the proposed action, or lands adjoining the proposed action, contain wetlands or other waterbodies regulated by a federal, state or local agency?	☐	☑
b. Would the proposed action physically alter, or encroach into, any existing wetland or waterbody?	☑	☐
If Yes, identify the wetland or waterbody and extent of alterations in square feet or acres: There are not any wetlands located on the portion of the Project Site to be developed. A wetland permit was issued by the USACE on April 20, 2006 and the 0.49 acres of impacts authorized by the permit have previously occurred.		

14. Identify the typical habitat types that occur on, or are likely to be found on the project site. Check all that apply:

☐ Shoreline ☐ Forest ☐ Agricultural/grasslands ☐ Early mid-successional
☐ Wetland ☐ Urban ☑ Suburban

	NO	YES
15. Does the site of the proposed action contain any species of animal, or associated habitats, listed by the State or Federal government as threatened or endangered?	☑	☐
16. Is the project site located in the 100 year flood plain?	☑	☐
17. Will the proposed action create storm water discharge, either from point or non-point sources? If Yes, a. Will storm water discharges flow to adjacent properties? ☑ NO ☐ YES	☐	☑
b. Will storm water discharges be directed to established conveyance systems (runoff and storm drains)? If Yes, briefly describe: ☐ NO ☑ YES Existing on-site stormwater management system will be utilized as previously approved.		

Attachment: Z-2023-01 application 042023 (27184 : Z-2023-01)

	NO	YES
18. Does the proposed action include construction or other activities that result in the impoundment of water or other liquids (e.g. retention pond, waste lagoon, dam)? If Yes, explain purpose and size:	☑	☐
19. Has the site of the proposed action or an adjoining property been the location of an active or closed solid waste management facility? If Yes, describe:	☑	☐
20. Has the site of the proposed action or an adjoining property been the subject of remediation (ongoing or completed) for hazardous waste? If Yes, describe:	☑	☐

I AFFIRM THAT THE INFORMATION PROVIDED ABOVE IS TRUE AND ACCURATE TO THE BEST OF MY KNOWLEDGE

TOWN OF AMHERST ATTACHMENT
State Environmental Quality Review
ENVIRONMENTAL ASSESSMENT FORM

2350 Sweet Home Road

1. For each applicable category of proposed new structures, including additions to existing structures, provide the following information for all soil types on the project site (*according to Soil Survey of Erie County, NY; Table 11, Building Site Development, pp 294-305):*

Soil Name	Shallow excavations	Dwellings without basements	Dwellings with basements	Small commercial buildings	Local roads and streets
Cosad [Cv]	Severe	Severe	Severe	Severe	Moderate
Swormville [Sw]	Severe	Severe	Severe	Severe	Severe

2. If the Soil survey indicates either "severe" or "moderate" suitability for the proposed types of construction, a geotechnical and hydrological analysis based on one test per 3.5 acres of project area must be provided (per Town Board resolution, 3/17/03, amended 6/16/03).

   _x_ Geotechnical report attached _____ Not applicable

   [Note: Three copies of the Geotechnical Report prepared by Barron & Associates dated October 11, 2017 have been submitted with the land use applications dated January 23, 2023.]

3. Is your property located: On Youngs Road between Dodge and Klein Roads? ☐ Yes ● No

   On Wehrle Dr. between Spindrift Dr. and Oakwood Rd? ☐ Yes ● No

   If so, the property may be within an area of the Town that is affected by a moratorium on connections to the sanitary sewer system.

4. Are there alternative locations on the site for this project? ☐ Yes ● No

5. Location and size of real property owned by petitioner within one (1) mile of subject proposal: **Not Applicable.**

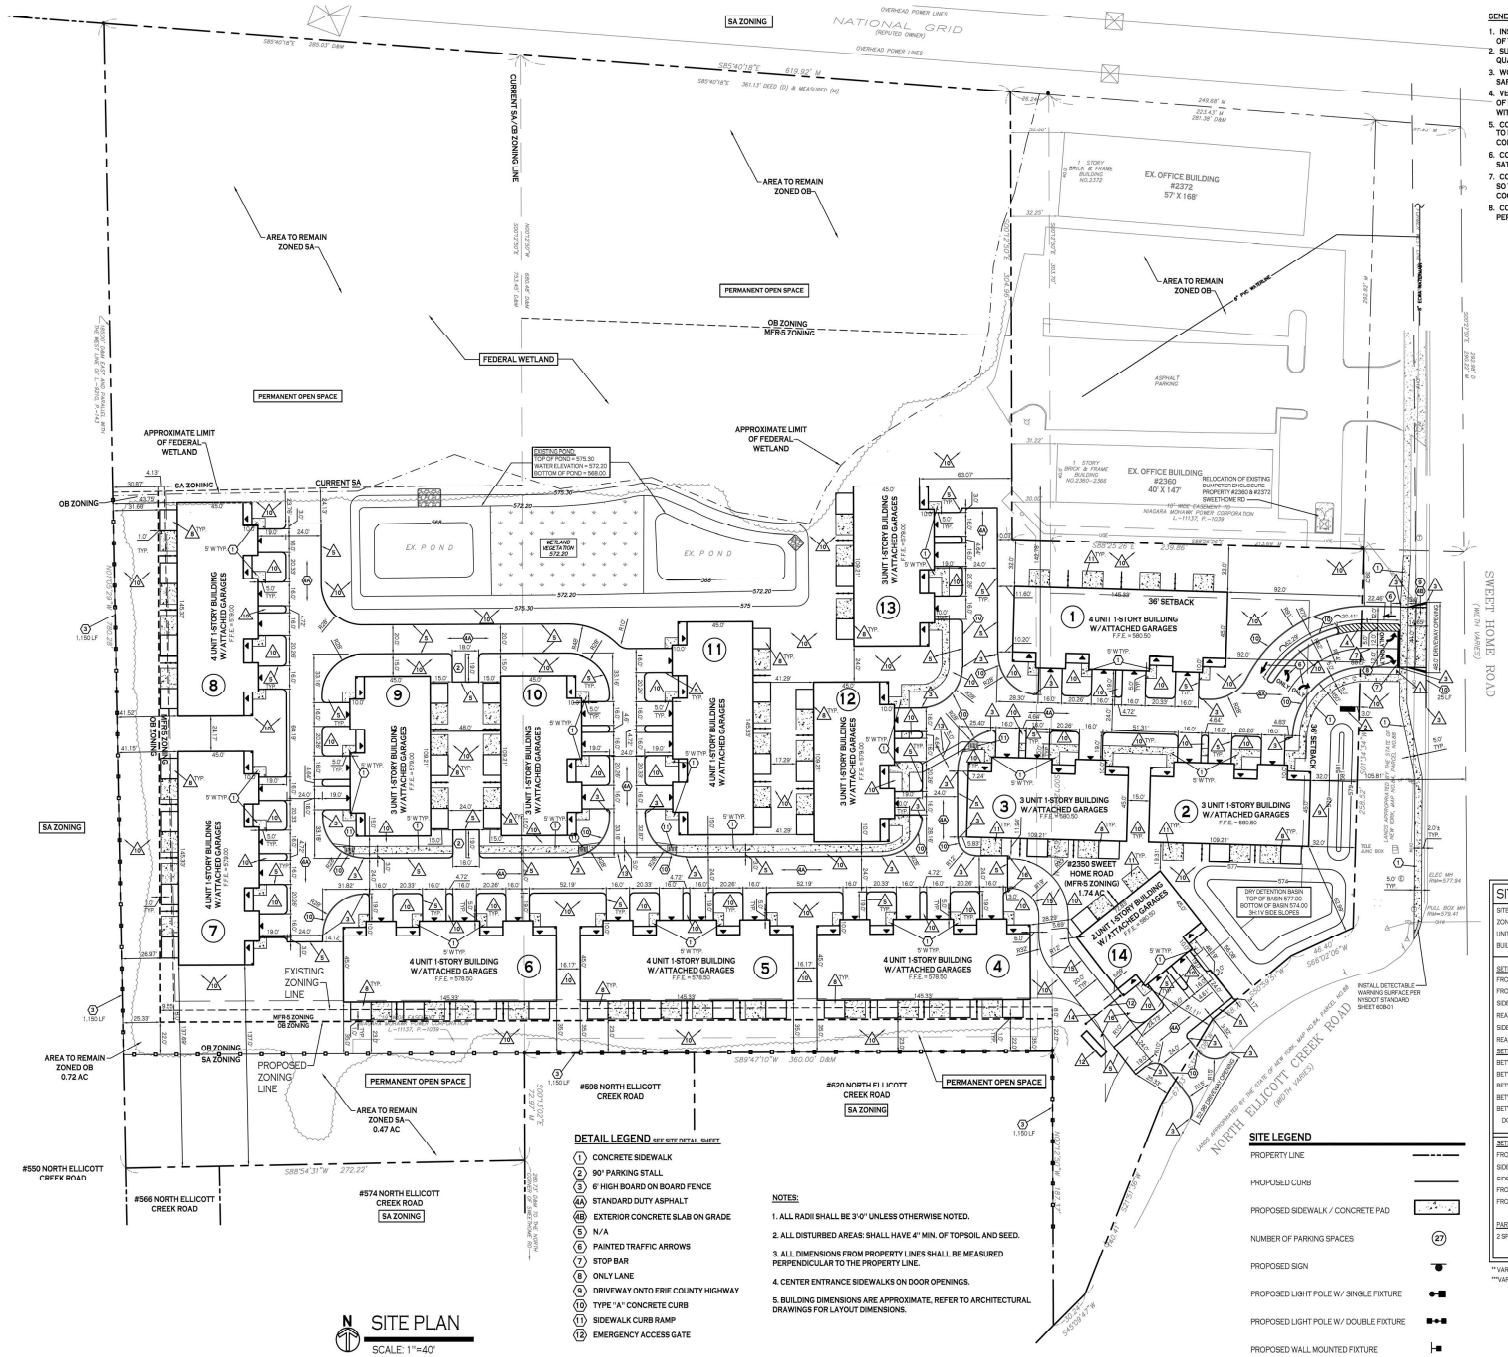
6. Are you aware of current or future plans or intentions by others in the Town of Amherst to develop property within 1000± ft. of the present project request: ☐ Yes ● No
   Describe: **Not Applicable.**
   (Potential environmental impacts from adjacent or nearby projects undergoing the approval process will receive a coordinated environmental review to determine cumulative effects on common receivers (e.g. traffic and drainage corridors) and other relevant environmental concerns.)

7. Maximum number of vehicular trips to be generated per hour upon completion of project: **Not Applicable.**

8. Will blasting occur during construction? ☐ Yes ● No

9. Does the project propose to connect and be tributary to the public sanitary sewer system? ● Yes ☐ No

Attachment: Z-2023-01 application 042023 (27184 : Z-2023-01)



10. Proposed net additional gallons per day (gpd) of sanitary sewer discharge upon completion of project: **Not applicable. The Project Sponsor is not proposing any modifications to approved number of upscale townhome units per the Site Plan approved by the Planning Board for the 48-unit project.**

(Please note that average flows of 2,500 gpd or greater will require an Engineer's Report that includes a detailed downstream sewer capacity analysis and the identification of and commitment to required I/I offset work during peak wastewater flow conditions.)

EXHIBIT 7

RESPONSES TO QUESTION 16 OF REZONING APPLICATION FOR PORTION OF 2350 SWEET HOME ROAD FROM OB TO MFR-5

Question 16(A)(1): **State in detail why the proposed zoning is consistent with the adopted Town of Amherst Bicentennial Comprehensive Plan. Cite specific sections, maps and/or figures in the plan that support the proposed zoning at this location.**

Response to Question 16(A)(1): The Project Sponsor is seeking to amend the zoning classification of a small portion of 2350 Sweet Home Road consisting of only 0.17 acres from OB to MFR-5 to allow first floor sunrooms to be constructed on the rear side of the attached townhome buildings on the southern and western boundaries of the Project Site as depicted on the Site Plan [Drawing C-100 – Date: 12/16/22] prepared by Carmina Wood Morris DPC. A reduced-size copy of the Site Plan is provided at **Exhibit "6"** and a full-size copy is also attached to this Application. The Project Sponsor is simultaneously seeking to modify a Declaration of Restrictions Containing Zoning Conditions Imposed in Connection with a Rezoning Decision. A copy of the Declaration of Restrictions recorded at the Erie County Clerk's Office on February 21, 2019 is provided **at Exhibit "3"** and a draft of the Amended Declaration of Restrictions is provided at **Exhibit "8"**.

The requested rezoning of a small portion of the Project Site from OB to MFR-5 to accommodate the proposed minor modifications to the project layout as depicted on the Site Plan approved by the Planning Board for the residential project at 2350 Sweet Home Road (the "***Project Site***") is consistent with the adopted Bicentennial Comprehensive Plan. The Town of Amherst adopted the Bicentennial Comprehensive Plan in January of 2007 after completing a lengthy planning process that included numerous public meetings and public hearings involving the

Attachment: Z-2023-01 application 042023 (27184 : Z-2023-01)

Comprehensive Plan Advisory Committee, the Planning Board and the Town Board.[1] In December of 2020, the Town Board most recently adopted amendments to the Bicentennial Comprehensive Plan. The Comprehensive Plan is intended to guide future growth and redevelopment in the Town.

Figure 6 of the Bicentennial Comprehensive Plan is the Conceptual Land Use Plan and the areas in the vicinity of the Project Site is designated as being appropriate for Mixed Residential uses. The Conceptual Land Use Plan is intended to communicate the overall direction and concept of future development in the Town of Amherst. "Mixed Residential" is described on Page 3-30 of the Comprehensive Plan as 4 to 12 units per acre. The Comprehensive Plan indicates that typical locations for the Mixed Residential category include "Areas of transition between commercial uses and lower density single-family neighborhoods, as well as along collector or arterial highways or other areas that are generally unattractive for large lot, single-family development. Other areas of the Town designated for concentrations of Mixed Residential use include underutilized areas near designated activity centers and commercial areas. Examples include areas adjacent to mixed-use centers at UB, near the I-290/I-990 interchange..." It is also important to mention that the Comprehensive Plan recognizes the need for diverse housing options including housing multifamily units.

Attachment: Z-2023-01 application 042023 (27184 : Z-2023-01)

[1] A copy of the resolution adopted by the Town Board on January 2, 2007 for the purpose of adopting the Bicentennial Comprehensive Plan pursuant to Town Law Section 272-a is included at the beginning of the Comprehensive Plan. This resolution recites the lengthy planning history that incorporated numerous opportunities for public input as well as a coordinated environmental review pursuant to SEQRA that involved the preparation a Generic EIS and the issuance of a Findings Statement.

Question 16(A)(2): Cite all text, map, and/or figures that must be amended to support the proposed zoning at this location and provide detailed suggested amendments.

Response to Question 16(A)(2): The requested rezoning of a small portion of the Project Site from OB to MFR-5 does not require an amendment to the Bicentennial Comprehensive Plan.

Question 16(A)(3): State why the proposed zoning is consistent with intent and objectives (Sec. 1-2-2) of the Zoning Ordinance:

Response to Question 16(A)(3): Section 1-2-1 of the Zoning Code is titled "Purpose" and it states as follows:

> *"The purpose of this Zoning Ordinance and the intent of the legislative authority in its adoption is to promote the environment of the town and its public health, safety, convenience, comfort, prosperity and the general welfare by regulating the use of buildings, other structures and land for residences, open space, public facilities, business, services, industry or other purposes; by regulating and restricting the bulk, height, design, building coverage and location of structures; by regulating and limiting population density; and for the aforesaid purposes, to divide the land within the limits of the town into districts of such number and dimensions generally consistent with the policies of the Comprehensive Plan and to provide procedures for the administration and amendment of said Zoning Ordinance."*

The requested rezoning of a small portion of the Project Site from OB to MFR-5 and the requested modification of the Declaration of Restrictions to accommodate the minor modifications to the approved project layout are consistent with the "Purpose" of the Zoning Code. Section 1-2-2 of the Zoning Code sets forth the objectives of the Zoning Code. This section of the Zoning Code lists thirteen objectives that are discussed below as follows:

A. To protect the character and values of residential, institutional and public uses, business, commercial and manufacturing uses and to insure their orderly and beneficial development;

Response: The residential project is consistent with the objective of protecting the character and value of existing land uses. The proposed rezoning of a small portion of the

Attachment: Z-2023-01 application 042023 (27184 : Z-2023-01)

Project Site from OB to MFR-5 and the request to modify the Declaration of Restrictions in order to accommodate minor modifications to the approved project layout represents orderly and beneficial development.

B. To provide adequate open spaces for light, air and outdoor uses to include public, common and private open space areas;

Response: The proposed minor modification to the layout of the residential project are not inconsistent with this objective.

C. To prevent overcrowding of land;

Response: The Project Sponsor is not proposing any increase to the density of the approved residential project.

D. To prevent excessive concentration of population and to prevent spare and uncoordinated development;

Response: The Project Sponsor is not proposing any increase to the density of the approved residential project and the minor modifications to the approved project layout represents coordinated development. The minor modifications to the previously approved project layout will require an amendment of the Site Plan previously approved by the Planning Board.

E. To regulate and control the location and spacing of buildings on the lot and in relation to the surrounding property generally consistent with the policies of the Comprehensive Plan.

Response: The requested rezoning of a small portion of the Project Site from OB to MFR-5 and the requested modification of the Declaration of Restrictions to accommodate the minor modifications to the approved project layout are consistent with the policies of the Comprehensive Plan.

F. To protect persons and property from damage and injury due to fire or flood;

Response: The minor modifications to the approved project layout will not increase the likelihood of damage and injury due to fire and flood. The residential buildings will

Attachment: Z-2023-01 application 042023 (27184 : Z-2023-01)

continue to be constructed in accordance with building permits issued by the Town of Amherst Building Department.

G. To preserve and protect significant natural features and vegetation, thereby preventing ecological damage and visual blight which occur when those features or vegetation are eliminated or substantially altered to serve development purposes only.

Response: There are not significant natural features located on the previously disturbed portion of the Project Site currently being developed.

H. To assure that structure and land use arrangements are aesthetically harmonious with nearby areas and structures.

Response: The development of the Project Site in a manner generally consistent with the updated Site Plan [Drawing C-100] prepared by Carmina Wood Design will be aesthetically harmonious with nearby areas and structures.

I. To regulate the location of buildings and intensity of uses in relation to streets according to plans so as to cause the least interference with and be damaged least by traffic movements and hence result in lessened street congestion and improved public safety.

Response: The minor modifications to the approved project layout do not involve changes to the access from the Project Site from public roadways.

J. To establish zoning patterns that insure economical extensions for sewers, water supply waste disposal and other public utilities, as well as development of recreation, schools and other public facilities;

Response: The Project Site has access to sanitary sewer and water lines as well as necessary public utilities to service the project.

K. To guide the future development of the town so as to being the gradual conformity of land, structures and uses generally consistent with the policies of the Comprehensive Plan.

Response: The minor modifications to the approved project layout are consistent with this objective since the residential project that is currently under construction is consistent with the policies contained in the Comprehensive Plan.

Attachment: Z-2023-01 application 042023 (27184 : Z-2023-01)

L. To accomplish the specific intents and goals set forth in the introduction to the respective sections.

Response: The minor modifications to the approved project layout are consistent with this objective.

M. To protect the community from visual pollution resulting from the unregulated use of signs and other advertising devices.

Response: The minor modifications to the approved project layout are not inconsistent with this objective.

Question 16(C): Compatibility with the present zoning and conforming uses of nearby property and with the character of the neighborhood:

Response to Question 16(C): The Project Sponsor is seeking to amend the zoning classification of a small portion of the Project Site from OB to MFR-5, which is the zoning classification of the portion of the Project Site currently being developed as a residential project pursuant to the Site Plan approved by the Planning Board.

Question 16(D): Suitability of the subject property for uses permitted by the current versus the proposed district:

Response to Question 16(D): The small portion of the Project Site the Project Sponsor seeks to rezone from OB to MFR-5 is more suitable for uses permitted by the proposed MFR-5 zoning classification than the existing OB zoning classification.

Question 16(E): Whether the proposed change tends to improve the balance of uses, or meets a specific demand in the Town:

Response to Question 16(D): The project has and will continue to improve the balance of uses and to satisfy a specific demand for upscale attached townhome style units for sale in the Town.

AMENDED DECLARATION OF RESTRICTIONS

THIS AMENDED DECLARATION OF RESTRICTIONS ("***Declaration***") is made as of the ___ day of _____, 2023 by **ESSEX HOMES OF WNY, INC.** (hereinafter "***Declarant***") under facts and circumstances summarized by the following recitals:

WHEREAS, the Declarant is the owner of real property consisting of 2350 Sweet Home Road (hereinafter "***2350 Sweet Home Road***" or the "***Project Site***") as more particularly described in the metes and bounds legal description of 2350 Sweet Home Road attached hereto as **Schedule "A"**;

WHEREAS, in December of 2016, RAS Development I LLC submitted an application with the Town of Amherst requesting that the Town Board of the Town of Amherst ("***Town Board***") amend the zoning classification of approximately 7.14 acres of a portion of 2360 Sweet Home Road from Office Building District ("***OB***") to Multifamily Residential District Five ("***MFR-5***");

WHEREAS, in September of 2017, RAS Development I LLC submitted an application with the Town of Amherst requesting that the Town Board of the Town of Amherst ("***Town Board***") amend the zoning classification of 2350 Sweet Home Road from General Business District ("***GB***") to Multifamily Residential District Five ("***MFR-5***");

WHEREAS, during its meeting held on March 19, 2018, the Town Board adopted Resolution No. 2018-241 for the purpose of approving an amendment of the zoning classification of 2350 Sweet Home Road from GB to MFR-5 subject to eighteen (18) conditions as contained in Resolution No. 2018-241;

WHEREAS, during its meeting held on March 19, 2018, the Town Board adopted Resolution No. 2018-242 for the purpose of approving an amendment of the zoning classification of a portion of 2360 Sweet Home Road from OB to MFR-5 subject to eighteen (18) conditions as contained in Resolution No. 2018-242;

WHEREAS, the conditions contained in Resolutions 2018-241 and 2018-242 as adopted by the Town Board on March 19, 2018 are identical;

WHEREAS, pursuant to Condition No. 18 as contained in Resolutions 2018-241 and 2018-242, Conditions No. 1 to 14 as imposed by the Town Board on March 19, 2018 are to be subject to a Declaration of Restrictions recorded at the Erie County Clerk's Office;

WHEREAS, Conditions No. 1 to 14 as contained in Resolutions 2018-241 and 2018-242, Conditions No. 1 to 14 as imposed by the Town Board on March 19, 2018 were as follows:

1. That the 5.2 acres of Permanent Open Space as depicted on the Concept Plan prepared by Carmina Wood Morris DPC dated November 16, 2017 shall not be

DRAFT

Attachment: Z-2023-01 application 042023 (27184 : Z-2023-01)

developed as any buildings or other above ground structures, and shall remain permanently undeveloped.

2. That the residential development of the project site shall not consist of an apartment complex comprised of rental units but instead shall consist of residential units for sale.

3. That the maximum allowable density of the residential development on the project site shall be 48 units.

4. The residential buildings to be constructed on the project site shall be limited to single-story residential units with second story loft space in the front portion of the buildings such that there shall not be any second story windows provided for the second story loft space on the rear portion of the buildings.

5. That maximum allowable height of any building on the project site as measured from finished grade to the peak of the building shall be 30 ft.

6. That there shall be a maximum of four attached residential units in any residential building on the project site.

7. That the minimum setback of the residential buildings on the project site from the southern boundary and western boundary of the project site shall be 35 feet.

8. That the minimum setback of Building No. 5 as depicted on the Concept Plan prepared by Carmina Wood Morris DPC dated November 16, 2017 from the northern boundary of 574 North Ellicott Creek Road shall be 109 feet.

9. That the minimum setback of Building No. 6 as depicted on the Concept Plan prepared by Carmina Wood Morris DPC dated November 16, 2017 from the southern boundary of the project site shall be 137 feet.

10. That a solid high quality vinyl fence with a natural color (not white) with a minimum height of six feet as measured from finished grade shall be installed along portions of the eastern, western and the southern boundary of the project site as depicted on the Concept Plan prepared by Carmina Wood Morris DPC dated November 16, 2017.

11. That extensive landscaping as required by the High Impact Screening standard as defined in the Town of Amherst Zoning Code shall be provided along the southern side and the portion of the western side of 2360 Sweet Home Road to be developed for residential purposes. The Landscaping Plan to be prepared by a licensed landscape architect during the site plan review stage for the residential project on 2360 Sweet Home Road shall be prepared based on consideration of input received by the Petitioner from the owners of the parcels directly south of the project site at

DRAFT

Attachment: Z-2023-01 application 042023 (27184 : Z-2023-01)

566, 574, 598 and 620 North Ellicott Creek Road and the owner of the parcel west of the project site at 550 North Ellicott Creek Road.

12. That the Lighting Plan to be prepared during the site plan review stage for the residential project on the project site shall demonstrate that the residential project will not result in any lighting spillover onto the parcels contiguous to the project site utilized for residential purposes at 550, 566, 574, 598 and 620 North Ellicott Creek Road. There shall not be any light poles installed on the project site with a height that exceeds 15 feet.

13. That there shall not be an internal driveway located on the Sweet Home Road frontage of the parcel at 2350 Sweet Home Road that connects to the northern side of the parcel at 2360 Sweet Home Road.

14. That with the exception of a driveway that will only service a two-unit building to be located along the North Ellicott Creek Road frontage that is depicted as Building No. 13 on the Concept Plan prepared by Carmina Wood Morris DPC dated November 16, 2017, there shall not be any driveway or roadway connection from the project site onto North Ellicott Creek Road.

WHEREAS, a metes and bounds legal description of the 5.2 acres of Permanent Open Space referenced above in Condition No. 1, as contained in Resolutions 2018-241 and 2018-242 adopted by the Town Board on March 19, 2018, consisting of a portion of 2360 Sweet Home Road, is attached as **Schedule "B"** (hereinafter **"*Permanent Open Space*"**);

WHEREAS, in July of 2018, RAS Development I LLC filed an Application for relief of Zoning Condition No. 14 as contained in Resolutions 2018-241 and 2018-242 for the purpose of seeking to allow a gated emergency access driveway to be installed connecting 2350 Sweet Home Road and a portion of 2360 Sweet Home to North Ellicott Creek Road;

WHEREAS, during its meeting held on October 1, 2018, the Town Board adopted Resolution No. 2018-1046 for the purpose of approving the requested Relief of Zoning Condition No. 14 as contained in Resolutions 2018-241 and 2018-242 to allow a gated emergency access driveway to be installed connecting to North Ellicott Creek Road subject to six (6) conditions as follows:

1. The gated emergency access connection will not be accessible by the future residents of the project nor the public and will only be accessible by emergency personnel.

2. Pursuant to the Town Code, all property owners within 600 ft. of the project site will receive written notice from the Town of any future proposed amendment of any of the zoning conditions.

3. The amended Zoning Condition No. 14 will be incorporated into the Declaration of Restrictions to be recorded at the Erie County Clerk's Office.

DRAFT

Attachment: Z-2023-01 application 042023 (27184 : Z-2023-01)

4. That the gated emergency access driveway to North Ellicott Creek Road be paved with a hard surface and not constructed of grass pavers.

5. That the gated emergency access driveway to North Ellicott Creek Road be straightened as much as possible.

6. That the final site plan be fully compliant with fire code.

WHEREAS, on February 21, 2019, a Declaration of Restrictions recorded at the Erie County Clerk's Office at Liber 11341 of Deeds at Page 2501 containing the following sixteen (16) restrictions:

1. That the 5.2 acres of Permanent Open Space as depicted on the Concept Plan prepared by Carmina Wood Morris DPC dated November 16, 2017 and described in the attached Schedule "C" shall not be developed as any buildings or other above ground structures and shall remain permanently undeveloped.

2. That the residential development of the project site shall not consist of an apartment complex comprised of rental units but instead shall consist of residential units for sale.

3. That the maximum allowable density of the residential development on the project site shall be 48 units.

4. The residential buildings to be constructed on the project site shall be limited to single-story residential units with second story loft space in the front portion of the buildings such that there shall not be any second story windows provided for the second story loft space on the rear portion of the buildings.

5. That maximum allowable height of any building on the project site as measured from finished grade to the peak of the building shall be 30 ft.

6. That there shall be a maximum of four attached residential units in any residential building on the project site.

7. That the minimum setback of the residential buildings on the project site from the southern boundary and western boundary of the project site shall be 35 feet.

8. That the minimum setback of Building No. 5 as depicted on the Concept Plan prepared by Carmina Wood Morris DPC dated November 16, 2017 from the northern boundary of 574 North Ellicott Creek Road shall be 109 feet.

9. That the minimum setback of Building No. 6 as depicted on the Concept Plan prepared by Carmina Wood Morris DPC dated November 16, 2017 from the southern boundary of the project site shall be 137 feet.

DRAFT

Attachment: Z-2023-01 application 042023 (27184 : Z-2023-01)

10. That a solid high quality vinyl fence with a natural color (not white) with a minimum height of six feet as measured from finished grade shall be installed along portions of the eastern, western and the southern boundary of the project site as depicted on the Concept Plan prepared by Carmina Wood Morris DPC dated November 16, 2017.

11. That extensive landscaping as required by the High Impact Screening standard as defined in the Town of Amherst Zoning Code shall be provided along the southern side and the portion of the western side of 2360 Sweet Home Road to be developed for residential purposes. The Landscaping Plan to be prepared by a licensed landscape architect during the site plan review stage for the residential project on 2360 Sweet Home Road shall be prepared based on consideration of input received by the Petitioner from the owners of the parcels directly south of the project site at 566, 574, 598 and 620 North Ellicott Creek Road and the owner of the parcel west of the project site at 550 North Ellicott Creek Road.

12. That the Lighting Plan to be prepared during the site plan review stage for the residential project on the project site shall demonstrate that the residential project will not result in any lighting spillover onto the parcels contiguous to the project site utilized for residential purposes at 550, 566, 574, 598 and 620 North Ellicott Creek Road. There shall not be any light poles installed on the project site with a height that exceeds 15 feet.

13. That there shall not be an internal driveway located on the Sweet Home Road frontage of the parcel at 2350 Sweet Home Road that connects to the northern side of the parcel formerly consisting of 2360 Sweet Home Road.

14. That with the exception of a driveway that will only service a two-unit building to be located along the North Ellicott Creek Road frontage that is depicted as Building No. 13 on the Concept Plan prepared by Carmina Wood Morris DPC dated November 16, 2017 and a gated emergency access only driveway connection to North Ellicott Creek Road, there shall not be any driveway or roadway connection from the project site onto North Ellicott Creek Road.

15. The gated emergency access connection to North Ellicott Creek Road will not be accessible by the future residents of the project nor the public and will only be accessible by emergency personnel.

16. That the gated emergency access driveway to North Ellicott Creek Road be paved with a hard surface and not constructed of grass pavers.

WHEREAS, in January of 2023, the Declarant filed an Application seeking to amend the zoning classification of a portion of 2350 Sweet Home Road consisting of 0.17 acres from Office Building District ("GB") to Multifamily Residential District Five ("MFR-5");

DRAFT

Attachment: Z-2023-01 application 042023 (27184 : Z-2023-01)

WHEREAS, in January of 2023, the Declarant filed Application for Relief of Zoning Condition imposed by the Town Board on October 18, 2018 as contained in Resolution No. 2018-1046;

WHEREAS, during its meeting held on _____ __, 2023, the Town Board adopted Resolution No. 2023-__ for the purpose of approving an amendment of the zoning classification of a portion of 2350 Sweet Home Road from OB to MFR-5 and Resolution No. 2023-__ for the purpose of approving the requested Relief of Zoning Conditions contained in Resolution No. 2018-1046; subject to sixteen (16) conditions as follows:

NOW, THEREFORE, in exchange for good and valuable consideration the sufficiency of which is acknowledged, the Declarant agrees to restrict the future use of 2350 Sweet Home Road as described in **Schedule "A"** including the Permanent Open Space consisting of a portion of 2360 Sweet Home Road as described in **Schedule "B"**, in accordance with the conditions as set forth in Resolutions No. 2023-___ and 2023-____as adopted by the Town Board on _____ __, 2023 as follows:

1. That the 5.2 acres of Permanent Open Space as depicted on the Site Plan prepared by Carmina Wood Morris dated December 16, 2022 shall not be developed as any buildings or other above ground structures, and shall remain permanently undeveloped.

2. That the residential development of the project site shall not consist of an apartment complex comprised of rental units but instead shall consist of residential units for sale.

3. That the maximum allowable density of the residential development on the project site shall be 48 units.

4. The residential buildings to be constructed on the project site shall be limited to single-story residential units with second story loft space. Second story windows are not permitted on the rear side of second story loft space in Buildings Building Nos. 4, 5, 6, 7 and 8 as depicted on the Site Plan prepared by Carmina Wood Morris dated December 16, 2022.

5. That maximum allowable height of any building on the project site as measured from finished grade to the peak of the building shall be 30 ft.

6. That there shall be a maximum of four attached residential units in any residential building on the project site.

7. That the portions of the residential buildings that include second story loft space shall have a minimum setback of 35 feet from the southern boundary and the western boundary of the Project Site. Notwithstanding the minimum setback language in the preceding sentence, a first floor only sunroom shall be permitted on the rear side of the residential buildings along the southern side of the Project Site

DRAFT

Attachment: Z-2023-01 application 042023 (27184 : Z-2023-01)

so long as the minimum setback of the first floor sunroom is 22 ft. from the southern boundary of the Project Site and a first floor only sunroom shall be permitted on the rear side of the residential buildings along the western side of the Project Site so long as the minimum setback of the first floor sunroom is 25.97 ft. from the western boundary of the Project Site. Additionally, patios on the rear side of the residential buildings on the southern side of the Project Site shall have a minimum setback of 22 ft. from the southern boundary of the Project Site and patios on the rear side of the residential buildings on the western side of the Project Site shall have a minimum setback of 25.97 ft. from the western boundary of the Project Site.

8. That the minimum setback of Building No. 6 as depicted on the Site Plan prepared by Carmina Wood Morris DPC dated December 16, 2022 from the northern boundary of 574 North Ellicott Creek Road shall be 94 feet.

9. That the minimum setback of Building No. 7 as depicted on the Site Plan prepared by Carmina Wood Morris DPC dated December 16, 2022 from the southern boundary of the project site shall be 137 feet.

10. That a solid high quality vinyl fence with a natural color (not white) with a minimum height of six feet as measured from finished grade shall be installed along portions of the eastern, western and the southern boundary of the project site as depicted on the Site Plan prepared by Carmina Wood Morris DPC dated December 16, 2022.

11. That extensive landscaping as required by the High Impact Screening standard as defined in the Town of Amherst Zoning Code shall be provided along the southern side of the project site and the portion of the western side of the portion of the project site formerly consisting of 2360 Sweet Home Road to be developed for residential purposes in accordance with the Landscape Plan previously approved by the Planning Board.

12. That the lighting to be installed in connection with the residential project shall comply with the Lighting Plan previously approved by the Planning Board demonstrating that the residential project will not result in any lighting spillover onto the parcels contiguous to the project site utilized for residential purposes at 550, 566, 574, 598 and 620 North Ellicott Creek Road. There shall not be any light poles installed on the project site with a height that exceeds 15 feet.

13. That there shall not be an internal driveway located on the Sweet Home Road frontage of the parcel at 2350 Sweet Home Road that connects to the northern side of the parcel formerly consisting of 2360 Sweet Home Road.

14. That with the exception of a driveway that will only service a two-unit building to be located along the North Ellicott Creek Road frontage that is depicted as Building No. 13 on the Site Plan prepared by Carmina Wood Morris DPC dated December 16, 2022 and a gated emergency access only driveway connection to North Ellicott

DRAFT

Re: Request to Rezone 0.17± Acres of Land from OB to MFR-5 [Z-2023-01]
& Request to Amend Declaration of Restrictions [Z-2016-16D & Z-2017-11B]
Location: 2350 & 2360-2372 Sweet Home Road
Applicant/Project Sponsor: Essex Homes of WNY, Inc.
File No. 10065.10

Dear Mr. Howard:

This letter and the enclosed project documentation is being submitted on behalf of Essex Homes of WNY, Inc. ("Project Sponsor") for the purpose of responding to Comment No. 1 as contained in the letters you issued dated March 14, 2023 relative to above referenced pending land use applications. Comment No. 1 stated as follows: "1.Complete the attached revised Town of Amherst Addendum to the EAF."

Enclosed are three (3) copies of the completed Page 5[a] of the Environmental Assessment Form that is applicable to both pending land use applications along with three (3) copies of the Geotechnical Report prepared by Barron & Associates P.C. dated October 11, 2017.

Please feel free to contact me at 510-4338 or via e-mail at shopkins@hsmlegal.com if you have any questions this letter or the enclosed documentation.

Sincerely,

HOPKINS SORGI & MCCARTHY PLLC

Sean W. Hopkins, Esq.

TOWN OF AMHERST
State Environmental Quality Review
ENVIRONMENTAL ASSESSMENT FORM
-- ADDENDUM --
Date: March 21, 2023

1. For each applicable category of proposed <u>new</u> structures, including additions to existing structures, provide the following information for all soil types on the project site (*according to Soil Survey of Erie County, NY; Table 11, Building Site Development, pp 294-305):*

Soil Name	Shallow excavations	Dwellings without basements	Dwellings with basements	Small commercial buildings	Local roads and streets
Cosad Loamy Fine Sand	Severe	Severe	Severe	Severe	Moderate
Odessa Silt Loam	Severe	Severe	Severe	Severe	Severe

2. If the Soil survey indicates either "severe" or "moderate" suitability for the proposed types of construction, a geotechnical and hydrological analysis based on one test per 3.5 acres of project area must be provided (per Town Board resolution, 3/17/03, amended 6/16/03).

   X Geotechnical report attached _____ Not applicable

3. Is your property located: On Youngs Road between Dodge and Klein Roads? ☐ Yes ☒ No
   On Wehrle Dr. between Spindrift Dr. and Oakwood Rd? ☐ Yes ☒ No

   If so, the property may be within an area of the Town that is affected by a moratorium on connections to the sanitary sewer system.

4. Are there alternative locations on the site for this project? ☐ Yes ☒ No

5. Location and size of real property owned by petitioner within one (1) mile of subject proposal:
   Not applicable.

6. Are you aware of current or future plans or intentions by others in the Town of Amherst to develop property within 1000± ft. of the present project request: ☐ Yes ☒ No

   Describe _____

   (Potential environmental impacts from adjacent or nearby projects undergoing the approval process will receive a coordinated environmental review to determine cumulative effects on common receivers (e.g. traffic and drainage corridors) and other relevant environmental concerns.)

7. Maximum number of vehicular trips to be generated per peak hour upon completion of project Not applicable.
   Source: _____

8. Will blasting occur during construction? ☐ Yes ☒ No

9. Does the project propose to connect and be tributary to the public sanitary sewer system? ☐ Yes ☒ No

10. Proposed net additional gallons per day (gpd) of sanitary sewer discharge upon completion of project:
    0 average flow 0 peak flow.

    (Average flows of 2,500 gpd or greater will require an Engineer's Report that includes a detailed downstream sewer capacity analysis and the identification of and commitment to required I/I offset work during peak wastewater flow conditions.)

11. Based on the Town's *2011 Reconnaissance Level Survey of Historic Resources,* is your property 'blue-rated' for historic significance? ☐ Yes ☒ No

ATTN: Mr. Robert Savarino

RE: Preliminary Geotechnical Engineering Report
Proposed Rezoning of Parcel
2350 Sweet Home Road
Town of Amherst, Erie Co., New York 14228

Gentlemen:

This Barron & Associates, P.C. - Buffalo Drilling Company, Inc. (B&A-BDC) letter report presents the findings of the subsurface investigation program and the geotechnical engineering recommendations for the above referenced project. The geographic orientation of the site is illustrated on the U.S. Geologic Survey (USGS) site location map in Figure No. 1. The project site is illustrated in Figure No. 2 and entitled "Test Boring Location Plan". The test boring log is shown in Appendix A. Refer to Appendix B entitled, "Geotechnical Reference Standards", for an explanation of the terminology that is used for soil and rock descriptions.

SITE AND SUBSURFACE CONDITIONS

SITE CONDITIONS: The proposed project site is addressed as 2350 Sweet Home Road in the Town of Amherst, New York and includes an existing single-story building, large asphalt parking lot and entrance roadway addressed. The site topography is relatively level.

PREDOMINATE SUBSURFACE CONDITIONS: A synopsis of the subsurface fill, soil, bedrock and groundwater conditions is as follows:

- Asphalt Pavement: At the boring location a thin two-inch-thick layer of asphalt exists at the ground surface.
- Random Fill Materials: Cohesive fill material was encountered and extends a total depth of four feet below ground surface. This fill consists primarily of silty clay with varying amounts of fine to course sand and gravel. This moderately plastic fill is noted to be in a moist state.
- Organic Materials: No buried topsoil or peat layers were noted to be encountered within the natural soil layers. Organic materials are unacceptable for foundation and load bearing purposes.
- Naturally Deposited Soils: The natural soil deposits in this area of the Town of Amherst are predominately composed of alluvial silty sand and lacustrine silty clay that mantles cohesive glacial till. Beneath the fill, a two-foot-thick layer of silty sand exists in a medium dense and moist state. Beneath the silty sand, lacustrine silty clay exists and extends approximately 30 feet below existing ground surface. This moderately plastic soil ranges from moist and very stiff within the upper portions of the unit to soft and wet below a depth of 14 feet. Based upon regional geology and nearby test borings, hard cohesive glacial till is expected to within close proximity to the bottom of the test boring.
- Bedrock: Auger refusal, generally inferred to be the top of competent bedrock, was not encountered. Based upon our experience and knowledge of regional geology bedrock is expected to be the Camillus Shale Formation.

Attachment: Z-2023-01 application 042023 (27184 : Z-2023-01)

- Groundwater Measurements: At the completion of drilling, groundwater was not encountered. The static groundwater level is believed to be below the assumed bearing elevations and no other severe groundwater condition was encountered during the subsurface exploration.

SEISMIC/EARTHQUAKE CONSIDERATIONS: For the given site conditions, the most applicable site definition is Site Class E, as listed in Table 1615.1.1 and Table 1615.1.5 of the Building Code of New York State, © 2010. The design spectral response acceleration parameters S_{DS}, at 0.2 seconds, and S_{D1}, at one second, are 0.37g and 0.12g (g = 32.2 feet/sec^2), respectively.

FOUNDATION AND CONSTRUCTION RECOMMENDATIONS

BUILDING(S): The proposed site development, top of finish first floor elevations and maximum design loads are not known at the time of this preliminary report.

FOOTINGS: Due to the presence of random fill materials, exterior and interior footings are recommended to be placed a minimum of four feet or lower below final grade. The frost depth for Amherst, New York is three and one-half feet. All footings for proposed buildings are recommended to be designed at/near the same contact pressure.

The footings should bear directly on the approved medium dense or better natural inorganic silty sand or on a thoroughly compacted (i.e., 95 percent minimum of ASTM D1557 maximum dry density) select/approved granular fill or other approved fill (i.e., fill used for a raised subgrade) section that extends to the approved stiff or better natural inorganic soil. Refer to Appendix D entitled "General Earthwork Specification", for definition of fill types and gradations, recommended minimum compaction requirements for various site developments, and placement and compaction methods.

The maximum net allowable bearing capacity for continuous strip and spread footings is preliminarily recommended not to exceed 2,000 pounds per square foot (psf) of footing area on approved natural soils or compacted select granular fill. Total and differential settlements of less than one inch and three-fourths of an inch, respectively, may be expected.

FLOOR SLABS: Prior to fill placement, the exposed subgrade surface would be thoroughly compacted and proofrolled. Typically, any encountered soft/medium stiff soils/fills would be removed for subsequent replacement with a select or approved compacted (i.e., minimum 92 percent of the maximum dry density from ASTM D1557) granular fill. If suitable for reuse on-site, the in-place or excavated existing fills/natural soft/medium stiff soils would be conditioned (i.e., sorted, dried, blended) and thoroughly compacted. Where required to raise the subgrade, an approved soil/fill will be placed and thoroughly compacted in thin lifts.

A geotextile fabric that separates the subgrade or raised subgrade and the select granular base layer is recommended. The use of a thin gravel cushion, as a capillary break, or a thin sand cushion over a vapor barrier that is placed beneath the concrete slabs are at the discretion of the design architect/engineer or as required by local code.

Above the approved subgrade, a minimum eight-inch thick select granular fill (i.e., number two crusher run stone or equal) layer is preliminarily recommended as the base course for a concrete floor slabs. The recommended subgrade modulus at the top of the base layer for a concrete floor slab bearing on a thoroughly compacted (i.e., minimum 95 percent compaction) base layer and prepared soil/fill subgrade (i.e., minimum 92 percent compaction) is recommended not to exceed 150 pounds per cubic inch with a Poisson Ratio of 0.40. Isolation of the floor slabs from the foundations-piers-columns and walls appear to be warranted.

Attachment: Z-2023-01 application 042023 (27184 : Z-2023-01)

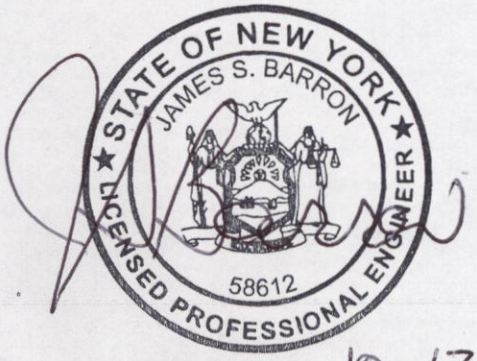
PAVEMENT: It is preliminarily recommended that the approved subgrade surface is adequately graded and/or underdrains are installed to prevent water accumulation. Typically, on an approved subgrade surface (i.e., minimum 92 percent compaction), a minimum three-inch asphalt thickness over a minimum eight-inch thick thoroughly compacted (i.e., minimum 95 percent compaction) select granular layer, as the base course, are recommended for lightly traveled roadway and parking areas (standard duty section). Geotextile filter and strength fabric, on cohesive/fine-grained soil subgrades, and a minimum four-inch asphalt thickness over a minimum 12-inch thick thoroughly compacted base course are recommended for all truck routes and heavily traveled roadways (heavy duty section).



LIMITATIONS: This report is based on the information that is provided by project representatives and the subsurface conditions that were encountered at the test boring locations. Due to the nature of the investigation method, additional test borings and/or test pit excavations will provide a greater level of delineation of the subsurface soil/fill/rock conditions than can be defined by the single test boring data alone. As detailed in Appendix E "Limitations, modification regarding proposed building/structure locations and other site developments can result in changes to the provided recommendations.

Thank you for the opportunity to assist on this project. If questions should arise, please call either of the undersigned at your earliest convenience.

Very truly yours,
BARRON & ASSOCIATES, INC.
and

APPENDIX B

GEOTECHNICAL REFERENCE STANDARDS

Attachment: Z-2023-01 application 042023 (27184 : Z-2023-01)

GEOTECHNICAL REFERENCE STANDARDS
SUMMARY OF LOGGING TECHNIQUES

Depth (ft.)	Blows per .5 ft.	Sample No.	N	% REC (RQD)	SOIL AND ROCK DESCRIPTION	REMARKS

Depth- The depth column provides the verticle scale of the boring log in feet below ground surface.

The number of blows obtained from each of the 0.5 ft. intervals of sampler penetration.

NOTE: WR represents the static weight of drill rods. WH represents the static weight of rods and hammer.

Sample Identification Number- Disturbed samples are identified with "S" preceding the sample number. Undisturbed samples (shelby tube) samples are identified with "U" preceding the sample number. Rock core samples are identified with "C" preceding the core run.

% Recovery- The length of sample recovered divided by the total length sampled. The result is numerically expressed as percent.

(RQD)- The "Rock Quality Designation". The total length of pieces>4 inches divided by the total length of core run.

N-value- The Standard Penetration Test N-value, as specified by ASTM D1586 is defined as the number of blows required by a 140-pound hammer falling 30 inches each blow to drive a 2 inch outside diameter split spoon sampler 12 inches.

TERMINOLOGY USED FOR SOIL DESCRIPTION

Density Description of Granular Soil

Number of Blows per ft., N.	Relative Density
0-4	Very loose
4-10	Loose
10-30	Medium
30-50	Dense
Over 50	Very dense

Consistency Description of Cohesive Soil

Number of Blows per ft., N.	Consistency
Below 2	Very soft
2-4	Soft
4-8	Medium
8-15	Stiff
15-30	Very stiff
Over 30	Hard

Grain Size

Boulder - greater than 12 inch diameter
Cobble - passing 12 inch, retained on 3 inch
Gravel - passing 3 inch, retained on No. 4 sieve
Sand - Coarse - passing No. 4 sieve, retained on No. 10 sieve
Medium - passing No. 10 sieve, retained on No. 40 sieve
Fine - passing No. 40 sieve, retained on No. 200 sieve
Silt - 0.074 mm to 0.005 mm
Clay - smaller than 0.005 mm

Description of Percentage or Proportions Used in Soil Sample Classification

Trace	0-10%
Little	10-20%
Some	20-35%
And	35-50%

Abbreviations Used In Soil Sample Classification

f - fine	v - very
m - medium	gr - gray
c - coarse	bn - brown
f/m - fine to medium	yel - yellow
f/c - fine to coarse	sl - slight
tr - trace	

Plasticity

Non-plastic - A 1/8 inch thread cannot be rolled at any water content.
Slight plasticity - The thread can barely be rolled.
Moderate Plasticity - Thread is easy to roll and little time is required to reach plastic limit.
Plastic - Considerable time is required to reach plastic limit. Thread can be re-rolled several times after reaching the plastic limit.

Moisture

Dry - Absence of moisture, dusty, dry to the touch.
Moist - Small quantity of moisture. Soil usually above groundwater level.
Wet - Moisture noticeable to the touch. Soil may be below groundwater level.
Saturated - Visible free water, usually soil is below groundwater level.

TERMINOLOGY USED FOR ROCK DESCRIPTION

Bedding

Parting	Less than 0.02 ft.
Band	0.02 to 0.2 ft.
Thin bed	0.2 to 0.5 ft.
Medium bed	0.5 to 1.0 ft.
Thick bed	1.0 to 2.0 ft.
Massive	Over 2.0 ft.

Hardness

Very Soft or Plastic	- Can be indented w/ thumb
Soft	- Can be scratched with fingernail
Moderately Hard	- Can be scratched easily with knife; cannot be scratched with fingernail
Hard	- Difficulty to scratch with knife
Very hard	- Cannot be scratched with knife

Crystallinity or Texture

Dense - Crystals are so small they cannot be distinguished with the naked eye.

Very Fine Crystalline - Crystals barely discernible with the naked eye.

Crystalline - Crystals are medium size -up to 1/8 inch diameter.

Very Coarsely Crystalline - Crystals larger than 1/8 inch diameter.

Voids

Pourous - Smaller than a pinhead. Their presence is indicated by the degree of absorbency.
Pitted - Pinhead size to 1/4 inch. If only thin walls separate the individual pits, the core may be described as honeycombed.
Vug - 1/4 inch to the diameter of the core. The upper limit will vary with core size.
Cavity - Larger than the diameter of the core.

Remarks - Denotes exact depth of recovery and general documentation of drilling efforts.

Notes - Description and classification are based on visual inspection of samples and boring operations.

The stratum lines shown on the boring logs are based upon interpretation and may not represent precise subsurface conditions.

Water level readings have been made in the drill holes at times and under conditions stated on the boring logs. Fluctuations in the water level may occur due to other factors than those present at the time measurements taken.

Attachment: Z-2023-01 application 042023 (27184 : Z-2023-01)

SOIL CLASSIFICATION CHART
(Unified Soil Classification System)

MAJOR DIVISIONS			GRAPH SYMBOL	LETTER SYMBOL	TYPICAL DESCRIPTIONS
COARSE-GRAINED SOILS More than 50% of material larger than No. 200 sieve	GRAVELS- More than 50% of coarse fraction larger than No. 4 sieve	Clean Gravels (little or no fines)		GW	Well-graded gravels, gravel-sand mixtures, little or no fines
				GP	Poorly-graded gravels, gravel-sand mixtures, little or no fines
		Gravels with appreciable amounts of fines		GM	Silty gravels, gravel-sand-silt mixtures
				GC	Clayey gravels, gravel-sand-clay mixtures
	SANDS- Less than 50% of coarse fraction larger than No. 4 sieve	Clean sands (little or no fines)		SW	Well-graded sands, gravelly sands, little or no fines
				SP	Poorly-graded sands, gravelly sands, little or no fines
		Sand with appreciable amounts of fines		SM	Silty sands, silt-sand mixtures
				SC	Clayey sands, sand-clay mixtures
FINE-GRAINED SOILS Less than 50% of material larger than No. 200 sieve	SILTS AND CLAYS Low plasticity Liquid Limit < 50%			ML	Inorganic silts and very fine sands, rock flour, silty or clayey fine sands or clayey silts with slight plasticity
				CL	Inorganic clays of low to medium plasticity, gravely clays, sandy clays, silty clays, lean clays
				OL	Organic silts and organic silty clays of low plasticity
	SILTS AND CLAYS High plasticity Liquid limit > 50%			MH	Inorganic silts, micaceous or diatomaceous fine sand or silty soils
				CH	Inorganic clays of high plasticity, fat clays
				OH	Organic clays of medium to high plasticity, organic silts
	Highly Organic Soils			Pt	Peat, humus, swamp soils with organic contents
	Miscellaneous Fill			FILL	Miscellaneous fill may belong in any division but is identified as FILL

B&A JOB NO.: 17-586

DATE: 10/11/17

LATERAL EARTH PRESSURE ON GENERIC BLOCK FOUNDATIONS FOR SIGNS, FREE-STANDING RETAINING WALLS, OR BELOW GRADE/BASEMENT/TANK/POOL RETAINING WALLS (Less Than 20 Feet High)

a) Porous filter media, in contact with the basement/below grade foundation wall or retaining walls, protects and is in contact with a minimum 4 inch diameter perforated drainage pipes at the footing/base of the foundation/structural wall (exterior backfill side and interior basement side) and/or weep pipes through the wall, as needed and as applicable.

b) Where recommended, a geotextile filter fabric will protect the gravel filter media from the earth backfill. Overlap unsewn seams as per the manufacturer's recommendations.

c) Waterproof earth side of wall, as is customarily provided in practice.

d) Drainage pipes are connected to an appropriately designed collector pipe, conveyance, and/or sump pump system as is applicable for the intended purpose of the wall and as customarily provided/installed in practice.

e) For potential groundwater table conditions above the top of the basement slab-on-grade condition, install continuous waterstops (with no joints in stop) at wall and floor construction joints, as is customarily provided in practice. Interior intermediate drainage pipes beneath the slab, that are spaced on-center and in both directions, do appear to be needed.

f) Assume a uniformly graded, clean coarse sand or sandy gravel backfills:

* equivalent N-value in a dense state: $(N_1)_{60}$ = 40 blows/foot
* friction angle: ϕ' = 38 degrees {Teng, pg. 12}
* average in-place densities: moist - γ_m = 120 pcf
  saturated - γ_{sat} = 132 pcf submerged - $\gamma' = (\gamma_{sat} - \gamma_w)$ = 70 pcf

g) Assume at base of wall/footing, coefficient of friction against sliding (f_s) at base of wall (Refer to Teng, pg. 320-1):

$f_s = \tan(0.58 \times \phi') = 0.40$ (AREA silty soil to silty coarse-grained soil)

h) Use equivalent fluid pressure design approach {Hough, pg. 249 and NAVFAC pg. 7-10-9}:

* at rest pressure coefficient - $K_0 = 1 - \sin(\phi') = 0.38$
* effective lateral pressure of soil - $\gamma'_l = K_o \times \gamma' = 26.6$ pcf
* hydrostatic pressure - γ_w = 62.4 pcf
* equivalent fluid pressure with water level at the top of the grade at the wall - $\gamma_{eo} = \gamma'_l + \gamma_w$ = 89 pcf (say 90 pcf)
* equivalent fluid pressure with compaction induced lateral stress increase (W&F, pg 409) $\gamma_{eo} = 2 \times K_o \times \gamma_m$ = 91 pcf (say 90 pcf)
* active pressure case - $K_a = [1 - \sin(\phi')] / [1 + \sin(\phi')] = 0.24$
  $\gamma_{ea} = K_a \times \gamma_m$ = 29 pcf (say 30 pcf)
* passive pressure case - $K_p = [1 + \sin(\phi')] / [1 - \sin(\phi')] = 4.2$
  $\gamma_{ep} = K_p \times \gamma_m$ = 504 pcf (say 330 pcf with a F.S. = 1.5)

		Thoroughly Compacted ⇒⇒	Uniformly Graded & Clean Coarse Sand or Sandy Gravel Fill	Non-Plastic Silty Sand or Sandy Silt Fill	
USE:	Earth Pressure Coefficient	Static Active =	0.24	0.33	
		Static At-Rest =	0.76	1.00	
		Static Passive =	2.80	2.00	(with F.S. = 1.5)
		Static Passive =	4.20	3.00	(with F.S. = 1.0)
USE:	Equivalent Fluid Pressure	Static Active =	30 pcf		
		Static At-Rest =	90 pcf (for rigid walls)		
		Static Passive =	330 pcf (with F.S. = 1.5)	[500 pcf with (with F.S. = 1.0)]	

[For earthquakes, structural engineer may elect to use the above Static Passive case instead of the below Earthquake Lateral Load for Non-Yielding Wall movement into the soil backfill.]

USE: Simplified Model for Earthquake Lateral Load/Ft. Wall Length @ 0.6 H_{bw} above base. Loads for Non-Yielding Wall. H_{bw} = Earth Height Behind Wall (feet)

Reduce load by 33% for Yielding Wall (active case) = (6.8 psf / foot) x H_{bw}^2 (NYS, S_{ds} = 0.25 g)

(γ_m = 120 pcf for S_{ds} value. Add to Static At Rest/ Active Pressure/Load for unsaturated backfill case) = (13.5 psf / foot) x H_{bw}^2 (NYS, S_{ds} = 0.50 g)

= (17.5 psf / foot) x H_{bw}^2 (NEern NYS, $S_{ds} \le 0.65$ g)

[Above for Site Class C to E soils. Interpolate for other S_{ds} values.
Use 1.75 x values for walls on Class B/A rock or on rigid foundation base. (FEMA NEHRP Guidelines)]

Saturated/Liquified Soil During Earthquake = 132 pcf

(Equivalent Fluid Pressure. Add to inertial hydrodynamic pressure, not presented here.)

{For looser/denser backfills, adjust above pressures by the ratio = new density / 120 pcf or / 132 pcf (for saturated case)}

USE: Coefficient of Friction Against Sliding (f_s) = 0.45 (on compacted NYSDOT Item #304.12 or #304.14 gravels)
(use lowest f_s with no underlying weaker layers) = 0.35 (on compacted granular soil & non-plastic silt)
= 0.20 (slab-on-grade on polyethylene on granular fill)
[with a F.S. = 1.0] = 0.60/0.50 (on clean, rough, & sound bedrock/smooth bedrock)
Min. Factor of Safety Against Sliding = 1.5 *[Rev.9-30-09]*

APPENDIX D

GENERAL EARTHWORK SPECIFICATION

Attachment: Z-2023-01 application 042023 (27184 : Z-2023-01)

Barron & Associates, P.C.
GENERAL EARTHWORK SPECIFICATION

PART 1 GENERAL

1.1 SITE AND SUBSURFACE CONDITIONS

1.1.1 Overview

This specification is included as a courtesy to the clients of Barron & Associates, P.C, and addresses earthwork site preparation. Additions and modifications are necessary to create a job-specific specification. This specification may serve as a basis for the development for a technical specification under Division 2, *Site Work*.

1.1.2 Site Conditions

The site-specific conditions are described under separate cover or may be available from the OWNER.

1.1.3 Subsurface Conditions

The site-specific subsurface conditions are described under separate cover or may be available from the OWNER.

1.2 REFERENCES

American Standard for Testing and Measurement (ASTM):

ASTM C136	Method for Sieve Analysis of Fine and Coarse Aggregates
ASTM C2922	Density for Soil and Soil-Aggregate in Place by Nuclear Methods
ASTM D422	Test Method for Particle-Size Analysis of Soils
ASTM D1140	Amount of Material in Soils Finer Than the No. 200 Sieve
ASTM D1557	Laboratory Compaction Characteristics of Soil Using Modified Effort (56,000 ft-lb/ft^3)
ASTM D2216	Test Method for Laboratory Determination of Water (Moisture) Content of Soil and Rock
ASTM D2487	1990 Classification of Soils for Engineering Purposes
ASTM D4318	Test Method for Liquid Limit, Plastic Limit, and Plasticity Index of Soils.

1.3 DEFINITIONS

1.3.1 Unacceptable Material

Soil material containing debris, wood, scrap material, vegetation, refuse, soft unsound particles, and other organic, frozen, deleterious, or objectionable materials. Contaminated soils shall be properly documented and removed or remediated on site. If necessary, remediation procedure will be defined by the OWNER.

1.3.2 Unsuitable Material

Brown, organic topsoil and underlying soft pockets of organic silt or wet, reworked silty clay.

1.3.3 Ordinary Fill

Friable soil containing no stone greater than two-thirds loose lift thickness and no unacceptable or unsuitable materials. In general, existing random fill is expected to be acceptable for reuse as ordinary fill given proper sorting, blending, drying, and controlled placement methods.

Attachment: Z-2023-01 application 042023 (27184 : Z-2023-01)

1.3.4 Granular Fill

Ordinary fill meeting the designation of ASTM D2487 classification of GW with a maximum of 10 percent by weight passing ASTM D1140, No. 200 sieve.

1.3.5 Select Granular Fill

Clean, uncoated soil which contains no unacceptable materials and conforms to the gradation requirements defined in Table A: Select Granular Fill.

Table A: Select Granular Fill	
Sieve Size	Percent Finer by Weight
2/3 of the loose lift thickness	100
No. 10	30 - 95
No. 40	10 - 70
No. 200	0 - 15

1.3.6 Sand and Gravel

Clean, hard, durable, uncoated particle of sand and gravel, free from lumps of clay, containing no unacceptable matter, and conforming to gradation requirements of *Table B : Sand and Gravel*

Table B: Sand and Gravel	
Sieve	Percent Finer by Weight
*	100
No. 4	50 - 85
No. 10	--
No. 40	10 - 35
No. 100	--
No. 200	0 - 8

* Job-Specific. To be determined by the ENGINEER

1.3.7 Crushed Stone

Clean, durable, sharp-angled fragments of rock or crushed gravel stone of uniform quality, containing no unacceptable matter, free from coatings, and conforming to gradation requirements of *Table C: Crushed Stone*

Table C: Crushed Stone		
	Percent Passing	
Sieve Size	¾-inch Stone	1 ¼-inch Stone
1 ½-inch	__	100
1 ¼-inch	__	85-100
1- inch	100	__
¾-inch	90-100	10-40
5/8-inch	__	__
½-inch	10-50	0-8
3/8-inch	0-20	__
#4	0-5	__

Attachment: Z-2023-01 application 042023 (27184 : Z-2023-01)

1.3.8 Flowable Fill

Also known as Controlled Low Strength Material – Controlled Density Fill (CLSM-CDF), this material is available under a variety of producer names (e.g., K-Krete©, M-Crete, Flash Fill©, Flowable Mortar, Unshrinkable Fill, etc.). This non-settling backfill mixture is most commonly used for its flowable characteristics, its support strength under traffic loads, and its removability at a later date. The material may be produced on-site or off-site. In either case, the producer of such materials and the product must meet certain certification criteria. Such information is beyond the scope of this specification and will be considered on a site-specific basis.

Flowable fill may be acceptable for use as a backfill for utility trenches of other low-lying areas which require a compacted granular fill. Its use and warranty of performance is left to the CONTRACTOR in such applications.

The use of flowable fill under load-bearing structural components in place of properly placed and compacted granular fill is NOT common and is questionable. The localized use of such material may have profound affects on the performance of a foundation system. Site-specific conditions and the extent of anticipated use of flowable fill must be examined by geotechnical engineer. Cost of such consultation shall be borne by the CONTRACTOR unless specifically directed by the OWNER to seek such consultation. Without such consultation, warranty of performance for such use is left to the CONTRACTOR.

1.4 SUBMITTALS

The following submittals shall be provided in accordance with approved submittals procedures.

1. Fill Source: Provide name and source locations of fill material.

2. Field Test Reports: Field tests will be performed by OWNER's Representative as needed. CONTRACTOR may be required to perform such tests on proposed off-site fill materials.
a. Fill material grain size analyses per ASTM C136, D422, D1140, D2487
b. Moisture/Density test results per ASTM D2216
c. Liquid limit, plastic limit, and plasticity index per ASTM D4318
d. Compaction/Density test results per ASTM C2922 and D1557

3. Sample: Geotextile fabric

PART 2 PRODUCTS

Geotextile Fabric: Mirafi 600X or equal. (Also referred to as synthetic fabric).

PART 3 EXECUTION

3.1 PROTECTION

3.1.1 General

Manner of excavation shall minimize disturbance of underlying natural ground. If deemed necessary by the Engineer, alter construction procedures to reduce subgrade disturbance. Excavate areas which have been excessively disturbed to firm ground and backfill with properly compacted granular fill.

3.1.2 Roads and Walks

Keep roads and walks free of dirt and debris at all times.

Attachment: Z-2023-01 application 042023 (27184 : Z-2023-01)

3.1.3 Trees, Shrubs, and Existing Facilities

Protect from any damage all vegetation and facilities identified to remain.

3.1.4 Utility Lines

Locate all utilities within the area of disturbance prior to the start of work. Show locations on initial plans. Protect utility lines from damage. Notify the ENGINEER immediately of damage to or an encounter with an unknown utility. Damage to utility lines are to be repaired by the CONTRACTOR at no additional cost. The CONTRACTOR shall have underground utility owners stake out utility locations prior to the start of clearing and excavation operations.

3.2 VERIFICATION OF CONDITIONS/PROOF-ROLLING

Prior to placement of the initial layer of fill over the natural ground, proof-roll the exposed natural ground above the groundwater table elevation by making two passes with a fully-loaded ten-wheel truck. Excavate unstable areas detected by this process and replace with compacted granular fill.

3.3 PREPARATION

3.3.1 Surface Preparation

Within the site limits indicated on the drawings, excavate all unsuitable material to firm natural ground in the manner specified herein. Follow a construction procedure which permits visual identification of firm natural ground. In the even that groundwater is encountered, the ENGINEER may require that the size of the open excavation be limited to that which can be handled by open pumping to allow visual inspection of the excavation bottom and the performance of backfill operations to be conducted in a dry state.

Excavation of unsuitable material shall be limited to the greater of the following:

- A distance of 5 feet beyond building lines or
- The area defined by a one-horizontal to one-vertical line sloping down from the outside bottom edge of exterior footings to firm natural ground.

3.4 PLACEMENT AND COMPACTION

3.4.1 General

Place fill in accordance with *Table D: Compaction Alternatives*. These alternatives are provided as minimum compaction
standards only and in no way relieve the CONTRACTOR of his obligation to achieve any specified degree of compaction by whatever means may be necessary.

Grade to provide positive drainage and a smooth surface which will readily shed water. To the extent practicable, compact each layer to the specified density on the same day placed. Place fill in horizontal layers. Where horizontal layers meet a natural slope, key layer into slope by cutting a bench.

Fill that is too wet for proper compaction: Disc, harrow, or otherwise dry to proper moisture content for compaction to the required density.

Fill that is too dry for proper compaction: Uniformly apply water over the surface of the loose layer in sufficient quantity to allow compaction to the required density.

Attachment: Z-2023-01 application 042023 (27184 : Z-2023-01)

Table D: Compaction Alternatives					
Compaction Method	Max. Stone Size	Maximum Loose Lift Thickness (inches)		Maximum Number of Passes	
		Below Structure and Pavements	Less Critical Areas	Below Structure and Pavements	Less Critical Areas
Hand operated vibratory plate of light roller in confined areas	3	4	4	4	4
Hand operated vibratory drum rollers weighing at least 1,000 pounds in confined areas	4	6	8	4	4
Loaded 10-wheel truck or D-8 crawler	6	10	12	4	2
Light vibratory drum roller; Min. weight at drum 8,000lbs; Min. dynamic force 10,000lbs.	8	12	12	6	2
Minimum vibratory drum; Min. weight at drum 10,000lbs; Min. dynamic force 20,000lbs.	8	18	18	6	4

3.4.2 Dewatering

Provide adequate pumping and drainage facilities to keep excavated areas sufficiently dry of groundwater and surface run-off. Dewatering shall avoid adversely affection construction procedures or causing excessive disturbance of underlying natural ground. Drain all pumped water in such a manner as to avoid damage to adjacent property.

If requested by the ENGINEER, place a 6-inch to 12-inch layer of sand and gravel or crushed stone over the natural underlying soil to stabilize area which have been disturbed due to groundwater seepage pressures and to expedite dewatering operations. Particular attention shall be given areas under proposed foundations.

3.5 FIELD QUALITY CONTROL

3.5.1 Compaction Requirements

Allow the ENGINEER sufficient time to make necessary observations and tests. Base the degree of compaction on maximum dry density as determined by ASTM D1557. The minimum degree of compaction for placed fill shall be as indicated *in Table E: Compaction Requirements.*

Table E: Compaction Requirements	
Area	Minimum Degree of Compaction (%)
Below foundation	95
Pavement and building subbase and base courses	95
Below building slab base course and above bottom of foundation	92
Below pavement subbase and base courses	90
Trench backfill outside of building	90
Trench backfill inside of building	Refer to one of the above-listed categories
Ordinary fill within 5 feet of grade	90
Vegetated areas below 5 feet of grade	85

3.5.2 Testing

Site work should be monitored and tested by geotechnical ENGINEER or his representative and in accordance with requirements of the design team to assure compliance with earthwork and foundation construction specifications.

Attachment: Z-2023-01 application 042023 (27184 : Z-2023-01)

The owner will retain a geotechnical ENGINEER or his representative to perform on-site observations and testing during this phase of construction operations. The geotechnical ENGINEER or his representative will:

- Observe excavation and dewatering of building and controlled fill areas;
- Observe backfill and compaction within building and controlled fill areas;
- Laboratory test and analyze fill material; and
- Observe construction – and performing water content, gradation, and compaction tests.

On a timely basis, the CONTRACTOR will receive copies of test results submitted to the OWNER. In addition, during construction the geotechnical ENGINEER will advise the OWNER and CONTRACTOR in writing of conditions which fail to conform to the Contract Documents. The CONTRACTOR shall take immediate action to remedy indicated deficiencies.

The geotechnical ENGINEER or his representative will not supervise or direct the actual work of the CONTRACTOR or employees and representatives of the CONTRACTOR. The presence of, observations by, and testing performed by the geotechnical ENGINEER or his representatives shall not excuse the CONTRACTOR from defects discovered in the work.

APPENDIX E

LIMITATIONS

Attachment: Z-2023-01 application 042023 (27184 : Z-2023-01)

LIMITATIONS

1. This report is based on the data that was obtained from the subsurface explorations and on the information submitted to the geotechnical engineer. A geotechnical engineer, who is experienced in foundation construction and earthwork, should be engaged to review the final design and specifications in order to determine whether any change in concept may have any effect on the validity of the conclusions presented herein, and whether these conclusions have, in fact, been implemented in the design and specifications.

2. The subsurface conditions, including thickness, between the exploration locations are approximate and simplified representations of the strata and transitions. There is the possibility that variations in soil and rock conditions and boundaries will be encountered during construction. In order to permit correlation between the exploratory soil data and the actual soil conditions encountered during construction and so as to assess conformance with the plans and specifications as originally contemplated, it is recommended that a geotechnical engineer, who is experienced in foundation construction and earthwork monitoring, should be retained to perform continuous construction review during the site preparation and foundation construction operations.

3. The subsurface exploration logs and subsurface conditions may aid in estimating material quality and quantities, such as topsoil/organic matter, fills, natural soils, and rock, but are not to be relied upon as the exclusive means for bid preparation purposes. It is the responsibility of the contractor to perform any additional site examinations and explorations and to prepare an accurate bid.

4. Disclaimers:

   a. In the event that any changes in the nature, design or location of the structure are planned, the conclusions that are contained in this report shall not be considered valid unless the changes are reviewed and the conclusions of this report are modified or verified in writing.

   b. The geotechnical engineering report has been prepared for this project by Barron & Associates, P.C. This report is for assistance in design only and is not a sufficient basis on which to prepare an accurate bid.

   c. This report has been prepared for the exclusive use of RAS Development Company, LLC of East Amherst, New York, their client and their designated design representatives, for specific application to the rezoning of a parcel at 2350 Sweet Home Road in the Town of Amherst, New York and in accordance with generally accepted geotechnical engineering practice. No other warranty, expressed or implied, is made.

PETITIONER

DJC Land, Inc.
c/o Sean Hopkins, Esq.
Hopkins Sorgi & McCarthy
5500 Main Street, Suite 343
Williamsville, NY 14221

PROPERTY LOCATION

2350 Sweet Home Road

WHEREAS the Town of Amherst Planning Board on Thursday, April 20, 2023 held a public hearing on the proposed rezoning of 0.17± acres of land from Office Building District (OB) to Multi-family Residential District Five (MFR-5), and

WHEREAS the Planning Board has reviewed plans and other materials regarding the rezoning proposal, and

WHEREAS the materials and plans have been referred to the Town's various review agencies, and

WHEREAS in accordance with Section 8-3-5 of the Zoning Ordinance the Planning Board finds that:

A. The proposed zoning and development plan is generally consistent with the policies of the Comprehensive Plan and the Zoning Ordinance.

B. There are adequate services and utilities available or proposed to be made available in the construction of the development.

C. The proposal is incompatible with the present zoning and conforming uses of nearby property and with the character of the neighborhood.

D. The subject property is not suitable for uses permitted by the proposed district.

E. The proposed change does not tend to improve the balance of uses, or meet a specific demand in the Town.

F. Review by the US Army Corps of Engineers under Section 404 of the Clean Water Act may be waived because a wetland investigation conducted October 2016 by Wilson Environmental Technologies concluded that no federal or state wetland areas exist within the subject portion of the site.

WHEREAS pursuant to Local Law #3-82, as amended, the Planning Board recommends that the Town Board determine that the requirements of SEQR are complete and that the subject proposal is not expected to have a significant adverse effect on the environment.

TO BE COMPLETED BY APPLICANT

1. **Petitioner:** Name: Essex Homes of WNY, Inc.

Address: c/o Sean Hopkins, Esq.
5500 Main Street, Suite 343
Williamsville, New York 14221
City State Zip Code

Phone: 716.510-4338 Fax:

E Mail shopkins@hsmlegal.com

2. **The undersigned hereby petitions the Honorable Town Board to rezone the following described property**

From: OB District

To: MFR-5 District

3. **Street address of land to be rezoned:** (must be verified by Town Assessor's Office)

Portion of 2350 Sweet Home Road

SBL #: 40.12-1-14

4. **Area of land to be rezoned** (in acres): .17 Acres

5. **Owner of Land:**

Name: Essex of WNY, Inc. c/o Sean Hopkins, Esq.

Address: 5500 Main Street, Suite 343 - Williamsville, NY 14221

Telephone: 716.510-4338 [E-mail: shopkins@hsmlegal.com]

6. **Representative** (Architect, Engineer, Landscape Architect, Surveyor or Attorney):

Name: Sean W. Hopkins, Esq., Hopkins Sorgi & McCarthy PLLC

Address: 5500 Main Street, Suite 343
Williamsville, New York 14221
City State Zip Code

Attachment: Z-2016-16D & Z-2017-11B application 042023 (27185 : Z-2016-16D & Z-2017-11B)

7. Petitioner's interest in property

_____Option to purchase

__X__Owner

_____Other (explain) _____

8. The following are all others having an interest in this application and join herein with the petitioner named above: (describe extent of interest; attach sheets as needed)

Not Applicable.

9. Attach Survey and Legal description of land to be rezoned. The Survey must be prepared by a New York State Licensed Land Surveyor. Legal description of property to be rezoned from OB to MFR-5 attached as Exhibit "1" and a copy of the survey prepared by GPI Engineering & Surveying is provided at Exhibit "2" Full-size copy of the survey is also attached to this Application.

10. Said property has the following deed restrictions or Covenants: (attach copy)

Liber 11341 Page 2501

Copy of Declaration of Restrictions as recorded on February 21, 2019 attached as Exhibit "3".

11. Information on proposed project:

A. Description of the character of the proposed development:

See Exhibit "4". A reduced-size copy the Site Plan prepared by Carmina Wood Design is provided at Exhibit "6" and a full-size copy is also attached to this Application.

B. Rationale for rezoning request:

1. Why was this site chosen?

See Exhibit "4"

Attachment: Z-2016-16D & Z-2017-11B application 042023 (27185 : Z-2016-16D & Z-2017-11B)

2. Why cannot land be used with the existing zoning?

See Exhibit "4".

3. How will this rezoning impact surrounding properties?

See Exhibit "4".

4. How will this rezoning impact the school system?

See Exhibit "4".

12. Quantitative Data:

A. Total # of dwelling units: 48 Attached Residential Units

B. Distribution of dwelling units by type: Attached Townhomes

C. Gross Residential Density per acre: 4.04 units per acre

D. Total amount of Open Space: Approximately 5.2 acres

E. Proposed Non-Residential Floor Area: Not Applicable

13. Development Schedule:

Start: Project under construction.

Finish: To be based on demand for the attached residential units.

Stages (# of): Based on market demand

14. If any portion of the proposed development is planned to be sold or leased, please describe:

The upscale residential units are for sale.

Attachment: Z-2016-16D & Z-2017-11B application 042023 (27185 : Z-2016-16D & Z-2017-11B)

15. Open Space ownership and maintenance provisions (if applicable):

Greenspace and landscaping will be privately owned and maintained.

16. Basis for Findings (Sec. 8-3-5 of the Town Zoning Code) (Attach sheets and supplemental materials as necessary.)

A. The proposed zoning and development plan must be generally consistent with the policies of the Comprehensive Plan and the Town Zoning Ordinance.

1. State in detail why the proposed zoning is consistent with the adopted Town of Amherst Bicentennial Comprehensive Plan. Cite specific sections, maps, and/or figures in the plan that support the proposed zoning at this location (The Comprehensive Plan document is available at the Planning Department, Town Clerk's Office, Amherst libraries, or at www.amherst.ny.us). Add sheets as needed.

See Exhibit "7".

2. Pursuant to NYS Town Law Section 272a(11), "all Town land use regulations must be in accordance with a comprehensive plan adopted pursuant to this Section." The Town Board adopted the Comprehensive Plan pursuant to NYS Town Law 272 on January 2, 2007. If the rezoning is approved, the Town Board may require the Plan to be amended, as applicable.

Cite all text, map, and / or figures that must be amended to support the proposed zoning at this location (attach pages as necessary) and provide detailed suggested amendments.

See Exhibit "7".

Attachment: Z-2016-16D & Z-2017-11B application 042023 (27185 : Z-2016-16D & Z-2017-11B)

3. State why the proposed zoning is consistent with intent and objectives (Sec. 1-2-2) of the Zoning Ordinance:

See Exhibit "7".

B. Adequate Services and Utilities are available or are proposed to be made available with the construction of the development:

1. Sanitary Sewer
   Yes.
2. Storm Sewer/Drainage
   Yes.
3. Water
   Yes.
4. Other Yes.

C. Compatibility with the present zoning and conforming uses of nearby property and with the character of the neighborhood:

See Exhibit "7".

D. Suitability of the subject property for uses permitted by the current versus the proposed district:

See Exhibit "7".

Attachment: Z-2016-16D & Z-2017-11B application 042023 (27185 : Z-2016-16D & Z-2017-11B)

E. Whether the proposed change tends to improve the balance of uses, or meets a specific demand in the Town:

See Exhibit "7".

17. The petitioner encloses herewith the sum of $ 1,265.00 to pay the fee, and consents to the placement of a sign(s) at the described location identifying this request for a period of time to be determined by the Town Clerk.

18. The undersigned certifies that all information required to be disclosed pursuant to Section 809 of the General Municipal Law (see below) is as follows:

The undersigned swears or affirms that all statements made herein are true, that all drawings submitted correctly show the situation involved in this petition.

[Authorization of Owner of the Project Site is attached.]

N.Y.S. General Municipal Law - Section 809 Disclosure in certain applications:

1. Every application, petition or request submitted for a variance, amendment, change of zoning, approval of a plat, exemption from a plat or official map, license or permit, pursuant to the provision of any ordinance, local law, rule or regulation constituting the zoning and planning regulations of a municipality shall state the name, residence and the nature and extent of the interest of any state office or any office or employee of such municipality or of a municipality of which such municipality is a part, in the person, partnership or association making such application, petition or request (hereinafter called the applicant) to the extent known to such applicant.

Attachment: Z-2016-16D & Z-2017-11B application 042023 (27185 : Z-2016-16D & Z-2017-11B)

2. For the purpose of this section an officer or employee shall be deemed to have an interest in the applicant when he, his spouse, or their brothers, sisters, parents, children, grandchildren, or the spouse of any of them

   (a) is the applicant, or
   (b) is an officer, director, partner or employee of the applicant, or
   (c) legally or beneficially owns or controls stock of a corporate applicant or is a member of a partnership or association applicant, or
   (d) is a party to an agreement with such an applicant, express or implied, whereby he may receive any payment or other benefit, whether or not for services rendered, dependent or contingent upon the favorable approval of such applicant, petition or request.

3. In the county of Nassau the provisions of subdivisions one and two of this section shall also apply to a party officer. "Party Officer" shall mean any person holding any position or office, whether by election, appointment or otherwise, in any party as defined by subdivision four or section two of the election law.

4. Ownership of less than five per cent of the stock of a corporation whose stock is listed on the New York or American Stock Exchanges shall not constitute an interest for the purposes of this section.

5. A person who knowingly and intentionally violates this section shall be guilty of a misdemeanor.

DECLARATION OF RESTRICTIONS

THIS DECLARATION OF RESTRICTIONS (*"Declaration"*) is made as of the 20th day of February, 2019 by **ESSEX HOMES OF WNY, INC.** (hereinafter *"Declarant"*) under facts and circumstances summarized by the following recitals:

WHEREAS, the Declarant is the owner of real property consisting of 2350 Sweet Home Road as more particularly described in the metes and bounds legal description of 2350 Sweet Home Road attached hereto as **Schedule "A";**

WHEREAS, the Declarant is the owner of real property consisting of a portion of 2360 Sweet Home Road comprised of approximately 10.22 acres as more particularly described in the metes and bounds legal description of a portion of 2360 Sweet Home Road attached hereto as **Schedule "B";**

WHEREAS, in December of 2016, RAS Development I LLC submitted an application with the Town of Amherst requesting that the Town Board of the Town of Amherst (*"Town Board"*) amend the zoning classification of approximately 7.14 acres of a portion of 2360 Sweet Home Road from Office Building District (*"OB"*) to Multifamily Residential District Five (*"MFR-5"*);

WHEREAS, in September of 2017, RAS Development I LLC submitted an application with the Town of Amherst requesting that the Town Board of the Town of Amherst (*"Town Board"*) amend the zoning classification of 2350 Sweet Home Road from General Business District (*"GB"*) to Multifamily Residential District Five (*"MFR-5"*);

WHEREAS, during its meeting held on March 19, 2018, the Town Board adopted Resolution No. 2018-241 for the purpose of approving an amendment of the zoning classification of 2350 Sweet Home Road from GB to MFR-5 subject to eighteen (18) conditions as contained in Resolution No. 2018-241;

WHEREAS, during its meeting held on March 19, 2018, the Town Board adopted Resolution No. 2018-242 for the purpose of approving an amendment of the zoning classification of a portion of 2360 Sweet Home Road from OB to MFR-5 subject to eighteen (18) conditions as contained in Resolution No. 2018-242;

WHEREAS, the conditions contained in Resolutions 2018-241 and 2018-242 as adopted by the Town Board on March 19, 2018 are identical;

WHEREAS, pursuant to Condition No. 18 as contained in Resolutions 2018-241 and 2018-242, Conditions No. 1 to 14 as imposed by the Town Board on March 19, 2018 are to be subject to a Declaration of Restrictions recorded at the Erie County Clerk's Office;

Attachment: Z-2016-16D & Z-2017-11B application 042023 (27185 : Z-2016-16D & Z-2017-11B)

WHEREAS, Conditions No. 1 to 14 as contained in Resolutions 2018-241 and 2018-242, Conditions No. 1 to 14 as imposed by the Town Board on March 19, 2018 are as follows:

1. That the 5.2 acres of Permanent Open Space as depicted on the Concept Plan prepared by Carmina Wood Morris DPC dated November 16, 2017 shall not be developed as any buildings or other above ground structures, and shall remain permanently undeveloped.

2. That the residential development of the project site shall not consist of an apartment complex comprised of rental units but instead shall consist of residential units for sale.

3. That the maximum allowable density of the residential development on the project site shall be 48 units.

4. The residential buildings to be constructed on the project site shall be limited to single-story residential units with second story loft space in the front portion of the buildings such that there shall not be any second story windows provided for the second story loft space on the rear portion of the buildings.

5. That maximum allowable height of any building on the project site as measured from finished grade to the peak of the building shall be 30 ft.

6. That there shall be a maximum of four attached residential units in any residential building on the project site.

7. That the minimum setback of the residential buildings on the project site from the southern boundary and western boundary of the project site shall be 35 feet.

8. That the minimum setback of Building No. 5 as depicted on the Concept Plan prepared by Carmina Wood Morris DPC dated November 16, 2017 from the northern boundary of 574 North Ellicott Creek Road shall be 109 feet.

9. That the minimum setback of Building No. 6 as depicted on the Concept Plan prepared by Carmina Wood Morris DPC dated November 16, 2017 from the southern boundary of the project site shall be 137 feet.

10. That a solid high quality vinyl fence with a natural color (not white) with a minimum height of six feet as measured from finished grade shall be installed along portions of the eastern, western and the southern boundary of the project site as depicted on the Concept Plan prepared by Carmina Wood Morris DPC dated November 16, 2017.

11. That extensive landscaping as required by the High Impact Screening standard as defined in the Town of Amherst Zoning Code shall be provided along the southern side and the portion of the western side of 2360 Sweet Home Road to be developed

Attachment: Z-2016-16D & Z-2017-11B application 042023 (27185 : Z-2016-16D & Z-2017-11B)

for residential purposes. The Landscaping Plan to be prepared by a licensed landscape architect during the site plan review stage for the residential project on 2360 Sweet Home Road shall be prepared based on consideration of input received by the Petitioner from the owners of the parcels directly south of the project site at 566, 574, 598 and 620 North Ellicott Creek Road and the owner of the parcel west of the project site at 550 North Ellicott Creek Road.

12. That the Lighting Plan to be prepared during the site plan review stage for the residential project on the project site shall demonstrate that the residential project will not result in any lighting spillover onto the parcels contiguous to the project site utilized for residential purposes at 550, 566, 574, 598 and 620 North Ellicott Creek Road. There shall not be any light poles installed on the project site with a height that exceeds 15 feet.

13. That there shall not be an internal driveway located on the Sweet Home Road frontage of the parcel at 2350 Sweet Home Road that connects to the northern side of the parcel at 2360 Sweet Home Road.

14. That with the exception of a driveway that will only service a two-unit building to be located along the North Ellicott Creek Road frontage that is depicted as Building No. 13 on the Concept Plan prepared by Carmina Wood Morris DPC dated November 16, 2017, there shall not be any driveway or roadway connection from the project site onto North Ellicott Creek Road.

WHEREAS, a metes and bounds legal description of the 5.2 acres of Permanent Open Space referenced above in Condition No. 1, as contained in Resolutions 2018-241 and 2018-242 adopted by the Town Board on March 19, 2018, consisting of a portion of 2360 Sweet Home Road, is attached as **Schedule "C"** (hereinafter "***Permanent Open Space***");

WHEREAS, in July of 2018, RAS Development I LLC filed an Application for relief of Zoning Condition No. 14 as contained in Resolutions 2018-241 and 2018-242 for the purpose of seeking to allow a gated emergency access driveway to be installed connecting 2350 Sweet Home Road and a portion of 2360 Sweet Home to North Ellicott Creek Road;

WHEREAS, during its meeting held on October 1, 2018, the Town Board adopted Resolution No. 2018-1046 for the purpose of approving the requested Relief of Zoning Condition No. 14 as contained in Resolutions 2018-241 and 2018-242 to allow a gated emergency access driveway to be installed connecting to North Ellicott Creek Road subject to six (6) conditions as follows:

1. The gated emergency access connection will not be accessible by the future residents of the project nor the public and will only be accessible by emergency personnel.

Attachment: Z-2016-16D & Z-2017-11B application 042023 (27185 : Z-2016-16D & Z-2017-11B)

2. Pursuant to the Town Code, all property owners within 600 ft. of the project site will receive written notice from the Town of any future proposed amendment of any of the zoning conditions.

3. The amended Zoning Condition No. 14 will be incorporated into the Declaration of Restrictions to be recorded at the Erie County Clerk's Office.

4. That the gated emergency access driveway to North Ellicott Creek Road be paved with a hard surface and not constructed of grass pavers.

5. That the gated emergency access driveway to North Ellicott Creek Road be straightened as much as possible.

6. That the final site plan be fully compliant with fire code.

NOW, THEREFORE, in exchange for good and valuable consideration the sufficiency of which is acknowledged, the Declarant agrees to restrict the future use of 2350 Sweet Home Road as described in **Schedule "A"**, a portion of 2360 Sweet Home Road as described in **Schedule "B"** including the Permanent Open Space consisting of a portion of 2360 Sweet Home Road as described in **Schedule "C"**, in accordance with the conditions as set forth in Resolutions No. 2018-241 and 2018-242 as adopted by the Town Board on March 19, 2018 and the conditions set forth in Resolution 2018-1046 as follows:

1. That the 5.2 acres of Permanent Open Space as depicted on the Concept Plan prepared by Carmina Wood Morris DPC dated November 16, 2017 and described in the attached **Schedule "C"** shall not be developed as any buildings or other above ground structures and shall remain permanently undeveloped.

2. That the residential development of the project site shall not consist of an apartment complex comprised of rental units but instead shall consist of residential units for sale.

3. That the maximum allowable density of the residential development on the project site shall be 48 units.

4. The residential buildings to be constructed on the project site shall be limited to single-story residential units with second story loft space in the front portion of the buildings such that there shall not be any second story windows provided for the second story loft space on the rear portion of the buildings.

5. That maximum allowable height of any building on the project site as measured from finished grade to the peak of the building shall be 30 ft.

6. That there shall be a maximum of four attached residential units in any residential building on the project site.

Attachment: Z-2016-16D & Z-2017-11B application 042023 (27185 : Z-2016-16D & Z-2017-11B)

7. That the minimum setback of the residential buildings on the project site from the southern boundary and western boundary of the project site shall be 35 feet.

8. That the minimum setback of Building No. 5 as depicted on the Concept Plan prepared by Carmina Wood Morris DPC dated November 16, 2017 from the northern boundary of 574 North Ellicott Creek Road shall be 109 feet.

9. That the minimum setback of Building No. 6 as depicted on the Concept Plan prepared by Carmina Wood Morris DPC dated November 16, 2017 from the southern boundary of the project site shall be 137 feet.

10. That a solid high quality vinyl fence with a natural color (not white) with a minimum height of six feet as measured from finished grade shall be installed along portions of the eastern, western and the southern boundary of the project site as depicted on the Concept Plan prepared by Carmina Wood Morris DPC dated November 16, 2017.

11. That extensive landscaping as required by the High Impact Screening standard as defined in the Town of Amherst Zoning Code shall be provided along the southern side and the portion of the western side of 2360 Sweet Home Road to be developed for residential purposes. The Landscaping Plan to be prepared by a licensed landscape architect during the site plan review stage for the residential project on 2360 Sweet Home Road shall be prepared based on consideration of input received by the Petitioner from the owners of the parcels directly south of the project site at 566, 574, 598 and 620 North Ellicott Creek Road and the owner of the parcel west of the project site at 550 North Ellicott Creek Road.

12. That the Lighting Plan to be prepared during the site plan review stage for the residential project on the project site shall demonstrate that the residential project will not result in any lighting spillover onto the parcels contiguous to the project site utilized for residential purposes at 550, 566, 574, 598 and 620 North Ellicott Creek Road. There shall not be any light poles installed on the project site with a height that exceeds 15 feet.

13. That there shall not be an internal driveway located on the Sweet Home Road frontage of the parcel at 2350 Sweet Home Road that connects to the northern side of the parcel at 2360 Sweet Home Road.

14. That with the exception of a driveway that will only service a two-unit building to be located along the North Ellicott Creek Road frontage that is depicted as Building No. 13 on the Concept Plan prepared by Carmina Wood Morris DPC dated November 16, 2017 and a gated emergency access only driveway connection to North Ellicott Creek Road, there shall not be any driveway or roadway connection from the project site onto North Ellicott Creek Road.

Attachment: Z-2016-16D & Z-2017-11B application 042023 (27185 : Z-2016-16D & Z-2017-11B)

15. The gated emergency access connection to North Ellicott Creek Road will not be accessible by the future residents of the project nor the public and will only be accessible by emergency personnel.

16. That the gated emergency access driveway to North Ellicott Creek Road be paved with a hard surface and not constructed of grass pavers.

The restrictions being established herein pursuant to the conditions contained in Resolutions No. 2018-241 and 2018-242 as adopted by the Town Board on March 19, 2018 and Resolution No. 2018-1046 as adopted by the Town Board on October 1, 2018 shall be binding on all parties claiming thereunder and shall run and touch the land except that the recorded restriction can be changed, modified or eliminated by a majority vote of the Town Board.

EXHIBIT 4

RESPONSES TO QUESTION 11 OF REZONING APPLICATION FOR PORTION OF 2350 SWEET HOME ROAD FROM OB TO MFR-5

Question 11(A): Description of the character of the proposed development:

Response to Question 11(A): The residential project as previously approved by the Planning Board consists of 48 upscale attached residential units with attached garages for sale as depicted on the Site Plan prepared by Carmina Wood Design. The Project Sponsor is seeking the necessary approvals consisting of the rezoning of a small portion of the Project Site from OB to MFR-5 and relief of the Declaration of Restrictions recorded on February 21, 2019 to accommodate the proposed minor modifications to the approved project layout consisting primarily of first floor sunrooms to be constructed on the rear side of the attached townhome buildings on the southern and western boundaries of the Project Site as depicted on the Site Plan [Drawing C-100 – Date: 12/16/22] prepared by Carmina Wood Morris DPC. A reduced-size copy of the Site Plan is provided at **Exhibit "6"** and a full-size copy is also attached to this Application. A draft of the Amended Declaration of Restrictions is provided at **Exhibit "8"**.[1]

Question 11(B)(1): Rationale for rezoning request: 1. What was this site chosen?

Response to Question 11(B)(1): The majority of the Project Site is currently zoned MFR-5 in accordance with decisions issued by the Town Board on March 19, 2018. The Project Sponsor is seeking to amend a small portion of the Project Site from OB to MFR-5 to accommodate minor modifications to the approved project layout. It is important to mention that a large portion of the Project Site

[1] A copy of the Declaration of Restrictions recorded at the Erie County Clerk's Office on February 21, 2019 is provided at **Exhibit "3"**.

Attachment: Z-2016-16D & Z-2017-11B application 042023 (27185 : Z-2016-16D & Z-2017-11B)

will consist of Permanent Open Space to ensure the residential project is consistent with the character of the surrounding vicinity.[2]

Question 11(B)(2): Why cannot land be used with the existing zoning?

Response to Question 11(B)(2): The Project Site is currently being developed in the accordance with the existing MFR-5 zoning of a majority of the Project Site that was approved by the Town Board on March 19, 2018.

Question 11(B)(3): How will this rezoning impact surrounding properties?

Response to Question 11(B)(3): The proposed rezoning of a small portion of the Project Site from OB to MFR-5 and the requested relief of the Declaration of Restriction in order to accommodate minor modifications to the approved project layout will have any adverse impacts on surrounding properties.

Question 11(B)(4): How will this rezoning impact the school system?

Response to Question 11(B)(4): The project will continue to have positive impacts on the school district. The approved residential project consisting of attached townhomes for sale will not result in any significant increased demand for educational services since the target market for the residential units is empty nesters, seniors and young professionals.

[2] The approximately 5.2 acres of Permanent Open Space shall remain undeveloped in accordance with the Declarations of Restrictions recorded on at the Erie County Clerk's Office on February 21, 2019.

Instructions for Completing

Part 1 - Project Information. The applicant or project sponsor is responsible for the completion of Part 1. Responses become part of the application for approval or funding, are subject to public review, and may be subject to further verification. Complete Part 1 based on information currently available. If additional research or investigation would be needed to fully respond to any item, please answer as thoroughly as possible based on current information.

Complete all items in Part 1. You may also provide any additional information which you believe will be needed by or useful to the lead agency; attach additional pages as necessary to supplement any item.

Part 1 - Project and Sponsor Information

Name of Action or Project:
Villas at Essex Woods Project

Project Location (describe, and attach a location map):
2350 Sweet Home Road - Town of Amherst - Erie County

Brief Description of Proposed Action:
The action involves the rezoning of approximately 0.17 acres of the Project Site from Office Building District ("OB") to Multifamily Residential District Five ("MFR-5") and a request to modify a Declaration of Restrictions containing zoning conditions imposed by the Town of Amherst Town Board to accommodate minor modifications to the previously approved residential project consisting of 48 attached residential units for sale including the addition of single-story sun rooms on the rear sides of the approved buildings. The project layout is depicted on the Site Plan [Drawing C-100] prepared by Carmina Wood Design dated December 16, 2022. The project is an Unlisted Action pursuant to the State Environmental Quality Review Act ("SEQRA") since the impact do not cross any of the thresholds for a Type I action per 6 NYCRR Part 617.4. It is important to mention that the Town Board, Planning Board and Zoning Board of Appeals have all previously issued negative declarations pursuant to the SEQRA with respect to the approved residential project that is currently under construction.

Name of Applicant or Sponsor:	Telephone: 716.510-4338
Essex Homes of WNY, Inc. c/o Sean W. Hopkins, Esq.	E-Mail: shopkins@hsmlegal.com

Address:
Hopkins Sorgi & McCarthy PLLC - 5500 Main Street, Suite 343

City/PO:	State:	Zip Code:
Williamsville	NY	14221

	NO	YES
1. Does the proposed action only involve the legislative adoption of a plan, local law, ordinance, administrative rule, or regulation? If Yes, attach a narrative description of the intent of the proposed action and the environmental resources that may be affected in the municipality and proceed to Part 2. If no, continue to question 2.	☑	☐
2. Does the proposed action require a permit, approval or funding from any other governmental Agency? If Yes, list agency(s) name and permit or approval: Town Board - Rezoning, Zoning Board of Appeals - Area Variances; Planning Department - Minor Site Plan Amendment	☐	☑

3.a. Total acreage of the site of the proposed action? 11.89 acres
b. Total acreage to be physically disturbed? .12 acres
c. Total acreage (project site and any contiguous properties) owned or controlled by the applicant or project sponsor? 11.89 acres

4. Check all land uses that occur on, adjoining and near the proposed action.
☐ Urban ☐ Rural (non-agriculture) ☐ Industrial ☑ Commercial ☑ Residential (suburban)
☐ Forest ☐ Agriculture ☐ Aquatic ☐ Other (specify): _____
☐ Parkland

Attachment: Z-2016-16D & Z-2017-11B application 042023 (27185 : Z-2016-16D & Z-2017-11B)

	NO	YES	N/A
5. Is the proposed action, a. A permitted use under the zoning regulations? [Project Sponsor is seeking to amend the zoning classification of .17 acres of the Project Site from OB to MFR-5 to accomodate single-story sun rooms on the rear side of attached townhome buildings.]	☐	☑	☐
b. Consistent with the adopted comprehensive plan?	☐	☑	☐

	NO	YES
6. Is the proposed action consistent with the predominant character of the existing built or natural landscape?	☐	☑
7. Is the site of the proposed action located in, or does it adjoin, a state listed Critical Environmental Area? If Yes, identify:	☑	☐
8. a. Will the proposed action result in a substantial increase in traffic above present levels?	☑	☐
b. Are public transportation service(s) available at or near the site of the proposed action?	☑	☐
c. Are any pedestrian accommodations or bicycle routes available on or near site of the proposed action?	☐	☑
9. Does the proposed action meet or exceed the state energy code requirements? If the proposed action will exceed requirements, describe design features and technologies:	☐	☑
10. Will the proposed action connect to an existing public/private water supply? If No, describe method for providing potable water:	☐	☑
11. Will the proposed action connect to existing wastewater utilities? If No, describe method for providing wastewater treatment:	☐	☑
12. a. Does the site contain a structure that is listed on either the State or National Register of Historic Places?	☑	☐
b. Is the proposed action located in an archeological sensitive area? [SHPO issued a No Impact determination for the Project Site on April 21, 2005.]	☐	☑
13. a. Does any portion of the site of the proposed action, or lands adjoining the proposed action, contain wetlands or other waterbodies regulated by a federal, state or local agency?	☐	☑
b. Would the proposed action physically alter, or encroach into, any existing wetland or waterbody? If Yes, identify the wetland or waterbody and extent of alterations in square feet or acres: There are not any wetlands located on the portion of the Project Site to be developed. A wetland permit was issued by the USACE on April 20, 2006 and the 0.49 acres of impacts authorized by the permit have previously occurred.	☑	☐

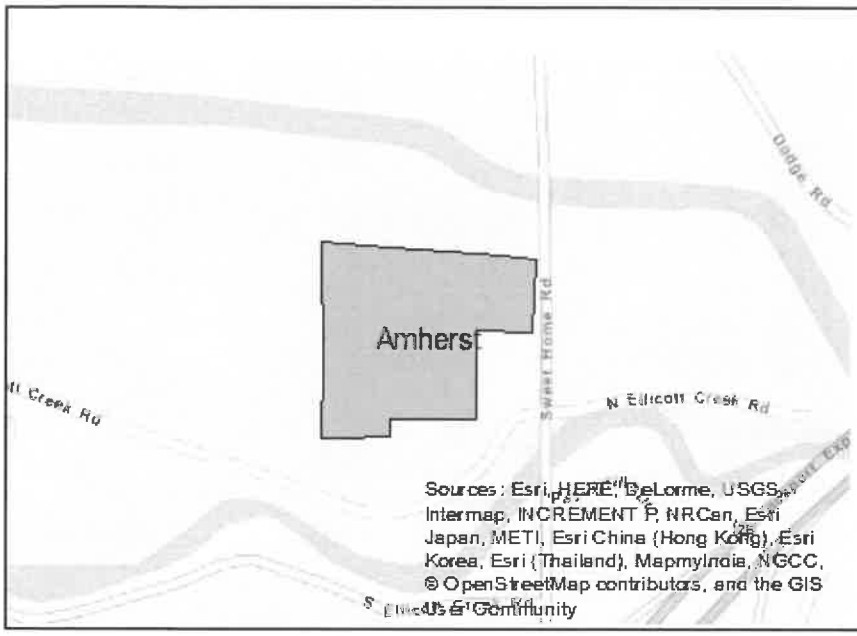
14. Identify the typical habitat types that occur on, or are likely to be found on the project site. Check all that apply:
☐ Shoreline ☐ Forest ☐ Agricultural/grasslands ☐ Early mid-successional
☐ Wetland ☐ Urban ☑ Suburban

	NO	YES
15. Does the site of the proposed action contain any species of animal, or associated habitats, listed by the State or Federal government as threatened or endangered?	☑	☐
16. Is the project site located in the 100 year flood plain?	☑	☐
17. Will the proposed action create storm water discharge, either from point or non-point sources? If Yes, a. Will storm water discharges flow to adjacent properties? ☑ NO ☐ YES	☐	☑
b. Will storm water discharges be directed to established conveyance systems (runoff and storm drains)? If Yes, briefly describe: ☐ NO ☑ YES Existing on-site stormwater management system will be utilized as previously approved.		

Attachment: Z-2016-16D & Z-2017-11B application 042023 (27185 : Z-2016-16D & Z-2017-11B)

	NO	YES
18. Does the proposed action include construction or other activities that result in the impoundment of water or other liquids (e.g. retention pond, waste lagoon, dam)? If Yes, explain purpose and size:	☑	☐
19. Has the site of the proposed action or an adjoining property been the location of an active or closed solid waste management facility? If Yes, describe:	☑	☐
20. Has the site of the proposed action or an adjoining property been the subject of remediation (ongoing or completed) for hazardous waste? If Yes, describe:	☑	☐

I AFFIRM THAT THE INFORMATION PROVIDED ABOVE IS TRUE AND ACCURATE TO THE BEST OF MY KNOWLEDGE



Applicant/sponsor name: Essex Homes of WNY, Inc. Date: January 23, 2023

TOWN OF AMHERST ATTACHMENT
State Environmental Quality Review
ENVIRONMENTAL ASSESSMENT FORM

2350 Sweet Home Road

1. For each applicable category of proposed new structures, including additions to existing structures, provide the following information for all soil types on the project site (*according to Soil Survey of Erie County, NY; Table 11, Building Site Development, pp 294-305):*

Soil Name	Shallow excavations	Dwellings without basements	Dwellings with basements	Small commercial buildings	Local roads and streets
Cosad [Cv]	Severe	Severe	Severe	Severe	Moderate
Swormville [Sw]	Severe	Severe	Severe	Severe	Severe

2. If the Soil survey indicates either "severe" or "moderate" suitability for the proposed types of construction, a geotechnical and hydrological analysis based on one test per 3.5 acres of project area must be provided (per Town Board resolution, 3/17/03, amended 6/16/03).

   _x_ Geotechnical report attached _____ Not applicable

   [Note: Three copies of the Geotechnical Report prepared by Barron & Associates dated October 11, 2017 have been submitted with the land use applications dated January 23, 2023.]

3. Is your property located: On Youngs Road between Dodge and Klein Roads? ☐ Yes ● No

   On Wehrle Dr. between Spindrift Dr. and Oakwood Rd? ☐ Yes ● No

   If so, the property may be within an area of the Town that is affected by a moratorium on connections to the sanitary sewer system.

4. Are there alternative locations on the site for this project? ☐ Yes ● No

5. Location and size of real property owned by petitioner within one (1) mile of subject proposal: **Not Applicable.**

6. Are you aware of current or future plans or intentions by others in the Town of Amherst to develop property within 1000± ft. of the present project request: ☐ Yes ● No
   Describe: **Not Applicable.**
   (Potential environmental impacts from adjacent or nearby projects undergoing the approval process will receive a coordinated environmental review to determine cumulative effects on common receivers (e.g. traffic and drainage corridors) and other relevant environmental concerns.)

7. Maximum number of vehicular trips to be generated per hour upon completion of project: **Not Applicable.**

8. Will blasting occur during construction? ☐ Yes ● No

9. Does the project propose to connect and be tributary to the public sanitary sewer system? ● Yes ☐ No

Attachment: Z-2016-16D & Z-2017-11B application 042023 (27185 : Z-2016-16D & Z-2017-11B)

10. Proposed net additional gallons per day (gpd) of sanitary sewer discharge upon completion of project: **Not applicable. The Project Sponsor is not proposing any modifications to approved number of upscale townhome units per the Site Plan approved by the Planning Board for the 48-unit project.**

(Please note that average flows of 2,500 gpd or greater will require an Engineer's Report that includes a detailed downstream sewer capacity analysis and the identification of and commitment to required I/I offset work during peak wastewater flow conditions.)

EXHIBIT 7

RESPONSES TO QUESTION 16 OF REZONING APPLICATION FOR PORTION OF 2350 SWEET HOME ROAD FROM OB TO MFR-5

Question 16(A)(1): State in detail why the proposed zoning is consistent with the adopted Town of Amherst Bicentennial Comprehensive Plan. Cite specific sections, maps and/or figures in the plan that support the proposed zoning at this location.

Response to Question 16(A)(1): The Project Sponsor is seeking to amend the zoning classification of a small portion of 2350 Sweet Home Road consisting of only 0.17 acres from OB to MFR-5 to allow first floor sunrooms to be constructed on the rear side of the attached townhome buildings on the southern and western boundaries of the Project Site as depicted on the Site Plan [Drawing C-100 – Date: 12/16/22] prepared by Carmina Wood Morris DPC. A reduced-size copy of the Site Plan is provided at **Exhibit "6"** and a full-size copy is also attached to this Application. The Project Sponsor is simultaneously seeking to modify a Declaration of Restrictions Containing Zoning Conditions Imposed in Connection with a Rezoning Decision. A copy of the Declaration of Restrictions recorded at the Erie County Clerk's Office on February 21, 2019 is provided **at Exhibit "3"** and a draft of the Amended Declaration of Restrictions is provided at **Exhibit "8"**.

The requested rezoning of a small portion of the Project Site from OB to MFR-5 to accommodate the proposed minor modifications to the project layout as depicted on the Site Plan approved by the Planning Board for the residential project at 2350 Sweet Home Road (the "***Project Site***") is consistent with the adopted Bicentennial Comprehensive Plan. The Town of Amherst adopted the Bicentennial Comprehensive Plan in January of 2007 after completing a lengthy planning process that included numerous public meetings and public hearings involving the

Attachment: Z-2016-16D & Z-2017-11B application 042023 (27185 : Z-2016-16D & Z-2017-11B)

Comprehensive Plan Advisory Committee, the Planning Board and the Town Board.[1] In December of 2020, the Town Board most recently adopted amendments to the Bicentennial Comprehensive Plan. The Comprehensive Plan is intended to guide future growth and redevelopment in the Town.

Figure 6 of the Bicentennial Comprehensive Plan is the Conceptual Land Use Plan and the areas in the vicinity of the Project Site is designated as being appropriate for Mixed Residential uses. The Conceptual Land Use Plan is intended to communicate the overall direction and concept of future development in the Town of Amherst. "Mixed Residential" is described on Page 3-30 of the Comprehensive Plan as 4 to 12 units per acre. The Comprehensive Plan indicates that typical locations for the Mixed Residential category include "Areas of transition between commercial uses and lower density single-family neighborhoods, as well as along collector or arterial highways or other areas that are generally unattractive for large lot, single-family development. Other areas of the Town designated for concentrations of Mixed Residential use include underutilized areas near designated activity centers and commercial areas. Examples include areas adjacent to mixed-use centers at UB, near the I-290/I-990 interchange..." It is also important to mention that the Comprehensive Plan recognizes the need for diverse housing options including housing multifamily units.

[1] A copy of the resolution adopted by the Town Board on January 2, 2007 for the purpose of adopting the Bicentennial Comprehensive Plan pursuant to Town Law Section 272-a is included at the beginning of the Comprehensive Plan. This resolution recites the lengthy planning history that incorporated numerous opportunities for public input as well as a coordinated environmental review pursuant to SEQRA that involved the preparation a Generic EIS and the issuance of a Findings Statement.

Attachment: Z-2016-16D & Z-2017-11B application 042023 (27185 : Z-2016-16D & Z-2017-11B)

Question 16(A)(2): Cite all text, map, and/or figures that must be amended to support the proposed zoning at this location and provide detailed suggested amendments.

Response to Question 16(A)(2): The requested rezoning of a small portion of the Project Site from OB to MFR-5 does not require an amendment to the Bicentennial Comprehensive Plan.

Question 16(A)(3): State why the proposed zoning is consistent with intent and objectives (Sec. 1-2-2) of the Zoning Ordinance:

Response to Question 16(A)(3): Section 1-2-1 of the Zoning Code is titled "Purpose" and it states as follows:

> *"The purpose of this Zoning Ordinance and the intent of the legislative authority in its adoption is to promote the environment of the town and its public health, safety, convenience, comfort, prosperity and the general welfare by regulating the use of buildings, other structures and land for residences, open space, public facilities, business, services, industry or other purposes; by regulating and restricting the bulk, height, design, building coverage and location of structures; by regulating and limiting population density; and for the aforesaid purposes, to divide the land within the limits of the town into districts of such number and dimensions generally consistent with the policies of the Comprehensive Plan and to provide procedures for the administration and amendment of said Zoning Ordinance."*

The requested rezoning of a small portion of the Project Site from OB to MFR-5 and the requested modification of the Declaration of Restrictions to accommodate the minor modifications to the approved project layout are consistent with the "Purpose" of the Zoning Code. Section 1-2-2 of the Zoning Code sets forth the objectives of the Zoning Code. This section of the Zoning Code lists thirteen objectives that are discussed below as follows:

A. To protect the character and values of residential, institutional and public uses, business, commercial and manufacturing uses and to insure their orderly and beneficial development;

Response: The residential project is consistent with the objective of protecting the character and value of existing land uses. The proposed rezoning of a small portion of the

Attachment: Z-2016-16D & Z-2017-11B application 042023 (27185 : Z-2016-16D & Z-2017-11B)

Project Site from OB to MFR-5 and the request to modify the Declaration of Restrictions in order to accommodate minor modifications to the approved project layout represents orderly and beneficial development.

B. To provide adequate open spaces for light, air and outdoor uses to include public, common and private open space areas;

Response: The proposed minor modification to the layout of the residential project are not inconsistent with this objective.

C. To prevent overcrowding of land;

Response: The Project Sponsor is not proposing any increase to the density of the approved residential project.

D. To prevent excessive concentration of population and to prevent spare and uncoordinated development;

Response: The Project Sponsor is not proposing any increase to the density of the approved residential project and the minor modifications to the approved project layout represents coordinated development. The minor modifications to the previously approved project layout will require an amendment of the Site Plan previously approved by the Planning Board.

E. To regulate and control the location and spacing of buildings on the lot and in relation to the surrounding property generally consistent with the policies of the Comprehensive Plan.

Response: The requested rezoning of a small portion of the Project Site from OB to MFR-5 and the requested modification of the Declaration of Restrictions to accommodate the minor modifications to the approved project layout are consistent with the policies of the Comprehensive Plan.

F. To protect persons and property from damage and injury due to fire or flood;

Response: The minor modifications to the approved project layout will not increase the likelihood of damage and injury due to fire and flood. The residential buildings will

Attachment: Z-2016-16D & Z-2017-11B application 042023 (27185 : Z-2016-16D & Z-2017-11B)

continue to be constructed in accordance with building permits issued by the Town of Amherst Building Department.

G. To preserve and protect significant natural features and vegetation, thereby preventing ecological damage and visual blight which occur when those features or vegetation are eliminated or substantially altered to serve development purposes only.

Response: There are not significant natural features located on the previously disturbed portion of the Project Site currently being developed.

H. To assure that structure and land use arrangements are aesthetically harmonious with nearby areas and structures.

Response: The development of the Project Site in a manner generally consistent with the updated Site Plan [Drawing C-100] prepared by Carmina Wood Design will be aesthetically harmonious with nearby areas and structures.

I. To regulate the location of buildings and intensity of uses in relation to streets according to plans so as to cause the least interference with and be damaged least by traffic movements and hence result in lessened street congestion and improved public safety.

Response: The minor modifications to the approved project layout do not involve changes to the access from the Project Site from public roadways.

J. To establish zoning patterns that insure economical extensions for sewers, water supply waste disposal and other public utilities, as well as development of recreation, schools and other public facilities;

Response: The Project Site has access to sanitary sewer and water lines as well as necessary public utilities to service the project.

K. To guide the future development of the town so as to being the gradual conformity of land, structures and uses generally consistent with the policies of the Comprehensive Plan.

Response: The minor modifications to the approved project layout are consistent with this objective since the residential project that is currently under construction is consistent with the policies contained in the Comprehensive Plan.

Attachment: Z-2016-16D & Z-2017-11B application 042023 (27185 : Z-2016-16D & Z-2017-11B)

L. To accomplish the specific intents and goals set forth in the introduction to the respective sections.

Response: The minor modifications to the approved project layout are consistent with this objective.

M. To protect the community from visual pollution resulting from the unregulated use of signs and other advertising devices.

Response: The minor modifications to the approved project layout are not inconsistent with this objective.

Question 16(C): Compatibility with the present zoning and conforming uses of nearby property and with the character of the neighborhood:

Response to Question 16(C): The Project Sponsor is seeking to amend the zoning classification of a small portion of the Project Site from OB to MFR-5, which is the zoning classification of the portion of the Project Site currently being developed as a residential project pursuant to the Site Plan approved by the Planning Board.

Question 16(D): Suitability of the subject property for uses permitted by the current versus the proposed district:

Response to Question 16(D): The small portion of the Project Site the Project Sponsor seeks to rezone from OB to MFR-5 is more suitable for uses permitted by the proposed MFR-5 zoning classification than the existing OB zoning classification.

Question 16(E): Whether the proposed change tends to improve the balance of uses, or meets a specific demand in the Town:

Response to Question 16(D): The project has and will continue to improve the balance of uses and to satisfy a specific demand for upscale attached townhome style units for sale in the Town.

AMENDED DECLARATION OF RESTRICTIONS

THIS AMENDED DECLARATION OF RESTRICTIONS ("***Declaration***") is made as of the ___ day of _____, 2023 by **ESSEX HOMES OF WNY, INC.** (hereinafter "***Declarant***") under facts and circumstances summarized by the following recitals:

WHEREAS, the Declarant is the owner of real property consisting of 2350 Sweet Home Road (hereinafter "***2350 Sweet Home Road***" or the "***Project Site***") as more particularly described in the metes and bounds legal description of 2350 Sweet Home Road attached hereto as **Schedule "A"**;

WHEREAS, in December of 2016, RAS Development I LLC submitted an application with the Town of Amherst requesting that the Town Board of the Town of Amherst ("***Town Board***") amend the zoning classification of approximately 7.14 acres of a portion of 2360 Sweet Home Road from Office Building District ("***OB***") to Multifamily Residential District Five ("***MFR-5***");

WHEREAS, in September of 2017, RAS Development I LLC submitted an application with the Town of Amherst requesting that the Town Board of the Town of Amherst ("***Town Board***") amend the zoning classification of 2350 Sweet Home Road from General Business District ("***GB***") to Multifamily Residential District Five ("***MFR-5***");

WHEREAS, during its meeting held on March 19, 2018, the Town Board adopted Resolution No. 2018-241 for the purpose of approving an amendment of the zoning classification of 2350 Sweet Home Road from GB to MFR-5 subject to eighteen (18) conditions as contained in Resolution No. 2018-241;

WHEREAS, during its meeting held on March 19, 2018, the Town Board adopted Resolution No. 2018-242 for the purpose of approving an amendment of the zoning classification of a portion of 2360 Sweet Home Road from OB to MFR-5 subject to eighteen (18) conditions as contained in Resolution No. 2018-242;

WHEREAS, the conditions contained in Resolutions 2018-241 and 2018-242 as adopted by the Town Board on March 19, 2018 are identical;

WHEREAS, pursuant to Condition No. 18 as contained in Resolutions 2018-241 and 2018-242, Conditions No. 1 to 14 as imposed by the Town Board on March 19, 2018 are to be subject to a Declaration of Restrictions recorded at the Erie County Clerk's Office;

WHEREAS, Conditions No. 1 to 14 as contained in Resolutions 2018-241 and 2018-242, Conditions No. 1 to 14 as imposed by the Town Board on March 19, 2018 were as follows:

1. That the 5.2 acres of Permanent Open Space as depicted on the Concept Plan prepared by Carmina Wood Morris DPC dated November 16, 2017 shall not be

Attachment: Z-2016-16D & Z-2017-11B application 042023 (27185 : Z-2016-16D & Z-2017-11B)

developed as any buildings or other above ground structures, and shall remain permanently undeveloped.

2. That the residential development of the project site shall not consist of an apartment complex comprised of rental units but instead shall consist of residential units for sale.

3. That the maximum allowable density of the residential development on the project site shall be 48 units.

4. The residential buildings to be constructed on the project site shall be limited to single-story residential units with second story loft space in the front portion of the buildings such that there shall not be any second story windows provided for the second story loft space on the rear portion of the buildings.

5. That maximum allowable height of any building on the project site as measured from finished grade to the peak of the building shall be 30 ft.

6. That there shall be a maximum of four attached residential units in any residential building on the project site.

7. That the minimum setback of the residential buildings on the project site from the southern boundary and western boundary of the project site shall be 35 feet.

8. That the minimum setback of Building No. 5 as depicted on the Concept Plan prepared by Carmina Wood Morris DPC dated November 16, 2017 from the northern boundary of 574 North Ellicott Creek Road shall be 109 feet.

9. That the minimum setback of Building No. 6 as depicted on the Concept Plan prepared by Carmina Wood Morris DPC dated November 16, 2017 from the southern boundary of the project site shall be 137 feet.

10. That a solid high quality vinyl fence with a natural color (not white) with a minimum height of six feet as measured from finished grade shall be installed along portions of the eastern, western and the southern boundary of the project site as depicted on the Concept Plan prepared by Carmina Wood Morris DPC dated November 16, 2017.

11. That extensive landscaping as required by the High Impact Screening standard as defined in the Town of Amherst Zoning Code shall be provided along the southern side and the portion of the western side of 2360 Sweet Home Road to be developed for residential purposes. The Landscaping Plan to be prepared by a licensed landscape architect during the site plan review stage for the residential project on 2360 Sweet Home Road shall be prepared based on consideration of input received by the Petitioner from the owners of the parcels directly south of the project site at

566, 574, 598 and 620 North Ellicott Creek Road and the owner of the parcel west of the project site at 550 North Ellicott Creek Road.

12. That the Lighting Plan to be prepared during the site plan review stage for the residential project on the project site shall demonstrate that the residential project will not result in any lighting spillover onto the parcels contiguous to the project site utilized for residential purposes at 550, 566, 574, 598 and 620 North Ellicott Creek Road. There shall not be any light poles installed on the project site with a height that exceeds 15 feet.

13. That there shall not be an internal driveway located on the Sweet Home Road frontage of the parcel at 2350 Sweet Home Road that connects to the northern side of the parcel at 2360 Sweet Home Road.

14. That with the exception of a driveway that will only service a two-unit building to be located along the North Ellicott Creek Road frontage that is depicted as Building No. 13 on the Concept Plan prepared by Carmina Wood Morris DPC dated November 16, 2017, there shall not be any driveway or roadway connection from the project site onto North Ellicott Creek Road.

WHEREAS, a metes and bounds legal description of the 5.2 acres of Permanent Open Space referenced above in Condition No. 1, as contained in Resolutions 2018-241 and 2018-242 adopted by the Town Board on March 19, 2018, consisting of a portion of 2360 Sweet Home Road, is attached as **Schedule "B"** (hereinafter **"*Permanent Open Space*"**);

WHEREAS, in July of 2018, RAS Development I LLC filed an Application for relief of Zoning Condition No. 14 as contained in Resolutions 2018-241 and 2018-242 for the purpose of seeking to allow a gated emergency access driveway to be installed connecting 2350 Sweet Home Road and a portion of 2360 Sweet Home to North Ellicott Creek Road;

WHEREAS, during its meeting held on October 1, 2018, the Town Board adopted Resolution No. 2018-1046 for the purpose of approving the requested Relief of Zoning Condition No. 14 as contained in Resolutions 2018-241 and 2018-242 to allow a gated emergency access driveway to be installed connecting to North Ellicott Creek Road subject to six (6) conditions as follows:

1. The gated emergency access connection will not be accessible by the future residents of the project nor the public and will only be accessible by emergency personnel.

2. Pursuant to the Town Code, all property owners within 600 ft. of the project site will receive written notice from the Town of any future proposed amendment of any of the zoning conditions.

3. The amended Zoning Condition No. 14 will be incorporated into the Declaration of Restrictions to be recorded at the Erie County Clerk's Office.

DRAFT

Attachment: Z-2016-16D & Z-2017-11B application 042023 (27185 : Z-2016-16D & Z-2017-11B)

4. That the gated emergency access driveway to North Ellicott Creek Road be paved with a hard surface and not constructed of grass pavers.

5. That the gated emergency access driveway to North Ellicott Creek Road be straightened as much as possible.

6. That the final site plan be fully compliant with fire code.

WHEREAS, on February 21, 2019, a Declaration of Restrictions recorded at the Erie County Clerk's Office at Liber 11341 of Deeds at Page 2501 containing the following sixteen (16) restrictions:

1. That the 5.2 acres of Permanent Open Space as depicted on the Concept Plan prepared by Carmina Wood Morris DPC dated November 16, 2017 and described in the attached Schedule "C" shall not be developed as any buildings or other above ground structures and shall remain permanently undeveloped.

2. That the residential development of the project site shall not consist of an apartment complex comprised of rental units but instead shall consist of residential units for sale.

3. That the maximum allowable density of the residential development on the project site shall be 48 units.

4. The residential buildings to be constructed on the project site shall be limited to single-story residential units with second story loft space in the front portion of the buildings such that there shall not be any second story windows provided for the second story loft space on the rear portion of the buildings.

5. That maximum allowable height of any building on the project site as measured from finished grade to the peak of the building shall be 30 ft.

6. That there shall be a maximum of four attached residential units in any residential building on the project site.

7. That the minimum setback of the residential buildings on the project site from the southern boundary and western boundary of the project site shall be 35 feet.

8. That the minimum setback of Building No. 5 as depicted on the Concept Plan prepared by Carmina Wood Morris DPC dated November 16, 2017 from the northern boundary of 574 North Ellicott Creek Road shall be 109 feet.

9. That the minimum setback of Building No. 6 as depicted on the Concept Plan prepared by Carmina Wood Morris DPC dated November 16, 2017 from the southern boundary of the project site shall be 137 feet.

DRAFT

Attachment: Z-2016-16D & Z-2017-11B application 042023 (27185 : Z-2016-16D & Z-2017-11B)

10. That a solid high quality vinyl fence with a natural color (not white) with a minimum height of six feet as measured from finished grade shall be installed along portions of the eastern, western and the southern boundary of the project site as depicted on the Concept Plan prepared by Carmina Wood Morris DPC dated November 16, 2017.

11. That extensive landscaping as required by the High Impact Screening standard as defined in the Town of Amherst Zoning Code shall be provided along the southern side and the portion of the western side of 2360 Sweet Home Road to be developed for residential purposes. The Landscaping Plan to be prepared by a licensed landscape architect during the site plan review stage for the residential project on 2360 Sweet Home Road shall be prepared based on consideration of input received by the Petitioner from the owners of the parcels directly south of the project site at 566, 574, 598 and 620 North Ellicott Creek Road and the owner of the parcel west of the project site at 550 North Ellicott Creek Road.

12. That the Lighting Plan to be prepared during the site plan review stage for the residential project on the project site shall demonstrate that the residential project will not result in any lighting spillover onto the parcels contiguous to the project site utilized for residential purposes at 550, 566, 574, 598 and 620 North Ellicott Creek Road. There shall not be any light poles installed on the project site with a height that exceeds 15 feet.

13. That there shall not be an internal driveway located on the Sweet Home Road frontage of the parcel at 2350 Sweet Home Road that connects to the northern side of the parcel formerly consisting of 2360 Sweet Home Road.

14. That with the exception of a driveway that will only service a two-unit building to be located along the North Ellicott Creek Road frontage that is depicted as Building No. 13 on the Concept Plan prepared by Carmina Wood Morris DPC dated November 16, 2017 and a gated emergency access only driveway connection to North Ellicott Creek Road, there shall not be any driveway or roadway connection from the project site onto North Ellicott Creek Road.

15. The gated emergency access connection to North Ellicott Creek Road will not be accessible by the future residents of the project nor the public and will only be accessible by emergency personnel.

16. That the gated emergency access driveway to North Ellicott Creek Road be paved with a hard surface and not constructed of grass pavers.

WHEREAS, in January of 2023, the Declarant filed an Application seeking to amend the zoning classification of a portion of 2350 Sweet Home Road consisting of 0.17 acres from Office Building District ("GB") to Multifamily Residential District Five ("MFR-5");

DRAFT

WHEREAS, in January of 2023, the Declarant filed Application for Relief of Zoning Condition imposed by the Town Board on October 18, 2018 as contained in Resolution No. 2018-1046;

WHEREAS, during its meeting held on _____ __, 2023, the Town Board adopted Resolution No. 2023-__ for the purpose of approving an amendment of the zoning classification of a portion of 2350 Sweet Home Road from OB to MFR-5 and Resolution No. 2023-__ for the purpose of approving the requested Relief of Zoning Conditions contained in Resolution No. 2018-1046; subject to sixteen (16) conditions as follows:

NOW, THEREFORE, in exchange for good and valuable consideration the sufficiency of which is acknowledged, the Declarant agrees to restrict the future use of 2350 Sweet Home Road as described in **Schedule "A"** including the Permanent Open Space consisting of a portion of 2360 Sweet Home Road as described in **Schedule "B"**, in accordance with the conditions as set forth in Resolutions No. 2023-___ and 2023-____as adopted by the Town Board on _____ __, 2023 as follows:

1. That the 5.2 acres of Permanent Open Space as depicted on the Site Plan prepared by Carmina Wood Morris dated December 16, 2022 shall not be developed as any buildings or other above ground structures, and shall remain permanently undeveloped.

2. That the residential development of the project site shall not consist of an apartment complex comprised of rental units but instead shall consist of residential units for sale.

3. That the maximum allowable density of the residential development on the project site shall be 48 units.

4. The residential buildings to be constructed on the project site shall be limited to single-story residential units with second story loft space. Second story windows are not permitted on the rear side of second story loft space in Buildings Building Nos. 4, 5, 6, 7 and 8 as depicted on the Site Plan prepared by Carmina Wood Morris dated December 16, 2022.

5. That maximum allowable height of any building on the project site as measured from finished grade to the peak of the building shall be 30 ft.

6. That there shall be a maximum of four attached residential units in any residential building on the project site.

7. That the portions of the residential buildings that include second story loft space shall have a minimum setback of 35 feet from the southern boundary and the western boundary of the Project Site. Notwithstanding the minimum setback language in the preceding sentence, a first floor only sunroom shall be permitted on the rear side of the residential buildings along the southern side of the Project Site

DRAFT

Attachment: Z-2016-16D & Z-2017-11B application 042023 (27185 : Z-2016-16D & Z-2017-11B)

so long as the minimum setback of the first floor sunroom is 22 ft. from the southern boundary of the Project Site and a first floor only sunroom shall be permitted on the rear side of the residential buildings along the western side of the Project Site so long as the minimum setback of the first floor sunroom is 25.97 ft. from the western boundary of the Project Site. Additionally, patios on the rear side of the residential buildings on the southern side of the Project Site shall have a minimum setback of 22 ft. from the southern boundary of the Project Site and patios on the rear side of the residential buildings on the western side of the Project Site shall have a minimum setback of 25.97 ft. from the western boundary of the Project Site.

8. That the minimum setback of Building No. 6 as depicted on the Site Plan prepared by Carmina Wood Morris DPC dated December 16, 2022 from the northern boundary of 574 North Ellicott Creek Road shall be 94 feet.

9. That the minimum setback of Building No. 7 as depicted on the Site Plan prepared by Carmina Wood Morris DPC dated December 16, 2022 from the southern boundary of the project site shall be 137 feet.

10. That a solid high quality vinyl fence with a natural color (not white) with a minimum height of six feet as measured from finished grade shall be installed along portions of the eastern, western and the southern boundary of the project site as depicted on the Site Plan prepared by Carmina Wood Morris DPC dated December 16, 2022.

11. That extensive landscaping as required by the High Impact Screening standard as defined in the Town of Amherst Zoning Code shall be provided along the southern side of the project site and the portion of the western side of the portion of the project site formerly consisting of 2360 Sweet Home Road to be developed for residential purposes in accordance with the Landscape Plan previously approved by the Planning Board.

12. That the lighting to be installed in connection with the residential project shall comply with the Lighting Plan previously approved by the Planning Board demonstrating that the residential project will not result in any lighting spillover onto the parcels contiguous to the project site utilized for residential purposes at 550, 566, 574, 598 and 620 North Ellicott Creek Road. There shall not be any light poles installed on the project site with a height that exceeds 15 feet.

13. That there shall not be an internal driveway located on the Sweet Home Road frontage of the parcel at 2350 Sweet Home Road that connects to the northern side of the parcel formerly consisting of 2360 Sweet Home Road.

14. That with the exception of a driveway that will only service a two-unit building to be located along the North Ellicott Creek Road frontage that is depicted as Building No. 13 on the Site Plan prepared by Carmina Wood Morris DPC dated December 16, 2022 and a gated emergency access only driveway connection to North Ellicott

DRAFT

Re: Request to Rezone 0.17± Acres of Land from OB to MFR-5 [Z-2023-01]
& Request to Amend Declaration of Restrictions [Z-2016-16D & Z-2017-11B]
Location: 2350 & 2360-2372 Sweet Home Road
Applicant/Project Sponsor: Essex Homes of WNY, Inc.
File No. 10065.10

Dear Mr. Howard:

This letter and the enclosed project documentation is being submitted on behalf of Essex Homes of WNY, Inc. ("Project Sponsor") for the purpose of responding to Comment No. 1 as contained in the letters you issued dated March 14, 2023 relative to above referenced pending land use applications. Comment No. 1 stated as follows: "1.Complete the attached revised Town of Amherst Addendum to the EAF."

Enclosed are three (3) copies of the completed Page 5[a] of the Environmental Assessment Form that is applicable to both pending land use applications along with three (3) copies of the Geotechnical Report prepared by Barron & Associates P.C. dated October 11, 2017.

Please feel free to contact me at 510-4338 or via e-mail at shopkins@hsmlegal.com if you have any questions this letter or the enclosed documentation.

Sincerely,

HOPKINS SORGI & MCCARTHY PLLC

TOWN OF AMHERST
State Environmental Quality Review
ENVIRONMENTAL ASSESSMENT FORM
-- ADDENDUM --
Date: March 21, 2023

1. For each applicable category of proposed <u>new</u> structures, including additions to existing structures, provide the following information for all soil types on the project site (*according to Soil Survey of Erie County, NY; Table 11, Building Site Development, pp 294-305):*

Soil Name	Shallow excavations	Dwellings without basements	Dwellings with basements	Small commercial buildings	Local roads and streets
Cosad Loamy Fine Sand	Severe	Severe	Severe	Severe	Moderate
Odessa Silt Loam	Severe	Severe	Severe	Severe	Severe

2. If the Soil survey indicates either "severe" or "moderate" suitability for the proposed types of construction, a geotechnical and hydrological analysis based on one test per 3.5 acres of project area must be provided (per Town Board resolution, 3/17/03, amended 6/16/03).

   X Geotechnical report attached _____ Not applicable

3. Is your property located: On Youngs Road between Dodge and Klein Roads? ☐ Yes ☒ No
   On Wehrle Dr. between Spindrift Dr. and Oakwood Rd? ☐ Yes ☒ No

   If so, the property may be within an area of the Town that is affected by a moratorium on connections to the sanitary sewer system.

4. Are there alternative locations on the site for this project? ☐ Yes ☒ No

5. Location and size of real property owned by petitioner within one (1) mile of subject proposal:
   Not applicable.

6. Are you aware of current or future plans or intentions by others in the Town of Amherst to develop property within 1000± ft. of the present project request: ☐ Yes ☒ No

   Describe _____

   (Potential environmental impacts from adjacent or nearby projects undergoing the approval process will receive a coordinated environmental review to determine cumulative effects on common receivers (e.g. traffic and drainage corridors) and other relevant environmental concerns.)

7. Maximum number of vehicular trips to be generated per peak hour upon completion of project Not applicable.
   Source: _____

8. Will blasting occur during construction? ☐ Yes ☒ No

9. Does the project propose to connect and be tributary to the public sanitary sewer system? ☐ Yes ☒ No

10. Proposed net additional gallons per day (gpd) of sanitary sewer discharge upon completion of project:
    0 average flow 0 peak flow.

    (Average flows of 2,500 gpd or greater will require an Engineer's Report that includes a detailed downstream sewer capacity analysis and the identification of and commitment to required I/I offset work during peak wastewater flow conditions.)

11. Based on the Town's *2011 Reconnaissance Level Survey of Historic Resources,* is your property 'blue-rated' for historic significance? ☐ Yes ☒ No

RE: Preliminary Geotechnical Engineering Report
Proposed Rezoning of Parcel
2350 Sweet Home Road
Town of Amherst, Erie Co., New York 14228

Gentlemen:

This Barron & Associates, P.C. - Buffalo Drilling Company, Inc. (B&A-BDC) letter report presents the findings of the subsurface investigation program and the geotechnical engineering recommendations for the above referenced project. The geographic orientation of the site is illustrated on the U.S. Geologic Survey (USGS) site location map in Figure No. 1. The project site is illustrated in Figure No. 2 and entitled "Test Boring Location Plan". The test boring log is shown in Appendix A. Refer to Appendix B entitled, "Geotechnical Reference Standards", for an explanation of the terminology that is used for soil and rock descriptions.

SITE AND SUBSURFACE CONDITIONS

SITE CONDITIONS: The proposed project site is addressed as 2350 Sweet Home Road in the Town of Amherst, New York and includes an existing single-story building, large asphalt parking lot and entrance roadway addressed. The site topography is relatively level.

PREDOMINATE SUBSURFACE CONDITIONS: A synopsis of the subsurface fill, soil, bedrock and groundwater conditions is as follows:

- Asphalt Pavement: At the boring location a thin two-inch-thick layer of asphalt exists at the ground surface.
- Random Fill Materials: Cohesive fill material was encountered and extends a total depth of four feet below ground surface. This fill consists primarily of silty clay with varying amounts of fine to course sand and gravel. This moderately plastic fill is noted to be in a moist state.
- Organic Materials: No buried topsoil or peat layers were noted to be encountered within the natural soil layers. Organic materials are unacceptable for foundation and load bearing purposes.
- Naturally Deposited Soils: The natural soil deposits in this area of the Town of Amherst are predominately composed of alluvial silty sand and lacustrine silty clay that mantles cohesive glacial till. Beneath the fill, a two-foot-thick layer of silty sand exists in a medium dense and moist state. Beneath the silty sand, lacustrine silty clay exists and extends approximately 30 feet below existing ground surface. This moderately plastic soil ranges from moist and very stiff within the upper portions of the unit to soft and wet below a depth of 14 feet. Based upon regional geology and nearby test borings, hard cohesive glacial till is expected to within close proximity to the bottom of the test boring.
- Bedrock: Auger refusal, generally inferred to be the top of competent bedrock, was not encountered. Based upon our experience and knowledge of regional geology bedrock is expected to be the Camillus Shale Formation.

Attachment: Z-2016-16D & Z-2017-11B application 042023 (27185 : Z-2016-16D & Z-2017-11B)

- Groundwater Measurements: At the completion of drilling, groundwater was not encountered. The static groundwater level is believed to be below the assumed bearing elevations and no other severe groundwater condition was encountered during the subsurface exploration.

SEISMIC/EARTHQUAKE CONSIDERATIONS: For the given site conditions, the most applicable site definition is Site Class E, as listed in Table 1615.1.1 and Table 1615.1.5 of the Building Code of New York State, © 2010. The design spectral response acceleration parameters S_{DS}, at 0.2 seconds, and S_{D1}, at one second, are 0.37g and 0.12g (g = 32.2 feet/sec^2), respectively.

FOUNDATION AND CONSTRUCTION RECOMMENDATIONS

BUILDING(S): The proposed site development, top of finish first floor elevations and maximum design loads are not known at the time of this preliminary report.

FOOTINGS: Due to the presence of random fill materials, exterior and interior footings are recommended to be placed a minimum of four feet or lower below final grade. The frost depth for Amherst, New York is three and one-half feet. All footings for proposed buildings are recommended to be designed at/near the same contact pressure.

The footings should bear directly on the approved medium dense or better natural inorganic silty sand or on a thoroughly compacted (i.e., 95 percent minimum of ASTM D1557 maximum dry density) select/approved granular fill or other approved fill (i.e., fill used for a raised subgrade) section that extends to the approved stiff or better natural inorganic soil. Refer to Appendix D entitled "General Earthwork Specification", for definition of fill types and gradations, recommended minimum compaction requirements for various site developments, and placement and compaction methods.

The maximum net allowable bearing capacity for continuous strip and spread footings is preliminarily recommended not to exceed 2,000 pounds per square foot (psf) of footing area on approved natural soils or compacted select granular fill. Total and differential settlements of less than one inch and three-fourths of an inch, respectively, may be expected.

FLOOR SLABS: Prior to fill placement, the exposed subgrade surface would be thoroughly compacted and proofrolled. Typically, any encountered soft/medium stiff soils/fills would be removed for subsequent replacement with a select or approved compacted (i.e., minimum 92 percent of the maximum dry density from ASTM D1557) granular fill. If suitable for reuse on-site, the in-place or excavated existing fills/natural soft/medium stiff soils would be conditioned (i.e., sorted, dried, blended) and thoroughly compacted. Where required to raise the subgrade, an approved soil/fill will be placed and thoroughly compacted in thin lifts.

A geotextile fabric that separates the subgrade or raised subgrade and the select granular base layer is recommended. The use of a thin gravel cushion, as a capillary break, or a thin sand cushion over a vapor barrier that is placed beneath the concrete slabs are at the discretion of the design architect/engineer or as required by local code.

Above the approved subgrade, a minimum eight-inch thick select granular fill (i.e., number two crusher run stone or equal) layer is preliminarily recommended as the base course for a concrete floor slabs. The recommended subgrade modulus at the top of the base layer for a concrete floor slab bearing on a thoroughly compacted (i.e., minimum 95 percent compaction) base layer and prepared soil/fill subgrade (i.e., minimum 92 percent compaction) is recommended not to exceed 150 pounds per cubic inch with a Poisson Ratio of 0.40. Isolation of the floor slabs from the foundations-piers-columns and walls appear to be warranted.

Attachment: Z-2016-16D & Z-2017-11B application 042023 (27185 : Z-2016-16D & Z-2017-11B)

PAVEMENT: It is preliminarily recommended that the approved subgrade surface is adequately graded and/or underdrains are installed to prevent water accumulation. Typically, on an approved subgrade surface (i.e., minimum 92 percent compaction), a minimum three-inch asphalt thickness over a minimum eight-inch thick thoroughly compacted (i.e., minimum 95 percent compaction) select granular layer, as the base course, are recommended for lightly traveled roadway and parking areas (standard duty section). Geotextile filter and strength fabric, on cohesive/fine-grained soil subgrades, and a minimum four-inch asphalt thickness over a minimum 12-inch thick thoroughly compacted base course are recommended for all truck routes and heavily traveled roadways (heavy duty section).

LIMITATIONS: This report is based on the information that is provided by project representatives and the subsurface conditions that were encountered at the test boring locations. Due to the nature of the investigation method, additional test borings and/or test pit excavations will provide a greater level of delineation of the subsurface soil/fill/rock conditions than can be defined by the single test boring data alone. As detailed in Appendix E "Limitations, modification regarding proposed building/structure locations and other site developments can result in changes to the provided recommendations.

Thank you for the opportunity to assist on this project. If questions should arise, please call either of the undersigned at your earliest convenience.

Very truly yours,
BARRON & ASSOCIATES, INC.

APPENDIX B

GEOTECHNICAL REFERENCE STANDARDS

Attachment: Z-2016-16D & Z-2017-11B application 042023 (27185 : Z-2016-16D & Z-2017-11B)

GEOTECHNICAL REFERENCE STANDARDS
SUMMARY OF LOGGING TECHNIQUES

Depth (ft.)	Blows per .5 ft.	Sample No.	N	% REC (RQD)	SOIL AND ROCK DESCRIPTION	REMARKS

Depth- The depth column provides the verticle scale of the boring log in feet below ground surface.

The number of blows obtained from each of the 0.5 ft. intervals of sampler penetration.

NOTE: WR represents the static weight of drill rods. WH represents the static weight of rods and hammer.

Sample Identification Number- Disturbed samples are identified with "S" preceding the sample number. Undisturbed samples (shelby tube) samples are identified with "U" preceding the sample number. Rock core samples are identified with "C" preceding the core run.

% Recovery- The length of sample recovered divided by the total length sampled. The result is numerically expressed as percent.

(RQD)- The "Rock Quality Designation". The total length of pieces>4 inches divided by the total length of core run.

N-value- The Standard Penetration Test N-value, as specified by ASTM D1586 is defined as the number of blows required by a 140-pound hammer falling 30 inches each blow to drive a 2 inch outside diameter split spoon sampler 12 inches.

TERMINOLOGY USED FOR SOIL DESCRIPTION

Density Description of Granular Soil

Number of Blows per ft., N.	Relative Density
0-4	Very loose
4-10	Loose
10-30	Medium
30-50	Dense
Over 50	Very dense

Consistency Description of Cohesive Soil

Number of Blows per ft., N.	Consistency
Below 2	Very soft
2-4	Soft
4-8	Medium
8-15	Stiff
15-30	Very stiff
Over 30	Hard

Grain Size

Boulder - greater than 12 inch diameter
Cobble - passing 12 inch, retained on 3 inch
Gravel - passing 3 inch, retained on No. 4 sieve
Sand - Coarse - passing No. 4 sieve, retained on No. 10 sieve
Medium - passing No. 10 sieve, retained on No. 40 sieve
Fine - passing No. 40 sieve, retained on No. 200 sieve
Silt - 0.074 mm to 0.005 mm
Clay - smaller than 0.005 mm

Description of Percentage or Proportions Used in Soil Sample Classification

Trace	0-10%
Little	10-20%
Some	20-35%
And	35-50%

Abbreviations Used In Soil Sample Classification

f - fine	v - very
m - medium	gr - gray
c - coarse	bn - brown
f/m - fine to medium	yel - yellow
f/c - fine to coarse	sl - slight
tr - trace	

Plasticity

Non-plastic - A 1/8 inch thread cannot be rolled at any water content.
Slight plasticity - The thread can barely be rolled.
Moderate Plasticity - Thread is easy to roll and little time is required to reach plastic limit.
Plastic - Considerable time is required to reach plastic limit. Thread can be re-rolled several times after reaching the plastic limit.

Moisture

Dry - Absence of moisture, dusty, dry to the touch.
Moist - Small quantity of moisture. Soil usually above groundwater level.
Wet - Moisture noticeable to the touch. Soil may be below groundwater level.
Saturated - Visible free water, usually soil is below groundwater level.

TERMINOLOGY USED FOR ROCK DESCRIPTION

Bedding

Parting	Less than 0.02 ft.
Band	0.02 to 0.2 ft.
Thin bed	0.2 to 0.5 ft.
Medium bed	0.5 to 1.0 ft.
Thick bed	1.0 to 2.0 ft.
Massive	Over 2.0 ft.

Hardness

Very Soft or Plastic - Can be indented w/ thumb
Soft - Can be scratched with fingernail
Moderately Hard - Can be scratched easily with knife; cannot be scratched with fingernail
Hard - Difficulty to scratch with knife
Very hard - Cannot be scratched with knife

Crystallinity or Texture

Dense - Crystals are so small they cannot be distinguished with the naked eye.

Very Fine Crystalline - Crystals barely discernible with the naked eye.

Crystalline - Crystals are medium size -up to 1/8 inch diameter.

Very Coarsely Crystalline - Crystals larger than 1/8 inch diameter.

Voids

Pourous - Smaller than a pinhead. Their presence is indicated by the degree of absorbency.
Pitted - Pinhead size to 1/4 inch. If only thin walls separate the individual pits, the core may be described as honeycombed.
Vug - 1/4 inch to the diameter of the core. The upper limit will vary with core size.
Cavity - Larger than the diameter of the core.

Remarks - Denotes exact depth of recovery and general documentation of drilling efforts.

Notes - Description and classification are based on visual inspection of samples and boring operations.

The stratum lines shown on the boring logs are based upon interpretation and may not represent precise subsurface conditions.

Water level readings have been made in the drill holes at times and under conditions stated on the boring logs. Fluctuations in the water level may occur due to other factors than those present at the time measurements taken.

Attachment: Z-2016-16D & Z-2017-11B application 042023 (27185 : Z-2016-16D & Z-2017-11B)

SOIL CLASSIFICATION CHART
(Unified Soil Classification System)

MAJOR DIVISIONS			GRAPH SYMBOL	LETTER SYMBOL	TYPICAL DESCRIPTIONS
COARSE-GRAINED SOILS More than 50% of material larger than No. 200 sieve	GRAVELS- More than 50% of coarse fraction larger than No. 4 sieve	Clean Gravels (little or no fines)		GW	Well-graded gravels, gravel-sand mixtures, little or no fines
				GP	Poorly-graded gravels, gravel-sand mixtures, little or no fines
		Gravels with appreciable amounts of fines		GM	Silty gravels, gravel-sand-silt mixtures
				GC	Clayey gravels, gravel-sand-clay mixtures
	SANDS- Less than 50% of coarse fraction larger than No. 4 sieve	Clean sands (little or no fines)		SW	Well-graded sands, gravelly sands, little or no fines
				SP	Poorly-graded sands, gravelly sands, little or no fines
		Sand with appreciable amounts of fines		SM	Silty sands, silt-sand mixtures
				SC	Clayey sands, sand-clay mixtures
FINE-GRAINED SOILS Less than 50% of material larger than No. 200 sieve	SILTS AND CLAYS Low plasticity Liquid Limit < 50%			ML	Inorganic silts and very fine sands, rock flour, silty or clayey fine sands or clayey silts with slight plasticity
				CL	Inorganic clays of low to medium plasticity, gravelly clays, sandy clays, silty clays, lean clays
				OL	Organic silts and organic silty clays of low plasticity
	SILTS AND CLAYS High plasticity Liquid limit > 50%			MH	Inorganic silts, micaceous or diatomaceous fine sand or silty soils
				CH	Inorganic clays of high plasticity, fat clays
				OH	Organic clays of medium to high plasticity, organic silts
	Highly Organic Soils			Pt	Peat, humus, swamp soils with organic contents
	Miscellaneous Fill			FILL	Miscellaneous fill may belong in any division but is identified as FILL

B&A JOB NO.: 17-586

DATE: 10/11/17

LATERAL EARTH PRESSURE ON GENERIC BLOCK FOUNDATIONS FOR SIGNS, FREE-STANDING RETAINING WALLS, OR BELOW GRADE/BASEMENT/TANK/POOL RETAINING WALLS (Less Than 20 Feet High)

a) Porous filter media, in contact with the basement/below grade foundation wall or retaining walls, protects and is in contact with a minimum 4 inch diameter perforated drainage pipes at the footing/base of the foundation/structural wall (exterior backfill side and interior basement side) and/or weep pipes through the wall, as needed and as applicable.

b) Where recommended, a geotextile filter fabric will protect the gravel filter media from the earth backfill. Overlap unsewn seams as per the manufacturer's recommendations.

c) Waterproof earth side of wall, as is customarily provided in practice.

d) Drainage pipes are connected to an appropriately designed collector pipe, conveyance, and/or sump pump system as is applicable for the intended purpose of the wall and as customarily provided/installed in practice.

e) For potential groundwater table conditions above the top of the basement slab-on-grade condition, install continuous waterstops (with no joints in stop) at wall and floor construction joints, as is customarily provided in practice. Interior intermediate drainage pipes beneath the slab, that are spaced on-center and in both directions, do appear to be needed.

f) Assume a uniformly graded, clean coarse sand or sandy gravel backfills:

* equivalent N-value in a dense state: $(N_1)_{60}$ = 40 blows/foot
* friction angle: ϕ' = 38 degrees {Teng, pg. 12}
* average in-place densities: moist - γ_m = 120 pcf
  saturated - γ_{sat} = 132 pcf submerged - $\gamma' = (\gamma_{sat} - \gamma_w)$ = 70 pcf

g) Assume at base of wall/footing, coefficient of friction against sliding (f_s) at base of wall (Refer to Teng, pg. 320-1):

$f_s = \tan(0.58 \times \phi') = 0.40$ (AREA silty soil to silty coarse-grained soil)

h) Use equivalent fluid pressure design approach {Hough, pg. 249 and NAVFAC pg. 7-10-9}:

* at rest pressure coefficient - $K_0 = 1 - \sin(\phi') = 0.38$
* effective lateral pressure of soil - $\gamma'_l = K_o \times \gamma' = 26.6$ pcf
* hydrostatic pressure - $\gamma_w = 62.4$ pcf
* equivalent fluid pressure with water level at the top of the grade at the wall - $\gamma_{eo} = \gamma'_l + \gamma_w = 89$ pcf (say 90 pcf)
* equivalent fluid pressure with compaction induced lateral stress increase (W&F, pg 409) $\gamma_{eo} = 2 \times K_o \times \gamma_m = 91$ pcf (say 90 pcf)
* active pressure case - $K_a = [1 - \sin(\phi')] / [1 + \sin(\phi')] = 0.24$
  $\gamma_{ea} = K_a \times \gamma_m = 29$ pcf (say 30 pcf)
* passive pressure case - $K_p = [1 + \sin(\phi')] / [1 - \sin(\phi')] = 4.2$
  $\gamma_{ep} = K_p \times \gamma_m = 504$ pcf (say 330 pcf with a F.S. = 1.5)

		Thoroughly Compacted ⇒⇒	Uniformly Graded & Clean Coarse Sand or Sandy Gravel Fill	Non-Plastic Silty Sand or Sandy Silt Fill	
USE:	Earth Pressure Coefficient	Static Active =	0.24	0.33	
		Static At-Rest =	0.76	1.00	
		Static Passive =	2.80	2.00	(with F.S. = 1.5)
		Static Passive =	4.20	3.00	(with F.S. = 1.0)
USE:	Equivalent Fluid Pressure	Static Active =	30 pcf		
		Static At-Rest =	90 pcf (for rigid walls)		
		Static Passive =	330 pcf (with F.S. = 1.5)	[500 pcf with (with F.S. = 1.0)]	

[For earthquakes, structural engineer may elect to use the above Static Passive case instead of the below Earthquake Lateral Load for Non-Yielding Wall movement into the soil backfill.]

USE: Simplified Model for Earthquake Lateral Load/Ft. Wall Length @ 0.6 H_{bw} above base. Loads for Non-Yielding Wall. H_{bw} = Earth Height Behind Wall (feet)

Reduce load by 33% for Yielding Wall (active case) = (6.8 psf / foot) x H_{bw}^2 (NYS, S_{ds} = 0.25 g)

(γ_m = 120 pcf for S_{ds} value. Add to Static At Rest/ Active Pressure/Load for unsaturated backfill case) = (13.5 psf / foot) x H_{bw}^2 (NYS, S_{ds} = 0.50 g)

= (17.5 psf / foot) x H_{bw}^2 (NEern NYS, $S_{ds} \leq 0.65$ g)

[Above for Site Class C to E soils. Interpolate for other S_{ds} values.
Use 1.75 x values for walls on Class B/A rock or on rigid foundation base. (FEMA NEHRP Guidelines)]

Saturated/Liquified Soil During Earthquake = 132 pcf
(Equivalent Fluid Pressure. Add to inertial hydrodynamic pressure, not presented here.)

{For looser/denser backfills, adjust above pressures by the ratio = new density / 120 pcf or / 132 pcf (for saturated case)}

USE:	Coefficient of Friction Against Sliding (f_s) =	0.45	(on compacted NYSDOT Item #304.12 or #304.14 gravels)
	(use lowest f_s with no underlying weaker layers) =	0.35	(on compacted granular soil & non-plastic silt)
	=	0.20	(slab-on-grade on polyethylene on granular fill)
	[with a F.S. = 1.0] =	0.60/0.50	(on clean, rough, & sound bedrock/smooth bedrock)
	Min. Factor of Safety Against Sliding =	1.5	*[Rev.9-30-09]*

APPENDIX D

GENERAL EARTHWORK SPECIFICATION

Barron & Associates, P.C.
GENERAL EARTHWORK SPECIFICATION

PART 1 GENERAL

1.1 SITE AND SUBSURFACE CONDITIONS

1.1.1 Overview

This specification is included as a courtesy to the clients of Barron & Associates, P.C, and addresses earthwork site preparation. Additions and modifications are necessary to create a job-specific specification. This specification may serve as a basis for the development for a technical specification under Division 2, *Site Work*.

1.1.2 Site Conditions

The site-specific conditions are described under separate cover or may be available from the OWNER.

1.1.3 Subsurface Conditions

The site-specific subsurface conditions are described under separate cover or may be available from the OWNER.

1.2 REFERENCES

American Standard for Testing and Measurement (ASTM):

ASTM C136	Method for Sieve Analysis of Fine and Coarse Aggregates
ASTM C2922	Density for Soil and Soil-Aggregate in Place by Nuclear Methods
ASTM D422	Test Method for Particle-Size Analysis of Soils
ASTM D1140	Amount of Material in Soils Finer Than the No. 200 Sieve
ASTM D1557	Laboratory Compaction Characteristics of Soil Using Modified Effort (56,000 ft-lb/ft^3)
ASTM D2216	Test Method for Laboratory Determination of Water (Moisture) Content of Soil and Rock
ASTM D2487	1990 Classification of Soils for Engineering Purposes
ASTM D4318	Test Method for Liquid Limit, Plastic Limit, and Plasticity Index of Soils.

1.3 DEFINITIONS

1.3.1 Unacceptable Material

Soil material containing debris, wood, scrap material, vegetation, refuse, soft unsound particles, and other organic, frozen, deleterious, or objectionable materials. Contaminated soils shall be properly documented and removed or remediated on site. If necessary, remediation procedure will be defined by the OWNER.

1.3.2 Unsuitable Material

Brown, organic topsoil and underlying soft pockets of organic silt or wet, reworked silty clay.

1.3.3 Ordinary Fill

Friable soil containing no stone greater than two-thirds loose lift thickness and no unacceptable or unsuitable materials. In general, existing random fill is expected to be acceptable for reuse as ordinary fill given proper sorting, blending, drying, and controlled placement methods.

Attachment: Z-2016-16D & Z-2017-11B application 042023 (27185 : Z-2016-16D & Z-2017-11B)

1.3.4 Granular Fill

Ordinary fill meeting the designation of ASTM D2487 classification of GW with a maximum of 10 percent by weight passing ASTM D1140, No. 200 sieve.

1.3.5 Select Granular Fill

Clean, uncoated soil which contains no unacceptable materials and conforms to the gradation requirements defined in Table A: Select Granular Fill.

Table A: Select Granular Fill	
Sieve Size	Percent Finer by Weight
2/3 of the loose lift thickness	100
No. 10	30 - 95
No. 40	10 - 70
No. 200	0 - 15

1.3.6 Sand and Gravel

Clean, hard, durable, uncoated particle of sand and gravel, free from lumps of clay, containing no unacceptable matter, and conforming to gradation requirements of *Table B : Sand and Gravel*

Table B: Sand and Gravel	
Sieve	Percent Finer by Weight
*	100
No. 4	50 - 85
No. 10	--
No. 40	10 - 35
No. 100	--
No. 200	0 - 8

* Job-Specific. To be determined by the ENGINEER

1.3.7 Crushed Stone

Clean, durable, sharp-angled fragments of rock or crushed gravel stone of uniform quality, containing no unacceptable matter, free from coatings, and conforming to gradation requirements of *Table C: Crushed Stone*

Table C: Crushed Stone		
	Percent Passing	
Sieve Size	¾-inch Stone	1 ¼-inch Stone
1 ½-inch	__	100
1 ¼-inch	__	85-100
1- inch	100	__
¾-inch	90-100	10-40
5/8-inch	__	__
½-inch	10-50	0-8
3/8-inch	0-20	__
#4	0-5	__

Attachment: Z-2016-16D & Z-2017-11B application 042023 (27185 : Z-2016-16D & Z-2017-11B)

1.3.8 Flowable Fill

Also known as Controlled Low Strength Material – Controlled Density Fill (CLSM-CDF), this material is available under a variety of producer names (e.g., K-Krete©, M-Crete, Flash Fill©, Flowable Mortar, Unshrinkable Fill, etc.). This non-settling backfill mixture is most commonly used for its flowable characteristics, its support strength under traffic loads, and its removability at a later date. The material may be produced on-site or off-site. In either case, the producer of such materials and the product must meet certain certification criteria. Such information is beyond the scope of this specification and will be considered on a site-specific basis.

Flowable fill may be acceptable for use as a backfill for utility trenches of other low-lying areas which require a compacted granular fill. Its use and warranty of performance is left to the CONTRACTOR in such applications.

The use of flowable fill under load-bearing structural components in place of properly placed and compacted granular fill is NOT common and is questionable. The localized use of such material may have profound affects on the performance of a foundation system. Site-specific conditions and the extent of anticipated use of flowable fill must be examined by geotechnical engineer. Cost of such consultation shall be borne by the CONTRACTOR unless specifically directed by the OWNER to seek such consultation. Without such consultation, warranty of performance for such use is left to the CONTRACTOR.

1.4 SUBMITTALS

The following submittals shall be provided in accordance with approved submittals procedures.

1. Fill Source: Provide name and source locations of fill material.

2. Field Test Reports: Field tests will be performed by OWNER's Representative as needed. CONTRACTOR may be required to perform such tests on proposed off-site fill materials.
a. Fill material grain size analyses per ASTM C136, D422, D1140, D2487
b. Moisture/Density test results per ASTM D2216
c. Liquid limit, plastic limit, and plasticity index per ASTM D4318
d. Compaction/Density test results per ASTM C2922 and D1557

3. Sample: Geotextile fabric

PART 2 PRODUCTS

Geotextile Fabric: Mirafi 600X or equal. (Also referred to as synthetic fabric).

PART 3 EXECUTION

3.1 PROTECTION

3.1.1 General

Manner of excavation shall minimize disturbance of underlying natural ground. If deemed necessary by the Engineer, alter construction procedures to reduce subgrade disturbance. Excavate areas which have been excessively disturbed to firm ground and backfill with properly compacted granular fill.

3.1.2 Roads and Walks

Keep roads and walks free of dirt and debris at all times.

Attachment: Z-2016-16D & Z-2017-11B application 042023 (27185 : Z-2016-16D & Z-2017-11B)

3.1.3 Trees, Shrubs, and Existing Facilities

Protect from any damage all vegetation and facilities identified to remain.

3.1.4 Utility Lines

Locate all utilities within the area of disturbance prior to the start of work. Show locations on initial plans. Protect utility lines from damage. Notify the ENGINEER immediately of damage to or an encounter with an unknown utility. Damage to utility lines are to be repaired by the CONTRACTOR at no additional cost. The CONTRACTOR shall have underground utility owners stake out utility locations prior to the start of clearing and excavation operations.

3.2 VERIFICATION OF CONDITIONS/PROOF-ROLLING

Prior to placement of the initial layer of fill over the natural ground, proof-roll the exposed natural ground above the groundwater table elevation by making two passes with a fully-loaded ten-wheel truck. Excavate unstable areas detected by this process and replace with compacted granular fill.

3.3 PREPARATION

3.3.1 Surface Preparation

Within the site limits indicated on the drawings, excavate all unsuitable material to firm natural ground in the manner specified herein. Follow a construction procedure which permits visual identification of firm natural ground. In the even that groundwater is encountered, the ENGINEER may require that the size of the open excavation be limited to that which can be handled by open pumping to allow visual inspection of the excavation bottom and the performance of backfill operations to be conducted in a dry state.

Excavation of unsuitable material shall be limited to the greater of the following:

- A distance of 5 feet beyond building lines or
- The area defined by a one-horizontal to one-vertical line sloping down from the outside bottom edge of exterior footings to firm natural ground.

3.4 PLACEMENT AND COMPACTION

3.4.1 General

Place fill in accordance with *Table D: Compaction Alternatives*. These alternatives are provided as minimum compaction
standards only and in no way relieve the CONTRACTOR of his obligation to achieve any specified degree of compaction by whatever means may be necessary.

Grade to provide positive drainage and a smooth surface which will readily shed water. To the extent practicable, compact each layer to the specified density on the same day placed. Place fill in horizontal layers. Where horizontal layers meet a natural slope, key layer into slope by cutting a bench.

Fill that is too wet for proper compaction: Disc, harrow, or otherwise dry to proper moisture content for compaction to the required density.

Fill that is too dry for proper compaction: Uniformly apply water over the surface of the loose layer in sufficient quantity to allow compaction to the required density.

Attachment: Z-2016-16D & Z-2017-11B application 042023 (27185 : Z-2016-16D & Z-2017-11B)

Table D: Compaction Alternatives					
Compaction Method	Max. Stone Size	Maximum Loose Lift Thickness (inches)		Maximum Number of Passes	
		Below Structure and Pavements	Less Critical Areas	Below Structure and Pavements	Less Critical Areas
Hand operated vibratory plate of light roller in confined areas	3	4	4	4	4
Hand operated vibratory drum rollers weighing at least 1,000 pounds in confined areas	4	6	8	4	4
Loaded 10-wheel truck or D-8 crawler	6	10	12	4	2
Light vibratory drum roller; Min. weight at drum 8,000lbs; Min. dynamic force 10,000lbs.	8	12	12	6	2
Minimum vibratory drum; Min. weight at drum 10,000lbs; Min. dynamic force 20,000lbs.	8	18	18	6	4

3.4.2 Dewatering

Provide adequate pumping and drainage facilities to keep excavated areas sufficiently dry of groundwater and surface run-off. Dewatering shall avoid adversely affection construction procedures or causing excessive disturbance of underlying natural ground. Drain all pumped water in such a manner as to avoid damage to adjacent property.

If requested by the ENGINEER, place a 6-inch to 12-inch layer of sand and gravel or crushed stone over the natural underlying soil to stabilize area which have been disturbed due to groundwater seepage pressures and to expedite dewatering operations. Particular attention shall be given areas under proposed foundations.

3.5 FIELD QUALITY CONTROL

3.5.1 Compaction Requirements

Allow the ENGINEER sufficient time to make necessary observations and tests. Base the degree of compaction on maximum dry density as determined by ASTM D1557. The minimum degree of compaction for placed fill shall be as indicated *in Table E: Compaction Requirements.*

Table E: Compaction Requirements	
Area	Minimum Degree of Compaction (%)
Below foundation	95
Pavement and building subbase and base courses	95
Below building slab base course and above bottom of foundation	92
Below pavement subbase and base courses	90
Trench backfill outside of building	90
Trench backfill inside of building	Refer to one of the above-listed categories
Ordinary fill within 5 feet of grade	90
Vegetated areas below 5 feet of grade	85

3.5.2 Testing

Site work should be monitored and tested by geotechnical ENGINEER or his representative and in accordance with requirements of the design team to assure compliance with earthwork and foundation construction specifications.

Attachment: Z-2016-16D & Z-2017-11B application 042023 (27185 : Z-2016-16D & Z-2017-11B)

The owner will retain a geotechnical ENGINEER or his representative to perform on-site observations and testing during this phase of construction operations. The geotechnical ENGINEER or his representative will:

- Observe excavation and dewatering of building and controlled fill areas;
- Observe backfill and compaction within building and controlled fill areas;
- Laboratory test and analyze fill material; and
- Observe construction – and performing water content, gradation, and compaction tests.

On a timely basis, the CONTRACTOR will receive copies of test results submitted to the OWNER. In addition, during construction the geotechnical ENGINEER will advise the OWNER and CONTRACTOR in writing of conditions which fail to conform to the Contract Documents. The CONTRACTOR shall take immediate action to remedy indicated deficiencies.

The geotechnical ENGINEER or his representative will not supervise or direct the actual work of the CONTRACTOR or employees and representatives of the CONTRACTOR. The presence of, observations by, and testing performed by the geotechnical ENGINEER or his representatives shall not excuse the CONTRACTOR from defects discovered in the work.

APPENDIX E

LIMITATIONS

Attachment: Z-2016-16D & Z-2017-11B application 042023 (27185 : Z-2016-16D & Z-2017-11B)

LIMITATIONS

1. This report is based on the data that was obtained from the subsurface explorations and on the information submitted to the geotechnical engineer. A geotechnical engineer, who is experienced in foundation construction and earthwork, should be engaged to review the final design and specifications in order to determine whether any change in concept may have any effect on the validity of the conclusions presented herein, and whether these conclusions have, in fact, been implemented in the design and specifications.

2. The subsurface conditions, including thickness, between the exploration locations are approximate and simplified representations of the strata and transitions. There is the possibility that variations in soil and rock conditions and boundaries will be encountered during construction. In order to permit correlation between the exploratory soil data and the actual soil conditions encountered during construction and so as to assess conformance with the plans and specifications as originally contemplated, it is recommended that a geotechnical engineer, who is experienced in foundation construction and earthwork monitoring, should be retained to perform continuous construction review during the site preparation and foundation construction operations.

3. The subsurface exploration logs and subsurface conditions may aid in estimating material quality and quantities, such as topsoil/organic matter, fills, natural soils, and rock, but are not to be relied upon as the exclusive means for bid preparation purposes. It is the responsibility of the contractor to perform any additional site examinations and explorations and to prepare an accurate bid.

4. Disclaimers:

   a. In the event that any changes in the nature, design or location of the structure are planned, the conclusions that are contained in this report shall not be considered valid unless the changes are reviewed and the conclusions of this report are modified or verified in writing.

   b. The geotechnical engineering report has been prepared for this project by Barron & Associates, P.C. This report is for assistance in design only and is not a sufficient basis on which to prepare an accurate bid.

   c. This report has been prepared for the exclusive use of RAS Development Company, LLC of East Amherst, New York, their client and their designated design representatives, for specific application to the rezoning of a parcel at 2350 Sweet Home Road in the Town of Amherst, New York and in accordance with generally accepted geotechnical engineering practice. No other warranty, expressed or implied, is made.

Attachment: Z-2016-16D & Z-2017-11B application 042023 (27185 : Z-2016-16D & Z-2017-11B)

Scale 1" = 40' Tax No. 40.12-1-13

Attachment: Z-2016-16D & Z-2017-11B drawing 042023 (27185 : Z-2016-16D & Z-2017-11B)

TOWN OF AMHERST
PLANNING BOARD
ZONING RESOLUTION – RELIEF OF CONDITIONS
Z-2016-16D & Z-2017-11B

PETITIONER

Essex Homes of WNY
c/o Sean Hopkins, Esq.
Hopkins Sorgi & McCarthy
5500 Main Street, Suite 343
Williamsville, NY 14221

PROPERTY LOCATION

2350 & 2360 Sweet Home Road

WHEREAS the Town of Amherst Planning Board on Thursday, April 20, 2023 held a public hearing on the proposed amendments to previously impose conditions of a rezoning request to amend conditions relating to building setbacks and the provisions against second story windows, and

WHEREAS the Planning Board has reviewed plans and other materials regarding the rezoning proposal, and

WHEREAS the materials and plans have been referred to the Town's various review agencies, and

WHEREAS in accordance with Section 8-3-5 of the Zoning Ordinance the Planning Board finds that:

A. The proposed zoning and development plan is generally consistent with the policies of the Comprehensive Plan and the Zoning Ordinance. The proposal is consistent with the Conceptual Land Use Plan which shows commercial office/mixed residential use in this area of the Town.

B. There are adequate services and utilities available or proposed to be made available in the construction of the development.

C. The proposal is not compatible with the present zoning and conforming uses of nearby property and with the character of the neighborhood.

D. The subject property is suitable for uses permitted by the current district.

E. The proposed changes do not tend to improve the balance of uses, or meet a specific demand in the Town.

F. Review by the US Army Corps of Engineers under Section 404 of the Clean Water Act may be waived as the parcel is developed and the proposed changes to previously imposed conditions of rezoning will not impact any potential federally jurisdictional wetland area.

Attachment: Z-2016-16D_&_Z-2017-11B_signed_resolution_042023 (27185 : Z-2016-16D & Z-2017-11B)

TOWN OF AMHERST
PLANNING BOARD
ZONING RESOLUTION – RELIEF OF CONDITIONS
Z-2016-16D & Z-2017-11B

PETITIONER	PROPERTY LOCATION
Essex Homes of WNY	2350 & 2360 Sweet Home Road

WHEREAS pursuant to Local Law #3-82, as amended, the Planning Board recommends that the Town Board determine that the requirements of SEQR are complete and that the subject proposal is not expected to have a significant adverse effect on the environment.

NOW THEREFORE BE IT RESOLVED that the Planning Board recommends to the Town Board in accordance with Section 8-3-4 of the Zoning Ordinance, that the request to amend conditions of a rezoning request be denied.

The foregoing resolution was adopted by the Town of Amherst Planning Board, April 20, 2023; moved by Chmiel; seconded by Penberthy; ayes 4, noes 3 (Gilmour, Giuliani, Kahn).

Robert J. Gilmour, Planning Board Chair

15. **Open Space ownership and maintenance provisions (if applicable):**

[redacted]

16. **Basis for Findings (Sec. 8-3-5 of the Town Zoning Code) (Attach sheets and supplemental materials as necessary.)**

A. **The proposed zoning and development plan must be generally consistent with the policies of the Comprehensive Plan and the Town Zoning Ordinance.**

1. State in detail why the proposed zoning is consistent with the adopted Town of Amherst Bicentennial Comprehensive Plan. Cite specific sections, maps, and/or figures in the plan that support the proposed zoning at this location (The Comprehensive Plan document is available at the Planning Department, Town Clerk's Office, Amherst libraries, or at www.amherst.ny.us). Add sheets as needed.

[redacted]

2. Pursuant to NYS Town Law Section 272a(11), "all Town land use regulations must be in accordance with a comprehensive plan adopted pursuant to this Section." The Town Board adopted the Comprehensive Plan pursuant to NYS Town Law 272 on January 2, 2007. If the rezoning is approved, the Town Board may require the Plan to be amended, as applicable.

Cite all text, map, and / or figures that must be amended to support the proposed zoning at this location (attach pages as necessary) and provide detailed suggested amendments.

[redacted]

Attachment: Z-2023-02 application 042023 (27197 : Z-2023-02)

3. State why the proposed zoning is consistent with intent and objectives (Sec. 1-2-2) of the Zoning Ordinance:

See Exhibit 5

B. Adequate Services and Utilities are available or are proposed to be made available with the construction of the development:

1. Sanitary Sewer
   Yes
2. Storm Sewer/Drainage
   Yes
3. Water
   Yes
4. Other Yes

C. Compatibility with the present zoning and conforming uses of nearby property and with the character of the neighborhood:

See Exhibit

D. Suitability of the subject property for uses permitted by the current versus the proposed district:

See Exhibit

Attachment: Z-2023-02 application 042023 (27197 : Z-2023-02)

E. Whether the proposed change tends to improve the balance of uses, or meets a specific demand in the Town:

See Exhibit 5.

17. The petitioner encloses herewith the sum of $ 1,265.00 to pay the fee, and consents to the placement of a sign(s) at the described location identifying this request for a period of time to be determined by the Town Clerk. [The filing fee has previously been paid.]

18. The undersigned certifies that all information required to be disclosed pursuant to Section 809 of the General Municipal Law (see below) is as follows:

The undersigned swears or affirms that all statements made herein are true, that all drawings submitted correctly show the situation involved in this petition.

N.Y.S. General Municipal Law - Section 809 Disclosure in certain applications:

1. Every application, petition or request submitted for a variance, amendment, change of zoning, approval of a plat, exemption from a plat or official map, license or permit, pursuant to the provision of any ordinance, local law, rule or regulation constituting the zoning and planning regulations of a municipality shall state the name, residence and the nature and extent of the interest of any state office or any office or employee of such municipality or of a municipality of which such municipality is a part, in the person, partnership or association making such application, petition or request (hereinafter called the applicant) to the extent known to such applicant.

Attachment: Z-2023-02 application 042023 (27197 : Z-2023-02)

2. For the purpose of this section an officer or employee shall be deemed to have an interest in the applicant when he, his spouse, or their brothers, sisters, parents, children, grandchildren, or the spouse of any of them

   (a) is the applicant, or
   (b) is an officer, director, partner or employee of the applicant, or
   (c) legally or beneficially owns or controls stock of a corporate applicant or is a member of a partnership or association applicant, or
   (d) is a party to an agreement with such an applicant, express or implied, whereby he may receive any payment or other benefit, whether or not for services rendered, dependent or contingent upon the favorable approval of such applicant, petition or request.

3. In the county of Nassau the provisions of subdivisions one and two of this section shall also apply to a party officer. "Party Officer" shall mean any person holding any position or office, whether by election, appointment or otherwise, in any party as defined by subdivision four or section two of the election law.

4. Ownership of less than five per cent of the stock of a corporation whose stock is listed on the New York or American Stock Exchanges shall not constitute an interest for the purposes of this section.

5. A person who knowingly and intentionally violates this section shall be guilty of a misdemeanor.

EXHIBIT 1

Attachment: Z-2023-02 application 042023 (27197 : Z-2023-02)

Instructions for Completing Part 1

Part 1 is to be completed by the applicant or project sponsor. Responses become part of the application for approval or funding, are subject to public review, and may be subject to further verification.

Complete Part 1 based on information currently available. If additional research or investigation would be needed to fully respond to any item, please answer as thoroughly as possible based on current information; indicate whether missing information does not exist, or is not reasonably available to the sponsor; and, when possible, generally describe work or studies which would be necessary to update or fully develop that information.

Applicants/sponsors must complete all items in Sections A & B. In Sections C, D & E, most items contain an initial question that must be answered either "Yes" or "No". If the answer to the initial question is "Yes", complete the sub-questions that follow. If the answer to the initial question is "No", proceed to the next question. Section F allows the project sponsor to identify and attach any additional information. Section G requires the name and signature of the applicant or project sponsor to verify that the information contained in Part 1is accurate and complete.

A. Project and Applicant/Sponsor Information.

Name of Action or Project: Rensch Group LLC		
Project Location (describe, and attach a general location map): 3945 Rensch Road, Town of Amherst - Erie County		
Brief Description of Proposed Action (include purpose or need): The proposed project ("action") consists of a three-story multifamily building consisting of twelve units and related site improvements to be located at 3945 Rensch ("Project Site"). The proposed action has been defined broadly to include all required discretionary approvals and permits as well as all proposed site improvements including an amendment of the zoning classification of the Project Site from R-4 to CTF-5. The project purpose is to develop the Project Site for residential purposes per a recommended land use contained in the Town's adopted Comprehensive Plan. The proposed project is an Unlisted Action and will not result in any potentially significant adverse environmental impacts.		
Name of Applicant/Sponsor: Rensch Group LLC c/o Sean Hopkins, Esq.	Telephone: 716.510-4338 E-Mail: shopkins@hsmlegal.com	
Address: 5500 Main Street, Suite 343

B. Government Approvals

B. Government Approvals, Funding, or Sponsorship. ("Funding" includes grants, loans, tax relief, and any other forms of financial assistance.)

Government Entity	If Yes: Identify Agency and Approval(s) Required	Application Date (Actual or projected)
a. City Counsel, Town Board, or Village Board of Trustees ☑Yes ☐No	Town of Amherst Town Board - Rezoning	Amended Application - April 5, 2023
b. City, Town or Village Planning Board or Commission ☑Yes ☐No	Town of Amherst Planning Board - Site Plan Approval	To be Determined
c. City, Town or Village Zoning Board of Appeals ☐Yes ☑No		
d. Other local agencies ☑Yes ☐No	Town of Amherst Building Department - Building Permit	To be Determined
e. County agencies ☑Yes ☐No	ECWA - Water	To be Determined
f. Regional agencies ☐Yes ☑No		
g. State agencies ☐Yes ☑No		
h. Federal agencies ☐Yes ☑No		

i. Coastal Resources.

i. Is the project site within a Coastal Area, or the waterfront area of a Designated Inland Waterway? ☐Yes ☑No

ii. Is the project site located in a community with an approved Local Waterfront Revitalization Program? ☐Yes ☑No

iii. Is the project site within a Coastal Erosion Hazard Area? ☐Yes ☑No

C. Planning and Zoning

C.1. Planning and zoning actions.

Will administrative or legislative adoption, or amendment of a plan, local law, ordinance, rule or regulation be the only approval(s) which must be granted to enable the proposed action to proceed? ☐Yes ☑No

- **If Yes,** complete sections C, F and G.
- **If No,** proceed to question C.2 and complete all remaining sections and questions in Part 1

C.2. Adopted land use plans.

a. Do any municipally- adopted (city, town, village or county) comprehensive land use plan(s) include the site where the proposed action would be located? ☑Yes ☐No

If Yes, does the comprehensive plan include specific recommendations for the site where the proposed action would be located? ☑Yes ☐No

b. Is the site of the proposed action within any local or regional special planning district (for example: Greenway; Brownfield Opportunity Area (BOA); designated State or Federal heritage area; watershed management plan; or other?) ☑Yes ☐No

If Yes, identify the plan(s):

NYS Heritage Areas:West Erie Canal Corridor

c. Is the proposed action located wholly or partially within an area listed in an adopted municipal open space plan, or an adopted municipal farmland protection plan? ☐Yes ☑No

If Yes, identify the plan(s):

Attachment: Z-2023-02 application 042023 (27197 : Z-2023-02)

C.3. Zoning

a. Is the site of the proposed action located in a municipality with an adopted zoning law or ordinance. ☑ Yes ☐ No
If Yes, what is the zoning classification(s) including any applicable overlay district?
Residential District Four ("R-4")

b. Is the use permitted or allowed by a special or conditional use permit? ☐ Yes ☑ No

c. Is a zoning change requested as part of the proposed action? ☑ Yes ☐ No
If Yes,
i. What is the proposed new zoning for the site? Center 5 ("CTR-5")

C.4. Existing community services.

a. In what school district is the project site located? Sweet Home Central School District

b. What police or other public protection forces serve the project site?
Town of Amherst Police Department

c. Which fire protection and emergency medical services serve the project site?
Local Volunteer Fire Department

d. What parks serve the project site?
There are various park that will be accessible to the residents of the Project Site.

D. Project Details

D.1. Proposed and Potential Development

a. What is the general nature of the proposed action (e.g., residential, industrial, commercial, recreational; if mixed, include all components)? Multifamily

b. a. Total acreage of the site of the proposed action? .5 acres
b. Total acreage to be physically disturbed? .4 acres
c. Total acreage (project site and any contiguous properties) owned or controlled by the applicant or project sponsor? .5 acres

c. Is the proposed action an expansion of an existing project or use? ☐ Yes ☑ No
i. If Yes, what is the approximate percentage of the proposed expansion and identify the units (e.g., acres, miles, housing units, square feet)? % _____ Units: _____

d. Is the proposed action a subdivision, or does it include a subdivision? ☐ Yes ☑ No
If Yes,
i. Purpose or type of subdivision? (e.g., residential, industrial, commercial; if mixed, specify types)
ii. Is a cluster/conservation layout proposed? ☐ Yes ☐ No
iii. Number of lots proposed? _____
iv. Minimum and maximum proposed lot sizes? Minimum _____ Maximum _____

e. Will the proposed action be constructed in multiple phases? ☐ Yes ☑ No
i. If No, anticipated period of construction: _____ months
ii. If Yes:
- Total number of phases anticipated _____
- Anticipated commencement date of phase 1 (including demolition) _____ month _____ year
- Anticipated completion date of final phase _____ month _____year
- Generally describe connections or relationships among phases, including any contingencies where progress of one phase may determine timing or duration of future phases: _____

Attachment: Z-2023-02 application 042023 (27197 : Z-2023-02)

f. Does the project include new residential uses? ☑ Yes ☐ No

5.a

If Yes, show numbers of units proposed.

	One Family	Two Family	Three Family	Multiple Family (four or more)
Initial Phase				12
At completion of all phases				12

g. Does the proposed action include new non-residential construction (including expansions)? ☐ Yes ☑ No

If Yes,

i. Total number of structures _____

ii. Dimensions (in feet) of largest proposed structure: _____height; _____width; and _____ length

iii. Approximate extent of building space to be heated or cooled: _____ square feet

h. Does the proposed action include construction or other activities that will result in the impoundment of any liquids, such as creation of a water supply, reservoir, pond, lake, waste lagoon or other storage? ☐ Yes ☑ No

If Yes,

i. Purpose of the impoundment: _____

ii. If a water impoundment, the principal source of the water: ☐ Ground water ☐ Surface water streams ☐ Other specify:

_____

iii. If other than water, identify the type of impounded/contained liquids and their source.

_____

iv. Approximate size of the proposed impoundment. Volume: _____ million gallons; surface area: _____ acres

v. Dimensions of the proposed dam or impounding structure: _____ height; _____ length

vi. Construction method/materials for the proposed dam or impounding structure (e.g., earth fill, rock, wood, concrete):

_____

D.2. Project Operations

a. Does the proposed action include any excavation, mining, or dredging, during construction, operations, or both? (Not including general site preparation, grading or installation of utilities or foundations where all excavated materials will remain onsite) ☐ Yes ☑ No

If Yes:

i .What is the purpose of the excavation or dredging? _____

ii. How much material (including rock, earth, sediments, etc.) is proposed to be removed from the site?

- Volume (specify tons or cubic yards): _____
- Over what duration of time? _____

iii. Describe nature and characteristics of materials to be excavated or dredged, and plans to use, manage or dispose of them.

_____

_____

iv. Will there be onsite dewatering or processing of excavated materials? ☐ Yes ☐ No

If yes, describe. _____

_____

v. What is the total area to be dredged or excavated? _____acres

vi. What is the maximum area to be worked at any one time? _____ acres

vii. What would be the maximum depth of excavation or dredging? _____ feet

viii. Will the excavation require blasting? ☐ Yes ☐ No

ix. Summarize site reclamation goals and plan: _____

_____

_____

b. Would the proposed action cause or result in alteration of, increase or decrease in size of, or encroachment into any existing wetland, waterbody, shoreline, beach or adjacent area? ☐ Yes ☑ No

If Yes:

i. Identify the wetland or waterbody which would be affected (by name, water index number, wetland map number or geographic description): _____

_____

Attachment: Z-2023-02 application 042023 (27197 : Z-2023-02)

ii. Describe how the proposed action would affect that waterbody or wetland, e.g. excavation, fill, placement of structures, or alteration of channels, banks and shorelines. Indicate extent of activities, alterations and additions in square feet or acres:

iii. Will the proposed action cause or result in disturbance to bottom sediments? ☐ Yes ☐ No
If Yes, describe:

iv. Will the proposed action cause or result in the destruction or removal of aquatic vegetation? ☐ Yes ☐ No
If Yes:

- acres of aquatic vegetation proposed to be removed:
- expected acreage of aquatic vegetation remaining after project completion:
- purpose of proposed removal (e.g. beach clearing, invasive species control, boat access):
- proposed method of plant removal:
- if chemical/herbicide treatment will be used, specify product(s):

v. Describe any proposed reclamation/mitigation following disturbance:

c. Will the proposed action use, or create a new demand for water? ☑ Yes ☐ No
If Yes:

i. Total anticipated water usage/demand per day: 2,400 gallons/day

ii. Will the proposed action obtain water from an existing public water supply? ☑ Yes ☐ No
If Yes:

- Name of district or service area: Erie County Consolidated Water District
- Does the existing public water supply have capacity to serve the proposal? ☑ Yes ☐ No
- Is the project site in the existing district? ☑ Yes ☐ No
- Is expansion of the district needed? ☐ Yes ☑ No
- Do existing lines serve the project site? ☑ Yes ☐ No

iii. Will line extension within an existing district be necessary to supply the project? ☐ Yes ☑ No
If Yes:

- Describe extensions or capacity expansions proposed to serve this project:
- Source(s) of supply for the district:

iv. Is a new water supply district or service area proposed to be formed to serve the project site? ☐ Yes ☐ No
If, Yes:

- Applicant/sponsor for new district:
- Date application submitted or anticipated:
- Proposed source(s) of supply for new district:

v. If a public water supply will not be used, describe plans to provide water supply for the project:

vi. If water supply will be from wells (public or private), what is the maximum pumping capacity: _____ gallons/minute.

d. Will the proposed action generate liquid wastes? ☑ Yes ☐ No
If Yes:

i. Total anticipated liquid waste generation per day: 2,400 gallons/day

ii. Nature of liquid wastes to be generated (e.g., sanitary wastewater, industrial; if combination, describe all components and approximate volumes or proportions of each):
Sanitary wastewater.

iii. Will the proposed action use any existing public wastewater treatment facilities? ☑ Yes ☐ No
If Yes:

- Name of wastewater treatment plant to be used: Town of Amherst Wastewater Treatment Plant
- Name of district: Town of Amherst Consolidated Sanitary Sewer District
- Does the existing wastewater treatment plant have capacity to serve the project? ☑ Yes ☐ No
- Is the project site in the existing district? ☑ Yes ☐ No
- Is expansion of the district needed? ☐ Yes ☑ No

Attachment: Z-2023-02 application 042023 (27197 : Z-2023-02)

- Do existing sewer lines serve the project site? ☑ Yes ☐ No
- Will a line extension within an existing district be necessary to serve the project? ☐ Yes ☑ No

If Yes:

- Describe extensions or capacity expansions proposed to serve this project: _____

iv. Will a new wastewater (sewage) treatment district be formed to serve the project site? ☐ Yes ☑ No

If Yes:

- Applicant/sponsor for new district: _____
- Date application submitted or anticipated: _____
- What is the receiving water for the wastewater discharge? _____

v. If public facilities will not be used, describe plans to provide wastewater treatment for the project, including specifying proposed receiving water (name and classification if surface discharge or describe subsurface disposal plans):

_____

vi. Describe any plans or designs to capture, recycle or reuse liquid waste: _____

e. Will the proposed action disturb more than one acre and create stormwater runoff, either from new point sources (i.e. ditches, pipes, swales, curbs, gutters or other concentrated flows of stormwater) or non-point source (i.e. sheet flow) during construction or post construction? ☑ Yes ☐ No

If Yes:

i. How much impervious surface will the project create in relation to total size of project parcel?

_____ Square feet or .2 acres (impervious surface)

_____ Square feet or .5 acres (parcel size)

ii. Describe types of new point sources. _____

iii. Where will the stormwater runoff be directed (i.e. on-site stormwater management facility/structures, adjacent properties, groundwater, on-site surface water or off-site surface waters)?

Stormwater runoff will be directed into the municipal storm water system.

- If to surface waters, identify receiving water bodies or wetlands: _____
- Will stormwater runoff flow to adjacent properties? ☐ Yes ☐ No

iv. Does the proposed plan minimize impervious surfaces, use pervious materials or collect and re-use stormwater? ☐ Yes ☐ No

f. Does the proposed action include, or will it use on-site, one or more sources of air emissions, including fuel combustion, waste incineration, or other processes or operations? ☐ Yes ☑ No

If Yes, identify:

i. Mobile sources during project operations (e.g., heavy equipment, fleet or delivery vehicles)

ii. Stationary sources during construction (e.g., power generation, structural heating, batch plant, crushers)

iii. Stationary sources during operations (e.g., process emissions, large boilers, electric generation)

g. Will any air emission sources named in D.2.f (above), require a NY State Air Registration, Air Facility Permit, or Federal Clean Air Act Title IV or Title V Permit? ☐ Yes ☑ No

If Yes:

i. Is the project site located in an Air quality non-attainment area? (Area routinely or periodically fails to meet ambient air quality standards for all or some parts of the year) ☐ Yes ☐ No

ii. In addition to emissions as calculated in the application, the project will generate:

- _____Tons/year (short tons) of Carbon Dioxide (CO_2)
- _____Tons/year (short tons) of Nitrous Oxide (N_2O)
- _____Tons/year (short tons) of Perfluorocarbons (PFCs)
- _____Tons/year (short tons) of Sulfur Hexafluoride (SF_6)
- _____Tons/year (short tons) of Carbon Dioxide equivalent of Hydroflourocarbons (HFCs)
- _____Tons/year (short tons) of Hazardous Air Pollutants (HAPs)

Attachment: Z-2023-02 application 042023 (27197 : Z-2023-02)

h. Will the proposed action generate or emit methane (including, but not limited to, sewage treatment plants, landfills, composting facilities)? ☐Yes ☑No

If Yes:

i. Estimate methane generation in tons/year (metric): _____

ii. Describe any methane capture, control or elimination measures included in project design (e.g., combustion to generate heat or electricity, flaring): _____

_____

i. Will the proposed action result in the release of air pollutants from open-air operations or processes, such as quarry or landfill operations? ☐Yes ☑No

If Yes: Describe operations and nature of emissions (e.g., diesel exhaust, rock particulates/dust):

_____

_____

j. Will the proposed action result in a substantial increase in traffic above present levels or generate substantial new demand for transportation facilities or services? ☐Yes ☑No

If Yes:

i. When is the peak traffic expected (Check all that apply): ☐ Morning ☐ Evening ☐Weekend ☐ Randomly between hours of _____ to _____.

ii. For commercial activities only, projected number of truck trips/day and type (e.g., semi trailers and dump trucks): _____

_____

iii. Parking spaces: Existing _____ Proposed _____ Net increase/decrease _____

iv. Does the proposed action include any shared use parking? ☐Yes ☐No

v. If the proposed action includes any modification of existing roads, creation of new roads or change in existing access, describe:

_____

vi. Are public/private transportation service(s) or facilities available within ½ mile of the proposed site? ☐Yes ☐No

vii Will the proposed action include access to public transportation or accommodations for use of hybrid, electric or other alternative fueled vehicles? ☐Yes ☐No

viii. Will the proposed action include plans for pedestrian or bicycle accommodations for connections to existing pedestrian or bicycle routes? ☐Yes ☐No

k. Will the proposed action (for commercial or industrial projects only) generate new or additional demand for energy? ☐Yes ☑No

If Yes:

i. Estimate annual electricity demand during operation of the proposed action: _____

_____

ii. Anticipated sources/suppliers of electricity for the project (e.g., on-site combustion, on-site renewable, via grid/local utility, or other):

_____

iii. Will the proposed action require a new, or an upgrade, to an existing substation? ☐Yes ☐No

l. Hours of operation. Answer all items which apply.

i. During Construction:

- Monday - Friday: 7:00 to 7:00
- Saturday: 7:00 to 5:00
- Sunday: As needed
- Holidays: Not Applicable

ii. During Operations:

- Monday - Friday: Not Applicable
- Saturday: _____
- Sunday: _____
- Holidays: _____

Attachment: Z-2023-02 application 042023 (27197 : Z-2023-02)

m. Will the proposed action produce noise that will exceed existing ambient noise levels during construction, operation, or both? ☑ Yes ☐ No

If yes:

i. Provide details including sources, time of day and duration:

Construction equipment and activities limited to daytime hours is a temporary and unavoidable adverse impact.

ii. Will the proposed action remove existing natural barriers that could act as a noise barrier or screen? ☐ Yes ☑ No

Describe: _____

n. Will the proposed action have outdoor lighting? ☑ Yes ☐ No

If yes:

i. Describe source(s), location(s), height of fixture(s), direction/aim, and proximity to nearest occupied structures:

Lighting improvements on the Project Site will comply with the stringent lighting standard contained in the Zoning Code.

ii. Will proposed action remove existing natural barriers that could act as a light barrier or screen? ☐ Yes ☑ No

Describe: _____

o. Does the proposed action have the potential to produce odors for more than one hour per day? ☐ Yes ☑ No

If Yes, describe possible sources, potential frequency and duration of odor emissions, and proximity to nearest occupied structures: _____

p. Will the proposed action include any bulk storage of petroleum (combined capacity of over 1,100 gallons) or chemical products 185 gallons in above ground storage or any amount in underground storage? ☐ Yes ☑ No

If Yes:

i. Product(s) to be stored _____

ii. Volume(s) _____ per unit time _____ (e.g., month, year)

iii. Generally, describe the proposed storage facilities:_____

q. Will the proposed action (commercial, industrial and recreational projects only) use pesticides (i.e., herbicides, insecticides) during construction or operation? ☐ Yes ☑ No

If Yes:

i. Describe proposed treatment(s):

ii. Will the proposed action use Integrated Pest Management Practices? ☐ Yes ☐ No

r. Will the proposed action (commercial or industrial projects only) involve or require the management or disposal of solid waste (excluding hazardous materials)? ☐ Yes ☑ No

If Yes:

i. Describe any solid waste(s) to be generated during construction or operation of the facility:

- Construction: _____ tons per _____ (unit of time)
- Operation : _____ tons per _____ (unit of time)

ii. Describe any proposals for on-site minimization, recycling or reuse of materials to avoid disposal as solid waste:

- Construction: _____
- Operation: _____

iii. Proposed disposal methods/facilities for solid waste generated on-site:

- Construction: _____
- Operation: _____

Attachment: Z-2023-02 application 042023 (27197 : Z-2023-02)

5.a

s. Does the proposed action include construction or modification of a solid waste management facility? ☐ Yes ☑ No

If Yes:

i. Type of management or handling of waste proposed for the site (e.g., recycling or transfer station, composting, landfill, or other disposal activities): _____

ii. Anticipated rate of disposal/processing:

- _____ Tons/month, if transfer or other non-combustion/thermal treatment, or
- _____ Tons/hour, if combustion or thermal treatment

iii. If landfill, anticipated site life: _____ years

t. Will the proposed action at the site involve the commercial generation, treatment, storage, or disposal of hazardous waste? ☐ Yes ☑ No

If Yes:

i. Name(s) of all hazardous wastes or constituents to be generated, handled or managed at facility: _____

ii. Generally describe processes or activities involving hazardous wastes or constituents: _____

iii. Specify amount to be handled or generated _____ tons/month

iv. Describe any proposals for on-site minimization, recycling or reuse of hazardous constituents: _____

v. Will any hazardous wastes be disposed at an existing offsite hazardous waste facility? ☐ Yes ☐ No

If Yes: provide name and location of facility: _____

If No: describe proposed management of any hazardous wastes which will not be sent to a hazardous waste facility:

E. Site and Setting of Proposed Action

E.1. Land uses on and surrounding the project site

a. Existing land uses.

i. Check all uses that occur on, adjoining and near the project site.

☐ Urban ☐ Industrial ☑ Commercial ☑ Residential (suburban) ☐ Rural (non-farm)
☐ Forest ☐ Agriculture ☐ Aquatic ☑ Other (specify): Mixed-Use

ii. If mix of uses, generally describe:

Mixtures of land uses including commercial, student housing and multifamily.

b. Land uses and covertypes on the project site.

Land use or Covertype	Current Acreage	Acreage After Project Completion	Change (Acres +/-)
• Roads, buildings, and other paved or impervious surfaces	.2	.4	.2
• Forested	0	0	0
• Meadows, grasslands or brushlands (non-agricultural, including abandoned agricultural)	0	0	0
• Agricultural (includes active orchards, field, greenhouse etc.)	0	0	0
• Surface water features (lakes, ponds, streams, rivers, etc.)	0	0	0
• Wetlands (freshwater or tidal)	0	0	0
• Non-vegetated (bare rock, earth or fill)	0	0	0
• Other Describe: Greenspace and Landcaping	.3	.1	(.2)

Attachment: Z-2023-02 application 042023 (27197 : Z-2023-02)

c. Is the project site presently used by members of the community for public recreation? ☐ Yes ☑ No
i. If Yes: explain: _____

d. Are there any facilities serving children, the elderly, people with disabilities (e.g., schools, hospitals, licensed day care centers, or group homes) within 1500 feet of the project site? ☑ Yes ☐ No
If Yes,
i. Identify Facilities:
There is a People Inc. group home located within 1,500 ft. of the Project Site on Rensch Road

e. Does the project site contain an existing dam? ☐ Yes ☑ No
If Yes:
i. Dimensions of the dam and impoundment:
- Dam height: _____ feet
- Dam length: _____ feet
- Surface area: _____ acres
- Volume impounded: _____ gallons OR acre-feet

ii. Dam's existing hazard classification: _____
iii. Provide date and summarize results of last inspection:

f. Has the project site ever been used as a municipal, commercial or industrial solid waste management facility, or does the project site adjoin property which is now, or was at one time, used as a solid waste management facility? ☐ Yes ☑ No
If Yes:
i. Has the facility been formally closed? ☐ Yes ☐ No
- If yes, cite sources/documentation: _____

ii. Describe the location of the project site relative to the boundaries of the solid waste management facility:

iii. Describe any development constraints due to the prior solid waste activities: _____

g. Have hazardous wastes been generated, treated and/or disposed of at the site, or does the project site adjoin property which is now or was at one time used to commercially treat, store and/or dispose of hazardous waste? ☐ Yes ☑ No
If Yes:
i. Describe waste(s) handled and waste management activities, including approximate time when activities occurred:

h. Potential contamination history. Has there been a reported spill at the proposed project site, or have any remedial actions been conducted at or adjacent to the proposed site? ☐ Yes ☑ No
If Yes:
i. Is any portion of the site listed on the NYSDEC Spills Incidents database or Environmental Site Remediation database? Check all that apply: ☐ Yes ☐ No
☐ Yes – Spills Incidents database — Provide DEC ID number(s): _____
☐ Yes – Environmental Site Remediation database — Provide DEC ID number(s): _____
☐ Neither database

ii. If site has been subject of RCRA corrective activities, describe control measures:_____

iii. Is the project within 2000 feet of any site in the NYSDEC Environmental Site Remediation database? ☐ Yes ☑ No
If yes, provide DEC ID number(s): _____

iv. If yes to (i), (ii) or (iii) above, describe current status of site(s):

Attachment: Z-2023-02 application 042023 (27197 : Z-2023-02)

v. Is the project site subject to an institutional control limiting property uses? ☐ Yes ☐ No

- If yes, DEC site ID number: _____
- Describe the type of institutional control (e.g., deed restriction or easement): _____
- Describe any use limitations: _____
- Describe any engineering controls: _____
- Will the project affect the institutional or engineering controls in place? ☐ Yes ☐ No
- Explain: _____

E.2. Natural Resources On or Near Project Site

a. What is the average depth to bedrock on the project site? >10 feet

b. Are there bedrock outcroppings on the project site? ☐ Yes ☑ No
If Yes, what proportion of the site is comprised of bedrock outcroppings? _____%

c. Predominant soil type(s) present on project site: Churchville Silt Loam 100 %

d. What is the average depth to the water table on the project site? Average: >10 feet

e. Drainage status of project site soils:
☐ Well Drained: _____% of site
☐ Moderately Well Drained: _____% of site
☑ Poorly Drained 100 % of site

f. Approximate proportion of proposed action site with slopes:
☑ 0-10%: 100 % of site
☐ 10-15%: _____% of site
☐ 15% or greater: _____% of site

g. Are there any unique geologic features on the project site? ☐ Yes ☑ No
If Yes, describe: _____

h. Surface water features.

i. Does any portion of the project site contain wetlands or other waterbodies (including streams, rivers, ponds or lakes)? ☐ Yes ☑ No

ii. Do any wetlands or other waterbodies adjoin the project site? ☐ Yes ☑ No

If Yes to either *i* or *ii*, continue. If No, skip to E.2.i.

iii. Are any of the wetlands or waterbodies within or adjoining the project site regulated by any federal, state or local agency? ☐ Yes ☑ No

iv. For each identified regulated wetland and waterbody on the project site, provide the following information:

- Streams: Name _____ Classification _____
- Lakes or Ponds: Name _____ Classification _____
- Wetlands: Name _____ Approximate Size _____
- Wetland No. (if regulated by DEC) _____

v. Are any of the above water bodies listed in the most recent compilation of NYS water quality-impaired waterbodies? ☐ Yes ☑ No

If yes, name of impaired water body/bodies and basis for listing as impaired: _____

i. Is the project site in a designated Floodway? ☐ Yes ☑ No

j. Is the project site in the 100-year Floodplain? ☐ Yes ☑ No

k. Is the project site in the 500-year Floodplain? ☐ Yes ☑ No

l. Is the project site located over, or immediately adjoining, a primary, principal or sole source aquifer? ☐ Yes ☑ No
If Yes:

i. Name of aquifer: _____

Attachment: Z-2023-02 application 042023 (27197 : Z-2023-02)

m. Identify the predominant wildlife species that occupy or use the project site: Typical suburban species.

n. Does the project site contain a designated significant natural community? ☐ Yes ☑ No

If Yes:

i. Describe the habitat/community (composition, function, and basis for designation): _____

ii. Source(s) of description or evaluation: _____

iii. Extent of community/habitat:

- Currently: _____ acres
- Following completion of project as proposed: _____ acres
- Gain or loss (indicate + or -): _____ acres

o. Does project site contain any species of plant or animal that is listed by the federal government or NYS as endangered or threatened, or does it contain any areas identified as habitat for an endangered or threatened species? ☐ Yes ☑ No

If Yes:

i. Species and listing (endangered or threatened): _____

p. Does the project site contain any species of plant or animal that is listed by NYS as rare, or as a species of special concern? ☐ Yes ☑ No

If Yes:

i. Species and listing: _____

q. Is the project site or adjoining area currently used for hunting, trapping, fishing or shell fishing? ☐ Yes ☑ No

If yes, give a brief description of how the proposed action may affect that use: _____

E.3. Designated Public Resources On or Near Project Site

a. Is the project site, or any portion of it, located in a designated agricultural district certified pursuant to Agriculture and Markets Law, Article 25-AA, Section 303 and 304? ☐ Yes ☑ No

If Yes, provide county plus district name/number: _____

b. Are agricultural lands consisting of highly productive soils present? ☐ Yes ☑ No

i. If Yes: acreage(s) on project site? _____

ii. Source(s) of soil rating(s): _____

c. Does the project site contain all or part of, or is it substantially contiguous to, a registered National Natural Landmark? ☐ Yes ☑ No

If Yes:

i. Nature of the natural landmark: ☐ Biological Community ☐ Geological Feature

ii. Provide brief description of landmark, including values behind designation and approximate size/extent: _____

d. Is the project site located in or does it adjoin a state listed Critical Environmental Area? ☐ Yes ☑ No

If Yes:

i. CEA name: _____

ii. Basis for designation: _____

iii. Designating agency and date: _____

Attachment: Z-2023-02 application 042023 (27197 : Z-2023-02)

e. Does the project site contain, or is it substantially contiguous to, a building, archaeological site, or district which is listed on the National or State Register of Historic Places, or that has been determined by the Commissioner of the NYS Office of Parks, Recreation and Historic Preservation to be eligible for listing on the State Register of Historic Places? ☑ Yes ☐ No

If Yes:

i. Nature of historic/archaeological resource: ☐ Archaeological Site ☐ Historic Building or District

ii. Name: Eligible property:4030 Rensch Road, Amherst

iii. Brief description of attributes on which listing is based:

f. Is the project site, or any portion of it, located in or adjacent to an area designated as sensitive for archaeological sites on the NY State Historic Preservation Office (SHPO) archaeological site inventory? ☑ Yes ☐ No

g. Have additional archaeological or historic site(s) or resources been identified on the project site? ☐ Yes ☑ No

If Yes:

i. Describe possible resource(s):

ii. Basis for identification:

h. Is the project site within fives miles of any officially designated and publicly accessible federal, state, or local scenic or aesthetic resource? ☐ Yes ☑ No

If Yes:

i. Identify resource:

ii. Nature of, or basis for, designation (e.g., established highway overlook, state or local park, state historic trail or scenic byway, etc.):

iii. Distance between project and resource: _____ miles.

i. Is the project site located within a designated river corridor under the Wild, Scenic and Recreational Rivers Program 6 NYCRR 666? ☐ Yes ☑ No

If Yes:

i. Identify the name of the river and its designation:

ii. Is the activity consistent with development restrictions contained in 6NYCRR Part 666? ☐ Yes ☐ No

F. Additional Information

Attach any additional information which may be needed to clarify your project.

If you have identified any adverse impacts which could be associated with your proposal, please describe those impacts plus any measures which you propose to avoid or minimize them.

G. Verification

I certify that the information provided is true to the best of my knowledge.

EAF Mapper Summary Report

Monday, February 20, 2023 12:5[illegible] P.M.

Disclaimer: The EAF Mapper is a screening tool intended to assist project sponsors and reviewing agencies in preparing an environmental assessment form (EAF). Not all questions asked in the EAF are answered by the EAF Mapper. Additional information on any EAF question can be obtained by consulting the EAF Workbooks. Although the EAF Mapper provides the most up-to-date digital data available to DEC, you may also need to contact local or other data sources in order to obtain data not provided by the Mapper. Digital data is not a substitute for agency determinations.

B.i.i [Coastal or Waterfront Area]	No
B.i.ii [Local Waterfront Revitalization Area]	No
C.2.b. [Special Planning District]	Yes - Digital mapping data are not available for all Special Planning Districts. Refer to EAF Workbook.
C.2.b. [Special Planning District - Name]	NYS Heritage Areas:West Erie Canal Corridor
E.1.h [DEC Spills or Remediation Site - Potential Contamination History]	Digital mapping data are not available or are incomplete. Refer to EAF Workbook.
E.1.h.i [DEC Spills or Remediation Site - Listed]	Digital mapping data are not available or are incomplete. Refer to EAF Workbook.
E.1.h.i [DEC Spills or Remediation Site - Environmental Site Remediation Database]	Digital mapping data are not available or are incomplete. Refer to EAF Workbook.
E.1.h.iii [Within 2,000' of DEC Remediation Site]	No
E.2.g [Unique Geologic Features]	No
E.2.h.i [Surface Water Features]	No
E.2.h.ii [Surface Water Features]	No
E.2.h.iii [Surface Water Features]	No
E.2.h.v [Impaired Water Bodies]	No
E.2.i. [Floodway]	No
E.2.j. [100 Year Floodplain]	No
E.2.k. [500 Year Floodplain]	No
E.2.l. [Aquifers]	No
E.2.n. [Natural Communities]	No
E.2.o. [Endangered or Threatened Species]	No
E.2.p. [Rare Plants or Animals]	No

Attachment: Z-2023-02 application 042023 (27197 : Z-2023-02)

E.3.a. [Agricultural District]	No
E.3.c. [National Natural Landmark]	No
E.3.d [Critical Environmental Area]	No
E.3.e. [National or State Register of Historic Places or State Eligible Sites]	Yes - Digital mapping data for archaeological site boundaries are not available. Refer to EAF Workbook.
E.3.e.ii [National or State Register of Historic Places or State Eligible Sites - Name]	Eligible property:4030 Rensch Road, Amherst
E.3.f. [Archeological Sites]	Yes
E.3.i. [Designated River Corridor]	No

Attachment: Z-2023-02 application 042023 (27197 : Z-2023-02)

TOWN OF AMHERST ATTACHMENT
State Environmental Quality Review
ENVIRONMENTAL ASSESSMENT FORM

1. For each applicable category of proposed new structures, including additions to existing structures, provide the following information for all soil types on the project site (*according to Soil Survey of Erie County, NY; Table 11, Building Site Development, pp 294-305):*

Soil Name	Shallow excavations	Dwellings without basements	Dwellings with basements	Small commercial buildings	Local roads and streets
[redacted] Silt Loam	[redacted]	[redacted]evere	[redacted]ever	[redacted]evere	[redacted]oderat
					[redacted]

2. If the Soil survey indicates either "severe" or "moderate" suitability for the proposed types of construction, a geotechnical and hydrological analysis based on one test per 3.5 acres of project area must be provided (per Town Board resolution, 3/17/03, amended 6/16/03).

__x___ Geotechnical report attached _____ Not applicable

[Note: Three copies of the Geotechnical Report prepared by Barron & Associates P.C. dated August 24, 2022 have been submitted to the Planning Department].

3. Is your property located: On Youngs Road between Dodge and Klein Roads? □ Yes x [redacted]o
On Wehrle Dr. between Spindrift Dr. and Oakwood Rd? □ Yes x No

If so, the property may be within an area of the Town that is affected by a moratorium on connections to the sanitary sewer system.

4. Are there alternative locations on the site for this project? □ Yes x No

5. Location and size of real property owned by petitioner within one (1) mile of subject proposal:
Not Applicable[redacted].

6. Are you aware of current or future plans or intentions by others in the Town of Amherst to develop property within 1000± ft. of the present project request: □ Yes ☒ No
Describe: Not Applicable.

(Potential environmental impacts from adjacent or nearby projects undergoing the approval process will receive a coordinated environmental review to determine cumulative effects on common receivers (e.g. traffic and drainage corridors) and other relevant environmental concerns.)

7. Maximum number of vehicular trips to be generated per peak hour upon completion of project[redacted]Weekday A.M. Pe[redacted]
Source: [redacted]IT[redacted]oration Report[redacted]

8. Will blasting occur during construction? □ Yes ☒ No

9. Does the project propose to connect and be tributary to the public sanitary sewer system? ☒ Yes □ No

10. Proposed net additional gallons per day (gpd) of sanitary sewer discharge upon completion of project:
[redacted]400[redacted] average flow [redacted]00[redacted] peak flow.

(Average flows of 2,500 gpd or greater will require an Engineer's Report that includes a detailed downstream sewer capacity analysis and the identification of and commitment to required I/I offset work during peak wastewater flow conditions.)

11. Based on the Town's *2011 Reconnaissance Level Survey of Historic Resources,* is your property 'blue-rated' for historic significance? □ Yes ☒ No

[redacted]

EXHIBIT 4 REZONING APPLICATION

REZONING OF 3945 RENSCH ROAD FROM R-4 TO CTR-5

Question 11(A): Description of the character of the proposed development:

Response to Question 11(A): The proposed multifamily project to be located on the parcel the approximately .5 acre parcel at 3945 Rensch Road ("Project Site") will be upscale in character and will feature an attractive multifamily building that will replace the existing residential structure. A reduced-size copy of the Conceptual Elevation Plan prepared by Sutton Architecture PLLC is provided at **Exhibit "7"**. There will be a total of 12 attached residential units for lease along with related site improvements. The conceptual layout for the proposed upscale multifamily project is depicted on the full-size Site Plan [Drawing C-100] prepared by Christopher Wood, P.E., of Carmina Wood Design attached to this Rezoning Application. A reduced size copy of the Site Plan depicting the project layout is also provided at **Exhibit "6"**.

Question 11(B)(1): Rationale for rezoning request: 1. What was this site chosen?

Response to Question 11(B)(1): The Project Site is an appropriate location for the requested rezoning of the Project Site from R-4 to CT-5 to accommodate the proposed upscale multifamily project given the character and scale of nearby land uses. It is also important to mention that the requested amendment of the zoning classification of portions of the Project Site is consistent with the Conceptual Land Use Plan for the Town of Amherst contained at Figure 6 of the adopted Bicentennial Comprehensive Plan ("Comprehensive Plan"), which designates the Project Site as appropriate for "Medium Residential" use as well as Figure 6-A of the Comprehensive Plan, that designates the Project Site as appropriate for "Suburban Center" [Designation Area No. 7 on

Attachment: Z-2023-02 application 042023 (27197 : Z-2023-02)

Figure 6-A]. Color copies of Figure 6 and Figure 6-A of the adopted Comprehensive Plan are attached as **Exhibit "8"**.

Question 11(B)(2): Why cannot land be used with the existing zoning?

Response to Question 11(B)(2): The Project Site is currently zoned Residential District Four ("R-4") and the R-3 zoning classification is no longer consistent with the zoning classifications and uses of nearby properties that include a large student housing on property zoned MFR-6, a mixed-use project and a hotel on parcels zoned GB, etc. As mentioned previously, Figure 6 of the adopted Comprehensive Plan designates the Project Site as appropriate for "Medium Residential" use.[1]

Question 11(B)(3): How will this rezoning impact surrounding properties?

Response to Question 11(B)(3): The requested rezoning of the Project Site from R-4 to CTR-5 to accommodate the proposed upscale multifamily project will not result in any potentially significant adverse impacts on surrounding properties. The density of the project will not be inconsistent with the surrounding vicinity.

Question 11(B)(4): How will this rezoning impact the school system?

Response to Question 11(B)(4): The proposed project will have positive impacts on the school district since the property taxes that will be generated on an annual basis will be substantially higher than the

[1] Page 3-32 of Chapter 3 of the Comprehensive Plan indicates that the Medium Residential category is appropriate for multifamily housing with a density of 12 to 60 units per acre and states as follows: "Medium Residential comprises the relatively small proportion of the Town's housing stock devoted to multi-family, largely rental apartment housing. Although longstanding policy has tended to favor low-density, single-family residential use, recent development trends have seen a substantial increase in the amount of new multi-family housing. The need for higher density housing will grow along with the component of the population that will increasingly choose smaller housing types, including retirees, empty nesters, singles, and other smaller household types.

Attachment: Z-2023-02 application 042023 (27197 : Z-2023-02)

current property taxes. The proposed project will potentially generate some demand for educational services provided by the Sweet Home Central School District but it is anticipated that the proposed upscale multifamily project will have overall positive fiscal impacts since the annual school taxes will be higher than the cost of educational services for school age children of the residents.

Attachment: Z-2023-02 application 042023 (27197 : Z-2023-02)

EXHIBIT 5

Attachment: Z-2023-02 application 042023 (27197 : Z-2023-02)

EXHIBIT 5

REZONING OF 3945 RENSCH ROAD FROM R-4 TO CTR-5

Question 16(A)(1): **State in detail why the proposed zoning is consistent with the adopted Town of Amherst Bicentennial Comprehensive Plan. Cite specific sections, maps and/or figures in the plan that support the proposed zoning at this location.**

Response to Question 16(A)(1): The Town of Amherst adopted the Bicentennial Comprehensive Plan in January of 2007 after completing a lengthy planning process that included numerous public meetings and public hearings involving the Comprehensive Plan Advisory Committee, the Planning Board and the Town Board.[1] On December 14, 2020, the Town Board most recently adopted amendments to the Bicentennial Comprehensive Plan. The proposed apartment project is consistent with the Comprehensive Plan including Figure 6, which designates the Project Site as appropriate "Medium Residential" use and Figure 6-A, which designates the Project Site as appropriate for multifamily and mixed-use development. Color copies of Figure 6 and 6-A of the adopted Comprehensive Plan are attached as **Exhibit "8"**.

Question 16(A)(2): **Cite all text, map, and/or figures that must be amended to support the proposed zoning at this location and provide detailed suggested amendments.**

Response to Question 16(A)(2): The proposed CTR-5 zoning classification and the proposed multifamily project are consistent with the Comprehensive Plan and such there is not a need to amend the Comprehensive Plan to accommodate the proposed project.

---

[1] A copy of the resolution adopted by the Town Board for the purpose of adopting the Bicentennial Comprehensive Plan pursuant to Town Law Section 272-a is included at the beginning of the Comprehensive Plan. This resolution recites the lengthy planning history that incorporated numerous opportunities for public input as well as a coordinated environmental review pursuant to SEQRA that involved the preparation a Generic EIS and the issuance of a Findings Statement.

Attachment: Z-2023-02 application 042023 (27197 : Z-2023-02)

Question 16(A)(3): State why the proposed zoning is consistent with intent and objectives (Sec. 1-2-2) of the Zoning Ordinance:

Response to Question 16(A)(3): Section 1-2-1 of the Zoning Code is titled "Purpose" and it states as follows:

> *"The purpose of this Zoning Ordinance and the intent of the legislative authority in its adoption is to promote the environment of the town and its public health, safety, convenience, comfort, prosperity and the general welfare by regulating the use of buildings, other structures and land for residences, open space, public facilities, business, services, industry or other purposes; by regulating and restricting the bulk, height, design, building coverage and location of structures; by regulating and limiting population density; and for the aforesaid purposes, to divide the land within the limits of the town into districts of such number and dimensions generally consistent with the policies of the Comprehensive Plan and to provide procedures for the administration and amendment of said Zoning Ordinance."*

The proposed rezoning of the Project Site to accommodate the proposed multifamily project is consistent with the "Purpose" of the Zoning Code. Section 1-2-2 of the Zoning Code sets forth the objectives of the Zoning Code. This section of the Zoning Code lists thirteen objectives that are discussed below as follows:

A. To protect the character and values of residential, institutional and public uses, business, commercial and manufacturing uses and to insure their orderly and beneficial development;

Response: The proposed rezoning of the Project Site will be consistent with the objective of protecting the character and value of existing land uses. The proposed rezoning will allow a portion of the Project Site to be redeveloped as a multifamily building consisting of twelve units represents orderly and beneficial development.

B. To provide adequate open spaces for light, air and outdoor uses to include public, common and private open space areas;

Response: The proposed rezoning of the Project Site will not be inconsistent with this objective.

Attachment: Z-2023-02 application 042023 (27197 : Z-2023-02)

C. To prevent overcrowding of land;

Response: The proposed project will not result in the overcrowding of land. The project is consistent with the type of development designated as appropriate for the Project Site per the adopted Comprehensive Plan.

D. To prevent excessive concentration of population and to prevent spare and uncoordinated development;

Response: The proposed rezoning of the Project Site will not result in excessive concentration of population and the residential project represents an example of coordinated development.

E. To regulate and control the location and spacing of buildings on the lot and in relation to the surrounding property generally consistent with the policies of the Comprehensive Plan.

Response: The responses to the Questions in Section 16 provided above sets forth the reasons the proposed rezoning is consistent with the policies of the Comprehensive Plan.

F. To protect persons and property from damage and injury due to fire or flood;

Response: The Site Plan Application review process will trigger the need for an Engineer's Report to be prepared by a licensed engineer to be prepared for review and approval by the Town's Engineering Department. The project will not increase the likelihood of damage and injury due to fire and flood. The proposed multifamily building will be constructed per the stringent requirements of the NYS Building Code including the fire safety standards contained therein.

G. To preserve and protect significant natural features and vegetation, thereby preventing ecological damage and visual blight which occur when those features or vegetation are eliminated or substantially altered to serve development purposes only.

Response: The proposed rezoning and the proposed project will not be inconsistent with this objective. There are not significant natural features located on the Project Site.

Attachment: Z-2023-02 application 042023 (27197 : Z-2023-02)

H. To assure that structure and land use arrangements are aesthetically harmonious with nearby areas and structures.

Response: The development of the Project Site in a manner consistent with the Site Plan [Drawing C-100] will be aesthetically harmonious with nearby areas and structures.

I. To regulate the location of buildings and intensity of uses in relation to streets according to plans so as to cause the least interference with and be damaged least by traffic movements and hence result in lessened street congestion and improved public safety.

Response: The proposed project will have vehicular access to Rensch Road and will be consistent with the above criteria.

J. To establish zoning patterns that insure economical extensions for sewers, water supply waste disposal and other public utilities, as well as development of recreation, schools and other public facilities;

Response: The Project Site has access to sanitary sewer and water lines as well as necessary public utilities to service the proposed project.

K. To guide the future development of the town so as to being the gradual conformity of land, structures and uses generally consistent with the policies of the Comprehensive Plan.

Response: The proposed rezoning of the Project Site is consistent with this objective since the proposed zoning classification and use are consistent with the policies contained in the Comprehensive Plan.

L. To accomplish the specific intents and goals set forth in the introduction to the respective sections.

Response: The proposed rezoning of the Project Site is consistent with this objective.

M. To protect the community from visual pollution resulting from the unregulated use of signs and other advertising devices.

Response: The proposed rezoning and the proposed project will not be inconsistent with this objective.

Attachment: Z-2023-02 application 042023 (27197 : Z-2023-02)

Question 16(C): **Compatibility with the present zoning and conforming uses of nearby property and with the character of the neighborhood:**

Response to Question 16(C): The proposed rezoning of the Project Site is compatible with the present zoning and conforming uses of nearby properties and the character of the neighborhood which includes a mixture of uses including commercial and residential uses on properties zoned GB, MFR-6, etc.

Question 16(D): **Suitability of the subject property for uses permitted by the current versus the proposed district:**

Response to Question 16(D): The Project Site is not suitable for the redevelopment pursuant to its existing R-4 zoning classification [development limited to a duplex] and the existing R-4 zoning classification is inconsistent with the adopted Comprehensive Plan. The Project Site is suitable for redevelopment pursuant to the proposed CTR-5 zoning classification.

Question 16(E): **Whether the proposed change tends to improve the balance of uses, or meets a specific demand in the Town:**

Response to Question 16(D): The proposed change in the zoning classification of the Project Site from R-4 to CTR-5 to accommodate the proposed project will have positive impacts on the balance of uses in the Town by providing residential units for lease within a portion of the Town that has been designated as appropriate for this use by the Town Board per the recommendations of the adopted Comprehensive Plan.

Instructions for Completing Part 1

Part 1 is to be completed by the applicant or project sponsor. Responses become part of the application for approval or funding, are subject to public review, and may be subject to further verification.

Complete Part 1 based on information currently available. If additional research or investigation would be needed to fully respond to any item, please answer as thoroughly as possible based on current information; indicate whether missing information does not exist, or is not reasonably available to the sponsor; and, when possible, generally describe work or studies which would be necessary to update or fully develop that information.

Applicants/sponsors must complete all items in Sections A & B. In Sections C, D & E, most items contain an initial question that must be answered either "Yes" or "No". If the answer to the initial question is "Yes", complete the sub-questions that follow. If the answer to the initial question is "No", proceed to the next question. Section F allows the project sponsor to identify and attach any additional information. Section G requires the name and signature of the applicant or project sponsor to verify that the information contained in Part 1is accurate and complete.

A. Project and Applicant/Sponsor Information.

Name of Action or Project: Rensch Group LLC		
Project Location (describe, and attach a general location map): 3945 Rensch Road, Town of Amherst - Erie County		
Brief Description of Proposed Action (include purpose or need): The proposed project ("action") consists of a three-story multifamily building consisting of twelve units and related site improvements to be located at 3945 Rensch ("Project Site"). The proposed action has been defined broadly to include all required discretionary approvals and permits as well as all proposed site improvements including an amendment of the zoning classification of the Project Site from R-4 to CTF-5. The project purpose is to develop the Project Site for residential purposes per a recommended land use contained in the Town's adopted Comprehensive Plan. The proposed project is an Unlisted Action and will not result in any potentially significant adverse environmental impacts.		
Name of Applicant/Sponsor: Rensch Group LLC c/o Sean Hopkins, Esq.	Telephone: 716.510-4338 E-Mail: shopkins@hsmlegal.com	
Address: 5500 Main Street, Suite 343		
City/PO: Williamsville	State: NY	Zip Code: 14221

B. Government Approvals

B. Government Approvals, Funding, or Sponsorship. ("Funding" includes grants, loans, tax relief, and any other forms of financial assistance.)

Government Entity	If Yes: Identify Agency and Approval(s) Required	Application Date (Actual or projected)
a. City Counsel, Town Board, or Village Board of Trustees ☑Yes ☐No	Town of Amherst Town Board - Rezoning	Amended Application - April 5, 2023
b. City, Town or Village Planning Board or Commission ☑Yes ☐No	Town of Amherst Planning Board - Site Plan Approval	To be Determined
c. City, Town or Village Zoning Board of Appeals ☐Yes ☑No		
d. Other local agencies ☑Yes ☐No	Town of Amherst Building Department - Building Permit	To be Determined
e. County agencies ☑Yes ☐No	ECWA - Water	To be Determined
f. Regional agencies ☐Yes ☑No		
g. State agencies ☐Yes ☑No		
h. Federal agencies ☐Yes ☑No		

i. Coastal Resources.

i. Is the project site within a Coastal Area, or the waterfront area of a Designated Inland Waterway? ☐Yes ☑No

ii. Is the project site located in a community with an approved Local Waterfront Revitalization Program? ☐Yes ☑No

iii. Is the project site within a Coastal Erosion Hazard Area? ☐Yes ☑No

C. Planning and Zoning

C.1. Planning and zoning actions.

Will administrative or legislative adoption, or amendment of a plan, local law, ordinance, rule or regulation be the only approval(s) which must be granted to enable the proposed action to proceed? ☐Yes ☑No

- **If Yes,** complete sections C, F and G.
- **If No,** proceed to question C.2 and complete all remaining sections and questions in Part 1

C.2. Adopted land use plans.

a. Do any municipally- adopted (city, town, village or county) comprehensive land use plan(s) include the site where the proposed action would be located? ☑Yes ☐No

If Yes, does the comprehensive plan include specific recommendations for the site where the proposed action would be located? ☑Yes ☐No

b. Is the site of the proposed action within any local or regional special planning district (for example: Greenway; Brownfield Opportunity Area (BOA); designated State or Federal heritage area; watershed management plan; or other?) ☑Yes ☐No

If Yes, identify the plan(s):

NYS Heritage Areas:West Erie Canal Corridor

c. Is the proposed action located wholly or partially within an area listed in an adopted municipal open space plan, or an adopted municipal farmland protection plan? ☐Yes ☑No

If Yes, identify the plan(s):

Attachment: Z-2023-02 application 042023 (27197 : Z-2023-02)

C.3. Zoning

a. Is the site of the proposed action located in a municipality with an adopted zoning law or ordinance. ☑ Yes ☐ No
If Yes, what is the zoning classification(s) including any applicable overlay district?
Residential District Four ("R-4")

b. Is the use permitted or allowed by a special or conditional use permit? ☐ Yes ☑ No

c. Is a zoning change requested as part of the proposed action? ☑ Yes ☐ No
If Yes,
i. What is the proposed new zoning for the site? Center 5 ("CTR-5")

C.4. Existing community services.

a. In what school district is the project site located? Sweet Home Central School District

b. What police or other public protection forces serve the project site?
Town of Amherst Police Department

c. Which fire protection and emergency medical services serve the project site?
Local Volunteer Fire Department

d. What parks serve the project site?
There are various park that will be accessible to the residents of the Project Site.

D. Project Details

D.1. Proposed and Potential Development

a. What is the general nature of the proposed action (e.g., residential, industrial, commercial, recreational; if mixed, include all components)? Multifamily

b. a. Total acreage of the site of the proposed action? .5 acres
b. Total acreage to be physically disturbed? .4 acres
c. Total acreage (project site and any contiguous properties) owned or controlled by the applicant or project sponsor? .5 acres

c. Is the proposed action an expansion of an existing project or use? ☐ Yes ☑ No
i. If Yes, what is the approximate percentage of the proposed expansion and identify the units (e.g., acres, miles, housing units, square feet)? % _____ Units: _____

d. Is the proposed action a subdivision, or does it include a subdivision? ☐ Yes ☑ No
If Yes,
i. Purpose or type of subdivision? (e.g., residential, industrial, commercial; if mixed, specify types)
ii. Is a cluster/conservation layout proposed? ☐ Yes ☐ No
iii. Number of lots proposed? _____
iv. Minimum and maximum proposed lot sizes? Minimum _____ Maximum _____

e. Will the proposed action be constructed in multiple phases? ☐ Yes ☑ No
i. If No, anticipated period of construction: _____ months
ii. If Yes:
- Total number of phases anticipated _____
- Anticipated commencement date of phase 1 (including demolition) _____ month _____ year
- Anticipated completion date of final phase _____ month _____year
- Generally describe connections or relationships among phases, including any contingencies where progress of one phase may determine timing or duration of future phases: _____

Attachment: Z-2023-02 application 042023 (27197 : Z-2023-02)

f. Does the project include new residential uses? ☑ Yes ☐ No

If Yes, show numbers of units proposed.

	One Family	Two Family	Three Family	Multiple Family (four or more)
Initial Phase				12
At completion of all phases				12

g. Does the proposed action include new non-residential construction (including expansions)? ☐ Yes ☑ No

If Yes,

i. Total number of structures _____

ii. Dimensions (in feet) of largest proposed structure: _____height; _____width; and _____ length

iii. Approximate extent of building space to be heated or cooled: _____ square feet

h. Does the proposed action include construction or other activities that will result in the impoundment of any liquids, such as creation of a water supply, reservoir, pond, lake, waste lagoon or other storage? ☐ Yes ☑ No

If Yes,

i. Purpose of the impoundment: _____

ii. If a water impoundment, the principal source of the water: ☐ Ground water ☐ Surface water streams ☐ Other specify:

_____

iii. If other than water, identify the type of impounded/contained liquids and their source.

_____

iv. Approximate size of the proposed impoundment. Volume: _____ million gallons; surface area: _____ acres

v. Dimensions of the proposed dam or impounding structure: _____ height; _____ length

vi. Construction method/materials for the proposed dam or impounding structure (e.g., earth fill, rock, wood, concrete):

_____

D.2. Project Operations

a. Does the proposed action include any excavation, mining, or dredging, during construction, operations, or both? (Not including general site preparation, grading or installation of utilities or foundations where all excavated materials will remain onsite) ☐ Yes ☑ No

If Yes:

i .What is the purpose of the excavation or dredging? _____

ii. How much material (including rock, earth, sediments, etc.) is proposed to be removed from the site?

- Volume (specify tons or cubic yards): _____
- Over what duration of time? _____

iii. Describe nature and characteristics of materials to be excavated or dredged, and plans to use, manage or dispose of them.

_____

_____

iv. Will there be onsite dewatering or processing of excavated materials? ☐ Yes ☐ No

If yes, describe. _____

_____

v. What is the total area to be dredged or excavated? _____acres

vi. What is the maximum area to be worked at any one time? _____ acres

vii. What would be the maximum depth of excavation or dredging? _____ feet

viii. Will the excavation require blasting? ☐ Yes ☐ No

ix. Summarize site reclamation goals and plan: _____

_____

_____

b. Would the proposed action cause or result in alteration of, increase or decrease in size of, or encroachment into any existing wetland, waterbody, shoreline, beach or adjacent area? ☐ Yes ☑ No

If Yes:

i. Identify the wetland or waterbody which would be affected (by name, water index number, wetland map number or geographic description): _____

_____

Attachment: Z-2023-02 application 042023 (27197 : Z-2023-02)

ii. Describe how the proposed action would affect that waterbody or wetland, e.g. excavation, fill, placement of structures, or alteration of channels, banks and shorelines. Indicate extent of activities, alterations and additions in square feet or acres:

iii. Will the proposed action cause or result in disturbance to bottom sediments? ☐ Yes ☐ No
If Yes, describe:

iv. Will the proposed action cause or result in the destruction or removal of aquatic vegetation? ☐ Yes ☐ No
If Yes:

- acres of aquatic vegetation proposed to be removed:
- expected acreage of aquatic vegetation remaining after project completion:
- purpose of proposed removal (e.g. beach clearing, invasive species control, boat access):
- proposed method of plant removal:
- if chemical/herbicide treatment will be used, specify product(s):

v. Describe any proposed reclamation/mitigation following disturbance:

c. Will the proposed action use, or create a new demand for water? ☑ Yes ☐ No
If Yes:

i. Total anticipated water usage/demand per day: 2,400 gallons/day

ii. Will the proposed action obtain water from an existing public water supply? ☑ Yes ☐ No
If Yes:

- Name of district or service area: Erie County Consolidated Water District
- Does the existing public water supply have capacity to serve the proposal? ☑ Yes ☐ No
- Is the project site in the existing district? ☑ Yes ☐ No
- Is expansion of the district needed? ☐ Yes ☑ No
- Do existing lines serve the project site? ☑ Yes ☐ No

iii. Will line extension within an existing district be necessary to supply the project? ☐ Yes ☑ No
If Yes:

- Describe extensions or capacity expansions proposed to serve this project:
- Source(s) of supply for the district:

iv. Is a new water supply district or service area proposed to be formed to serve the project site? ☐ Yes ☐ No
If, Yes:

- Applicant/sponsor for new district:
- Date application submitted or anticipated:
- Proposed source(s) of supply for new district:

v. If a public water supply will not be used, describe plans to provide water supply for the project:

vi. If water supply will be from wells (public or private), what is the maximum pumping capacity: _____ gallons/minute.

d. Will the proposed action generate liquid wastes? ☑ Yes ☐ No
If Yes:

i. Total anticipated liquid waste generation per day: 2,400 gallons/day

ii. Nature of liquid wastes to be generated (e.g., sanitary wastewater, industrial; if combination, describe all components and approximate volumes or proportions of each):
Sanitary wastewater.

iii. Will the proposed action use any existing public wastewater treatment facilities? ☑ Yes ☐ No
If Yes:

- Name of wastewater treatment plant to be used: Town of Amherst Wastewater Treatment Plant
- Name of district: Town of Amherst Consolidated Sanitary Sewer District
- Does the existing wastewater treatment plant have capacity to serve the project? ☑ Yes ☐ No
- Is the project site in the existing district? ☑ Yes ☐ No
- Is expansion of the district needed? ☐ Yes ☑ No

Attachment: Z-2023-02 application 042023 (27197 : Z-2023-02)

- Do existing sewer lines serve the project site? ☑ Yes ☐ No
- Will a line extension within an existing district be necessary to serve the project? ☐ Yes ☑ No

If Yes:

- Describe extensions or capacity expansions proposed to serve this project: _____

iv. Will a new wastewater (sewage) treatment district be formed to serve the project site? ☐ Yes ☑ No

If Yes:

- Applicant/sponsor for new district: _____
- Date application submitted or anticipated: _____
- What is the receiving water for the wastewater discharge? _____

v. If public facilities will not be used, describe plans to provide wastewater treatment for the project, including specifying proposed receiving water (name and classification if surface discharge or describe subsurface disposal plans):

_____

vi. Describe any plans or designs to capture, recycle or reuse liquid waste: _____

e. Will the proposed action disturb more than one acre and create stormwater runoff, either from new point sources (i.e. ditches, pipes, swales, curbs, gutters or other concentrated flows of stormwater) or non-point source (i.e. sheet flow) during construction or post construction? ☑ Yes ☐ No

If Yes:

i. How much impervious surface will the project create in relation to total size of project parcel?

_____ Square feet or .2 acres (impervious surface)

_____ Square feet or .5 acres (parcel size)

ii. Describe types of new point sources. _____

iii. Where will the stormwater runoff be directed (i.e. on-site stormwater management facility/structures, adjacent properties, groundwater, on-site surface water or off-site surface waters)?

Stormwater runoff will be directed into the municipal storm water system.

- If to surface waters, identify receiving water bodies or wetlands: _____
- Will stormwater runoff flow to adjacent properties? ☐ Yes ☐ No

iv. Does the proposed plan minimize impervious surfaces, use pervious materials or collect and re-use stormwater? ☐ Yes ☐ No

f. Does the proposed action include, or will it use on-site, one or more sources of air emissions, including fuel combustion, waste incineration, or other processes or operations? ☐ Yes ☑ No

If Yes, identify:

i. Mobile sources during project operations (e.g., heavy equipment, fleet or delivery vehicles)

ii. Stationary sources during construction (e.g., power generation, structural heating, batch plant, crushers)

iii. Stationary sources during operations (e.g., process emissions, large boilers, electric generation)

g. Will any air emission sources named in D.2.f (above), require a NY State Air Registration, Air Facility Permit, or Federal Clean Air Act Title IV or Title V Permit? ☐ Yes ☑ No

If Yes:

i. Is the project site located in an Air quality non-attainment area? (Area routinely or periodically fails to meet ambient air quality standards for all or some parts of the year) ☐ Yes ☐ No

ii. In addition to emissions as calculated in the application, the project will generate:

- _____Tons/year (short tons) of Carbon Dioxide (CO_2)
- _____Tons/year (short tons) of Nitrous Oxide (N_2O)
- _____Tons/year (short tons) of Perfluorocarbons (PFCs)
- _____Tons/year (short tons) of Sulfur Hexafluoride (SF_6)
- _____Tons/year (short tons) of Carbon Dioxide equivalent of Hydroflourocarbons (HFCs)
- _____Tons/year (short tons) of Hazardous Air Pollutants (HAPs)

Attachment: Z-2023-02 application 042023 (27197 : Z-2023-02)

h. Will the proposed action generate or emit methane (including, but not limited to, sewage treatment plants, landfills, composting facilities)? ☐Yes ☑No

If Yes:

i. Estimate methane generation in tons/year (metric): _____

ii. Describe any methane capture, control or elimination measures included in project design (e.g., combustion to generate heat or electricity, flaring): _____

_____

i. Will the proposed action result in the release of air pollutants from open-air operations or processes, such as quarry or landfill operations? ☐Yes ☑No

If Yes: Describe operations and nature of emissions (e.g., diesel exhaust, rock particulates/dust):

_____

_____

j. Will the proposed action result in a substantial increase in traffic above present levels or generate substantial new demand for transportation facilities or services? ☐Yes ☑No

If Yes:

i. When is the peak traffic expected (Check all that apply): ☐ Morning ☐ Evening ☐Weekend ☐ Randomly between hours of _____ to _____.

ii. For commercial activities only, projected number of truck trips/day and type (e.g., semi trailers and dump trucks): _____

_____

iii. Parking spaces: Existing _____ Proposed _____ Net increase/decrease _____

iv. Does the proposed action include any shared use parking? ☐Yes ☐No

v. If the proposed action includes any modification of existing roads, creation of new roads or change in existing access, describe:

_____

vi. Are public/private transportation service(s) or facilities available within ½ mile of the proposed site? ☐Yes ☐No

vii Will the proposed action include access to public transportation or accommodations for use of hybrid, electric or other alternative fueled vehicles? ☐Yes ☐No

viii. Will the proposed action include plans for pedestrian or bicycle accommodations for connections to existing pedestrian or bicycle routes? ☐Yes ☐No

k. Will the proposed action (for commercial or industrial projects only) generate new or additional demand for energy? ☐Yes ☑No

If Yes:

i. Estimate annual electricity demand during operation of the proposed action: _____

_____

ii. Anticipated sources/suppliers of electricity for the project (e.g., on-site combustion, on-site renewable, via grid/local utility, or other):

_____

iii. Will the proposed action require a new, or an upgrade, to an existing substation? ☐Yes ☐No

l. Hours of operation. Answer all items which apply.

i. During Construction:

- Monday - Friday: 7:00 to 7:00
- Saturday: 7:00 to 5:00
- Sunday: As needed
- Holidays: Not Applicable

ii. During Operations:

- Monday - Friday: Not Applicable
- Saturday: _____
- Sunday: _____
- Holidays: _____

Attachment: Z-2023-02 application 042023 (27197 : Z-2023-02)

m. Will the proposed action produce noise that will exceed existing ambient noise levels during construction, operation, or both? ☑ Yes ☐ No

If yes:

i. Provide details including sources, time of day and duration:

Construction equipment and activities limited to daytime hours is a temporary and unavoidable adverse impact.

ii. Will the proposed action remove existing natural barriers that could act as a noise barrier or screen? ☐ Yes ☑ No

Describe: _____

n. Will the proposed action have outdoor lighting? ☑ Yes ☐ No

If yes:

i. Describe source(s), location(s), height of fixture(s), direction/aim, and proximity to nearest occupied structures:

Lighting improvements on the Project Site will comply with the stringent lighting standard contained in the Zoning Code.

ii. Will proposed action remove existing natural barriers that could act as a light barrier or screen? ☐ Yes ☑ No

Describe: _____

o. Does the proposed action have the potential to produce odors for more than one hour per day? ☐ Yes ☑ No

If Yes, describe possible sources, potential frequency and duration of odor emissions, and proximity to nearest occupied structures: _____

p. Will the proposed action include any bulk storage of petroleum (combined capacity of over 1,100 gallons) or chemical products 185 gallons in above ground storage or any amount in underground storage? ☐ Yes ☑ No

If Yes:

i. Product(s) to be stored _____

ii. Volume(s) _____ per unit time _____ (e.g., month, year)

iii. Generally, describe the proposed storage facilities: _____

q. Will the proposed action (commercial, industrial and recreational projects only) use pesticides (i.e., herbicides, insecticides) during construction or operation? ☐ Yes ☑ No

If Yes:

i. Describe proposed treatment(s):

ii. Will the proposed action use Integrated Pest Management Practices? ☐ Yes ☐ No

r. Will the proposed action (commercial or industrial projects only) involve or require the management or disposal of solid waste (excluding hazardous materials)? ☐ Yes ☑ No

If Yes:

i. Describe any solid waste(s) to be generated during construction or operation of the facility:

- Construction: _____ tons per _____ (unit of time)
- Operation : _____ tons per _____ (unit of time)

ii. Describe any proposals for on-site minimization, recycling or reuse of materials to avoid disposal as solid waste:

- Construction: _____
- Operation: _____

iii. Proposed disposal methods/facilities for solid waste generated on-site:

- Construction: _____
- Operation: _____

Attachment: Z-2023-02 application 042023 (27197 : Z-2023-02)

5.a

s. Does the proposed action include construction or modification of a solid waste management facility? ☐ Yes ☑ No

If Yes:

i. Type of management or handling of waste proposed for the site (e.g., recycling or transfer station, composting, landfill, or other disposal activities): _____

ii. Anticipated rate of disposal/processing:

- _____ Tons/month, if transfer or other non-combustion/thermal treatment, or
- _____ Tons/hour, if combustion or thermal treatment

iii. If landfill, anticipated site life: _____ years

t. Will the proposed action at the site involve the commercial generation, treatment, storage, or disposal of hazardous waste? ☐ Yes ☑ No

If Yes:

i. Name(s) of all hazardous wastes or constituents to be generated, handled or managed at facility: _____

ii. Generally describe processes or activities involving hazardous wastes or constituents: _____

iii. Specify amount to be handled or generated _____ tons/month

iv. Describe any proposals for on-site minimization, recycling or reuse of hazardous constituents: _____

v. Will any hazardous wastes be disposed at an existing offsite hazardous waste facility? ☐ Yes ☐ No

If Yes: provide name and location of facility: _____

If No: describe proposed management of any hazardous wastes which will not be sent to a hazardous waste facility:

E. Site and Setting of Proposed Action

E.1. Land uses on and surrounding the project site

a. Existing land uses.

i. Check all uses that occur on, adjoining and near the project site.

☐ Urban ☐ Industrial ☑ Commercial ☑ Residential (suburban) ☐ Rural (non-farm)
☐ Forest ☐ Agriculture ☐ Aquatic ☑ Other (specify): Mixed-Use

ii. If mix of uses, generally describe:

Mixtures of land uses including commercial, student housing and multifamily.

b. Land uses and covertypes on the project site.

Land use or Covertype	Current Acreage	Acreage After Project Completion	Change (Acres +/-)
• Roads, buildings, and other paved or impervious surfaces	.2	.4	.2
• Forested	0	0	0
• Meadows, grasslands or brushlands (non-agricultural, including abandoned agricultural)	0	0	0
• Agricultural (includes active orchards, field, greenhouse etc.)	0	0	0
• Surface water features (lakes, ponds, streams, rivers, etc.)	0	0	0
• Wetlands (freshwater or tidal)	0	0	0
• Non-vegetated (bare rock, earth or fill)	0	0	0
• Other Describe: Greenspace and Landcaping	.3	.1	(.2)

Attachment: Z-2023-02 application 042023 (27197 : Z-2023-02)

c. Is the project site presently used by members of the community for public recreation? ☐ Yes ☑ No
i. If Yes: explain: _____

d. Are there any facilities serving children, the elderly, people with disabilities (e.g., schools, hospitals, licensed day care centers, or group homes) within 1500 feet of the project site? ☑ Yes ☐ No
If Yes,
i. Identify Facilities:
There is a People Inc. group home located within 1,500 ft. of the Project Site on Rensch Road

e. Does the project site contain an existing dam? ☐ Yes ☑ No
If Yes:
i. Dimensions of the dam and impoundment:
- Dam height: _____ feet
- Dam length: _____ feet
- Surface area: _____ acres
- Volume impounded: _____ gallons OR acre-feet

ii. Dam's existing hazard classification: _____
iii. Provide date and summarize results of last inspection:

f. Has the project site ever been used as a municipal, commercial or industrial solid waste management facility, or does the project site adjoin property which is now, or was at one time, used as a solid waste management facility? ☐ Yes ☑ No
If Yes:
i. Has the facility been formally closed? ☐ Yes ☐ No
- If yes, cite sources/documentation: _____

ii. Describe the location of the project site relative to the boundaries of the solid waste management facility:

iii. Describe any development constraints due to the prior solid waste activities: _____

g. Have hazardous wastes been generated, treated and/or disposed of at the site, or does the project site adjoin property which is now or was at one time used to commercially treat, store and/or dispose of hazardous waste? ☐ Yes ☑ No
If Yes:
i. Describe waste(s) handled and waste management activities, including approximate time when activities occurred:

h. Potential contamination history. Has there been a reported spill at the proposed project site, or have any remedial actions been conducted at or adjacent to the proposed site? ☐ Yes ☑ No
If Yes:
i. Is any portion of the site listed on the NYSDEC Spills Incidents database or Environmental Site Remediation database? Check all that apply: ☐ Yes ☐ No
☐ Yes – Spills Incidents database — Provide DEC ID number(s): _____
☐ Yes – Environmental Site Remediation database — Provide DEC ID number(s): _____
☐ Neither database

ii. If site has been subject of RCRA corrective activities, describe control measures:_____

iii. Is the project within 2000 feet of any site in the NYSDEC Environmental Site Remediation database? ☐ Yes ☑ No
If yes, provide DEC ID number(s): _____

iv. If yes to (i), (ii) or (iii) above, describe current status of site(s):

Attachment: Z-2023-02 application 042023 (27197 : Z-2023-02)

v. Is the project site subject to an institutional control limiting property uses? ☐ Yes ☐ No

- If yes, DEC site ID number: _____
- Describe the type of institutional control (e.g., deed restriction or easement): _____
- Describe any use limitations: _____
- Describe any engineering controls: _____
- Will the project affect the institutional or engineering controls in place? ☐ Yes ☐ No
- Explain: _____

E.2. Natural Resources On or Near Project Site

a. What is the average depth to bedrock on the project site? >10 feet

b. Are there bedrock outcroppings on the project site? ☐ Yes ☑ No
If Yes, what proportion of the site is comprised of bedrock outcroppings? _____%

c. Predominant soil type(s) present on project site: Churchville Silt Loam 100 %

d. What is the average depth to the water table on the project site? Average: >10 feet

e. Drainage status of project site soils:
☐ Well Drained: _____% of site
☐ Moderately Well Drained: _____% of site
☑ Poorly Drained 100 % of site

f. Approximate proportion of proposed action site with slopes:
☑ 0-10%: 100 % of site
☐ 10-15%: _____% of site
☐ 15% or greater: _____% of site

g. Are there any unique geologic features on the project site? ☐ Yes ☑ No
If Yes, describe: _____

h. Surface water features.

i. Does any portion of the project site contain wetlands or other waterbodies (including streams, rivers, ponds or lakes)? ☐ Yes ☑ No

ii. Do any wetlands or other waterbodies adjoin the project site? ☐ Yes ☑ No

If Yes to either *i* or *ii*, continue. If No, skip to E.2.i.

iii. Are any of the wetlands or waterbodies within or adjoining the project site regulated by any federal, state or local agency? ☐ Yes ☑ No

iv. For each identified regulated wetland and waterbody on the project site, provide the following information:

- Streams: Name _____ Classification _____
- Lakes or Ponds: Name _____ Classification _____
- Wetlands: Name _____ Approximate Size _____
- Wetland No. (if regulated by DEC) _____

v. Are any of the above water bodies listed in the most recent compilation of NYS water quality-impaired waterbodies? ☐ Yes ☑ No

If yes, name of impaired water body/bodies and basis for listing as impaired: _____

i. Is the project site in a designated Floodway? ☐ Yes ☑ No

j. Is the project site in the 100-year Floodplain? ☐ Yes ☑ No

k. Is the project site in the 500-year Floodplain? ☐ Yes ☑ No

l. Is the project site located over, or immediately adjoining, a primary, principal or sole source aquifer? ☐ Yes ☑ No
If Yes:

i. Name of aquifer: _____

Attachment: Z-2023-02 application 042023 (27197 : Z-2023-02)

m. Identify the predominant wildlife species that occupy or use the project site: Typical suburban species.

n. Does the project site contain a designated significant natural community? ☐ Yes ☑ No

If Yes:

i. Describe the habitat/community (composition, function, and basis for designation): _____

ii. Source(s) of description or evaluation: _____

iii. Extent of community/habitat:

- Currently: _____ acres
- Following completion of project as proposed: _____ acres
- Gain or loss (indicate + or -): _____ acres

o. Does project site contain any species of plant or animal that is listed by the federal government or NYS as endangered or threatened, or does it contain any areas identified as habitat for an endangered or threatened species? ☐ Yes ☑ No

If Yes:

i. Species and listing (endangered or threatened): _____

p. Does the project site contain any species of plant or animal that is listed by NYS as rare, or as a species of special concern? ☐ Yes ☑ No

If Yes:

i. Species and listing: _____

q. Is the project site or adjoining area currently used for hunting, trapping, fishing or shell fishing? ☐ Yes ☑ No

If yes, give a brief description of how the proposed action may affect that use: _____

E.3. Designated Public Resources On or Near Project Site

a. Is the project site, or any portion of it, located in a designated agricultural district certified pursuant to Agriculture and Markets Law, Article 25-AA, Section 303 and 304? ☐ Yes ☑ No

If Yes, provide county plus district name/number: _____

b. Are agricultural lands consisting of highly productive soils present? ☐ Yes ☑ No

i. If Yes: acreage(s) on project site? _____

ii. Source(s) of soil rating(s): _____

c. Does the project site contain all or part of, or is it substantially contiguous to, a registered National Natural Landmark? ☐ Yes ☑ No

If Yes:

i. Nature of the natural landmark: ☐ Biological Community ☐ Geological Feature

ii. Provide brief description of landmark, including values behind designation and approximate size/extent: _____

d. Is the project site located in or does it adjoin a state listed Critical Environmental Area? ☐ Yes ☑ No

If Yes:

i. CEA name: _____

ii. Basis for designation: _____

iii. Designating agency and date: _____

Attachment: Z-2023-02 application 042023 (27197 : Z-2023-02)

e. Does the project site contain, or is it substantially contiguous to, a building, archaeological site, or district which is listed on the National or State Register of Historic Places, or that has been determined by the Commissioner of the NYS Office of Parks, Recreation and Historic Preservation to be eligible for listing on the State Register of Historic Places? ☑ Yes ☐ No

If Yes:

i. Nature of historic/archaeological resource: ☐ Archaeological Site ☐ Historic Building or District

ii. Name: Eligible property:4030 Rensch Road, Amherst

iii. Brief description of attributes on which listing is based:

f. Is the project site, or any portion of it, located in or adjacent to an area designated as sensitive for archaeological sites on the NY State Historic Preservation Office (SHPO) archaeological site inventory? ☑ Yes ☐ No

g. Have additional archaeological or historic site(s) or resources been identified on the project site? ☐ Yes ☑ No

If Yes:

i. Describe possible resource(s):

ii. Basis for identification:

h. Is the project site within fives miles of any officially designated and publicly accessible federal, state, or local scenic or aesthetic resource? ☐ Yes ☑ No

If Yes:

i. Identify resource:

ii. Nature of, or basis for, designation (e.g., established highway overlook, state or local park, state historic trail or scenic byway, etc.):

iii. Distance between project and resource: _____ miles.

i. Is the project site located within a designated river corridor under the Wild, Scenic and Recreational Rivers Program 6 NYCRR 666? ☐ Yes ☑ No

If Yes:

i. Identify the name of the river and its designation:

ii. Is the activity consistent with development restrictions contained in 6NYCRR Part 666? ☐ Yes ☐ No

F. Additional Information

Attach any additional information which may be needed to clarify your project.

If you have identified any adverse impacts which could be associated with your proposal, please describe those impacts plus any measures which you propose to avoid or minimize them.

G. Verification

I certify that the information provided is true to the best of my knowledge.

EAF Mapper Summary Report

Monday, February 20, 2023 12:5[illegible] P.M.

Disclaimer: The EAF Mapper is a screening tool intended to assist project sponsors and reviewing agencies in preparing an environmental assessment form (EAF). Not all questions asked in the EAF are answered by the EAF Mapper. Additional information on any EAF question can be obtained by consulting the EAF Workbooks. Although the EAF Mapper provides the most up-to-date digital data available to DEC, you may also need to contact local or other data sources in order to obtain data not provided by the Mapper. Digital data is not a substitute for agency determinations.

B.i.i [Coastal or Waterfront Area]	No
B.i.ii [Local Waterfront Revitalization Area]	No
C.2.b. [Special Planning District]	Yes - Digital mapping data are not available for all Special Planning Districts. Refer to EAF Workbook.
C.2.b. [Special Planning District - Name]	NYS Heritage Areas:West Erie Canal Corridor
E.1.h [DEC Spills or Remediation Site - Potential Contamination History]	Digital mapping data are not available or are incomplete. Refer to EAF Workbook.
E.1.h.i [DEC Spills or Remediation Site - Listed]	Digital mapping data are not available or are incomplete. Refer to EAF Workbook.
E.1.h.i [DEC Spills or Remediation Site - Environmental Site Remediation Database]	Digital mapping data are not available or are incomplete. Refer to EAF Workbook.
E.1.h.iii [Within 2,000' of DEC Remediation Site]	No
E.2.g [Unique Geologic Features]	No
E.2.h.i [Surface Water Features]	No
E.2.h.ii [Surface Water Features]	No
E.2.h.iii [Surface Water Features]	No
E.2.h.v [Impaired Water Bodies]	No
E.2.i. [Floodway]	No
E.2.j. [100 Year Floodplain]	No
E.2.k. [500 Year Floodplain]	No
E.2.l. [Aquifers]	No
E.2.n. [Natural Communities]	No

TOWN OF AMHERST ATTACHMENT
State Environmental Quality Review
ENVIRONMENTAL ASSESSMENT FORM

1. For each applicable category of proposed new structures, including additions to existing structures, provide the following information for all soil types on the project site (*according to Soil Survey of Erie County, NY; Table 11, Building Site Development, pp 294-305):*

Soil Name	Shallow excavations	Dwellings without basements	Dwellings with basements	Small commercial buildings	Local roads and streets
Churchville Silt Loam	Severe	Severe	Severe	Severe	Moderate

2. If the Soil survey indicates either "severe" or "moderate" suitability for the proposed types of construction, a geotechnical and hydrological analysis based on one test per 3.5 acres of project area must be provided (per Town Board resolution, 3/17/03, amended 6/16/03).

   __x__ Geotechnical report attached _____ Not applicable

   [Note: Three copies of the Geotechnical Report prepared by Barron & Associates P.C. dated August 24, 2022 have been submitted to the Planning Department].

3. Is your property located: On Youngs Road between Dodge and Klein Roads? □ Yes x No
   On Wehrle Dr. between Spindrift Dr. and Oakwood Rd? □ Yes x No

   If so, the property may be within an area of the Town that is affected by a moratorium on connections to the sanitary sewer system.

4. Are there alternative locations on the site for this project? □ Yes x No

5. Location and size of real property owned by petitioner within one (1) mile of subject proposal:

   Not Applicable.

6. Are you aware of current or future plans or intentions by others in the Town of Amherst to develop property within 1000± ft. of the present project request: □ Yes ☒ No
   Describe: Not Applicable.

   (Potential environmental impacts from adjacent or nearby projects undergoing the approval process will receive a coordinated environmental review to determine cumulative effects on common receivers (e.g. traffic and drainage corridors) and other relevant environmental concerns.)

7. Maximum number of vehicular trips to be generated per peak hour upon completion of project 11[Weekday A.M. Peak]
   Source: ITE Trip Generation Report

8. Will blasting occur during construction? □ Yes ☒ No

9. Does the project propose to connect and be tributary to the public sanitary sewer system? ☒ Yes □ No

10. Proposed net additional gallons per day (gpd) of sanitary sewer discharge upon completion of project:
    2,400 average flow 9,600 peak flow.

    (Average flows of 2,500 gpd or greater will require an Engineer's Report that includes a detailed downstream sewer capacity analysis and the identification of and commitment to required I/I offset work during peak wastewater flow conditions.)

11. Based on the Town's *2011 Reconnaissance Level Survey of Historic Resources,* is your property 'blue-rated' for historic significance? □ Yes ☒ No

Re: Amended Rezoning Application & Supporting Documentation
Rezoning of 3945 Rensch Road R-4 to CTR-5 [Z-2023-02]
Applicant/Project Sponsor: Rensch Group LLC c/o Ellicott Development Company
File No. 10173.12

Dear Gary:

Per our recent discussion as well as the comment letter issued by the Planning Department dated April 4th, enclosed is an Amended Rezoning Application with attached supporting documentation being submitted for the purpose of seeking to amend the zoning classification of 3945 Rensch Road ("Project Site") from R-4 to CTR-5 instead of the previously requested SC-3 zoning classification pursuant to the Planning Department's input in order to accommodate the proposed redevelopment of the Project Site as a three-story multifamily building consisting of twelve units. In connection with the updated submission, enclosed is the following:

1. Amended Rezoning Application dated April 5th with attached supporting documentation consisting of Exhibits "1" to "8". The Exhibits consist of the following:

   - **Exhibit 1:** Amended Part 1 of the Full Environmental Assessment Form prepared pursuant to the State Environmental Quality Review Act ("SEQRA") with attached Page 5[a];
   - **Exhibit 2:** Legal description of property to be rezoned from R-3 to CTR-5;
   - **Exhibit 3**: Survey of the Project Site as prepared by Ottney & Miller, L.S.P.C.;
   - **Exhibit 4:** Responses to Question 11 of the Rezoning Application;
   - **Exhibit 5:** Responses to Questions 16A, 16C, 16D and 16E of the of the Rezoning Application;
   - **Exhibit 6:** Reduced-size copy of the updated Concept Site Plan [Drawing C-100 – Date: 04/04/23] as prepared by Christopher Wood, P.E. of Carmina Wood Design;
   - **Exhibit 7:** Conceptual Elevation Plan for the proposed three-story multifamily building as prepared by Sutton Architecture PLLC; and

5500 Main Street, Suite 343 • Williamsville, New York 14221
Direct: 716-510-4338 • E-mail: shopkins@hsmlegal.com • www.hsmlegal.com

Attachment: Z-2023-02 application 042023 (27197 : Z-2023-02)

- **Exhibit 8:** Color copies of Figure 6 and Figure 6-A of the Bicentennial Comprehensive Plan

The Project Sponsor is requesting that Planning Board adopt resolutions during its upcoming meeting to be held on **Thursday, April 20th at 6:30 p.m.** for the purpose of recommending that the Town Board issue a negative declaration pursuant to the State Environmental Quality Review Act ("SEQRA") and approving the requested rezoning of the Project Site from R-4 to CTR-5.

If you have any questions regarding the enclosed Amended Rezoning Application and supporting documentation, please feel free to contact me at 716.510-4338 or via e-mail at shopkins@hsmlegal.com.

Sincerely,

HOPKINS SORGI & MCCARTHY PLLC

TOWN OF AMHERST
PLANNING BOARD
ZONING RESOLUTION
Z-2023-02

PETITIONER

Rensch Group LLC
c/o Sean Hopkins
5500 Main Street, Suite 343
Williamsville, NY 14221

PROPERTY LOCATION

3945 Rensch Road

WHEREAS the Town of Amherst Planning Board on Thursday, April 20, 2023 held a public hearing on the proposed rezoning of land from Residential District Four (R-4) to Center 5 District (CTR-5), and

WHEREAS the Planning Board has reviewed plans and other materials regarding the rezoning proposal, and

WHEREAS the materials and plans have been referred to the Town's various review agencies, and

WHEREAS in accordance with Section 8-3-5 of the Zoning Ordinance the Planning Board finds that:

A. The proposed zoning and development plan is generally consistent with the policies of the Comprehensive Plan and the Zoning Ordinance and is consistent with the Conceptual Land Use Plan which shows medium density residential use in a mixed-use form in this area of the Town.

B. There are adequate services and utilities available or proposed to be made available in the construction of the development.

C. The proposal is compatible with the present zoning and conforming uses of nearby property and with the character of the neighborhood.

D. The subject property is no longer suitable for uses permitted by the current zoning district versus the proposed district.

E. The proposed change does tend to improve the balance of uses, or meets a specific demand in the Town.

F. Review by the US Army Corps of Engineers under Section 404 of the Clean Water Act may be waived because the parcel is developed.

WHEREAS pursuant to Local Law #3-82, as amended, the Planning Board recommends that the Town Board determine that the requirements of SEQR are complete and that the subject proposal is not expected to have a significant adverse effect on the environment.

LOCAL LAW NO.___ -2023

TOWN OF AMHERST

COUNTY OF ERIE, STATE OF NEW YORK

A Local Law Amending Chapter 203 Of The Code Of The Town Of Amherst, Also Known As The Zoning Ordinance, To Exclude Certain Public Uses

Be it enacted by the Town Board of the Town of Amherst as follows:

Section 1. Title.

This Local Law shall be referred to as, "A Local Law Amending Chapter 203 Of The Code Of The Town Of Amherst, Also Known As The Zoning Ordinance, To Exclude Certain Public Uses."

Section 2. Purpose

The purpose of this Local Law shall be to amend Chapter 203 of the Code of the Town of Amherst to exclude certain public uses.

Section 3.

Chapter 203 of the Code of the Town of Amherst is hereby amended to include a new section to Chapter 203, Part 1, namely Section 1-13, as follows:

Chapter 203, Part 1, Section 1-13

§203-1-13 Certain Public Uses Excluded

A. The regulations of this chapter shall not be construed as to limit or interfere with the dedication, development or use of any land or building for public parks, other public recreation areas or public schools required for compulsory education; or with the use of land or buildings owned by the United States of America, the State of New York, the County of Erie or the Town of Amherst and used for governmental purposes; or with the construction, installation, operation and maintenance for public utility purposes of water or gas pipes, mains or conduits, electric light or electric power transmission or distribution lines, telephone or telegraph lines, cable television lines, oil pipe lines, sewers, sewer mains or incidental appurtenances; nor with any highway, railroad right-of-way or mass transit right-of-way existing or hereafter authorized by the United States of

~~Strikethrough~~ = Deleted language; Underline = Added language

Attachment: ZTA-2023-01 application 042023 (27355 : Zta-2023-01)

America, the State of New York, the County of Erie, the Erie County Water Authority, or the Town of Amherst .

B. These exceptions, however, shall not be interpreted to permit yards, garages or other buildings for service or storage by said public utilities which are otherwise permitted by this chapter in appropriate districts; nor shall these exceptions permit wireless telecommunications facilities as permitted by sections 6-7 and section 6-11, unless constructed by or for the Town of Amherst or on the Town's behalf to include governmental use.

C. These exemptions do not apply to the provisions of the State Environmental Review Act (SEQRA) or other state or federal requirements, but are limited only to requirements of the Town of Amherst.

D. The Town Board may prescribe conditions that it deems necessary or desirable and may require a site plan of the proposed installation. Application for such use impacting 20 acres or more may be referred to the Town Planning Board for its recommendation which shall be advisory only.

Section 4. Severability.

If any section, subsection, sentence, clause or phrase of this Local Law is for any reason held to be invalid or unconstitutional, such decision shall not affect the validity of the remaining portions of this Chapter. The Town Board declares that it would have passed this Chapter, and each section, subsection, sentence, clause and phrase thereof, irrespective of the fact that any one or more sections, subsections, sentences, clauses or phrases may be declared invalid or unconstitutional and, if for any reason this Chapter should be declared invalid or unconstitutional, then the remaining section, subsection, sentence, clause or phrases shall be in full force and effect.

Section 5. Effective Date

This Local Law shall take effect immediately and be filed in the Office of the Secretary of State in accordance with Section 27 of the Municipal Home Rule Law and published pursuant to Sections 130 and 133 of the Town Law and Chapter 28 of the Code of the Town of Amherst.

Francina J. Spoth, Town Clerk
Town of Amherst
County of Erie, New York

TOWN OF AMHERST
PLANNING BOARD
ZONING ORDINANCE TEXT AMENDMENT RESOLUTION
ZTA-2023-01

PETITIONER

Town of Amherst

WHEREAS the Town of Amherst Planning Board on Thursday, April 20, 2023 held a public hearing on the proposed zoning ordinance changes, which exempt the Town of Amherst Government from the provisions of the Chapter 203 (Zoning Ordinance) of the Amherst Town Code, and

WHEREAS the Planning Board has reviewed materials regarding the text amendments proposal, and

WHEREAS the materials have been referred to the Town's various review agencies, and

NOW THEREFORE BE IT RESOLVED that the Planning Board recommends to the Town Board in accordance with Section 8-3-4 of the Zoning Ordinance, that the Zoning Text Amendment **not be approved.**

The foregoing resolution was adopted by the Town of Amherst Planning Board, April 20, 2023; moved by - Fenberthy; seconded by - Raffaele; ayes 4, noes 3; absent - 0.

TOWN OF AMHERST

APPLICATION & REVIEW PROCEDURE

MAJOR SITE PLAN

MATERIALS MUST BE PROVIDED IN AN ELECTRONIC FORMAT THAT CONTAINS PDF FILES OF THE APPLICATION, EAF, SITE PLAN DRAWING SET SURVEY, LANDSCAPE PLAN, PRELIMINARY BUILDING FLOO PLANS / ELEVATIONS & ANY OTHER SUPPORTING INFORMATION. THIS MUST BE SUBMITTED WITH YOUR APPLICATION. APPLICATIONS WILL NOT BE TRANSMITTED WITHOUT THIS ELECTRONIC INFORMATION.

THIS ALSO APPLIES TO REVISED MATERIALS THAT AR SUBMITTED.

This application package includes the following:

- Application Procedures
- Application Form & Checklist
- Stormwater Pollution Prevention Plan Checklist
- Appendix A Town of Amherst EAF Addendum
- Appendix B Criteria for Required 8½" x 11" Sketches
- Appendix C Erie Sewer District No. 5 – Commercial / Industrial New & Existing Buildings Requirements

- IMPORTANT-

1. A pre-submittal consultation with Planning Department staff is *strongly recommended* prior to submitting an application. The pre-submittal meeting gives the applicant an opportunity to discuss with staff such items as:
   - classifying the action as a major site plan, minor site plan, or minor site plan adjustment;
   - determining what specific information will be required to be submitted with the application;
   - identifying and discussing issues that must be addressed as part of the SEQR review;
   - identifying any potential variances required to implement the project as proposed.

   An appointment is required for all meetings with Planning Department staff.

2. This site plan petition is subject to the requirements of 6 NYCRR Part 617, State Environmental Quality Review Act (SEQR), and Chapter 104 of the Town of Amherst Code, as amended. The Planning Board cannot make a SEQR determination unless a complete Environmental Assessment Form (EAF), including Town of Amherst EAF Addendum, and any required supplementary information such as traffic impact studies, archaeological reports, wetland delineations or geotechnical reports, are submitted. SEQR issues may be discussed with Planning Department staff at a recommended pre-submittal meeting. Unlisted Actions require a Short EAF; Type I Actions require a Full EAF. The following is a link to the NYSDEC website and fillable forms with instructions*:*
   http://www.dec.ny.gov/permits/6191.html.

3. **Review by the Town Design Advisory Board (DAB) is required for Major Site Plans located in the following Mixed-Use zoning districts:**

   Traditional Infill 2.5 (TI-2.5)
   Traditional Infill 4 (TI-4)
   Shallow Corridor 3 (SC-3)
   Deep Corridor 3 (DC-3)
   Deep Corridor 5 (DC-5)
   Center 2.5 (CTR-2.5)
   Center 5 (CTR-5)
   Center 8 (CTR-8)

   The application for DAB review is required to be filed in conjunction with the major site plan application.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

4. The application shall be executed or consented to in writing by the owner of the property.

5. **Any variances from the Zoning Board of Appeals, or any decision from the Town Board (e.g. removal of deed restrictions) must be obtained prior to action by the Planning Board on a Site Plan application.**

6. Submittal of an application grants permission to Town staff and Planning Board members to access the parcel(s) under consideration.

7. All site plan drawings must be prepared by a Registered Architect, Professional Engineer, Landscape Architect, or Land Surveyor (as applicable) licensed to practice in New York State.

8. If you wish to include a Coordinated Sign Plan application with the site plan petition, a separate application must be completed. Contact the Planning Department for a copy of a Coordinated Sign Plan application package.

9. All drawings should be no larger than 24 in. x 36 in. If site characteristics warrant larger plan sheets, they may be accepted subject to Planning Department concurrence. All drawings must also reserve a 4 in. x 6 in. area in the lower right hand corner for official Town use.

APPLICATION PROCEDURES

1. Applicant secures application package from the Planning Department, 5583 Main Street, Williamsville, NY 14221. (716) 631-7051. Forms are also available online at: www.amherst.ny.us, (keyword: Planning).

2. Applicant prepares information as required on the Site Plan Submittal Checklist, attached. NOTE: Some proposals may not require all items on the checklist; please verify with the Planning Department.

3. Applicant schedules an appointment with the Planning Department to review the following:
   - a complete set of site plan drawings, preliminary building elevations and floor plans (no larger than 24" x 36" in size)
   - Environmental Assessment Form (EAF) & Town EAF Addendum
   - any supporting reports and materials
   - verification from the Town Assessor that the address in the application is correct

4. Applicant schedules an application submittal appointment with the Planning Department. NO SITE PLAN WILL BE ACCEPTED FOR REVIEW WITHOUT A PRE-SET SUBMITTAL APPOINTMENT.

5. At the submittal appointment, applicant provides fourteen (14) complete and collated sets of drawings and application information to the Planning Department **(materials will not be accepted unless folded into 9" x 12" in size),** including**:**
   - application form
   - Environmental Assessment Form (EAF)
   - supporting reports / materials
   - complete set of site plan drawings, preliminary building elevations and floor plans (**at least one (1) set of drawings must bear a raised or wet seal and signature of the design professional** who prepared the plans; the remaining copies may be submitted with a facsimile of the seal and signature)
   - digital files of all materials in pdf format
   - an 8½" x 11" reduction of the sketch plan or plat drawing (see Appendix B)

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

6. After approval for filing by the Planning Department, applicant submits all necessary fees to the Town Clerk. **(See Schedule of Fees on first page of application and make checks payable to: Town of Amherst.)**

7. The applicant returns a copy of the filing receipt to the Planning Department.

8. The Planning Department transmits remaining thirteen (13) copies of the application and supporting materials to:
   - Assessor
   - Commissioner of Building
   - Town Engineer
   - Superintendent of Highways
   - Traffic/Safety Board
   - Fire Chiefs' Association
   - Plumbing Division
   - Right-of-Way Agent
   - Police Department (if applicable)
   - Zoning Enforcement Officer
   - Other Town and outside agencies, as applicable

9. Within 30 days of its receipt of the complete application for Site Plan approval, each agency completes its review and notifies the Planning Department in writing of its comments or recommendations as required by Ordinance.

10. The applicant may be required to submit revised plans, reports, or materials to address review agency comments. The procedures for submittal of revised plans are as follows:

    - A cover letter addressing all comments received to date is required.
    - "Highlight" the area of change on the drawings and provide a notation describing the change.
    - Revised plans/materials are required. Planning staff should be contacted to determine the number of sets needed.
    - All revised plans and materials must also be provided in an electronic format that contains pdf files of the revised information.

11. The Planning Board reviews the EAF to determine whether a Draft Environmental Impact Statement (DEIS) is required. The petitioner will be advised in the event that a DEIS is required and afforded the opportunity to prepare it. If the petitioner declines, the Planning Board will prepare the DEIS at the petitioner's expense. The public hearing will be held on the DEIS concurrently with the Planning Board hearing on the application.

12. Planning Board Meeting Procedures:

    The applicant or representative presents the project at the public hearing before the Planning Board and is available to answer any questions. The Planning Board may take any of the following actions:

    - Adjourn the hearing to a future Planning Board meeting (hearing remains open).
    - Close the hearing and table action on the site plan to a future Planning Board meeting. (The Planning Board may remove the item from the agenda until such time as all required information is provided.)
    - Close the hearing and make a decision on the site plan.

    All determinations on matters before the Planning Board are made after all public hearings on that meeting's agenda are completed.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

13. A copy of the Planning Board's determination will be provided to the applicant, his / her representative, the Building Commissioner and the Town Clerk approximately 1 week following the Planning Board meeting at which it was heard.

14. If the Planning Board approves a Site Plan with conditions, the Planning Department will work with the applicant to ensure that all conditions of the approval are satisfactorily addressed. When all conditions are satisfied, the applicant submits **seven (7) final copies** of the complete set of all site plan drawings, folded into 9" x 12". For site plans in the Mixed-Use zoning districts, building elevations will also be required.

    All 7 sets must have original wet seals and include the required 4 in. x 6 in area in the lower right hand corner for official Town use. These drawings will be stamped and signed "Approved" by the Planning Director and transmitted to Town Departments for their files and use.

15. A building permit will not be issued by the Building Department until the stamped and signed Site Plan is issued by the Planning Director.

NOTE: Please check with the Planning Department to determine the deadline date for filing applications. Due to the public hearing notice requirements and department reviews, no site plan application will be placed on the Planning Board agenda after the deadline for filing has closed. Scheduling may be delayed if an application is incomplete.

Project Name: _____

Project Description:

Property is currently occupied by a 2 story brick and wood retail/office building which faces Main Street. The rear and sides on Château and Freihauf contain split level areas. This will be demolished and removed. The new development will be a mixed uses, including approximately 7,000 square feet of commercial space on Main Street level with 45 to 50 apartments on upper levels. The area between the "U" shaped development will contain a terrace area and partial parking area at the Main Street level. Additional parking is accessible from Chateau Street at the rear of the site, Also, a 30' landscape buffer area will be constructed at the rear of the site. Building architecture will meet design guidelines.

Site Plan Submittal Requirements and Checklist

The following checklist outlines the information required by the Planning Department to accept a Site Plan application for review. ***It is strongly recommended that you make an appointment with Planning Staff to determine which items apply to your application***.

Item No.	Item	Submitted	Official use
I Basic Drawing Information			
1.0	**Drawing size not to exceed 24" x 36"**		
2.0	**Title of Drawing**		
3.0	**Name and address of Applicant**		
4.0	**Name of person preparing drawing**		
5.0	**Wet seal/raised seal and signature of NYS licensed architect, engineer, landscape architect, or surveyor (as applicable)**		
6.0	**Project address**		
7.0	**Zoning of subject property and adjacent parcels**		
8.0	**North point, scale, date, and revision date(s)**		
9.0	**4" x 6" reserved area in lower right hand corner for official Town use**		
II Structures, Paved Areas, & Open Space			
1.0	**Existing and Proposed Streets**		
1.1	Names of all existing and proposed streets		
1.2	Width and radii of proposed curb-cuts		
1.3	Existing curb-cuts on adjacent and opposite properties		
1.4	Show ROW width, pavement dimensions, lane widths, pavement markings, and proposed signage on proposed streets		
1.5	Show proposed ROW consistent with planned NYSDOT, Erie County, or Town road projects (if applicable)		
1.6	Show location of proposed cross access to adjacent parcels along with a draft easement		
1.7	Designation of Fire Lanes (if applicable)		
1.8	Fire apparatus access roads		
1.9	Label any proposed roads as public or private		
1.10	Location and dimensions of sidewalks		
1.11	Typical cross sections and profiles of proposed streets, pedestrian walkways, and bikeways		
2.0	**Proposed Structures**		
2.1	Location and complete dimensions of proposed structures		
2.2	Setback dimensions of structure(s) to all property lines		
2.3	Proposed use of structures		
2.4	Gross square feet area of each structure		
2.5	Location of all building entrances		
2.6	Indicate type of roof construction/materials		
2.7	Location, height, and design detail of existing and proposed fences and walls		
2.8	Location of light standards and building mounted lights		
2.9	Location of dumpster and detail of dumpster enclosure with gate		
2.10	Layout and dimensions of the lot(s) proposed for development		

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

Town of Amherst Planning Department 5583 Main Street Williamsville-NY-14221

Item No.	Item	Submitted	Official use
II Structures, Paved Areas, & Open Space (cont'd)			
3.0	**Floor Plans with individual rooms and spaces labeled** (fully dimensioned)		
4.0	**Building elevations with height dimensions from finished grade to the highest point of the roof and to midpoint of gable or hip of a pitched roof.** (fully dimensioned)		
4.1	Show screening of mechanical equipment		
5.0	**Parking/Loading/Stacking Areas**		
5.1	Location and complete dimensions of all paved areas		
5.2	Setback dimensions of all paved areas to property lines		
5.3	Dimension of typical parking space and drive aisles		
5.4	Location and layout of handicapped parking spaces & access aisles		
5.5	Detail of vertical signage for handicapped parking and access aisles		
5.6	Indicate minimum parking requirement & number of spaces provided		
5.7	Proposed signage for directing and guiding traffic		
5.8	Curb cut permits from NYS, Erie County, or Town (if applicable)		
5.9	Pedestrian connections (from proposed structures to public sidewalk network)		
6.0	**Location and proposed development of all open spaces, including parks, playgrounds, and open reservations**		
III Utilities and Drainage			
1.0	**Engineers Report** (bound separately from the Stormwater Pollution Prevention Plan [SWPPP])		
1.1	Stamped/sealed and signed by NYS licensed architect or professional engineer		
1.2	Proposed water service sizing, RPZ pressure and fire safety flow and pressure calculations		
1.3	Proposed sanitary sewer facility load calculations (avg. & peak flows) including calculation of the peaking factor		
1.4	Proposed storm drainage facility calculations (see information included with this application)		
2.0	**Grading Plan**		
2.1	Existing and proposed grades indicated (proposed grades may not exceed 1 on 3)		
3.0	**Water Service**		
3.1	Location, size and material of existing and proposed facilities		
3.2	Location of existing and proposed fire hydrant location(s)		
3.3	Indicate use of sprinklers, location of Fire Department connection, and proposed fire protection systems		
3.4	Existing and proposed meter/RPZ size and location		
3.5	Applicable construction details		
4.0	**Sanitary Sewers**		
4.1	Locations, sizes, slopes, inverts, and materials of all existing and proposed facilities		

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

Town of Amherst Planning Department 5583 Main Street Williamsville-NY-14221
(716) 631-7051- Fax: (716) 631-7153

Item No.		Submitted	Official use
III Utilities and Drainage (cont'd)			
4.2	Applicable construction details		
4.3	Proposed water/oil/grease interceptor sizing calculations by a professional engineer (if applicable)		
5.0	**Storm Drainage**		
5.1	Locations, sizes, slopes, inverts, and materials of existing and proposed storm drainage facilities		
5.2	Connection of roof drains to proposed drainage system		
5.3	Applicable Town Standard construction details		
5.4	Existing and proposed swales and ditches		
5.5	Detention area cross-section and high-level elevations		
5.6	County and State approval for tie-in to existing sewers		
6.0	**Stormwater Pollution Prevention Plan (SWPPP) as applicable** (bound separately from the Engineer's Report) **See attached checklist.**		
7.0	**Natural Gas Service**		
8.0	**Location of transformers, generators and other mechanical equipment; include detail drawings (if applicable)**		
9.0	**Downstream Sanitary Capacity Analysis (DSCA) Report** (must be submitted if proposed average flows are greater than 2,500 gallons per day)		
9.1	The DSCA Report must include a detailed downstream sewer capacity analysis and the calculations of and commitment to (via Developer commitment letter) the required financial contribution to the Town's I/I mitigation fund based on peak flow conditions. The contribution must be based on $250 per gallon per minute of mitigated flow		
IV Lighting Plan			
1.0	**Photometric plan showing light spread in foot candles at property lines**		
1.1	Detail of all light standards, including dimension of height from finished grade		
1.2	Detail of all exterior lighting fixtures		
V Landscape Plan			
1.0	**Wet/raised seal and signature of a licensed Landscape Architect**		
2.0	**Provide a calculation of the total Parking area and a calculation of interior parking area in square feet and as a percentage**		
3.0	**Indicate location, size, number and type of proposed landscape materials**		
4.0	**Indicate location, type and size of <u>all</u> existing trees 4" caliper or larger and indicate which will be removed or retained**		
VI Other Required Information/General Requirements			
1.0	**Complete boundary survey that includes all existing structures, acreage, legal description with reference to a property line, street, or other known feature, and easements plotted to scale by a NYS licensed land surveyor**		

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

Town of Amherst Planning Department 5583 Main Street Williamsville-NY-14221
(716) 631-7051- Fax: (716) 631-7153

Item No.		Submitted	Official Use
VI Other Required Information/General Requirements (cont'd)			
1.1	Copies of all easements, reciprocal access agreement or similar leag documents		
2.0	**Topographic Survey with a 30 ft. buffer outside all property lines by a NYS licensed land surveyor**		
3.0	**Draft of any deed restrictions, covenants, provisions for home associations and common ownership, and reciprocal easement agreements (as applicable).**		
4.0	**For assessment purposes, state intent to apply for condominium status (if applicable).**		
5.0	**Completed and signed Environmental Assessment Form**		
5.1	Soil boring report and geotechnical report prepared by a qualified Professional Engineer (if applicable)		
5.2	Traffic Impact Study (if applicable)		
5.3	Archaeological survey (if applicable		
5.4	Wetland Delineation report (if applicable)		
6.0	**Show existing zoning(s) of both the subject property and adjacent parcels on the Site Plan and the Landscape Plan**		
7.0	**Location of NYSDEC wetlands (including buffer area) and/or federal wetlands; indicate jurisdictional status**		
8.0	**Location of Floodway and floodplain** (if applicable)		
9.0	**Documentation pertaining to any conditions of zonings, including copies of required deed restrictions; indicate date of rezoning and the parcel address under which it was rezoned (if applicable)**		
10.0	**Documentation related to any required variances granted by the ZBA**		
11.0	**For residential site plans, provide a statement from the appropriate school district that adequate school sites and facilities are available.**		
12.0	**8 1/2" X 11" reduction of primary site plan drawing (see appendix "B" of application package for specifications)**		
13.0	**A CD containing a PDF of all site plan drawings (Must also be provided with revised drawings)**		
VII Additional Required Information for Projects in the Mixed Use Districts			
1.0	**Design Advisory Board Application**		
1.1	Required for Major Site Plan		
1.2	Required at the Planning Directors Discretion for Minor Site Plans		
2.0	**Block & Street Network Plan**		
2.1	Designation of Core, Local & Alley streets		
2.2	Dimensions of Blocks		
3.0	**Block Usage Plan (as applicable)**		
3.1	Designation of site usage for each block including open space areas		
4.0	**Phasing Plan**

TOWN OF AMHERST
State Environmental Quality Review
ENVIRONMENTAL ASSESSMENT FORM
-- ADDENDUM --

1. For each applicable category of proposed <u>new</u> structures, including additions to existing structures, provide the following information for all soil types on the project site (*according to Soil Survey of Erie County, NY; Table 11, Building Site Development, pp 294-305):*

Soil Name	Shallow excavations	Dwellings without basements	Dwellings with basements	Small commercial buildings	Local roads and streets

2. If the Soil survey indicates either "severe" or "moderate" suitability for the proposed types of construction, a geotechnical and hydrological analysis based on one test per 3.5 acres of project area must be provided (per Town Board resolution, 3/17/03, amended 6/16/03).

   _____ Geotechnical report attached _____ Not applicable

3. Is your property located: On Youngs Road between Dodge and Klein Roads? □ Yes □ No
   On Wehrle Dr. between Spindrift Dr. and Oakwood Rd? □ Yes □ No

   If so, the property may be within an area of the Town that is affected by a moratorium on connections to the sanitary sewer system.

4. Are there alternative locations on the site for this project? □ Yes □ No

5. Location and size of real property owned by petitioner within one (1) mile of subject proposal:
   _____
   _____

6. Are you aware of current or future plans or intentions by others in the Town of Amherst to develop property within 1000± ft. of the present project request: □ Yes □ No

   Describe_____
   _____

   (Potential environmental impacts from adjacent or nearby projects undergoing the approval process will receive a coordinated environmental review to determine cumulative effects on common receivers (e.g. traffic and drainage corridors) and other relevant environmental concerns.)

7. Maximum number of vehicular trips to be generated per peak hour upon completion of project_____
   Source: _____

8. Will blasting occur during construction? □ Yes □ No

9. Does the project propose to connect and be tributary to the public sanitary sewer system? □ Yes □ No

10. Proposed net additional gallons per day (gpd) of sanitary sewer discharge upon completion of project:
    _____ average flow _____ peak flow.

    (Average flows of 2,500 gpd or greater will require an Engineer's Report that includes a detailed downstream sewer capacity analysis and the identification of and commitment to required I/I offset work during peak wastewater flow conditions.)

11. Based on the Town's *2011 Reconnaissance Level Survey of Historic Resources,* is your property 'blue-rated' for historic significance? □ Yes □ No

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

State Environmental Quality Review
ENVIRONMENTAL ASSESSMENT FORM
-- ADDENDUM --

1. For each applicable category of proposed <u>new</u> structures, including additions to existing structures, provide the following information for all soil types on the project site (*according to Soil Survey of Erie County, NY; Table 11, Building Site Development, pp 294-305):*

Soil Name	Shallow excavations	Dwellings without basements	Dwellings with basements	Small commercial buildings	Local roads and streets
Ux-Urban Land Wassaic complex	Severe	Moderate	Severe	Severe	Severe

2. If the Soil survey indicates either "severe" or "moderate" suitability for the proposed types of construction, a geotechnical and hydrological analysis based on one test per 3.5 acres of project area must be provided (per Town Board resolution, 3/17/03, amended 6/16/03).

   X Geotechnical report attached _____ Not applicable

3. Is your property located: On Youngs Road between Dodge and Klein Roads? ☐ Yes ☒ No
   On Wehrle Dr. between Spindrift Dr. and Oakwood Rd? ☐ Yes ☒ No

   If so, the property may be within an area of the Town that is affected by a moratorium on connections to the sanitary sewer system.

4. Are there alternative locations on the site for this project? ☐ Yes ☒ No

5. Location and size of real property owned by petitioner within one (1) mile of subject proposal:
   4445 Main Street (1.02 Acres); 4925 Main Street (2.2 Acres);

6. Are you aware of current or future plans or intentions by others in the Town of Amherst to develop property within 1000± ft. of the present project request: ☐ Yes ☒ No

   Describe _____

   (Potential environmental impacts from adjacent or nearby projects undergoing the approval process will receive a coordinated environmental review to determine cumulative effects on common receivers (e.g. traffic and drainage corridors) and other relevant environmental concerns.)

7. Maximum number of vehicular trips to be generated per peak hour upon completion of project 83 Trips
   Source: SRF & Associates Traffic Letter dated July 30, 2021

8. Will blasting occur during construction? ☒ Yes ☐ No

9. Does the project propose to connect and be tributary to the public sanitary sewer system? ☒ Yes ☐ No

10. Proposed net additional gallons per day (gpd) of sanitary sewer discharge upon completion of project:
    11,860 GPD average flow 33 GPM peak flow.

    (Average flows of 2,500 gpd or greater will require an Engineer's Report that includes a detailed downstream sewer capacity analysis and the identification of and commitment to required I/I offset work during peak wastewater flow conditions.)

11. Based on the Town's *2011 Reconnaissance Level Survey of Historic Resources,* is your property 'blue-rated' for historic significance? ☒ Yes ☐ No

Full Environmental Assessment Form
Part 1 - Project and Setting

Instructions for Completing Part 1

Part 1 is to be completed by the applicant or project sponsor. Responses become part of the application for approval or funding, are subject to public review, and may be subject to further verification.

Complete Part 1 based on information currently available. If additional research or investigation would be needed to fully respond to any item, please answer as thoroughly as possible based on current information; indicate whether missing information does not exist, or is not reasonably available to the sponsor; and, when possible, generally describe work or studies which would be necessary to update or fully develop that information.

Applicants/sponsors must complete all items in Sections A & B. In Sections C, D & E, most items contain an initial question that must be answered either "Yes" or "No". If the answer to the initial question is "Yes", complete the sub-questions that follow. If the answer to the initial question is "No", proceed to the next question. Section F allows the project sponsor to identify and attach any additional information. Section G requires the name and signature of the project sponsor to verify that the information contained in Part 1is accurate and complete.

A. Project and Sponsor Information.

Name of Action or Project: Proposed Multi-Story Building		
Project Location (describe, and attach a general location map): 4548-4564 Main Street, 17 Freuhauf Ave, & 22 Chateau Terrace, Town of Amherst, NY 14226		
Brief Description of Proposed Action (include purpose or need): Proposed Action includes: Demolition of existing buildings along Main Street between, Fruehauf Ave and Chateau Terrace and residential property 22 Chateau Terrace and clearing of land; Proposed Multi-Story Building consisting of 48 apartments and 6,624 SF of restaurant space with associated parking garage, improved drainage and utility infrastructure, landscaping and site lighting. The total apartment units are as follows: 22 - 1 Bedroom units, 24 2 Bedroom Units and 2 - 3 Bedroom Units.		
Name of Applicant/Sponsor: Benderson Development Inc.	Telephone: 716-878-9626 E-Mail: jamesboglioli@benderson.com	
Address: 570 Delaware Ave		
City/PO: Buffalo	State: NY	Zip Code: 14202
Project Contact (if not same as sponsor; give name and title/role): James Boglioli, Esq	Telephone: 716-878-9626 E-Mail: jamesboglioli@benderson.com	
Address: 570 Delaware Ave		
City/PO: Buffalo	State: NY	Zip Code: 14202
Property Owner (if not same as sponsor):	Telephone: E-Mail:	
Address:		
City/PO:	State:	Zip Code:

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

B. Government Approvals

B. Government Approvals, Funding, or Sponsorship. ("Funding" includes grants, loans, tax relief, and any other forms of financial assistance.)

Government Entity	If Yes: Identify Agency and Approval(s) Required	Application Date (Actual or projected)
a. City Council, Town Board, or Village Board of Trustees ☐Yes ☑No		
b. City, Town or Village Planning Board or Commission ☑Yes ☐No	Town of Amherst Planning Board	June 2022
c. City Council, Town or Village Zoning Board of Appeals ☐Yes ☑No		
d. Other local agencies ☑Yes ☐No	Town of Amherst Traffic Safety Board Town of Amherst Historic Preservation Commision	June 2022
e. County agencies ☑Yes ☐No	Erie County Water Authority	June 2022
f. Regional agencies ☐Yes ☑No		
g. State agencies ☑Yes ☐No	NYSDOT; NYSDEC	June 2022
h. Federal agencies ☐Yes ☑No		

i. Coastal Resources.

i. Is the project site within a Coastal Area, or the waterfront area of a Designated Inland Waterway? ☐Yes ☑No

ii. Is the project site located in a community with an approved Local Waterfront Revitalization Program? ☐Yes ☑No

iii. Is the project site within a Coastal Erosion Hazard Area? ☐Yes ☑No

C. Planning and Zoning

C.1. Planning and zoning actions.

Will administrative or legislative adoption, or amendment of a plan, local law, ordinance, rule or regulation be the only approval(s) which must be granted to enable the proposed action to proceed? ☐Yes ☑No

- **If Yes,** complete sections C, F and G.
- **If No,** proceed to question C.2 and complete all remaining sections and questions in Part 1

C.2. Adopted land use plans.

a. Do any municipally- adopted (city, town, village or county) comprehensive land use plan(s) include the site where the proposed action would be located? ☑Yes ☐No

If Yes, does the comprehensive plan include specific recommendations for the site where the proposed action would be located? ☐Yes ☑No

b. Is the site of the proposed action within any local or regional special planning district (for example: Greenway Brownfield Opportunity Area (BOA); designated State or Federal heritage area; watershed management plan; or other?) ☐Yes ☑No

If Yes, identify the plan(s):

_____

_____

_____

c. Is the proposed action located wholly or partially within an area listed in an adopted municipal open space plan, or an adopted municipal farmland protection plan? ☐Yes ☑No

If Yes, identify the plan(s):

_____

_____

_____

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

C.3. Zoning

a. Is the site of the proposed action located in a municipality with an adopted zoning law or ordinance. ☑ Yes ☐ No
If Yes, what is the zoning classification(s) including any applicable overlay district?
Traditional Infill (TI-2.5)

b. Is the use permitted or allowed by a special or conditional use permit? ☑ Yes ☐ No

c. Is a zoning change requested as part of the proposed action? ☐ Yes ☑ No
If Yes,
i. What is the proposed new zoning for the site? _____

C.4. Existing community services.

a. In what school district is the project site located? Amherst CSD

b. What police or other public protection forces serve the project site?
Amherst Police Department; Erie County Sheriff; NY State Troopers

c. Which fire protection and emergency medical services serve the project site?
Amherst Fire Department - Snyder District

d. What parks serve the project site?
None

D. Project Details

D.1. Proposed and Potential Development

a. What is the general nature of the proposed action (e.g., residential, industrial, commercial, recreational; if mixed, include all components)? Residential and commercial

b. a. Total acreage of the site of the proposed action? 0.93 acres
b. Total acreage to be physically disturbed? 1.02 acres
c. Total acreage (project site and any contiguous properties) owned or controlled by the applicant or project sponsor? 0.93 acres

c. Is the proposed action an expansion of an existing project or use? ☐ Yes ☑ No
i. If Yes, what is the approximate percentage of the proposed expansion and identify the units (e.g., acres, miles, housing units, square feet)? % _____ Units: _____

d. Is the proposed action a subdivision, or does it include a subdivision? ☑ Yes ☐ No
If Yes,
i. Purpose or type of subdivision? (e.g., residential, industrial, commercial; if mixed, specify types)
Lot Combination
ii. Is a cluster/conservation layout proposed? ☐ Yes ☑ No
iii. Number of lots proposed? _____
iv. Minimum and maximum proposed lot sizes? Minimum _____ Maximum _____

e. Will proposed action be constructed in multiple phases? ☐ Yes ☑ No
i. If No, anticipated period of construction: 12 months
ii. If Yes:
- Total number of phases anticipated _____
- Anticipated commencement date of phase 1 (including demolition) _____ month _____ year
- Anticipated completion date of final phase _____ month _____year
- Generally describe connections or relationships among phases, including any contingencies where progress of one phase may determine timing or duration of future phases: _____

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

f. Does the project include new residential uses? ☑ Yes ☐ No

If Yes, show numbers of units proposed.

	One Family	Two Family	Three Family	Multiple Family (four or more)
Initial Phase	0			
At completion of all phases	48			

g. Does the proposed action include new non-residential construction (including expansions)? ☑ Yes ☐ No

If Yes,

i. Total number of structures 1

ii. Dimensions (in feet) of largest proposed structure: 35 height; 172.1 width; and 238.8 length

iii. Approximate extent of building space to be heated or cooled: 65,000 square feet

h. Does the proposed action include construction or other activities that will result in the impoundment of any liquids, such as creation of a water supply, reservoir, pond, lake, waste lagoon or other storage? ☑ Yes ☐ No

If Yes,

i. Purpose of the impoundment: Bio-retention pond

ii. If a water impoundment, the principal source of the water: ☐ Ground water ☐ Surface water streams ☑ Other specify: Non-permeable surface runoff

iii. If other than water, identify the type of impounded/contained liquids and their source.

iv. Approximate size of the proposed impoundment. Volume: 0.006 million gallons; surface area: 0.03 acres

v. Dimensions of the proposed dam or impounding structure: 1.5' height; 58' length

vi. Construction method/materials for the proposed dam or impounding structure (e.g., earth fill, rock, wood, concrete): Earth Fill

D.2. Project Operations

a. Does the proposed action include any excavation, mining, or dredging, during construction, operations, or both? (Not including general site preparation, grading or installation of utilities or foundations where all excavated materials will remain onsite) ☐ Yes ☑ No

If Yes:

i .What is the purpose of the excavation or dredging?

ii. How much material (including rock, earth, sediments, etc.) is proposed to be removed from the site?

- Volume (specify tons or cubic yards):
- Over what duration of time?

iii. Describe nature and characteristics of materials to be excavated or dredged, and plans to use, manage or dispose of them.

iv. Will there be onsite dewatering or processing of excavated materials? ☐ Yes ☐ No

If yes, describe.

v. What is the total area to be dredged or excavated? acres

vi. What is the maximum area to be worked at any one time? acres

vii. What would be the maximum depth of excavation or dredging? feet

viii. Will the excavation require blasting? ☐ Yes ☐ No

ix. Summarize site reclamation goals and plan:

b. Would the proposed action cause or result in alteration of, increase or decrease in size of, or encroachment into any existing wetland, waterbody, shoreline, beach or adjacent area? ☐ Yes ☑ No

If Yes:

i. Identify the wetland or waterbody which would be affected (by name, water index number, wetland map number or geographic description):

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

ii. Describe how the proposed action would affect that waterbody or wetland, e.g. excavation, fill, placement of structures, or alteration of channels, banks and shorelines. Indicate extent of activities, alterations and additions in square feet or acres:

iii. Will proposed action cause or result in disturbance to bottom sediments? ☐ Yes ☐ No
If Yes, describe:

iv. Will proposed action cause or result in the destruction or removal of aquatic vegetation? ☐ Yes ☐ No
If Yes:

- acres of aquatic vegetation proposed to be removed:
- expected acreage of aquatic vegetation remaining after project completion:
- purpose of proposed removal (e.g. beach clearing, invasive species control, boat access):
- proposed method of plant removal:
- if chemical/herbicide treatment will be used, specify product(s):

v. Describe any proposed reclamation/mitigation following disturbance:

c. Will the proposed action use, or create a new demand for water? ☑ Yes ☐ No
If Yes:

i. Total anticipated water usage/demand per day: 12,034 gallons/day

ii. Will the proposed action obtain water from an existing public water supply? ☑ Yes ☐ No
If Yes:

- Name of district or service area: Erie County Water Authority
- Does the existing public water supply have capacity to serve the proposal? ☑ Yes ☐ No
- Is the project site in the existing district? ☑ Yes ☐ No
- Is expansion of the district needed? ☐ Yes ☑ No
- Do existing lines serve the project site? ☑ Yes ☐ No

iii. Will line extension within an existing district be necessary to supply the project? ☐ Yes ☑ No
If Yes:

- Describe extensions or capacity expansions proposed to serve this project:
- Source(s) of supply for the district:

iv. Is a new water supply district or service area proposed to be formed to serve the project site? ☐ Yes ☑ No
If, Yes:

- Applicant/sponsor for new district:
- Date application submitted or anticipated:
- Proposed source(s) of supply for new district:

v. If a public water supply will not be used, describe plans to provide water supply for the project:

vi. If water supply will be from wells (public or private), maximum pumping capacity: _____ gallons/minute.

d. Will the proposed action generate liquid wastes? ☑ Yes ☐ No
If Yes:

i. Total anticipated liquid waste generation per day: 10,940 gallons/day

ii. Nature of liquid wastes to be generated (e.g., sanitary wastewater, industrial; if combination, describe all components and approximate volumes or proportions of each):
Sanitary Wastewater

iii. Will the proposed action use any existing public wastewater treatment facilities? ☑ Yes ☐ No
If Yes:

- Name of wastewater treatment plant to be used: Tonawanda Creek Plant #16
- Name of district: Amherst Sewer District #1
- Does the existing wastewater treatment plant have capacity to serve the project? ☑ Yes ☐ No
- Is the project site in the existing district? ☑ Yes ☐ No
- Is expansion of the district needed? ☐ Yes ☑ No

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

- Do existing sewer lines serve the project site? ☑ Yes ☐ No
- Will line extension within an existing district be necessary to serve the project? ☐ Yes ☑ No

If Yes:

- Describe extensions or capacity expansions proposed to serve this project: _____

iv. Will a new wastewater (sewage) treatment district be formed to serve the project site? ☐ Yes ☑ No

If Yes:

- Applicant/sponsor for new district: _____
- Date application submitted or anticipated: _____
- What is the receiving water for the wastewater discharge? _____

v. If public facilities will not be used, describe plans to provide wastewater treatment for the project, including specifying proposed receiving water (name and classification if surface discharge, or describe subsurface disposal plans):

vi. Describe any plans or designs to capture, recycle or reuse liquid waste: None

e. Will the proposed action disturb more than one acre and create stormwater runoff, either from new point sources (i.e. ditches, pipes, swales, curbs, gutters or other concentrated flows of stormwater) or non-point source (i.e. sheet flow) during construction or post construction? ☑ Yes ☐ No

If Yes:

i. How much impervious surface will the project create in relation to total size of project parcel?

_____ Square feet or 0.83 acres (impervious surface)

_____ Square feet or 0.93 acres (parcel size)

ii. Describe types of new point sources. Proposed 12" Storm connected to existing 12" Storm along Chateau Terrace

iii. Where will the stormwater runoff be directed (i.e. on-site stormwater management facility/structures, adjacent properties, groundwater, on-site surface water or off-site surface waters)?

Yes, through a series of trench drains, catch basins and bio-retention pond

- If to surface waters, identify receiving water bodies or wetlands: N/A
- Will stormwater runoff flow to adjacent properties? ☐ Yes ☑ No

iv. Does proposed plan minimize impervious surfaces, use pervious materials or collect and re-use stormwater? ☐ Yes ☑ No

f. Does the proposed action include, or will it use on-site, one or more sources of air emissions, including fuel combustion, waste incineration, or other processes or operations? ☐ Yes ☑ No

If Yes, identify:

i. Mobile sources during project operations (e.g., heavy equipment, fleet or delivery vehicles)

ii. Stationary sources during construction (e.g., power generation, structural heating, batch plant, crushers)

iii. Stationary sources during operations (e.g., process emissions, large boilers, electric generation)

g. Will any air emission sources named in D.2.f (above), require a NY State Air Registration, Air Facility Permit, or Federal Clean Air Act Title IV or Title V Permit? ☐ Yes ☑ No

If Yes:

i. Is the project site located in an Air quality non-attainment area? (Area routinely or periodically fails to meet ambient air quality standards for all or some parts of the year) ☐ Yes ☐ No

ii. In addition to emissions as calculated in the application, the project will generate:

- _____Tons/year (short tons) of Carbon Dioxide (CO_2)
- _____Tons/year (short tons) of Nitrous Oxide (N_2O)
- _____Tons/year (short tons) of Perfluorocarbons (PFCs)
- _____Tons/year (short tons) of Sulfur Hexafluoride (SF_6)
- _____Tons/year (short tons) of Carbon Dioxide equivalent of Hydroflourocarbons (HFCs)
- _____Tons/year (short tons) of Hazardous Air Pollutants (HAPs)

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

h. Will the proposed action generate or emit methane (including, but not limited to, sewage treatment plants, landfills, composting facilities)? ☐Yes ☑No

If Yes:

i. Estimate methane generation in tons/year (metric): _____

ii. Describe any methane capture, control or elimination measures included in project design (e.g., combustion to generate heat or electricity, flaring): _____

i. Will the proposed action result in the release of air pollutants from open-air operations or processes, such as quarry or landfill operations? ☐Yes ☑No

If Yes: Describe operations and nature of emissions (e.g., diesel exhaust, rock particulates/dust):

j. Will the proposed action result in a substantial increase in traffic above present levels or generate substantial new demand for transportation facilities or services? ☑Yes ☐No

If Yes:

i. When is the peak traffic expected (Check all that apply): ☐ Morning ☑ Evening ☐Weekend
☐ Randomly between hours of _____ to _____.

ii. For commercial activities only, projected number of semi-trailer truck trips/day: 1

iii. Parking spaces: Existing 50 Proposed 76 Net increase/decrease 26

iv. Does the proposed action include any shared use parking? ☑Yes ☐No

v. If the proposed action includes any modification of existing roads, creation of new roads or change in existing access, describe:
New Curb cut access points along Fruehauf Ave and Chateau Terrace

vi. Are public/private transportation service(s) or facilities available within ½ mile of the proposed site? ☑Yes ☐No

vii Will the proposed action include access to public transportation or accommodations for use of hybrid, electric or other alternative fueled vehicles? ☑Yes ☐No

viii. Will the proposed action include plans for pedestrian or bicycle accommodations for connections to existing pedestrian or bicycle routes? ☑Yes ☐No

k. Will the proposed action (for commercial or industrial projects only) generate new or additional demand for energy? ☑Yes ☐No

If Yes:

i. Estimate annual electricity demand during operation of the proposed action: _____
TBD

ii. Anticipated sources/suppliers of electricity for the project (e.g., on-site combustion, on-site renewable, via grid/local utility, or other):
National Grid

iii. Will the proposed action require a new, or an upgrade to, an existing substation? ☐Yes ☑No

l. Hours of operation. Answer all items which apply.

i. During Construction:

- Monday - Friday: 7 AM -9 PM (as allowed per code)
- Saturday: 7 AM -9 PM (as allowed per code
- Sunday: _____
- Holidays: _____

ii. During Operations:

- Monday - Friday: 24 hours
- Saturday: 24 hours
- Sunday: 24 hours
- Holidays: 24 hours

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

m. Will the proposed action produce noise that will exceed existing ambient noise levels during construction, operation, or both? ☑ Yes ☐ No

If yes:

i. Provide details including sources, time of day and duration:

Construction Equipment Monday - Saturday, 7am to 9 pm

ii. Will proposed action remove existing natural barriers that could act as a noise barrier or screen? ☐ Yes ☑ No

Describe: _____

n.. Will the proposed action have outdoor lighting? ☑ Yes ☐ No

If yes:

i. Describe source(s), location(s), height of fixture(s), direction/aim, and proximity to nearest occupied structures:

Parking Garage - Overhead LED Fixtures; Outdoor Seating - Architectural Poles on 1st floor

ii. Will proposed action remove existing natural barriers that could act as a light barrier or screen? ☐ Yes ☑ No

Describe: _____

o. Does the proposed action have the potential to produce odors for more than one hour per day? ☐ Yes ☑ No

If Yes, describe possible sources, potential frequency and duration of odor emissions, and proximity to nearest occupied structures: _____

p. Will the proposed action include any bulk storage of petroleum (combined capacity of over 1,100 gallons) or chemical products 185 gallons in above ground storage or any amount in underground storage? ☐ Yes ☑ No

If Yes:

i. Product(s) to be stored _____

ii. Volume(s) _____ per unit time _____ (e.g., month, year)

iii. Generally describe proposed storage facilities: _____

q. Will the proposed action (commercial, industrial and recreational projects only) use pesticides (i.e., herbicides, insecticides) during construction or operation? ☐ Yes ☑ No

If Yes:

i. Describe proposed treatment(s):

ii. Will the proposed action use Integrated Pest Management Practices? ☐ Yes ☐ No

r. Will the proposed action (commercial or industrial projects only) involve or require the management or disposal of solid waste (excluding hazardous materials)? ☐ Yes ☑ No

If Yes:

i. Describe any solid waste(s) to be generated during construction or operation of the facility:

- Construction: _____ tons per _____ (unit of time)
- Operation : _____ tons per _____ (unit of time)

ii. Describe any proposals for on-site minimization, recycling or reuse of materials to avoid disposal as solid waste:

- Construction: _____
- Operation: _____

iii. Proposed disposal methods/facilities for solid waste generated on-site:

- Construction: _____
- Operation: _____

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

7.a

s. Does the proposed action include construction or modification of a solid waste management facility? ☐ Yes ☑ No

If Yes:

i. Type of management or handling of waste proposed for the site (e.g., recycling or transfer station, composting, landfill, or other disposal activities): _____

ii. Anticipated rate of disposal/processing:

- _____ Tons/month, if transfer or other non-combustion/thermal treatment, or
- _____ Tons/hour, if combustion or thermal treatment

iii. If landfill, anticipated site life: _____ years

t. Will proposed action at the site involve the commercial generation, treatment, storage, or disposal of hazardous waste? ☐ Yes ☑ No

If Yes:

i. Name(s) of all hazardous wastes or constituents to be generated, handled or managed at facility: _____

ii. Generally describe processes or activities involving hazardous wastes or constituents: _____

iii. Specify amount to be handled or generated _____ tons/month

iv. Describe any proposals for on-site minimization, recycling or reuse of hazardous constituents: _____

v. Will any hazardous wastes be disposed at an existing offsite hazardous waste facility? ☐ Yes ☐ No

If Yes: provide name and location of facility: _____

If No: describe proposed management of any hazardous wastes which will not be sent to a hazardous waste facility:

E. Site and Setting of Proposed Action

E.1. Land uses on and surrounding the project site

a. Existing land uses.

i. Check all uses that occur on, adjoining and near the project site.

☐ Urban ☐ Industrial ☑ Commercial ☑ Residential (suburban) ☐ Rural (non-farm)
☐ Forest ☐ Agriculture ☐ Aquatic ☐ Other (specify): _____

ii. If mix of uses, generally describe:

Proposed Multi-Use Building with first floor retail and apartments

b. Land uses and covertypes on the project site.

Land use or Covertype	Current Acreage	Acreage After Project Completion	Change (Acres +/-)
• Roads, buildings, and other paved or impervious surfaces	0.80	0.83	+ 0.03
• Forested	-	-	-
• Meadows, grasslands or brushlands (non-agricultural, including abandoned agricultural)	-	-	-
• Agricultural (includes active orchards, field, greenhouse etc.)	-	-	-
• Surface water features (lakes, ponds, streams, rivers, etc.)	-	0.01	+ 0.01
• Wetlands (freshwater or tidal)	-	-	-
• Non-vegetated (bare rock, earth or fill)	0.13	0.10	-0.03
• Other Describe: _____			

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

7.a

c. Is the project site presently used by members of the community for public recreation? ☐ Yes ☑ No
i. If Yes: explain: _____

d. Are there any facilities serving children, the elderly, people with disabilities (e.g., schools, hospitals, licensed day care centers, or group homes) within 1500 feet of the project site? ☑ Yes ☐ No
If Yes,
i. Identify Facilities:
Elder Care Solutions of WNY, Daemen University, Garden Nursery School-Ahmerst, Bornhava School and The Park School of Buffalo

e. Does the project site contain an existing dam? ☐ Yes ☑ No
If Yes:
i. Dimensions of the dam and impoundment:
- Dam height: _____ feet
- Dam length: _____ feet
- Surface area: _____ acres
- Volume impounded: _____ gallons OR acre-feet

ii. Dam's existing hazard classification: _____
iii. Provide date and summarize results of last inspection:
_____

f. Has the project site ever been used as a municipal, commercial or industrial solid waste management facility, or does the project site adjoin property which is now, or was at one time, used as a solid waste management facility? ☐ Yes ☑ No
If Yes:
i. Has the facility been formally closed? ☐ Yes ☐ No
- If yes, cite sources/documentation: _____

ii. Describe the location of the project site relative to the boundaries of the solid waste management facility:
_____
iii. Describe any development constraints due to the prior solid waste activities: _____

g. Have hazardous wastes been generated, treated and/or disposed of at the site, or does the project site adjoin property which is now or was at one time used to commercially treat, store and/or dispose of hazardous waste? ☐ Yes ☑ No
If Yes:
i. Describe waste(s) handled and waste management activities, including approximate time when activities occurred:
_____

h. Potential contamination history. Has there been a reported spill at the proposed project site, or have any remedial actions been conducted at or adjacent to the proposed site? ☐ Yes ☑ No
If Yes:
i. Is any portion of the site listed on the NYSDEC Spills Incidents database or Environmental Site Remediation database? Check all that apply: ☐ Yes ☐ No
☐ Yes – Spills Incidents database — Provide DEC ID number(s): _____
☐ Yes – Environmental Site Remediation database — Provide DEC ID number(s): _____
☐ Neither database

ii. If site has been subject of RCRA corrective activities, describe control measures:_____
_____
iii. Is the project within 2000 feet of any site in the NYSDEC Environmental Site Remediation database? ☐ Yes ☐ No
If yes, provide DEC ID number(s): _____
iv. If yes to (i), (ii) or (iii) above, describe current status of site(s):
_____

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

7.a

v. Is the project site subject to an institutional control limiting property uses? ☐ Yes ☑ No

- If yes, DEC site ID number: _____
- Describe the type of institutional control (e.g., deed restriction or easement): _____
- Describe any use limitations: _____
- Describe any engineering controls: _____
- Will the project affect the institutional or engineering controls in place? ☐ Yes ☐ No
- Explain: _____

E.2. Natural Resources On or Near Project Site

a. What is the average depth to bedrock on the project site? +/- 5 feet

b. Are there bedrock outcroppings on the project site? ☐ Yes ☑ No
If Yes, what proportion of the site is comprised of bedrock outcroppings? _____%

c. Predominant soil type(s) present on project site: Ux 100 %
_____ %
_____ %

d. What is the average depth to the water table on the project site? Average: >10' feet

e. Drainage status of project site soils:
☑ Well Drained: 100 % of site
☐ Moderately Well Drained: _____% of site
☐ Poorly Drained _____% of site

f. Approximate proportion of proposed action site with slopes:
☑ 0-10%: 100 % of site
☐ 10-15%: _____% of site
☐ 15% or greater: _____% of site

g. Are there any unique geologic features on the project site? ☐ Yes ☑ No
If Yes, describe: _____

h. Surface water features.

i. Does any portion of the project site contain wetlands or other waterbodies (including streams, rivers, ponds or lakes)? ☐ Yes ☑ No

ii. Do any wetlands or other waterbodies adjoin the project site? ☐ Yes ☑ No

If Yes to either *i* or *ii*, continue. If No, skip to E.2.i.

iii. Are any of the wetlands or waterbodies within or adjoining the project site regulated by any federal, state or local agency? ☐ Yes ☐ No

iv. For each identified regulated wetland and waterbody on the project site, provide the following information:

- Streams: Name _____ Classification _____
- Lakes or Ponds: Name _____ Classification _____
- Wetlands: Name _____ Approximate Size _____
- Wetland No. (if regulated by DEC) _____

v. Are any of the above water bodies listed in the most recent compilation of NYS water quality-impaired waterbodies? ☐ Yes ☐ No

If yes, name of impaired water body/bodies and basis for listing as impaired: _____

i. Is the project site in a designated Floodway? ☐ Yes ☑ No

j. Is the project site in the 100 year Floodplain? ☐ Yes ☑ No

k. Is the project site in the 500 year Floodplain? ☐ Yes ☑ No

l. Is the project site located over, or immediately adjoining, a primary, principal or sole source aquifer? ☐ Yes ☑ No
If Yes:

i. Name of aquifer: _____

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

m. Identify the predominant wildlife species that occupy or use the project site: None

n. Does the project site contain a designated significant natural community? ☐ Yes ☑ No

If Yes:

i. Describe the habitat/community (composition, function, and basis for designation): _____

ii. Source(s) of description or evaluation: _____

iii. Extent of community/habitat:

- Currently: _____ acres
- Following completion of project as proposed: _____ acres
- Gain or loss (indicate + or -): _____ acres

o. Does project site contain any species of plant or animal that is listed by the federal government or NYS as endangered or threatened, or does it contain any areas identified as habitat for an endangered or threatened species? ☐ Yes ☑ No

p. Does the project site contain any species of plant or animal that is listed by NYS as rare, or as a species of special concern? ☐ Yes ☑ No

q. Is the project site or adjoining area currently used for hunting, trapping, fishing or shell fishing? ☐ Yes ☑ No

If yes, give a brief description of how the proposed action may affect that use: _____

E.3. Designated Public Resources On or Near Project Site

a. Is the project site, or any portion of it, located in a designated agricultural district certified pursuant to Agriculture and Markets Law, Article 25-AA, Section 303 and 304? ☐ Yes ☑ No

If Yes, provide county plus district name/number: _____

b. Are agricultural lands consisting of highly productive soils present? ☐ Yes ☑ No

i. If Yes: acreage(s) on project site? _____

ii. Source(s) of soil rating(s): _____

c. Does the project site contain all or part of, or is it substantially contiguous to, a registered National Natural Landmark? ☐ Yes ☑ No

If Yes:

i. Nature of the natural landmark: ☐ Biological Community ☐ Geological Feature

ii. Provide brief description of landmark, including values behind designation and approximate size/extent: _____

d. Is the project site located in or does it adjoin a state listed Critical Environmental Area? ☐ Yes ☑ No

If Yes:

i. CEA name: _____

ii. Basis for designation: _____

iii. Designating agency and date: _____

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

7.a

e. Does the project site contain, or is it substantially contiguous to, a building, archaeological site, or district which is listed on, or has been nominated by the NYS Board of Historic Preservation for inclusion on, the State or National Register of Historic Places? ☐ Yes ☑ No

If Yes:

i. Nature of historic/archaeological resource: ☐ Archaeological Site ☐ Historic Building or District

ii. Name: _____

iii. Brief description of attributes on which listing is based:

_____

f. Is the project site, or any portion of it, located in or adjacent to an area designated as sensitive for archaeological sites on the NY State Historic Preservation Office (SHPO) archaeological site inventory? ☐ Yes ☑ No

g. Have additional archaeological or historic site(s) or resources been identified on the project site? ☐ Yes ☑ No

If Yes:

i. Describe possible resource(s): _____

ii. Basis for identification: _____

h. Is the project site within fives miles of any officially designated and publicly accessible federal, state, or local scenic or aesthetic resource? ☑ Yes ☐ No

If Yes:

i. Identify resource: Glen Falls - Amherst State Park

ii. Nature of, or basis for, designation (e.g., established highway overlook, state or local park, state historic trail or scenic byway, etc.): Scenic Park and waterfall

iii. Distance between project and resource: 1.8 miles.

i. Is the project site located within a designated river corridor under the Wild, Scenic and Recreational Rivers Program 6 NYCRR 666? ☐ Yes ☑ No

If Yes:

i. Identify the name of the river and its designation: _____

ii. Is the activity consistent with development restrictions contained in 6NYCRR Part 666? ☐ Yes ☐ No

F. Additional Information

Attach any additional information which may be needed to clarify your project.

If you have identified any adverse impacts which could be associated with your proposal, please describe those impacts plus any measures which you propose to avoid or minimize them.

G. Verification

I certify that the information provided is true to the best of my knowledge.

Williamsville, NY 14221

RE: Application for Site Plan Approval
Proposed Site Redevelopment
4548-4564 Main St, Amherst, NY (BDP # 5202)

Dear Chairman Gilmour and Members of the Planning Board:

Enclosed please find materials in connection with our application for site plan approval for the parcel located at 4548-4564 Main Street (the "Project Site").

The Project Site is approximately 0.93-Acres and consists for four parcels between Fruehauf Ave and Chateau Terrace on the Northside of Main Street. The two parcels along Main Street consist of two existing retail buildings with associated parking lot accessed at the northside of site. All four parcels are in the mixed-use district Traditional Infill 2.5 (TI-2.5). As part of this project, these four parcels shall be combined into a single tax lot.

The proposed project will consist of the following:

- The demolition of existing buildings located on the Project Site (13K removed) and to construct a multi-story mixed use 65,000 +/- square footage building;
- Provide 48 Apartments of various bedroom sizes and 6,995 square feet of restaurant space;
- Provide a two-level parking garage to provide 79 parking spaces and requires 77 parking spaces;
- Provide Outdoor Amenity Space in accordance with the Mixed-Use District Town code;
- Provide new curb cut access drives from Fruehauf Ave and Chateau Terrace;
- Provide new site drainage infrastructures and utilities.

The proposed site plan and building elevations have been designed to meet the intent of the requirements of the TI-2.5 zoning.

We believe the project will be an attractive improvement and look forward to reviewing this project with the Planning Board. Should you have any questions or require any additional information, please do not hesitate to contact me.

Thank you,

Mr. Matt Oates, P.E.
Director, Engineering
Benderson Development Company, LLC
570 Delaware Avenue
Buffalo, New York 14202

RE: Proposed 4548-4564 Main Street Mixed-Use Project, Town of Amherst, NY
Traffic Impact Assessment

Dear Mr. Oates:

The purpose of this Traffic Impact Assessment (TIA) is to identify and evaluate the potential traffic impacts associated with the proposed mixed-use project to be located at 4548-4564 Main Street in the Town of Amherst, NY. This assessment identifies the operating characteristics of the proposed access drives and impacts to the adjacent roadway network and recommends mitigating measures (if needed) to minimize any operational concerns. To define traffic impact, this analysis establishes existing baseline traffic conditions, projects background traffic flow including area growth, and determines the traffic operations that would result from the proposed project.

SITE LOCATION AND STUDY AREA

The project site is to be located at 4548-4564 Main Street in the Town of Amherst, Erie County, New York. The project site, currently consisting of one to two-story buildings, is bounded by residential to the north, Chateau Terrace to the east, Main Street to the south, and Fruehauf Avenue to the west. Land uses in the vicinity of the site include residential, office, service, and retail.

To ensure a comprehensive analysis of potential traffic impacts, the following existing intersections were included in the analysis:

- Main Street (NY-5)/Chateau Terrace/Bernhardt Drive (signalized)
- Main Street/Fruehauf Avenue (unsignalized)

The site location and study area are illustrated in **Figure 1** (all figures and supporting materials are included at the end of this letter).

EXISTING TRAFFIC CONDITIONS

A. Vehicular Network Description

The following information outlined in **Table 1** provides a description of the existing roadway network within the project study area. **Figure 2** illustrates the lane geometry at the study intersections and the Annual Average Daily Traffic (AADT) volumes on the study roadways. The AADTs reflect the most recently collected data obtained from the New York State Department of Transportation (NYSDOT). Functional classification of highways within the study area is determined by the NYSDOT and the Federal Highway Administration (FHWA). Where recent data is not available, traffic data is shown as an extrapolation of turning movement counts collected by Passero Associates in 2022.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

TABLE 1: EXISTING HIGHWAY SYSTEM

ROADWAY	CLASS[1]	AGENCY[2]	SPEED LIMIT[3]	TRAVEL LANES[4]	ORIENTATION OF TRAVEL	AADT[5]
Main Street (NY-5)	14	NYSDOT	40	4	Two-way/ Northwest-Southeast	21,436 NYSDOT (2019)
Chateau Terrace	19	Town	30	2	Two-way/ North-South	1,210 Passero (2022)
Bernhardt Drive	19	Town	30	2	Two-way/ North-South	400 Passero (2022)
Fruehauf Avenue	19	Town	30	2	Two-way/ North-South	900 Passero (2022)

Notes:
1. State Functional Classification of Roadway: 14 = Urban Principal Arterial, 19 = Urban Local
2. Jurisdictional Agency of Roadway.
3. Posted or Statewide Limit in Miles per Hour (mph).
4. Number of travel lanes. Excludes turning/auxiliary lanes developed at intersections.
5. Estimated AADT in Vehicles per Day (vpd). AADT Source (Year).

B. Multi-Modal Network Description

Sidewalks are present along all study corridors. The signalized intersection of Main Street/Chateau Terrace/Bernhardt Drive consists of actuated pedestrian countdown signals, a high visibility crosswalk across Main Street, and ADA compliant curb ramps. There are no dedicated bicycle lanes, although bicyclists are allowed to share the road with motorists. The Niagara Frontier Transportation Authority has bus stops nearby.

C. Peak Intervals for Analysis

Given the functional characteristics of the study corridors, adjacent land uses, and the proposed land uses (residential, restaurants) for the project site, the peak hours selected for analysis are the weekday commuter AM and PM peak periods. The combination of site traffic and adjacent through traffic produces the greatest demand during these time periods.

D. Existing Traffic Volume Data

Turning movement traffic counts were collected on Tuesday, December 13, 2022, by Passero Associates at the study intersections. Traffic counts were conducted between 7:00-9:00 AM for the weekday AM peak period and 4:00-6:00 PM for the weekday PM peak period. The peak hour traffic periods generally occurred from 7:30-8:30 AM and 4:00-5:00 PM.

All turning movement count data was collected on a typical weekday while local schools were in session. No adverse weather conditions impacted the traffic counts. The traffic volumes were reviewed to confirm the accuracy and relative balance of the collective traffic counts. The actual differences in traffic volumes can be attributed to temporal variations in traffic volumes as well as activity related to parking in the segments between the study intersections. **Figure 3** illustrates the peak hour volumes used for analysis purposes in this study.

E. Field Observations

The study intersections were observed for the project during all peak intervals to assess current traffic operations. Signal timing and phasing information for the signalized intersection was obtained from the NYSDOT to determine peak hour phasing plans and phase durations during each interval. This information was used to support and/or calibrate capacity analysis models described in detail later in this report.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

F. Existing Peak Hour Queuing Assessment

A peak hour queuing assessment was performed along Fruehauf Avenue during the AM and PM peak hours to measure the frequency of southbound vehicles that block the proposed driveway. The centerline of the proposed driveway is located approximately 38 feet from the stop bar. Given this distance, the driveway is located approximately 1.7 vehicle lengths from the stop bar.

Our firm documented southbound queues at the intersection of Main Street/Fruehauf Avenue on Thursday, July 22, 2021, from 7:00-9:00 AM and 4:00-6:00 PM. The peak hours generally occurred from 8:00-9:00 AM and 4:30-5:30 PM. Based on this field investigation during the peak hours of study, the proposed driveway location was blocked once during the AM peak hour for a duration of five seconds and was blocked once during the PM peak hour for a duration of three seconds.

G. Existing Crash Analysis

The purpose of this crash analysis is to identify inherent safety issues by studying and quantifying historical crashes at the study intersections and identifying potential crash patterns and clusters.

A crash cluster is defined as an abnormal occurrence of similar crash types occurring at approximately the same location or involving the same geometric features. The severity of the crashes should also be considered. A history of crashes is an indication that further analysis is required to determine the cause(s) of the crash(es) and to identify what actions, if any, could be taken to mitigate the crashes.

A crash investigation within the study area was conducted to assess the safety history from July 31, 2017, through July 31, 2021. The data was provided by the New York State Department of Motor Vehicles through a Freedom of Information (FOIL) request.

Despite the COVID-19 pandemic influencing daily travel in 2020 and 2021, only one crash was reported during this period, and it occurred in 2021. This crash was included in the analysis.

Reportable (non-injury, injury, and fatal injury) type crashes are defined as damage to one person's property in the amount of $1,001 or more. The Non-Reportable type crashes result in property damage of $1,000 or less. Crash rates were computed for the study intersections and compared with NYSDOT average crash rates for similar intersections, as summarized in **Table 2**. Intersection rates are listed as crashes per million entering vehicle (CR/MEV). Pertinent crash data is provided in the Appendices.

TABLE 2: EXISTING CRASH RATES

INTERSECTION	NUMBER OF CRASHES	NUMBER OF ENTERING VEHICLES	ACTUAL CRASH RATE	STATEWIDE AVERAGE CRASH RATE
Main Street/Chateau Terrace/Bernhardt Drive	9	19,800 vpd	0.25	0.26
Main Street/Fruehauf Avenue	0	18,958 vpd	0.00	0.26

Notes:
1. vpd = vehicles per day.
2. **Bold** text denotes crash rate above statewide average

Main Street/Chateau Terrace/Bernhardt Drive

Five of the nine (56%) reported crashes were attributed to rear end collisions. This is characteristic of heavily trafficked signalized intersections. Three of the crashes occurred in the westbound direction. The causes of the rear end crashes were generally due to driver error (e.g., following too closely, driver inattention). The remaining crashes were sideswipe (2), left turn (1), and a crash into a parked vehicle. No geometric improvements are recommended.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

FUTURE AREA DEVELOPMENT AND LOCAL GROWTH

Construction of the proposed project is anticipated to reach full build-out within approximately two years. Widely accepted methodology for preparing traffic impact studies requires that any projects in the study area that are currently approved and/or under construction must be considered in the traffic analysis. Projects that are contemplated but not yet approved are not included in a traffic analysis. Local municipal personnel were contacted to discuss any other specific projects that are currently approved or under construction that would generate additional traffic in the study area. No projects were identified.

A review of historical NYSDOT traffic volume data in the vicinity of the site indicates that traffic has decreased slightly between 2015 and 2019. To account for normal increases in background traffic growth, including any unforeseen developments in the project study area, a growth rate of 1.0% was applied to the existing traffic volumes. The background traffic volumes are depicted in **Figure 4**.

PROPOSED PROJECT

A. Project Description

The proposed project consists of constructing 48 apartment units, a ±2,513 square foot (SF) fast casual restaurant, and a ±4,111 SF fine dining restaurant. Access will be provided via two full access driveways: one along Chateau Terrace which accesses a parking lot with 54 spaces and one along Fruehauf Avenue which accesses a parking lot with 22 spaces. Chateau Terrace is posted as a "No Outlet" street while Fruehauf Avenue is posted as a "Dead End" street. On-street parking is available along Main Street. Sidewalks are present throughout the adjacent neighborhood. **Figure 5** illustrates the proposed concept plan.

B. Site Traffic Generation

The volume of traffic generated by a site is dependent on the intended land use and size of the development. Trip generation is an estimate of the number of trips generated by a specific building or land use. These trips represent the volume of traffic entering and exiting the development. Trip Generation Manual (11th Edition) published by the Institute of Transportation Engineers (ITE) is used as a reference for this information. The trip rate for the peak hour of the generator may or may not coincide in time or volume with the trip rate for the peak hour of adjacent street traffic. Volumes generated during the peak hour of the adjacent street traffic and proposed land use, in this case, the weekday commuter AM and PM peaks, represent a more critical volume when analyzing the capacity of the system; those intervals will provide the basis of this analysis.

For certain types of developments, the total number of trips generated is different from the amount of new traffic added to the adjacent highway network by the generator. Service/retail-oriented developments (i.e., shopping centers, gas stations, coffee/donut shops, and restaurants) often locate adjacent to busy streets to attract the motorists already passing the site on the adjacent street. These sites attract a portion of their trips from traffic passing the site. The "pass-by" traffic refers to the amount of existing traffic already on the roadway adjacent to the site that, as it "passes by" the site, will enter the site driveways to patronize the project site. The quantifying of "pass-by" trips has the net result of reducing the volume of new traffic that is added to the site driveways and/or adjacent roadways. This site is likely to exhibit some level of pass-by traffic. However, no adjustment was made to remain conservative.

Table 3 shows the site generated trips for the proposed project.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

TABLE 3: SITE GENERATED TRIPS

DESCRIPTION	ITE LUC	SIZE	AM PEAK HOUR		PM PEAK HOUR	
			ENTER	EXIT	ENTER	EXIT
Multi-family Residential	220	48 units	5	14	15	9
Fast Casual Restaurant	930	±2,513 SF	2	2	17	15
Quality Restaurant	931	±4,111 SF	2	1	21	11
Total Site Generated Trips			**9**	**17**	**53**	**35**

Note:
1. ITE LUC = ITE Land Use Code.

The proposed project is expected to generate approximately nine entering/17 exiting vehicle trips during the AM peak hour and 53 entering/35 exiting vehicle trips during the PM peak hour.

C. Site Traffic Distribution

The cumulative effect of site generated traffic on the transportation network is dependent on the origins and destinations of that traffic and the location of the access drives serving the site. The proposed arrival/departure distribution of traffic generated by the proposed project is considered a function of several parameters, including:

- Residential and employment centers using U.S. Census Data
- Site access locations
- Existing traffic patterns
- Existing traffic conditions and controls

Based on these parameters, **Figure 6A** illustrates the anticipated trip distribution pattern percentages for the residential traffic and **Figure 6B** illustrates the anticipated trip distribution for the restaurant traffic from the proposed project. **Figure 7** illustrates the peak hour project site generated traffic based on those percentages.

D. Full Development Volumes

Proposed design hour traffic volumes were developed for the AM and PM peak hours by combining the background traffic conditions (**Figure 4**) and the total site generated traffic volumes (**Figure 7**) to yield the traffic volumes under full build conditions. The resulting design hour volumes for the proposed project are illustrated in **Figure 8** under full build-out conditions.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

CAPACITY ANALYSIS

A. Description of Capacity Analysis

A capacity analysis is a technique used for determining a measure of effectiveness for a section of roadway and/or intersection based on the number of vehicles during a specific time period. The measure of effectiveness used for the capacity analysis is referred to as a Level of Service (LOS). Levels of Service are calculated to provide an indication of the amount of delay that a motorist experiences while traveling along a roadway or through an intersection. Since the most amount of delay to motorists usually occurs at intersections, capacity analysis typically focuses on intersections, as opposed to highway segments.

Six Levels of Service are defined for analysis purposes. They are assigned letter designations, from "A" to "F", with LOS "A" representing conditions with little to no delay, and LOS "F" with very long and significant delays to motorists. Suggested ranges of service capacity and an explanation of Levels of Service are included in the Attachments. LOS “C” or better is generally desirable, but LOS “D” for signalized locations and LOS “E” for unsignalized are generally acceptable during peak periods so long as the volume to capacity ratio (v/c) is below 1.0.

The standard procedure for capacity analysis of signalized and unsignalized intersections is outlined in the Highway Capacity Manual (HCM 2016) published by the Transportation Research Board (TRB). Traffic analysis software, Synchro 11, which is based on procedures and methodologies contained in the HCM, was used to analyze operating conditions at study area intersections. The procedure yields a Level of Service based on the HCM as an indicator of how well intersections operate. This study used HCM 2000 methodology for determining operations at the unsignalized intersections in accordance with local NYSDOT Region 5 guidelines.

B. Capacity Analysis Results

Existing and background operating conditions during the peak study periods are evaluated to determine a basis for comparison with the projected future conditions. The future traffic conditions generated by the proposed project were analyzed to assess the operation of the study area intersections. Capacity results for existing, background, and full development conditions are listed in **Table 4**. The discussion following the table summarizes capacity conditions.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

TABLE 4: CAPACITY ANALYSIS RESULTS

INTERSECTION	2022 EXISTING CONDITIONS				2024 BACKGROUND CONDITIONS				2024 FULL DEVELOPMENT CONDITIONS			
	AM		PM		AM		PM		AM		PM	
1. Main Street/Chateau Terrace/Bernhardt Drive (S)

WB Thru/Right - Main Street	A	7.8	A	7.6	A	7.9	A	7.7	A	8.3	A	8.0
NB - Bernhardt Drive	C	30.3	D	36.3	C	30.3	D	36.3	C	30.3	D	36.3
SB - Chateau Terrace	D	37.4	D	37.8	D	37.4	D	38.3	D	38.9	D	39.8
Overall LOS	**A**	**9.3**	**A**	**9.5**	**A**	**9.4**	**A**	**9.7**	**A**	**10.0**	**B**	**10.1**
Volume-to-Capacity (v/c) Ratio	**0.43**		**0.44**		**0.44**		**0.45**		**0.48**		**0.48**	
2. Main Street/Fruehauf Avenue (U)												
EB Left - Main Street	A	9.5	A	9.3	A	9.5	A	9.4	A	9.5	A	9.6
SB - Fruehauf Avenue	B	12.5	B	12.5	B	12.6	B	12.6	B	12.8	B	12.8
3. Fruehauf Avenue/Proposed Driveway (U)												
WB - Proposed Driveway	NA		NA		NA		NA		A	8.7	A	8.9
SB - Fruehauf Avenue									A	0.0	A	0.0
4. Chateau Terrace/Proposed Driveway (U)												
EB - Proposed Driveway	NA		NA		NA		NA		A	8.7	A	8.7
NB - Chateau Terrace									A	0.5	A	1.9

Notes:

1. A(2.8) = Level of Service (Delay in seconds per vehicle)
2. EB = Eastbound, WB = Westbound, NB = Northbound, SB = Southbound
3. (S) = Signalized; (U) = Unsignalized
4. N/A = Approach does not exist and/or was not analyzed during this condition
5. Green shaded cells indicate low delays, yellow shaded cells indicate moderate delays, red shaded cells indicate long delays.
6. The v/c ratio, also referred to as degree of saturation, represents the sufficiency of an intersection to accommodate the vehicular demand. A v/c ratio less than 0.85 generally indicates that adequate capacity is available and vehicles are not expected to experience significant queues and delays. A v/c ratio between 0.85 and 0.95 generally indicates an intersection is nearing capacity. Intersections with a v/c ratio of 1.0 or greater generally indicate conditions at or above capacity.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

1. Main Street/Chateau Terrace/Bernhardt Drive (Signalized)
All movements generally operate at LOS "D" or better under existing and projected background conditions with moderate delays for the northbound and southbound movements. The overall LOS is projected to change from "A" to "B" during the PM peak hour between background and full development conditions. However, this is a borderline condition as the threshold is 10.0 seconds of delay per vehicle. There are no other projected changes in LOS because of the proposed project. There is capacity to accommodate the additional traffic volumes and projected minor impacts from the proposed project; thus, no mitigation is warranted nor recommended.

2. Main Street/Fruehauf Avenue (Unsignalized)
All movements operate at LOS "B" or better under existing, background, and full development conditions during both peak hours. There are no projected changes in LOS between background and full development conditions. There is capacity to accommodate the additional traffic volumes and projected minor impacts from the proposed project; thus, no mitigation is warranted nor recommended.

3. Fruehauf Avenue/Proposed Driveway (Unsignalized)
All movements are projected to operate at LOS "A" under full development conditions. There is capacity to accommodate the additional traffic volumes and projected minor impacts from the proposed project; thus, no mitigation is warranted nor recommended.

4. Chateau Terrace/Proposed Driveway (Unsignalized)
All movements are projected to operate at LOS "A" under full development conditions. There is capacity to accommodate the additional traffic volumes and projected minor impacts from the proposed project; thus, no mitigation is warranted nor recommended.

SIGHT LINE EVALUATION

Based upon a review of the attached site plan, the proposed building is projected to be built in approximately the same footprint as the existing structures fronting Main Street. There is a marked stop bar for traffic exiting Fruehauf Avenue.

In this case, the primary concern is with the proposed building at the existing Main Street/Fruehauf Avenue intersection. The attached **Figure 9** illustrates the sight line evaluation performed at the intersection to the east of the intersection.

Sight distance is provided at intersections to allow drivers to perceive the presence of potentially conflicting vehicles. This should occur in sufficient time for a motorist to stop or adjust their speed, as appropriate, to avoid a collision at the intersection. Sight distance is also provided at intersections to allow the drivers of stopped vehicles a sufficient view of the intersecting highway to anticipate and avoid potential incidents. If the available sight distance for an entering or crossing vehicle is at least equal to the appropriate stopping sight distance for the major road, then drivers have sufficient sight distance to anticipate and avoid collisions.

A Policy on Geometric Design of Highways and Streets (2011) published by the American Association of State Highway and Transportation Officials (AASHTO), was used as a reference to establish the required Stopping Sight Distance (SSD) and desirable Intersection Sight Distance (ISD) for the adjacent driveway location. **Table 5** depicts the results of the sight distance evaluation at the Main Street/Fruehauf Avenue intersection.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

TABLE 5: SIGHT LINE EVALUATION

DESCRIPTION		VALUE
POSTED SPEED		40 MPH
DESIGN SPEED[1]		45 MPH
REQUIRED SSD		360 feet
DESIRABLE ISD		500 feet
AVAILABLE SIGHT DISTANCE TO THE EAST	*SSD*	>360 feet
	ISD	505 feet (no vehicles) 155 feet (parked vehicles)

Note:
1. Design speed equals posted speed plus 5 MPH.

The required SSD is satisfied to the east of the study intersection. When cars are parked in the spaces in front of the building, the ISD is not satisfied. However, with no vehicles parked, the ISD is satisfied.

It is understood that urbanized environments consist of on-street parking, limited to zero building setback lines, and other fixed objects (e.g., signs, trees, street furniture). By regulation, on-street parking is restricted within 20 feet of a crosswalk at an intersection and within 30 feet of a traffic signal or stop sign. In this case, parking is restricted for more than 60 feet along the northern side of Main Street from Fruehauf Avenue. Legally parked vehicles may be considered as allowable objects in this case. It is noted that on-street parking can be beneficial in these settings to reduce vehicle speeds and provide a buffer to pedestrians on the sidewalk. This condition is not unique to this study location and can be found in other areas along Main Street in Amherst and Williamsville.

Parking within the sight triangle may occur throughout the day and limit the sight lines, as noted on **Figure 9**. However, given the existing condition of the intersection and intermittent nature of the sight line being impacted, intersection warning signage may be considered as relief.

CONCLUSIONS & RECOMMENDATIONS

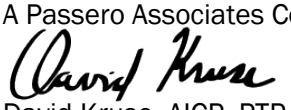
This Traffic Impact Assessment identified and evaluated the potential traffic impacts that can be expected from the proposed mixed-use project to be located at 4548-4564 Main Street in the Town of Amherst, NY. The results of this study determined that the existing transportation network can adequately accommodate the projected traffic volumes and resulting impacts to study area intersections. The following sets forth the conclusions based on the results of the analyses:

1. The proposed project is expected to generate approximately nine entering/17 exiting vehicle trips during the AM peak hour and 53 entering/35 exiting vehicle trips during the PM peak hour.

2. All movements generally operate at LOS “D” or better under existing, projected background, and full development conditions during both peak hours studied at all study intersections. Minimal impacts are projected because of the proposed project. No capacity improvements are recommended at the study intersections.

3. Based upon documentation of southbound queues at the intersection of Main Street/Fruehauf Avenue during the peak hours of study, the proposed driveway location was blocked once during the AM peak hour for a duration of five seconds and was blocked once during the PM peak hour for a duration of three seconds.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)



4. Based upon a sight line evaluation at the Main Street/Fruehauf Avenue intersection, the required SSD is satisfied to the east. However, the desirable ISD is not satisfied if/when on-street parking is present. When parked vehicles are not present, the ISD is fully satisfied. The existing and proposed ISD sight distance will be the same and the proposed building will not impact the existing sight distance.

5. For purposes of the environmental review of the proposed project pursuant to the State Environmental Quality Review Act (SEQRA), it is our firm's professional opinion that the proposed project will not result in any potentially significant adverse traffic impacts to the study area.

If you have any questions or require additional information, please do not hesitate to contact our office.

LEVEL OF SERVICE: CRITERIA/DEFINITIONS

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

Level of Service Criteria

Highway Capacity Manual 2016

SIGNALIZED INTERSECTIONS

Level of Service is a qualitative measure describing operational conditions within a traffic stream, based on service measures such as speed and travel time, freedom to maneuver, traffic interruptions, comfort, and convenience. Level of Service for signalized intersections is defined in terms of delay specifically, average total delay per vehicle for a 15-minute analysis period. The ranges are as follows:

Level of Service	Control Delay per vehicle (seconds)
A	< 10
B	10 – 20
C	20 – 35
D	35 – 55
E	55 – 80
F	>80

UNSIGNALIZED INTERSECTIONS

Level of Service for unsignalized intersections is also defined in terms of delay. However, the delay criteria are different from a signalized intersection. The primary reason for this is driver expectation that a signalized intersection is designed to carry higher volumes than an unsignalized intersection. The total delay threshold for any given Level of Service is less for an unsignalized intersection than for a signalized intersection. The ranges are as follows:

Level of Service	Control Delay per vehicle (seconds)
A	< 10
B	10 – 15
C	15 – 25
D	25 – 35
E	35 - 50
F	>50
