Rev. January 2023

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

Project Description

This project is a redevelopment of four parcels with a total of 0.93-acres currently occupied with two (2) multi-tenant buildings and one (1) 950 sf residential house that are all to be demolished. The project is located along Main Street in the Town of Amherst. Proposed construction will include a 34,121 sf multi-story building with associated parking garage, utility, drainage and site improvements.

The proposed sanitary demand for the proposed building will be served by a private 6" SDR-35 PVC lateral that will connect to a private 8" SDR-35 PVC sanitary sewer. The private 8" sanitary sewer will discharge to an existing Town of Amherst sewer manhole within the Fruehaut Avenue R.O.W. Flows then travel north and are ultimately conveyed to the Town of Amherst Wastewater Treatment Facility. Refer to the sewer node maps located at the end of this downstream sewer capacity analysis report.

Node 1 - Harlem Road (12"):

Existing Peak Flow measured (wet weather event)	= 3.379 cfs (2.184 mgd)*
4548-4564 Main St Peak Flow	= 0.074 cfs (0.048 mgd)**
Proposed Total Peak Flow	= 3.453 cfs

Theoretical capacity of existing 12" VTP @ 0.44% = 2.193 cfs

Conclusion: The maximum monitored wet weather flow exceeds the capacity of the existing 8" sewer pipe. One time during the monitoring period the flow depth exceeded the pipe diameter at Node 1 following a 1.56" rainfall event, but at no time during the monitoring period did the flow at any point slow or stall which would have caused a backup or flooding at the manhole. I/I mitigation shall be required for the contribution proposed for this project.

Node 2 - Park School (10"):

Existing Peak Flow measured (wet weather event)	= 1.145 cfs (0.740 mgd)*
4548-4564 Main St Peak Flow	= 0.074 cfs (0.048 mgd)**
Proposed Total Peak Flow	= 1.219 cfs

Theoretical capacity of existing 10" VTP @ 1.19% = 7.012 cfs

Conclusion: The proposed total peak flow is less than the capacity of the 10" VTP pipe, therefore there is sufficient capacity.

Node 3 - West Side Interceptor (60"):

Existing Peak Flow measured (wet weather event)	= 116.831 cfs (75.510 mgd)*
4548-4564 Main St Peak Flow	= 0.074 cfs (0.048 mgd)**
Proposed Total Peak Flow	= 116.904 cfs
Existing Peak Flow (per (T) Amherst)	= 83.705 cfs (54.100 mgd)*
4548-4564 Main St Peak Flow	= 0.074 cfs (0.048 mgd)**
Proposed Total Peak Flow	= 83.779 cfs

Capacity of existing 60" West Side Interceptor = 75.969 cfs (49.1 mgd)

Conclusion: The maximum monitored wet weather flow exceeds the capacity of the existing 60" sewer pipe. One time during the monitoring period the flow depth exceeded the pipe diameter at Node 3 following a 1.56" rainfall event, but at no time during the monitoring period did the flow at any point slow or stall which would have caused a backup or flooding at the manhole. I/I mitigation shall be required for the contribution proposed for this project.

SANITARY SEWER FLOW CAPACITY STUDY – Summary Review

Prepared For: 4558-4564 Main Capacity Analysis

Christopher Wood, PE Partner
487 Main Street, Suite 500
Buffalo, New York 14203

Project Name: 4558-4564 Main Capacity Analysis

Flow Monitoring Period: November 1, 2022 to November 29, 2022

Rain Events (> 0.5-inches) Monitored: November 11 (1.59"), November 17 (0.90"), November 18 (0.59"), and November 19 (1.49")

Number of Monitoring Nodes: Three (3) downstream manholes

Node Locations and Descriptions:

- Node 1 Harlem Rd 12" (12")
- Node 2 Park School 10" (10")
- Node 3 N. Ellicott Crk (59.75")

Summary Conclusion:

Based on the data presented in this report, specifically the flow depth measurements recorded (see graphs below)

- One time did the flow depth exceed pipe diameter at Node 1 and None 3 of the downstream monitoring points during the wet weather events monitored.
- At no time did the flow depth exceed pipe diameter at Node 2 of the downstream monitoring points during the wet weather events monitored.

Updated December 13, 2022

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

GENERAL

This project is a redevelopment of four parcels with a total of 0.93-acres currently occupied with two multi-tenant buildings totaling 12,150 S.F. with an associated parking lot, utility and drainage infrastructure and a 950 S.F. residential house with associated driveway and garage. The project is located along Rt. 5 Main Street between Fruehauf Ave and Chateau Terrace in the Town of Amherst. The property abuts general commercial properties along Main Street property and abuts residential properties along the North property line. The existing multi-tenant buildings and residential house will be demolished for the construction of this project.

Existing Conditions:

The site is currently occupied by a multi-tenant building with associated parking lot and a residential house. The site currently is sheet draining any runoff from pavement surface existing on-site drainage structures.

The site contains three existing domestic water services. A ¾" domestic service is located along Main St. that are tapped off the existing 8" water main along the Southside of Main St. A 2" domestic service is tapped off the 6" water main along Fruehauf Ave. A ¾" domestic service, for the residential home, is tapped off the Existing 1" service main along Chateau Terrace. The existing water services will be abandoned as part of this project.

Existing Sanitary Sewers are located along Main Street that discharges into the existing Town of Amherst sewer district #1.

PROJECT OVERVIEW

The proposed project *(Figure 1)* consists of; demolition of the existing 12,150 S.F. multi-tenant buildings, residential house and garage, pavement areas and the clearing of land; construction of a proposed 34,121 S.F. multi-story building with associated parking garage, drainage infrastructure and site improvements to the sites existing grading and utilities.

PROPOSED FACILITIES

Storm Water

SWPPP Engineer's Report prepared by Carmina, Wood, Morris DPC dated May, 2022

Water System

The existing water services to the site are to be abandoned for this proposed project. The proposed development will provide a new water service tap to the 6" main along Chateau Terrace. The proposed domestic and fire services will be backflowed within the proposed building.

Disinfection of the water services following installation will be continuous feed, according to AWWA C-651, latest revision.

Summary: *(Refer to Figure 2)*

Proposed Building:	34,121 S.F.
Operating Demand Increase:	22.29 gpm
Peak Demand Increase:	40.11 gpm
Water Main:	6" main along Chateau Terrace
Static Pressure:	64 PSI
Head Loss Friction:	0.0 psi
Loss through meter/RPZ:	13.0 psi
Elevation Loss:	0.8 psi
Bends Loss:	0 psi
Required Pressure after RPZ:	20 psi
Proposed Pressure after RPZ:	**50.8 PSI**

Sanitary Sewer:

Sanitary services will provide a new sanitary lateral connection to an existing manhole along Fruehauf Ave. The proposed building will be provided a 2,000 Gal grease trap with new 6" SDR-35 PVC lateral sanitary connection.

Summary:

Existing Flow:		3,165 GPD
Proposed New Building S.F.:		34,121 S.F.
Proposed Flow:	Restaurant	35 GPD * 80 Seats = 2,800 GPD
	Residential	110 GPD * 74 Bedrooms = 8,140 GPD
GPD Total =		10,940 GPD
Total Increased Sanitary Flow:		**7,775 GPD**

STORM WATER POLLUTION PREVENTION PROGRAM

801 SCOPE

A. **PURPOSE: Benderson Development LLC** has placed an emphasis on following **the New York State Department of Environmental Conservation (NYSDEC) SPDES General Permit for Stormwater Discharges from Construction Activity** governing storm water discharges during construction, and in accordance with erosion control practices. The Contractor's participation in this program is mandatory and its non-compliance is subject to various remedies, including without limitation, monetary set-offs, withholding payments; reimbursement for costs, expenses (including reasonable attorney's fees), fines and civil penalties incurred by **Benderson Development LLC;** and/or liquidated damages. This section provides a descriptive explanation of **Benderson Development LLC's** Storm Water Pollution Prevention Program and required Contractor participation.

The Engineer of record for this project certifies that this SWPPP meets the requirements and is in compliance with the New York State Stormwater Management Design Manual and latest NYSDEC Phase II stormwater regulation requirements.

B. **SPDES General Permit for Stormwater Discharges from Construction Activity:** Regulations promulgated by the NYSDEC to regulate the discharge of storm water from construction activities on sites where more than **one (1)** acre of soil is disturbed. One of the ways to comply with these regulations for affected sites is to request coverage under the General Permit for Construction Activities for New York State. In order to use the General Permit, a Notice of Intent (NOI) form must be completed and mailed to the **NYSDEC** at least ***5 business days*** prior to any earth-disturbing activities (this time frame may increase to 60 business days if a full review of the SWPPP is determined necessary by the NYSDEC) and a Storm Water Pollution Prevention Plan (SWPPP) for the site must be prepared and followed during the construction activities.

Approval from a regulated, traditional land use control MS4:

1. An *owner or operator* of a *construction activity* that is not subject to the requirements of a *regulated, traditional land use control MS4* must first develop a SWPPP in accordance with all applicable requirements of this permit and then submit a completed NOI form to the NYSDEC.

2. An *owner or operator* of a *construction activity* that is subject to the requirements of a *regulated, traditional land use control MS4* must first develop a SWPPP in accordance with all applicable requirements of this permit and then have its SWPPP reviewed and accepted by the *MS4* prior to submitting the NOI to the NYSDEC. The *owner or operator* shall have the "MS4 SWPPP Acceptance" form signed by the principal executive officer or ranking elected official from the *regulated, traditional land use control MS4*, or by a duly authorized representative of that person, and then submit that form along with the NOI to the address referenced under "Notice of Intent (NOI) Submittal".

C. **RESPONSIBILITIES OF THE CONTRACTOR:** The Contractor shall manage the discharge of storm water from the site in accordance with the **NYSDEC** General Permit for Construction Activities conditions and the following provisions of this section. The Operator shall be responsible for conducting the storm water management practices in accordance with the permit. The Contractor shall be responsible for providing qualified inspectors to conduct the inspections required by the SWPPP. The Contractor shall be responsible for any enforcement action taken or imposed by federal, state, or local agencies, including the cost of fines, construction delays, and remedial actions resulting from the Contractor's failure to comply with the permit provisions. **It shall be the responsibility of the Contractor to make any changes to the SWPPP necessary when the Contractor or any of his subcontractors elects to use borrow or fill or material storage sites, either contiguous to or remote from the construction site, when such sites are used solely for this construction site. Such sites are considered to be part of the construction site covered by the permit and this SWPPP. Off-site borrow, fill, or material storage sites which are used for multiple construction projects are not subject to this requirement, unless specifically required by state or local jurisdictional entity regulations. The Contractor should consider this requirement in negotiating with earthwork subcontractors, since the choice of an off-site borrow, fill, or material storage**

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

site may impact their duty to implement, make changes to, and perform inspections required by the SWPPP for the site.

D. **NOTICE OF INTENT:** The Operator has petitioned the **NYSDEC** for coverage under the storm water discharges during construction at this site to be covered by the **SPDES** General Permit for Construction Activity for the State of **New York.** A Notice of Intent (NOI) for coverage under this permit has been filed by the Operator. The SWPPP must be prepared prior to submittal of the NOI form. The Operator will require the Contractor to be a co-permittee with the Operator. The Contractor will be required to post the NOI at the construction site along with any building permits.

E. **CONTRACTOR CERTIFICATION & TRAINING**: Certification and Training of the Contractor's Project Manager and Superintendent will be performed at the Pre-Construction Meeting and administered by the **Operator's Project Manager** and/or **Operator's Engineer**. This Certification and Training Program has been developed to stress the importance of the following topics:

- Erosion and sediment control for water quality protection
- Implementation of erosion and sediment control plans
- The importance to proper installation of erosion and sediment control measures
- Regular inspection by the **owner/operator** and a **Qualified Professional** of erosion and sediment control measures
- Diligent maintenance of erosion and sediment control measures
- Expedient preparation of accurate and complete records regarding inspection and maintenance of erosion and sediment control measures
- Record-keeping for inspections and maintenance activities

Upon completion of the certification and training program, the project will receive a *SWPPP Ledger* for use by the Contractor's Project Manager and Superintendent with all required certifications and record keeping forms involved with the installation and/or maintenance of erosion and sediment control measures. The Operator's certification and training shall be in addition to any federal, state or local certifications or training required or available to comply with SPDES stormwater permit requirements by the Contractor.

F. **REQUIREMENTS FOR THE GENERAL CONTRACTOR AND SUBCONTRACTOR(S):** The *SWPPP Ledger* shall provide a **"Contractor's Certification Log" (Form SWPPP-1)** for both the General Contractor and Subcontractor(s) identifying the Company Name, Business Address and Telephone Number along with the Responsible Person for the Contractor and all subcontractors' who will implement the measures identified in the SWPPP. **The General Contractor and Subcontractor(s) shall also sign the "Contractor's Certification Statement" (Form SWPPP-2)** verifying they have been instructed on how to comply with and fully understand the requirements of the **SPDES** General Permit for Construction Activity for the State of **New York** and the SWPPP. These certifications must be signed, by a responsible corporate officer or other party meeting the "Signatory Requirements" of the SPDES General Permit, on behalf of each entity, prior to the beginning of any construction activities and shall be filed in the project's *SWPPP Ledger*. A Signatory Authorization Designation **(Form SWPPP-11)** must be filled out by each entity giving the authorization for the individual to sign on behalf of the entity.

G. **STORM WATER POLLUTION PREVENTION PROGRAM LOCATION REQUIREMENTS:** The *SWPPP Ledger* is meant to be a working document that shall be maintained at the site of the Construction Activities at all times throughout the project, shall be readily available upon request by the Operator's personnel or **NYSDEC** or any other agency with regulatory authority over storm water issues, and shall be kept on-site until the site complies with the Final Stabilization section of this document. **A sign or other notice must be posted near the main entrance of the construction site which contains a completed NOI, the location of the SWPPP and the name and phone number of a contact person responsible for scheduling SWPPP viewing times, and any other state specific requirements.**

H. **SWPPP LEDGER:** The SWPPP Ledger shall be a three (3) ring binder, the Ledger shall be tabbed and indexed for the following sections:

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

- **Table of Contents**
- **Written SWPPP**
- **Site Map**
- **Erosion and Sedimentation Control Plan(s)**
- **Signed NYSDEC Notice of Intent (NOI)**
- **Copy of Notice of Permit Coverage**
- **Copy of the NYSDEC SPDES General Permit for Construction Activity for the State of New York**
- **Blank Copy of NOI and Notice of Termination (NOT)**
- **Contractor's Certification Log (Form SWPPP-1)**
- **Contractor's Certification Statement (Form SWPPP-2)**
- **Inspection Report(s) (Form SWPPP-3)**
- **Stabilization Schedule (Form SWPPP-4)**
- **Final Stabilization/Termination Checklist (Form SWPPP-5)**
- **Project Rainfall Log (Form SWPPP-6)**
- **Requested Changes to the SWPPP (Form SWPPP-7)**
- **Monthly Training Log (Form SWPPP-8)**
- **Reportable Quantity Release Form (Form SWPPP-9)**
- **Implementation Schedule (Form SWPPP-10)**
- **Signatory Authorization Designation (SWPPP-11)**
- **Owner's Certification (SWPPP-12)**
- **Engineer's Certification (SWPPP-13)**
- **Sample Forms**

The Operator's Project Manager must review and evaluate for compliance the *SWPPP Ledger* at each Project Review. All Inspection and Maintenance Forms must be **signed** by the Operator's Project Manager **(or other duly authorized representative)** at this review and be submitted with the Contractor's Monthly Application for Payment. The approval of the Contractor's Application for Payment will be withheld until the *SWPPP Ledger* is deemed in compliance and all SWPPP Inspection and Maintenance Forms and have been submitted to the satisfaction of the Operator.

I. INSPECTIONS AND RECORD-KEEPING:

A. General Construction Site Inspection and Maintenance Requirements

1. The *owner or operator* must ensure that all erosion and sediment control practices and all post-construction stormwater management practices identified in the SWPPP are maintained in effective operating condition at all times.

2. The terms of this permit shall not be construed to prohibit the State of New York from exercising any authority pursuant to the ECL, common law or federal law, or prohibit New York State from taking any measures, whether civil or criminal, to prevent violations of the laws of the State of New York, or protect the public health and safety and/or the environment.

B. Owner or Operator Maintenance Inspection Requirements

1. The *owner or operator* shall inspect, in accordance with the requirements in the most current version of the technical standard, New York State Standards and Specifications for Erosion and Sediment Control, the erosion and sediment controls identified in the SWPPP to ensure that they are being maintained in effective operating condition at all times.

2. For construction sites where soil disturbance activities have been temporarily suspended (e.g. winter shutdown) and temporary stabilization measures have been applied to all disturbed areas, the *owner or operator* can stop conducting the maintenance inspections. The *owner or operator* shall begin conducting the maintenance inspections in accordance with Part IV.B.1. of the General Permit as soon as soil

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

disturbance activities resume.

3. For construction sites where soil disturbance activities have been shut down with partial project completion, the *owner or operator* can stop conducting the maintenance inspections if all areas disturbed as of the project shutdown date have achieved *final stabilization* and all post-construction stormwater management practices required for the completed portion of the project have been constructed in conformance with the SWPPP and are operational.

C. **Qualified Inspector Inspection Requirements**

The *owner or operator* shall have a *qualified inspector* conduct site inspections in conformance with the following requirements:

Note: The *trained contractor* identified in Part III.A.6 of the General Permit **cannot** conduct the *qualified inspector* site inspections unless they meet the *qualified inspector* qualifications included in Appendix A of the General Permit. In order to perform these inspections, the *trained contractor* would have to be a:

- Licensed Professional Engineer,
- Certified Professional in Erosion and Sediment Control (CPESC),
- Registered Landscape Architect, or
- Someone working under the direct supervision of, and at the same company as, the licensed Professional Engineer or Registered Landscape Architect, provided they have received four (4) hours of Department endorsed training in proper erosion and sediment control principles from a Soil and Water Conservation District, or other Department endorsed entity.

1. A *qualified inspector* shall conduct site inspections for all construction activities identified in Tables 1 and 2 of Appendix B of the General Permit, with the exception of:

   a. The construction of a single family residential subdivision with 25% or less impervious cover at total site build-out that involves a soil disturbance of one (1) or more acres of land but less than five (5) acres and is not located in one of the watersheds listed in Appendix C of the General Permit and not directly discharging to one of the 303(d) segments listed in Appendix E of the General Permit;

   b. The construction of a single family home that involves a soil disturbance of one (1) or more acres of land but less than five (5) acres and is not located in one of the watersheds listed in Appendix C and not directly discharging to one of the 303(d) segments listed in Appendix E of the General Permit;

   c. Construction on agricultural property that involves a soil disturbance of one (1) or more acres of land but less than five (5) acres; and

   d. Construction activities located in the watersheds identified in Appendix D of the General Permit that involve soil disturbances between five thousand (5000) square feet and one (1) acre of land.

2. Unless otherwise notified by the Department, the *qualified inspector* shall conduct site inspections in accordance with the following timetable:

   a. For construction sites where soil disturbance activities are on-going, the *qualified inspector* shall conduct a site inspection at least once every seven (7) calendar days.

   b. For construction sites where soil disturbance activities are on-going and the *owner or operator* has received authorization in accordance with Part II.C.3 of the General Permit to disturb greater than five (5) acres of soil at any one time, the *qualified inspector* shall conduct at least two (2) site inspections every seven (7) calendar days. The two (2) inspections shall be separated by a minimum of two (2) full calendar days.

   c. For construction sites where soil disturbance activities have been temporarily suspended (e.g. winter

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

shutdown) and temporary stabilization measures have been applied to all disturbed areas, the *qualified inspector* shall conduct a site inspection at least once every thirty (30) calendar days. The *owner or operator* shall notify the Regional Office stormwater contact person (see contact information in Appendix F of the General Permit) or, in areas under the jurisdiction of a *regulated, traditional land use control MS4,* the MS4 (provided the MS4 is not the *owner or operator* of the construction activity) in writing prior to reducing the frequency of inspections.

d. For construction sites where soil disturbance activities have been shut down with partial project completion, the *qualified inspector* can stop conducting inspections if all areas disturbed as of the project shutdown date have achieved *final stabilization* and all post-construction stormwater management practices required for the completed portion of the project have been constructed in conformance with the SWPPP and are operational. The *owner or operator* shall notify the Regional Office stormwater contact person or, in areas under the jurisdiction of a *regulated, traditional land use control MS4,* the MS4 (provided the MS4 is not the *owner or operator* of the construction activity). in writing prior to the shutdown. If soil disturbance activities are not resumed within 2 years from the date of shutdown, the *owner or operator* shall have the *qualified inspector* perform a final inspection and certify that all disturbed areas have achieved *final stabilization,* and all temporary, structural erosion and sediment control measures have been removed*;* and that all post-construction stormwater management practices have been constructed in conformance with the SWPPP by signing the "Final Stabilization" and "Post-Construction Stormwater Management Practice" certification statements on the NOT. The *owner or operator* shall then submit the completed NOT form to the address in Part II.A.1 of the General Permit.

3. At a minimum, the *qualified inspector* shall inspect all erosion and sediment control practices to ensure integrity and effectiveness, all post-construction stormwater management practices under construction to ensure that they are constructed in conformance with the SWPPP, all areas of disturbance that have not achieved *final stabilization,* all points of discharge to natural surface waterbodies located within, or immediately adjacent to, the property boundaries of the construction site, and all points of discharge from the construction site.

4. The *qualified inspector* shall prepare an inspection report subsequent to each and every inspection. At a minimum, the inspection report shall include and/or address the following:

   a. Date and time of inspection;

   b. Name and title of person(s) performing inspection;

   c. A description of the weather and soil conditions (e.g. dry, wet, saturated) at the time of the inspection;

   d. A description of the condition of the runoff at all points of discharge from the construction site. This shall include identification of any *discharges* of sediment from the construction site. Include *discharges* from conveyance systems (i.e. pipes, culverts, ditches, etc.) and overland flow;

   e. A description of the condition of all natural surface waterbodies located within, or immediately adjacent to, the property boundaries of the construction site which receive runoff from disturbed areas. This shall include identification of any *discharges* of sediment to the surface waterbody;

   f. Identification of all erosion and sediment control practices that need repair or maintenance;

   g. Identification of all erosion and sediment control practices that were not installed properly or are not functioning as designed and need to be reinstalled or replaced;

   h. Description and sketch of areas that are disturbed at the time of the inspection and areas that have been stabilized (temporary and/or final) since the last inspection;

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

i. Current phase of construction of all post-construction stormwater management practices and identification of all construction that is not in conformance with the SWPPP and technical standards;

j. Corrective action(s) that must be taken to install, repair, replace or maintain erosion and sediment control practices; and to correct deficiencies identified with the construction of the post-construction stormwater management practice(s); and

k. Digital photographs, with date stamp, that clearly show the condition of all practices that have been identified as needing corrective actions. The *qualified inspector* shall attach paper color copies of the digital photographs to the inspection report being maintained onsite within seven (7) calendar days of the date of the inspection. The *qualified inspector* shall also take digital photographs, with date stamp, that clearly show the condition of the practice(s) after the corrective action has been completed. The *qualified inspector* shall attach paper color copies of the digital photographs to the inspection report that documents the completion of the corrective action work within seven (7) calendar days of that inspection.

5. Within one business day of the completion of an inspection, the *qualified inspector* shall notify the *owner or operator* and appropriate contractor or subcontractor identified in Part III.A.6. of any corrective actions that need to be taken. The contractor or subcontractor shall begin implementing the corrective actions within one business day of this notification and shall complete the corrective actions in a reasonable time frame.

6. All inspection reports shall be signed by the *qualified inspector*. Pursuant to Part II.C.2 of the General Permit, the inspection reports shall be maintained on site with the SWPPP.

Record Retention - The *owner or operator* shall retain a copy of the NOI, NOI Acknowledgment Letter, SWPPP, MS4 SWPPP Acceptance form and any inspection reports that were prepared in conjunction with this permit for a period of at least five (5) years from the date that the site achieves *final stabilization*. This period may be extended by the Department, in its sole discretion, at any time upon written notification.

- **Form SWPPP-3** **Inspection Report**
- **Form SWPPP-4** **Stabilization Schedule**
- **Form SWPPP-5** **Final Stabilization/Termination Checklist**
- **Form SWPPP-6** **Project Rainfall Log**
- **Form SWPPP-7** **Requested Changes to the SWPPP**
- **Form SWPPP-8** **Monthly Training Log**
- **Form SWPPP-9** **Reportable Quantity Release Form**
- **Form SWPPP-10** **Implementation Schedule**
- **Form SWPPP-11** **Signatory Authorization Designation**
- **Form SWPPP-12** **Owner's Certification**
- **Form SWPPP-13** **Engineer's Certification**

J. **SWPPP MODIFICATIONS:** The inspection report should also identify if any revisions to the SWPPP are warranted due to unexpected conditions. The SWPPP is meant to be a dynamic working guide that is to be kept current and amended whenever there is a change in design, construction, operation, or maintenance at the construction site that has or could have a significant effect on the discharge of pollutants or when the plan proves to be ineffective in eliminating or significantly minimizing pollutant discharges. Any such changes to the SWPPP must be made in writing on the "**Requested Changes to the SWPPP" (Form SWPPP-7)** within 7 days of the date of such modification or amendment is made. The Contractor's failure to modify or report deficiencies to the Operator will result in the Contractor being liable for fines and construction delays resulting from any federal, state, or local agency enforcement action.

K. **CONTRACTOR'S MONTHLY TRAINING:** The Contractor shall provide monthly training sessions for all entities and subcontractors involved with installing, applying, performing, maintaining and inspection of the SWPPP. Logs of each monthly training shall be kept by the Contractor on the "Monthly Training Log" **(Form SWPPP-8)**, in the *SWPPP Ledger*. Training shall educate the attendees on the topics of:

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

- The Location and Type of Control Measures
- The Construction Requirements for the Control Measures
- Maintenance Procedures for each of the Control Measures
- Spill Prevention and Cleanup Measures
- Inspection and Maintenance Record Keeping Requirements

L. **FINAL STABILIZATION AND TERMINATION OF PERMIT COVERAGE:** A site can be considered finally stabilized when all soil disturbing activities have been completed and a uniform perennial vegetative cover with a density of **85%** for the unpaved areas and areas not covered by permanent structures has been established or equivalent permanent stabilization measures have been established and the facility no longer discharges storm water associated with construction activities and a Notice of Termination (NOT) form filed by the Operator(s) with the NYSDEC. The Operator's Project Manager must complete the NOT. The NOT must be signed by the signatory (or equivalent position) on the NOI and subsequently submitted to the appropriate agency. The Operator's Project Manager must provide a completed copy of the NOT to the Contractor for inclusion in the SWPPP, which will then be optically scanned into the final SWPPP document as required. This filing terminates coverage under the General Permit and terminates the Contractor's responsibility to implement the SWPPP, but the requirements of the SWPPP, including periodic inspections, must be continued until the NOT is filed. The owner or operator shall also have the qualified inspector perform a final site inspection prior to submitting the NOT to the Department. In addition, the qualified inspector must verify during the final inspection that all Town of Amherst requirements for Final Stabilization have been satisfied prior to Town of Amherst signature of the NOT. Upon achieving this milestone, the Contractor shall also submit "Final Stabilization Certification/Termination Checklist" **(Form SWPPP-5)**. Final payment and/or the release of retainage will be withheld until all provisions of the SWPPP have been submitted, completed and accepted by the Operator.

802 PROJECT NAME AND LOCATION

Proposed Site Redevelopment
4548-4564 Main Street
Town of Amherst, NY 14226
42.963°N, 78.782°W
Estimated Area of Site ≈ 1.02+/- acres
Estimated Area to be Disturbed by Construction Activities ≈ 1.02+/- acres

A general location map is included as Appendix A.

803 OPERATOR'S NAME AND ADDRESS

Benderson Development LLC
570 Delaware Ave
Buffalo, NY 14202
Contact Person: Matt Oates
Telephone: 716-878-9397

804 PROJECT DESCRIPTION

This redevelopment project will consist of the construction of a 3-story mixed-use building that will include apartments, restaurant space and multi-level parking. The site is located on the north side of Main Street (NY-5), between Fruehauf Ave and Chateau Terrace in the Town of Amherst. The existing site is currently occupied by a 3-story vacant building located along the Main Street frontage. Existing surface parking is located north behind the existing building. Both the existing building and parking areas will be removed as part of this project. The overall site area is approximately 0.93+/- acres, however, construction activities will result in approximately 1.02+/- acres of disturbance area.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

Soil disturbing activities will include:

A. Construction of temporary construction exit point
B. Clearing & grubbing of the site within disturbance limits
C. Construction of detention basin & bioretention area
D. Installation of storm sewer pipes and inlets
E. Construction of utilities
F. Construction of driveways and parking lot
G. Final grading & landscaping
H. Construction of building

This project is owned by **Benderson Development LLC** and will be developed by **Benderson Development LLC**. The work area consists of approximately 1.02+/- acres for which erosion and sediment controls have been developed and fully addressed in this written plan and the Erosion and Sediment Control Plans. See the construction documents for additional details

805 RUNOFF COEFFICIENT, SOILS, AND RAINFALL INFORMATION

The initial runoff curve number for the pre-construction site is "CN" = 95. The post-construction runoff curve number for the site will be "CN" = 95. Approximately 1.02+/- acres will be disturbed by construction activities.

See soils information located in Appendix D

The site is in Erie County, which receives an average of approximately 35 inches rainfall annually with the highest amounts of rainfall received in the months of May thru September. Annual snow for this area is approximately 100 inches.

806 WATERS

The runoff generated from this site will discharge to the existing closed Town of Amherst storm sewer that is ultimately tributary to Ellicott Creek and the Niagara River.

807 INDIAN COUNTRY LANDS

This project is not located on Indian Lands.

808 ENDANGERED AND THREATENED SPECIES

No endangered/threatened species have been determined to be on the site.

809 CRITICAL HABITAT

No critical habitats have been determined to be on the site.

810 HISTORIC PLACES

The assessed property is not listed in the National Register of Historical Places.

811 WETLANDS AND/OR OTHER SURFACE WATERS

No wetlands are located on the site.

812 EROSION AND SEDIMENT CONTROLS

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

812.1 STABILIZATION PRACTICES

Stabilization practices for this site include:

A. Land clearing activities shall be done only in areas where earthwork will be performed and shall progress as earthwork is needed.
B. Use of stabilization method for all slopes having a slope greater than 1V:3H.
C. Permanent seeding and planting of all unpaved areas using the hydromulching grass seeding technique.
D. Mulching exposed areas.
E. Vegetation preservation in undisturbed areas.
F. Frequent watering to minimize wind erosion during construction.

a. For sites where **5 acres or more** are disturbed at any one time: In areas where soil disturbance activity has been temporarily or permanently ceased, temporary and/or permanent soil stabilization measures shall be installed and/or implemented within seven (7) days from the date the soil disturbance activity ceased. The soil stabilization measures selected shall be in conformance with the most current version of the *New York Standards and Specifications for Erosion and Sediment Control.*
b. The owner or operator shall prepare a phasing plan that defines maximum disturbed area per phase and shows required cuts and fills.
c. The owner or operator shall install any additional measures needed to protect water quality.

812.2 STRUCTURAL PRACTICES

Structural practices for this site include:

A. Inlet protection using a method detailed in the Construction Documents.
B. Perimeter protection using temporary silt fence.
C. Outlet protection using rip-rap stone and end sections.
D. Stabilized Construction Entrance.
E. Temporary stone wash off areas.
F. Storm sewer, curb/gutter.
G. Sediment traps and basins.

812.3 SEQUENCE OF MAJOR ACTIVITIES

The Contractor will be responsible for implementing the following erosion control and storm water management control measures. The Contractor may designate these tasks to certain subcontractors as he sees fit, but the ultimate responsibility for implementing these controls and ensuring their proper functioning remains with the Contractor. The order of activities will be as follows:

A. Construct temporary construction exits at locations shown on the Demolition & Erosion Control Plan Sheet.
B. Install perimeter silt fences in the locations shown on the Demolition & Erosion Control Plan Sheet.
C. Clear & Grub site.
D. Construction of detention basin & bioretention area.
E. Commence site grading.
F. Disturbed areas of the site where construction activity has ceased for more than 14 days shall be temporarily seeded and watered.
G. Installation of proposed utilities.
H. Finalize pavement subgrade preparation.
I. Construct all curb, drainage inlets, storm sewer pipes and storm sewer manholes, as shown on the plans. Install temporary inlet protection at the locations of all inlets.
J. Dust control.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

K. Remove inlet protection around inlets and manholes no more than 48 hours prior to placing stabilized base course.
L. Install base material as required for pavement.
M. Carry out final grading and seeding and planting.
N. Clean storm system following construction.
O. Remove silt fencing only after all paving is complete and exposed surfaces are stabilized.
P. Remove temporary construction exits only prior to pavement construction in these areas.

A schedule for implementation for the activities identified above is included as Form SWPPP-4 of the SWPPP.

Note: Sediment control storage during construction (traps & basins) during construction shall be 134cy per acre of disturbance per NYSDEC requirements.

812.4 STORM WATER MANAGEMENT: See Appendix D, Engineer's Report

813 OTHER CONTROLS

813.1 OFF-SITE VEHICLE TRACKING

A stabilized construction exit will be provided to help reduce vehicle tracking of sediments. Existing paved areas will remain as long as possible and will be used for vehicle wash areas and to further aid in the reduction of vehicle tracking of sediments. The paved streets adjacent to the site entrance shall be inspected daily and swept as necessary to remove any excess mud, dirt, or rock tracked from the site. Dump trucks hauling material to/from the construction site will be covered with a tarpaulin. The job site superintendent will be responsible for seeing that these procedures are followed.

813.2 EXCAVATION SPOIL MATERIALS

Excavation spoil materials are generated during the excavation of the development's building and utilities installation. These materials must be properly managed to prevent them from contributing to storm water discharges. The materials generated from the development of this project will be hauled off-site or stockpiled for re-use in designated areas which will have temporary erosion & sediment control measures installed. Any removal from site will be done under the necessary permits required by the local governing agencies.

813.3 DUST CONTROL

Minimizing wind erosion and controlling dust will be accomplished by one or more of the following methods:
A. Frequent watering of excavation and fill areas.
B. Providing gravel or paving at entrance/exit drives, parking areas and transit paths.

813.4 WASTE DISPOSAL

If needed, all waste materials will be collected and stored in securely lidded metal dumpsters rented from an approved waste management company. The dumpster will comply with all local and state solid waste management regulations.

All trash and construction debris from the site will be deposited in the dumpsters. The dumpsters will be emptied when full and then hauled to a NYSDEC approved landfill for proper disposal. No construction waste will be buried on-site. All personnel will be instructed regarding the correct procedures for waste disposal.

813.5 SANITARY WASTE

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

If needed, portable toilet units or field offices with toilet facilities connected to the municipal sanitary sewer will be used for sanitary purposes. All portable toilet units will be emptied a minimum of once per week by a licensed portable facility provided in compliance with local and state regulations.

813.6 CONCRETE WASTE FROM CONCRETE TRUCKS

A. Emptying of excess unhardened concrete and/or washout from concrete delivery trucks will be allowed on the job site, but in either (1) specifically designated diked areas which have been prepared to prevent contact between concrete and/or washout and storm water which will be discharged from the site or (2) in locations where waste concrete will be poured into forms to make rip-rap or other useful concrete products.

B. Hardened waste concrete from the designated diked areas described above will be disposed of in accordance with applicable local and state regulations with regards to disposal of construction debris.

813.7 HAZARDOUS SUBSTANCES & HAVARDOUS WASTE

A. All hazardous waste materials will be disposed of by the Contractor in the manner specified by local, state, and/or federal regulations and by the manufacturer of such products. Site personnel will be instructed in these practices by the job superintendent, who will also be responsible for seeing these practices are followed. Material Safety Data Sheets (MSDS's) for each substance with hazardous properties that is used on the job site will be obtained and used for the proper management of potential wastes that may result from these products. An MSDS will be posted in the immediate area where such products are stored and/or used and another copy of each MSDS will be maintained in the SWPPP file at the job site construction office. Each employee who must handle a substance with hazardous properties will be instructed on the use of MSDS sheets and the specific information in the applicable MSDS for the product he/she is using, particularly regarding spill control techniques.

B. The contractor will implement the Spill Prevention Control and Countermeasures (SPCC) Plan found within this SWPPP and will train all personnel in the proper cleanup and handling of spilled materials. No spilled hazardous materials of hazardous wastes will be allowed to come in contact with storm water discharges. If such contact occurs, the storm water discharge shall be contained on site until appropriate measures in compliance with state and federal regulations are taken to dispose of such contaminated storm water. It shall be the responsibility of the job superintendent to properly train all personnel in the use of the SPCC plan.

C. Any spills of hazardous materials which are in excess of the Reportable Quantities as defined by the EPA regulations shall be immediately reported to the EPA National Response Center at 1-800-424-8802. From SWPPP-9 "Reportable Quantity Release Form" must be filled out.

D. In order to minimize the potential for a spill of hazardous materials to come in contact with storm water, the following steps will be implemented:

1. All materials with hazardous properties (such as pesticides, petroleum products, fertilizers, detergents, construction chemicals, acids, paints, paint solvents, cleaning solvents, additives for soil stabilization, concrete curing compounds and additives, etc.) will be stored in a secure location, under cover, when not in use.
2. The minimum practical quantity of all such materials will be kept on the job site.
3. A spill control and containment kit (containing for example, absorbent such as kitty litter or sawdust, acid neutralizing powder, brooms, dust pans, mops, rags, gloves, goggles, plastic and metal trash containers, etc.) will be provided at the storage site.
4. All of the product in a container will be used before the container is disposed of. All such containers will be triple rinsed with water prior to disposal. The rinse water used in these

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

containers will be disposed of in a manner in compliance with state and federal regulations and will not be allowed to mix with storm water discharges.

5. All products will be stored in and used from the original container with the original product label.
6. All products will be used in strict compliance with instructions on the product label.
7. The disposal of excess or used products will be in strict compliance with instructions on the product label.

813.8 CONTAMINATED SOILS

A. Any contaminated soils (resulting from spills of materials with hazardous properties) which may result from construction activities will be contained and cleaned up immediately in accordance with the procedures given in the Spill Prevention Control and Countermeasures (SPCC) Plan and in accordance with applicable state and federal regulations.

B. The job site superintendent will be responsible for seeing that these procedures are followed.

814 COMPLIANCE WITH FEDERAL, STATE, AND LOCAL REGULATIONS

The Contractor will obtain copies of any and all local and state regulations which are applicable to storm water management, erosion control, and pollution minimization at this job site and will comply fully with such regulations. The Contractor will submit written evidence of such compliance if requested by the Operator or any agent of a regulatory body. The Contractor will comply with all conditions of the **SPDES** General Permit for Construction Activity for the State of **New York**, including the conditions related to maintaining the SWPPP and evidence of compliance with the SWPPP at the job site and allowing regulatory personnel access to the job site and to records in order to determine compliance.

815 INSPECTION AND MAINTENANCE PROCEDURES

The following inspection and maintenance practices will be used to maintain erosion and sediment controls and stabilization measures.

1. All control measures will be inspected by the **owner/operator** at least weekly and shall continue until the site complies with the Final Stabilization section of this document (See Section 816)

2. All control measures will be inspected by a **Qualified Professional** twice a week separated by at least two (2) full calendar days and shall continue until the site complies with the Final Stabilization section of this document (See Section 816)

3. All measures will be maintained in good working order; if repairs or other measures are found to be necessary, they will be initiated within 24 hours of report.

4. Built up sediment will be removed from silt fence when it has reached one-third the height of the fence.

5. Silt fences will be inspected for depth of sediment, tears, etc., to see if the fabric is securely attached to the fence posts, and to see that the fence posts are securely in the ground.

6. Inlet protection and the stabilized construction entrance shall be inspected to see if these measures are functioning properly or if maintenance is required.

7. Temporary and permanent seeding and all other stabilization measures will be inspected for bare spots, washouts, and healthy growth.

8. A maintenance inspection report will be made after each inspection. Copies of the report forms to be completed by the inspector are included in this SWPPP.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

9. The job site superintendent will be responsible for selecting and training the individuals who will be responsible for these inspections, maintenance and repair activities, and filling out inspection and maintenance reports.

10. Personnel selected for the inspection and maintenance responsibilities will receive training from the job site superintendent. They will be trained in all the inspection and maintenance practices necessary for keeping the erosion and sediment controls that are used onsite in good working order. They will also be trained in the completion of, initiation of actions required by, and the filing of the inspection forms. Documentation of this personnel training will be kept on site with the SWPPP.

11. Disturbed areas and materials storage areas will be inspected for evidence of or potential for pollutants entering stormwater systems.

12. Report to the NYSDEC within 24 hours any noncompliance with the SWPPP that will endanger public health or the environment. Follow up with a written report within 5 days of the noncompliance event. The following events require 24 hour reporting: a) any unanticipated bypass which exceeds any effluent limitation in the permit, b) any upset which exceeds any effluent limitation in the permit, and c) a violation of a maximum daily discharge limitation for any of the pollutants listed by the NYSDEC in the permit to be reported within 24 hours. The written submission must contain a description of the non-compliance and its cause; the period of non-compliance, including exact dates and times, and if the non-compliance has not been corrected, the anticipated time it is expected to continue; and steps taken or planned to reduce, eliminate, and prevent recurrence of the non-compliance.

13. Releases of hazardous substances or oil in excess of reportable quantities (as established under 40 CFR 110, 40 CFR 117 or 40 CFR 302) must be reported.

Upon completion of construction, the property owner is responsible for ensuring that the stormwater facilities are regularly inspected and maintained. Maintenance and inspection procedures are as follows.

1. On a quarterly basis and following significant rainfall events or snow-melts, perform the following:
   - Inspect catch basins, storm manholes, treatment structures, storm piping and stormwater ponds for debris and accumulation of sediment.
   - Remove and properly dispose of any collected debris and sediment in accordance with applicable state, federal and local regulations.
   - Flush piping with water if necessary to remove accumulated sediment.
   - Clean treatment structures per manufacturer's recommendations
   - Check all stone outfall structures for erosion and re-stone if necessary to prevent further erosion.
   - Inspect grassed/landscaped areas for un-vegetated areas or areas with less than 80% healthy stand of grass and reseed and mulch as necessary. Water daily if reseeded in July and August.
   - A record of all inspections should be kept.
2. Maintain all lawn areas by regular mowing, including the grassed slopes of the stormwater ponds and any grass swales. Any eroded areas shall be regarded, seeded and mulched immediately.

816 INSPECTION AND MAINTENANCE REPORT FORMS

Once installation of any required or optional erosion control device or measure has been implemented, inspections shall be performed by a Qualified Professional at least once every seven (7) calendar days. For construction sites where soil disturbance activities are on-going and the owner or operator has received authorization in accordance with Part II.C.3 of the General Permit to disturb greater than five (5) acres of soil at any one time, the qualified inspector shall conduct at least two (2) site inspections every seven (7) calendar days. The two (2) inspections shall be separated by a minimum of two (2) full calendar days. The owner and contractor shall obtain from the MS4 an approval for disturbing more than five-acres at any given time. For construction sites where active construction has been suspended, inspection frequency under the general permit can be reduced to once every 30 days, provided temporary stabilization measures have been applied to all disturbed areas. The forms found in this SWPPP shall be used by the inspectors to inventory and report the

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

condition of each measure to assist in maintaining the erosion and sediment control measures in good working order.

These report forms shall become an integral part of the SWPPP and shall be made readily accessible to governmental inspection officials, the Operator's Engineer, and the Operator for review upon request during visits to the project site. In addition, copies of the reports shall be provided to any of these persons, upon request, via mail or facsimile transmission. Inspection and maintenance report forms are to be maintained by the permittee for five years following the final stabilization of the site.

THE TOWN OF AMHERST IS TO BE PROVIDED WITH A COPY OF ALL SWPPP INSPECTIONS WITHIN ONE WORKING DAY OF PERFORMING THE INSPECTION.

817 OTHER RECORD-KEEPING REQUIREMENTS

The Contractor shall keep the following records related to construction activities at the site:

- Dates when major grading activities occur and the areas which were graded
- Dates and details concerning the installation of structural controls
- Dates when construction activities cease in an area
- Dates when an areas is stabilized, either temporarily or permanently
- Dates of rainfall and the amount of rainfall
- Dates and descriptions of the character and amount of any spills of hazardous materials
- Records of reports filed with regulatory agencies if reportable quantities of hazardous materials spilled

818 SPILL PREVENTION CONTROL AND COUNTERMEASURES (SPCC) PLAN

818.1 MATERIALS COVERED

The following materials or substances are expected to be present onsite during construction:

Concrete/Additives/Wastes	Cleaning solvents
Detergents	Petroleum based products
Paints/Solvents	Pesticides
Acids	Fertilizers
Solid and construction wastes	Sanitary wastes
Soil stabilization additives	

818.2 MATERIAL MANAGEMENT PRACTICES

The following are the material management practices that will be used to reduce the risk of spills or other accidental exposure of materials and substances to stormwater runoff. The job site superintendent will be responsible for ensuring that these procedures are followed.

A. Good Housekeeping

The following good housekeeping practices will be followed onsite during the construction project.

1. An effort will be made to store only enough products required to do the job.
2. All materials stored onsite will be stored in a neat, orderly manner and, if possible, under a roof or in a containment area. At a minimum, all containers will be stored with their lids on when not in use. Drip pans shall be provided under all dispensers.
3. Products will be kept in their original containers with the original manufacturer's label in legible condition.
4. Substances will not be mixed with one another unless recommended by the manufacturer.
5. Whenever possible, all of a product will be used up before disposing of the container.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

6. Manufacturer's recommendations for proper use and disposal will be followed.
7. The job site superintendent will be responsible for daily inspections to ensure proper use and disposal of materials.

B. Hazardous Products

These practices will be used to reduce the risks associated with hazardous materials. Material Safety Data Sheets (MSDS's) for each substance with hazardous properties that is used on the job site will be obtained and used for the proper management of potential wastes that may result from these products. An MSDS will be posted in the immediate area where such product is stored and/or used and another copy of each MSDS will be maintained in the SWPPP file at the job site construction trailer office. Each employee who must handle a substance with hazardous properties will be instructed on the use of MSDS sheets and the specific information in the applicable MSDS for the product he/she is using, particularly regarding spill control techniques.

1. Products will be kept in original containers with the original labels in legible condition.
2. Original labels and material safety data sheets (MSDS's) will be procured and used for each material.
3. If surplus product must be disposed of, manufacturer's or local/state/federal recommended methods for proper disposal will be followed.
4. A spill control and containment kit (containing for example, absorbent such as kitty litter or sawdust, acid neutralizing powder, brooms, dust pans, mops, rags, gloves, goggles, plastic and metal trash containers, etc.) will be provided at the storage site.
5. All of the product in a container will be used before the container is disposed of. All such containers will be triple rinsed with water prior to disposal. The rinse water used in these containers will be disposed of in a manner in compliance with state and federal regulations and will not be allowed to mix with storm water discharges.

C. Hazardous Waste

All hazardous waste materials will be disposed of by the Contractor in the manner specified by local, state, and/or federal regulations and by the manufacturer of such products. Site personnel will be instructed in these practices by the job site superintendent, who will also be responsible for seeing that these practices are followed.

D. Product Specific Practices

The following product specific practices will be followed on the job site.

1. Petroleum Products

All onsite vehicles will be monitored for leaks and receive regular preventative maintenance to reduce the chance of leakage. Petroleum products will be stored in tightly sealed containers which are clearly labeled. **Any petroleum storage tanks stored onsite will be located within a containment area that is designed with an impervious surface between the tank and the ground. The secondary containment must be designed to provide a containment volume that is equal to 110% of the volume of the largest tank.** Drip pans shall be provided for all dispensers. Any asphalt substances used onsite will be applied according to the manufacturer's recommendations. The location of any fuel tanks and/or equipment storage areas must be identified on a plan by the contractor once the locations have been determined.

2. Fertilizers

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

Fertilizers will be applied only in the minimum amounts recommended by the manufacturer. Once applied, fertilizer will be worked in the soil to limit exposure to stormwater. Storage will be in a covered shed. The contents of any partially used bags of fertilizer will be transferred to a sealable plastic bin to avoid spills.

3. Paints, Paint Solvents, and Cleaning Solvents

All containers will be tightly sealed and stored when not in use. Excess paint and solvents will not be discharged to the storm sewer system but will be properly disposed of according to manufacturer's instructions or state and federal regulations.

4. Concrete Wastes

Concrete trucks will be allowed to wash out or discharge surplus concrete or drum wash water on the site, but only in either (1) specifically designated diked areas which have been prepared to prevent contact between the concrete and/or wash out and storm water which will be discharged from the site or (2) in locations where waste concrete can be poured into forms to make riprap or other useful concrete products.

The hardened residue from the concrete wash out diked areas will be disposed of in the same manner as other non-hazardous construction waste materials or may be broken up and used on site as deemed appropriate by the Contractor. The job site superintendent will be responsible for seeing that these procedures are followed.

All concrete wash out areas will be located in an area where the likelihood of the area contributing to storm water discharges is negligible. If required, additional BMPs must be implemented to prevent concrete wastes from contributing to storm water discharges. The location of concrete wash out area(s) must be identified on a plan by the contractor once the locations have been determined. In addition, a standard detail on the construction of the concrete wash out shall be included on this plan.

E. Solid and Construction Wastes

All waste materials will be collected and stored in an appropriately covered container and/or securely lidded metal dumpster rented from a local waste management company which must be a solid waste management company licensed to do business in New York and the Town of Amherst. The dumpster will comply with all local and state solid waste management regulations.

All trash and construction debris from the site will be deposited in the dumpster. The dumpster will be emptied a minimum of twice per week or more often if necessary, and the trash will be hauled to a landfill approved by the NYSDEC. No construction waste materials will be buried on site. All personnel will be instructed regarding the correct procedures for waste disposal.

All waste dumpsters and roll-off containers will be located in an area where the likelihood of the containers contributing to storm water discharges is negligible. If required, additional BMPs must be implemented, such as sandbags around the base, to prevent wastes from contributing to storm water discharges. The location of waste dumpsters and roll-off containers must be identified on a plan by the contractor once the locations have been determined.

F. Sanitary Wastes

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

Portable toilet units or field offices with toilet facilities connected to the municipal sanitary sewer will be used for sanitary purposes. All portable toilet units will be emptied a minimum of once per week by a licensed portable facility provided in compliance with local and state regulations.

All sanitary waste units will be located in an area where the likelihood of the unit contributing to storm water discharges is negligible. If required, additional BMPs must be implemented, such as sandbags around the base, to prevent wastes from contributing to storm water discharges. The location of sanitary waste units must be identified on a plan by the contractor once the locations have been determined.

G. Contaminated Soils

Any contaminated soils (resulting from spills of materials with hazardous properties) which may result from construction activities will be contained and cleaned up immediately in accordance with the procedures given in the Materials Management Plan and in accordance with applicable state and federal regulations.

818.3 SPILL PREVENTION AND RESPONSE PROCEDURES

The Contractor will train all personnel in the proper handling and cleanup of spilled materials. No spilled hazardous materials or hazardous wastes will be allowed to come in contact with storm water discharges. If such contact occurs, the storm water discharge will be contained on site until appropriate measures in compliance with state and federal regulations are taken to dispose of such contaminated storm water. It shall be the responsibility of the job site superintendent to properly train all personnel in spill prevention and clean up procedures.

A. In order to minimize the potential for a spill of hazardous materials to come into contact with storm water, the following steps will be implemented:

1. All materials with hazardous properties (such as pesticides, petroleum products, fertilizers, detergents, construction chemicals, acids, paints, paint solvents, cleaning solvents, additives for soil stabilization, concrete curing compounds and additives, etc.) will be stored in a secure location, with their lids on, preferably under cover, when not in use.

2. The minimum practical quantity of all such materials will be kept on the job site.

3. A spill control and containment kit (containing, for example, absorbent materials, acid neutralizing powder, brooms, dust pans, mops, rags, gloves, goggles, plastic and metal trash containers, etc.) will be provided at the storage site.

4. Manufacturer's recommended methods for spill cleanup will be clearly posted and site personnel will be trained regarding these procedures and the location of the information and cleanup supplies.

B. In the event of a spill, the following procedures should be followed

1. All spills will be cleaned up immediately after discovery.

2. The spill area will be kept well ventilated and personnel will wear appropriate protective clothing to prevent injury from contact with the hazardous substances.

3. The project manager and the Engineer of Record will be notified immediately.

Spills of toxic or hazardous materials will be reported to the appropriate federal, state, and/or local government agency, regardless of the size of the spill. Spills of amounts that exceed

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

Reportable Quantities of certain substances specifically mentioned in federal regulations (40 CFR 110, 40 CFR 117, and 40 CFR 302) must be immediately reported to the EPA National Response Center, telephone 1-800-424-8802. From SWPPP-9 "Reportable Quantity Release Form" must be filled out.

4. If the spill exceeds a Reportable Quantity, the SWPPP must be modified within seven (7) calendar days of knowledge of the discharge to provide a description of the release, the circumstances leading to the release, and the date of the release. The plans must identify measures to prevent the recurrence of such releases and to respond to such releases.

C. The job site superintendent will be the spill prevention and response coordinator. He will designate the individuals who will receive spill prevention and response training. These individuals will each become responsible for a particular phase of prevention and response. The names of these personnel will be posted in the material storage area and in the office trailer onsite.

819 CONTROL OF NON-STORM WATER DISCHARGES

Certain types of discharges are allowable under the **NYSDEC SPDES** General Permit for Construction Activity for the State of **New York**, and it is the intent of this SWPPP to allow such discharges. These types of discharges will be allowed under the conditions that no pollutants will be allowed to come in contact with the water prior to or after its discharge. The control measures which have been outlined previously in this SWPPP will be strictly followed to ensure that no contamination of these non-storm water discharges takes place. The following allowable non-storm water discharges which may occur at the job site include:

A. Discharges from fire fighting activities.
B. Fire hydrant flushings (see note below)
C. Waters used to wash vehicles or control dust in order to minimize offsite sediment tracking.
D. Routine external building washdown which does not use detergents.
E. Pavement washwaters where spills or leaks of hazardous materials have not occurred or detergents have not been used.
F. Air conditioning condensate.
G. Springs or other uncontaminated groundwater, including dewatering ground water infiltration.
H. Foundation or footing drains where no contamination with process materials such as solvents is present.

Note: The Contractor shall discharge any super-chlorinated water from water distribution pipe disinfection activities into sanitary sewer system

820 STORM WATER CONTROL FACILITY MAINTENANCE

The proposed stormwater drainage system area shall be inspected 2 times per year (spring and fall) for removal of silt and debris. See Appendix H: Stormwater Management Pond and Bioretention Construction and Maintenance Checklist.

1. Provide the Geographic Coordinates for the project site. To do this, go to the NYSDEC Stormwater Interactive Map on the DEC website at:

https://gisservices.dec.ny.gov/gis/stormwater/

Zoom into your Project Location such that you can accurately click on the centroid of your site. Once you have located the centroid of your project site, go to the bottom right hand corner of the map for the X, Y coordinates. Enter the coordinates into the boxes below. For problems with the interactive map use the help function.

X Coordinates (Easting)

-7 8782

Ex. -73.749

Y Coordinates (Northing)

42963

Ex. 42.652

2. What is the nature of this construction project?

○ **New Construction**

● **Redevelopment with increase in impervious area**

○ **Redevelopment with no increase in impervious area**

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

3. Select the predominant land use for both pre and post development conditions.
SELECT ONLY ONE CHOICE FOR EACH

Pre-Development Existing Land Use

- ○ FOREST
- ○ PASTURE/OPEN LAND
- ○ CULTIVATED LAND
- ○ SINGLE FAMILY HOME
- ○ SINGLE FAMILY SUBDIVISION
- ○ TOWN HOME RESIDENTIAL
- ○ MULTIFAMILY RESIDENTIAL
- ○ INSTITUTIONAL/SCHOOL
- ○ INDUSTRIAL
- ● COMMERCIAL
- ○ ROAD/HIGHWAY
- ○ RECREATIONAL/SPORTS FIELD
- ○ BIKE PATH/TRAIL
- ○ LINEAR UTILITY
- ○ PARKING LOT
- ○ OTHER

Post-Development Future Land Use

- ○ SINGLE FAMILY HOME
- ○ SINGLE FAMILY SUBDIVISION — Number of Lots
- ○ TOWN HOME RESIDENTIAL
- ○ MULTIFAMILY RESIDENTIAL
- ○ INSTITUTIONAL/SCHOOL
- ○ INDUSTRIAL
- ● COMMERCIAL
- ○ MUNICIPAL
- ○ ROAD/HIGHWAY
- ○ RECREATIONAL/SPORTS FIELD
- ○ BIKE PATH/TRAIL
- ○ LINEAR UTILITY (water, sewer, gas, etc.)
- ○ PARKING LOT
- ○ CLEARING/GRADING ONLY
- ○ DEMOLITION, NO REDEVELOPMENT
- ○ WELL DRILLING ACTIVITY *(Oil, Gas, etc.)
- ○ OTHER

***Note**: for gas well drilling, non-high volume hydraulic fractured wells only

4. In accordance with the larger common plan of development or sale, enter the total project site area; the total area to be disturbed; existing impervious area to be disturbed (for redevelopment activities); and the future impervious area constructed within the disturbed area. (Round to the nearest tenth of an acre.)

Total Site Area	Total Area To Be Disturbed	Existing Impervious Area To Be Disturbed	Future Impervious Area Within Disturbed Area
1.0	1.0	0.8	0.9

5. Do you plan to disturb more than 5 acres of soil at any one time? ○ **Yes** ● **No**

6. Indicate the percentage of each Hydrologic Soil Group(HSG) at the site.

A	B	C	D
0 %	0 %	0 %	100 %

7. Is this a phased project? ○ **Yes** ● **No**

8. Enter the planned start and end dates of the disturbance activities.

Start Date	End Date
01/01/2022	01/01/2023

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

9. Identify the nearest surface waterbody(ies) to which construction site runoff will discharge.

Name: Ellicott Creek

9a. Type of waterbody identified in Question 9?

- ○ Wetland / State Jurisdiction On Site (Answer 9b)
- ○ Wetland / State Jurisdiction Off Site
- ○ Wetland / Federal Jurisdiction On Site (Answer 9b)
- ○ Wetland / Federal Jurisdiction Off Site
- ○ Stream / Creek On Site
- ● Stream / Creek Off Site
- ○ River On Site
- ○ River Off Site
- ○ Lake On Site
- ○ Lake Off Site
- ○ Other Type On Site
- ○ Other Type Off Site

9b. How was the wetland identified?

- ○ Regulatory Map
- ○ Delineated by Consultant
- ○ Delineated by Army Corps of Engineers
- ○ Other (identify)

10. Has the surface waterbody(ies) in question 9 been identified as a 303(d) segment in Appendix E of GP-0-20-001? ● Yes ○ No

11. Is this project located in one of the Watersheds identified in Appendix C of GP-0-20-001? ○ Yes ● No

12. Is the project located in one of the watershed areas associated with AA and AA-S classified waters? ○ Yes ● No
If no, skip question 13.

13. Does this construction activity disturb land with no existing impervious cover and where the Soil Slope Phase is identified as an E or F on the USDA Soil Survey? ○ Yes ● No
If Yes, what is the acreage to be disturbed?

14. Will the project disturb soils within a State regulated wetland or the protected 100 foot adjacent area? ○ Yes ● No

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

15. Does the site runoff enter a separate storm sewer system (including roadside drains, swales, ditches, culverts, etc)? ● Yes ○ No ○ Unknown

16. What is the name of the municipality/entity that owns the separate storm sewer system?

Town of Amherst closed storm water drainage system

17. Does any runoff from the site enter a sewer classified as a Combined Sewer? ○ Yes ● No ○ Unknown

18. Will future use of this site be an agricultural property as defined by the NYS Agriculture and Markets Law? ○ Yes ● No

19. Is this property owned by a state authority, state agency, federal government or local government? ○ Yes ● No

20. Is this a remediation project being done under a Department approved work plan? (i.e. CERCLA, RCRA, Voluntary Cleanup Agreement, etc.) ○ Yes ● No

21. Has the required Erosion and Sediment Control component of the SWPPP been developed in conformance with the current NYS Standards and Specifications for Erosion and Sediment Control (aka Blue Book)? ● Yes ○ No

22. Does this construction activity require the development of a SWPPP that includes the post-construction stormwater management practice component (i.e. Runoff Reduction, Water Quality and Quantity Control practices/techniques)? ● Yes ○ No
If No, skip questions 23 and 27-39.

23. Has the post-construction stormwater management practice component of the SWPPP been developed in conformance with the current NYS Stormwater Management Design Manual? ● Yes ○ No

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

24. The Stormwater Pollution Prevention Plan (SWPPP) was prepared by:

- ● **Professional Engineer (P.E.)**
- ○ **Soil and Water Conservation District (SWCD)**
- ○ **Registered Landscape Architect (R.L.A)**
- ○ **Certified Professional in Erosion and Sediment Control (CPESC)**
- ○ **Owner/Operator**
- ○ **Other**

SWPPP Preparer Certification

I hereby certify that the Stormwater Pollution Prevention Plan (SWPPP) for this project has been prepared in accordance with the terms and conditions of the GP-0-20-001. Furthermore, I understand that certifying false, incorrect or inaccurate information is a violation of this permit and the laws of the State of New York and could subject me to criminal, civil and/or administrative proceedings.

First Name Christopher **MI**

Last Name Wood

Signature

Date 05/20/2022

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

25. Has a construction sequence schedule for the planned management practices been prepared? ● Yes ○ No

26. Select **all** of the erosion and sediment control practices that will be employed on the project site:

Temporary Structural

- ○ Check Dams
- ○ Construction Road Stabilization
- ● Dust Control
- ○ Earth Dike
- ○ Level Spreader
- ○ Perimeter Dike/Swale
- ○ Pipe Slope Drain
- ○ Portable Sediment Tank
- ○ Rock Dam
- ○ Sediment Basin
- ○ Sediment Traps
- ● Silt Fence
- ● Stabilized Construction Entrance
- ● Storm Drain Inlet Protection
- ○ Straw/Hay Bale Dike
- ○ Temporary Access Waterway Crossing
- ○ Temporary Stormdrain Diversion
- ○ Temporary Swale
- ○ Turbidity Curtain
- ○ Water bars

Biotechnical

- ○ Brush Matting
- ○ Wattling

Vegetative Measures

- ○ Brush Matting
- ○ Dune Stabilization
- ○ Grassed Waterway
- ● Mulching
- ○ Protecting Vegetation
- ○ Recreation Area Improvement
- ● Seeding
- ● Sodding
- ○ Straw/Hay Bale Dike
- ○ Streambank Protection
- ○ Temporary Swale
- ● Topsoiling
- ○ Vegetating Waterways

Permanent Structural

- ○ Debris Basin
- ○ Diversion
- ○ Grade Stabilization Structure
- ○ Land Grading
- ○ Lined Waterway (Rock)
- ○ Paved Channel (Concrete)
- ○ Paved Flume
- ○ Retaining Wall
- ○ Riprap Slope Protection
- ● Rock Outlet Protection
- ○ Streambank Protection

Other

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

Post-construction Stormwater Management Practice (SMP) Requirements

Important: Completion of Questions 27-39 is not required if response to Question 22 is No.

27. Identify all site planning practices that were used to prepare the final site plan/layout for the project.

- ○ **Preservation of Undisturbed Areas**
- ○ **Preservation of Buffers**
- ○ **Reduction of Clearing and Grading**
- ● **Locating Development in Less Sensitive Areas**
- ○ **Roadway Reduction**
- ○ **Sidewalk Reduction**
- ○ **Driveway Reduction**
- ○ **Cul-de-sac Reduction**
- ○ **Building Footprint Reduction**
- ○ **Parking Reduction**

27a. Indicate which of the following soil restoration criteria was used to address the requirements in Section 5.1.6("Soil Restoration") of the Design Manual (2010 version).

- ● All disturbed areas will be restored in accordance with the Soil Restoration requirements in Table 5.3 of the Design Manual (see page 5-22).
- ○ Compacted areas were considered as impervious cover when calculating the **WQv Required**, and the compacted areas were assigned a post-construction Hydrologic Soil Group (HSG) designation that is one level less permeable than existing conditions for the hydrology analysis.

28. Provide the total Water Quality Volume (WQv) required for this project (based on final site plan/layout).

Total WQv Required

		0	.	0	2	3	**acre-feet**

29. Identify the RR techniques (Area Reduction), RR techniques(Volume Reduction) and Standard SMPs with RRv Capacity in Table 1 (See Page 9) that were used to reduce the Total WQv Required(#28).

Also, provide in Table 1 the total impervious area that contributes runoff to each technique/practice selected. For the Area Reduction Techniques, provide the total contributing area (includes pervious area) and, if applicable, the total impervious area that contributes runoff to the technique/practice.

Note: Redevelopment projects shall use Tables 1 and 2 to identify the SMPs used to treat and/or reduce the WQv required. If runoff reduction techniques will not be used to reduce the required WQv, skip to question 33a after identifying the SMPs.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

7738089822

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

Table 2 - Alternative SMPs (DO NOT INCLUDE PRACTICES BEING USED FOR PRETREATMENT ONLY)

Alternative SMP	Total Contributing Impervious Area(acres)
○ Hydrodynamic	
○ Wet Vault	
○ Media Filter	
○ Other _____	

Provide the name and manufacturer of the Alternative SMPs (i.e. proprietary practice(s)) being used for WQv treatment.

Name

Manufacturer

Note: Redevelopment projects which do not use RR techniques, shall use questions 28, 29, 33 and 33a to provide SMPs used, total WQv required and total WQv provided for the project.

30. Indicate the Total RRv provided by the RR techniques (Area/Volume Reduction) and Standard SMPs with RRv capacity identified in question 29.

Total RRv provided

0.012 **acre-feet**

31. Is the Total RRv provided (#30) greater than or equal to the total WQv required (#28).

○ **Yes** ● **No**

If Yes, go to question 36.
If No, go to question 32.

32. Provide the Minimum RRv required based on HSG.
[Minimum RRv Required = (P)(0.95)(Ai)/12, Ai=(S)(Aic)]

Minimum RRv Required

0.004 **acre-feet**

32a. Is the Total RRv provided (#30) greater than or equal to the Minimum RRv Required (#32)?

● **Yes** ○ **No**

If Yes, go to question 33.
Note: Use the space provided in question #39 to summarize the specific site limitations and justification for not reducing 100% of WQv required (#28). A detailed evaluation of the specific site limitations and justification for not reducing 100% of the WQv required (#28) must also be included in the SWPPP.
If No, sizing criteria has not been met, so NOI can not be processed. SWPPP preparer must modify design to meet sizing criteria.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

33. Identify the Standard SMPs in Table 1 and, if applicable, the Alternative SMPs in Table 2 that were used to treat the remaining total WQv(=Total WQv Required in 28 - Total RRv Provided in 30).

Also, provide in Table 1 and 2 the total impervious area that contributes runoff to each practice selected.

Note: Use Tables 1 and 2 to identify the SMPs used on Redevelopment projects.

33a. Indicate the Total WQv provided (i.e. WQv treated) by the SMPs identified in question #33 and Standard SMPs with RRv Capacity identified in question 29.

WQv Provided

0.018 **acre-feet**

Note: For the standard SMPs with RRv capacity, the WQv provided by each practice = the WQv calculated using the contributing drainage area to the practice - RRv provided by the practice. (See Table 3.5 in Design Manual)

34. Provide the sum of the Total RRv provided (#30) and the WQv provided (#33a).

0.030

35. Is the sum of the RRv provided (#30) and the WQv provided (#33a) greater than or equal to the total WQv required (#28)? ● **Yes** ○ **No**

If Yes, go to question 36.
If No, sizing criteria has not been met, so NOI can not be processed. SWPPP preparer must modify design to meet sizing criteria.

36. Provide the total Channel Protection Storage Volume (CPv) required and provided or select waiver (36a), if applicable.

CPv Required

0.019 **acre-feet**

CPv Provided

0.019 **acre-feet**

36a. The need to provide channel protection has been waived because:

○ Site discharges directly to tidal waters or a fifth order or larger stream.

○ Reduction of the total CPv is achieved on site through runoff reduction techniques or infiltration systems.

37. Provide the Overbank Flood (Qp) and Extreme Flood (Qf) control criteria or select waiver (37a), if applicable.

Total Overbank Flood Control Criteria (Qp)

Pre-Development

4.29 **CFS**

Post-development

3.62 **CFS**

Total Extreme Flood Control Criteria (Qf)

Pre-Development

7.37 **CFS**

Post-development

5.59 **CFS**

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

37a. The need to meet the Qp and Qf criteria has been waived because:

- ○ Site discharges directly to tidal waters or a fifth order or larger stream.
- ○ Downstream analysis reveals that the Qp and Qf controls are not required

38. Has a long term Operation and Maintenance Plan for the post-construction stormwater management practice(s) been developed? ● Yes ○ No

If Yes, Identify the entity responsible for the long term Operation and Maintenance

Benderson Development Company

39. Use this space to summarize the specific site limitations and justification for not reducing 100% of WQv required(#28). (See question 32a) This space can also be used for other pertinent project information.

RRv criteria is not required for redevelopment activities & onsite soils with slow infiltration rates

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

40. Identify other DEC permits, existing and new, that are required for this project/facility.

- ○ Air Pollution Control
- ○ Coastal Erosion

41. Does this project require a US Army Corps of Engineers Wetland Permit? ○ **Yes** ● **No**
If Yes, Indicate Size of Impact. [ ][ ][ ][ ][ ][ ].[ ]

42. Is this project subject to the requirements of a regulated, traditional land use control MS4? ● **Yes** ○ **No**
(If No, skip question 43)

43. Has the "MS4 SWPPP Acceptance" form been signed by the principal executive officer or ranking elected official and submitted along with this NOI? ● **Yes** ○ **No**

44. If this NOI is being submitted for the purpose of continuing or transferring coverage under a general permit for stormwater runoff from construction activities, please indicate the former SPDES number assigned. [N][Y][R][ ][ ][ ][ ][ ][ ]

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

Owner/Operator Certification

I have read or been advised of the permit conditions and believe that I understand them. I also understand that, under the terms of the permit, there may be reporting requirements. I hereby certify that this document and the corresponding documents were prepared under my direction or supervision. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations. I further understand that coverage under the general permit will be identified in the acknowledgment that I will receive as a result of submitting this NOI and can be as long as sixty (60) business days as provided for in the general permit. I also understand that, by submitting this NOI, I am acknowledging that the SWPPP has been developed and will be implemented as the first element of construction, and agreeing to comply with all the terms and conditions of the general permit for which this NOI is being submitted.

MS4 SWPPP Acceptance Form - continued

V. Certification Statement - MS4 Official (principal executive officer or ranking elected official) or Duly Authorized Representative

I hereby certify that the final Stormwater Pollution Prevention Plan (SWPPP) for the construction project identified in question 5 has been reviewed and meets the substantive requirements in the SPDES General Permit For Stormwater Discharges from Municipal Separate Storm Sewer Systems (MS4s). Note: The MS4, through the acceptance of the SWPPP, assumes no responsibility for the accuracy and adequacy of the design included in the SWPPP. In addition, review and acceptance of the SWPPP by the MS4 does not relieve the owner/operator or their SWPPP preparer of responsibility or liability for errors or omissions in the plan.

Proposed Site Redevelopment
4548-4564 Main Street
Amherst, NY 14226

8/18/2021

Section 1 – Location & Description

This redevelopment project will consist of the construction of a 3-story mixed-use building that will include apartments, restaurant space and multi-level parking. The site is located on the north side of Main Street (NY-5), between Fruehauf Ave and Chateau Terrace in the Town of Amherst. The existing site is currently occupied by a 3-story vacant building located along the Main Street frontage. Existing surface parking is located north behind the existing building. Both the existing building and parking areas will be removed as part of this project. The overall site area is approximately 0.93+/- acres, however, construction activities will result in approximately 1.02+/- acres of disturbance area.

Section 2 – Stormwater Drainage System

The existing side streets, Fruehauf Ave and Chateau Terrace, slope from south to north. Existing closed stormwater drainage systems are located along Main Street (NYSDOT) and Chateau Terrace (Town of Amherst). The existing northeast parking lot area sheet drains to the north and northeast to Chateau Terrace. The existing northwest parking lot is generally flat and drains to an existing closed stormwater drainage system with unknown outlet. Existing stormwater runoff collected and conveyed from the site is ultimately tributary to Ellicott Creek and the Niagara River.

For purposes of the runoff analysis and the stormwater drainage system design, portions of the project site were classified as “Redevelopment” per NYSDEC Stormwater Management Design Manual Chapter 9 requirements. The nature of this construction project will be a “Redevelopment” with an increase in impervious area. The proposed hydrology of the site development will remain similar to existing hydrologic conditions. The proposed parking and patio areas will consist of a combination of overland sheet flow and pipe channel flow connected by a series of trench drains located throughout the runoff areas. Stormwater runoff from these areas will be conveyed to a proposed onsite stormwater management area located on the north side of the site consisting of a dry detention basin with a bioretention planting area located in the bottom of the basin. Runoff routed through the proposed basin will be discharged via a 6” HDPE outlet control pipe to the existing closed stormwater drainage system along Chateau Terrace. Proposed rooftop runoff will be discharged directly to the existing closed stormwater drainage system along Chateau Terrace.

The dry detention basin volume was designed with an outlet control pipe to attenuate proposed runoff to existing conditions prior to discharge. The bioretention area will provide Runoff Reduction and Water Quality volume requirements. The filter area planting soil depth varies throughout the bioretention

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

area but maintains a minimum of at least 18 inches of soil. The 18 inches of soil is an acceptable deviation per the NYSDEC where existing grades prevent the full 2.5'-4' foot soil depth. 6" underdrain below the planting soil will be located throughout the bioretention area connected by an overflow catch basin to convey runoff to the outlet control pipe.

The NYSDEC Stormwater Management Design Manual requires a five-step process for Stormwater Management Planning as outlined in Chapter 3. The five steps include:

1. *Site planning to preserve natural features and reduce impervious cover.*
   - Minimal natural existing features are located onsite and the site is located in a less sensitive area.
2. *Calculation of Water Quality Volume (WQv) for site.*
   - See "Stormwater Drainage Analysis".
3. *Incorporation of Green Infrastructure techniques and standard SMPs with Runoff Reduction Volume (RRv) capacity.*
   - A bioretention area was incorporated into the site design to provide required RRv. See "Stormwater Drainage Analysis".
4. *Use of standard SMPs where applicable, to treat the portion of water quality volume not addressed by green infrastructure techniques and standard SMPs with RRv capacity.*
   - 100% of required Water Quality was addressed by the bioretention area. See "Stormwater Drainage Analysis".
5. *Design of volume and peak rate control practices where required.*
   - See "Stormwater Drainage Analysis".

The NYSDEC Stormwater Management Design Manual requires (5) five different criteria be considered when designing a stormwater management system. Those criteria are Water Quality, Runoff Reduction Volume, Channel Protection, Overbank Flooding and Extreme Storm Protection. Below is a summary of each item and how it is incorporated into this project.

Water Quality:
The NYSDEC requires water quality treatment prior to discharge. This will be achieved by the application of a bioretention area. The total WQv provided was 1,301 cf and greater than the required WQv of 1,002 cf.

Runoff Reduction Volume:
The NYSDEC requires reduction of the total water quality volume by green infrastructure techniques and SMPs to replicate pre-development hydrology. A bioretention area was incorporated into the site layout to provide the required RRv for contributing runoff areas in the WQv. The RRv provided was 520 cf and greater than the required RRv min. of 172 cf.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

100% of the required WQv was not reduced due to the followings site specific limitations: *RRv criteria is not required for redevelopment activities & onsite soils with slow infiltration rates.* In addition, below is a summary of how each green infrastructure technique was evaluated and determined to be feasible or infeasible:

1) Conservation of natural areas: the site development is located in a less sensitive area.
2) Sheetflow to riparian buffers or filter strips: no riparian buffers possible on the site; filter strips not feasible given the limited area for development.
3) Vegetated Open Swales: swales are not feasible given the limited area for development.
4) Tree Plantings: new trees to be planted throughout the site.
5) Disconnection of Roof Top Runoff: roof top runoff will be connected to closed stormwater drainage system.
6) Stream Daylighting: is not feasible given the limited area for development.
7) Rain Garden: this method is not recommended for these types of projects.
8) Green Roof: the proposed use of the building makes this an unfeasible practice.
9) Stormwater Planter: this method is not recommended for these types of projects.
10) Rain Barrels & Cisterns: collected water would not be used for irrigation.
11) Porous Pavement: porous pavement is not recommended for areas with impermeable soils (Type D) and areas with sediment laden runoff (salting in winter months).

Channel Protection:
The NYSDEC requires that 24-Hour extended detention be provided for the proposed 1-year storm event. A volume of 842 cf (0.019 ac-ft) will be accommodated in the detention basin onsite.

Overbank Flooding:
The NYSDEC requires that the 10-year proposed storm event be attenuated with detention and that the outlet be restricted to the 10-year existing storm event. Storage of this storm will be provided within the detention basin onsite. At this storm event the stormwater drainage system will allow discharge of 3.62 cfs, which is below the existing peak 10-year runoff of 4.29 cfs.

Extreme Storm Protection:
The NYSDEC requires that the 100-year proposed storm event be attenuated with detention and that the outlet be restricted to the 100-year existing storm event. Storage of this storm will be provided within the detention basin onsite. At this

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

storm event the stormwater drainage system will allow discharge of 5.59 cfs, which is below the existing peak 100-year runoff of 7.37 cfs.

Town of Amherst:
The Town of Amherst requires that the 25-year proposed storm event be attenuated with detention and that the outlet be restricted to the 10-year existing storm event. Storage will be provided within the detention basin onsite. At the 25-year storm event the stormwater drainage system will allow discharge of 4.28 cfs, which is below the existing peak 10-year runoff of 4.29 cfs.

Design Criteria:
Storm pipes: 10-year storm
Detention:
- Comparison of the existing 1-year vs. the proposed 1-year runoff
- Comparison of the existing 10-year vs. the proposed 10-year runoff
- Comparison of the existing 100-year vs. the proposed 100-year runoff
- Comparison of the existing 10-year vs. the proposed 25-year runoff

Bioretention: RRv = 100% of post-development water quality volumes

RUNOFF ANALYSIS OF PROPOSED DEVELOPMENT AREA:

STORM EVENT	EXISTING RUNOFF	PROPOSED RUNOFF
1 YEAR	2.28 CFS	1.61 CFS
10 YEAR	4.29 CFS	3.62 CFS
25 YEAR	5.33 CFS	4.28 CFS
100 YEAR	7.37 CFS	5.59 CFS

WATER QUALITY SUMMARY:
WQv REQUIRED = 1,002 CF (0.023 AC-FT)
RRv MIN. REQUIRED = 172 CF (0.004 AC-FT)
RRv PROVIDED WITHIN BIORETENTION AREA = 520 CF (0.012 AC-FT)
WQv PROVIDED WITHIN BIORETENTION AREA = 1,301 CF (0.030 AC-FT)

BIORETENTION FILTER AREA & ELEVATION SUMMARY:
FILTER AREA = 1,115 SF @ 672.50

See attached “Stormwater Drainage Analysis” for additional information.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:15,800.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Erie County, New York
Survey Area Data: Version 20, Jun 11, 2020

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Jul 4, 2020—Jul 10, 2020

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Description

"Water table" refers to a saturated zone in the soil. It occurs during specified months. Estimates of the upper limit are based mainly on observations of the water table at selected sites and on evidence of a saturated zone, namely grayish colors (redoximorphic features) in the soil. A saturated zone that lasts for less than a month is not considered a water table.

This attribute is actually recorded as three separate values in the database. A low value and a high value indicate the range of this attribute for the soil component. A "representative" value indicates the expected value of this attribute for the component. For this soil property, only the representative value is used.

PREFACE

Pursuant to Section 402 of the Clean Water Act ("CWA"), stormwater *discharges* from certain *construction activities* are unlawful unless they are authorized by a *National Pollutant Discharge Elimination System ("NPDES")* permit or by a state permit program. New York administers the approved State Pollutant Discharge Elimination System (SPDES) program with permits issued in accordance with the New York State Environmental Conservation Law (ECL) Article 17, Titles 7, 8 and Article 70.

An *owner or operator* of a *construction activity* that is eligible for coverage under this permit must obtain coverage prior to the *commencement of construction activity*. Activities that fit the definition of "*construction activity*", as defined under 40 CFR 122.26(b)(14)(x), (15)(i), and (15)(ii), constitute construction of a *point source* and therefore, pursuant to ECL section 17-0505 and 17-0701, the *owner or operator* must have coverage under a SPDES permit prior to *commencing construction activity*. The *owner or operator* cannot wait until there is an actual *discharge* from the *construction site* to obtain permit coverage.

***Note: The italicized words/phrases within this permit are defined in Appendix A.**

Part 1. PERMIT COVERAGE AND LIMITATIONS

A. Permit Application

This permit authorizes stormwater *discharges* to *surface waters of the State* from the following *construction activities* identified within 40 CFR Parts 122.26(b)(14)(x), 122.26(b)(15)(i) and 122.26(b)(15)(ii), provided all of the eligibility provisions of this permit are met:

1. *Construction activities* involving soil disturbances of one (1) or more acres; including disturbances of less than one acre that are part of a *larger common plan of development or sale* that will ultimately disturb one or more acres of land; excluding *routine maintenance activity* that is performed to maintain the original line and grade, hydraulic capacity or original purpose of a facility;

2. *Construction activities* involving soil disturbances of less than one (1) acre where the Department has determined that a *SPDES* permit is required for stormwater *discharges* based on the potential for contribution to a violation of a *water quality standard* or for significant contribution of *pollutants* to *surface waters of the State.*

3. *Construction activities* located in the watershed(s) identified in Appendix D that involve soil disturbances between five thousand (5,000) square feet and one (1) acre of land.

B. Effluent Limitations Applicable to Discharges from Construction Activities

*Discharge*s authorized by this permit must achieve, at a minimum, the effluent limitations in Part I.B.1. (a) – (f) of this permit. These limitations represent the degree of effluent reduction attainable by the application of best practicable technology currently available.

1. Erosion and Sediment Control Requirements - The *owner or operator* must select, design, install, implement and maintain control measures to *minimize* the *discharge* of *pollutants* and prevent a violation of the *water quality standards*. The selection, design, installation, implementation, and maintenance of these control measures must meet the non-numeric effluent limitations in Part I.B.1.(a) – (f) of this permit and be in accordance with the New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016, using sound engineering judgment. Where control measures are not designed in conformance with the design criteria included in the technical standard, the *owner or operator* must include in the *Stormwater Pollution Prevention Plan* ("SWPPP") the reason(s) for the

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

deviation or alternative design and provide information which demonstrates that the deviation or alternative design is *equivalent* to the technical standard.

a. **Erosion and Sediment Controls.** Design, install and maintain effective erosion and sediment controls to *minimize* the *discharge* of *pollutants* and prevent a violation of the *water quality standards*. At a minimum, such controls must be designed, installed and maintained to:

   (i) *Minimize* soil erosion through application of runoff control and soil stabilization control measure to *minimize pollutant discharge*s;

   (ii) Control stormwater *discharge*s, including both peak flowrates and total stormwater volume, to *minimize* channel and *streambank* erosion and scour in the immediate vicinity of the *discharge* points;

   (iii) *Minimize* the amount of soil exposed during *construction activity*;

   (iv) *Minimize* the disturbance of *steep slopes*;

   (v) *Minimize* sediment *discharge*s from the site;

   (vi) Provide and maintain *natural buffer*s around surface waters, direct stormwater to vegetated areas and maximize stormwater infiltration to reduce *pollutant discharge*s, unless *infeasible*;

   (vii) *Minimize* soil compaction. Minimizing soil compaction is not required where the intended function of a specific area of the site dictates that it be compacted;

   (viii) Unless *infeasible*, preserve a sufficient amount of topsoil to complete soil restoration and establish a uniform, dense vegetative cover; and

   (ix) *Minimize* dust. On areas of exposed soil, *minimize* dust through the appropriate application of water or other dust suppression techniques to control the generation of pollutants that could be discharged from the site.

b. **Soil Stabilization**. In areas where soil disturbance activity has temporarily or permanently ceased, the application of soil stabilization measures must be initiated by the end of the next business day and completed within fourteen (14) days from the date the current soil disturbance activity ceased. For construction sites that *directly discharge* to one of the 303(d) segments

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

listed in Appendix E or is located in one of the watersheds listed in Appendix C, the application of soil stabilization measures must be initiated by the end of the next business day and completed within seven (7) days from the date the current soil disturbance activity ceased. See Appendix A for definition of *Temporarily Ceased*.

c. **Dewatering**. *Discharge*s from *dewatering* activities, including *discharge*s from *dewatering* of trenches and excavations, must be managed by appropriate control measures.

d. **Pollution Prevention Measures**. Design, install, implement, and maintain effective pollution prevention measures to *minimize* the *discharge* of *pollutants* and prevent a violation of the *water quality standards*. At a minimum, such measures must be designed, installed, implemented and maintained to:

(i) *Minimize* the *discharge* of *pollutants* from equipment and vehicle washing, wheel wash water, and other wash waters. This applies to washing operations that use clean water only. Soaps, detergents and solvents cannot be used;

(ii) *Minimize* the exposure of building materials, building products, construction wastes, trash, landscape materials, fertilizers, pesticides, herbicides, detergents, sanitary waste, hazardous and toxic waste, and other materials present on the site to precipitation and to stormwater. Minimization of exposure is not required in cases where the exposure to precipitation and to stormwater will not result in a *discharge* of *pollutants*, or where exposure of a specific material or product poses little risk of stormwater contamination (such as final products and materials intended for outdoor use) ; and

(iii) Prevent the *discharge* of *pollutants* from spills and leaks and implement chemical spill and leak prevention and response procedures.

e. **Prohibited *Discharges*.** The following *discharge*s are prohibited:

(i) Wastewater from washout of concrete;

(ii) Wastewater from washout and cleanout of stucco, paint, form release oils, curing compounds and other construction materials;

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

(iii) Fuels, oils, or other *pollutants* used in vehicle and equipment operation and maintenance;

(iv) Soaps or solvents used in vehicle and equipment washing; and

(v) Toxic or hazardous substances from a spill or other release.

f. Surface Outlets. When discharging from basins and impoundments, the outlets shall be designed, constructed and maintained in such a manner that sediment does not leave the basin or impoundment and that erosion at or below the outlet does not occur.

C. Post-construction Stormwater Management Practice Requirements

1. The *owner or operator* of a *construction activity* that requires post-construction stormwater management practices pursuant to Part III.C. of this permit must select, design, install, and maintain the practices to meet the *performance criteria* in the New York State Stormwater Management Design Manual ("Design Manual"), dated January 2015, using sound engineering judgment. Where post-construction stormwater management practices ("SMPs") are not designed in conformance with the *performance criteria* in the Design Manual, the *owner or operator* must include in the SWPPP the reason(s) for the deviation or alternative design and provide information which demonstrates that the deviation or alternative design is *equivalent* to the technical standard.

2. The *owner or operator* of a *construction activity* that requires post-construction stormwater management practices pursuant to Part III.C. of this permit must design the practices to meet the applicable *sizing criteria* in Part I.C.2.a., b., c. or d. of this permit.

a. Sizing Criteria for New Development

(i) Runoff Reduction Volume ("RRv"): Reduce the total Water Quality Volume ("WQv") by application of RR techniques and standard SMPs with RRv capacity. The total WQv shall be calculated in accordance with the criteria in Section 4.2 of the Design Manual.

(ii) Minimum RRv and Treatment of Remaining Total WQv: Construction activities that cannot meet the criteria in Part I.C.2.a.(i) of this permit due to site limitations shall direct runoff from all newly constructed impervious areas to a RR technique or standard SMP with RRv capacity unless infeasible. The specific site limitations that prevent the reduction of 100% of the WQv shall be documented in the SWPPP.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

For each impervious area that is not directed to a RR technique or standard SMP with RRv capacity, the SWPPP must include documentation which demonstrates that all options were considered and for each option explains why it is considered infeasible.

In no case shall the runoff reduction achieved from the newly constructed impervious areas be less than the Minimum RRv as calculated using the criteria in Section 4.3 of the Design Manual. The remaining portion of the total WQv that cannot be reduced shall be treated by application of standard SMPs.

(iii) Channel Protection Volume ("Cpv"): Provide 24 hour extended detention of the post-developed 1-year, 24-hour storm event; remaining after runoff reduction. The Cpv requirement does not apply when:
(1) Reduction of the entire Cpv is achieved by application of runoff reduction techniques or infiltration systems, or
(2) The site discharges directly to tidal waters, or fifth order or larger streams.

(iv) *Overbank* Flood Control Criteria ("Qp"): Requires storage to attenuate the post-development 10-year, 24-hour peak discharge rate (Qp) to predevelopment rates. The Qp requirement does not apply when:
(1) the site discharges directly to tidal waters or fifth order or larger streams, or
(2) A downstream analysis reveals that *overbank* control is not required.

(v) Extreme Flood Control Criteria ("Qf"): Requires storage to attenuate the post-development 100-year, 24-hour peak discharge rate (Qf) to predevelopment rates. The Qf requirement does not apply when:
(1) the site discharges directly to tidal waters or fifth order or larger streams, or
(2) A downstream analysis reveals that *overbank* control is not required.

b. *Sizing Criteria* for *New Development* in Enhanced Phosphorus Removal Watershed

(i) Runoff Reduction Volume (RRv): Reduce the total Water Quality Volume (WQv) by application of RR techniques and standard SMPs with RRv capacity. The total WQv is the runoff volume from the 1-year, 24 hour design storm over the post-developed watershed and shall be

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

calculated in accordance with the criteria in Section 10.3 of the Design Manual.

(ii) Minimum RRv and Treatment of Remaining Total WQv: *Construction activities* that cannot meet the criteria in Part I.C.2.b.(i) of this permit due to *site limitations* shall direct runoff from all newly constructed *impervious areas* to a RR technique or standard SMP with RRv capacity unless *infeasible*. The specific *site limitations* that prevent the reduction of 100% of the WQv shall be documented in the SWPPP. For each *impervious area* that is not directed to a RR technique or standard SMP with RRv capacity, the SWPPP must include documentation which demonstrates that all options were considered and for each option explains why it is considered *infeasible.*

In no case shall the runoff reduction achieved from the newly constructed *impervious areas* be less than the Minimum RRv as calculated using the criteria in Section 10.3 of the Design Manual. The remaining portion of the total WQv that cannot be reduced shall be treated by application of standard SMPs.

(iii) Channel Protection Volume (Cpv): Provide 24 hour extended detention of the post-developed 1-year, 24-hour storm event; remaining after runoff reduction. The Cpv requirement does not apply when:
(1) Reduction of the entire Cpv is achieved by application of runoff reduction techniques or infiltration systems, or
(2) The site *discharge*s directly to tidal waters, or fifth order or larger streams.

(iv) *Overbank* Flood Control Criteria (Qp): Requires storage to attenuate the post-development 10-year, 24-hour peak *discharge* rate (Qp) to predevelopment rates. The Qp requirement does not apply when:
(1) the site *discharge*s directly to tidal waters or fifth order or larger streams, or
(2) A downstream analysis reveals that *overbank* control is not required.

(v) Extreme Flood Control Criteria (Qf): Requires storage to attenuate the post-development 100-year, 24-hour peak *discharge* rate (Qf) to predevelopment rates. The Qf requirement does not apply when:
(1) the site *discharge*s directly to tidal waters or fifth order or larger streams, or
(2) A downstream analysis reveals that *overbank* control is not required.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

c. Sizing Criteria for Redevelopment Activity

(i) Water Quality Volume (WQv): The WQv treatment objective for *redevelopment activity* shall be addressed by one of the following options. *Redevelopment activities* located in an Enhanced Phosphorus Removal Watershed (see Part III.B.3. and Appendix C of this permit) shall calculate the WQv in accordance with Section 10.3 of the Design Manual. All other *redevelopment activities* shall calculate the WQv in accordance with Section 4.2 of the Design Manual.

(1) Reduce the existing *impervious cover* by a minimum of 25% of the total disturbed, *impervious area*. The Soil Restoration criteria in Section 5.1.6 of the Design Manual must be applied to all newly created pervious areas, or

(2) Capture and treat a minimum of 25% of the WQv from the disturbed, *impervious area* by the application of standard SMPs; or reduce 25% of the WQv from the disturbed, *impervious area* by the application of RR techniques or standard SMPs with RRv capacity., or

(3) Capture and treat a minimum of 75% of the WQv from the disturbed, *impervious area* as well as any additional runoff from tributary areas by application of the alternative practices discussed in Sections 9.3 and 9.4 of the Design Manual., or

(4) Application of a combination of 1, 2 and 3 above that provide a weighted average of at least two of the above methods. Application of this method shall be in accordance with the criteria in Section 9.2.1(B) (IV) of the Design Manual.

If there is an existing post-construction stormwater management practice located on the site that captures and treats runoff from the *impervious area* that is being disturbed, the WQv treatment option selected must, at a minimum, provide treatment equal to the treatment that was being provided by the existing practice(s) if that treatment is greater than the treatment required by options 1 – 4 above.

(ii) Channel Protection Volume (Cpv): Not required if there are no changes to hydrology that increase the *discharge* rate from the project site.

(iii) *Overbank* Flood Control Criteria (Qp): Not required if there are no changes to hydrology that increase the *discharge* rate from the project site.

(iv) Extreme Flood Control Criteria (Qf): Not required if there are no changes to hydrology that increase the *discharge* rate from the project site

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

d. Sizing Criteria for Combination of Redevelopment Activity and New Development

Construction projects that include both New Development and Redevelopment Activity shall provide post-construction stormwater management controls that meet the sizing criteria calculated as an aggregate of the Sizing Criteria in Part I.C.2.a. or b. of this permit for the New Development portion of the project and Part I.C.2.c of this permit for Redevelopment Activity portion of the project.

D. Maintaining Water Quality

The Department expects that compliance with the conditions of this permit will control *discharge*s necessary to meet applicable *water quality standards*. It shall be a violation of the *ECL* for any discharge to either cause or contribute to a violation of *water quality standards* as contained in Parts 700 through 705 of Title 6 of the Official Compilation of Codes, Rules and Regulations of the State of New York, such as:

1. There shall be no increase in turbidity that will cause a substantial visible contrast to natural conditions;

2. There shall be no increase in suspended, colloidal or settleable solids that will cause deposition or impair the waters for their best usages; and

3. There shall be no residue from oil and floating substances, nor visible oil film, nor globules of grease.

If there is evidence indicating that the stormwater *discharge*s authorized by this permit are causing, have the reasonable potential to cause, or are contributing to a violation of the *water quality standards*; the *owner or operator* must take appropriate corrective action in accordance with Part IV.C.5. of this general permit and document in accordance with Part IV.C.4. of this general permit. To address the *water quality standard* violation the *owner or operator* may need to provide additional information, include and implement appropriate controls in the SWPPP to correct the problem, or obtain an individual SPDES permit.

If there is evidence indicating that despite compliance with the terms and conditions of this general permit it is demonstrated that the stormwater *discharge*s authorized by this permit are causing or contributing to a violation of *water quality standards*, or if the Department determines that a modification of the permit is necessary to prevent a violation of *water quality standards*, the authorized *discharge*s will no longer be eligible for coverage under this permit. The Department may require the *owner or operator* to obtain an individual SPDES permit to continue discharging.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

E. Eligibility Under This General Permit

1. This permit may authorize all *discharges* of stormwater from *construction activity* to *surface waters of the State* and *groundwaters* except for ineligible *discharges* identified under subparagraph F. of this Part.

2. Except for non-stormwater *discharges* explicitly listed in the next paragraph, this permit only authorizes stormwater *discharge*s; including stormwater runoff, snowmelt runoff, and surface runoff and drainage, from *construction activities*.

3. Notwithstanding paragraphs E.1 and E.2 above, the following non-stormwater discharges are authorized by this permit: those listed in 6 NYCRR 750-1.2(a)(29)(vi), with the following exception: "Discharges from firefighting activities are authorized only when the firefighting activities are emergencies/unplanned"; waters to which other components have not been added that are used to control dust in accordance with the SWPPP; and uncontaminated *discharge*s from *construction site* de-watering operations. All non-stormwater discharges must be identified in the SWPPP. Under all circumstances, the *owner or operator* must still comply with *water quality standards* in Part I.D of this permit.

4. The *owner or operator* must maintain permit eligibility to *discharge* under this permit. Any *discharges* that are not compliant with the eligibility conditions of this permit are not authorized by the permit and the *owner or operator* must either apply for a separate permit to cover those ineligible *discharges* or take steps necessary to make the *discharge* eligible for coverage.

F. Activities Which Are Ineligible for Coverage Under This General Permit

All of the following are **not** authorized by this permit:

1. *Discharge*s after *construction activities* have been completed and the site has undergone *final stabilization*;

2. *Discharge*s that are mixed with sources of non-stormwater other than those expressly authorized under subsection E.3. of this Part and identified in the SWPPP required by this permit;

3. *Discharges* that are required to obtain an individual SPDES permit or another SPDES general permit pursuant to Part VII.K. of this permit;

4. *Construction activities* or *discharges* from *construction activities* that may adversely affect an *endangered or threatened species* unless the *owner or*

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

operator has obtained a permit issued pursuant to 6 NYCRR Part 182 for the project or the Department has issued a letter of non-jurisdiction for the project. All documentation necessary to demonstrate eligibility shall be maintained on site in accordance with Part II.D.2 of this permit;

5. *Discharges* which either cause or contribute to a violation of *water quality standards* adopted pursuant to the *ECL* and its accompanying regulations;

6. *Construction activities* for residential, commercial and institutional projects:

   a. Where the *discharge*s from the *construction activities* are tributary to waters of the state classified as AA or AA-s; and

   b. Which are undertaken on land with no existing *impervious cover*; and

   c. Which disturb one (1) or more acres of land designated on the current United States Department of Agriculture ("USDA") Soil Survey as Soil Slope Phase "D", (provided the map unit name is inclusive of slopes greater than 25%), or Soil Slope Phase "E" or "F" (regardless of the map unit name), or a combination of the three designations.

7. *Construction activities* for linear transportation projects and linear utility projects:

   a. Where the *discharge*s from the *construction activities* are tributary to waters of the state classified as AA or AA-s; and

   b. Which are undertaken on land with no existing *impervious cover*; and

   c. Which disturb two (2) or more acres of land designated on the current USDA Soil Survey as Soil Slope Phase "D" (provided the map unit name is inclusive of slopes greater than 25%), or Soil Slope Phase "E" or "F" (regardless of the map unit name), or a combination of the three designations.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

8. *Construction activities* that have the potential to affect an *historic property*, unless there is documentation that such impacts have been resolved. The following documentation necessary to demonstrate eligibility with this requirement shall be maintained on site in accordance with Part II.D.2 of this permit and made available to the Department in accordance with Part VII.F of this permit:

   a. Documentation that the *construction activity* is not within an archeologically sensitive area indicated on the sensitivity map, and that the *construction activity* is not located on or immediately adjacent to a property listed or determined to be eligible for listing on the National or State Registers of Historic Places, and that there is no new permanent building on the *construction site* within the following distances from a building, structure, or object that is more than 50 years old, or if there is such a new permanent building on the *construction site* within those parameters that NYS Office of Parks, Recreation and Historic Preservation (OPRHP), a Historic Preservation Commission of a Certified Local Government, or a qualified preservation professional has determined that the building, structure, or object more than 50 years old is not historically/archeologically significant.

      - 1-5 acres of disturbance - 20 feet
      - 5-20 acres of disturbance - 50 feet
      - 20+ acres of disturbance - 100 feet, or

   b. DEC consultation form sent to OPRHP, and copied to the NYS DEC Agency Historic Preservation Officer (APO), and
      (i) the State Environmental Quality Review (SEQR) Environmental Assessment Form (EAF) with a negative declaration or the Findings Statement, with documentation of OPRHP's agreement with the resolution; or
      (ii) documentation from OPRHP that the *construction activity* will result in No Impact; or
      (iii) documentation from OPRHP providing a determination of No Adverse Impact; or
      (iv) a Letter of Resolution signed by the owner/operator, OPRHP and the DEC APO which allows for this *construction activity* to be eligible for coverage under the general permit in terms of the State Historic Preservation Act (SHPA); or

   c. Documentation of satisfactory compliance with Section 106 of the National Historic Preservation Act for a coterminous project area:

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

(i) No Affect
(ii) No Adverse Affect
(iii) Executed Memorandum of Agreement, or

d. Documentation that:

(i) SHPA Section 14.09 has been completed by NYS DEC or another state agency.

9. *Discharge*s from *construction activities* that are subject to an existing SPDES individual or general permit where a SPDES permit for *construction activity* has been terminated or denied; or where the *owner or operator* has failed to renew an expired individual permit.

Part II. PERMIT COVERAGE

A. How to Obtain Coverage

1. An *owner or operator* of a *construction activity* that is not subject to the requirements of a regulated, traditional land use control MS4 must first prepare a SWPPP in accordance with all applicable requirements of this permit and then submit a completed Notice of Intent (NOI) to the Department to be authorized to discharge under this permit.

2. An *owner or operator* of a *construction activity* that is subject to the requirements of a *regulated, traditional land use control MS4* must first prepare a SWPPP in accordance with all applicable requirements of this permit and then have the SWPPP reviewed and accepted by the *regulated, traditional land use control MS4* prior to submitting the NOI to the Department. The *owner or operator* shall have the "MS4 SWPPP Acceptance" form signed in accordance with Part VII.H., and then submit that form along with a completed NOI to the Department.

3. The requirement for an *owner or operator* to have its SWPPP reviewed and accepted by the *regulated, traditional land use control MS4* prior to submitting the NOI to the Department does not apply to an *owner or operator* that is obtaining permit coverage in accordance with the requirements in Part II.F. (Change of *Owner or Operator*) or where the *owner or operator* of the *construction activity* is the *regulated, traditional land use control MS4* . This exemption does not apply to *construction activities* subject to the New York City Administrative Code.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

B. Notice of Intent (NOI) Submittal

1. Prior to December 21, 2020, an owner or operator shall use either the electronic (eNOI) or paper version of the NOI that the Department prepared. Both versions of the NOI are located on the Department's website (http://www.dec.ny.gov/). The paper version of the NOI shall be signed in accordance with Part VII.H. of this permit and submitted to the following address:

   NOTICE OF INTENT
   NYS DEC, Bureau of Water Permits
   625 Broadway, 4th Floor
   Albany, New York 12233-3505

2. Beginning December 21, 2020 and in accordance with EPA's 2015 NPDES Electronic Reporting Rule (40 CFR Part 127), the *owner or operator* must submit the NOI electronically using the *Department's* online NOI.

3. The *owner or operator* shall have the SWPPP preparer sign the "SWPPP Preparer Certification" statement on the NOI prior to submitting the form to the Department.

4. As of the date the NOI is submitted to the Department, the *owner or operator* shall make the NOI and SWPPP available for review and copying in accordance with the requirements in Part VII.F. of this permit.

C. Permit Authorization

1. An *owner or operator* shall not *commence construction activity* until their authorization to *discharge* under this permit goes into effect.

2. Authorization to *discharge* under this permit will be effective when the *owner or operator* has satisfied all of the following criteria:

   a. project review pursuant to the State Environmental Quality Review Act ("SEQRA") have been satisfied, when SEQRA is applicable. See the Department's website (http://www.dec.ny.gov/) for more information,

   b. where required, all necessary Department permits subject to the *Uniform Procedures Act ("UPA")* (see 6 NYCRR Part 621), or the equivalent from another New York State agency, have been obtained, unless otherwise notified by the Department pursuant to 6 NYCRR 621.3(a)(4). *Owners or operators* of *construction activities* that are required to obtain *UPA* permits

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

must submit a preliminary SWPPP to the appropriate DEC Permit Administrator at the Regional Office listed in Appendix F at the time all other necessary *UPA* permit applications are submitted. The preliminary SWPPP must include sufficient information to demonstrate that the *construction activity* qualifies for authorization under this permit,

c. the final SWPPP has been prepared, and

d. a complete NOI has been submitted to the Department in accordance with the requirements of this permit.

3. An *owner or operator* that has satisfied the requirements of Part II.C.2 above will be authorized to *discharge* stormwater from their *construction activity* in accordance with the following schedule:

   a. For *construction activities* that are not subject to the requirements of a *regulated, traditional land use control MS4*:

      (i) Five (5) business days from the date the Department receives a complete electronic version of the NOI (eNOI) for *construction activities* with a SWPPP that has been prepared in conformance with the design criteria in the technical standard referenced in Part III.B.1 and the *performance criteria* in the technical standard referenced in Parts III.B., 2 or 3, for *construction activities* that require post-construction stormwater management practices pursuant to Part III.C.; or

      (ii) Sixty (60) business days from the date the Department receives a complete NOI (electronic or paper version) for *construction activities* with a SWPPP that has not been prepared in conformance with the design criteria in technical standard referenced in Part III.B.1. or, for *construction activities* that require post-construction stormwater management practices pursuant to Part III.C., the *performance criteria* in the technical standard referenced in Parts III.B., 2 or 3, or;

      (iii) Ten (10) business days from the date the Department receives a complete paper version of the NOI for *construction activities* with a SWPPP that has been prepared in conformance with the design criteria in the technical standard referenced in Part III.B.1 and the *performance criteria* in the technical standard referenced in Parts III.B., 2 or 3, for *construction activities* that require post-construction stormwater management practices pursuant to Part III.C.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

b. For *construction activities* that are subject to the requirements of a *regulated, traditional land use control MS4*:

(i) Five (5) business days from the date the Department receives both a complete electronic version of the NOI (eNOI) and signed "*MS4* SWPPP Acceptance" form, or

(ii) Ten (10) business days from the date the Department receives both a complete paper version of the NOI and signed "MS4 SWPPP Acceptance" form.

4. Coverage under this permit authorizes stormwater *discharges* from only those areas of disturbance that are identified in the NOI. If an *owner or operator* wishes to have stormwater *discharges* from future or additional areas of disturbance authorized, they must submit a new NOI that addresses that phase of the development, unless otherwise notified by the Department. The *owner or operator* shall not *commence construction activity* on the future or additional areas until their authorization to *discharge* under this permit goes into effect in accordance with Part II.C. of this permit.

D. General Requirements For Owners or Operators With Permit Coverage

1. The *owner or operator* shall ensure that the provisions of the SWPPP are implemented from the *commencement of construction activity* until all areas of disturbance have achieved *final stabilization* and the Notice of Termination ("NOT") has been submitted to the Department in accordance with Part V. of this permit. This includes any changes made to the SWPPP pursuant to Part III.A.4. of this permit.

2. The *owner or operator* shall maintain a copy of the General Permit (GP-0-20-001), NOI, *NOI Acknowledgment Letter*, SWPPP, MS4 SWPPP Acceptance form, inspection reports, responsible contractor's or subcontractor's certification statement (see Part III.A.6.), and all documentation necessary to demonstrate eligibility with this permit at the *construction site* until all disturbed areas have achieved *final stabilization* and the NOT has been submitted to the Department. The documents must be maintained in a secure location, such as a job trailer, on-site construction office, or mailbox with lock. The secure location must be accessible during normal business hours to an individual performing a compliance inspection.

3. The *owner or operator* of a *construction activity* shall not disturb greater than five (5) acres of soil at any one time without prior written authorization from the Department or, in areas under the jurisdiction of a *regulated, traditional land*

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

use control MS4, the *regulated, traditional land use control MS4* (provided the *regulated, traditional land use control MS4* is not the *owner or operator* of the *construction activity*). At a minimum, the *owner or operator* must comply with the following requirements in order to be authorized to disturb greater than five (5) acres of soil at any one time:

a. The *owner or operator* shall have a *qualified inspector* conduct **at least** two (2) site inspections in accordance with Part IV.C. of this permit every seven (7) calendar days, for as long as greater than five (5) acres of soil remain disturbed. The two (2) inspections shall be separated by a minimum of two (2) full calendar days.

b. In areas where soil disturbance activity has temporarily or permanently ceased, the application of soil stabilization measures must be initiated by the end of the next business day and completed within seven (7) days from the date the current soil disturbance activity ceased. The soil stabilization measures selected shall be in conformance with the technical standard, New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016.

c. The *owner or operator* shall prepare a phasing plan that defines maximum disturbed area per phase and shows required cuts and fills.

d. The *owner or operator* shall install any additional site-specific practices needed to protect water quality.

e. The *owner or operator* shall include the requirements above in their SWPPP.

4. In accordance with statute, regulations, and the terms and conditions of this permit, the Department may suspend or revoke an *owner's or operator's* coverage under this permit at any time if the Department determines that the SWPPP does not meet the permit requirements or consistent with Part VII.K..

5. Upon a finding of significant non-compliance with the practices described in the SWPPP or violation of this permit, the Department may order an immediate stop to all activity at the site until the non-compliance is remedied. The stop work order shall be in writing, describe the non-compliance in detail, and be sent to the *owner or operator*.

6. For *construction activities* that are subject to the requirements of a *regulated, traditional land use control MS4*, the *owner or operator* shall notify the

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

regulated, traditional land use control MS4 in writing of any planned amendments or modifications to the post-construction stormwater management practice component of the SWPPP required by Part III.A. 4. and 5. of this permit. Unless otherwise notified by the *regulated, traditional land use control MS4*, the *owner or operator* shall have the SWPPP amendments or modifications reviewed and accepted by the *regulated, traditional land use control MS4* prior to commencing construction of the post-construction stormwater management practice.

E. Permit Coverage for Discharges Authorized Under GP-0-15-002

1. Upon renewal of SPDES General Permit for Stormwater Discharges from *Construction Activity* (Permit No. GP-0-15-002), an *owner or operator* of *a construction activity* with coverage under GP-0-15-002, as of the effective date of GP- 0-20-001, shall be authorized to *discharge* in accordance with GP- 0-20-001, unless otherwise notified by the Department.

   An *owner or operator* may continue to implement the technical/design components of the post-construction stormwater management controls provided that such design was done in conformance with the technical standards in place at the time of initial project authorization. However, they must comply with the other, non-design provisions of GP-0-20-001.

F. Change of Owner or Operator

1. When property ownership changes or when there is a change in operational control over the construction plans and specifications, the original *owner or operator* must notify the new *owner or operator*, in writing, of the requirement to obtain permit coverage by submitting a NOI with the Department. For *construction activities* subject to the requirements of a *regulated, traditional land use control MS4,* the original *owner or operator* must also notify the MS4, in writing, of the change in ownership at least 30 calendar days prior to the change in ownership.

2. Once the new *owner or operator* obtains permit coverage, the original *owner or operator* shall then submit a completed NOT with the name and permit identification number of the new *owner or operator* to the Department at the address in Part II.B.1. of this permit. If the original *owner or operator* maintains ownership of a portion of the *construction activity* and will disturb soil, they must maintain their coverage under the permit.

3. Permit coverage for the new *owner or operator* will be effective as of the date the Department receives a complete NOI, provided the original *owner or*

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

operator was not subject to a sixty (60) business day authorization period that has not expired as of the date the Department receives the NOI from the new *owner or operator*.

Part III. STORMWATER POLLUTION PREVENTION PLAN (SWPPP)

A. General SWPPP Requirements

1. A SWPPP shall be prepared and implemented by the *owner or operator* of each *construction activity* covered by this permit. The SWPPP must document the selection, design, installation, implementation and maintenance of the control measures and practices that will be used to meet the effluent limitations in Part I.B. of this permit and where applicable, the post-construction stormwater management practice requirements in Part I.C. of this permit. The SWPPP shall be prepared prior to the submittal of the NOI. The NOI shall be submitted to the Department prior to the *commencement of construction activity*. A copy of the completed, final NOI shall be included in the SWPPP.

2. The SWPPP shall describe the erosion and sediment control practices and where required, post-construction stormwater management practices that will be used and/or constructed to reduce the *pollutants* in stormwater *discharges* and to assure compliance with the terms and conditions of this permit. In addition, the SWPPP shall identify potential sources of pollution which may reasonably be expected to affect the quality of stormwater *discharges*.

3. All SWPPPs that require the post-construction stormwater management practice component shall be prepared by a *qualified professional* that is knowledgeable in the principles and practices of stormwater management and treatment.

4. The *owner or operator* must keep the SWPPP current so that it at all times accurately documents the erosion and sediment controls practices that are being used or will be used during construction, and all post-construction stormwater management practices that will be constructed on the site. At a minimum, the *owner or operator* shall amend the SWPPP, including construction drawings:

    a. whenever the current provisions prove to be ineffective in minimizing *pollutants* in stormwater *discharges* from the site;

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

b. whenever there is a change in design, construction, or operation at the *construction site* that has or could have an effect on the *discharge* of *pollutants*;

c. to address issues or deficiencies identified during an inspection by the *qualified inspector,* the Department or other regulatory authority; and

d. to document the final construction conditions.

5. The Department may notify the *owner or operator* at any time that the SWPPP does not meet one or more of the minimum requirements of this permit. The notification shall be in writing and identify the provisions of the SWPPP that require modification. Within fourteen (14) calendar days of such notification, or as otherwise indicated by the Department, the *owner or operator* shall make the required changes to the SWPPP and submit written notification to the Department that the changes have been made. If the *owner or operator* does not respond to the Department's comments in the specified time frame, the Department may suspend the *owner's or operator's* coverage under this permit or require the *owner or operator* to obtain coverage under an individual SPDES permit in accordance with Part II.D.4. of this permit.

6. Prior to the *commencement of construction activity*, the *owner or operator* must identify the contractor(s) and subcontractor(s) that will be responsible for installing, constructing, repairing, replacing, inspecting and maintaining the erosion and sediment control practices included in the SWPPP; and the contractor(s) and subcontractor(s) that will be responsible for constructing the post-construction stormwater management practices included in the SWPPP. The *owner or operator* shall have each of the contractors and subcontractors identify at least one person from their company that will be responsible for implementation of the SWPPP. This person shall be known as the *trained contractor.* The *owner or operator* shall ensure that at least one *trained contractor* is on site on a daily basis when soil disturbance activities are being performed.

   The *owner or operator* shall have each of the contractors and subcontractors identified above sign a copy of the following certification statement below before they commence any *construction activity*:

   "I hereby certify under penalty of law that I understand and agree to comply with the terms and conditions of the SWPPP and agree to implement any corrective actions identified by the *qualified inspector* during a site inspection. I also understand that the *owner or operator* must comply with

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

the terms and conditions of the most current version of the New York State Pollutant Discharge Elimination System ("SPDES") general permit for stormwater *discharge*s from *construction activities* and that it is unlawful for any person to cause or contribute to a violation of *water quality standards*. Furthermore, I am aware that there are significant penalties for submitting false information, that I do not believe to be true, including the possibility of fine and imprisonment for knowing violations"

In addition to providing the certification statement above, the certification page must also identify the specific elements of the SWPPP that each contractor and subcontractor will be responsible for and include the name and title of the person providing the signature; the name and title of the *trained contractor* responsible for SWPPP implementation; the name, address and telephone number of the contracting firm; the address (or other identifying description) of the site; and the date the certification statement is signed. The *owner or operator* shall attach the certification statement(s) to the copy of the SWPPP that is maintained at the *construction site*. If new or additional contractors are hired to implement measures identified in the SWPPP after construction has commenced, they must also sign the certification statement and provide the information listed above.

7. For projects where the Department requests a copy of the SWPPP or inspection reports, the *owner or operator* shall submit the documents in both electronic (PDF only) and paper format within five (5) business days, unless otherwise notified by the Department.

B. Required SWPPP Contents

1. Erosion and sediment control component - All SWPPPs prepared pursuant to this permit shall include erosion and sediment control practices designed in conformance with the technical standard, New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016. Where erosion and sediment control practices are not designed in conformance with the design criteria included in the technical standard, the *owner or operator* must demonstrate *equivalence* to the technical standard. At a minimum, the erosion and sediment control component of the SWPPP shall include the following:

    a. Background information about the scope of the project, including the location, type and size of project

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

b. A site map/construction drawing(s) for the project, including a general location map. At a minimum, the site map shall show the total site area; all improvements; areas of disturbance; areas that will not be disturbed; existing vegetation; on-site and adjacent off-site surface water(s); floodplain/floodway boundaries; wetlands and drainage patterns that could be affected by the *construction activity*; existing and final contours ; locations of different soil types with boundaries; material, waste, borrow or equipment storage areas located on adjacent properties; and location(s) of the stormwater *discharge*(s);

c. A description of the soil(s) present at the site, including an identification of the Hydrologic Soil Group (HSG);

d. A construction phasing plan and sequence of operations describing the intended order of *construction activities*, including clearing and grubbing, excavation and grading, utility and infrastructure installation and any other activity at the site that results in soil disturbance;

e. A description of the minimum erosion and sediment control practices to be installed or implemented for each *construction activity* that will result in soil disturbance. Include a schedule that identifies the timing of initial placement or implementation of each erosion and sediment control practice and the minimum time frames that each practice should remain in place or be implemented;

f. A temporary and permanent soil stabilization plan that meets the requirements of this general permit and the technical standard, New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016, for each stage of the project, including initial land clearing and grubbing to project completion and achievement of *final stabilization*;

g. A site map/construction drawing(s) showing the specific location(s), size(s), and length(s) of each erosion and sediment control practice;

h. The dimensions, material specifications, installation details, and operation and maintenance requirements for all erosion and sediment control practices. Include the location and sizing of any temporary sediment basins and structural practices that will be used to divert flows from exposed soils;

i. A maintenance inspection schedule for the contractor(s) identified in Part III.A.6. of this permit, to ensure continuous and effective operation of the erosion and sediment control practices. The maintenance inspection

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

schedule shall be in accordance with the requirements in the technical standard, New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016;

j. A description of the pollution prevention measures that will be used to control litter, construction chemicals and construction debris from becoming a *pollutant* source in the stormwater *discharges*;

k. A description and location of any stormwater *discharges* associated with industrial activity other than construction at the site, including, but not limited to, stormwater *discharges* from asphalt plants and concrete plants located on the *construction site*; and

l. Identification of any elements of the design that are not in conformance with the design criteria in the technical standard, New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016. Include the reason for the deviation or alternative design and provide information which demonstrates that the deviation or alternative design is *equivalent* to the technical standard.

2. Post-construction stormwater management practice component – The *owner or operator* of any construction project identified in Table 2 of Appendix B as needing post-construction stormwater management practices shall prepare a SWPPP that includes practices designed in conformance with the applicable *sizing criteria* in Part I.C.2.a., c. or d. of this permit and the *performance criteria* in the technical standard, New York State Stormwater Management Design Manual dated January 2015

   Where post-construction stormwater management practices are not designed in conformance with the *performance criteria* in the technical standard, the *owner or operator* must include in the SWPPP the reason(s) for the deviation or alternative design and provide information which demonstrates that the deviation or alternative design is *equivalent* to the technical standard.

   The post-construction stormwater management practice component of the SWPPP shall include the following:

   a. Identification of all post-construction stormwater management practices to be constructed as part of the project. Include the dimensions, material specifications and installation details for each post-construction stormwater management practice;

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

b. A site map/construction drawing(s) showing the specific location and size of each post-construction stormwater management practice;

c. A Stormwater Modeling and Analysis Report that includes:
   (i) Map(s) showing pre-development conditions, including watershed/subcatchments boundaries, flow paths/routing, and design points;

   (ii) Map(s) showing post-development conditions, including watershed/subcatchments boundaries, flow paths/routing, design points and post-construction stormwater management practices;

   (iii) Results of stormwater modeling (i.e. hydrology and hydraulic analysis) for the required storm events. Include supporting calculations (model runs), methodology, and a summary table that compares pre and post-development runoff rates and volumes for the different storm events;

   (iv) Summary table, with supporting calculations, which demonstrates that each post-construction stormwater management practice has been designed in conformance with the *sizing criteria* included in the Design Manual;

   (v) Identification of any *sizing criteria* that is not required based on the requirements included in Part I.C. of this permit; and

   (vi) Identification of any elements of the design that are not in conformance with the *performance criteria* in the Design Manual. Include the reason(s) for the deviation or alternative design and provide information which demonstrates that the deviation or alternative design is *equivalent* to the Design Manual;

d. Soil testing results and locations (test pits, borings);

e. Infiltration test results, when required; and

f. An operations and maintenance plan that includes inspection and maintenance schedules and actions to ensure continuous and effective operation of each post-construction stormwater management practice. The plan shall identify the entity that will be responsible for the long term operation and maintenance of each practice.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

3. Enhanced Phosphorus Removal Standards - All construction projects identified in Table 2 of Appendix B that are located in the watersheds identified in Appendix C shall prepare a SWPPP that includes post-construction stormwater management practices designed in conformance with the applicable *sizing criteria* in Part I.C.2. b., c. or d. of this permit and the *performance criteria,* Enhanced Phosphorus Removal Standards included in the Design Manual. At a minimum, the post-construction stormwater management practice component of the SWPPP shall include items 2.a - 2.f. above.

C. Required SWPPP Components by Project Type

Unless otherwise notified by the Department, *owners or operators* of *construction activities* identified in Table 1 of Appendix B are required to prepare a SWPPP that only includes erosion and sediment control practices designed in conformance with Part III.B.1 of this permit. *Owners or operators* of the *construction activities* identified in Table 2 of Appendix B shall prepare a SWPPP that also includes post-construction stormwater management practices designed in conformance with Part III.B.2 or 3 of this permit.

Part IV. INSPECTION AND MAINTENANCE REQUIREMENTS

A. General Construction Site Inspection and Maintenance Requirements

1. The *owner or operator* must ensure that all erosion and sediment control practices (including pollution prevention measures) and all post-construction stormwater management practices identified in the SWPPP are inspected and maintained in accordance with Part IV.B. and C. of this permit.

2. The terms of this permit shall not be construed to prohibit the State of New York from exercising any authority pursuant to the ECL, common law or federal law, or prohibit New York State from taking any measures, whether civil or criminal, to prevent violations of the laws of the State of New York or protect the public health and safety and/or the environment.

B. Contractor Maintenance Inspection Requirements

1. The *owner or operator* of each *construction activity* identified in Tables 1 and 2 of Appendix B shall have a *trained contractor* inspect the erosion and sediment control practices and pollution prevention measures being implemented within the active work area daily to ensure that they are being maintained in effective operating condition at all times. If deficiencies are identified, the contractor shall

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

begin implementing corrective actions within one business day and shall complete the corrective actions in a reasonable time frame.

2. For construction sites where soil disturbance activities have been temporarily suspended (e.g. winter shutdown) and *temporary stabilization* measures have been applied to all disturbed areas, the *trained contractor* can stop conducting the maintenance inspections. The *trained contractor* shall begin conducting the maintenance inspections in accordance with Part IV.B.1. of this permit as soon as soil disturbance activities resume.

3. For construction sites where soil disturbance activities have been shut down with partial project completion, the *trained contractor* can stop conducting the maintenance inspections if all areas disturbed as of the project shutdown date have achieved *final stabilization* and all post-construction stormwater management practices required for the completed portion of the project have been constructed in conformance with the SWPPP and are operational.

C. Qualified Inspector Inspection Requirements

The *owner or operator* shall have a *qualified inspector* conduct site inspections in conformance with the following requirements:

[Note: The *trained contractor* identified in Part III.A.6. and IV.B. of this permit **cannot** conduct the *qualified inspector* site inspections unless they meet the *qualified inspector* qualifications included in Appendix A. In order to perform these inspections, the *trained contractor* would have to be a:

- licensed Professional Engineer,
- Certified Professional in Erosion and Sediment Control (CPESC),
- New York State Erosion and Sediment Control Certificate Program holder
- Registered Landscape Architect, or
- someone working under the direct supervision of, and at the same company as, the licensed Professional Engineer or Registered Landscape Architect, provided they have received four (4) hours of Department endorsed training in proper erosion and sediment control principles from a Soil and Water Conservation District, or other Department endorsed entity].

1. A *qualified inspector* shall conduct site inspections for all *construction activities* identified in Tables 1 and 2 of Appendix B, with the exception of:

   a. the construction of a single family residential subdivision with 25% or less *impervious cover* at total site build-out that involves a soil disturbance of one (1) or more acres of land but less than five (5) acres and is not located

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

in one of the watersheds listed in Appendix C and not directly discharging to one of the 303(d) segments listed in Appendix E;

b. the construction of a single family home that involves a soil disturbance of one (1) or more acres of land but less than five (5) acres and is not located in one of the watersheds listed in Appendix C and not directly discharging to one of the 303(d) segments listed in Appendix E;

c. construction on agricultural property that involves a soil disturbance of one (1) or more acres of land but less than five (5) acres; and

d. *construction activities* located in the watersheds identified in Appendix D that involve soil disturbances between five thousand (5,000) square feet and one (1) acre of land.

2. Unless otherwise notified by the Department, the *qualified inspector* shall conduct site inspections in accordance with the following timetable:

a. For construction sites where soil disturbance activities are on-going, the *qualified inspector* shall conduct a site inspection at least once every seven (7) calendar days.

b. For construction sites where soil disturbance activities are on-going and the *owner or operator* has received authorization in accordance with Part II.D.3 to disturb greater than five (5) acres of soil at any one time, the *qualified inspector* shall conduct at least two (2) site inspections every seven (7) calendar days. The two (2) inspections shall be separated by a minimum of two (2) full calendar days.

c. For construction sites where soil disturbance activities have been temporarily suspended (e.g. winter shutdown) and *temporary stabilization* measures have been applied to all disturbed areas, the *qualified inspector* shall conduct a site inspection at least once every thirty (30) calendar days. The *owner or operator* shall notify the DOW Water (SPDES) Program contact at the Regional Office (see contact information in Appendix F) or, in areas under the jurisdiction of a *regulated, traditional land use control MS4,* the *regulated, traditional land use control MS4* (provided the *regulated, traditional land use control MS4* is not the *owner or operator* of the *construction activity*) in writing prior to reducing the frequency of inspections.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

d. For construction sites where soil disturbance activities have been shut down with partial project completion, the *qualified inspector* can stop conducting inspections if all areas disturbed as of the project shutdown date have achieved *final stabilization* and all post-construction stormwater management practices required for the completed portion of the project have been constructed in conformance with the SWPPP and are operational. The *owner or operator* shall notify the DOW Water (SPDES) Program contact at the Regional Office (see contact information in Appendix F) or, in areas under the jurisdiction of a *regulated, traditional land use control MS4,* the *regulated, traditional land use control MS4* (provided the *regulated, traditional land use control MS4* is not the *owner or operator* of the *construction activity*) in writing prior to the shutdown. If soil disturbance activities are not resumed within 2 years from the date of shutdown, the *owner or operator* shall have the *qualified inspector* perform a final inspection and certify that all disturbed areas have achieved *final stabilization,* and all temporary, structural erosion and sediment control measures have been removed*;* and that all post-construction stormwater management practices have been constructed in conformance with the SWPPP by signing the "*Final Stabilization*" and "Post-Construction Stormwater Management Practice" certification statements on the NOT. The *owner or operator* shall then submit the completed NOT form to the address in Part II.B.1 of this permit.

e. For construction sites that directly *discharge* to one of the 303(d) segments listed in Appendix E or is located in one of the watersheds listed in Appendix C, the *qualified inspector* shall conduct at least two (2) site inspections every seven (7) calendar days. The two (2) inspections shall be separated by a minimum of two (2) full calendar days.

3. At a minimum, the *qualified inspector* shall inspect all erosion and sediment control practices and pollution prevention measures to ensure integrity and effectiveness, all post-construction stormwater management practices under construction to ensure that they are constructed in conformance with the SWPPP, all areas of disturbance that have not achieved *final stabilization,* all points of *discharge* to natural surface waterbodies located within, or immediately adjacent to, the property boundaries of the *construction site*, and all points of *discharge* from the *construction site*.

4. The *qualified inspector* shall prepare an inspection report subsequent to each and every inspection. At a minimum, the inspection report shall include and/or address the following:

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

a. Date and time of inspection;

b. Name and title of person(s) performing inspection;

c. A description of the weather and soil conditions (e.g. dry, wet, saturated) at the time of the inspection;

d. A description of the condition of the runoff at all points of *discharge* from the *construction site*. This shall include identification of any *discharges* of sediment from the *construction site*. Include *discharges* from conveyance systems (i.e. pipes, culverts, ditches, etc.) and overland flow;

e. A description of the condition of all natural surface waterbodies located within, or immediately adjacent to, the property boundaries of the *construction site* which receive runoff from disturbed areas. This shall include identification of any *discharges* of sediment to the surface waterbody;

f. Identification of all erosion and sediment control practices and pollution prevention measures that need repair or maintenance;

g. Identification of all erosion and sediment control practices and pollution prevention measures that were not installed properly or are not functioning as designed and need to be reinstalled or replaced;

h. Description and sketch of areas with active soil disturbance activity, areas that have been disturbed but are inactive at the time of the inspection, and areas that have been stabilized (temporary and/or final) since the last inspection;

i. Current phase of construction of all post-construction stormwater management practices and identification of all construction that is not in conformance with the SWPPP and technical standards;

j. Corrective action(s) that must be taken to install, repair, replace or maintain erosion and sediment control practices and pollution prevention measures; and to correct deficiencies identified with the construction of the post-construction stormwater management practice(s);

k. Identification and status of all corrective actions that were required by previous inspection; and

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

l. Digital photographs, with date stamp, that clearly show the condition of all practices that have been identified as needing corrective actions. The *qualified inspector* shall attach paper color copies of the digital photographs to the inspection report being maintained onsite within seven (7) calendar days of the date of the inspection. The *qualified inspector* shall also take digital photographs, with date stamp, that clearly show the condition of the practice(s) after the corrective action has been completed. The *qualified inspector* shall attach paper color copies of the digital photographs to the inspection report that documents the completion of the corrective action work within seven (7) calendar days of that inspection.

5. Within one business day of the completion of an inspection, the *qualified inspector* shall notify the *owner or operator* and appropriate contractor or subcontractor identified in Part III.A.6. of this permit of any corrective actions that need to be taken. The contractor or subcontractor shall begin implementing the corrective actions within one business day of this notification and shall complete the corrective actions in a reasonable time frame.

6. All inspection reports shall be signed by the *qualified inspector.* Pursuant to Part II.D.2. of this permit, the inspection reports shall be maintained on site with the SWPPP.

Part V. TERMINATION OF PERMIT COVERAGE

A. Termination of Permit Coverage

1. An *owner or operator* that is eligible to terminate coverage under this permit must submit a completed NOT form to the address in Part II.B.1 of this permit. The NOT form shall be one which is associated with this permit, signed in accordance with Part VII.H of this permit.

2. An *owner or operator* may terminate coverage when one or more the following conditions have been met:

   a. Total project completion - All *construction activity* identified in the SWPPP has been completed; and all areas of disturbance have achieved *final stabilization*; and all temporary, structural erosion and sediment control measures have been removed; and all post-construction stormwater management practices have been constructed in conformance with the SWPPP and are operational;

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

b. Planned shutdown with partial project completion - All soil disturbance activities have ceased; and all areas disturbed as of the project shutdown date have achieved *final stabilization*; and all temporary, structural erosion and sediment control measures have been removed; and all post-construction stormwater management practices required for the completed portion of the project have been constructed in conformance with the SWPPP and are operational;

c. A new *owner or operator* has obtained coverage under this permit in accordance with Part II.F. of this permit.

d. The *owner or operator* obtains coverage under an alternative SPDES general permit or an individual SPDES permit.

3. For *construction activities* meeting subdivision 2a. or 2b. of this Part, the *owner or operator* shall have the *qualified inspector* perform a final site inspection prior to submitting the NOT. The *qualified inspector* shall, by signing the "*Final Stabilization*" and "Post-Construction Stormwater Management Practice certification statements on the NOT, certify that all the requirements in Part V.A.2.a. or b. of this permit have been achieved.

4. For *construction activities* that are subject to the requirements of a *regulated, traditional land use control MS4* and meet subdivision 2a. or 2b. of this Part, the *owner or operator* shall have the *regulated, traditional land use control MS4* sign the "MS4 Acceptance" statement on the NOT in accordance with the requirements in Part VII.H. of this permit. The *regulated, traditional land use control MS4* official, by signing this statement, has determined that it is acceptable for the *owner or operator* to submit the NOT in accordance with the requirements of this Part. The *regulated, traditional land use control MS4* can make this determination by performing a final site inspection themselves or by accepting the *qualified inspector*'s final site inspection certification(s) required in Part V.A.3. of this permit.

5. For *construction activities* that require post-construction stormwater management practices and meet subdivision 2a. of this Part, the *owner or operator* must, prior to submitting the NOT, ensure one of the following:

a. the post-construction stormwater management practice(s) and any right-of-way(s) needed to maintain such practice(s) have been deeded to the municipality in which the practice(s) is located,

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

b. an executed maintenance agreement is in place with the municipality that will maintain the post-construction stormwater management practice(s),

c. for post-construction stormwater management practices that are privately owned, the *owner or operator* has a mechanism in place that requires operation and maintenance of the practice(s) in accordance with the operation and maintenance plan, such as a deed covenant in the *owner or operator's* deed of record,

d. for post-construction stormwater management practices that are owned by a public or private institution (e.g. school, university, hospital), government agency or authority, or public utility; the *owner or operator* has policy and procedures in place that ensures operation and maintenance of the practices in accordance with the operation and maintenance plan.

Part VI. REPORTING AND RETENTION RECORDS

A. Record Retention

The *owner or operator* shall retain a copy of the NOI, NOI Acknowledgment Letter, SWPPP, MS4 SWPPP Acceptance form and any inspection reports that were prepared in conjunction with this permit for a period of at least five (5) years from the date that the Department receives a complete NOT submitted in accordance with Part V. of this general permit.

B. Addresses

With the exception of the NOI, NOT, and MS4 SWPPP Acceptance form (which must be submitted to the address referenced in Part II.B.1 of this permit), all written correspondence requested by the Department, including individual permit applications, shall be sent to the address of the appropriate DOW Water (SPDES) Program contact at the Regional Office listed in Appendix F.

Part VII. STANDARD PERMIT CONDITIONS

A. Duty to Comply

The *owner or operator* must comply with all conditions of this permit. All contractors and subcontractors associated with the project must comply with the terms of the SWPPP. Any non-compliance with this permit constitutes a violation of the Clean Water

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

Act (CWA) and the ECL and is grounds for an enforcement action against the *owner or operator* and/or the contractor/subcontractor; permit revocation, suspension or modification; or denial of a permit renewal application. Upon a finding of significant non-compliance with this permit or the applicable SWPPP, the Department may order an immediate stop to all *construction activity* at the site until the non-compliance is remedied. The stop work order shall be in writing, shall describe the non-compliance in detail, and shall be sent to the *owner or operator*.

If any human remains or archaeological remains are encountered during excavation, the *owner or operator* must immediately cease, or cause to cease, all *construction activity* in the area of the remains and notify the appropriate Regional Water Engineer (RWE). *Construction activity* shall not resume until written permission to do so has been received from the RWE.

B. Continuation of the Expired General Permit

This permit expires five (5) years from the effective date. If a new general permit is not issued prior to the expiration of this general permit, an *owner or operator* with coverage under this permit may continue to operate and *discharge* in accordance with the terms and conditions of this general permit, if it is extended pursuant to the State Administrative Procedure Act and 6 NYCRR Part 621, until a new general permit is issued.

C. Enforcement

Failure of the *owner or operator,* its contractors, subcontractors, agents and/or assigns to strictly adhere to any of the permit requirements contained herein shall constitute a violation of this permit. There are substantial criminal, civil, and administrative penalties associated with violating the provisions of this permit. Fines of up to $37,500 per day for each violation and imprisonment for up to fifteen (15) years may be assessed depending upon the nature and degree of the offense.

D. Need to Halt or Reduce Activity Not a Defense

It shall not be a defense for an *owner or operator* in an enforcement action that it would have been necessary to halt or reduce the *construction activity* in order to maintain compliance with the conditions of this permit.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

E. Duty to Mitigate

The *owner or operator* and its contractors and subcontractors shall take all reasonable steps to *minimize* or prevent any *discharge* in violation of this permit which has a reasonable likelihood of adversely affecting human health or the environment.

F. Duty to Provide Information

The *owner or operator* shall furnish to the Department, within a reasonable specified time period of a written request, all documentation necessary to demonstrate eligibility and any information to determine compliance with this permit or to determine whether cause exists for modifying or revoking this permit, or suspending or denying coverage under this permit, in accordance with the terms and conditions of this permit. The NOI, SWPPP and inspection reports required by this permit are public documents that the *owner or operator* must make available for review and copying by any person within five (5) business days of the *owner or operator* receiving a written request by any such person to review these documents. Copying of documents will be done at the requester's expense.

G. Other Information

When the *owner or operator* becomes aware that they failed to submit any relevant facts, or submitted incorrect information in the NOI or in any of the documents required by this permit , or have made substantive revisions to the SWPPP (e.g. the scope of the project changes significantly, the type of post-construction stormwater management practice(s) changes, there is a reduction in the sizing of the post-construction stormwater management practice, or there is an increase in the disturbance area or *impervious area*), which were not reflected in the original NOI submitted to the Department, they shall promptly submit such facts or information to the Department using the contact information in Part II.A. of this permit. Failure of the *owner or operator* to correct or supplement any relevant facts within five (5) business days of becoming aware of the deficiency shall constitute a violation of this permit.

H. Signatory Requirements

1. All NOIs and NOTs shall be signed as follows:

    a. For a corporation these forms shall be signed by a responsible corporate officer. For the purpose of this section, a responsible corporate officer means:

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

(i) a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision-making functions for the corporation; or

(ii) the manager of one or more manufacturing, production or operating facilities, provided the manager is authorized to make management decisions which govern the operation of the regulated facility including having the explicit or implicit duty of making major capital investment recommendations, and initiating and directing other comprehensive measures to assure long term environmental compliance with environmental laws and regulations; the manager can ensure that the necessary systems are established or actions taken to gather complete and accurate information for permit application requirements; and where authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures;

b. For a partnership or sole proprietorship these forms shall be signed by a general partner or the proprietor, respectively; or

c. For a municipality, State, Federal, or other public agency these forms shall be signed by either a principal executive officer or ranking elected official. For purposes of this section, a principal executive officer of a Federal agency includes:

(i) the chief executive officer of the agency, or

(ii) a senior executive officer having responsibility for the overall operations of a principal geographic unit of the agency (e.g., Regional Administrators of EPA).

2. The SWPPP and other information requested by the Department shall be signed by a person described in Part VII.H.1. of this permit or by a duly authorized representative of that person. A person is a duly authorized representative only if:

a. The authorization is made in writing by a person described in Part VII.H.1. of this permit;

b. The authorization specifies either an individual or a position having responsibility for the overall operation of the regulated facility or activity, such as the position of plant manager, operator of a well or a well field,

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

superintendent, position of *equivalent* responsibility, or an individual or position having overall responsibility for environmental matters for the company. (A duly authorized representative may thus be either a named individual or any individual occupying a named position) and,

c. The written authorization shall include the name, title and signature of the authorized representative and be attached to the SWPPP.

3. All inspection reports shall be signed by the *qualified inspector* that performs the inspection.

4. The MS4 SWPPP Acceptance form shall be signed by the principal executive officer or ranking elected official from the *regulated, traditional land use control MS4,* or by a duly authorized representative of that person.

   It shall constitute a permit violation if an incorrect and/or improper signatory authorizes any required forms, SWPPP and/or inspection reports.

I. Property Rights

The issuance of this permit does not convey any property rights of any sort, nor any exclusive privileges, nor does it authorize any injury to private property nor any invasion of personal rights, nor any infringement of Federal, State or local laws or regulations. *Owners or operators* must obtain any applicable conveyances, easements, licenses and/or access to real property prior to *commencing construction activity*.

J. Severability

The provisions of this permit are severable, and if any provision of this permit, or the application of any provision of this permit to any circumstance, is held invalid, the application of such provision to other circumstances, and the remainder of this permit shall not be affected thereby.

K. Requirement to Obtain Coverage Under an Alternative Permit

1. The Department may require any owner or operator authorized by this permit to apply for and/or obtain either an individual SPDES permit or another SPDES general permit. When the Department requires any discharger authorized by a general permit to apply for an individual SPDES permit, it shall notify the discharger in writing that a permit application is required. This notice shall

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

include a brief statement of the reasons for this decision, an application form, a statement setting a time frame for the owner or operator to file the application for an individual SPDES permit, and a deadline, not sooner than 180 days from owner or operator receipt of the notification letter, whereby the authorization to discharge under this general permit shall be terminated. Applications must be submitted to the appropriate Permit Administrator at the Regional Office. The Department may grant additional time upon demonstration, to the satisfaction of the Department, that additional time to apply for an alternative authorization is necessary or where the Department has not provided a permit determination in accordance with Part 621 of this Title.

2. When an individual SPDES permit is issued to a discharger authorized to *discharge* under a general SPDES permit for the same *discharge*(s), the general permit authorization for outfalls authorized under the individual SPDES permit is automatically terminated on the effective date of the individual permit unless termination is earlier in accordance with 6 NYCRR Part 750.

L. Proper Operation and Maintenance

The *owner or operator* shall at all times properly operate and maintain all facilities and systems of treatment and control (and related appurtenances) which are installed or used by the *owner or operator* to achieve compliance with the conditions of this permit and with the requirements of the SWPPP.

M. Inspection and Entry

The *owner or operator* shall allow an authorized representative of the Department, EPA, applicable county health department, or, in the case of a *construction site* which *discharges* through an *MS4*, an authorized representative of the *MS4* receiving the discharge, upon the presentation of credentials and other documents as may be required by law, to:

1. Enter upon the owner’s or operator's premises where a regulated facility or activity is located or conducted or where records must be kept under the conditions of this permit;

2. Have access to and copy at reasonable times, any records that must be kept under the conditions of this permit; and

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

3. Inspect at reasonable times any facilities or equipment (including monitoring and control equipment), practices or operations regulated or required by this permit.

4. Sample or monitor at reasonable times, for purposes of assuring permit compliance or as otherwise authorized by the Act or ECL, any substances or parameters at any location.

N. Permit Actions

This permit may, at any time, be modified, suspended, revoked, or renewed by the Department in accordance with 6 NYCRR Part 621. The filing of a request by the *owner or operator* for a permit modification, revocation and reissuance, termination, a notification of planned changes or anticipated noncompliance does not limit, diminish and/or stay compliance with any terms of this permit.

O. Definitions

Definitions of key terms are included in Appendix A of this permit.

P. Re-Opener Clause

1. If there is evidence indicating potential or realized impacts on water quality due to any stormwater discharge associated with construction activity covered by this permit, the owner or operator of such discharge may be required to obtain an individual permit or alternative general permit in accordance with Part VII.K. of this permit or the permit may be modified to include different limitations and/or requirements.

2. Any Department initiated permit modification, suspension or revocation will be conducted in accordance with 6 NYCRR Part 621, 6 NYCRR 750-1.18, and 6 NYCRR 750-1.20.

Q. Penalties for Falsification of Forms and Reports

In accordance with 6NYCRR Part 750-2.4 and 750-2.5, any person who knowingly makes any false material statement, representation, or certification in any application, record, report or other document filed or required to be maintained under this permit, including reports of compliance or noncompliance shall, upon conviction, be punished in accordance with ECL §71-1933 and or Articles 175 and 210 of the New York State Penal Law.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

R. Other Permits

Nothing in this permit relieves the *owner or operator* from a requirement to obtain any other permits required by law.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

APPENDIX A – Acronyms and Definitions

Acronyms

APO – Agency Preservation Officer
BMP – Best Management Practice
CPESC – Certified Professional in Erosion and Sediment Control
Cpv – Channel Protection Volume
CWA – Clean Water Act (or the Federal Water Pollution Control Act, 33 U.S.C. §1251 et seq)
DOW – Division of Water
EAF – Environmental Assessment Form
ECL - Environmental Conservation Law
EPA – U. S. Environmental Protection Agency
HSG – Hydrologic Soil Group
MS4 – Municipal Separate Storm Sewer System
NOI – Notice of Intent
NOT – Notice of Termination
NPDES – National Pollutant Discharge Elimination System
OPRHP – Office of Parks, Recreation and Historic Places
Qf – Extreme Flood
Qp – Overbank Flood
RRv – Runoff Reduction Volume
RWE – Regional Water Engineer
SEQR – State Environmental Quality Review
SEQRA - State Environmental Quality Review Act
SHPA – State Historic Preservation Act
SPDES – State Pollutant Discharge Elimination System
SWPPP – Stormwater Pollution Prevention Plan
TMDL – Total Maximum Daily Load
UPA – Uniform Procedures Act
USDA – United States Department of Agriculture
WQv – Water Quality Volume

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

Definitions

All definitions in this section are solely for the purposes of this permit.

Agricultural Building – a structure designed and constructed to house farm implements, hay, grain, poultry, livestock or other horticultural products; excluding any structure designed, constructed or used, in whole or in part, for human habitation, as a place of employment where agricultural products are processed, treated or packaged, or as a place used by the public.

Agricultural Property –means the land for construction of a barn, *agricultural building*, silo, stockyard, pen or other structural practices identified in Table II in the "Agricultural Management Practices Catalog for Nonpoint Source Pollution in New York State" prepared by the Department in cooperation with agencies of New York Nonpoint Source Coordinating Committee (dated June 2007).

Alter Hydrology from Pre to Post-Development Conditions - means the post-development peak flow rate(s) has increased by more than 5% of the pre-developed condition for the design storm of interest (e.g. 10 yr and 100 yr).

Combined Sewer - means a sewer that is designed to collect and convey both "sewage" and "stormwater".

Commence (Commencement of) Construction Activities - means the initial disturbance of soils associated with clearing, grading or excavation activities; or other construction related activities that disturb or expose soils such as demolition, stockpiling of fill material, and the initial installation of erosion and sediment control practices required in the SWPPP. See definition for "*Construction Activity(ies)*" also.

Construction Activity(ies) - means any clearing, grading, excavation, filling, demolition or stockpiling activities that result in soil disturbance. Clearing activities can include, but are not limited to, logging equipment operation, the cutting and skidding of trees, stump removal and/or brush root removal. Construction activity does not include routine maintenance that is performed to maintain the original line and grade, hydraulic capacity, or original purpose of a facility.

Construction Site – means the land area where *construction activity(ies)* will occur. See definition for "*Commence (Commencement of) Construction Activities"* and "*Larger Common Plan of Development or Sale" also.*

Dewatering – means the act of draining rainwater and/or groundwater from building foundations, vaults or excavations/trenches.

Direct Discharge (to a specific surface waterbody) - means that runoff flows from a *construction site* by overland flow and the first point of discharge is the specific surface waterbody, or runoff flows from a *construction site* to a separate storm sewer system

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

and the first point of discharge from the separate storm sewer system is the specific surface waterbody.

Discharge(s) - means any addition of any pollutant to waters of the State through an outlet or *point source*.

Embankment –means an earthen or rock slope that supports a road/highway.

Endangered or Threatened Species – see 6 NYCRR Part 182 of the Department's rules and regulations for definition of terms and requirements.

Environmental Conservation Law (ECL) - means chapter 43-B of the Consolidated Laws of the State of New York, entitled the Environmental Conservation Law.

Equivalent (Equivalence) – means that the practice or measure meets all the performance, longevity, maintenance, and safety objectives of the technical standard and will provide an equal or greater degree of water quality protection.

Final Stabilization - means that all soil disturbance activities have ceased and a uniform, perennial vegetative cover with a density of eighty (80) percent over the entire pervious surface has been established; or other equivalent stabilization measures, such as permanent landscape mulches, rock rip-rap or washed/crushed stone have been applied on all disturbed areas that are not covered by permanent structures, concrete or pavement.

General SPDES permit - means a SPDES permit issued pursuant to 6 NYCRR Part 750-1.21 and Section 70-0117 of the ECL authorizing a category of discharges.

Groundwater(s) - means waters in the saturated zone. The saturated zone is a subsurface zone in which all the interstices are filled with water under pressure greater than that of the atmosphere. Although the zone may contain gas-filled interstices or interstices filled with fluids other than water, it is still considered saturated.

Historic Property – means any building, structure, site, object or district that is listed on the State or National Registers of Historic Places or is determined to be eligible for listing on the State or National Registers of Historic Places.

Impervious Area (Cover) - means all impermeable surfaces that cannot effectively infiltrate rainfall. This includes paved, concrete and gravel surfaces (i.e. parking lots, driveways, roads, runways and sidewalks); building rooftops and miscellaneous impermeable structures such as patios, pools, and sheds.

Infeasible – means not technologically possible, or not economically practicable and achievable in light of best industry practices.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

Larger Common Plan of Development or Sale - means a contiguous area where multiple separate and distinct *construction activities* are occurring, or will occur, under one plan. The term "plan" in "larger common plan of development or sale" is broadly defined as any announcement or piece of documentation (including a sign, public notice or hearing, marketing plan, advertisement, drawing, permit application, State Environmental Quality Review Act (SEQRA) environmental assessment form or other documents, zoning request, computer design, etc.) or physical demarcation (including boundary signs, lot stakes, surveyor markings, etc.) indicating that *construction activities* may occur on a specific plot.

For discrete construction projects that are located within a larger common plan of development or sale that are at least 1/4 mile apart, each project can be treated as a separate plan of development or sale provided any interconnecting road, pipeline or utility project that is part of the same "common plan" is not concurrently being disturbed.

Minimize – means reduce and/or eliminate to the extent achievable using control measures (including best management practices) that are technologically available and economically practicable and achievable in light of best industry practices.

Municipal Separate Storm Sewer (MS4) - a conveyance or system of conveyances (including roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, man-made channels, or storm drains):

(i) Owned or operated by a State, city, town, borough, county, parish, district, association, or other public body (created by or pursuant to State law) having jurisdiction over disposal of sewage, industrial wastes, stormwater, or other wastes, including special districts under State law such as a sewer district, flood control district or drainage district, or similar entity, or an Indian tribe or an authorized Indian tribal organization, or a designated and approved management agency under section 208 of the CWA that discharges to surface waters of the State*;*
(ii) Designed or used for collecting or conveying stormwater;
(iii) Which is not a *combined sewer*; and
(iv) Which is not part of a Publicly Owned Treatment Works (POTW) as defined at 40 CFR 122.2.

National Pollutant Discharge Elimination System (NPDES) - means the national system for the issuance of wastewater and stormwater permits under the Federal Water Pollution Control Act (Clean Water Act).

Natural Buffer –means an undisturbed area with natural cover running along a surface water (e.g. wetland, stream, river, lake, etc.).

New Development – means any land disturbance that does not meet the definition of Redevelopment Activity included in this appendix.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

New York State Erosion and Sediment Control Certificate Program – a certificate program that establishes and maintains a process to identify and recognize individuals who are capable of developing, designing, inspecting and maintaining erosion and sediment control plans on projects that disturb soils in New York State. The certificate program is administered by the New York State Conservation District Employees Association.

NOI Acknowledgment Letter - means the letter that the Department sends to an owner or operator to acknowledge the Department's receipt and acceptance of a complete Notice of Intent. This letter documents the owner's or operator's authorization to discharge in accordance with the general permit for stormwater discharges from *construction activity*.

Nonpoint Source - means any source of water pollution or pollutants which is not a discrete conveyance or *point source* permitted pursuant to Title 7 or 8 of Article 17 of the Environmental Conservation Law (see ECL Section 17-1403).

Overbank –means flow events that exceed the capacity of the stream channel and spill out into the adjacent floodplain.

Owner or Operator - means the person, persons or legal entity which owns or leases the property on which the *construction activity* is occurring; an entity that has operational control over the construction plans and specifications, including the ability to make modifications to the plans and specifications; and/or an entity that has day-to-day operational control of those activities at a project that are necessary to ensure compliance with the permit conditions.

Performance Criteria – means the design criteria listed under the "Required Elements" sections in Chapters 5, 6 and 10 of the technical standard, New York State Stormwater Management Design Manual, dated January 2015. It does not include the Sizing Criteria (i.e. WQv, RRv, Cpv, Qp and Qf) in Part I.C.2. of the permit.

Point Source - means any discernible, confined and discrete conveyance, including but not limited to any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, vessel or other floating craft, or landfill leachate collection system from which *pollutants* are or may be discharged.

Pollutant - means dredged spoil, filter backwash, solid waste, incinerator residue, sewage, garbage, sewage sludge, munitions, chemical wastes, biological materials, radioactive materials, heat, wrecked or discarded equipment, rock, sand and industrial, municipal, agricultural waste and ballast discharged into water; which may cause or might reasonably be expected to cause pollution of the waters of the state in contravention of the standards or guidance values adopted as provided in 6 NYCRR Parts 700 et seq .

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

Qualified Inspector - means a person that is knowledgeable in the principles and practices of erosion and sediment control, such as a licensed Professional Engineer, Certified Professional in Erosion and Sediment Control (CPESC), Registered Landscape Architect, New York State Erosion and Sediment Control Certificate Program holder or other Department endorsed individual(s).

It can also mean someone working under the direct supervision of, and at the same company as, the licensed Professional Engineer or Registered Landscape Architect, provided that person has training in the principles and practices of erosion and sediment control. Training in the principles and practices of erosion and sediment control means that the individual working under the direct supervision of the licensed Professional Engineer or Registered Landscape Architect has received four (4) hours of Department endorsed training in proper erosion and sediment control principles from a Soil and Water Conservation District, or other Department endorsed entity. After receiving the initial training, the individual working under the direct supervision of the licensed Professional Engineer or Registered Landscape Architect shall receive four (4) hours of training every three (3) years.

It can also mean a person that meets the *Qualified Professional* qualifications in addition to the *Qualified Inspector* qualifications.

Note: Inspections of any post-construction stormwater management practices that include structural components, such as a dam for an impoundment, shall be performed by a licensed Professional Engineer.

Qualified Professional - means a person that is knowledgeable in the principles and practices of stormwater management and treatment, such as a licensed Professional Engineer, Registered Landscape Architect or other Department endorsed individual(s). Individuals preparing SWPPPs that require the post-construction stormwater management practice component must have an understanding of the principles of hydrology, water quality management practice design, water quantity control design, and, in many cases, the principles of hydraulics. All components of the SWPPP that involve the practice of engineering, as defined by the NYS Education Law (see Article 145), shall be prepared by, or under the direct supervision of, a professional engineer licensed to practice in the State of New York.

Redevelopment Activity(ies) – means the disturbance and reconstruction of existing impervious area, including impervious areas that were removed from a project site within five (5) years of preliminary project plan submission to the local government (i.e. site plan, subdivision, etc.).

Regulated, Traditional Land Use Control MS4 - means a city, town or village with land use control authority that is authorized to discharge under New York State DEC's

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

SPDES General Permit For Stormwater Discharges from Municipal Separate Stormwater Sewer Systems (MS4s) or the City of New York's Individual SPDES Permit for their Municipal Separate Storm Sewer Systems (NY-0287890).

Routine Maintenance Activity - means *construction activity* that is performed to maintain the original line and grade, hydraulic capacity, or original purpose of a facility, including, but not limited to:

- Re-grading of gravel roads or parking lots,
- Cleaning and shaping of existing roadside ditches and culverts that maintains the approximate original line and grade, and hydraulic capacity of the ditch,
- Cleaning and shaping of existing roadside ditches that does not maintain the approximate original grade, hydraulic capacity and purpose of the ditch if the changes to the line and grade, hydraulic capacity or purpose of the ditch are installed to improve water quality and quantity controls (e.g. installing grass lined ditch),
- Placement of aggregate shoulder backing that stabilizes the transition between the road shoulder and the ditch or *embankment*,
- Full depth milling and filling of existing asphalt pavements, replacement of concrete pavement slabs, and similar work that does not expose soil or disturb the bottom six (6) inches of subbase material,
- Long-term use of equipment storage areas at or near highway maintenance facilities,
- Removal of sediment from the edge of the highway to restore a previously existing sheet-flow drainage connection from the highway surface to the highway ditch or *embankment*,
- Existing use of Canal Corp owned upland disposal sites for the canal, and
- Replacement of curbs, gutters, sidewalks and guide rail posts.

Site limitations – means site conditions that prevent the use of an infiltration technique and or infiltration of the total WQv. Typical site limitations include: seasonal high groundwater, shallow depth to bedrock, and soils with an infiltration rate less than 0.5 inches/hour. The existence of site limitations shall be confirmed and documented using actual field testing (i.e. test pits, soil borings, and infiltration test) or using information from the most current United States Department of Agriculture (USDA) Soil Survey for the County where the project is located.

Sizing Criteria – means the criteria included in Part I.C.2 of the permit that are used to size post-construction stormwater management control practices. The criteria include; Water Quality Volume (WQv), Runoff Reduction Volume (RRv), Channel Protection Volume (Cpv), *Overbank* Flood (Qp), and Extreme Flood (Qf).

State Pollutant Discharge Elimination System (SPDES) - means the system established pursuant to Article 17 of the ECL and 6 NYCRR Part 750 for issuance of permits authorizing discharges to the waters of the state.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

Steep Slope – means land area designated on the current United States Department of Agriculture ("USDA") Soil Survey as Soil Slope Phase "D", (provided the map unit name is inclusive of slopes greater than 25%) , or Soil Slope Phase E or F, (regardless of the map unit name), or a combination of the three designations.

Streambank – as used in this permit, means the terrain alongside the bed of a creek or stream. The bank consists of the sides of the channel, between which the flow is confined.

Stormwater Pollution Prevention Plan (SWPPP) – means a project specific report, including construction drawings, that among other things: describes the construction activity(ies), identifies the potential sources of pollution at the *construction site*; describes and shows the stormwater controls that will be used to control the pollutants (i.e. erosion and sediment controls; for many projects, includes post-construction stormwater management controls); and identifies procedures the *owner or operator* will implement to comply with the terms and conditions of the permit. See Part III of the permit for a complete description of the information that must be included in the SWPPP.

Surface Waters of the State - shall be construed to include lakes, bays, sounds, ponds, impounding reservoirs, springs, rivers, streams, creeks, estuaries, marshes, inlets, canals, the Atlantic ocean within the territorial seas of the state of New York and all other bodies of surface water, natural or artificial, inland or coastal, fresh or salt, public or private (except those private waters that do not combine or effect a junction with natural surface waters), which are wholly or partially within or bordering the state or within its jurisdiction. Waters of the state are further defined in 6 NYCRR Parts 800 to 941.

Temporarily Ceased – means that an existing disturbed area will not be disturbed again within 14 calendar days of the previous soil disturbance.

Temporary Stabilization - means that exposed soil has been covered with material(s) as set forth in the technical standard, New York Standards and Specifications for Erosion and Sediment Control, to prevent the exposed soil from eroding. The materials can include, but are not limited to, mulch, seed and mulch, and erosion control mats (e.g. jute twisted yarn, excelsior wood fiber mats).

Total Maximum Daily Loads (TMDLs) - A TMDL is the sum of the allowable loads of a single pollutant from all contributing point and *nonpoint source*s. It is a calculation of the maximum amount of a pollutant that a waterbody can receive on a daily basis and still meet *water quality standards*, and an allocation of that amount to the pollutant's sources. A TMDL stipulates wasteload allocations (WLAs) for *point source* discharges, load allocations (LAs) for *nonpoint source*s, and a margin of safety (MOS).

Trained Contractor - means an employee from the contracting (construction) company, identified in Part III.A.6., that has received four (4) hours of Department endorsed

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

training in proper erosion and sediment control principles from a Soil and Water Conservation District, or other Department endorsed entity. After receiving the initial training, the *trained contractor* shall receive four (4) hours of training every three (3) years.

It can also mean an employee from the contracting (construction) company, identified in Part III.A.6., that meets the *qualified inspector* qualifications (e.g. licensed Professional Engineer, Certified Professional in Erosion and Sediment Control (CPESC), Registered Landscape Architect, New York State Erosion and Sediment Control Certificate Program holder, or someone working under the direct supervision of, and at the same company as, the licensed Professional Engineer or Registered Landscape Architect, provided they have received four (4) hours of Department endorsed training in proper erosion and sediment control principles from a Soil and Water Conservation District, or other Department endorsed entity).

The *trained contractor* is responsible for the day to day implementation of the SWPPP.

Uniform Procedures Act (UPA) Permit - means a permit required under 6 NYCRR Part 621 of the Environmental Conservation Law (ECL), Article 70.

Water Quality Standard - means such measures of purity or quality for any waters in relation to their reasonable and necessary use as promulgated in 6 NYCRR Part 700 et seq.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

APPENDIX B – Required SWPPP Components by Project Type

Table 1
Construction Activities that Require the Preparation of a SWPPP That Only Includes Erosion and Sediment Controls

The following construction activities that involve soil disturbances of one (1) or more acres of land, but less than five (5) acres:

- Single family home not located in one of the watersheds listed in Appendix C or not *directly discharging* to one of the 303(d) segments listed in Appendix E
- Single family residential subdivisions with 25% or less impervious cover at total site build-out and not located in one of the watersheds listed in Appendix C and not directly discharging to one of the 303(d) segments listed in Appendix E
- Construction of a barn or other *agricultural building*, silo, stock yard or pen.

The following construction activities that involve soil disturbances between five thousand (5000) square feet and one (1) acre of land:

All construction activities located in the watersheds identified in Appendix D that involve soil disturbances between five thousand (5,000) square feet and one (1) acre of land.

The following construction activities that involve soil disturbances of one (1) or more acres of land:

- Installation of underground, linear utilities; such as gas lines, fiber-optic cable, cable TV, electric, telephone, sewer mains, and water mains
- Environmental enhancement projects, such as wetland mitigation projects, stormwater retrofits and stream restoration projects
- Pond construction
- Linear bike paths running through areas with vegetative cover, including bike paths surfaced with an impervious cover
- Cross-country ski trails and walking/hiking trails
- Sidewalk, bike path or walking path projects, surfaced with an impervious cover, that are not part of residential, commercial or institutional development;
- Sidewalk, bike path or walking path projects, surfaced with an impervious cover, that include incidental shoulder or curb work along an existing highway to support construction of the sidewalk, bike path or walking path.
- Slope stabilization projects
- Slope flattening that changes the grade of the site, but does not significantly change the runoff characteristics

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

Table 1 (Continued) Construction Activities that Require the Preparation of a SWPPP That Only Includes Erosion and Sediment Controls

The following construction activities that involve soil disturbances of one (1) or more acres of land:

- Spoil areas that will be covered with vegetation
- Vegetated open space projects (i.e. recreational parks, lawns, meadows, fields, downhill ski trails) excluding projects that *alter hydrology from pre to post development* conditions,
- Athletic fields (natural grass) that do not include the construction or reconstruction of *impervious area* and do not *alter hydrology from pre to post development* conditions
- Demolition project where vegetation will be established, and no redevelopment is planned
- Overhead electric transmission line project that does not include the construction of permanent access roads or parking areas surfaced with *impervious cover*
- Structural practices as identified in Table II in the "Agricultural Management Practices Catalog for Nonpoint Source Pollution in New York State", excluding projects that involve soil disturbances of greater than five acres and construction activities that include the construction or reconstruction of impervious area
- Temporary access roads, median crossovers, detour roads, lanes, or other temporary impervious areas that will be restored to pre-construction conditions once the construction activity is complete

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

Table 2
CONSTRUCTION ACTIVITIES THAT REQUIRE THE PREPARATION OF A SWPPP THAT INCLUDES POST-CONSTRUCTION STORMWATER MANAGEMENT PRACTICES

The following construction activities that involve soil disturbances of one (1) or more acres of land:

- Single family home located in one of the watersheds listed in Appendix C or *directly discharging* to one of the 303(d) segments listed in Appendix E
- Single family home that disturbs five (5) or more acres of land
- Single family residential subdivisions located in one of the watersheds listed in Appendix C or *directly discharging* to one of the 303(d) segments listed in Appendix E
- Single family residential subdivisions that involve soil disturbances of between one (1) and five (5) acres of land with greater than 25% impervious cover at total site build-out
- Single family residential subdivisions that involve soil disturbances of five (5) or more acres of land, and single family residential subdivisions that involve soil disturbances of less than five (5) acres that are part of a larger common plan of development or sale that will ultimately disturb five or more acres of land
- Multi-family residential developments; includes duplexes, townhomes, condominiums, senior housing complexes, apartment complexes, and mobile home parks
- Airports
- Amusement parks
- Breweries, cideries, and wineries, including establishments constructed on agricultural land
- Campgrounds
- Cemeteries that include the construction or reconstruction of impervious area (>5% of disturbed area) or *alter the hydrology from pre to post development* conditions
- Commercial developments
- Churches and other places of worship
- Construction of a barn or other *agricultural building* (e.g. silo) and structural practices as identified in Table II in the "Agricultural Management Practices Catalog for Nonpoint Source Pollution in New York State" that include the construction or reconstruction of *impervious area*, excluding projects that involve soil disturbances of less than five acres.
- Golf courses
- Institutional development; includes hospitals, prisons, schools and colleges
- Industrial facilities; includes industrial parks
- Landfills
- Municipal facilities; includes highway garages, transfer stations, office buildings, POTW's, water treatment plants, and water storage tanks
- Office complexes
- Playgrounds that include the construction or reconstruction of impervious area
- Sports complexes
- Racetracks; includes racetracks with earthen (dirt) surface
- Road construction or reconstruction, including roads constructed as part of the construction activities listed in Table 1

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

Table 2 (Continued)

CONSTRUCTION ACTIVITIES THAT REQUIRE THE PREPARATION OF A SWPPP THAT INCLUDES POST-CONSTRUCTION STORMWATER MANAGEMENT PRACTICES

The following construction activities that involve soil disturbances of one (1) or more acres of land:

- Parking lot construction or reconstruction, including parking lots constructed as part of the construction activities listed in Table 1
- Athletic fields (natural grass) that include the construction or reconstruction of impervious area (>5% of disturbed area) or *alter the hydrology from pre to post development* conditions
- Athletic fields with artificial turf
- Permanent access roads, parking areas, substations, compressor stations and well drilling pads, surfaced with *impervious cover,* and constructed as part of an over-head electric transmission line project, wind-power project, cell tower project, oil or gas well drilling project, sewer or water main project or other linear utility project
- Sidewalk, bike path or walking path projects, surfaced with an impervious cover, that are part of a residential, commercial or institutional development
- Sidewalk, bike path or walking path projects, surfaced with an impervious cover, that are part of a highway construction or reconstruction project
- All other construction activities that include the construction or reconstruction of *impervious area* or *alter the hydrology from pre to post development* conditions, and are not listed in Table 1

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

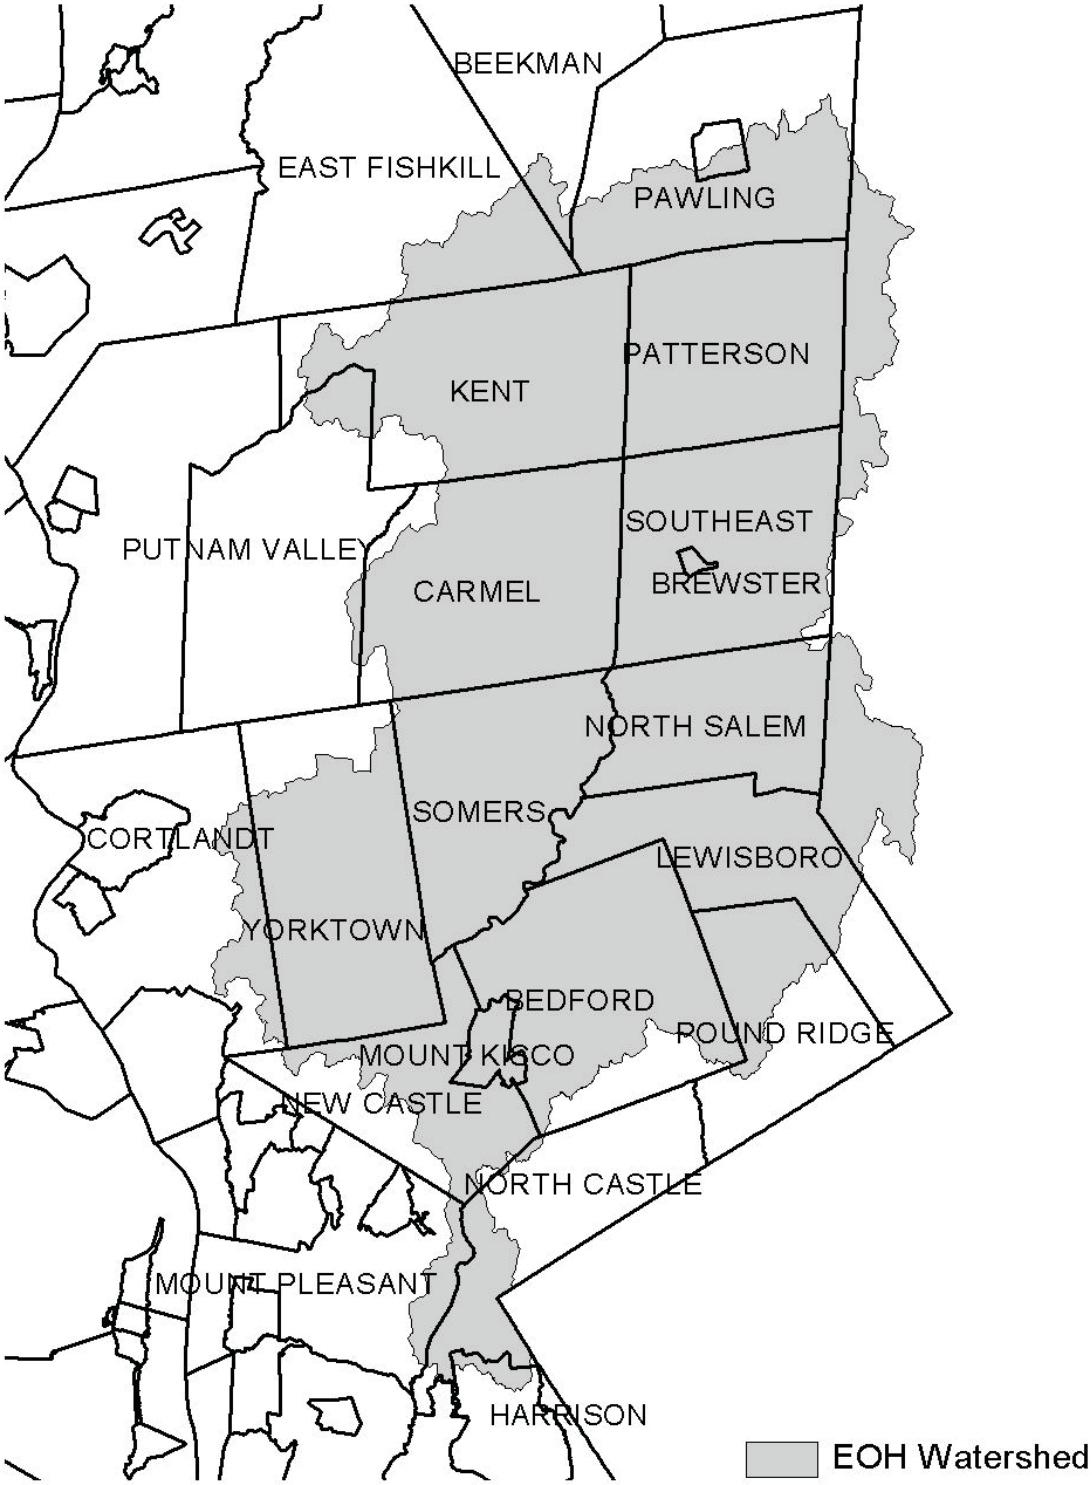
APPENDIX C – Watersheds Requiring Enhanced Phosphorus Removal



Watersheds where *owners or operators* of construction activities identified in Table 2 of Appendix B must prepare a SWPPP that includes post-construction stormwater management practices designed in conformance with the Enhanced Phosphorus Removal Standards included in the technical standard, New York State Stormwater Management Design Manual ("Design Manual").

- Entire New York City Watershed located east of the Hudson River - Figure 1
- Onondaga Lake Watershed - Figure 2
- Greenwood Lake Watershed -Figure 3
- Oscawana Lake Watershed – Figure 4
- Kinderhook Lake Watershed – Figure 5

APPENDIX D – Watersheds with Lower Disturbance Threshold

Watersheds where *owners or operators* of construction activities that involve soil disturbances between five thousand (5000) square feet and one (1) acre of land must obtain coverage under this permit.

Entire New York City Watershed that is located east of the Hudson River - See Figure 1 in Appendix C

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

APPENDIX E – 303(d) Segments Impaired by Construction Related Pollutant(s)

List of 303(d) segments impaired by pollutants related to *construction activity* (e.g. silt, sediment or nutrients). The list was developed using "The Final New York State 2016 Section 303(d) List of Impaired Waters Requiring a TMDL/Other Strategy" dated November 2016. *Owners or operators* of single family home and single family residential subdivisions with 25% or less total impervious cover at total site build-out that involve soil disturbances of one or more acres of land, but less than 5 acres, and *directly discharge* to one of the listed segments below shall prepare a SWPPP that includes post-construction stormwater management practices designed in conformance with the New York State Stormwater Management Design Manual ("Design Manual"), dated January 2015.

COUNTY	WATERBODY	POLLUTANT
Albany	Ann Lee (Shakers) Pond, Stump Pond	Nutrients

INSPECTION REPORT (Page 1 of 2)

FORM SWPPP-3

Proposed Site Redevelopment - 4548-4564 Main Street - Amherst, NY 14226

Inspections/reports are required at least once every seven (7) calendar days.

Inspection Type: ☐ **Routine (every 7 calendar days)** ☐ **Routine (every 30 calendar days)** ☐ **Storm**

Date: _____ Week Ending: _____

Weather/Storm Event Information:

Storm Start Time: _____ Storm Duration: _____

Time Elapsed Since Last Storm: _____ Approximate Amount of Rainfall (inches): _____

Based on the results of the inspection, necessary control modifications shall be implemented within seven (7) calendar days. These reports shall be kept on file as part of the Storm Water Pollution Prevention Plan for at least five (5) years from the date of completion and submission of the Final Stabilization Certification/Termination Checklist and Notice of Termination. A copy of the SWPPP shall be kept at the site at all times during construction.

Certification Statement:
"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Name of Inspector: _____ Title of Inspector: _____

Qualifications of Inspector: _____

_____

Inspector's Signature: _____

Construction phasing/sequencing is consistent with the SWPPP and Erosion Control Plans: ☐ **Yes** ☐ **No**

Compliance Certification
I certify that, based on no incidents of non-compliance identified during the inspection, the site is in compliance with the SWPPP and the Construction General Permit.

Name of Operator's Duly Authorized Representative (Printed): _____

Signature of Operator's Duly Authorized Representative: _____

Date: _____

*Note: This Compliance Certification is only to be signed by the Operator's Duly Authorized Representative (Project Manager) when there are no **"unsatisfactory" conditions and the construction phasing/sequencing is consistent with the SWPPP, rendering the site in full compliance with** the SWPPP and the Construction General Permit.

MODIFICATION REPORT

FORM SWPPP-7

Proposed Site Redevelopment - 4548-4564 Main Street - Amherst, NY 14226

CHANGES REQUIRED FOR STORM WATER POLLUTION PREVENTION PLAN

The SWPPP must be amended whenever there is a change in design, construction, operation, or maintenance at the construction site that has a significant effect on the discharge of pollutants to the waters of the United States that has not been previously addressed in the SWPPP, if inspections or investigations by site staff, local, state or federal officials determine that discharges are causing water quality exceedances or the SWPPP is ineffective in eliminating or significantly minimizing pollutants in storm water discharges from the construction site, or based on the results of an inspection, the SWPPP must be modified to include additional or modified BMPs designed to correct identified problems. Revisions must be completed within seven (7) calendar days following the inspection.

STORM WATER POLLUTION PREVENTION PLAN
REPORTABLE QUANTITY RELEASE FORM

FORM SWPPP-9

Proposed Site Redevelopment - 4548-4564 Main Street - Amherst, NY 14226

The discharges of hazardous substances or oil in storm water discharges from construction sites must be prevented or minimized in accordance with the SWPPP. Where a release containing a hazardous substance or oil in an amount equal to or in excess of a reportable quantity established under 40CFR110, 40CFR117 and 40CFR302 occurs, the following steps must be taken:

1. All measures must be taken to contain and abate the spill and to prevent the discharge of the pollutant(s) to storm water or off-site.

2. Notice must be provided to the National Response Center (NRC) at 1-800-424-8802 and the NYSDEC in accordance with regulations referenced above as soon as site staff has knowledge of the discharge.

3. Contact the Project Manager or Engineer of Record immediately upon knowledge of release.

4. The SWPPP must be modified within seven (7) calendar days of knowledge of the discharge to provide a description of the release, the circumstances leading to the release, and the date of the release. The plans must identify measures to prevent the recurrence of such releases and to respond to such releases.

Date of Spill	Material Spilled	Approximate Quantity of Spill (in gallons)	Agency(s) Notified	Date of Notification	SWPPP Revision Date

STORM WATER POLLUTION PREVENTION PLAN
IMPLEMENTATION SCHEDULE

FORM SWPPP-10

Proposed Site Redevelopment - 4548-4564 Main Street - Amherst, NY 14226

*To be completed prior to initiation of construction by the contractor.

The Contractor will be responsible for implementing all erosion control and storm water management control structures. The Contractor may designate these tasks to certain subcontractors as they see fit, but the ultimate responsibility for implementing these controls and ensuring their proper functioning remains with the Contractor.

Refer to Section 812.3 for Sequence of Activities

Construction Activity	Proposed Initiation Date	Proposed Completion Date	Contractor Responsible for Implementation

Certification Statement - Owner/Operator

I have read or been advised of the permit conditions and believe that I understand them. I also understand that, under the terms of the permit, there may be reporting requirements. I hereby certify that this document and the corresponding documents were prepared under my direction or supervision. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations. I further understand that coverage under the general permit will be identified in the acknowledgment that I will receive as a result of submitting this NOI and can be as long as sixty (60) business days as provided for in the general permit. I also understand that, by submitting this NOI, I am acknowledging that the SWPPP has been developed and will be implemented as the first element of construction, and agreeing to comply with all the terms and conditions of the general permit for which this NOI is being submitted.

(NOTE: Submit completed form to address above)

NOTICE OF TERMINATION for Storm Water Discharges Authorized under the SPDES General Permit for Construction Activity

Please indicate your permit identification number: NYR ___ ___ ___ ___ ___ ___

I. Owner or Operator Information

1. Owner/Operator Name:

2. Street Address:

3. City/State/Zip:

4. Contact Person: | 4a.Telephone:

4b. Contact Person E-Mail:

II. Project Site Information

5. Project/Site Name:

6. Street Address:

7. City/Zip:

8. County:

III. Reason for Termination

9a. □ All disturbed areas have achieved final stabilization in accordance with the general permit and SWPPP. ***Date final stabilization completed** (month/year): _____

9b. □ Permit coverage has been transferred to new owner/operator. Indicate new owner/operator's permit identification number: NYR ___ ___ ___ ___ ___ ___
(Note: Permit coverage can not be terminated by owner identified in I.1. above until new owner/operator obtains coverage under the general permit)

9c. □ Other (Explain on Page 2)

IV. Final Site Information:

10a. Did this construction activity require the development of a SWPPP that includes post-construction stormwater management practices? □ yes □ no (If no, go to question 10f.)

10b. Have all post-construction stormwater management practices included in the final SWPPP been constructed? □ yes □ no (If no, explain on Page 2)

10c. Identify the entity responsible for long-term operation and maintenance of practice(s)?

_____

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

NOTICE OF TERMINATION for Storm Water Discharges Authorized under the SPDES General Permit for Construction Activity - continued

10d. Has the entity responsible for long-term operation and maintenance been given a copy of the operation and maintenance plan required by the general permit? □ yes □ no

10e. Indicate the method used to ensure long-term operation and maintenance of the post-construction stormwater management practice(s):

□ Post-construction stormwater management practice(s) and any right-of-way(s) needed to maintain practice(s) have been deeded to the municipality.

□ Executed maintenance agreement is in place with the municipality that will maintain the post-construction stormwater management practice(s).

□ For post-construction stormwater management practices that are privately owned, a mechanism is in place that requires operation and maintenance of the practice(s) in accordance with the operation and maintenance plan, such as a deed covenant in the owner or operator's deed of record.

□ For post-construction stormwater management practices that are owned by a public or private institution (e.g. school, university or hospital), government agency or authority, or public utility; policy and procedures are in place that ensures operation and maintenance of the practice(s) in accordance with the operation and maintenance plan.

10f. Provide the total area of impervious surface (i.e. roof, pavement, concrete, gravel, etc.) constructed within the disturbance area? _____ (acres)

11. Is this project subject to the requirements of a regulated, traditional land use control MS4? □ yes □ no

(If Yes, complete section VI - "MS4 Acceptance" statement

V. Additional Information/Explanation:

(Use this section to answer questions 9c. and 10b., if applicable)

VI. MS4 Acceptance - MS4 Official (principal executive officer or ranking elected official) or Duly Authorized Representative (Note: Not required when 9b. is checked -transfer of coverage)

I have determined that it is acceptable for the owner or operator of the construction project identified in question 5 to submit the Notice of Termination at this time.

3. Backfill placed and tamped by hand under “haunches” of pipe		
4. Remaining backfill placed in max. 8 inch lifts using small power tamping equipment until 2 feet cover over pipe is reached		

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

CONSTRUCTION SEQUENCE	SATISFACTORY/ UNSATISFACTORY	COMMENTS
3. Pipe Spillway Installation		
Concrete pipe		
1. Pipe set on blocks or concrete slab for pouring of low cradle		
2. Pipe installed with rubber gasket joints with no spalling in gasket interface area		
3. Excavation for lower half of anti-seep collar(s) with reinforcing steel set		
4. Entire area where anti-seep collar(s) will come in contact with pipe coated with mastic or other approved waterproof sealant		
5. Low cradle and bottom half of anti-seep collar installed as monolithic pour and of an approved mix		
6. Upper half of anti-seep collar(s) formed with reinforcing steel set		
7. Concrete for collar of an approved mix and vibrated into place (protected from freezing while curing, if necessary)		
8. Forms stripped and collar inspected for honeycomb prior to backfilling. Parge if necessary.		
C. Backfilling		
Fill placed in maximum 8 inch lifts		
Backfill taken minimum 2 feet above top of anti-seep collar elevation before traversing with heavy equipment		

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

CONSTRUCTION SEQUENCE	SATISFACTORY/ UNSATISFACTORY	COMMENTS
4. Riser / Outlet Structure Installation		
Riser located within embankment		
A. Metal riser		
Riser base excavated or formed on stable subgrade to design dimensions		
Set on blocks to design elevations and plumbed		
Reinforcing bars placed at right angles and projecting into sides of riser		
Concrete poured so as to fill inside of riser to invert of barrel		
B. Pre-cast concrete structure		
Dry and stable subgrade		
Riser base set to design elevation		
If more than one section, no spalling in gasket interface area; gasket or approved caulking material placed securely		
Watertight and structurally sound collar or gasket joint where structure connects to pipe spillway		
C. Poured concrete structure		
Footing excavated or formed on stable subgrade, to design dimensions with reinforcing steel set		
Structure formed to design dimensions, with reinforcing steel set as per plan		
Concrete of an approved mix and vibrated into place (protected from freezing while curing, if necessary)		
Forms stripped & inspected for “honeycomb” prior to backfilling; parge if necessary		

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

CONSTRUCTION SEQUENCE	SATISFACTORY/ UNSATISFACTORY	COMMENTS
5. Embankment Construction		
Fill material		
Compaction		
Embankment		
1. Fill placed in specified lifts and compacted with appropriate equipment		
2. Constructed to design cross-section, side slopes and top width		
3. Constructed to design elevation plus allowance for settlement		
6. Impounded Area Construction		
Excavated / graded to design contours and side slopes		
Inlet pipes have adequate outfall protection		
Forebay(s)		
Pond benches		
7. Earth Emergency Spillway Construction		
Spillway located in cut or structurally stabilized with riprap, gabions, concrete, etc.		
Excavated to proper cross-section, side slopes and bottom width		
Entrance channel, crest, and exit channel constructed to design grades and elevations		

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

CONSTRUCTION SEQUENCE	SATISFACTORY / UNSATISFACTORY	COMMENTS
8. Outlet Protection		
A. End section		
Securely in place and properly backfilled		
B. Endwall		
Footing excavated or formed on stable subgrade, to design dimensions and reinforcing steel set, if specified		
Endwall formed to design dimensions with reinforcing steel set as per plan		
Concrete of an approved mix and vibrated into place (protected from freezing, if necessary)		
Forms stripped and structure inspected for "honeycomb" prior to backfilling; parge if necessary		
C. Riprap apron / channel		
Apron / channel excavated to design cross-section with proper transition to existing ground		
Filter fabric in place		
Stone sized as per plan and uniformly place at the thickness specified		
9. Vegetative Stabilization		
Approved seed mixture or sod		
Proper surface preparation and required soil amendments		
Excelsior mat or other stabilization, as per plan		

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

CONSTRUCTION SEQUENCE	SATISFACTORY/ UNSATISFACTORY	COMMENTS
10. Miscellaneous		
Drain for ponds having a permanent pool		
Trash rack / anti-vortex device secured to outlet structure		
Trash protection for low flow pipes, orifices, etc.		
Fencing (when required)		
Access road		
Set aside for clean-out maintenance		
11. Stormwater Wetlands		
Adequate water balance		
Variety of depth zones present		
Approved pondscaping plan in place Reinforcement budget for additional plantings		
Plants and materials ordered 6 months prior to construction		
Construction planned to allow for adequate planting and establishment of plant community (April-June planting window)		
Wetland buffer area preserved to maximum extent possible

CONSTRUCTION SEQUENCE	SATISFACTORY/ UNSATISFACTORY	COMMENTS
1. Pre-Construction		
Pre-construction meeting		
Runoff diverted		
Facility area cleared		
If designed as exfilter, soil testing for permeability		
Facility location staked out		
2. Excavation		
Size and location		
Lateral slopes completely level		
If designed as exfilter, ensure that excavation does not compact susoils.		
Longitudinal slopes within design range		

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

CONSTRUCTION SEQUENCE	SATISFACTORY / UNSATISFACTORY	COMMENTS
3. Structural Components		
Stone diaphragm installed correctly		
Outlets installed correctly		
Underdrain		
Pretreatment devices installed		
Soil bed composition and texture		
4. Vegetation		
Complies with planting specs		
Topsoil adequate in composition and placement		
Adequate erosion control measures in place		
5. Final Inspection		
Dimensions		
Proper stone diaphragm		
Proper outlet		
Soil/ filter bed permeability testing		
Effective stand of vegetation and stabilization		
Construction generated sediments removed		
Contributing watershed stabilized before flow is diverted to the practice

Bioretention Operation, Maintenance and Management Inspection Checklist

Project:
Location:
Site Status:

Date:

Time:

Inspector:

MAINTENANCE ITEM	SATISFACTORY / UNSATISFACTORY	COMMENTS
1. Debris Cleanout (Monthly)		
Bioretention and contributing areas clean of debris		
No dumping of yard wastes into practice		
Litter (branches, etc.) have been removed		
2. Vegetation (Monthly)		
Plant height not less than design water depth		
Fertilized per specifications		
Plant composition according to approved plans		
No placement of inappropriate plants		
Grass height not greater than 6 inches		
No evidence of erosion		
3. Check Dams/Energy Dissipaters/Sumps (Annual, After Major Storms)		
No evidence of sediment buildup		

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

MAINTENANCE ITEM	SATISFACTORY / UNSATISFACTORY	COMMENTS
Sumps should not be more than 50% full of sediment		
No evidence of erosion at downstream toe of drop structure		
4. Dewatering (Monthly)		
Dewaters between storms		
No evidence of standing water		
5. Sediment Deposition (Annual)		
Swale clean of sediments		
Sediments should not be > 20% of swale design depth		
6. Outlet/Overflow Spillway (Annual, After Major Storms)		
Good condition, no need for repair		
No evidence of erosion		
No evidence of any blockages		
7. Integrity of Filter Bed (Annual)		
Filter bed has not been blocked or filled inappropriately

GENERAL NOTES:
1. INSTALL ALL MATERIALS TO MANUFACTURER'S RECOMMENDATIONS AND BEST STANDARDS OF TRADE INVOLVED.
2. SUBSTITUTIONS SHALL BE MADE ONLY WITH OWNER'S APPROVAL AND BE OF EQUIVALENT QUALITY TO WHAT IS SPECIFIED.
3. WORK SHALL BE COMPLETED IN STRICT ACCORDANCE WITH ALL LOCAL CODES AND OSHA SAFETY RULES AND REGULATIONS.
4. CONTRACTOR SHALL VERIFY ALL EXISTING CONDITIONS AND DIMENSIONS AT THE SITE. NOTIFY OWNER & ENGINEER OF DISCREPANCIES IN CONDITIONS SHOWN ON DRAWINGS PRIOR TO PROCEEDING WITH THE WORK.
5. CONTRACTOR SHALL BE RESPONSIBLE FOR PROTECTION OF ANY EXISTING STRUCTURES TO REMAIN AND ANY FINISH MATERIAL INSTALLED WHILE WORKING ON OTHER COMPONENTS.
6. CONTRACTOR SHALL KEEP JOB FREE OF DEBRIS AND MAKE FINAL CLEANUP TO THE SATISFACTION OF OWNER.
7. CONTRACTOR SHALL ASCERTAIN THE LOCATION OF ALL UTILITIES PRIOR TO CONSTRUCTION SO THAT THIS WORK WILL NOT DISTURB EXISTING LINES AND/OR INSTALLATIONS EXCEPT AS DETAILED ON THE PLANS. COORDINATE ALL WORK WITH THE APPLICABLE UTILITY COMPANIES.
8. CONTRACTOR SHALL OBTAIN AND PAY FOR ALL REQUIRED PERMITS NECESSARY TO PERFORM THE WORK.
9. BUILDING DIMENSIONS ARE APPROXIMATE. REFER TO ARCHITECTURAL DRAWINGS FOR LAYOUT DIMENSIONING.
10. SIDEWALK DIMENSIONS ARE APPROXIMATE. REFER TO ARCHITECTURAL DRAWINGS FOR THE SIDEWALK PLAN.
11. CONCRETE SIDEWALK SEALERS (REFER TO ARCHITECTURAL PLANS FOR LOCATION OF CONCRETE TYPES.)
11.1. GREY CONCRETE SIDEWALKS SHALL HAVE CHEMMASTERS SILENCURE WITHIN 2HRS AFTER FINAL FINISHING OF CONCRETE AND ALL BLEED WATER HAS DISSIPATED.
11.2. EXPOSED AGGREGATE/STAMPED CONCRETE SIDEWALKS SHALL HAVE ONE (#1) COAT CHEMMASTERS - SILENCURE AS SOON AS CONCRETE HAS DRIED AFTER PRESSURE WASHING THE RELEASE AGENT OFF. APRX 30 DAYS AFTER THIS (IF WEATHER PERMITS) APPLY ONE (#1) COAT OF CHEMMASTERS - POLYSEAL EZ.
12. LIGHTING FIXTURE ARROW SYMBOLS REFER TO THE DIRECTION THAT THE FIXTURES ARE REQUIRED TO FACE. SPECIFIC MOUNT BRACKETS WILL BE REQUIRED DEPENDING ON ORIENTATION AND FIXTURE COUNT.
13. CURB ISLAND DIMENSIONS ARE FROM INSIDE OF CURB TO INSIDE OF CURB.

DEMOLITION & EROSION NOTES:
1. USE ENTRANCE FROM FRUEHAUF AVE. FOR CONSTRUCTION ENTRANCE
2. INSTALL TEMPORARY EROSION CONTROL DEVICES AS DIRECTED WITHIN THE WORKING AREA TO PREVENT SEDIMENT MIGRATION. ALL EROSION CONTROL DEVICES SHALL BE INSTALLED IN ACCORDANCE WITH THE DETAILS PROVIDED.
3. ALL EROSION CONTROL DEVICES SHALL BE REPLACED WHEREVER THEY BECOME INOPERABLE.
4. THE CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTENANCE AND REMOVAL OF TEMPORARY SEDIMENTATION CONTROLS.
5. THE CONTRACTOR MUST CONTROL DUST DURING CONSTRUCTION, DURING EARTHWORK OPERATIONS, WATER-SPREADING EQUIPMENT SHALL BE PROVIDED BY THE CONTRACTOR, AND WATER SPREAD AS NECESSARY AND AS DIRECTED IN ORDER TO CONTROL DUST.
6. DIRT OR DEBRIS LEFT ON LOCAL PUBLIC ROADS AS A RESULT OF THIS CONSTRUCTION PROJECT SHALL BE REMOVED AND ROAD SURFACES CLEANED BY THE CONTRACTORS ON A DAILY BASIS, OR MORE FREQUENTLY IF DEEMED NECESSARY.
7. ALL DISTURBED AREAS (EXCEPT AREAS TO BE PAVED OR BUILT UPON) SHALL BE TOPSOILED TO A MINIMUM OF 4" DEPTH AND SEEDED IMMEDIATELY AFTER FINE GRADING TAKES PLACE AND AS SOON AS PHYSICALLY POSSIBLE.
8. THE CONTRACTOR IS RESPONSIBLY FOR THE MAINTENANCE OF DOWNSTREAM STORM SEWERS, DITCHES AND CULVERTS. SILT BUILDUP FOUND TO BE A RESULT OF THIS SITE CONSTRUCTION WORK SHALL BE REMOVED FROM DOWNSTREAM CULVERTS, DETENTION PONDS, BY THE CONTRACTOR AT NO ADDITIONAL EXPENSE TO THE OWNER OR CITY.
9. ALL SOIL EROSION AND SEDIMENT CONTROL DEVICES AND MATERIALS SHALL BE IN PLACE PRIOR TO BEGINNING EARTHWORK OPERATIONS AND SHALL BE MAINTAINED UNTIL THE ALL GRADING WORKS ARE COMPLETE.

DEMOLITION LEGEND:
- Property Line
- Existing Electric
- Existing Gas
- Existing Water
- Existing Overhead Utility
- Existing Sanitary
- Existing Storm
- Existing Telecoms
- Saw Cut Line
- Silt Fence/Sock
- Inlet Protection "Sedi-Bag" or similar
- Existing Easement to be removed.
- Existing Building to be removed.

DEMOLITION NOTES:
1. Existing Buildings to be removed.
2. Existing Pavement to be removed.
3. Existing R.O.W. Driveway, Curb and Sidewalk to be removed.
4. Existing Retaining Wall and Steps to be removed.
5. Existing Landscape Area to be removed.
6. Existing Fence to be removed.
7. Existing Utility to be removed.
8. Existing Storm Drainage/CB to be removed.
9. Existing Sign to be removed.
10. Existing Curb to remain.
11. Existing Pavement to remain.
12. Existing Landscape area to remain.
13. Eising Sidewalk to remain.
14. Existing Storm Drainage/CB to remain and be protected during Construction.
15. Existing Utility to remain and be protected dering construction.
16. Existing Light Pole to remain and be poteded during construction.
17. Existing Sign to be relocated.

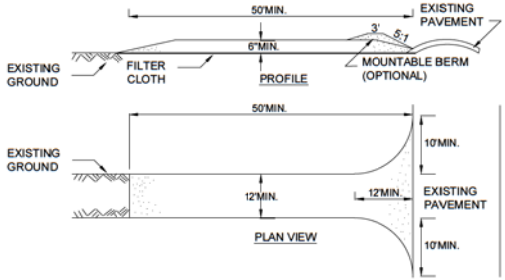
BORING LOCATION PLAN

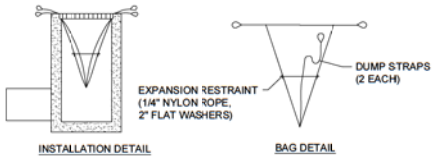


SCALE: 1:20

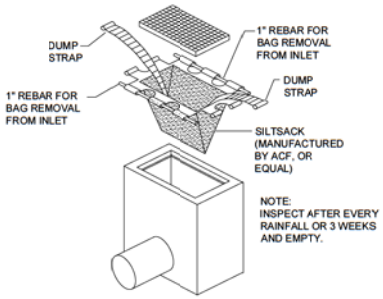
DRAWN BY: DMZ

CHECKED BY: JAR

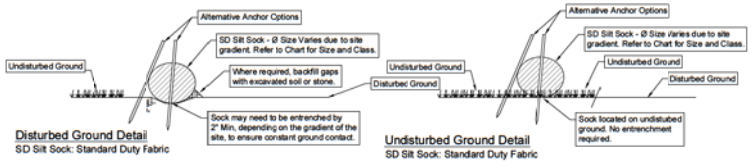
DATE: 05.05.2022



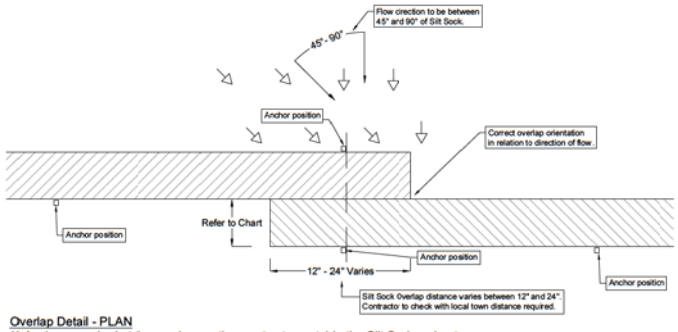
DRAWING NO.: C3.1



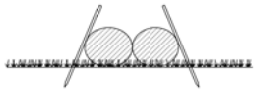
STABILIZED CONSTRUCTION ENTRANCE DETAIL



NOT TO SCALE



1. STONE SIZE - USE 2" STONE, OR RECLAIMED OR RECYCLED CONCRETE EQUIVALENT
2. LENGTH - NOT LESS THAN 50 FEET (EXCEPT ON A SINGLE RESIDENCE LOT WHERE A 30 FOOT MINIMUM LENGTH WOULD APPLY).
3. THICKNESS - NOT LESS THAN SIX (6) INCHES.
4. WIDTH - TWELVE (12) FOOT MINIMUM, BUT NOT LESS THAN THE FULL WIDTH AT POINTS WHERE INGRESS OR EGRESS OCCURS. TWENTY-FOUR (24) FOOT IF SINGLE ENTRANCE TO SITE.
5. FILTER CLOTH - WILL BE PLACED OVER THE ENTIRE AREA PRIOR TO PLACING OF STONE.
6. SURFACE WATER - ALL SURFACE WATER FLOWING OR DIVERTED TOWARD CONSTRUCTION ENTRANCES SHALL BE PIPED ACROSS THE ENTRANCE. IF PIPING IS IMPRACTICAL, A MOUNTABLE BERM WITH 5:1 SLOPES WILL BE PERMITTED.
7. MAINTENANCE - THE ENTRANCE SHALL BE MAINTAINED IN A CONDITION WHICH WILL PREVENT TRACKING OR FLOWING OF SEDIMENT ONTO PUBLIC RIGHTS-OF-WAY. ALL SEDIMENT SPILLED, DROPPED, WASHED OR TRACTED ONTO PUBLIC RIGHTS-OF-WAY MUST BE REMOVED IMMEDIATELY.
8. WHEN WASHING IS REQUIRED, IT SHALL BE DONE ON A AREA STABILIZED WITH STONE AND WHICH DRAINS INTO AN APPROVED SEDIMENT TRAPPING DEVICE.
9. PERIODIC INSPECTION AND NEEDED MAINTENANCE SHALL BE PROVIDED AFTER EACH RAIN.



SILT SACK DETAIL
N.T.S.

Overlap Detail - PLAN

1) Anchors required at the overlap section are to stay outside the Silt Sock and not pierce through the material. See alternative anchor positons in details above.

SD SILT SOCK DETAIL

SD Silt Sock: Standard Duty Fabric

TYPICAL CONCRETE WASH OUT DETAIL

NOTES:
1. CONSTRUCT TO 2016 NYSDEC BLUE BOOK DESIGN CRITERIA

Notes:

1 - Do not use sock below the normal watermark or perpendicular to flow in river and where the maximum incline is greater than 50%.
2 - Contractors shoud be aware of federal, state and local laws, rules regulations or permit requirements for the use of Silt Socks on site.
3 - Sock should be positioned on the outline of the area to be protected, but must be installed between 45° to 90° from directions of flow.
4 - Sock may be required to be entrenched a minimum of 2" on disturbed ground to ensure constant ground contact.
5 - All gaps and ruts must be backfilled with soil or sock material.
6 - Sock overlap should be in the direction of the flow. Overlap amount will be between 12" and 24". Contractor to check with local town for requirements.
7 - If sediment collects to 1/2 the height of the sock, then a second sock may be stacked immediately up slope of the original instead of removing the sediment.
8 - Sock joint is where two sock sections meet on a level grade, overlap and adjoining ends, tightening the ends together, and anchoring through each end. Where two sections meet on un-level ground, j-hook higher elevated end, anchor, and begin new section just below. Back fill any gaps.
9 - Sock should be inspected and repaired as neeced.
10 - If ruts begin under the sock they should be backfilled with soil and compacted so that the ground and sock have continuous contact.
11 - If sock rolls out of place, the sock should be repositioned and secured with additional anchors.
12 - Tears in the Sock fabric may be repaired by wrapping a new piece of fabric over the sock and securing, or by place a second sock immediately up slope with the required overlap beyond deformation.
13 - A section of sock should be replaced whenever it has weakened to such an extent that the efficiency is reduced or diminished. Weakening can occur because the natural mesh fabric breaks down over time of from being moved/dragged on site.
14 - Sock should be replaced when sediment has built up and has been removed three times.
15 - All sediment in disturbed area next to sock must be removed and correctly disposed of before the sock can be removed.
16 - When removing, cut sock open and spread the filler material around. The neting should be removed from site.
17 - Sock should be installed before works commence on site.

11.2. EXPOSED AGGREGATE/STAMPED CONCRETE SIDEWALKS SHALL HAVE ONE (x1) COAT CHEMMASTERS - SILENCURE AS SOON AS CONCRETE HAS DRIED AFTER PRESSURE-WASHING THE RELEASE AGENT OFF. APPX 30 DAYS AFTER THIS (IF WEATHER PERMITS) APPLY ONE (x1) COAT OF CHEMMASTERS - POLYSEAL EZ.
12. LIGHTING FIXTURE ARROW SYMBOLS REFER TO THE DIRECTION THAT THE FIXTURES ARE REQUIRED TO FACE. SPECIFIC MOUNT BRACKETS WILL BE REQUIRED DEPENDING ON ORIENTATION AND FIXTURE COUNT.
13. CURB ISLAND DIMENSIONS ARE FROM INSIDE OF CURB TO INSIDE OF CURB.

SANITARY SEWER NOTES:
1. THE CONTRACTOR IS ADVISED THAT A TRENCH SHIELD AND/OR SHORING DESIGNED IN ACCORDANCE WITH OSHA STANDARDS SHALL BE USED IN ALL OPEN TRENCH EXCAVATIONS.
2. ANY CONTRACTOR AND/OR PLUMBER PERFORMING WORKING IN A CONFINED SPACE (ie MANHOLES, WETWELLS, CHAMBERS) OWNED BY THE TOWN MUST CERTIFY TO THE TOWN THAT THEY HAVE THEIR OWN CONFINED SPACE ENTRY PROGRAM THAT MEETS OR EXCEEDS OSHA'S REGULATIONS. CERTIFICATION MUST BE NOTARIZED BY A NOTARY PUBLIC.
3. CONSTRUCTION SHALL CONFORM TO THE RULES AND REGULATIONS OF THE TOWN AND NEW YORK STATE CODES.
4. IF ANY PROPOSED SEWER LATERAL RUNS UNDER PAVED AREA AND HAS LESS THAN 4' COVER, CONCRETE ENCASEMENT IS REQUIRED. IF MORE THAN 4' COVER IS PROVIDED IN PAVED AREAS SELECT FILL IS REQUIRED.
5. THE CONTRACTOR MUST NOTIFY THE TOWN ENGINEER OFFICE AND THE PLUMBING INSPECTOR 24 HOURS IN ADVANCE OF CONSTRUCTION.
6. CLEANOUTS ARE REQUIRED EVERY 100' AND AT CHANGE IN DIRECTION.
7. ABANDONED SANITARY SEWER CONNECTIONS FROM THE SITE, IF ANY, REQUIRE PROOF OF A DISTRICT PERMIT FOR DISCONNECTION PRIOR TO THE NEW CONNECTION BEING MADE.

UTILITY NOTES:
1. PROVIDE FITTINGS AND BLOCKING AS NECESSARY AT ALL BENDS IN WATER LINES.
2. WHERE UTILITIES ARE INSTALLED IN EXISTING PAVEMENT, LANDSCAPED AREA ETC. ANY ITEMS REMOVED/DAMAGED SHALL BE REPLACED IN KIND.
3. IT IS THE RESPONSIBILITY OF THE CONTRACTOR TO OBTAIN ALL PERMITS NECESSARY: STATE, COUNTY, AND TOWN.
4. WATER MAINS TO HAVE MINIMUM 5FT COVER.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

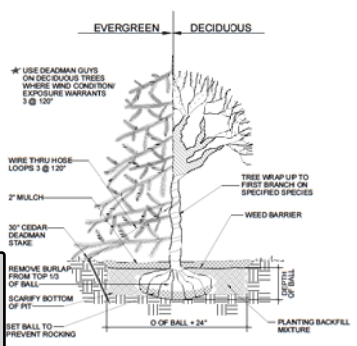
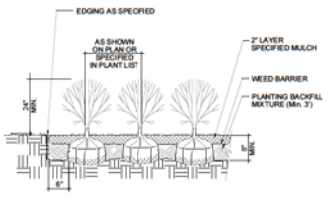
GENERAL NOTES:



1. INSTALL ALL MATERIALS TO MANUFACTURER'S RECOMMENDATIONS AND BEST STANDARDS OF TRADE INVOLVED.
2. SUBSTITUTIONS SHALL BE MADE ONLY WITH OWNER'S APPROVAL AND BE OF EQUIVALENT QUALITY TO WHAT IS SPECIFIED.
3. WORK SHALL BE COMPLETED IN STRICT ACCORDANCE WITH ALL LOCAL CODES AND OSHA SAFETY RULES AND REGULATIONS.
4. CONTRACTOR SHALL VERIFY ALL EXISTING CONDITIONS AND DIMENSIONS AT THE SITE. NOTIFY OWNER & ENGINEER OF DISCREPANCIES IN CONDITIONS SHOWN ON DRAWINGS PRIOR TO PROCEEDING WITH THE WORK.
5. CONTRACTOR SHALL BE RESPONSIBLE FOR PROTECTION OF ANY EXISTING STRUCTURES TO REMAIN AND ANY FINISH MATERIAL INSTALLED WHILE WORKING ON OTHER COMPONENTS.
6. CONTRACTOR SHALL KEEP JOB FREE OF DEBRIS AND MAKE FINAL CLEANUP TO THE SATISFACTION OF OWNER.
7. CONTRACTOR SHALL ASCERTAIN THE LOCATION OF ALL UTILITIES PRIOR TO CONSTRUCTION SO THAT THIS WORK WILL NOT DISTURB EXISTING LINES AND/OR INSTALLATIONS EXCEPT AS DETAILED ON THE PLANS. COORDINATE ALL WORK WITH THE APPLICABLE UTILITY COMPANIES.
8. CONTRACTOR SHALL OBTAIN AND PAY FOR ALL REQUIRED PERMITS NECESSARY TO PERFORM THE WORK.
9. BUILDING DIMENSIONS ARE APPROXIMATE. REFER TO ARCHITECTURAL DRAWINGS FOR LAYOUT DIMENSIONS.
10. SIDEWALK DIMENSIONS ARE APPROXIMATE. REFER TO ARCHITECTURAL DRAWINGS FOR THE SIDEWALK PLAN.
11. CONCRETE SIDEWALK SEALERS: (REFER TO ARCHITECTURAL PLANS FOR LOCATION OF CONCRETE TYPES.)
    11.1 GREY CONCRETE SIDEWALKS SHALL HAVE CHEMMASTERS - SILENCURE WITHIN 2HRS AFTER FINAL FINISHING OF CONCRETE AND ALL BLEED WATER HAS DISSIPATED.
    11.2 EXPOSED AGGREGATE/STAMPED CONCRETE SIDEWALKS SHALL HAVE ONE (x1) COAT CHEMMASTERS - SILENCURE AS SOON AS CONCRETE HAS DRIED AFTER PRESSURE-WASHING THE RELEASE AGENT OFF. APPX 30 DAYS AFTER THIS (IF WEATHER PERMITS) APPLY ONE (x1) COAT OF CHEMMASTERS - POLYSEAL EZ.
12. LIGHTING FIXTURE ARROW SYMBOLS REFER TO THE DIRECTION THAT THE FIXTURES ARE REQUIRED TO FACE. SPECIFIC MOUNT BRACKETS WILL BE REQUIRED DEPENDING ON ORIENTATION AND FIXTURE COUNT.
13. ISLAND DIMENSIONS ARE FROM INSIDE OF CURB TO INSIDE OF CURB.

LANDSCAPE NOTES:



1. ALL PLANTS INSTALLED SHALL MEET OR EXCEED THE MINIMUM REQUIREMENTS AS NOTED ON THE PLANS AND IN THE LATEST EDITION ON THE AMERICAN STANDARD FOR NURSERY STOCK, BY THE AMERICAN ASSOCIATION OF NURSERYMEN, ANSI Z60.1
2. THE CONTRACTOR SHALL BE RESPONSIBLE FOR HIS OWN QUANTITY TAKEOFF. THE QUANTITIES SHOWN ARE A MINIMUM AND ARE FOR REFERENCE ONLY.
3. THE CONTRACTOR SHALL PERFORM A ROUGH FIELD STAKEOUT OF ALL PLANTING MATERIAL LOCATIONS AND CONTACT THE OWNERS FIELD REPRESENTATIVE PRIOR TO ACTUALL INSTALLING. THE PLANTING MATERIAL LOCATIONS SHOWN ON THE PLANS ARE TO CONVEY THE DESIGN INTENT ONLY. ACTUAL LOCATIONS WILL BE FINALIZED BY THE OWNERS FIELD REPRESENTATIVE AT THE TIME OF INSTALLATION.
4. THE CONTRACTOR IS HEREBY NOTIFIED THAT IF UNDERGROUND UTILITIES EXIST IN THE VICINITY OF THE PLANTINGS, ALL PROPOSED PLANTINGS SHALL BE INSTALLED A MINIMUM OF 5' FROM ANY UNDERGROUND UTILITY. CONTACT THE OWNERS FIELD REPRESENTATIVE IF PLANTINGS SHOWN ON THE PLANS VIOLATE THIS SITUATION.
5. ALL TREES SHALL BE INSTALLED A MINIMUM OF 20' FROM ANY OVERHEAD ELECTRIC LINES.
6. PLANTING BACKFILL MIXTURE SHALL CONSIST OF 4 PARTS TOPSOIL, 1 PART PEAT MOSS, ½ PART WELL ROTTED MANURE, 10 LBS 5-10-5 PLANTING FERTILIZER THOROUGHLY MIXED PER CUBIC YARD.
7. STAKE AND WRAP TREES IMMEDIATELY FOLLOWING INSTALLATION.
8. ALL PLANTED AREAS SHALL RECEIVE A MIN. 2" LAYER OF COCOA BROWN MULCH. WEED MAT EQUAL TO "WEEDBLOCK" BY EASY GARDENER OR DEWITT WEED BARRIER.
9. ALL DISTURBED AREAS NOT RECEIVING PLANTINGS (INCLUDING RIGHT-OF-WAYS) SHALL BE PROVIDED WITH SOD. SEED PERMITTED AT DETENTION POND IF PLANTED EARLY ENOUGH TO ESTABLISH.
10. THE AREAS ON THE PLAN TO BE SEEDED SHALL HAVE 4" MINIMUM OF TOPSOIL, DISK PLOWED, LEVELED AND HAND RAKED SMOOTH. SURFACE SHALL BE ROLLED TO REMOVE LUMPS.
11. ALL SEEDED AREAS SHALL BE HYDROSEEDED IN ACCORDANCE WITH THE SPECIFICATION INDICATED. WHERE REQUIRED BY CLIMATIC CONDITIONS, SLOPE OR SEASON OF PLANTING.
    HYDROSEED SPEC: 20% RYE, 20% BLUE GRASS, 60% TURF TYPE FESCUE
    SOD MAY BE SUBSTITUTED FOR SEED DOWN IN ORDER TO ACHIEVE THE REQUIRED COVERAGE (REFER TO CONTRACTOR FOR SOD/SEED COVERAGE).
12. THE CONTRACTOR SHALL BE RESPONSIBLE FOR WATERING, MOWING AND OTHER MAINTENANCE TO SEEDED AREAS UNTIL THE PROJECT IS ACCEPTED BY THE OWNER. THIS SHALL INCLUDE WATERING DAILY FOR 15 DAYS OR, AS REQUIRED BY WEATHER CONDITIONS, AND RE-SEEDING OF THIN SPOTS FOLLOWING THE GERMINATION OF THE SEEDS.
13. CONTRACTOR IS RESPONSIBLE TO PROTECT ALL EXISTING TREES ONSITE AND OFFSITE, WHICH ARE TO BE PRESERVED, FROM ALL POSSIBLE TYPES OF ROOT, TRUNK, AND LIMB DAMAGE.

OSQ Series

OSQ™ LED Area/Flood Luminaire featuring Cree TrueWhite® Technology – Medium & Large

Rev. Date: V5 09/14/2021

Product Description

The OSQ™ Area/Flood luminaire blends extreme optical control, advanced thermal management and modern, clean aesthetics. Built to last, the housing is rugged cast aluminum with an integral, weatherlight LED driver compartment. Versatile mounting configurations offer simple installation. Its slim, low-profile design minimizes wind load requirements and blends seamlessly into the site providing even, quality illumination. The 6L lumen package is a suitable upgrade for HID applications up to 250 Watt, and the 11L lumen package is a suitable upgrade for HID applications up to 400 Watt. The 22L lumen package is a suitable upgrade for HID applications up to 750 Watts, and the 30L lumen package is a suitable upgrade for HID applications up to 1000 Watts.

Applications: Parking lots, walkways, campuses, car dealerships, office complexes, tunnels, underpasses, and internal roadways

Performance Summary

Utilizes Cree TrueWhite® Technology on 5000K Luminaires

NanoOptic® Precision Delivery Grid™ optic

Assembled in the U.S.A. of U.S. and imported parts

Initial Delivered Lumens: 4,000 - 30,000

Efficacy: Up to 173 LPW

CRI: Minimum 70 CRI (3000K, 4000K & 5700K); 90 CRI (5000K)

CCT: 3000K, 4000K, 5000K, 5700K

Limited Warranty*: 10 years on luminaire; 10 years on ColorFast DeltaGuard® finish; up to 5 years for Synapse® accessories; 1 year on luminaire accessories

*See http://creelighting.com/warranty for warranty terms. For Synapse accessories, consult Synapse spec sheets for details on warranty terms.

Ordering Information

Fully assembled luminaire is composed of two components that must be ordered separately:

Example: **Mount:** OSQ-ML-B-AA-BK + **Luminaire:** OSQM-8-4L-30K7-3M-UL-WH-BK

Mount (Luminaire must be ordered separately)*

IG Series

LED Parking Garage Luminaire

Rev. Date: V6 09/13/2020

Product Description

Cree Lighting innovates again to reset the performance benchmark in parking garage applications with the IG Series featuring WaveMax® Technology, our innovative optical waveguide platform. Available in 30 watt and 60 watt, two lumen packages are offered to satisfy IES RP-8-18 and IES Security Zone 0-1-03 requirements for environments seeking higher light levels for improved safety and security. The streamlined design breaks away from dated traditional designs, blending form and function, to deliver superior low glare illumination.

For enhanced performance and versatility, a range of optional integrated lighting controllers bring advanced capabilities andenergy savings to the IG Series. From the stand-alone multi-level (PML) option to the full-featuredLimelight by Lutron or Synapse® wireless control options, the IG Series provides the features andflexibility designed to meet the needs of today's most demanding parking garage applications.

Applications: Parking garages

Performance Summary

Utilizes WaveMax® Technology

Initial Delivered Lumens: 3,860 or 7,300 lumens

Input Power: 33 or 60 watts

Efficacy: Up to 126 LPW

Optic: Type V Short Distribution

Assembled in the USA of U.S. and imported parts

CCT: 3000K, 3500K, 4000K, 5700K

CRI: Minimum 80 CRI

Limited Warranty*: 10years on luminaire; 5 years on PML and Limelight options; up to 5 years for Synapse® accessories;1 year on luminaire accessories

*See http://creelighting.com/warranty for warranty terms. For Synapse accessories, consult Synapse spec sheets for details on warranty terms.

CPY Series - Version C

CPY250® LED Canopy/Soffit Luminaire

Rev. Date: V3 02/01/2022

Product Description

The CPY250® LED Canopy/Soffit Luminaire has an extremely thin profile constructed of rugged cast aluminum. It can be surface mounted easily from below the canopy deck and can be pendant mounted. Direct imaging of the LEDs is eliminated with a highly efficient patterned flat or EF1™ (23mm) drop glass lens.

Applications: Petroleum canopies, CNG fueling stations, soffits

Performance Summary

Assembled in the USA by Cree Lighting from US and imported parts

Initial Delivered Lumens: Up to 21,000

Efficacy: Up to 165 LPW

CRI: Minimum 70 CRI (aLM, SBK, STW); 80 CRI (30K); 90 CRI (aLM, SBK)

CCT: 2000K, 4000K, 5000K, 5700K

Limited Warranty*: 10 years on luminaires/10 years on ColorFast DeltaGuard® finish/5 years on PML, sensor/1 year on field-installed accessories

IP66 Rated (select models only)

Class I, Division 2 Hazardous Location for select models

Canopy Upgrade Kits: 18 ga. steel, except where noted)
CPY-AFSSU* - for use with Cree Lighting CAN-36k luminaires, 16 ga. 5052 aluminum
XA-EGCCWH - for use with Jiffi Pkg, 21.44" (545mm) square, white
XA-EGCCWH – for use with Cisco Francisco, 33.06" (840mm) square, white
XA-EGCCPW – for use with LSI Dakota or Masters, 23.50" (597mm) square, white
XA-EGCCGW - for use with Whitney Retro or Rip-A-Lite, 20.40" (517mm) square, white
XA-EGCCRW – for use with Cisco Merrit, 19.06" (485mm) square, white
XA-EGCCRW – for use with LSI Richmond or Whiteway Civic, 23.00" (584mm) L x 19.00" (483mm) W
Direct Mount Junction Box/Steel Bar Hanger Kit
XA-EGCCJBOX – 6.0" (152mm) H x 10¼" (259mm) NPT Stem
- Watertight
- Rated for feed through #14 in, 4 wall #12 AWC conductors

Direct Mount Beauty Plates
XA-EGCCBPW – 24.17" (605mm) Beauty Plate Only (18 ga. steel), white
XA-EGCBPW-DM – 24.17" (605mm) Beauty Plate (18 ga. steel,) w/14" (305mm) Backer Plate (14 ga. steel), white
- Required when Canopy Deck opening is larger than what is required for mounting the CPY250 luminaire. Maximum deck opening 15.79" x 15" (400mm x 379mm)

XA-EGCCBPW-LW – 26.17" (665mm) Beauty Plate (18 ga. steel,) w/14" (405mm) Backer Plate (14 ga. steel), white
- Required when Canopy Deck opening is larger than what is required for mounting the CPY250 luminaire. Maximum deck opening 17" x 15" (380mm x 379mm)

*Must specify color: BK (Black), BZ (Bronze), or DA (Dark) or WH (White)

Pendant Mount Luminaires
Pendant Mount Kits
M-PSX2M77 – 5' (1524mm) pendant
M-PSX2M177 – 11' (2794mm) pendant
M-PSX2M77 – 10' (381 mm) pendant
- Includes two conduit fittings and (4) 14.70"ft pipe threaded on two ends

Roof-Mold Remote
XA-SENSROM
- For successful implementation of the programmable multi-level option, a minimum of one hand-held remote is required

Synapse® Simplytwo 10V Interface
DMIS-10SP
- 10V-277V
- Requires other Synapse components to complete system

THE EDGE® Series

LED Area Luminaire - Round

Rev. Date: V10 12/19/2021

Product Description

THE EDGE® Series has a slim, low profile design. Its rugged cast aluminum housing minimizes wind load requirements and features an integral, weatherlight LED driver compartment, spun-rivetted cover, high performance aluminum heat sinks and leaf/debris guard.

Applications: Auto Dealerships, parking lots, campuses, facade lighting and general site lighting applications

Performance Summary

Patented NanoOptic® Product Technology

Assembled in the USA by Cree Lighting from US and imported parts

Initial Delivered Lumens: Up to 25,165

CRI: Minimum 70 CRI 6,000K & 5700K); 80 CRI (3000K); 90 CRI (5000K)

CCT: Turtle Friendly Amber, 3030K(+/- 300K), 4000K (+/- 300K), 5000K (+/- 500K), 5700K (+/- 500K) standard

Limited Warranty*: 10years on Luminaire/10 years on ColorFast DeltaGuard® finish /5 year on accessories

RE: Geotechnical Engineering Report
Proposed Two-Story Building with Underground Garage
4548 & 4564 Main Street, 22 Chateau Terrace, and 17 Fruehauf Avenue
Town of Amherst, Erie Co., New York 14226

Gentlemen:

This report presents the findings of the subsurface investigation program and geotechnical engineering recommendations for the above referenced project. The geographic orientation of the project site is illustrated on the U.S. Geologic Survey (USGS) site location map in Figure No. 1. The project site is illustrated in Figure No. 2, entitled "Test Boring Location Plan", which includes: the approximate location of six test borings that were drilled by Buffalo Drilling Company, Inc. (BDC); relative ground surface elevations; and additional site details.

EXPLORATION METHODS

Sampling Method: A truck-mounted Diedrich D-50 rotary drill rig was used to drill six borings each to auger refusal below ground surface by using 2-1/4 inch and 4-1/4 inch inside diameter (ID), continuous flight hollow stem augers. Samples were recovered by driving a standard split-spoon sampler (2-foot long by 1-3/8 inch inside diameter) 24 inches with a 140-pound hammer falling 30 inches per blow per the American Society of Testing and Materials (ASTM) Standard D1586. The number of blows from six to 18 inches of penetration is defined as the Standard Penetration Test (SPT) N-value. Auger refusal, which may infer the top of bedrock, was encountered at each boring location at depths ranging from about two to six feet. At borings B-1 and B-6, bedrock was confirmed by coring to a depth of five feet below auger refusal. Bedrock coring efforts were done with an Nx-sized (2-1/8 ± inch I.D.) core barrel and impregnated diamond bit in accordance with ASTM Method D2113.

Any encountered groundwater conditions are documented in the field on the driller's logs for each test boring. If indicators of groundwater are observed on the sampling equipment, the depth to groundwater is also checked and measured through the hollow stem augers at the completion of the sampling efforts.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

Classification: The retrieved soil and fill samples were initially logged in the field by the driller, and a portion of each sample was placed and sealed in a glass jar. The boring logs, which are included in Appendix A, were based upon the field logs and a second visual classification of recovered samples in the laboratory by a geologist. Classification/identification of samples, as noted on the boring logs, is based on the Unified Soil Classification System (USCS) in ASTM D2487/D2488. Refer to Appendix B entitled, "Geotechnical Reference Standards", for an explanation of the terminology that is used for soil and rock descriptions.

Each rock core was examined on a run-by-run basis to determine the percentage of core recovery and Rock Quality Designation (RQD). Core recovery percentage is the ratio of the sample length recovered divided by the length of the core run times 100 percent. RQD is defined as the total length of all pieces of core that are greater than four inches divided by the length of the core run times 100 percent. Core recovery and RQD percentages are noted on the boring logs.

Laboratory Testing: Laboratory soil testing was undertaken on several retrieved split spoon samples. The overall laboratory testing program consisted of the following test methods:

- Unconfined Compressive Strength of Intact Rock Core Specimens ASTM D2938

Table No. 1 presents the tabulated results of bedrock physical property data.

SITE AND SUBSURFACE CONDITIONS

General: The proposed site for development consists of four parcels addressed as 4548 & 4564 Main Street, 22 Chateau Terrace, and 17 Fruehauf Avenue in the Town of Amherst, Erie County, New York. The project will include a mixed-use, two-story building with both retail spaces and residential apartments. The majority of the structure will have a lower basement/underground parking garage beneath it. The site topography slopes to the northwest across the boring locations with ground surface elevations varying by approximately five feet.

Subsurface Soil Conditions: In general, subsurface conditions, underlying the topsoil at B-2 and the asphalt pavement with crushed limestone base layer at the remaining borings, consist of naturally deposited cohesive/fine-grained glacial till that extends to auger refusal.

Beneath the asphalt/gravel base or topsoil, a naturally deposited cohesive/fine-grained glacial till exists and extends to auger refusal. The unit ranges in thickness from two to five fee and consists of moderately plastic, silty clay with lesser amounts of sub-rounded fine-sized to coarse-sized sand and gravel. The consistency of this soil is primarily very stiff to hard with moisture contents of retrieved samples noted to be moist.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

Bedrock: Auger refusal, which is generally inferred to be the top of the apparent bedrock surface, was not encountered at each boring approximately two to six feet below ground surface, ranging in elevation from 675.00 to 671.20+/- feet. The proposed footing bearing grade for the building, approximate elevation 671.30 +/- feet, will be at or within the bedrock which will make it necessary to remove almost four feet of bedrock.

Rock coring efforts were undertaken at borings B-1 and B-6 to depths of five feet, below auger refusal. Based upon the regional geology and recovered core samples, the bedrock type is the Onondaga Limestone and is described as a hard and slightly weathered, medium dark gray, banded to thinly bedded, finely crystalline limestone that is porous and calcareous. The percent recoveries for the cores ranged from 33 percent to 83 percent with RQD values of 0 percent (very poor quality) to 29 percent (poor quality).

Table No. 1 provides the laboratory uniaxial compressive strength and density data for the intact limestone specimens near the bottom part of the B-1 cored interval C-1 and middle of B-6 cored interval C-2. The density data is characteristic of a limestone rock. The uniaxial compressive strengths ranged from approximately 4,000 to 7,500 pounds per square inch (psi); which is on the low to middle portion of the range for limestone. The intact bedrock uniaxial compressive strength and other rock properties (e.g., RQD) can be used in the estimation of the strength properties for the bedrock mass.

Groundwater: Groundwater was not encountered during subsurface exploration. Note that the groundwater readings were taken at the completion of drilling efforts and, therefore, an adequate amount of time for the groundwater level to recharge to static conditions was probably not allowed. Fluctuations in the groundwater level may occur due to other factors than those present during field operations.

EARTHQUAKE/SEISMIC CONSIDERATIONS

Site Class Definition: For the given site conditions, the most applicable site definition is Site Class B, as listed in Table 1613.5.2 of the Building Code of New York State, © 2010.

Liquefaction Potential: For the Site Class B, the design spectral response acceleration parameters S_{DS}, at 0.2 seconds, and S_{D1}, at one second, are 0.15g and 0.03g (g = 32.2 feet/sec^2), respectively, for this part of Erie County, New York (see Appendix C). These values have a two percent probability of being exceeded in 50 years. Based upon the above conditions and an approximate magnitude 6.0 earthquake on the Richter Scale, the potential for liquefaction or settlement of Site Class B rock is considered non-existent.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

FOUNDATION DESIGN AND CONSTRUCTION RECOMMENDATIONS

General: This section will present and discuss recommendations on foundation design and construction and placement of controlled fills, and subgrade and base layer requirements for concrete floor slabs, paved parking and roadway areas.

As shown in Figure No. 2, the proposed development will include a two-story mixed-use building with underground parking garage. The existing ground surface slopes to the northwest across the proposed development areas with ground surface elevations varying by approximately five feet. As per drawings provided via email with client representatives, finish first floor elevation of the building is at elevation 683.80 ± feet and steps up to 685.00 ± feet. The basement level and underground parking garage will have a finish floor elevation that is 11.5 feet beneath the first floor at approximate elevation 672.3 ± feet. Final exterior grades are assumed to match existing, from about elevation 685.00 ± feet to 675.00 ± feet. The maximum design exterior bearing wall and column loads are not expected to exceed 10 kips per lineal foot and 100 kips, respectively. The maximum design interior bearing column load is not expected to exceed 120 kips.

Site Preparation and Earthwork: General site preparation will include the demolition and complete removal of any encountered foundations and floor slabs, and removing all unsuitable surficial material (i.e., asphalt pavement, concrete, brick, expansive slag, organic or topsoil layer, and construction and demolition-like fill) to a depth where firm, granular or cohesive fills or naturally occurring soils are encountered. It is recommended, particularly in the location of the proposed structure, that any slag and/or cinder/ash containing material, if encountered, should be tested to determine the expansion and corrosion characteristics (where applicable for direct or potential contact with foundation elements and buried utilities) of these materials prior to their use on-site. Any rubble-like and brick fill, boulders, or wood fill in particular, if encountered, will require undercutting. The proposed building and any paved areas are to be proof rolled with a fully loaded ten-wheel dump truck. All encountered soft and disturbed zones should be undercut and stabilized with granular fill that is placed in compacted lifts prior to placement of additional fill materials above. Refer to Appendix D entitled "General Earthwork Specification" for definition of the fill types and gradations, recommended minimum compaction requirements for various site developments, and placement and compaction methods. The NYS Department of Transportation (NYSDOT) specification numbers for typical aggregate subbase/base course components that are included in the select granular fill category as are as follows: Item No. 304.12 (Metric) Subbase Course, Type 2 (< 2-inch maximum size), which is preferred; or Item No. 304.14 (Metric) Subbase Course, Type 4 (< 2-inch maximum size).

Other than the existing buildings along Main Street and the house and garage at 22 Chateau Terrace that will be demolished, it is unknown if any former residential/commercial structures, existed at the project site and if any former footings and foundation walls may be buried within the addition footprint. Septic tank and

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

system locations and the abandonment conditions or practices are normally unknown. If encountered during site development, it is recommended that any tanks and systems should be properly removed/treated/remediated relative to the proposed development and under the applicable local and state regulations. The remaining cavities, from the aforementioned items, should be backfilled with select/approved granular fill that is placed in thin lifts and compacted to the minimum recommendation, as presented in this report, for the proposed development at that cavity location.

Shallow Foundation: The recommended foundation type is shallow footings. Continuous strip and spread exterior footings and interior spread footings would bear at an elevation of four feet or lower below final grade, at elevation 670.80 ± feet. The bearing elevation is also approximated based upon the basement/parking garage finish floor elevation of 672.30 ± feet. A four-foot minimum footing depth (as required by local or New York State code) is needed to provide adequate protection from frost for exterior footings.

Basement/parking garage will require the removal of up to four feet of limestone bedrock. If the approved bedrock depth is less than four feet below final exterior grade, hooked rebar dowels are recommended to be placed in grout filled holes at approximately a four-foot spacing and extending to a minimum total depth of four feet into approved bedrock. This precaution is needed to confirm adequate bedrock quality and to incorporate the rock mass into the perimeter footing system.

The exterior and interior footings are recommended to bear at the same relative elevation on stable, natural, approved limestone bedrock or on thin layers of thoroughly compacted (minimum of 95 percent of the maximum dry density by ASTM D 1557) select/approved granular fill that is placed on an approved subgrade. If needed, a geotextile strength and filter fabric (such as, Mirafi 600X) may be used to line the excavation bottom for the purpose of stabilizing the excavation and placement of the select/approved granular fill.

Undercut areas beneath proposed foundations must extend laterally beyond each vertically projected edge of the foundation by a minimum distance equal to one-half the total depth of the undercut or equating to a slope of two vertical to one horizontal from the bottom foundation corner. The undercuts and placement of compacted select/approved granular fill are required to ensure a suitable and more uniform bearing media for the footings, and to prevent unacceptable differential settlements.

Wall footings should have a minimum two-foot width and column footings should have a minimum three-foot width. Based on the above described conditions, the recommended maximum net allowable foundation bearing pressure is 5,000 pounds per square foot (psf) of bearing area. All footings for the proposed building are recommended to be designed near the same contact pressure. The recommended

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

maximum net allowable foundation bearing pressure is based on generally accepted design methods for cohesive soil conditions. Based on the provisions of the above recommendations and estimated design requirements and utilization of proper construction procedures and experienced field supervision and testing personnel, total and differential settlements are estimated to be less than one inch and 3/4's inch, respectively. Refer to Appendix C for additional foundation design and construction details.

Additional Foundation Considerations: In addition to the above, the following recommendations will provide additional assurances with regard to proper foundation construction.

a) All fill placed beneath, adjacent, or above foundations must comply with the "General Earthwork Specification", included as Appendix D.

b) Backfill of foundations with approved select granular fill must be completed prior to placement of substantial superstructure loads, except for basement walls or substructure areas that may additionally require superstructure loads and possibly internal bracing.

c) The upper silty materials may rut and “pump” if exposed to excessive surface water and repeated construction traffic. Proper site management and fill placement operations are needed to minimize costly undercuts and subgrade repairs prior to placement of concrete slabs and asphalt pavement. It is noted that construction during wet/rainy and/or Fall and Spring conditions may require added precautions and possibly a thicker base layer to maintain a stable subgrade condition.

d) Step footings, if utilized, should have a rise to run ratio of 1:2, with a two-foot maximum rise and a four-foot minimum run between steps or as recommended by the design structural engineer.

e) The recommended at rest (rigid wall), active, and passive static earth pressure coefficients for unsaturated, select granular sandy gravel fill against an earth retaining structure/wall are 0.76, 0.24, and 2.8 (with an ultimate value of 4.2), respectively. The respective equivalent static lateral fluid pressures are recommended to be 90, 30 and 330 (with an ultimate value of 500) pounds per square foot (psf) per foot depth which are based upon a moist, compacted unit backfill weight of 120 pounds per cubic foot (pcf). The at rest value would account for the average expected compaction induced stresses and/or the potential influences of hydrostatic pressure. The static lateral fluid pressures can be directly proportioned for other unit weights.

Stabilization of Excavations/Underground Structures: The trench/excavation sidewall stability concerns can be addressed with the Occupational Safety and Health Act (OSHA) requirements as set forth in Subpart P of 29 CFR Part 1926, Sections 1926.650 to 1926.652. In lieu of a properly designed shoring system, side slopes of the trench excavation should be one on one (vertical to horizontal distance) or flatter in cohesive soils or one on one and one-half or flatter in the granular materials, as required by OSHA.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

In areas where sloped excavations are impractical, a land cofferdam (e.g., sheet piling or soldier piles with lagging and walers-struts/tiebacks, as needed) must be installed to effectuate the installation of the proposed underground parking structure. The aforementioned system(s) must be designed by a licensed New York State professional engineer with proven experience. These types of designs are outside the scope of this report.

Water must not be allowed to accumulate or pond on exposed foundation bearing grades. Surface water and groundwater from within the excavation must be either pumped, diverted or channelized by gravity flow to effectuate the construction of the proposed foundation. Pockets of localized perched groundwater may seasonally be expected to be encountered at footing and/or footing undercut bearing grades. At these locations, dewatering with surface sumps may be required to maintain stable side slopes and excavation bottom.

Substructures/Retaining Walls: While not a unique design concern, proposed basement/underground parking substructures must be adequately designed and constructed to support horizontal soil pressures and surface loads. Refer to Appendix C and the following recommendations that will provide additional assurances with regard to proper design and construction of free standing retaining walls and fixed/restrained walls.

a) At the location of the proposed structure(s), design the wall foundation based on the previously recommended maximum net allowable bearing capacity and bearing conditions.

b) Cantilever (such as, retaining) walls and fixed/restrained walls must be adequately designed and constructed to support horizontal soil pressures and surface loads.

c) Uniformly distributed surface surcharge loads should be applied at 100 percent of the load times the appropriate lateral earth pressure coefficient to the retaining wall. The lateral design stress on the wall is the sum of the equivalent lateral fluid pressure and other applied surface stresses and subsurface stresses (i.e., footings).

d) The recommended at rest (rigid wall), active, and passive static earth pressure coefficients for unsaturated, select granular sandy gravel fill against an earth retaining structure/wall are 0.76, 0.24, and 2.8 (with an ultimate value of 4.2), respectively. The respective equivalent static lateral fluid pressures are recommended to be 90, 30 and 330 (with an ultimate value of 500) pounds per square foot (psf) per foot depth, which are based upon a moist, compacted unit backfill weight of 120 pounds per cubic foot (pcf). The at rest value would account for the average expected compaction induced stresses and/or the potential influences of hydrostatic pressure. If a moist, compacted granular sandy silt or silty sand fill is used, the recommended active and passive static earth pressure coefficients are 0.33 and 2.0 (with an ultimate value of 3.0) and the equivalent static

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

lateral fluid pressures are 45 and 270 (with an ultimate value of 405) psf per foot depth, which is based upon a unit backfill weight of 135 pcf. The static lateral fluid pressures can be directly proportioned for other unit weights.

e) For a soil/fill that is at or near a saturated/liquefied state, the equivalent static lateral fluid pressure on a wall from earthquake/seismic induced loading is recommended to be at least equal to the unit weight of the backfill. For unsaturated backfill conditions under earthquake/seismic induced loading, it is recommended that an additional (to the static) lateral load per foot of wall length (in pounds/foot) to a non-yielding wall will be located at 0.6 times the earth height behind the wall, as taken from the base of the wall, and will be equal to 6.8 times (for S_{ds} = 0.25g) to 13.5 times (for S_{ds} = 0.50g) the earth height squared behind the wall, in feet (for a soil backfill unit weight of 120 pcf and for Site Class C to E soils). As applied to yielding walls, these multiplying factors may be reduced by 33 percent. The earthquake/seismic lateral pressures or loads can be directly proportioned for other unit weights and S_{ds} values. Use a 1.75 multiplier to the earthquake/seismic lateral pressures or loads for walls bearing on Site Class B/A rock. Since non-yielding/rigid walls may move into the backfill, the equivalent lateral static fluid pressure for the static passive condition would also be a structural engineering design concern.

f) Lateral stresses from surface loading (such as, trucks) would not generally be a design concern if the load is transient and the loading is at a horizontal distance from the subsurface wall that is greater than the depth of the subsurface cavity. The geotechnical engineer should be consulted once the type and magnitude of the surface loading are identified.

g) The ultimate values of the friction factor or coefficient of sliding friction for the concrete footing of a retaining wall or foundation wall are recommended to be 0.35 on a silty sand/non-plastic sandy silt interface, 0.45 on non-plastic sand and gravel mixtures with less than five percent silt or on NYSDOT Item No. 304.12, Type 2 and Item No. 304.14, Type 4 gravel interfaces, and 0.60 if cast against a clean, sound and rough bedrock interface (which has a Factor of Safety = 1.0). Use a value of 0.5 for a smooth surface of either bedrock or if a dental concrete leveling course, without bonding reinforcing bars, is to be placed on the bedrock surface prior to casting the footing/foundation wall. For foundations on very stiff to hard natural cohesive soils, the cohesion/adhesion for sliding resistance is limited to 1,000 psf. The minimum recommended factor of safety against sliding is 1.5.

h) The minimum recommended factors of safety against overturning of a retaining wall are 1.5 for a clean/silt-free compacted granular backfill or for foundations on approved rock and 2.0 for a compacted cohesive backfill.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

i) Relieve any hydrostatic or water pressure that develops behind the walls from in-flowing groundwater as is normally provided in practice. The exterior and interior sides of walls are to have a properly designed and installed dewatering system or as determined by the design civil/structural engineer.

Concrete Interior Floor Slab(s)/Pad: For the most part and based on test results for similar soils/fills, moderately plastic cohesive natural soils/fills may be somewhat difficult to compact in a controlled manner considering the varying soil plasticity and natural moisture contents that are estimated to be at to wet of optimum, at the time of this investigation. Excavated and approvable cohesive soil/fill types are not expected to be available in any reasonable quantities. These soils/fills may be expected to be suitable for re-use as general fill with the implementation of uniformly applied soil conditioning (i.e., drying and blending) and compaction methods, if additional volume of soil for backfill is needed.

Excavated and approvable granular (i.e., sand or gravel and non-plastic silt and sand) soil/fill are expected to be available in very limited quantity and associated with the base layer beneath the existing asphalt pavement. For the most part, granular (i.e., sand or gravel) soil/fill is expected to be acceptable for on-site re-use, as general/ordinary fill without substantial reworking and/or modification, while silty fine-sized sand may first require drying and blending.

Dissimilar excavated materials should not be commingled prior to their use elsewhere on-site, unless designated for a green/vegetation area. General fill material is also recommended to be placed on prepared and approved subgrade and in accordance with previous recommendations.

A geotextile fabric (such as, Mirafi 600X or equal) that separates the subgrade and the approved/select granular base layer may be needed and is particularly recommended for sensitive cohesive/fine-grained/silty clay subgrade soil/fills. This approach will stabilize and provide a workable building pad condition with minimal required repairs.

The approved subgrades will consist of very stiff or better/thoroughly compacted (i.e., minimum 92 percent of the maximum dry density by ASTM D 1557) cohesive/fine-grained glacial till, stable approved limestone bedrock, or thoroughly compacted imported select/approved granular fill. Above the approved subgrades, a minimum 12-inch thick select granular fill (i.e., number two crusher run stone or equal) layer is recommended as the base course for the basement/parking garage concrete floor slab. The NYSDOT specification numbers for typical aggregate subbase/base course components are Item No. 304.12 (Metric) Subbase Course, Type 2 (< 2-inch maximum), which is preferred, or Item No. 304.14 (Metric) Subbase Course, Type 4 (< 2-inch maximum). This select granular base layer would be compacted to a minimum 95 percent of the maximum dry density by ASTM D 1557. The basement/parking garage floor slab is recommended to be a six-inch minimum thickness or is as determined by the design structural engineer.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

The floor slab reinforcement should be provided through placement of wire mesh or plastic fibers and is also as determined by the design structural engineer.

At the discretion of the design architect, a vapor barrier may be considered for use in the proposed structure. The use of a thin gravel cushion, as a capillary break, or a thin sand cushion over a vapor barrier that is placed beneath the concrete slab(s) are at the discretion of the design architect/engineer or as required by local code. Gradations of gravels that are satisfactory capillary breaks include 1 ¼-inch or ¾-inch crushed stone or aggregate per the ASTM D2321 Types IA, IB and II with less than 5 % fines. A number two crusher run stone may also be applicable, but the gradation and material property specifications must qualify.

Exterior Concrete Slabs-On-Grade/Pad/Parking and Roadway Facilities: The characteristics of the natural soils and the known frost penetration in Western New York require that specific attention is provided to the design and construction of paved roadway and parking areas. For new pavement sections, isolated pockets of surficial silty/cohesive/fine-grained soil/fill may be encountered and may be too soft and wet in the proposed parking and roadway areas. These types of soil/fill may be adequately conditioned (i.e., dried and blended) and compacted (i.e., minimum 90 percent compaction) to support necessary construction equipment and normal pavement section. Otherwise, the removal/undercutting of the silty/cohesive/fine-grained soil/fill to a firm, approved subgrade and subsequent placement and compaction of select or approved granular fill will be required in order to accommodate the recommended pavement sections.

For new pavement sections, it is recommended that the subgrade surface is adequately graded and/or underdrains are installed to prevent water accumulation. Above the approved subgrade surface (i.e., minimum 90 percent compaction), a minimum eight-inch thick select granular layer is recommended as the base course for lightly traveled roadway and parking areas (standard duty section). A geotextile filter and strength fabric (such as, Mirafi 600X or equal) and minimum 12-inch thick base course are recommended for all truck routes and heavily traveled roadways (heavy duty section). If “pumping” of the silty/cohesive/fine-grained soil subgrade occurs or is difficult to stabilize during construction, an increase in the base thickness to that of the heavy-duty section and/or a geotextile filter and strength fabric is recommended to be placed on the prepared and approved subgrade for the standard duty section. The NYS Department of Transportation (NYSDOT) specification numbers for typical aggregate subbase/base course components are Item No. 304.12 (Metric) Subbase Course, Type 2 (< 2-inch maximum size), which is preferred, or Item No. 304.14 (Metric) Subbase Course, Type 4 (< 2-inch maximum size). The granular aggregate base layer is recommended to be compacted to at least 95 percent of maximum dry density by ASTM D1557.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

The thickness of top and binder course layers should be determined in accordance with AASHTO methods. In summary, the minimum recommended asphalt thicknesses for the heavy-duty section and standard duty section are three and one-half inches and three inches, respectively. The top and binder course layers are recommended to be designed and constructed in accordance with New York State Department of Transportation Standard Specification.

Limitations, Field Inspections and Monitoring: This report is based on the preliminary information that is provided by project representatives and the subsurface conditions that were encountered at the test boring locations. Due to the nature of the investigation method, test pit excavation will provide a greater level of delineation of the subsurface soil/fill/rock conditions than can be defined by the test boring data alone. As detailed in Appendix E "Limitations", modification regarding proposed building/structure locations and other site developments can result in changes to provided recommendations. It is recommended that the geotechnical engineer be provided the opportunity to generally review the final detailed design and contract specifications. Required earthwork and foundation construction should be done under the supervision of experienced construction personnel and in a manner consistent with proven methods. All site work should be carefully monitored and tested by experienced geotechnical personnel to assure compliance with earthwork and foundation construction specifications.

Thank you for the opportunity to assist on this project. If questions should arise, please call the undersigned at your earliest convenience.

Very truly yours,
BARRON & ASSOCIATES, INC.
and

		S-2 : 2.0'- 4.0'	19	50	Brown, m. dense f. SAND, some Silt, tr. Gravel, tr. Clay, tr. Roots, non-plastic, moist (SM)

Elevation/Depth: The depth column provides the vertical scale of the boring log in feet below ground surface.

Sample No. : Range: Disturbed samples are identified with “S” preceding the sample number. Undisturbed (Shelby-tube) samples are identified with “U” preceding the sample number. Rock core samples identified with “C” preceding the core run. The range of elevation/depth where the sample was taken is identified in one-tenth foot increments.

N-value: The Standard Penetration Test N-value, as specified by ASTM D1586, is defined as the number of blows required by a 140-pound hammer falling 30 inches, each blow, to drive a 2-in outside diameter split-spoon sampler 12 inches.

% REC (RQD): “Percent Recovery” is the length of samples recovered divided by the total length sampled. The result is numerically expressed as a percent. The Rock Quality Designation (RQD) is the total length of places >4 inches divided by the total length of core run.

Soil and Rock Description / Remarks: This column denotes the exact depth of recovery and general documentation of drilling efforts. Description and classification are based on visual inspection of samples and boring operations. The stratum lines shown on the boring logs are based upon interpretation and may not represent precise subsurface conditions. Water-level readings have been made in the drill holes at time under conditions stated on the boring logs. Fluctuations in the water level may occur due to other factors than those present the time measurement was taken. See attached sheet.

Soil and Rock Description / Remarks: Terminology Used for Soil Description

Density Description of Granular Soil

Number of Blows per ft., N	*Relative Density*
0 - 4	Very Loose
4 - 10	Loose
10 - 30	Medium
30 - 50	Dense
Over 50	Very Dense

Abbreviations Used in Soil Sample Classification

f - fine	v - very
m - medium	gr - gray
c - coarse	bn - brown
f/m - fine to medium	yel - yellow
f/c - fine to coarse	sl - slight
tr - trace	dk - dark

Consistency Description of Cohesive Soil

Number of Blows per ft., N	*Consistency*
Below 2	Very Soft
2 - 4	Soft
4 - 8	Medium
8 - 15	Stiff
15 - 30	Very Stiff
Over 30	Hard

Bedding

Parting	Less than 0.02 ft.
Band	0.02 - 0.2 ft.
Thin bed	0.2 - 0.5 ft.
Medium bed	0.5 - 1.0 ft.
Thick bed	1.0 - 2.0 ft.
Massive	Over 2.0 ft.

Grain Size

	Passing / Retained on
Boulder	LARGE / 12-in sieve
Cobble	12-in / 3-in sieve
Gravel	3-in sieve / No. 4 sieve
	No. 4 sieve / No. 10 sieve
Sand	No. 10 sieve / No. 40 sieve
	No. 40 sieve / No. 200 sieve
Silt	No. 200 sieve / 0.005 mm sieve
Clay	Smaller than 0.005 mm

Hardness

Very Soft or Plastic	Can be indented with thumb
Soft	Can be scratched with fingernail
Moderately Hard	Can be scratched with knife
Hard	Difficulty to scratch with knife
Very hard	Cannot be scratched with knife

Percentage Terminology Used in Soil Classification

Trace	0 - 10 %	Some	20 - 35 %
Little	10 - 20 %	And	35 - 50 %

Moisture

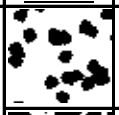
Dry	Absence of moisture, dusty, dry to the touch.
Moisture	Small quantity of moisture. Soil usually above groundwater level.
Wet	Moisture noticeable to the touch. Soil may be below groundwater level.
Saturated	Visible free water, usually soil is below groundwater level.

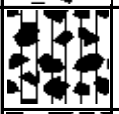
Plasticity

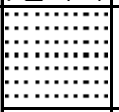
Non-plastic	An 1/8-in thread cannot be rolled at any water content.
Slight plasticity	Thread can be barley rolled.
Moderate plasticity	Thread is easy to roll and little time is required to reach the plastic limit (PL).
Plasticity	Considerable time is required to reach PL. Thread can be re-rolled several times after reaching the PL.

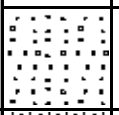
Crystallinity or Texture

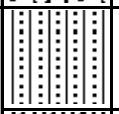
Dense	Crystals are to small they cannot be distinguished with the naked eye.
Very Fine Crystalline	Crystals barely discernable with the naked eye.
Crystalline	Crystals are medium size, up to 1/8-in diameter.
Very Coarsely Crystalline	Crystals larger than 1/8-in diameter.

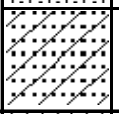


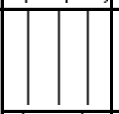


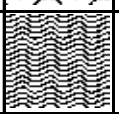


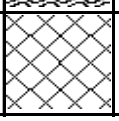












Voids

Porous	Smaller than pinhead. Their presence is indicated by the degree of absorbency.
Pitted	Pinhead size to 1/4 in. If thin walls separate the individuals pits, the core may be described as honeycomb.
Vug	1/4 inch to the diameter of the core. The upper limit will vary with core size.
Cavity	Larger than the diameter of the core.

Soil Classification Chart: Unified Soil Classification System (USCS)

Major Divisions			Pattern	USCS ID	Typical Descriptions
Coarse-Grained Soils: More than 50% of material larger than No. 200 sieve	**Gravels**: More than 50% of coarse fraction larger than No. 4 sieve	Clean Gravels (little or no fines)		GW	Well-graded gravels, gravel-sand mixtures, little or no fines
				GP	Poorly-graded gravels, gravel-sand mixtures, little or no fines
		Gravels with appreciable amounts of fines		GM	Silty gravels, gravel-sand-silt mixtures
				GC	Clayey gravels, gravel-sand-silt mixtures
	Sands: Less than 50% of coarse fraction larger than No. 4 sieve	Clean sands (little or no fines)		SW	Well-graded sands, gravelly sands, little or no fines
				SP	Poorly-graded sands, gravelly sands, little or no fines
		Sand with appreciable amount of fines		SM	Silty sands, silt-sand mixtures
				SC	Clayey sands, sand-clay mixtures
Fine-Grained Soils: Less than 50% of material larger than No. 200 sieve	**Silts and Clays, Low plasticity**: Liquid Limit < 50%			ML	Inorganic silts and very fine sands, rock flour, silty or clayey fine sands or clayey silts with slight plasticity
				CL	Inorganic clays of low to medium plasticity, gravely clays, sandy clays, silty clays, lean clays
				OL	Organic silts and organic silty clays of low plasticity
	Silts and Clays, High plasticity: Liquid Limit > 50%			MH	Inorganic silts, micaceous or diatomaceous fine sand or silty soils
				CH	Inorganic clays of high plasticity, fat clays
				OH	Organic clays of medium to high plasticity, organic silts
Highly Organic Soils				Pt	Peat, humus, swamp soils with organic contents
Miscellaneous Fill				FILL	Miscellaneous fill may belong in any division but is identified as FILL

Exterior Perimeter Footing Detail (Typical):

Note: Bear footings on stable, natural, approved limestone bedrock or on approved select granular fill section placed in loose lifts no greater than 12 inches thick and compacted to 95% of max. dry density as per ASTM D1557.

Basement/parking garage will require the removal of up to four feet of limestone bedrock. If the approved bedrock depth is less than four feet below final exterior grade, hooked rebar dowels (No. 4 or 5) are recommended to be placed in grout filled holes at approximately a four-foot spacing and extending to a minimum total depth of four feet into approved bedrock.

On above conditions: USE Q_{ALLOW} = 5,000 PSF

Paving
Gravel Fill
Cohesive Glacial till
Limestone
Topsoil
Poorly graded silty fine sand

B&A JOB NO.: 20-533

DATE: 07/16/20

LATERAL EARTH PRESSURE ON GENERIC BLOCK FOUNDATIONS FOR SIGNS, FREE-STANDING RETAINING WALLS, OR BELOW GRADE/BASEMENT/TANK/POOL RETAINING WALLS (Less Than 20 Feet High)

a) Porous filter media, in contact with the basement/below grade foundation wall or retaining walls, protects and is in contact with a minimum 4 inch diameter perforated drainage pipes at the footing/base of the foundation/structural wall (exterior backfill side and interior basement side) and/or weep pipes through the wall, as needed and as applicable.

b) Where recommended, a geotextile filter fabric will protect the gravel filter media from the earth backfill. Overlap unsewn seams as per the manufacturer's recommendations.

c) Waterproof earth side of wall, as is customarily provided in practice.

d) Drainage pipes are connected to an appropriately designed collector pipe, conveyance, and/or sump pump system as is applicable for the intended purpose of the wall and as customarily provided/installed in practice.

e) For potential groundwater table conditions above the top of the basement slab-on-grade condition, install continuous waterstops (with no joints in stop) at wall and floor construction joints, as is customarily provided in practice. Interior intermediate drainage pipes beneath the slab, that are spaced on-center and in both directions, do appear to be needed.

f) Assume a uniformly graded, clean coarse sand or sandy gravel backfills:

* equivalent N-value in a dense state: $(N_1)_{60}$ = 40 blows/foot
* friction angle: ϕ' = 38 degrees {Teng, pg. 12}
* average in-place densities: moist - γ_m = 120 pcf
  saturated - γ_{sat} = 132 pcf submerged - $\gamma' = (\gamma_{sat} - \gamma_w)$ = 70 pcf

g) Assume at base of wall/footing, coefficient of friction against sliding (f_s) at base of wall (Refer to Teng, pg. 320-1):

f_s = tan (0.58 x ϕ') = 0.40 (AREA silty soil to silty coarse-grained soil)

h) Use equivalent fluid pressure design approach {Hough, pg. 249 and NAVFAC pg. 7-10-9}:

* at rest pressure coefficient - K_0 = 1 - sin (ϕ') = 0.38
* effective lateral pressure of soil - γ'_l = K_o x γ' = 26.6 pcf
* hydrostatic pressure - γ_w = 62.4 pcf
* equivalent fluid pressure with water level at the top of the grade at the wall - γ_{eo} = $\gamma'_l + \gamma_w$ = 89 pcf (say 90 pcf)
* equivalent fluid pressure with compaction induced lateral stress increase (W&F, pg 409) - γ_{eo} = 2 x K_o x γ_m = 91 pcf (say 90 pcf)
* active pressure case - K_a = [1 - sin (ϕ')] / [1 + sin (ϕ')] = 0.24
  γ_{ea} = K_a x γ_m = 29 pcf (say 30 pcf)
* passive pressure case - K_p = [1 + sin (ϕ')] / [1 - sin (ϕ')] = 4.2
  γ_{ep} = K_p x γ_m = 504 pcf (say 330 pcf with a F.S. = 1.5)

		Thoroughly Compacted ⇒⇒		Uniformly Graded & Clean Coarse Sand or Sandy Gravel Fill	Non-Plastic Silty Sand or Sandy Silt Fill	
USE:	Earth Pressure Coefficient	Static Active	=	0.24	0.33	
		Static At-Rest	=	0.76	1.00	
		Static Passive	=	2.80	2.00	(with F.S. = 1.5)
		Static Passive	=	4.20	3.00	(with F.S. = 1.0)
USE:	Equivalent Fluid Pressure	Static Active	=	30 pcf		
		Static At-Rest	=	90 pcf (for rigid walls)		
		Static Passive	=	330 pcf (with F.S. = 1.5)	[500 pcf with (with F.S. = 1.0)]	

[For earthquakes, structural engineer may elect to use the above Static Passive case instead of the below Earthquake Lateral Load for Non-Yielding Wall movement into the soil backfill.]

USE: Simplified Model for Earthquake Lateral Load/Ft. Wall Length @ 0.6 H_{bw} above base. Loads for Non-Yielding Wall.

H_{bw} = Earth Height Behind Wall (feet)

Reduce load by 33% for Yielding Wall (active case) = (6.8 psf / foot) x H_{bw}^2 (NYS, S_{ds} = 0.25 g)

(γ_m = 120 pcf for S_{ds} value. Add to Static At Rest/ Active Pressure/Load for unsaturated backfill case) = (13.5 psf / foot) x H_{bw}^2 (NYS, S_{ds} = 0.50 g)

= (17.5 psf / foot) x H_{bw}^2 (NEern NYS, $S_{ds} \leq 0.65$ g)

[Above for Site Class C to E soils. Interpolate for other S_{ds} values.
Use 1.75 x values for walls on Class B/A rock or on rigid foundation base. (FEMA NEHRP Guidelines)]

Saturated/Liquified Soil During Earthquake = 132 pcf
(Equivalent Fluid Pressure. Add to inertial hydrodynamic pressure, not presented here.)

{For looser/denser backfills, adjust above pressures by the ratio = new density / 120 pcf or / 132 pcf (for saturated case)}

USE:	Coefficient of Friction Against Sliding (f_s)	= 0.45	(on compacted NYSDOT Item #304.12 or #304.14 gravels)
	(use lowest f_s with no underlying weaker layers)	= 0.35	(on compacted granular soil & non-plastic silt)
		= 0.20	(slab-on-grade on polyethylene on granular fill)
	[with a F.S. = 1.0]	= 0.60/0.50	(on clean, rough, & sound bedrock/smooth bedrock)
	Min. Factor of Safety Against Sliding	= 1.5	*[Rev.9-30-09]*

APPENDIX D

GENERAL EARTHWORK SPECIFICATION

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

Barron & Associates, P.C.
GENERAL EARTHWORK SPECIFICATION

PART 1 GENERAL

1.1 SITE AND SUBSURFACE CONDITIONS

1.1.1 Overview

This specification is included as a courtesy to the clients of Barron & Associates, P.C, and addresses earthwork site preparation. Additions and modifications are necessary to create a job-specific specification. This specification may serve as a basis for the development for a technical specification under Division 2, *Site Work*.

1.1.2 Site Conditions

The site-specific conditions are described under separate cover or may be available from the OWNER.

1.1.3 Subsurface Conditions

The site-specific subsurface conditions are described under separate cover or may be available from the OWNER.

1.2 REFERENCES

American Standard for Testing and Measurement (ASTM):

ASTM C136	Method for Sieve Analysis of Fine and Coarse Aggregates
ASTM C2922	Density for Soil and Soil-Aggregate in Place by Nuclear Methods
ASTM D422	Test Method for Particle-Size Analysis of Soils
ASTM D1140	Amount of Material in Soils Finer Than the No. 200 Sieve
ASTM D1557	Laboratory Compaction Characteristics of Soil Using Modified Effort (56,000 ft-lb/ft^3)
ASTM D2216	Test Method for Laboratory Determination of Water (Moisture) Content of Soil and Rock
ASTM D2487	1990 Classification of Soils for Engineering Purposes
ASTM D4318	Test Method for Liquid Limit, Plastic Limit, and Plasticity Index of Soils.

1.3 DEFINITIONS

1.3.1 Unacceptable Material

Soil material containing debris, wood, scrap material, vegetation, refuse, soft unsound particles, and other organic, frozen, deleterious, or objectionable materials. Contaminated soils shall be properly documented and removed or remediated on site. If necessary, remediation procedure will be defined by the OWNER.

1.3.2 Unsuitable Material

Brown, organic topsoil and underlying soft pockets of organic silt or wet, reworked silty clay.

1.3.3 Ordinary Fill

Friable soil containing no stone greater than two-thirds loose lift thickness and no unacceptable or unsuitable materials. In general, existing random fill is expected to be acceptable for reuse as ordinary fill given proper sorting, blending, drying, and controlled placement methods.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

1.3.4 Granular Fill

Ordinary fill meeting the designation of ASTM D2487 classification of GW with a maximum of 10 percent by weight passing ASTM D1140, No. 200 sieve.

1.3.5 Select Granular Fill

Clean, uncoated soil which contains no unacceptable materials and conforms to the gradation requirements defined in Table A: Select Granular Fill.

Table A: Select Granular Fill	
Sieve Size	Percent Finer by Weight
2/3 of the loose lift thickness	100
No. 10	30 - 95
No. 40	10 - 70
No. 200	0 - 15

1.3.6 Sand and Gravel

Clean, hard, durable, uncoated particle of sand and gravel, free from lumps of clay, containing no unacceptable matter, and conforming to gradation requirements of *Table B : Sand and Gravel*

Table B: Sand and Gravel	
Sieve	Percent Finer by Weight
*	100
No. 4	50 - 85
No. 10	--
No. 40	10 - 35
No. 100	--
No. 200	0 - 8

* Job-Specific. To be determined by the ENGINEER

1.3.7 Crushed Stone

Clean, durable, sharp-angled fragments of rock or crushed gravel stone of uniform quality, containing no unacceptable matter, free from coatings, and conforming to gradation requirements of *Table C: Crushed Stone*

Table C: Crushed Stone		
	Percent Passing	
Sieve Size	¾-inch Stone	1 ¼-inch Stone
1 ½-inch	__	100
1 ¼-inch	__	85-100
1- inch	100	__
¾-inch	90-100	10-40
5/8-inch	__	__
½-inch	10-50	0-8
3/8-inch	0-20	__
#4	0-5	__

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

1.3.8 Flowable Fill

Also known as Controlled Low Strength Material – Controlled Density Fill (CLSM-CDF), this material is available under a variety of producer names (e.g., K-Krete©, M-Crete, Flash Fill©, Flowable Mortar, Unshrinkable Fill, etc.). This non-settling backfill mixture is most commonly used for its flowable characteristics, its support strength under traffic loads, and its removability at a later date. The material may be produced on-site or off-site. In either case, the producer of such materials and the product must meet certain certification criteria. Such information is beyond the scope of this specification and will be considered on a site-specific basis.

Flowable fill may be acceptable for use as a backfill for utility trenches of other low-lying areas which require a compacted granular fill. Its use and warranty of performance is left to the CONTRACTOR in such applications.

The use of flowable fill under load-bearing structural components in place of properly placed and compacted granular fill is NOT common and is questionable. The localized use of such material may have profound affects on the performance of a foundation system. Site-specific conditions and the extent of anticipated use of flowable fill must be examined by geotechnical engineer. Cost of such consultation shall be borne by the CONTRACTOR unless specifically directed by the OWNER to seek such consultation. Without such consultation, warranty of performance for such use is left to the CONTRACTOR.

1.4 SUBMITTALS

The following submittals shall be provided in accordance with approved submittals procedures.

1. Fill Source: Provide name and source locations of fill material.

2. Field Test Reports: Field tests will be performed by OWNER's Representative as needed. CONTRACTOR may be required to perform such tests on proposed off-site fill materials.
a. Fill material grain size analyses per ASTM C136, D422, D1140, D2487
b. Moisture/Density test results per ASTM D2216
c. Liquid limit, plastic limit, and plasticity index per ASTM D4318
d. Compaction/Density test results per ASTM C2922 and D1557

3. Sample: Geotextile fabric

PART 2 PRODUCTS

Geotextile Fabric: Mirafi 600X or equal. (Also referred to as synthetic fabric).

PART 3 EXECUTION

3.1 PROTECTION

3.1.1 General

Manner of excavation shall minimize disturbance of underlying natural ground. If deemed necessary by the Engineer, alter construction procedures to reduce subgrade disturbance. Excavate areas which have been excessively disturbed to firm ground and backfill with properly compacted granular fill.

3.1.2 Roads and Walks

Keep roads and walks free of dirt and debris at all times.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

3.1.3 Trees, Shrubs, and Existing Facilities

Protect from any damage all vegetation and facilities identified to remain.

3.1.4 Utility Lines

Locate all utilities within the area of disturbance prior to the start of work. Show locations on initial plans. Protect utility lines from damage. Notify the ENGINEER immediately of damage to or an encounter with an unknown utility. Damage to utility lines are to be repaired by the CONTRACTOR at no additional cost. The CONTRACTOR shall have underground utility owners stake out utility locations prior to the start of clearing and excavation operations.

3.2 VERIFICATION OF CONDITIONS/PROOF-ROLLING

Prior to placement of the initial layer of fill over the natural ground, proof-roll the exposed natural ground above the groundwater table elevation by making two passes with a fully-loaded ten-wheel truck. Excavate unstable areas detected by this process and replace with compacted granular fill.

3.3 PREPARATION

3.3.1 Surface Preparation

Within the site limits indicated on the drawings, excavate all unsuitable material to firm natural ground in the manner specified herein. Follow a construction procedure which permits visual identification of firm natural ground. In the even that groundwater is encountered, the ENGINEER may require that the size of the open excavation be limited to that which can be handled by open pumping to allow visual inspection of the excavation bottom and the performance of backfill operations to be conducted in a dry state.

Excavation of unsuitable material shall be limited to the greater of the following:

- A distance of 5 feet beyond building lines or
- The area defined by a one-horizontal to one-vertical line sloping down from the outside bottom edge of exterior footings to firm natural ground.

3.4 PLACEMENT AND COMPACTION

3.4.1 General

Place fill in accordance with *Table D: Compaction Alternatives*. These alternatives are provided as minimum compaction
standards only and in no way relieve the CONTRACTOR of his obligation to achieve any specified degree of compaction by whatever means may be necessary.

Grade to provide positive drainage and a smooth surface which will readily shed water. To the extent practicable, compact each layer to the specified density on the same day placed. Place fill in horizontal layers. Where horizontal layers meet a natural slope, key layer into slope by cutting a bench.

Fill that is too wet for proper compaction: Disc, harrow, or otherwise dry to proper moisture content for compaction to the required density.

Fill that is too dry for proper compaction: Uniformly apply water over the surface of the loose layer in sufficient quantity to allow compaction to the required density.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

Table D: Compaction Alternatives					
Compaction Method	Max. Stone Size	Maximum Loose Lift Thickness (inches)		Maximum Number of Passes	
		Below Structure and Pavements	Less Critical Areas	Below Structure and Pavements	Less Critical Areas
Hand operated vibratory plate of light roller in confined areas	3	4	4	4	4
Hand operated vibratory drum rollers weighing at least 1,000 pounds in confined areas	4	6	8	4	4
Loaded 10-wheel truck or D-8 crawler	6	10	12	4	2
Light vibratory drum roller; Min. weight at drum 8,000lbs; Min. dynamic force 10,000lbs.	8	12	12	6	2
Minimum vibratory drum; Min. weight at drum 10,000lbs; Min. dynamic force 20,000lbs.	8	18	18	6	4

3.4.2 Dewatering

Provide adequate pumping and drainage facilities to keep excavated areas sufficiently dry of groundwater and surface run-off. Dewatering shall avoid adversely affection construction procedures or causing excessive disturbance of underlying natural ground. Drain all pumped water in such a manner as to avoid damage to adjacent property.

If requested by the ENGINEER, place a 6-inch to 12-inch layer of sand and gravel or crushed stone over the natural underlying soil to stabilize area which have been disturbed due to groundwater seepage pressures and to expedite dewatering operations. Particular attention shall be given areas under proposed foundations.

3.5 FIELD QUALITY CONTROL

3.5.1 Compaction Requirements

Allow the ENGINEER sufficient time to make necessary observations and tests. Base the degree of compaction on maximum dry density as determined by ASTM D1557. The minimum degree of compaction for placed fill shall be as indicated *in Table E: Compaction Requirements.*

Table E: Compaction Requirements	
Area	Minimum Degree of Compaction (%)
Below foundation	95
Pavement and building subbase and base courses	95
Below building slab base course and above bottom of foundation	92
Below pavement subbase and base courses	90
Trench backfill outside of building	90
Trench backfill inside of building	Refer to one of the above-listed categories
Ordinary fill within 5 feet of grade	90
Vegetated areas below 5 feet of grade	85

3.5.2 Testing

Site work should be monitored and tested by geotechnical ENGINEER or his representative and in accordance with requirements of the design team to assure compliance with earthwork and foundation construction specifications.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

The owner will retain a geotechnical ENGINEER or his representative to perform on-site observations and testing during this phase of construction operations. The geotechnical ENGINEER or his representative will:

- Observe excavation and dewatering of building and controlled fill areas;
- Observe backfill and compaction within building and controlled fill areas;
- Laboratory test and analyze fill material; and
- Observe construction – and performing water content, gradation, and compaction tests.

On a timely basis, the CONTRACTOR will receive copies of test results submitted to the OWNER. In addition, during construction the geotechnical ENGINEER will advise the OWNER and CONTRACTOR in writing of conditions which fail to conform to the Contract Documents. The CONTRACTOR shall take immediate action to remedy indicated deficiencies.

The geotechnical ENGINEER or his representative will not supervise or direct the actual work of the CONTRACTOR or employees and representatives of the CONTRACTOR. The presence of, observations by, and testing performed by the geotechnical ENGINEER or his representatives shall not excuse the CONTRACTOR from defects discovered in the work.

APPENDIX E

LIMITATIONS

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

LIMITATIONS

1. This report is based on the data that was obtained from the subsurface explorations and on the design of the proposed two-story building with underground garage as submitted to the geotechnical engineer. A geotechnical engineer, who is experienced in foundation construction and earthwork, should be engaged to review the final design and specifications in order to determine whether any change in concept may have any effect on the validity of the conclusions presented herein, and whether these conclusions have, in fact, been implemented in the design and specifications.

2. The subsurface conditions, including thickness, between the exploration locations are approximate and simplified representations of the strata and transitions. There is the possibility that variations in soil and rock conditions and boundaries will be encountered during construction. In order to permit correlation between the exploratory soil data and the actual soil conditions encountered during construction and so as to assess conformance with the plans and specifications as originally contemplated, it is recommended that a geotechnical engineer, who is experienced in foundation construction and earthwork monitoring, should be retained to perform continuous construction review during the site preparation and foundation construction operations.

3. The subsurface exploration logs and subsurface conditions may aid in estimating material quality and quantities, such as topsoil/organic matter, fills, natural soils, and rock, but are not to be relied upon as the exclusive means for bid preparation purposes. It is the responsibility of the contractor to perform any additional site examinations and explorations and to prepare an accurate bid.

4. Disclaimers:

   a. In the event that any changes in the nature, design or location of the structure are planned, the conclusions that are contained in this report shall not be considered valid unless the changes are reviewed and the conclusions of this report are modified or verified in writing.

   b. The geotechnical engineering report has been prepared for this project by Barron & Associates, P.C. This report is for assistance in design only and is not a sufficient basis on which to prepare an accurate bid.

   c. This report has been prepared for the exclusive use of Benderson Development Company, LLC of Buffalo, New York, their client(s) and their designated design representatives, for specific application to the construction of a two-story building with underground garage at 4548 & 4564 Main Street, 22 Chateau Terrace, and 17 Fruehauf Avenue in the Town of Amherst, Erie County, New York and in accordance with generally accepted geotechnical engineering practice. No other warranty, expressed or implied, is made.

Project Summary

Commonwealth Heritage Group, Inc. (Commonwealth) prepared this documentation report for the property at 22 Chateau Terrace in the Snyder area of the Town of Amherst, Erie County, New York, under contract to Benderson Development Company, LLC (Figures 1 and 2).[1] This documentation report includes a State and National Registers of Historic Places (S/NRHPs) eligibility assessment of the ca. 1920 residence at 22 Chateau Terrace. It was prepared for submittal to the Town of Amherst Historic Preservation Commission to comply with the "Historic Preservation Law of the Town of Amherst." The study included exterior and interior photographic documentation (see Appendix A), historical research, and an architectural investigation of the building. On-site field investigation was conducted in April 2022. Christine M. Longiaru, M.A., served as Principal Investigator and Senior Architectural Historian. Mr. Mark A. Steinback, M.A., New York Regional Director/ Senior Historian, was the Project Director. Ms. Longiaru and Mr. Steinback exceed the professional qualifications requirements (36 CFR 61) for their respective disciplines.

Figure 1. The property at 22 Chateau Terrace, Town of Amherst, Erie County, New York *(Commonwealth 2022).*

[1] Note, Commonwealth's New York Regional Office in Buffalo was formerly Panamerican Consultants, Inc. The Buffalo office has conducted 50 cultural resources investigations in the Town of Amherst.

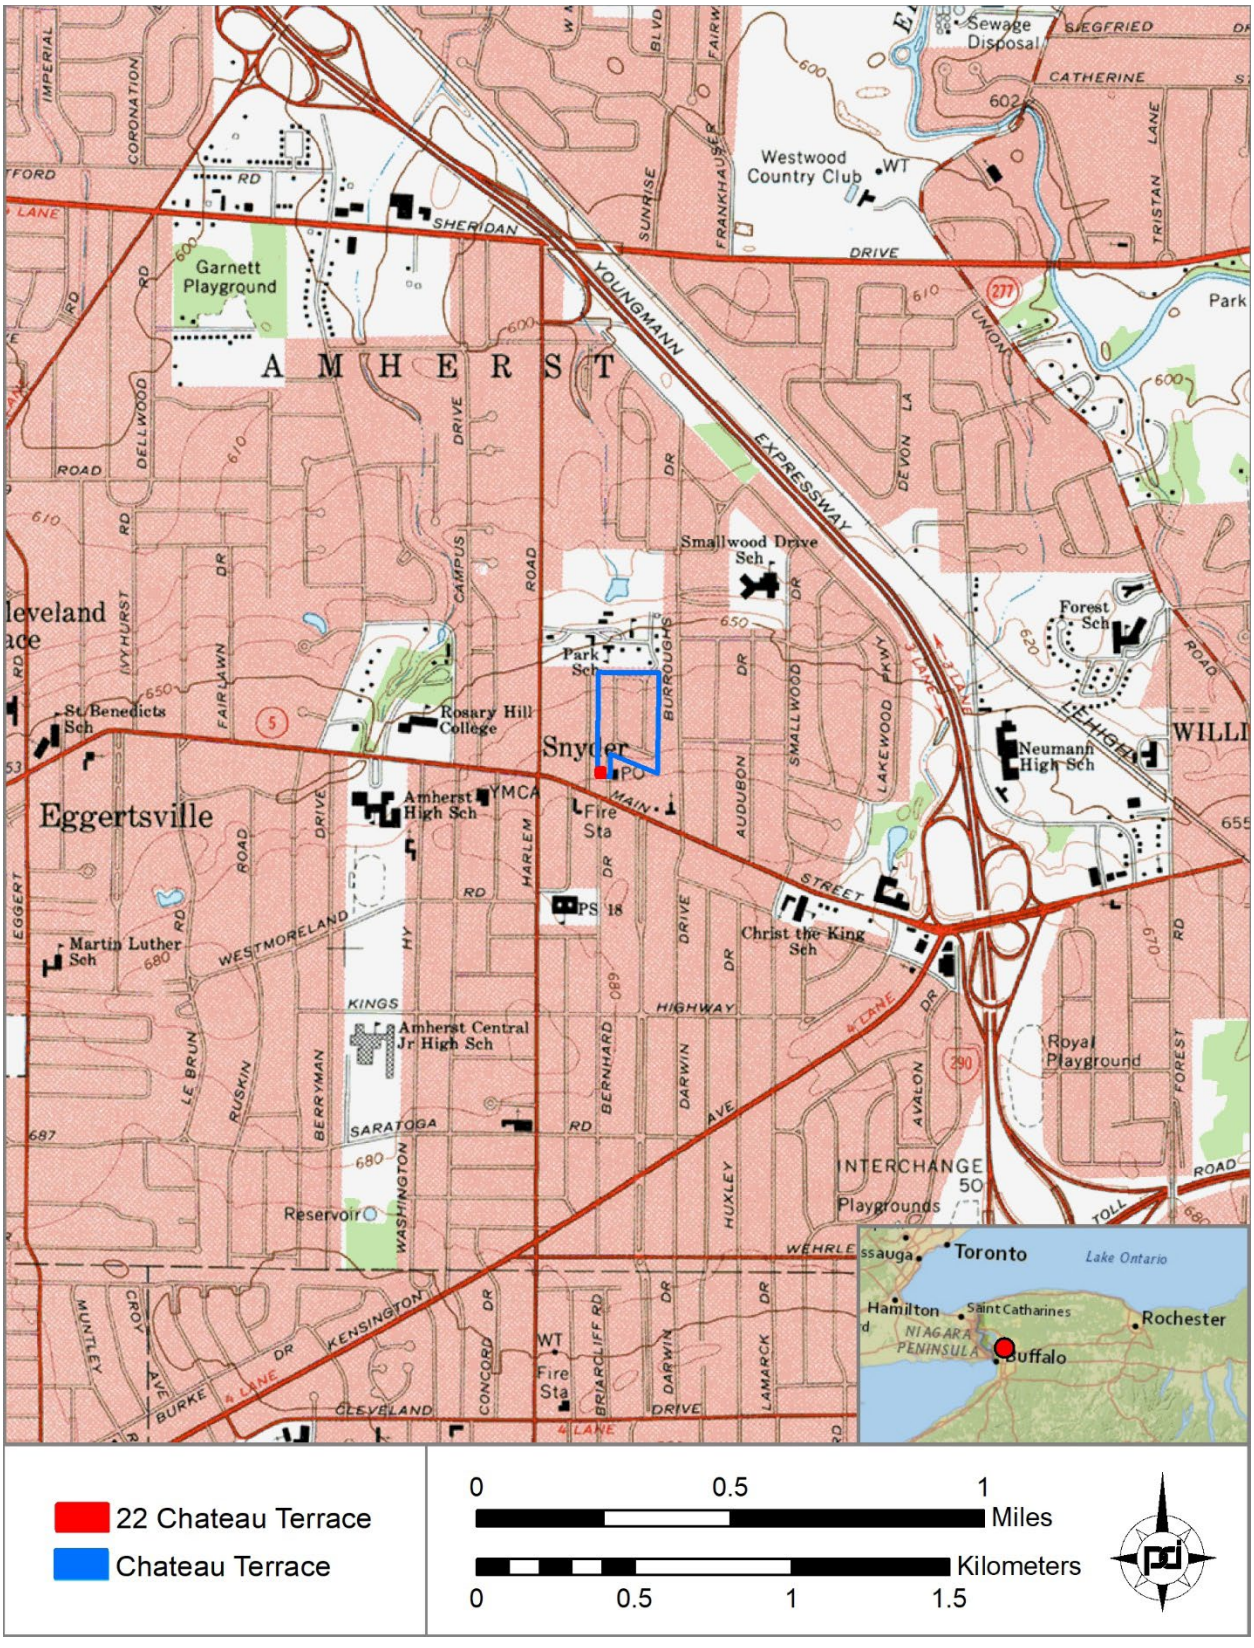

Figure 2 Location of the property at 22 Chateau Terrace, Town of Amherst, Erie County, New York *(USGS Buffalo Northeast, 1965).*

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

Current State-level Inventory Status. The residence at 22 Chateau Terrace is in the Chateau Terrace Study Area (New York State Office of Parks, Recreation, and Historic Preservation [NYS OPRHP] Unique Site Number [USN] 02902.001453), which has not been formally evaluated for listing on the State and National Registers of Historic Places (New York State Cultural Resources Information System (CRIS 2022). A general boundary for the study area is delineated in CRIS, though individual residences in the Chateau Terrace Study Area have not been assigned USNs (Figure 3). Audubon Terrace Study Area adjacent to Chateau Terrace (USN 02902.001454) to the east is also a contemporary unevaluated subdivision.

Figure 3. Chateau Terrace Study Area at left as delineated by the NYS OPRHP. The general location of 22 Chateau Terrace is depicted by the red-shaded circle. Note, the adjacent Audubon Terrace Study Area boundary at right *(CRIS 2022).*

Previous Surveys

Local-level Historic Resources Survey Documentation. Chateau Terrace Study Area was first recommended as a potential historic district in the 1997 *Reconnaissance Level Survey of Historic Resources, Town of Amherst* (Bero 1997:Appendix F-6). The residence at 22 Chateau Terrace was identified as a contributing resource to a proposed historic district. In 1997, Chateau Terrace consisted of approximately 73 houses (52 contributing; 21 non-contributing). It included the following properties: 121 Chateau Terrace North; 7-65 and 10-42 Chateau Terrace South, 11-69 and 20-80 Chateau Terrace East 1-121 and 22-120 Chateau Terrace.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

As initially reported, Chateau Terrace Historic District was characterized as a cohesive early twentieth-century residential district consisting of modest scale houses. Chateau Terrace residences were primarily built during the 1920s and 1930s. A variety of popular residential architectural styles are represented in the neighborhood including Bungalow, Craftsman, American Foursquare, Colonial Revival, and Dutch Colonial Revival (Figure 4). Other features of Chateau Terrace include a winding street pattern with mature street trees. The 1997 survey also noted Chateau Terrace's significance at the local level for its association with Amherst's early twentieth-century suburban development.

The 1997 survey assigned a "yellow" color code for Chateau Terrace, which is the third level of color coding for properties in the reconnaissance survey's Annotated List (Bero 1997: Appendix F-6). A "yellow" designation for a property represents a property with moderate architectural and/or historical significance (Bero 1997: 101). Chateau Terrace was one of nine historic districts in Amherst recommended for the intensive level survey. However, the historic districts were not included in the 1998 intensive level survey (Bero 1998:2).

Figure 4. A representative view of 27, 23, and 19 Chateau Terrace in 1997 (*Reproduced from Bero 1997: Photo No. 52*).

In 2011, Chateau Terrace was reassessed in the *Updated Reconnaissance Level Survey of Historic Resources, Town of Amherst* (KTA 2011: Appendix 1-6). The 2011 survey determined Chateau Terrace Historic District met the criteria for a "blue rated" property. The definition of a "blue rated" property is presented below:

> **BLUE:** Extremely high architectural and/or historic significance. These properties would likely also meet the criteria for to be considered National Register eligible. A locally significant district. A resource that is rare and lacks individual distinction. All districts are considered Blue as are most farmsteads.

Seventy properties were identified in Chateau Terrace in 2011; 47 contributing and 23 noncontributing (KTA 2011:Appendix 1-6). The residence at 22 Chateau Terrace is included as a contributing resource (KTA 2011: Area 6-9). Chateau Terrace consists of the following properties: 11 to 77 Chateau Terrace East and 20 to 80 Chateau Terrace East; 7 to 47 Chateau Terrace South and 10 to 42 Chateau Terrace South; 22 to 120 Chateau Terrace and 65 to 121 Chateau Terrace (Figure 5).

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

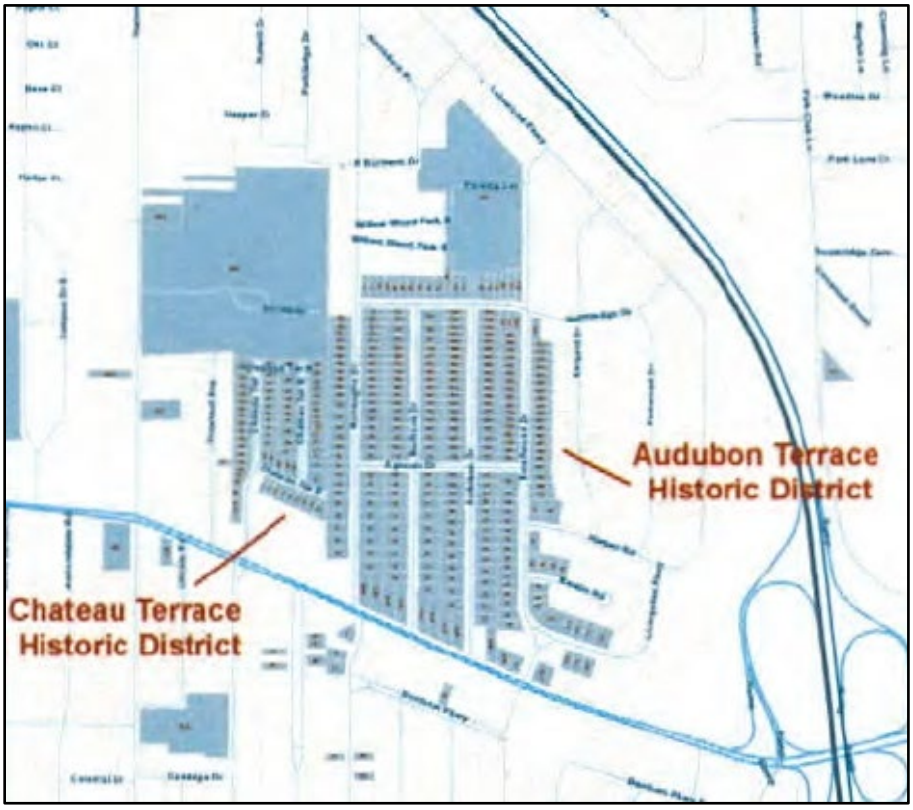

Figure 5. Chateau Terrace Historic District and the adjacent Audubon Terrace District in 2011 (*Reproduced from KTA 2011: Area 6*).

Methodology

Methodologies, historic overviews, and recommendations presented in previous historic resources surveys of the Town of Amherst informed this S/NRHP eligibility assessment for the individual subject property at 22 Chateau Terrace. To assess the historic significance of 22 Chateau Terrace further research was conducted on the development history of the Chateau Terrace Study Area and its surrounding area in the Snyder community. In April 2022, an online Freedom of Information Law (FOIL) request was made with the Town of Amherst Building Department and Planning Department for the following: 1) subdivision files for Chateau Terrace (Suor & Suor Building Company) and 2) building permit records for 22 Chateau Terrace (Online FOIL Request: 2134). The FOIL request did not yield any relevant historical information about the residence or the subdivision.[2]

A research inquiry for Chateau Terrace subdivision was also made with the The Niederlander Research Library of Buffalo Niagara Heritage Museum.[3] The library does not presently hold records specific to Chateau Terrace. Research was conducted at the Eggertsville-Snyder Branch Library and The Grosvenor Room-Special Collections department at the Central Library of the Buffalo & Erie County Public Library. Other research included online searches of relevant genealogical and newspaper web sites.

[2] Online FOIL Request #2134, Town of Amherst, NY (April 28, 2022). FOIL responses were received on May 4 and June 8, 2022.

[3] Rachel Ravago (Deputy Director for Collections and Interpretation, Buffalo Niagara Heritage Museum) in discussion with the author, May 2022.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

On-site documentation of the property was conducted on April 28, 2022. As noted above, the investigation included digital photography of the property's setting and the existing conditions of exterior and interior of the building (see Appendix A). Intact architectural details and the overall condition of the building were noted as were any changes to the building. A cursory drive through of the Chateau Terrace development was also carried out to support the S/NRHP eligibility assessment. The National Register Criteria for Evaluation was applied only to the individual property at 22 Chateau Terrace (National Park Service 2002).

> Criterion A: (Event) Properties that are associated with events that have made a significant contribution to the broad patterns of our history; or
>
> Criterion B: (Person) Properties that are associated with the lives of persons significant in our past; or
>
> Criterion C: (Design/Construction) Properties that embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; or
>
> Criterion D: (Information Potential) Properties that have yielded, or may be likely to yield, information important in prehistory or history (*NPS Bulletin 15*, referencing 36 CFR 60).

A property is not eligible if it cannot be related to a particular time period or cultural group and thereby lacks any historic context with which to evaluate the importance of the cultural resource. The cultural property (e.g., historic structure or landscape) must also retain the historic integrity of those features necessary to convey its significance. Seven aspects or qualities of integrity recognized by the National Register are location, design, setting, materials, workmanship, feeling, and association. Actual determinations of eligibility for the S./NRHPs are made by the NYS OPRHP.

Historical Overview

Early Development of Town of Amherst. European-American settlement of the Niagara Frontier dates from the end of the American Revolution in 1783. During the next decade large grants of land in western New York would be sold to private investors who attempted to open the land to settlement. The land's initial purchasers, a syndicate of speculators headed by Oliver Phelps and Nathaniel Gorham, forfeited their obligations, and the rights to the unsurveyed portion of the area were sold to Robert Morris in 1791. Reserving a portion of the land for his own purposes, Morris sold the remainder, including all of present Erie County, to a consortium of Dutch investors, called the Holland Land Company, in 1792-1793 (Turner 1974 [1850]; Silsby 1961).

Joseph Ellicott was contracted in July 1797 to survey the company's land in western New York and divide it into townships. The process began in the spring of the following year. The current path of Main Street (NY Route 5), completed in 1803, was known as the Buffalo-Batavia Road to the early settlers. This road and the future City of Buffalo were laid out by Ellicott (White 1898). Once townships had been surveyed and roads in the area cut, settlement and growth followed quickly. The first land sales in Amherst were made in the autumn of 1803 to Samuel Kelsey, Henry Lake, Benjamin Gardner, and William Lewis, among others. The earliest settlers arrived the following year and included Timothy and Orlando Hopkins, John Hershey, Samuel McConnell, Alexander Logan, Caleb Rogers, Stephen Colvin, John King, and Joel Chamberlain. By 1808 Ellicott Creek (then known as Eleven Mile Creek) had been dammed and a grist mill was operating in what was then called Williams Mill. Erected by Jonas Williams, the mill was joined by a sawmill and later a tannery (Glover 1972:2). Niagara County (consisting of what are now Erie and Niagara counties) was formed from Genesee County in 1808.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

The War of 1812 stunted growth in Western New York which served as one of the primary theaters of that conflict, and areas near the border with Upper Canada (the current province of Ontario) were ravaged by attacks and counterattacks. After the war, Eleven Mile Creek (Ellicott Creek) offered a prime power source for nascent industrial growth, which in turn attracted settlers to the area. With increased population, new political divisions were made. The Town of Amherst was separated from the Town of Buffalo in April 1818 and named for Sir Jeffrey (or Geoffrey) Amherst, Commander of British forces in America in 1759 and 1760 and an early advocate of biological warfare (i.e., blankets infected with small-pox) against the Indians (White 1898:I:493-494; Fenn 2000:1573-1579). Erie County was created when all the land south of Tonawanda Creek was removed from Niagara County in 1821. The Town of Amherst achieved its present size in 1839 when the Town of Cheektowaga was created (White 1898:I:493-494).

The area received a tremendous economic boost when one terminus of the Erie Canal was located at the village of Buffalo. Begun in 1817, the Erie Canal linked Buffalo and Lake Erie with New York City when it opened on October 26, 1825. The completion of the canal attracted additional settlers to the region, including many German-speaking Alsatians, who began to populate the largely agricultural and unoccupied northern portions of the Town of Amherst in the early 1830s (Young 1965:260). Progress was slow since Ellicott Creek flooded regularly, and the nearby land had to be drained before it could be cultivated (Smith 1884:I:400). Despite these endeavors, the center of settlement in the Town of Amherst remained at Williamsville near the creek. Homesteaders focused on growing grain, notably wheat, and grazing cattle. The town's numerous creeks supported a variety of rural industries, including grist mills, a carding mill, sawmills, a tannery, a shoe-and-boot factory, a broom factory, a slaughterhouse, and two furnaces for processing iron needed by area blacksmiths (Glover 1972:2-3; League of Women Voters 1985:6; Amherst Museum 1997). The Fogelsonger limestone quarry was located between Snyder and Williamsville near what is now the entrance to the New York State Thruway. The population of the town increased during the middle decades of the nineteenth century from 4,153 in 1850 to 4,807 in 1875 (Beers 1880:18-19).

First completed to Buffalo in the 1840s, railroads played an important part in the development of western New York as an economic power during the nineteenth and twentieth centuries. As part of the effort "to connect the Hudson River and Lake Erie with a 'ribbon of rails'" the Batavia branch of the New York Central Railroad passed through the central part of the Town of Amherst (Eberle and Grande 1987:52; Stone and Stewart 1866; Beers 1880). This line was abandoned in the twentieth century, and the tracks were pulled up. The New York West Shore & Buffalo Railroad ran passenger service along this route, stopping at Transit Station and Getzville beginning in 1884 (White 1898:I:539; USGS 1905). By 1896, a branch of the Lehigh Valley Railroad ran diagonally through the town, west and south of the project area (Young 1965:264; USGS 1905, 1948).

During the late nineteenth century, the Town of Amherst underwent a period of infrastructure improvements, including the widening and paving of streets and roadways, and the erection of bridges. The first telephone was installed in 1879 (although dial service did not begin until 1949) and the first water system was created in 1895. After the turn of the nineteenth century, other public services began to improve living conditions in the town: water power generated by Niagara Falls was used to provide the town's electricity as electric lights were erected along Main Street in 1901; a natural-gas franchise was granted in 1902; the first water meters were installed in 1919 (League of Women Voters 1985:7; Young 1965:264-265).

Industry in the town at that time centered on processing grain. Large and active flour mills ground wheat grown in the town as well as grain brought to Williamsville from the docks of Buffalo. By the 1890s, however, "electric power from Niagara Falls became available in unlimited quantities. [As a result,] except for the Chalmers gelatine factory [in Williamsville], founded in the 1872, industry disappeared, and Amherst turned toward developing itself as a residential area" (Glover 1972:6-7; see also Young 1965:116-117). Improvements and developments in transportation networks during the 1890s into the twentieth

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

century, as well as the prosperity of the cities of Buffalo and Tonawanda facilitated the trend toward creating residential communities. In 1892, an electric trolley system connected Williamsville to Buffalo, which operated until 1930, when gasoline buses and cars proved more popular with commuters (Glover 1972:6; Young 1965:263). These transportation improvements offered suburban living opportunities for urban workers.

Agriculture remained prominent in the town well into the twentieth century although the trend of subdividing former farms or unproductive areas into residential developments accelerated after World War I (Dunn 1972:212; Eberle and Grande 1987:202).

Synderville. To the west of William's Mill, a small community formed in the future Snyder area when in 1804 Timothy Hopkins purchased a large farm on Main Street which extended west from Washington Highway (approximately three blocks west of Harlem Road) to Amherstdale Road (Fiddler-Woite 1998:11). Settlement progressed slowly in the Snyder area during the early nineteenth century. The Schenck family moved to the area from Pennsylvania in 1821. Two years later, Abraham Snyder and his family also moved from Pennsylvania and settled near their cousins, the Schencks.

Other early families include Schenck, Freuhauf, Helfer, LeBrun, Miller, Fisher, Schuler, Cable, Witmer, Beck, Crout, Harrison, Kern, Frick, and Fogelsanger (Fiddler-Woite 2009:63,65). In 1830, the Hopkins sold their property to the Schenk family (Fiddler-Woite 2009:14). Abraham Snyder, his wife Veronica, and their two sons (Michael and Jacob) lived in a log cabin on Main Street near Harlem Road. In 1832, Mr. Snyder mysteriously disappeared leaving the burden of supporting the family on young Michael (Fiddler-Woite 2009:20). Within 5 years, Michael Snyder moved the family into a plank house on the northeast corner of Main Street and Harlem Road. He opened a mercantile with John Schenk in the front room of the house. He later expanded the house and opened Snyder's Inn to cater to travelers on the Buffalo Road. He established a U.S. Post Office, according to Snyder family records, as early as the late 1840s (Fiddler-Woite 2009:23). The first post office stood on the northwest corner of Main Street and Harlem Road. However, Michael Snyder was not formally listed as the postmaster of the Snyderville Post Office until 1882 (Fiddler-Woite 2009:24).

An unnamed crossroads community centered on Main Street and Harlem Road is depicted on the 1855 atlas map of Erie County (Geil 1855). The area near Chateau Terrace along Main Street was lined with structures, one of which was a school house. One map-documented structure was a property owned by Mrs. Snyder, which would later be adjacent to the side of Chateau Terrace. A log and brick school house (District #18) was also located near the future site of the Chateau Terrace development (Grande 2000:51). In 1860, Michael Snyder acquired additional property to the east on Main Street near present Chateau Terrace. Snyderville is first identified on the 1866 map of Erie County (Stone & Stewart 1866). M. Snyder's Store and Post Office are depicted on the northeast corner of the intersection on Lot 13.

Tobias Witmer, surveyor, carried out the original survey of Farm Lot 13, the future location of Chateau Terrace, in 1852 (Holland Company Land Title & Abstract Company 2017). Mid-to late nineteenth-century land owners of the Chateau Terrace section of Lot 3 (east section) included Michael Shenk, Michael Shenk Jr., and Philip J. Ferkel. By 1880, Lot 13 had been further subdivided, and G. Demerest owned the largest tract with 61 acres on the east side of Lot 13. (Beers 1880; Figure 6). John and Jacob Snyder owned adjacent parcels on Lot 12, to the east. In 1896, a branch of Lehigh Valley Railroad was constructed through Amherst (Young 1965:264) to the north and east of Snyder. An 1898 map depicts the Lehigh Valley Railroad and the Buffalo & Williamsville Electric Railroad on Main Street extending through Snyder (The Matthews-Northrup Co. 1898). Lot 13, the future location of 22 Chateau Terrace, remained undeveloped. The first residential development in the Snyder vicinity was laid out along Getzville Road and Main Street by this time.

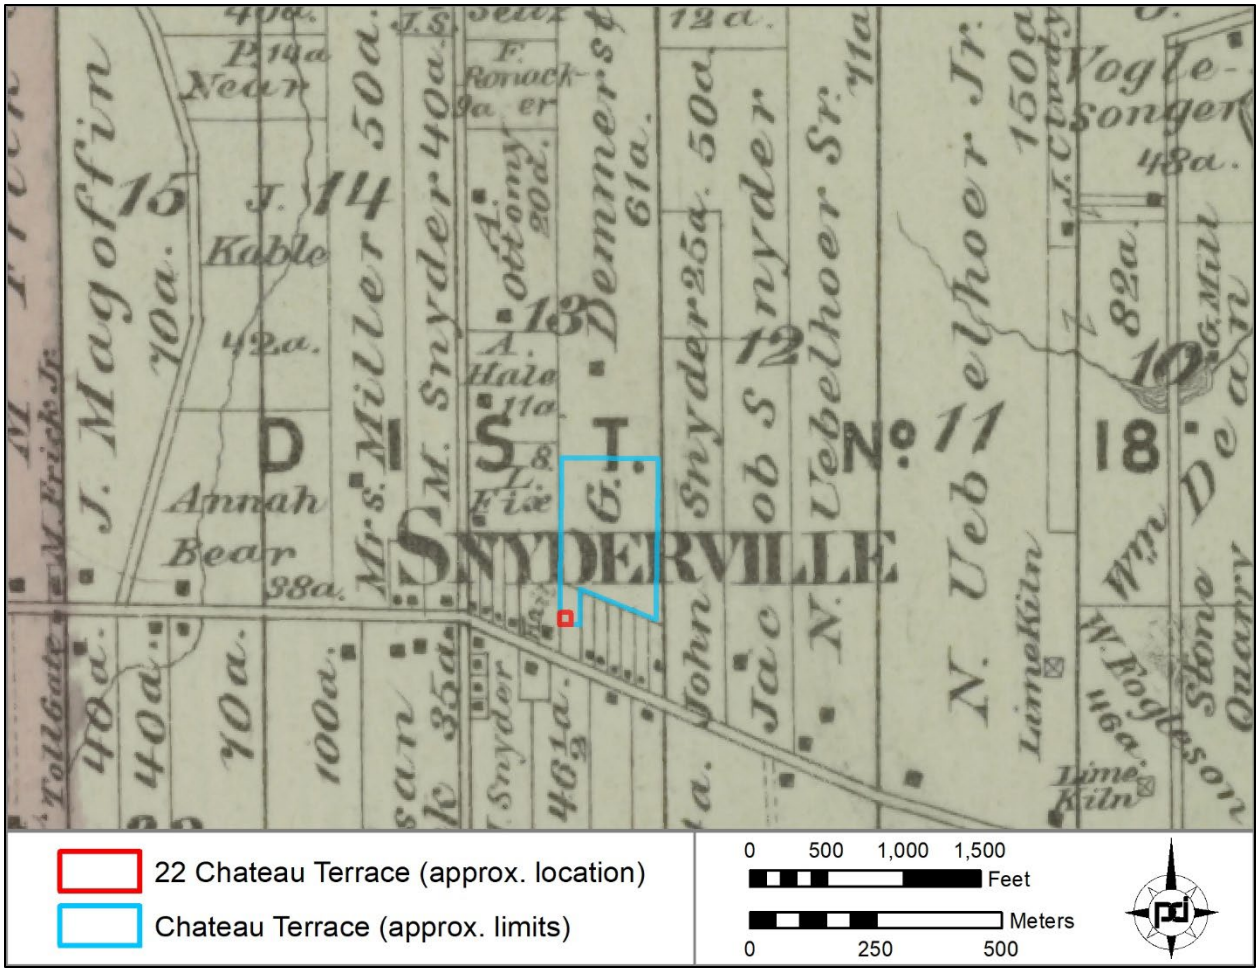

Figure 6. The general location of 22 Chateau Terrace on the 1880 map of the Town of Amherst (*Century Map Co. 1915).*

Twentieth-Century Development in Snyder. Early twentieth-century growth of the Snyder area has been attributed to the opening of Buffalo & Williamsville Electronic Railway (aka Toonerville Trolley in 1893 and the advent of the automobile (Grande 200:145; Fiddler-Woite 2009:38). Running along the north side of Main Street, the trolley line connected Buffalo and Williamsville. Efficient and dependable transportation attracted the interest of future homebuyers in new housing developments (Fiddler-Woite 2009:93). In operation until 1930, the trolley provided access for middle class families to purchase a home in Snyder.

In 1911, brothers William Charles Taylor Suor (1873-1959) and Arthur M. Suor (1874-1936) purchased 99 acres of the Kabel family's farm for the College Hill neighborhood development, which they first called "Amherst Heights" (Grande 2000:149). Formed in 1894, Suor & Suor were initially engaged in real estate business development projects near the Central Park and Parkside neighborhoods of Buffalo (White 1898:439). The brothers developed a few one-block streets near some of the main thoroughfares of Central Park, including Starin and Vorhees Avenues (Moriarty 2017). Their developments on Revere Place, Taft Place, and Sagamore Terrace were speculatively built homes erected on modest lots (Moriarty 2017). Suor & Suor offered affordable single-family homes with modern amenities which appealed to middle class consumers (Moriarty 2017).

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

Suor & Suor had been previously involved in more traditional real estate interests of acquiring and selling farm houses (Grande 2000:149). Within a few years the firm would further expand development in Snyder with the College Hill - Chateau Terrace subdivision. A third brother, John Russell Suor (1882-1959), was also involved in the development of Snyder (Buffalo Evening News [BEN] 1953:25). He started his real estate career in Buffalo and later moved to Snyder. For roughly 25 years, John Suor was associated with the Erie County Real Estate Department and the county attorney's office as an appraiser (BEN 1953:25).

In Snyder, the Suors envisioned a new type of residential development on the south side of Main Street between Getzville and Harlem roads. Washington Highway formed the central point of what became known as the College Hill (Fiddler-Woite 2009:93). Suor & Suor's College Hill Office was erected on the southwest corner of Main Street (#4363) and Washington Highway (Fiddler-Woite 2009:94). The company built middle-class-sized homes which typically consisted of a two-story building with four bedrooms, a den, and a bathroom on each floor (Fiddler-Woite 2009:95). In February 1917, there were 40 homes in College Hill (BEN 1917). Suor & Suor advertised their new modern homes in local Buffalo newspapers to attract potential buyers to relocate to Snyder (Figures 7 and 8).

The brothers continued to acquire more tracts of land for their development in Snyder. Suor & Suor purchased an additional 65-acres of the Tobias Witmer farm south of College Hill by 1919 (Fiddler-Woite 2009:95). Named College Hill Terrace, the new 331-lot development extended toward Kensington Avenue. It was laid out with large lots for more upscale homes with landscaping and street furniture (Fiddler-Woite 2009:95). The Suors also endeavored in commercial development. In 1920, the Town of Amherst's population had increased by 36 percent from 4,629 in 1910 to 6,286 with much of the increase in the Snyder-Eggertsville area (Grande 2000:145). This rise in population included both new owners of large estates as well as an increased migration of middle-class commuters who purchased homes in the new subdivisions (Grande 2000:146).

By early 1920s, new residential neighborhoods were established west of Williamsville along Main Street which included the following: Rosedale Park, College Hill, Chateau Terrace, Audubon Terrace, and Amherst Estates. From 1923 to 1930, a town committee on building construction approved 73 major subdivisions (Grande 2000:189). The 1920s building boom in Amherst contributed to a 110 percent increase in population from 6,286 in 1920 to 13,181 in 1920 (Grande 2000:183). This growth is evident on a 1927 aerial photograph of the Snyder area (see Figure 14). The 1938 map of Snyder shows extensive residential subdivisions on the north and east sides of Main Street west of Harlem Road and on the south side of Main Street west of Harlem Road (Niagara Frontier Planning Board 1938a, 1938b).

Chateau Terrace Area. In 1909, G. Demert is identified with the east portion of Lot 13, which would become the future site of Chateau Terrace subdivision (Century Map Co.1909 [Figures 9 and 10]). The southern portion of Lot 13 consisted of a residential-width parcel consistent with the other lots along Main Street. It would later become the entrance road to Chateau Terrace. J. Freuhaut [sic] owned the adjacent properties on the west side of the southern portion of Lot 13. The south end of the street that became Fruehauf Avenue is shown between the two Frauhaut parcels fronting Main Street in 1909. A parcel owned by A. Snyder is adjacent to the east side of the south section of Lot 13, which became the Chateau Terrace entrance. Five other parcels on Main Street bordered the south boundary of Lot 13, one of which included the 1900 two-story brick school house (District 18). The rectangular-shaped north section of Lot 13 was bound to the west by residences on Harlem Road.

The 1915 Century Atlas map contains a discrepancy in property ownership of Lot 13. Chauncey Hamlin was identified on the Snyder sub plan as the owner of the G. Demert property on Lot 13, while the 1915 map of the Town of Amherst documents G. Demert as the owner of the 61-acre parcel (Century Map Co. 1915a, 1915b [Figures 11 and 12]). Hamlin's country estate stood on a separate parcel that fronted Harlem Road. Adjacent to the west side of the property was "J.C. Fruehaups Sub Div.," which consisted of 23 home sites with eleven frame buildings. Other subdivisions documented in Snyder at this time included Meadow Crest on the west side of Harlem Avenue north of Main Street and College Hill south side of Main Street along Washington Highway. According to the results of the title search, Chauncey Hamlin had the parcel surveyed in November 1917 (Holland Company Land Title & Abstract Company 2017: Table 1).

In 1920, The Park School of Buffalo purchased 100 acres on the east side of Harlem Road from the Hamlin Estate for the location of their new school campus which bordered the north boundary of the new Chateau Terrace subdivision (The Park School of Buffalo 2022; Fiddler-Woite 2009:126). In 1922, the Burkhardt Company purchased the Tobias Witmer farm on the east side of Chateau Terrace for the Audubon Terrace subdivision (Fiddler-Woite 2009:148).

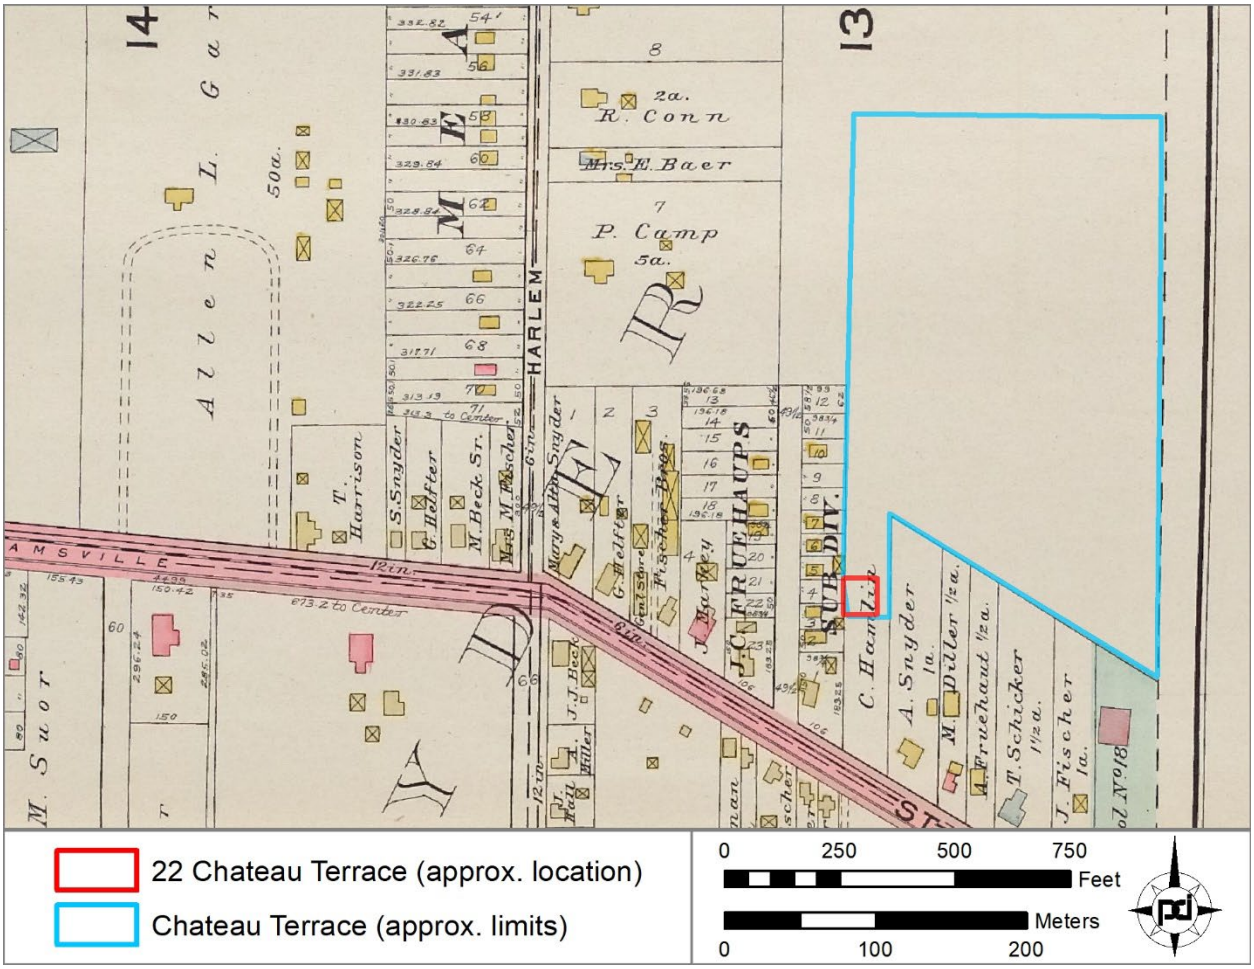

Figure 12. The general location of 22 Chateau Terrace on the 1915 sub-plan of Snyder *(Century 1915b).*

In July 1919, William C.T. Suor and Arthur M. Suor purchased land from Chauncey J. and Emily G. Hamlin for their new College Hill-Chateau Terrace development (Liber 1423 of Deeds, page 240). Louis W. & Josephine E. Ball purchased the parcel at 22 Chateau Terrace on September 1, 1920 (Liber 1555 of Deeds, page 138). The lot was subject to building restriction for a period of 25 years from July 1, 1919. By March 1921, Suor & Suor were listing new homes in the Chateau Terrace development (Buffalo Courier 1921). The house at 30 Chateau Terrace, on the adjacent lot to the north of 22 Chateau Terrace, was advertised with four bedrooms on an 80-foot-wide lot at a list price of $9,000. At 65 Chateau Terrace, the company built a three-bedroom house on a 50-ft by 132-ft lot which listed for $9,500.

By 1923, Chateau Terrace subdivision was platted and sparsely developed with only 13 residences, three of which were on the west side of Chateau Terrace just north of Main Street (Sanborn 1923 [Figure 13]). Individual lot numbers in Chateau Terrace do not appear on the 1923 map. Nos. 22, 30, and 38 Chateau Terrace along the south entrance to the subdivision had been constructed by this time. The Craftsman-style detached garage at 22 Chateau Terrace had yet to be constructed. Roads within the subdivision were 50 ft wide. The Park School campus is documented on the north side of Chateau Terrace for the first time in 1923. By this time, Freuhauf subdivision had acquired additional land extending north to the school property. The properties south of Chateau Terrace South included four dwellings with detached garages and School House No. 18. In 1924, District #18 School moved from the two-story brick schoolhouse to a new location on Harlem Road (Fiddler-Woite 2009:110).

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

Charles S. Burkhardt Co., developer of the adjacent Audubon Subdivision, also built homes in Chateau Terrace. In April 1923, Burkhardt advertised two new homes in Chateau Terrace featuring all modern conveniences, garages, and large lots. Ranging in price between $14,000 and $14,500, each house included three bedrooms and tile baths (Buffalo Courier 1923a).

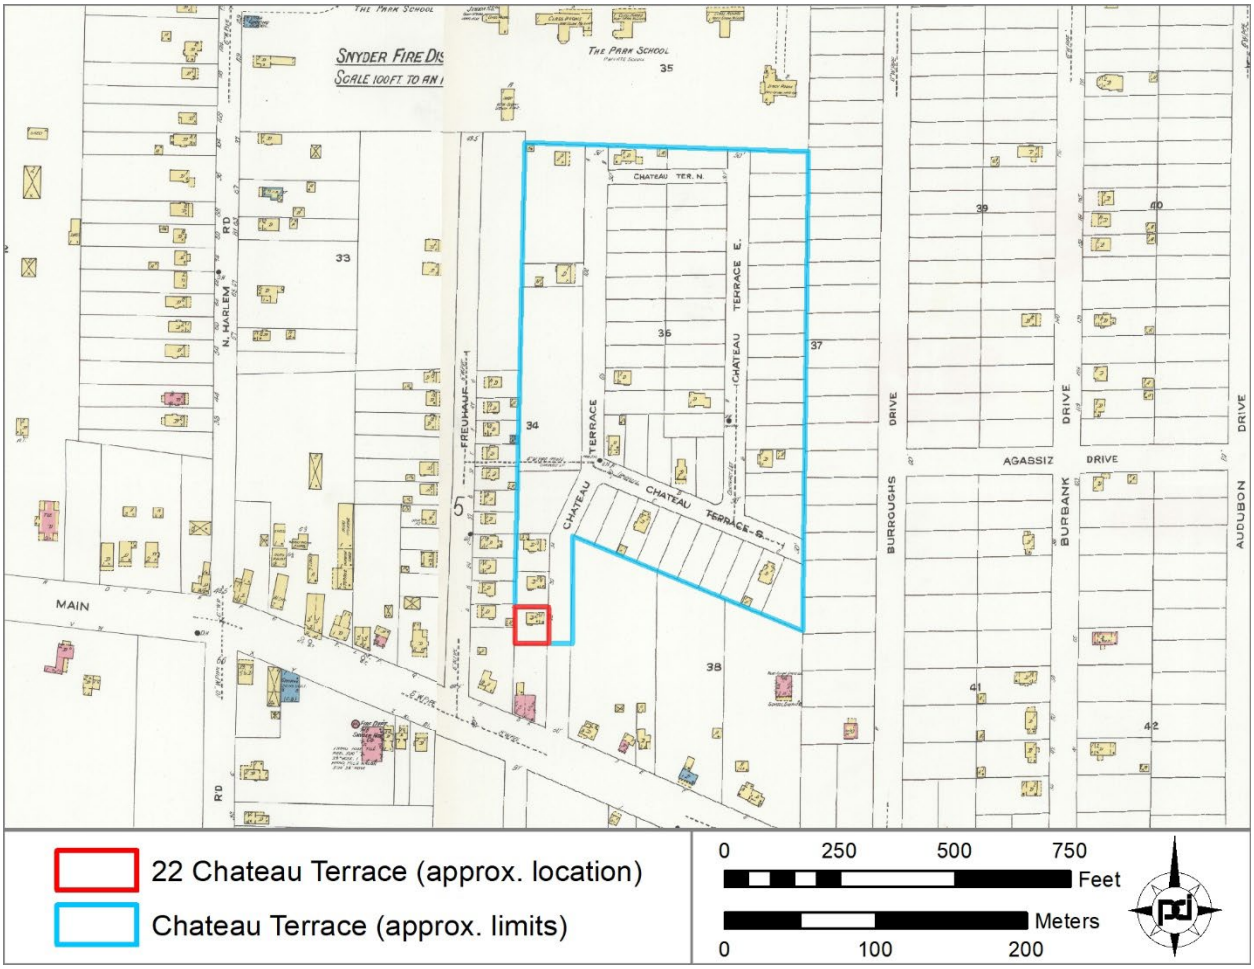

Figure 13. The location and footprint of the house at 22 Chateau Terrace as documented on the 1923 Sanborn Fire Insurance Map *(Sanborn 1923).*

Chateau Terrace was laid out off Main Street serving as the only entrance road to the subdivision. In 1927, Chateau Terrace remained a partially developed subdivision (ECDPW 1927 [Figure 14]). The three residences depicted on the 1923 map on west side of Chateau Terrace, south of the where the road bends, are visible in the aerial photograph. The southernmost of which is 22 Chateau Terrace. By 1932, homes were erected on Chateau Terrace South and Chateau Terrace East along with some construction on Chateau Terrace (KTA 2011: Area 6-9).

On the 1938 map of Snyder, Chateau Terrace consisted of 74 numbered lots. The west side of Chateau Terrace was divided into 20 lots with the lots 1 through 4 located between Main Street and the bend south of Chateau Terrace South (Figure 15). The residence at 22 Chateau Terrace was constructed on Lot #2. The three houses noted on the 1927 aerial had 80 frontages on Chateau Terrace. The other parcels were laid out with 50-ft frontages along Chateau Terrace to the north, the south side Chateau Terrace East, and the south side of Chateau Terrace South. A 1951 aerial view shows additional development in Snyder (Figure 16).

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

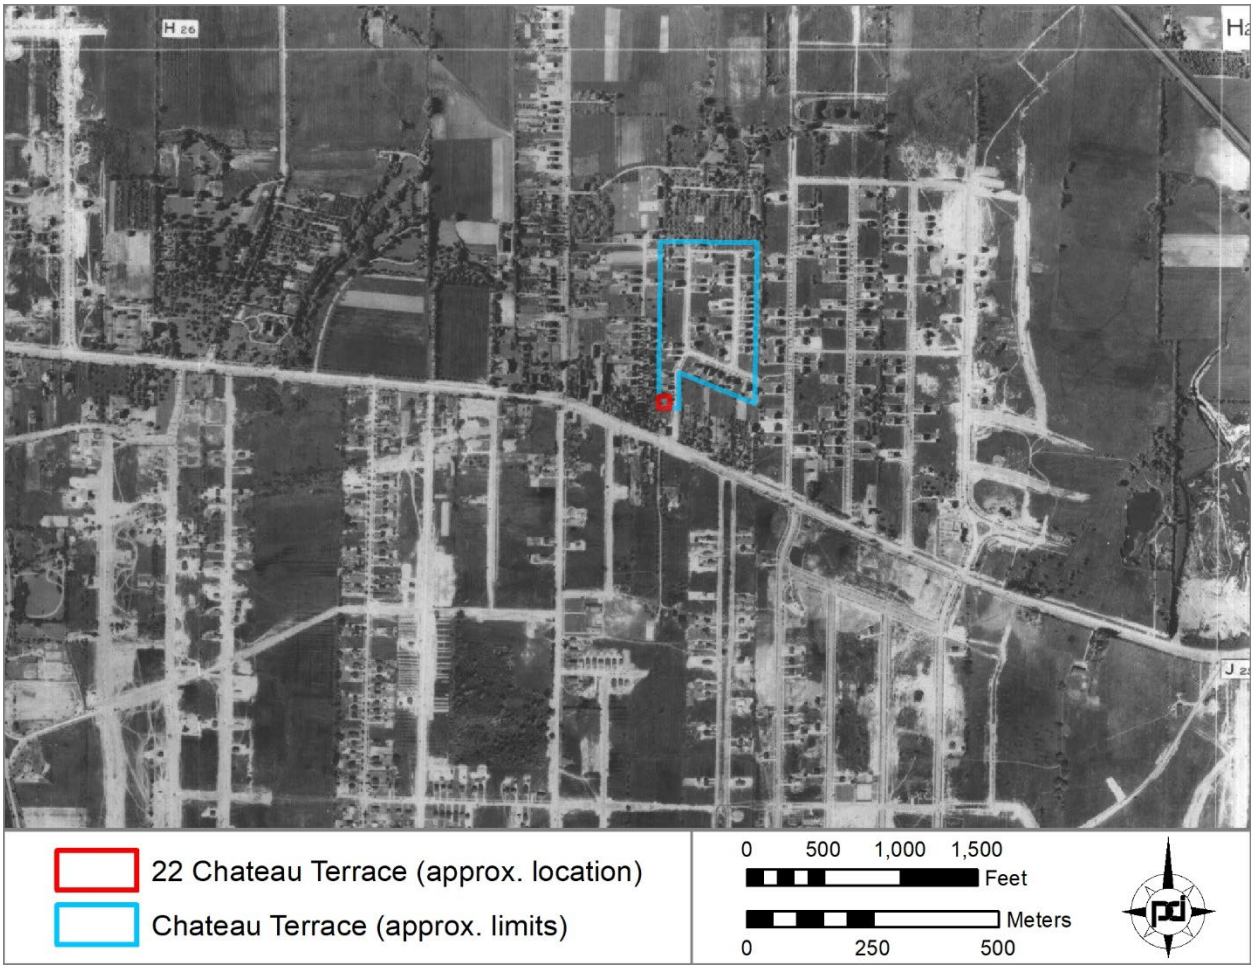

Figure 14. A 1927 aerial view of Chateau Terrace showing residential development in the subdivision and the surrounding area of Snyder *(Erie County Department of Public Works [ECDPW] 1927).*

The former Abram L. Snyder house on the northeast corner of Main Street and Chateau Terrace was demolished in 1957 (Fiddler-Woite 2009:148). A new U.S. Post Office branch (now occupied by the Bornhava school) was erected across the street from 22 Chateau Terrace on the site of the old homestead tract. Willliam C.T. Suor died at 85 years old in January 1959. An editorial on his passing credited the Suor brothers for beginning the trek to the North Buffalo suburbs with their Central Park development and continuing with the suburban development in Snyder (BEN 1959).

Lewis Ball died on August 20, 1968. His widow, Josephine E. Ball, sold the property in July 1971 to Edmund Karnofsky (Liber 7812 of Deeds, page 1). In 1975, the former school building on Main Street was demolished, and the adjacent property to the south of Chateau Terrace was subdivided into parcels (Snyder-Eggertsville Library and Ascension Lutheran Church [Fiddler-Woite 2009:110]). Karnofsky owned the property for 15 years, later selling it to E/K Realty Group LLC in September 2008. The subsequent owner 570 DAB 3 LLC purchased the property in March 2018. Table 1 presents a summary of deed information for Subdivision Lot 2 (22 Chateau Terrace/Parcel B).

William Charles Taylor Suor and Arthur M. Suor. The Suor brothers were the sons of Charles and Anna (Taylor) Suor (White 1898:439). Their grandfather Joseph Suor was a native of Germany (White 1898:439). Charles Suor operated a wood turning establishment on the corner of Clinton and Oak streets in Buffalo and served as supervisor of the old Eleventh ward (White 1898:439). He died in 1887 when the boys were teenagers.

Arthur M. Suor was educated in public schools and the College of Commerce in Buffalo. He was first employed for three years with the T. C. Tanke's jewelry store and later in the Western Transit Company for a short time. In 1890, he accepted a position with the real estate firm of Thorne & Angell. He was associated with the firm until 1894, when he formed a partnership with his brother, William C. T. Suor (White 1898:439). In 1896, he married Ida Clare Heeb of Buffalo. They had one son, Arthur M., Jr. He was a member of Parish Lodge No. 292, F. & A. M., and of Trinity Lodge, I. O. O. F.

Architectural Summary

Setting. Chateau Terrace on the north side of Main Street east of Harlem Road is nestled between two early-to-mid-twentieth-century residential subdivisions, Freuhauf to the west and Audubon Terrace to the east. Chateau Terrace was laid out to serve as the entrance road for the development. The subdivision was designed with four roads that form a near rectangular-shaped central plan. These include two north-south roads (Chateau Terrace & Chateau Terrace East), one northwest-southeast road (Chateau Terrace South), and one east-west road (Chateau Terrace North). The south end of Chateau Terrace has a bend to the northeast just south of Chateau Terrace South. Street trees were planted throughout Chateau Terrace. Trees lining the entrance road, and the road's winding alignment were designed to provide screening as well as privacy. Chateau Terrace was originally designed with three dead end roads. The north end of Chateau Terrace East is open for access to the Park School of Buffalo Campus. Commercial properties, a school, medical offices, and a public library border the south boundary of the subdivision.

Site. Located on the west side of the street, the single-family residence and detached garage at 22 Chateau Terrace is the first residential property in the subdivision north of Main Street. The parcel measures 80 ft wide by 73.34 ft deep. The house has a narrow 9.77-ft setback and a small, enclosed backyard measuring roughly 22 ft wide by 20 ft deep. A mature 24-inch green ash tree is centered in front of the house on the road verge. Other mature trees include are on the south side of the driveway and along west edge of the parcel. Concrete walkways (2.5 ft-2.6 ft) are on the north and west sides of the house. A low concrete retaining wall stretches across the south property line. Parking lots associated with commercial properties fronting Main Street (Nos. 4558-4560 & 4548) border the south, southwest, and west perimeters of the parcel. Residential properties are adjacent to the north (20 Chateau Terrace) and northwest (23 Fruehauf).

Description of Exterior. The residence at 22 Chateau Terrace is a frame, two-story Craftsman-style building with a front-gabled roof with asphalt shingles, stucco exterior, wood belt course, and stone foundation. It has a rectangular plan and measures approximately 24.20 ft wide by 40.66 ft deep. Window openings are single, paired, and triple groupings. These openings feature simple molded wood surrounds and wood double-hung sash (1/1 and 9/1). Original basement windows have two lights.

The east façade has an enclosed entry porch with a wood stoop in the north bay, a one-story sunroom with a low-pitched gabled roof, and a triple window grouping with bracketed pent. The entrance door features six lights over two lights and two panels. It is flanked by sidelights of four over one, a wood panel, and a single corner pilaster. Six lights over one light windows are on the north side of the entry porch. Stylistic details include wide overhanging eaves with single triangular knee brackets, beveled windows, and paneled and glazed doors.

Exterior alterations include a few replacement windows, a replacement wood rail on the front stoop, and asphalt roofing shingles.

Description of Interior. The open first-floor layout consists of a sunroom, dining room, living room, kitchen, and basement/side entrance hall. Three bedrooms, a bathroom, and a hall closet are on the second floor. It has an unfinished basement. The interior has painted plaster walls. Floor finishes include carpeting, hardwood, linoleum, and tile. Hardwood floors are covered on the first floor and primary bedroom. Interior windows are accented with simple wood trim. Extant interior doors are wood with six panels.

The living room has a central brick fireplace with a wood mantel supported by three brick corbels, built-in wood shelving, and Craftsman-style staircase (quarter turn stairs) with corner pier along the north wall. The Craftsman-type living room entrance door has a single panel and four lights. An original push button switch panel is on right side of front door. A Craftsman-type beveled glass window is in the north wall of the living room and west wall of the dining room. Original wooden baseboards and metal baseboard registers are

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

intact. The kitchen has built-in cabinets. Original cabinet doors have been removed from the upper cabinet shelves on the west wall and a new sink with cabinets has been installed on the east wall. The side entrance/ basement hall is on the north side of the house.

The primary bedroom on the second floor is in the upper front (east) of the house. It features two closets and window seat. The other two bedrooms have a single window and closet. The bathroom retains its white hexagonal floor tile, built-in closet, and built-in medicine cabinet.

The basement retains its original door and wood stairs. It has exposed stone walls and a row of built-in cabinets along the west wall. The chimney has a basement clean.

Interior alterations include the following: removal of portions of built-in kitchen cabinets and sink; removal of original light fixtures; drop ceiling in the dining room; new kitchen flooring; removal of a few original doors; and removal of original bathroom sink and tub.

Garage. A detached, frame, two-bay Craftsman-style garage is on the southwest side of the house. The 3.66.5 sq ft garage (18.35 ft wide by 20.15 ft deep) has a hipped roof with overhanging eaves, and asphalt roof shingles, and wood exterior siding. Garage doors feature multiple pane fixed windows and wood panels. The garage is presently structurally unstable. A section of the roof has partially collapsed on the south slope (Photograph 14 in Appendix A).

Conclusions

The ca. 1920 residence with garage at 22 Chateau Terrace does not appear to meet the State/National Register of Historic Places (S/NRHP) criteria for individual eligibility. Though the building retains much of its original materials and stylistic elements, it is a representative example of a modest single-family home type constructed in the first quarter of the twentieth century in Buffalo and suburban neighborhoods. Previous historic resources surveys have also identified the building at 22 Chateau Terrace as not individually eligible for listing on the S/NRHP (Bero 1997; KTA 2011), but instead they recommended the property as a contributing resource to a Chateau Terrace Historic District (Chateau Terrace Study Area in CRIS). Note, Chateau Terrace was not included in the NRHP Multiple Documentation Form for Multiple Resources Associated with the Suburban Development of Buffalo.

As previously recognized in the historic resources survey, Chateau Terrace Study Area is historically significant at the local level for its association with the suburban development of the Town of Amherst during the early to mid-twentieth century. A S/NRHP eligibility assessment for the entire Chateau Terrace Study Area is beyond the scope of this documentation report. Further survey work and documentation of the neighborhood, as well as additional research, would be required to provide an informed S/NRHP recommendation for Chateau Terrace Study Area. The NRHP Multiple Documentation Form for *Multiple Resources Associated with the Suburban Development of Buffalo, New York* (2015) and guidance provided in *Historic Residential Suburbs Guidelines For Evaluation And Documentation For The National Register Of Historic Places* (Ames and Flint 2002) would also need to be applied for an NRHP eligibility recommendation.

RE: Proposed Mixed-Use Project, 4548-4564 Main Street, Town of Amherst, NY
Traffic Engineering Assessment Letter

Dear Mr. Oates:

The purpose of this technical letter is to provide a traffic engineering assessment related to the proposed mixed-use project located at 4548-4564 Main Street in the Town of Amherst, NY for informational purposes and to understand the possible traffic impacts resulting from the proposed project. The concept site plan, figures, and supporting data are included in the attachments. This letter evaluates:

- Projected trip generation estimates and discusses the thresholds for completing a Traffic Impact Study (TIS).
- Southbound queuing on Fruehauf Avenue during the AM and PM peak periods.
- Sight line evaluation at the Main Street/Fruehauf Avenue intersesction.

PROJECT DESCRIPTION

The proposed project consists of developing 57 units of one and two-bedroom apartment units, a ±3,628 square foot (SF) quality restaurant, and a ±3,137 SF fast casual restaurant in a three-story building. Access is provided via two full access driveways: one along Chateau Terrace which accesses a parking lot with 50 spaces and one along Fruehauf Avenue which accesses a parking lot with 20 spaces. Chateau Terrace is posted as a "No Outlet" street while Fruehauf Avenue is posted as a "Dead End" street. On-street parking is available along Main Street. Sidewalks are present throughout the adjacent neighborhood.

TRIP GENERATION

Data contained in the Institute of Transportation Engineers (ITE) Trip Generation Manual (10th Edition) was used to project the volume of the traffic generated by the proposed project. Data published by the ITE is the nationally accepted standard for generating trips for new uses. Given the functional characteristics of the corridors and the land uses proposed for the site, the peak hours selected for analysis are the weekday morning (AM) and weekday evening (PM) peak periods. The combination of site traffic and adjacent street traffic produces the greatest demand during these peak periods.

The proposed project as depicted on the site plan consists of two different land uses (residential and restaurant) and is considered mixed-use (multi-use). According to the Institute of Transportation Engineers Trip Generation Handbook (3rd Edition), "…a multi-use development is typically a single real-estate project that consists of two or more ITE land use classifications between which trips can be made without using the off-site road system. Because of the nature of these land uses, the trip-making

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

characteristics are interrelated, and some trips are made among the on-site uses. This capture of trips internal to the site has the net effect of reducing vehicle trip generation between the overall development site and the external street system (compared to the total number of trips generated by comparable, standalone sites)." "In some multi-use developments, these internal trips can be made by walking or by vehicles entirely on internal pathways or internal roadways without using streets external to the site."

The Handbook indicates internal capture rates for trips within a multi-use development to vary between residential, office, retail, restaurant, and entertainment and recreational uses during the AM and PM peak hours. Given the proposed land use components and interconnection between these components, multi-use total volume trips will likely occur.

Methodology contained in National Cooperative Highway Research Program (NCHRP) Report 684: Enhancing Internal Trip Capture Estimation for Mixed-Use Development was consulted to perform the mixed-use adjustment. The NCHRP 684 model reported an internal baseline capture percentage of 0% during the AM peak hour and 10% during the PM peak hour.

These multi-use trip projection adjustments were applied to the respective site generated trips and subtracted from the traffic entering and exiting the site during the PM peak period. The internal capture calculation considers baseline mode shares and vehicle occupancy factors for the proposed land uses, as described in the Handbook.

For certain types of developments, the total number of trips generated is different from the amount of new traffic added to the adjacent highway network by the generator. Service/retail-oriented developments (i.e., shopping centers, gas stations, coffee/donut shops, and restaurants) often locate adjacent to busy streets to attract the motorists already passing the site on the adjacent street. These sites attract a portion of their trips from traffic passing the site. The "pass-by" traffic refers to the amount of existing traffic already on the roadway adjacent to the site that, as it "passes by" the site, will enter the site driveways to patronize the project site. The quantifying of "pass-by" trips has the net result of reducing the volume of new traffic that is added to the site driveways and/or adjacent roadways.

This site is likely to exhibit some level of pass-by traffic. The ITE Trip Generation Handbook (3rd Edition) was used as a reference to determine pass-by rates. For quality restaurants, the ITE data reports a range of rates during the PM peak period from 26% to 82% with an average pass-by rate of 44%. No data is available for the AM peak period. To remain conservative, this study used a 20% pass-by rate during the PM peak period.

The ITE does not have data for fast casual restaurants. Therefore, fast food restaurants with drive-thru was considered a comparable use. The ITE data reports a range of rates during the PM peak period from 25% to 71% with an average pass-by rate of 50%. To remain conservative, this study used a 20% pass-by rate during the PM peak period.

Table 1 shows the total site generated trips for the peak hours of study with the pass-by trip adjustment.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

TABLE 1: SITE GENERATED TRIPS AND ADJUSTMENTS

DESCRIPTION	ITE LUC	SIZE	AM PEAK HOUR		PM PEAK HOUR	
			ENTER	EXIT	ENTER	EXIT
Multi-family Residential	220	57 units	6	22	23	13
Quality Restaurant	931	±3,628 SF	1	1	19	9
Fast Casual Restaurant	930	±3,137 SF	4	2	24	20
Sub-Total Trips			**11**	**25**	**66**	**42**
Mixed-Use Adjustment			*0*	*0*	*-5*	*-5*
Sub-Total Driveway Trips			**11**	**25**	**61**	**37**
Pass-by Adjustment			*0*	*0*	*-9*	*-6*
Total Primary (New) Vehicle Trips			**11**	**25**	**52**	**31**

Note:
1. ITE LUC = ITE Land Use Code.

Prior to considering mixed-use and pass-by adjustments, the proposed project is expected to generate 11 entering/25 exiting vehicle trips during the AM peak hour and 66 entering/42 exiting vehicle trips during the PM peak hour. When considering ITE published mixed-use and pass-by trip rates and our professional judgement, the proposed project is expected to generate the following new vehicle trips: 11 entering/25 exiting vehicle trips during the AM peak hour and 52 entering/31 exiting vehicle trips during the PM peak hour.

TRIP DISTRIBUTION

The cumulative effect of site-generated traffic on the transportation network is dependent on the origins and destinations of that traffic and the location of the driveways serving the site. The proposed arrival/departure distribution of traffic generated by the proposed project is considered a function of several parameters, including:

- Commercial/employment and residential centers in the area using US Census Data (e.g., OnTheMap).
- Site access locations.
- Hourly traffic patterns using most recent available Annual Average Daily Traffic (AADT) data obtained from the New York State Department of Transportation (NYSDOT) along Main Street.
- Turning movement counts using the most recent available data obtained from the Greater Buffalo-Niagara Regional Transportation Council (GBNRTC) at the intersections of Main Street/Chateau Terrace/Bernhardt Drive and Main Street/Lamarck Drive/Livingston Parkway.
- Existing traffic controls.

Figure 1 shows the anticipated trip distribution pattern percentages for the traffic from the proposed project for the residential program while Figure 2 illustrates the trip distribution for the restaurant program. Figure 3 illustrates the residential peak hour site generated traffic based on the percentages in Figure 1. Figures 4-5 illustrate the restaurant peak hour site generated traffic based on the percentages in Figure 2 for the project's primary and pass-by trips, respectively. Figure 6 illustrates the total site generated trips. The roads anticipated to be used by the additional trips generated by the proposed project are listed in Table 2.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

To remain conservative, all site generated traffic was assumed to enter and exit the site via the proposed driveways along Fruehauf Avenue and Chateau Terrace. A portion of site visitors may use available on-street parking along Main Street (notably the restaurant patrons); thus, reducing the projected number of vehicle trips entering and exiting Fruehauf Avenue and Chateau Terrace.

TABLE 2: EXISTING HIGHWAY SYSTEM

ROADWAY[1]	CLASS[2]	AGENCY[3]	SPEED LIMIT[4]	# OF TRAVEL LANES[5]	TRAVEL PATTERN	EST. AADT[6] & SOURCE[7]
Main Street (NY-5)	14	NYSDOT	40	4	Two-way/ East-West	21,436 NYSDOT (2019)
Chateau Terrace	19	Town	30	2	Two-way/ North-South	No Data Available
Fruehauf Avenue	19	Town	30	2	Two-way/ North-South	No Data Available

4. Posted or Statewide Limit in Miles per Hour (mph).
5. Excludes turning/auxiliary lanes developed at intersections.
6. Estimated AADT in Vehicles per Day (vpd).
7. AADT Source (Year).

THRESHOLDS FOR THE REQUIREMENT OF A TRAFFIC IMPACT STUDY

Many reviewing agencies, including the NYSDOT and Erie County Department of Public Works (ECDPW), use a guideline in determining whether a project warrants the preparation of a Traffic Impact Study (TIS). The applicable guideline is that if a proposed project is projected to add 100 or more site generated vehicles per hour (vph) to an adjacent intersection during either peak study period, then that intersection should be studied for potential traffic impacts.

Based upon the ITE trip generation projections and the resulting traffic assignment estimates shown in Figure 6, the projected new vehicle trips are added to the following intersections during the AM and PM peak hours:

- Main Street/Chateau Terrace/Bernhardt Drive: 29 (58)
- Main Street/Fruehauf Drive: 23 (83)
- Fruehauf Drive/Proposed Driveway: 14 (80)
- Chateau Terrace/Proposed Driveway: 22 (33)

Given that fewer than 85 peak hour trips are added to a single intersection during the peak hours studied, a TIS is not warranted.

PEAK HOUR QUEUING ASSESSMENT

A peak hour queuing assessment was performed along Fruehauf Avenue during the AM and PM peak hours to measure the frequency of southbound vehicles that block the proposed driveway. The centerline of the proposed driveway is located approximately 38 feet from the stop bar. Given this distance, the driveway is located approximately 1.7 vehicle lengths from the stop bar.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

Our firm documented southbound queues at the intersection of Main Street/Fruehauf Avenue on Thursday, July 22, 2021, from 7:00-9:00 AM and 4:00-6:00 PM. The peak hours generally occurred from 8:00-9:00 AM and 4:30-5:30 PM. Based on this field investigation during the peak hours of study, the proposed driveway location was blocked once during the AM peak hour for a duration of five seconds and was blocked once during the PM peak hour for a duration of three seconds.

SIGHT LINE EVALUATION

Based upon a review of the attached site plan, the proposed building is projected to be built in approximately the same footprint as the existing structures fronting Main Street. There is a marked stop bar for traffic exiting Fruehauf Avenue.

In this case, the primary concern is with the proposed building at the existing Main Street/Fruehauf Avenue intersection. The attached figure illustrates the sight line evaluation performed at the intersection to the east of the intersection.

Sight distance is provided at intersections to allow drivers to perceive the presence of potentially conflicting vehicles. This should occur in sufficient time for a motorist to stop or adjust their speed, as appropriate, to avoid a collision at the intersection. Sight distance is also provided at intersections to allow the drivers of stopped vehicles a sufficient view of the intersecting highway to anticipate and avoid potential incidents. If the available sight distance for an entering or crossing vehicle is at least equal to the appropriate stopping sight distance for the major road, then drivers have sufficient sight distance to anticipate and avoid collisions.

A Policy on Geometric Design of Highways and Streets (2011) published by the American Association of State Highway and Transportation Officials (AASHTO), was used as a reference to establish the required Stopping Sight Distance (SSD) and desirable Intersection Sight Distance (ISD) for the adjacent driveway location. Table 3 depicts the results of the sight distance evaluation at the Main Street/Fruehauf Avenue intersection.

TABLE 3: SIGHT LINE EVALUATION

DESCRIPTION		VALUE
POSTED SPEED		40 MPH
DESIGN SPEED[1]		45 MPH
REQUIRED SSD		360 feet
DESIRABLE ISD		500 feet
AVAILABLE SIGHT DISTANCE TO THE EAST	*SSD*	>360 feet
	ISD	385 feet (no vehicles) 145 feet (parked vehicles)

Note:
1. Design speed equals posted speed plus 5 MPH.

The required SSD is satisfied to the east of the study intersection. However, the desirable ISD is not satisfied. The existing and proposed ISD sight distance will be the same and the proposed building will not impact the existing sight distance.

Attachment: SP-2022-11_application_021623 (26951 : Sp-2022-11)

It is noted that the intersection is in an urbanized area with numerous side roads where drivers expect traffic to be entering and exiting. Further, the intersection is located downstream of the signalized intersection of Main Street/Chateau Terrace/Bernhardt Drive and motorists turning out of Fruehauf Avenue will be afforded gap opportunities when the Main Street approaches are in the red phase. As this distance is not satisfied, potential relief consists of installing intersection warning signage for westbound traffic.

CONCLUSIONS AND RECOMMENDATIONS

The following sets forth the findings and recommendations of this assessment:

1. When considering ITE published mixed-use and pass-by trip rates and our professional judgement, the proposed project is expected to generate the following new vehicle trips: 11 entering/25 exiting vehicle trips during the AM peak hour and 52 entering/31 exiting vehicle trips during the PM peak hour.

2. Given the projected site traffic distribution, it is our firm's professional opinion that the adjacent intersections and surrounding roadway network will not experience significant adverse traffic impacts. Given these conditions, no further study is warranted nor recommended at this time.

3. Based upon documentation of southbound queues at the intersection of Main Street/Fruehauf Avenue during the peak hours of study, the proposed driveway location was blocked once during the AM peak hour for a duration of five seconds and was blocked once during the PM peak hour for a duration of three seconds.

4. Based upon a sight line evaluation at the Main Street/Fruehauf Avenue intersection, the required SSD is satisfied to the east. However, the desirable ISD is not satisfied. The existing and proposed ISD sight distance will be the same and the proposed building will not impact the existing sight distance. As this distance is not satisfied, potential relief consists of installing intersection warning signage for westbound traffic.

If you have any questions or require additional information, please do not hesitate to contact our office.

Sincerely,
SRF Associates, D.P.C.

David Kruse, AICP, PTP

GENERAL NOTES:

1. INSTALL ALL MATERIALS TO MANUFACTURER'S RECOMMENDATIONS AND BEST STANDARDS OF TRADE INVOLVED.
2. SUBSTITUTIONS SHALL BE MADE ONLY WITH OWNER'S APPROVAL AND BE OF EQUIVALENT QUALITY TO WHAT IS SPECIFIED.
3. WORK SHALL BE COMPLETED IN STRICT ACCORDANCE WITH ALL LOCAL CODES AND OSHA SAFETY RULES AND REGULATIONS.
4. CONTRACTOR SHALL VERIFY ALL EXISTING CONDITIONS AND DIMENSIONS AT THE SITE. NOTIFY OWNER & ENGINEER OF DISCREPANCIES IN CONDITIONS SHOWN ON DRAWINGS PRIOR TO PROCEEDING WITH THE WORK.
5. CONTRACTOR SHALL BE RESPONSIBLE FOR PROTECTION OF ANY EXISTING STRUCTURES TO REMAIN AND ANY FINISH MATERIAL INSTALLED WHILE WORKING ON OTHER COMPONENTS.
6. CONTRACTOR SHALL KEEP JOB FREE OF DEBRIS AND MAKE FINAL CLEANUP TO THE SATISFACTION OF OWNER.
7. CONTRACTOR SHALL ASCERTAIN THE LOCATION OF ALL UTILITIES PRIOR TO CONSTRUCTION SO THAT THIS WORK WILL NOT DISTURB EXISTING LINES AND/OR INSTALLATIONS EXCEPT AS DETAILED ON THE PLANS. COORDINATE ALL WORK WITH THE APPLICABLE UTILITY COMPANIES.
8. CONTRACTOR SHALL OBTAIN AND PAY FOR ALL REQUIRED PERMITS NECESSARY TO PERFORM THE WORK.
9. BUILDING DIMENSIONS ARE APPROXIMATE. REFER TO ARCHITECTURAL DRAWINGS FOR LAYOUT DIMENSIONS.
10. SIDEWALK DIMENSIONS ARE APPROXIMATE. REFER TO ARCHITECTURAL DRAWINGS FOR THE SIDEWALK PLAN .
11. CONCRETE SIDEWALK SEALERS: (REFER TO ARCHITECTURAL PLANS FOR LOCATION OF CONCRETE TYPES.)
    11.1. GREY CONCRETE SIDEWALKS SHALL HAVE CHEMMASTERS - SILENCURE WITHIN 2HRS AFTER FINAL FINISHING OF CONCRETE AND ALL BLEED WATER HAS DISSIPATED.
    11.2. EXPOSED AGGREGATE/STAMPED CONCRETE SIDEWALKS SHALL HAVE ONE (x1) COAT CHEMMASTERS - SILENCURE AS SOON AS CONCRETE HAS DRIED AFTER PRESSURE-WASHING THE RELEASE AGENT OFF. APRX 30 DAYS AFTER THIS (IF WEATHER PERMITS) APPLY ONE (x1) COAT OF CHEMMASTERS - POLYSEAL EZ.
12. LIGHTING FIXTURE ARROW SYMBOLS REFER TO THE DIRECTION THAT THE FIXTURES ARE REQUIRED TO FACE. SPECIFIC MOUNT BRACKETS WILL BE REQUIRED DEPENDING ON ORIENTATION AND FIXTURE COUNT.
13. CURB ISLAND DIMENSIONS ARE FROM INSIDE OF CURB TO INSIDE OF CURB.

SITE LEGEND:

- Property line
- 6" Curb (typ).
- Proposed sign & pole
- Proposed landscape
- Proposed Concrete Pavement
- Proposed Heavy Duty Pavement

* All curb radii are 3ft unless noted.
* Refer to General Notes, Concstruction Details and Architectural Plans for Concrete Sealer information.

UTILITIES

The underground utilities shown have been located from field survey information & existing drawings. The surveyor makes no guarantee that the underground utilities shown comprise all such utilities in the area, either in service or abandoned. The surveyor further does not warrant that the underground utilities shown are in the exact location indicated although he does certify that they are located as accurately as possible from the information available. This surveyor has not physically located the underground utilities.

Note: Underground Utility information has been ordered from the respective utility companies. As the information is received, this map will be amended to reflect said information.

SCHEDULE "A"

HOLLAND LAND TITLE & ABSTRACT COMPANY, INC.
SEARCH NO. 2010–54388
DATED: NOVEMBER 17, 2017

PARCEL A:

ALL THAT TRACT OR PARCEL OF LAND, situate in the Town of Amherst, County of Erie, and State of New York, being part of Farm Lot No. 13, Township 12, Range 7 of the Holland Land Company's Survey, and being Subdivision Lot No. 1 as shown on a certain subdivision map made by Busch & Percival, Engineers, entitled "College Hill Terraces" and recorded in Erie County Clerk's Office in Liber 1416 of Deeds, page 349, and more particularly bounded and described as follows:

BEGINNING at the point of intersection of the northeasterly line of Main Street with the west line of Chateau Terrace; running thence northerly along the westerly line of Chateau Terrace; running thence northerly along the westerly line of Chateau Terrace, 189.63 feet to the southerly line of Subdivision Lot No. 2, as shown on said subdivision map; thence westerly at right angles with the westerly line of Chateau Terrace and along the southerly line of Subdivision Lot No. 2, 73.34 feet to the westerly bounds of the lands of Suor & Suor Store Properties, Inc.; thence southerly and at right angles with the said southerly line of Subdivision Lot No. 2, and along the westerly bounds of the lands of the Suor & Suor Store Properties, Inc., 160 feet to the northeasterly line of Main Street; thence southeasterly along the said line of Main Street, 79.09 feet to the point of beginning.

PARCEL B:

ALL THAT TRACT OR PARCEL OF LAND, situate in the Town of Amherst, County of Erie, and State of New York, being part of Farm Lot No. 13, Township 12, Range 7 of the Holland Land Company's Survey and which up on a certain subdivision map of a part of said Farm Lot No. 13, made by Busch & Percival, Engineers, called a subdivision map of College Hill Terraces (which said map is recorded in Erie County Clerk's Office in Liber 1416 of Deeds, page 349) is known as Subdivision Lot No 2, being 80 feet front and rear by 73.34 feet deep situate on the west side of Chateau Terrace, beginning 189.63 feet north of the north line of Main Street.

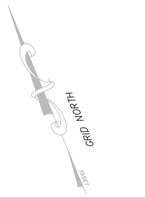
PARCEL C:

ALL THAT TRACT OR PARCEL OF LAND, situate in the Town of Amherst, County of Erie, and State of New York, being part of Farm Lot No. 13, Township 12, Range 7 of the Holland Land Company's Survey, and being designated as Subdivision Lot No. 1 as shown on subdivision map made for Jacob C. Fruehauf by C.F. Witmer, Surveyor, in 1898 of part of said Lot No. 18 filed in Erie County Clerk's Office under Map Cover 864 and also being designated as Subdivision Lot No. 1 on a map filed in Erie County Clerk's Office under Cover No. 936, and bounded and described as follow:

BEGINNING at the southeasterly corner of premises conveyed to said Jacob C. Fruehauf by Fanny Holl, by Committee, by deed dated February 7, 1898, recorded in Erie County Clerk's Office in Liber 844 of Deeds, page 262, February 7, 1898, being in the northerly line of Main Street (Buffalo and Williamsville Road); running thence northerly along the easterly line of the premises conveyed by said deed, 189.25 feet; thence westerly 98.75 feet to the easterly lien of Fruehauf Street (formerly known as Chestnut Street) as shown on said map; thence southerly along the easterly line of Fruehauf Street (formerly known as Chestnut Street) 150 feet to the said northerly line of Main Street (Buffalo and Williamsville Road); and thence easterly along said line of Main Street (Buffalo and Williamsville Road) 106 feet to the place of beginning.

PARCEL D:

ALL THAT TRACT OR PARCEL OF LAND, situate in the Town of Amherst, County of Erie, and State of New York, being part of Farm Lot No. 13, Township 12, Range 7 of the Holland Land Company's Survey and being further known and distinguished as Subdivision Lot No. 2 as shown and laid down on map and survey made made by C.F. Witmer, Surveyor in 1898, which map is filed in Erie County Clerk's Office under Cover No. 864, said lot being bounded and described as follows:



BEGINNING in the easterly line of Fruehauf Avenue at a point distant 150 feet from the point of intersection of said line of Fruehauf Avenue with the northerly line of Main Street; thence easterly along the southerly line of said Subdivision Lot No. 2, 98.75 feet to the east line of land conveyed to Jacob C Fruehauf by deed recorded in Erie County Clerk's Office in Liber 844 of Deeds, page 262; thence northerly along the said easterly lien of said land so conveyed, 50 feet; thence westerly along the northerly line of said Subdivision Lot No. 2, 98.75 feet; and thence southerly along the easterly line of Fruehauf Avenue 50 feet to the place of beginning.

SURVEYOR'S DESCRIPTION:

ALL THAT TRACT OR PARCEL OF LAND, situate in the Town of Amherst, County of Erie, and State of New York, being part of Farm Lot No. 13, Township 12, Range 7 of the Holland Land Company's Survey, bounded and described as follows:

BEGINNING at the point of intersection of the northerly line of Main Street with the west line of Chateau Terrace; running thence northerly along the westerly line of Chateau Terrace; running thence northerly along the westerly line of Chateau Terrace, 269.63 feet to a point; thence westerly at right angles with the westerly line of Chateau Terrace, 172.09 feet to the easterly line of Fruehauf Avenue; thence southerly along the easterly line of Fruehauf Avenue, 200.00 feet to the said northerly line of Main Street; and thence easterly along said line of Main Street 185.64 feet to the place of beginning.

Parcel containing 0.93 acres of land, more or less.

ENTIRE PREMISES LIES WITHIN ZONE "X" (AREA DETERMINED TO BE OUTSIDE 500–YEAR FLOODPLAN) PER F.E.M.A. FLOOD INSURANCE RATE MAP 3602226 0012 E, TOWN OF AMHERST MAP DATE: OCTOBER 16, 1992

ZONING

TOWN OF AMHERST
ONLINE – ECODE360
ADOPTED BY THE TOWN BARD OF THE TOWN OF AMHERST 5–1–2006

SBL NO. 68.17–6–19 AND 22 ARE IN ZONE R–3 (RESIDENTIAL DISTRICTS)

SBL NO. 68.17–6–20 AND 21 ARE IN ZONE GB (NON RESIDENTIAL DISTRICTS)

B. Dimensional Standards.

R-3 Principal Use Dimensional Standards	
Min. lot area (per dwelling)	
Interior	8,450 sf
Corner	9,700 sf
Min. lot width	
Interior	65 ft
Corner	75 ft
Min. yards	
Front yard	30 ft
Rear yard	30 ft
Combined side yards	10 ft
Each side yard	3 ft
Corner lot	See § 2-5.2A(5)
Through lot	See § 2-5.2A(3)
Max. height	2 stories (up to 35 ft)
Max. building coverage	30%
Min. floor area (dwelling only)	
Under 2 stories	1,000 sf
2 or more stories	1,200 sf

Note: For explanations of measurements, computations, and exceptions see § 2-5[1]

GB Principal & Accessory Use/Structure Dimensional Standards		Vehicle Use Area
Min. lot area	None	
Min. lot width	None	
Min. front yard		
Height of structure for first 35 ft	20 ft	10 ft*
Height of structure for any portion of building above 35 ft	30 ft	10 ft*
Min. rear yard (abutting residential ** /nonresidential)		
Height of structure up to 30 ft	See § 2-5.4B(3)/15 ft	15 ft* / 5 ft*
Height of structure 30 ft or more	See § 2-5.4B(3)/25 ft	15 ft* / 5 ft*
Min. side yard (abutting residential ** /nonresidential) **		
Height of structure up to 30 ft	See § 2-5.4B(3)/ None or 10 ft if not on lot line	15 ft* / 5 ft*
Height of structure 30 ft or more	See § 2-5.4B(3) / 25 ft	15 ft* / 5 ft*
Max. height	65 ft	
Max. building coverage	None	
Min. interior building separation	None required	

*	The entire area must be landscaped.
**	Accessory structures shall be setback a minimum of 10 feet

PART OF LOT 13 SECTION ____ TOWNSHIP 12 RANGE 7 OF THE: Holland Land Company's SURVEY – Erie COUNTY, N.Y.

SURVEY OF: 22 Chateau Terrace, 4564 & 4548 Main Street and 17 Fruehauf Avenue, Town of Amherst

SBL No. 68.17–6–21 & 22

Attachment: SP-2022-11 drawings 021623 (2695 : Sp-2022-11)

GENERAL NOTES:

1. INSTALL ALL MATERIALS TO MANUFACTURER'S RECOMMENDATIONS AND BEST STANDARDS OF TRADE INVOLVED.
2. SUBSTITUTIONS SHALL BE MADE ONLY WITH OWNER'S APPROVAL AND BE OF EQUIVALENT QUALITY TO WHAT IS SPECIFIED.
3. WORK SHALL BE COMPLETED IN STRICT ACCORDANCE WITH ALL LOCAL CODES AND OSHA SAFETY RULES AND REGULATIONS.
4. CONTRACTOR SHALL VERIFY ALL EXISTING CONDITIONS AND DIMENSIONS AT THE SITE. NOTIFY OWNER & ENGINEER OF DISCREPANCIES IN CONDITIONS SHOWN ON DRAWINGS PRIOR TO PROCEEDING WITH THE WORK.
5. CONTRACTOR SHALL BE RESPONSIBLE FOR PROTECTION OF ANY EXISTING STRUCTURES TO REMAIN AND ANY FINISH MATERIAL INSTALLED WHILE WORKING ON OTHER COMPONENTS.
6. CONTRACTOR SHALL KEEP JOB FREE OF DEBRIS AND MAKE FINAL CLEANUP TO THE SATISFACTION OF OWNER.
7. CONTRACTOR SHALL ASCERTAIN THE LOCATION OF ALL UTILITIES PRIOR TO CONSTRUCTION SO THAT THIS WORK WILL NOT DISTURB EXISTING LINES AND/OR INSTALLATIONS EXCEPT AS DETAILED ON THE PLANS. COORDINATE ALL WORK WITH THE APPLICABLE UTILITY COMPANIES.
8. CONTRACTOR SHALL OBTAIN AND PAY FOR ALL REQUIRED PERMITS NECESSARY TO PERFORM THE WORK.
9. BUILDING DIMENSIONS ARE APPROXIMATE. REFER TO ARCHITECTURAL DRAWINGS FOR LAYOUT DIMENSIONS.
10. SIDEWALK DIMENSIONS ARE APPROXIMATE. REFER TO ARCHITECTURAL DRAWINGS FOR THE SIDEWALK PLAN.
11. CONCRETE SIDEWALK SEALERS: (REFER TO ARCHITECTURAL PLANS FOR LOCATION OF CONCRETE TYPES.)
    - 11.1. GREY CONCRETE SIDEWALKS SHALL HAVE CHEMMASTERS - SILENCURE WITHIN 2HRS AFTER FINAL FINISHING OF CONCRETE AND ALL BLEED WATER HAS DISSIPATED.
    - 11.2. EXPOSED AGGREGATE/STAMPED CONCRETE SIDEWALKS SHALL HAVE ONE (x1) COAT CHEMMASTERS - SILENCURE AS SOON AS CONCRETE HAS DRIED AFTER PRESSURE-WASHING THE RELEASE AGENT OFF. APRX 30 DAYS AFTER THIS (IF WEATHER PERMITS) APPLY ONE (x1) COAT OF CHEMMASTERS - POLYSEAL EZ.
12. LIGHTING FIXTURE ARROW SYMBOLS REFER TO THE DIRECTION THAT THE FIXTURES ARE REQUIRED TO FACE. SPECIFIC MOUNT BRACKETS WILL BE REQUIRED DEPENDING ON ORIENTATION AND FIXTURE COUNT.
13. CURB ISLAND DIMENSIONS ARE FROM INSIDE OF CURB TO INSIDE OF CURB.

DEMOLITION & EROSION NOTES:

1. USE ENTRANCE FROM FRUEHAUF AVE. FOR CONSTRUCTION ENTRANCE
2. INSTALL TEMPORARY EROSION CONTROL DEVICES AS DIRECTED WITHIN THE WORKING AREA TO PREVENT SEDIMENT MIGRATION. ALL EROSION CONTROL DEVICES SHALL BE INSTALLED IN ACCORDANCE WITH THE DETAILS PROVIDED.
3. ALL EROSION CONTROL DEVICES SHALL BE REPLACED WHEREVER THEY BECOME INOPERABLE.
4. THE CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTENANCE AND REMOVAL OF TEMPORARY SEDIMENTATION CONTROLS.
5. THE CONTRACTOR MUST CONTROL DUST DURING CONSTRUCTION, DURING EARTHWORK OPERATIONS, WATER-SPREADING EQUIPMENT SHALL BE PROVIDED BY THE CONTRACTOR, AND WATER SPREAD AS NECESSARY AND AS DIRECTED IN ORDER TO CONTROL DUST.
6. DIRT OR DEBRIS LEFT ON LOCAL PUBLIC ROADS AS A RESULT OF THIS CONSTRUCTION PROJECT SHALL BE REMOVED AND ROAD SURFACES CLEANED BY THE CONTRACTORS ON A DAILY BASIS, OR MORE FREQUENTLY IF DEEMED NECESSARY.
7. ALL DISTURBED AREAS (EXCEPT AREAS TO BE PAVED OR BUILT UPON) SHALL BE TOPSOILED TO A MINIMUM OF 4" DEPTH AND SEEDED IMMEDIATELY AFTER FINE GRADING TAKES PLACE AND AS SOON AS PHYSICALLY POSSIBLE.
8. THE CONTRACTOR IS RESPONSIBLY FOR THE MAINTENANCE OF DOWNSTREAM STORM SEWERS, DITCHES AND CULVERTS. SILT BUILDUP FOUND TO BE A RESULT OF THIS SITE CONSTRUCTION WORK SHALL BE REMOVED FROM DOWNSTREAM CULVERTS, DETENTION PONDS, BY THE CONTRACTOR AT NO ADDITIONAL EXPENSE TO THE OWNER OR CITY.
9. ALL SOIL EROSION AND SEDIMENT CONTROL DEVICES AND MATERIALS SHALL BE IN PLACE PRIOR TO BEGINNING EARTHWORK OPERATIONS AND SHALL BE MAINTAINED UNTIL THE ALL GRADING WORKS ARE COMPLETE.

DEMOLITION LEGEND:

- Property Line
- EX ELEC — Existing Electric
- EX GAS — Existing Gas
- EX WTR — Existing Water
- EX OH — Existing Overhead Utility
- EX SAN — Existing Sanitary
- EX STM — Existing Storm
- EX TC — Existing Telecoms
- Saw Cut Line
- Silt Fence/Sock
- Inlet Protection "Sedi-Bag" or similar
- Existing Easement to be removed.
- Existing Building to be removed.

DEMOLITION NOTES: (#)

1. Existing Buildings to be removed.
2. Existing Pavement to be removed.
3. Existing R.O.W. Driveway, Curb and Sidewalk to be removed.
4. Existing Retaining Wall and Steps to be removed.
5. Existing Landscape Area to be removed.
6. Existing Fence to be removed.
7. Existing Utility to be removed.
8. Existing Storm Drainage/CB to be removed.
9. Existing Sign to be removed.
10. Existing Curb to remain.
11. Existing Pavement to remain.
12. Existing Landscape area to remain.
13. Existing Sidewalk to remain.
14. Existing Storm Drainage/CB to remain and be protected during Construction.
15. Existing Utility to remain and be protected during construction.
16. Existing Light Pole to remain and be protected during construction.
17. Existing Sign to be relocated.

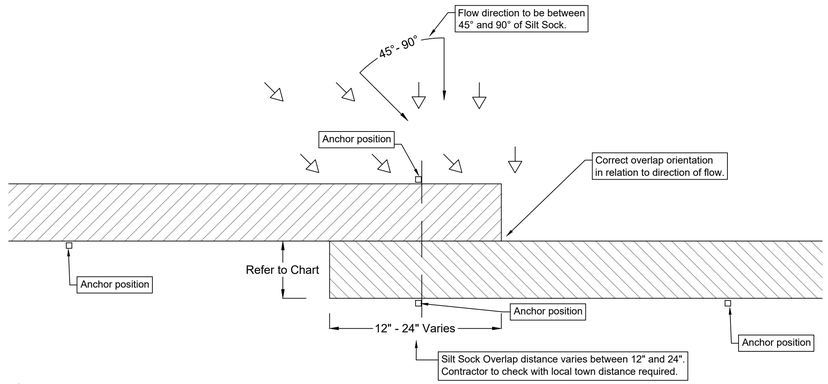
STABILIZED CONSTRUCTION ENTRANCE DETAIL



NOT TO SCALE

1. STONE SIZE - USE 2" STONE, OR RECLAIMED OR RECYCLED CONCRETE EQUIVALENT.
2. LENGTH - NOT LESS THAN 50 FEET (EXCEPT ON A SINGLE RESIDENCE LOT WHERE A 30 FOOT MINIMUM LENGTH WOULD APPLY).
3. THICKNESS - NOT LESS THAN SIX (6) INCHES.
4. WIDTH - TWELVE (12) FOOT MINIMUM, BUT NOT LESS THAN THE FULL WIDTH AT POINTS WHERE INGRESS OR EGRESS OCCURS. TWENTY-FOUR (24) FOOT IF SINGLE ENTRANCE TO SITE.
5. FILTER CLOTH - WILL BE PLACED OVER THE ENTIRE AREA PRIOR TO PLACING OF STONE.
6. SURFACE WATER - ALL SURFACE WATER FLOWING OR DIVERTED TOWARD CONSTRUCTION ENTRANCES SHALL BE PIPED ACROSS THE ENTRANCE. IF PIPING IS IMPRACTICAL, A MOUNTABLE BERM WITH 5:1 SLOPES WILL BE PERMITTED.
7. MAINTENANCE - THE ENTRANCE SHALL BE MAINTAINED IN A CONDITION WHICH WILL PREVENT TRACKING OR FLOWING OF SEDIMENT ONTO PUBLIC RIGHTS-OF-WAY, ALL SEDIMENT SPILLED, DROPPED, WASHED OR TRACTED ONTO PUBLIC RIGHTS-OF-WAY MUST BE REMOVED IMMEDIATELY.
8. WHEN WASHING IS REQUIRED, IT SHALL BE DONE ON A AREA STABILIZED WITH STONE AND WHICH DRAINS INTO AN APPROVED SEDIMENT TRAPPING DEVICE.
9. PERIODIC INSPECTION AND NEEDED MAINTENANCE SHALL BE PROVIDED AFTER EACH RAIN.

NOTES:
1. CONSTRUCT TO 2016 NYSDEC BLUE BOOK DESIGN CRITERIA

Notes:

1 - Do not use sock below the normal watermark or perpendicular to flow in river and where the maximum incline is greater than 50%.
2 - Contractors should be aware of federal, state and local laws, rules regulations or permit requirements for the use of Silt Socks on site.
3 - Sock should be positioned on the outline of the area to be protected, but must be installed between 45° to 90° from directions of flow.
4 - Sock may be required to be entrenched a minimum of 2" on disturbed ground to ensure constant ground contact.
5 - All gaps and ruts must be backfilled with soil or sock material.
6 - Sock overlap should be in the direction of the flow. Overlap amount will be between 12" and 24". Contractor to check with local town for requirements.
7 - If sediment collects to 1/2 the height of the sock, then a second sock may be stacked immediately up slope of the original instead of removing the sediment.
8 - Sock joint is where two sock sections meet on a level grade, overlap and adjoining ends, tightening the ends together, and anchoring through each end. Where two sections meet on un-level ground, j-hook higher elevated end, anchor, and begin new section just below. Back fill any gaps.
9 - Sock should be inspected and repaired as needed.
10 - If ruts begin under the sock they should be backfilled with soil and compacted so that the ground and sock have continuous contact.
11 - If sock rolls out of place, the sock should be repositioned and secured with additional anchors.
12 - Tears in the Sock fabric may be repaired by wrapping a new piece of fabric over the sock and securing, or by place a second sock immediately up slope with the required overlap beyond deformation.
13 - A section of sock should be replaced whenever it has weakened to such an extent that the efficiency is reduced or diminished. Weakening can occur because the natural mesh fabric breaks down over time of from being moved/dragged on site.
14 - Sock should be replaced when sediment has built up and has been removed three times.
15 - All sediment in disturbed area next to sock must be removed and correctly disposed of before the sock can be removed.
16 - When removing, cut sock open and spread the filler material around. The netting should be removed from site.
17 - Sock should be installed before works commence on site.

11. CONCRETE SIDEWALK SEALERS: (REFER TO ARCHITECTURAL PLANS FOR LOCATION OF CONCRETE TYPES.)
    - 11.1. GREY CONCRETE SIDEWALKS SHALL HAVE CHEMMASTERS - SILENCURE WITHIN 2HRS AFTER FINAL FINISHING OF CONCRETE AND ALL BLEED WATER HAS DISSIPATED.
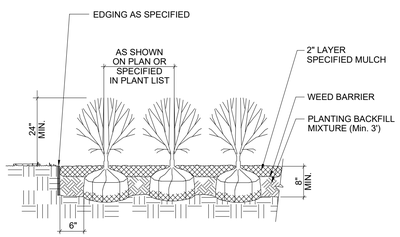
    - 11.2. EXPOSED AGGREGATE/STAMPED CONCRETE SIDEWALKS SHALL HAVE ONE (x1) COAT CHEMMASTERS - SILENCURE AS SOON AS CONCRETE HAS DRIED AFTER PRESSURE-WASHING THE RELEASE AGENT OFF. APRIX 30 DAYS AFTER THIS (IF WEATHER PERMITS) APPLY ONE (x1) COAT OF CHEMMASTERS - POLYSEAL EZ.
12. LIGHTING FIXTURE ARROW SYMBOLS REFER TO THE DIRECTION THAT THE FIXTURES ARE REQUIRED TO FACE. SPECIFIC MOUNT BRACKETS WILL BE REQUIRED DEPENDING ON ORIENTATION AND FIXTURE COUNT.
13. CURB ISLAND DIMENSIONS ARE FROM INSIDE OF CURB TO INSIDE OF CURB.

LANDSCAPE NOTES:



1. ALL PLANTS INSTALLED SHALL MEET OR EXCEED THE MINIMUM REQUIREMENTS AS NOTED ON THE PLANS AND IN THE LATEST EDITION ON THE AMERICAN STANDARD FOR NURSERY STOCK, BY THE AMERICAN ASSOCIATION OF NURSERYMEN, ANSI 260.1
2. THE CONTRACTOR SHALL BE RESPONSIBLE FOR HIS OWN QUANTITY TAKEOFF, THE QUANTITIES SHOWN ARE A MINIMUM AND ARE FOR REFERENCE ONLY.
3. THE CONTRACTOR SHALL PERFORM A ROUGH FIELD STAKEOUT OF ALL PLANTING MATERIAL LOCATIONS AND CONTACT THE OWNERS FIELD REPRESENTATIVE PRIOR TO ACTUALL INSTALLING. THE PLANTING MATERIAL LOCATIONS SHOWN ON THE PLANS ARE TO CONVEY THE DESIGN INTENT ONLY, ACTUAL LOCATIONS WILL BE FINALIZED BY THE OWNERS FIELD REPRESENTATIVE AT THE TIME OF INSTALLATION.
4. THE CONTRACTOR IS HEREBY NOTIFIED THAT IF UNDERGROUND UTILITIES EXIST IN THE VICINITY OF THE PLANTINGS, ALL PROPOSED PLANTINGS SHALL BE INSTALLED A MINIMUM OF 5' FROM ANY UNDERGROUND UTILITY, CONTACT THE OWNERS FIELD REPRESENTATIVE IF PLANTINGS SHOWN ON THE PLANS VIOLATE THIS SITUATION.
5. ALL TREES SHALL BE INSTALLED A MINIMUM OF 20' FROM ANY OVERHEAD ELECTRIC LINES.
6. PLANTING BACKFILL MIXTURE SHALL CONSIST OF 4 PARTS TOPSOIL, 1 PART PEAT MOSS, ½ PART WELL ROTTED MANURE, 10 LBS 5-10-5 PLANTING FERTILIZER THOROUGHLY MIXED PER CUBIC YARD.
7. STAKE AND WRAP TREES IMMEDIATELY FOLLOWING INSTALLATION.
8. ALL PLANTED AREAS SHALL RECEIVE A MAX. 2" LAYER OF COCOA BROWN MULCH. WEED MAT EQUAL TO "WEEDBLOCK" BY EASY GARDENER OR DEWITT WEED BARRIER.
9. ALL DISTURBED AREAS NOT RECEIVING PLANTINGS (INCLUDING RIGHT-OF-WAYS) SHALL BE PROVIDED WITH SOD. SEED PERMITTED AT DETENTION POND IF PLANTED EARLY ENOUGH TO ESTABLISH.
10. THE AREAS ON THE PLAN TO BE SEEDED SHALL HAVE 4" MINIMUM OF TOPSOIL, DISK PLOWED, LEVELED AND HAND RAKED SMOOTH. SURFACE SHALL BE ROLLED TO REMOVE LUMPS.
11. ALL SEEDED AREAS SHALL BE HYDROSEEDED IN ACCORDANCE WITH THE SPECIFICATION INDICATED. WHERE REQUIRED BY CLIMATIC CONDITIONS, SLOPE OR SEASON OF PLANTING.
    HYDROSEED SPEC: 20% RYE, 20% BLUE GRASS, 60% TURF TYPE FESCUE.
    SOD MAY BE SUBSTITUTED FOR SEEDING IN ORDER TO ACHIEVE THE REQUIRED COVERAGE (REFER TO CONTRACTOR FOR SOD/SEED COVERAGE).
12. THE CONTRACTOR SHALL BE RESPONSIBLE FOR WATERING, MOWING AND OTHER MAINTENANCE TO SEEDED AREAS UNTIL THE PROJECT IS ACCEPTED BY THE OWNER, THIS SHALL INCLUDE WATERING DAILY FOR 15 DAYS OR AS REQUIRED BY WEATHER CONDITIONS AND RE-SEEDING OF THIN SPOTS FOLLOWING THE GERMINATION OF THE SEEDS.
13. CONTRACTOR IS RESPONSIBLE TO PROTECT ALL EXISTING TREES ONSITE AND OFFSITE, WHICH ARE TO BE PRESERVED, FROM ALL POSSIBLE TYPES OF ROOT, TRUNK, AND LIMB DAMAGE.

OSQ Series

OSQ™ LED Area/Flood Luminaire featuring Cree TrueWhite® Technology – Medium & Large

Rev. Date: VS 09/14/2021

Product Description

The OSQ™ Area/Flood luminaire blends extreme optical control, advanced thermal management and modern, clean aesthetics. Built to last, the housing is rugged cast aluminum with an integral, weathertight LED driver compartment. Versatile mounting configurations offer simple installation. Its slim, low-profile design minimizes wind load requirements and blends seamlessly into the site providing even, quality illumination. The 4L lumen package is a suitable upgrade for HID applications up to 250 Watt, and the 11L lumen package is a suitable upgrade for HID applications up to 400 Watt. The 22L lumen package is a suitable upgrade for HID applications up to 750 Watts, and the 30L lumen package is a suitable upgrade for HID applications up to 1000 Watts.
Applications: Parking lots, walkways, campuses, car dealerships, office complexes, tunnels, underpasses, and internal roadways

Performance Summary

Utilizes Cree TrueWhite® Technology on 5000K Luminaires

NanoOptic® Precision Delivery Grid™ optic

Assembled in the U.S.A. of U.S. and imported parts

Initial Delivered Lumens: 4,000 - 30,000

Efficacy: Up to 173 LPW

CRI: Minimum 70 CRI (300K, 400K & 5700K); 90 CRI (5000K)

CCT: 3000K, 4000K, 5000K, 5700K

Limited Warranty*: 10 years on luminaire; 13 years on Colorfast DeltaGuard® finish; up to 5 years for Synapse® accessories; 1 year on luminaire accessories

*See http://creelighting.com/warranty for warranty terms. For Synapse accessories, consult Synapse spec sheets for details on warranty terms.

Ordering Information

Fully assembled luminaire is composed of two components that must be ordered separately:
Example: **Mount:** OSQ-ML-B-AA-BK + **Luminaire:** OSQM-B-4L-30K7-2M-UL-NM-BK

Mount (Luminaire must be ordered separately)*

OSQL	32.4 lbs. [14.7kg]

Note: Refer to page 11 for future mounting drill pattern. For additional mounts, refer to drawings beginning on page 19

CPY Series - Version C

CPY250® LED Canopy/Soffit Luminaire

Rev. Date: V3 02/01/2022

Product Description

The CPY250® LED Canopy/Soffit Luminaire has an extremely thin profile constructed of rugged cast aluminum. It can be surface mounted easily from below the canopy deck and can be pendant mounted. Direct imaging of the LEDs is eliminated with a highly efficient patterned flat or 0.91" (23mm) drop glass lens.
Applications: Petroleum canopies, CNG fueling stations, soffits

Performance Summary

Assembled in the USA by Cree Lighting from US and imported parts

Initial Delivered Lumens: Up to 21,000

Efficacy: Up to 165 LPW

CRI: Minimum 70 CRI (40K, 50K, 57K); 80 CRI (30K); 90 CRI (40K, 50K)

CCT: 3000K, 4000K, 5000K, 5700K

Limited Warranty*: 10 years on luminaire/10 years on Colorfast DeltaGuard® finish/5 years on PML sensor/1 year on field-installed accessories

IP66 Rated (select models only)

Class I, Division 2 Hazardous Location for select models

*See http://creelighting.com/warranty for warranty terms

Accessories

Field-Installed

Direct Mount Luminaires
Canopy Upgrade Kits (18 ga. steel, except where noted)
CPY-AP06A* - for use with Cree Lighting CAN-304 luminaires, 16 ga. 5052 aluminum
XA-BXCCMW – for use with Jet-Philips, 21.40" (569mm) square, white
XA-BXCCNW – for use with Elsco Franciscan, 22.06" (560mm) square, white
XA-BXCCPW – for use with LSI Dakota or Masters, 22.50" (572mm) square, white
XA-BXCCQW – for use with Whiteway Riviera or Rig-A-Lite, 20.60" (523mm) square, white
XA-BXCCRW – for use with Elsco Merrit, 18.06" (459mm) square, white
XA-BXCCSW – for use with LSI Richmond or Whiteway Civic, 23.00" (584mm) L x 13.00" (330mm) W, white
Direct Mount Junction Box/Stem Kit
XA-BXCCJBOX – 6.0" (152mm) H x 3/4" (19mm) NPT Stem
- Watertight
- Rated for feed through 8 (4 in, 4 out) #12 AWG conductors
Direct Mount Beauty Plates
XA-BXCCBPW – 24.17" (665mm) Beauty Plate Only (18 ga. steel), white
XA-BXCCBPB13W – 24.17" (665mm) Beauty Plate (18 ga. steel) w/13" (305mm) Backer Plate (16 ga. steel), white
- For use in canopies where deck opening is larger than what is required for mounting the CPY250 luminaire. Maximum deck opening 10.75" x 15" (183mm x 275mm)
XA-BXCCBPB16W – 24.17" (665mm) Beauty Plate (18 ga. steel) w/16" (406mm) Backer Plate (16 ga. steel), white
- For use in canopies where deck opening is larger than what is required for mounting the CPY250 luminaire. Maximum deck opening 12" x 15" (305mm x 375mm)

Pendant Mount Luminaires
Pendant Mount Kits
XA-PS12KIT* – 5" (127mm) pendant
XA-PS18KIT* – 11" (279mm) pendant
XA-PS22KIT* – 15" (381mm) pendant
- Includes two conduit fittings and 3/4-14 NPT pipe threaded on two ends

Hand-Held Remote
XA-SENSREM
- For successful implementation of the programmable multi-level option, a minimum of one hand-held remote is required

Synapse® SimplySnap 10V Interface
DIM10-220F
- 120V-277V
- Requires other Synapse components to complete system
- Refer to DIM10-220F spec sheet for details

* Must specify color: BK (Black), BZ (Bronze), SV (Silver) or WH (White)

IG Series

LED Parking Garage Luminaire

Rev. Date: V6 09/17/2020

Product Description

Cree Lighting innovates again to reset the performance benchmark in parking garage applications with the IG Series featuring WaveMax® Technology, our innovative optical waveguide platform. Available in 33 watt and 60 watt, two lumen packages are offered to satisfy IES RP-8-18 and IES Security Zone 0-1-03 requirements for environments seeking higher light levels for improved safety and security. The streamlined design breaks away from dated traditional designs, blending form and function, to deliver superior low-glare illumination.

For enhanced performance and versatility, a range of optional integrated lighting controllers bring advanced capabilities and energy savings to the IG Series. From the stand-alone multi-level (PML) option to the full-featured Limelight by Lutron or Synapse® wireless control options, the IG Series provides the features and flexibility designed to meet the needs of today's most demanding parking garage applications.

Applications: Parking garages

Performance Summary

Utilizes WaveMax® Technology

Initial Delivered Lumens: 3,860 or 7,550 lumens

Input Power: 33 or 60 watts

Efficacy: Up to 126 LPW

Optic: Type V Short Distribution

Assembled in the USA of U.S. and imported parts

CCT: 3000K, 3500K, 4000K, 5700K

CRI: Minimum 80 CRI

Limited Warranty*: 10 years on luminaire; 5 years on PML and Limelight options; up to 5 years for Synapse® accessories; 1 year on luminaire accessories

*See http://creelighting.com/warranty for warranty terms. For Synapse accessories, consult Synapse spec sheets for details on warranty terms.

THE EDGE® Series

LED Area Luminaire – Round

Rev. Date: V10 12/10/2021

Product Description

THE EDGE® Series has a slim, low profile design. Its rugged cast aluminum housing minimizes wind load requirements and features an integral, weathertight LED driver compartment, spun vented cover, high performance aluminum heat sinks and leaf/debris guard.
Applications: Auto Dealerships, parking lots, campuses, facade lighting and general site lighting applications

Performance Summary

Patented NanoOptic® Product Technology

Assembled in the USA by Cree Lighting from US and imported parts

Initial Delivered Lumens: Up to 25,065

CRI: Minimum 70 CRI (4000K & 5700K); 80 CRI (3000K); 90 CRI (5000K)

CCT: Turtle Friendly Amber, 3000K (+/-300K), 4000K (+/-300K), 5000K (+/- 500K), 5700K (+/- 500K) standard

Limited Warranty*: 10 years on luminaire/10 years on Colorfast DeltaGuard® finish /1 year on accessories

SEQR
Negative Declaration

NOTICE OF DETERMINATION OF NON-SIGNIFICANCE

Lead Agency: Town of Amherst
Planning Board

Project: SP-2022-11

Address: 5583 Main Street
Williamsville, NY 14221
(716) 631-7051

Date:

This notice is issued pursuant to Part 617 and Local Law #3-82, as amended, of the implementing regulations pertaining to Article 8 (State Environmental Quality Review) of the Environmental Conservation Law.

The Lead Agency has determined that the proposed action described below will not have a significant adverse effect on the environment.

Title of Action: Site Plan Review

SEQR Status: Unlisted Action

Description of Action: Demolish all existing structures located on the subject parcels and construct a proposed 2½ story mixed use building containing 48 apartment units (22 one bedroom, 24 two bedroom & 2 three bedroom) with 2 commercial (restaurant) tenant spaces totaling 6,624± sq. ft. Parking is provided for 76 vehicles which is internal to the building. Work will include the site improvements not specifically stated above, including, stormwater, utilities, grading, lighting, paving, and landscaping.

Location: 4548 & 4564 Main Street, 17 Fruehauf Avenue, and 22 Chateau Terrace, Amherst, Erie County

Petitioner: Benderson Development Company, LLC

Attachment: SP-2022-11_draft_neg_dec_021623 (26951 : Sp-2022-11)

Reasons Supporting This Determination

Based on information submitted by the applicant including a Full Environmental Assessment Form (EAF) - Part I, (as amended) and Part 2 and a complete site plan application, a preliminary staff analysis was undertaken. Compared to the criteria listed in Section 617.7, all indications are that this action will not have a significant impact on the environment, as follows:

1. The project is not expected to cause a substantial adverse change in existing air quality, ground or surface water quality or quantity, or noise levels; a substantial increase in solid waste production; or a substantial increase in the potential for erosion, flooding, leaching or drainage problems. The Engineering Department on **January 12, 2023** reviewed the Grading, Drainage and Utility Plans submitted on **January 9, 2023,** Engineer's Report submitted on September 30, 2022, Erosion Control Plan submitted on **January 9, 2023** and Geotechnical Report prepared by Barron & Associates, PC and submitted on **September 30, 2022**. The Stormwater Pollution Prevention Plan (SWPPP) submitted on **January 9, 2023** was also reviewed on **February 7, 2023**. Based on its review of these documents, the Department has determined that the project has or will have met all applicable requirements and has no objection to its approval.

2. The project will not result in the removal or destruction of large quantities of vegetation or fauna; or in significant adverse impacts to fish or wildlife species, habitats or other natural resources. The properties involved with this action are entirely developed for commercial and residential activities and are proposed for redevelopment. The Planning Department reviewed a Landscape Plan submitted on **January 9, 2023** and determined that it meets or exceeds Zoning Ordinance requirements for greenspace. The Landscape Plan has or will have met all Zoning Ordinance and Town requirements for landscaping.

3. The project is not expected to create any substantive conflict with the Town Comprehensive Plan. The Planning Department in their review of **January 20, 2023** and the Zoning Enforcement Officer in his/her review dated **January 20, 2023** has reviewed the application documents and Building Department in their review of **January 12, 2023** has reviewed the application documents along with the Geotechnical Report submitted on **September 30, 2022** and determined that the subject project has or will have met all International Building Code – 2015 and Zoning Ordinance regulations.

4. The project is within an area identified by the State as having potential archaeological or historical significance. The properties involved with this action have been previously disturbed in their entirety by the construction of the existing commercial and residential uses on the properties. A report prepared by Commonwealth Heritage Group, Inc. dated June 2022 and received on September 30, 2022 indicates the residence and garage located at 22 Chateau Terrace do not appear to meet the State/National Register of Historic Places criteria for individual eligibility. The property and residence located at 22 Chateau Terrace is located within a potential Town of Amherst Historic District and will require approval of a certificate of appropriateness to allow for the demolition of the residence and associates garage structure by the Town of Amherst Historic Preservation Commission. Therefore it is

Attachment: SP-2022-11_draft_neg_dec_021623 (26951 : Sp-2022-11)

anticipated that the development will not impair the character or quality of important historical resources.

5. The project will not impair the character or quality of important aesthetic resources or of existing community or neighborhood character. The project is located in the Traditional Infill 2.5 District (TI-2.5) zoning district; neighboring uses are commercial, educational and single family residential and zoned Traditional Infill 2.5 District (TI-2.5) and Residential District Three (R-3); therefore, the project is consistent with surrounding land use.

6. The proposed subject development will include a 2½ story mixed use building containing 48 apartment units with 6,624± sq. ft. of commercial space and 76 vehicle parking spaces that are internal to the building which will not cause a major change in the use of either the quantity or type of energy.

7. The project will not create any hazard to human health. The Fire Chief's Association on **_____,** has reviewed the project and has no objection to the approval of the site plan, as all requirements of this agency has or will have been met.

8. The project will not cause a substantial change in the use, or intensity of use, of land including agricultural, open space or recreational resources, or in its capacity to support existing uses. The 2½ story mixed commercial and residential building will be consistent with the scale of surrounding land uses.

9. The function of the proposed mixed use building containing commercial spaces and residential units will not significantly increase the number of people using the site over its historical previous level of use.

10. Review by the Town Traffic/Safety Board dated February 2, 2023 and NYSDOT dated January 11, 2023 **indicates** that significant negative traffic impacts are not expected to result from the proposed project. Review of the Traffic Impact Assessment prepared by Passero Associates submitted to the planning Department on **January 20, 2023** and reviewed by the Town Traffic/Safety Board on **February 2, 2023** and NYSDOT on **January 11, 2023** indicates that significant negative traffic impacts are not expected to result from the proposed project.

11. A coordinated review of the project has been undertaken by Town Departments, in addition to those mentioned above, Highway on **November 16, 2022,** Assessor on **January 18, 2023,** Plumbing Division on **January 13, 2023** and Right-of-Way Agent on **October 17, 2022** along with outside agencies including the Erie County Department of Environment and Planning on _____, New York State Department of Transportation on **January 11, 2023** and the New York State Office of Parks, Recreation and Historic Preservation on _____. These reviews have not identified any significant environmental issues and indicate that the proposal will not have a significant damaging impact on the environment.

Attachment: SP-2022-11_draft_neg_dec_021623 (26951 : Sp-2022-11)

12. Issues not specifically mentioned above and/or those not specifically reviewed were not raised by Town departments, outside agencies or the public and are not determined to cause significant negative environmental impacts.

DRAFT (2/16/23)
TOWN OF AMHERST
PLANNING BOARD
DESIGN EXCEPTION RESOLUTION
SP-2022-11

PETITIONER

Benderson Development
570 Delaware Avenue
Buffalo, NY 14202

PROPERTY LOCATION

4548 & 4564 Main Street, 17 Fruehauf Avenue, and 22 Chateau Terrace

WHEREAS, the Town of Amherst Planning Board on Thursday, February 16, 2023 held a public hearing on a Site Plan for which design exceptions to the design standards of the mixed use districts is being sought, and

WHEREAS, the Planning Board reviewed the design exception request and reasoning in the petitioners letter to the Planning Board dated January 27, 2023 and received on February 8, 2023 by the Planning Department for the subject site plan, and

WHEREAS, in accordance with Section 5A of the Zoning Ordinance, the following are the required design standards for which design exceptions are being sought

A. Section 5A-2-4 B requires the building face lengths along Chateau Terrace and Fruehauf Avenue to be 90% of the lot frontage. The required building face length along Chateau Terrace is 242.67 feet (269.63 ft. x 0.9) and along Fruehauf Avenue is 180.00 feet (200.00 ft. x 0.90).

B. Section 5A-2-4 D limits the building length along Chateau Terrace to be 200 feet.

C. Section 5A-5-4 requires a 30 foot minimum setback to the protected district (north property line) which limits the maximum allowed building length along Chateau Terrace to be 239.63 feet and along Fruehauf Avenue to be 170.00 feet.

D. Section 5A-2-4 K requires tree planting in grates along Chateau Terrace & Fruehauf Avenue.

WHEREAS, in accordance with Section 5A-7-19 of the Zoning Ordinance, the Planning Board finds that:

A. The alternative design approach satisfies the overall intent of the design standards for which the design exceptions are being sought.

B. The design exceptions meet the intent of the applicable standards in an alternative way.

C. The design exceptions are equivalent to or produce a better outcome than the applicable standards in Section 5A of the Zoning Ordinance.

PETITIONER

Benderson Development
570 Delaware Avenue
Buffalo, NY 14202

PROPERTY LOCATION

4548 & 4564 Main Street, 17 Fruehauf Avenue, and 22 Chateau Terrace

WHEREAS, the Town of Amherst Planning Board on Thursday, February 16, 2023 held a public hearing on a Site Plan for a 2½ story mixed use building containing 48 apartment units 6,624± sq. ft. of commercial space and parking for 76 vehicles which is internal to the building, and

WHEREAS, the Planning Board reviewed the plans and specifications for the proposed project, and

WHEREAS, the Site Plan was referred to the Town's various review agencies, and

WHEREAS, the site and building plans were reviewed by the Town's Design Advisory Board and their recommendations were provided, and

WHEREAS, in accordance with Section 8-7-8 of the Zoning Ordinance, the Planning Board finds that:

A. The site plan includes usable space for active and passive recreation, including pedestrian connections.

B. The site plan does not include open space lands for public ownership and use offered for dedication or other disposition to the Town or other public entity.

C. School sites and facilities are adequate to accommodate the proposed site plan.

D. The site plan does not include the extension of roadways to adjacent property, and

WHEREAS, in accordance with Section 8-7-9 of the Zoning Ordinance, the Planning Board finds that:

A. The proposed site plan is consistent with the development plan if one is required.

B. The proposed site plan is consistent with the purpose and specific requirements of the Zoning Ordinance and generally consistent with the policies of the Comprehensive Plan.

C. Adequate services and utilities will be available prior to occupancy.

Dear Mr. Boglioli:

At its meeting of February 16, 2023 the Planning Board voted to **adjourn** the subject site plan to allow consideration of the petition and public presentations.

This request will be placed on the Planning Board agenda for the March 16, 2023 meeting. The public hearing for this item has been closed.

Please submit any revised plans or required materials by Monday, March 6, 2023 so they may be reviewed prior to the meeting.

Should you have any questions regarding the Planning Board's decision, please do not hesitate to call us.

Very truly yours,

Daniel C. Howard, AICP

TOWN OF AMHERST

APPLICATION & REVIEW PROCEDURE

MAJOR SITE PLAN

MATERIALS MUST BE PROVIDED IN AN ELECTRONIC FORMAT THAT CONTAINS PDF FILES OF THE APPLICATION, EAF, SITE PLAN DRAWING SET SURVEY, LANDSCAPE PLAN, PRELIMINARY BUILDING FLOO PLANS / ELEVATIONS & ANY OTHER SUPPORTING INFORMATION. THIS MUST BE SUBMITTED WITH YOUR APPLICATION. APPLICATIONS WILL NOT BE TRANSMITTED WITHOUT THIS ELECTRONIC INFORMATION.

THIS ALSO APPLIES TO REVISED MATERIALS THAT AR SUBMITTED.

This application package includes the following:

- Application Procedures
- Application Form & Checklist
- Stormwater Pollution Prevention Plan Checklist
- Appendix A Town of Amherst EAF Addendum
- Appendix B Criteria for Required 8½" x 11" Sketches
- Appendix C Erie Sewer District No. 5 – Commercial / Industrial New & Existing Buildings Requirements

- IMPORTANT-

1. A pre-submittal consultation with Planning Department staff is *strongly recommended* prior to submitting an application. The pre-submittal meeting gives the applicant an opportunity to discuss with staff such items as:
   - classifying the action as a major site plan, minor site plan, or minor site plan adjustment;
   - determining what specific information will be required to be submitted with the application;
   - identifying and discussing issues that must be addressed as part of the SEQR review;
   - identifying any potential variances required to implement the project as proposed.

   An appointment is required for all meetings with Planning Department staff.

2. This site plan petition is subject to the requirements of 6 NYCRR Part 617, State Environmental Quality Review Act (SEQR), and Chapter 104 of the Town of Amherst Code, as amended. The Planning Board cannot make a SEQR determination unless a complete Environmental Assessment Form (EAF), including Town of Amherst EAF Addendum, and any required supplementary information such as traffic impact studies, archaeological reports, wetland delineations or geotechnical reports, are submitted. SEQR issues may be discussed with Planning Department staff at a recommended pre-submittal meeting. Unlisted Actions require a Short EAF; Type I Actions require a Full EAF. The following is a link to the NYSDEC website and fillable forms with instructions*:*
   http://www.dec.ny.gov/permits/6191.html.

3. **Review by the Town Design Advisory Board (DAB) is required for Major Site Plans located in the following Mixed-Use zoning districts:**

   Traditional Infill 2.5 (TI-2.5)
   Traditional Infill 4 (TI-4)
   Shallow Corridor 3 (SC-3)
   Deep Corridor 3 (DC-3)
   Deep Corridor 5 (DC-5)
   Center 2.5 (CTR-2.5)
   Center 5 (CTR-5)
   Center 8 (CTR-8)

   The application for DAB review is required to be filed in conjunction with the major site plan application.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

4. The application shall be executed or consented to in writing by the owner of the property.

5. **Any variances from the Zoning Board of Appeals, or any decision from the Town Board (e.g. removal of deed restrictions) must be obtained prior to action by the Planning Board on a Site Plan application.**

6. Submittal of an application grants permission to Town staff and Planning Board members to access the parcel(s) under consideration.

7. All site plan drawings must be prepared by a Registered Architect, Professional Engineer, Landscape Architect, or Land Surveyor (as applicable) licensed to practice in New York State.

8. If you wish to include a Coordinated Sign Plan application with the site plan petition, a separate application must be completed. Contact the Planning Department for a copy of a Coordinated Sign Plan application package.

9. All drawings should be no larger than 24 in. x 36 in. If site characteristics warrant larger plan sheets, they may be accepted subject to Planning Department concurrence. All drawings must also reserve a 4 in. x 6 in. area in the lower right hand corner for official Town use.

APPLICATION PROCEDURES

1. Applicant secures application package from the Planning Department, 5583 Main Street, Williamsville, NY 14221. (716) 631-7051. Forms are also available online at: www.amherst.ny.us, (keyword: Planning).

2. Applicant prepares information as required on the Site Plan Submittal Checklist, attached. NOTE: Some proposals may not require all items on the checklist; please verify with the Planning Department.

3. Applicant schedules an appointment with the Planning Department to review the following:
   - a complete set of site plan drawings, preliminary building elevations and floor plans (no larger than 24" x 36" in size)
   - Environmental Assessment Form (EAF) & Town EAF Addendum
   - any supporting reports and materials
   - verification from the Town Assessor that the address in the application is correct

4. Applicant schedules an application submittal appointment with the Planning Department. NO SITE PLAN WILL BE ACCEPTED FOR REVIEW WITHOUT A PRE-SET SUBMITTAL APPOINTMENT.

5. At the submittal appointment, applicant provides fourteen (14) complete and collated sets of drawings and application information to the Planning Department **(materials will not be accepted unless folded into 9" x 12" in size),** including**:**
   - application form
   - Environmental Assessment Form (EAF)
   - supporting reports / materials
   - complete set of site plan drawings, preliminary building elevations and floor plans (**at least one (1) set of drawings must bear a raised or wet seal and signature of the design professional** who prepared the plans; the remaining copies may be submitted with a facsimile of the seal and signature)
   - digital files of all materials in pdf format
   - an 8½" x 11" reduction of the sketch plan or plat drawing (see Appendix B)

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

6. After approval for filing by the Planning Department, applicant submits all necessary fees to the Town Clerk. **(See Schedule of Fees on first page of application and make checks payable to: Town of Amherst.)**

7. The applicant returns a copy of the filing receipt to the Planning Department.

8. The Planning Department transmits remaining thirteen (13) copies of the application and supporting materials to:
   - Assessor
   - Commissioner of Building
   - Town Engineer
   - Superintendent of Highways
   - Traffic/Safety Board
   - Fire Chiefs' Association
   - Plumbing Division
   - Right-of-Way Agent
   - Police Department (if applicable)
   - Zoning Enforcement Officer
   - Other Town and outside agencies, as applicable

9. Within 30 days of its receipt of the complete application for Site Plan approval, each agency completes its review and notifies the Planning Department in writing of its comments or recommendations as required by Ordinance.

10. The applicant may be required to submit revised plans, reports, or materials to address review agency comments. The procedures for submittal of revised plans are as follows:

    - A cover letter addressing all comments received to date is required.
    - "Highlight" the area of change on the drawings and provide a notation describing the change.
    - Revised plans/materials are required. Planning staff should be contacted to determine the number of sets needed.
    - All revised plans and materials must also be provided in an electronic format that contains pdf files of the revised information.

11. The Planning Board reviews the EAF to determine whether a Draft Environmental Impact Statement (DEIS) is required. The petitioner will be advised in the event that a DEIS is required and afforded the opportunity to prepare it. If the petitioner declines, the Planning Board will prepare the DEIS at the petitioner's expense. The public hearing will be held on the DEIS concurrently with the Planning Board hearing on the application.

12. Planning Board Meeting Procedures:

    The applicant or representative presents the project at the public hearing before the Planning Board and is available to answer any questions. The Planning Board may take any of the following actions:

    - Adjourn the hearing to a future Planning Board meeting (hearing remains open).
    - Close the hearing and table action on the site plan to a future Planning Board meeting. (The Planning Board may remove the item from the agenda until such time as all required information is provided.)
    - Close the hearing and make a decision on the site plan.

    All determinations on matters before the Planning Board are made after all public hearings on that meeting's agenda are completed.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

13. A copy of the Planning Board's determination will be provided to the applicant, his / her representative, the Building Commissioner and the Town Clerk approximately 1 week following the Planning Board meeting at which it was heard.

14. If the Planning Board approves a Site Plan with conditions, the Planning Department will work with the applicant to ensure that all conditions of the approval are satisfactorily addressed. When all conditions are satisfied, the applicant submits **seven (7) final copies** of the complete set of all site plan drawings, folded into 9" x 12". For site plans in the Mixed-Use zoning districts, building elevations will also be required.

    All 7 sets must have original wet seals and include the required 4 in. x 6 in area in the lower right hand corner for official Town use. These drawings will be stamped and signed "Approved" by the Planning Director and transmitted to Town Departments for their files and use.

15. A building permit will not be issued by the Building Department until the stamped and signed Site Plan is issued by the Planning Director.

NOTE: Please check with the Planning Department to determine the deadline date for filing applications. Due to the public hearing notice requirements and department reviews, no site plan application will be placed on the Planning Board agenda after the deadline for filing has closed. Scheduling may be delayed if an application is incomplete.

MAJOR SITE PLAN APPLICATION (con't) ***Page 2***

Representative (Architect, Engineer, Landscape Architect, Surveyor, or Attorney)**:**

Name: James A. Boglioli

Address: 570 Delaware Avenue

Buffalo , New York 14202
city state zip code

Phone: 716-878-9626 Fax: _____

E Mail: jmb@benderson.com

Project Location (must be verified by Town Assessor's Office)**:**

Address: 4548 - 4564 Main Street

SBL No(s): 68.17-5-219.20, 68.17-5-219.21, 68.17-5-219.22

Project Name: _____

Project Description:

Property is currently occupied by a 2 story brick and wood retail/office building which faces Main Street. The rear and sides on Château and Freihauf contain split level areas. This will be demolished and removed. The new development will be a mixed uses, including approximately 7,000 square feet of commercial space on Main Street level with 45 to 50 apartments on upper levels. The area between the "U" shaped development will contain a terrace area and partial parking area at the Main Street level. Additional parking is accessible from Chateau Street at the rear of the site, Also, a 30' landscape buffer area will be constructed at the rear of the site. Building architecture will meet design guidelines.

Site Plan Submittal Requirements and Checklist

The following checklist outlines the information required by the Planning Department to accept a Site Plan application for review. ***It is strongly recommended that you make an appointment with Planning Staff to determine which items apply to your application***.

Item No.	Item	Submitted	Official use
I Basic Drawing Information			
1.0	**Drawing size not to exceed 24" x 36"**		
2.0	**Title of Drawing**		
3.0	**Name and address of Applicant**		
4.0	**Name of person preparing drawing**		
5.0	**Wet seal/raised seal and signature of NYS licensed architect, engineer, landscape architect, or surveyor (as applicable)**		
6.0	**Project address**		
7.0	**Zoning of subject property and adjacent parcels**		
8.0	**North point, scale, date, and revision date(s)**		
9.0	**4" x 6" reserved area in lower right hand corner for official Town use**		
II Structures, Paved Areas, & Open Space			
1.0	**Existing and Proposed Streets**		
1.1	Names of all existing and proposed streets		
1.2	Width and radii of proposed curb-cuts		
1.3	Existing curb-cuts on adjacent and opposite properties		
1.4	Show ROW width, pavement dimensions, lane widths, pavement markings, and proposed signage on proposed streets		
1.5	Show proposed ROW consistent with planned NYSDOT, Erie County, or Town road projects (if applicable)		
1.6	Show location of proposed cross access to adjacent parcels along with a draft easement		
1.7	Designation of Fire Lanes (if applicable)		
1.8	Fire apparatus access roads		
1.9	Label any proposed roads as public or private		
1.10	Location and dimensions of sidewalks		
1.11	Typical cross sections and profiles of proposed streets, pedestrian walkways, and bikeways		
2.0	**Proposed Structures**		
2.1	Location and complete dimensions of proposed structures		
2.2	Setback dimensions of structure(s) to all property lines		
2.3	Proposed use of structures		
2.4	Gross square feet area of each structure		
2.5	Location of all building entrances		
2.6	Indicate type of roof construction/materials		
2.7	Location, height, and design detail of existing and proposed fences and walls		
2.8	Location of light standards and building mounted lights		
2.9	Location of dumpster and detail of dumpster enclosure with gate		
2.10	Layout and dimensions of the lot(s) proposed for development		

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

Town of Amherst Planning Department 5583 Main Street Williamsville-NY-14221
(716) 631-7051- Fax: (716) 631-7153

Item No.	Item	Submitted	Official use
II Structures, Paved Areas, & Open Space (cont'd)			
3.0	**Floor Plans with individual rooms and spaces labeled** (fully dimensioned)		
4.0	**Building elevations with height dimensions from finished grade to the highest point of the roof and to midpoint of gable or hip of a pitched roof.** (fully dimensioned)		
4.1	Show screening of mechanical equipment		
5.0	**Parking/Loading/Stacking Areas**		
5.1	Location and complete dimensions of all paved areas		
5.2	Setback dimensions of all paved areas to property lines		
5.3	Dimension of typical parking space and drive aisles		
5.4	Location and layout of handicapped parking spaces & access aisles		
5.5	Detail of vertical signage for handicapped parking and access aisles		
5.6	Indicate minimum parking requirement & number of spaces provided		
5.7	Proposed signage for directing and guiding traffic		
5.8	Curb cut permits from NYS, Erie County, or Town (if applicable)		
5.9	Pedestrian connections (from proposed structures to public sidewalk network)		
6.0	**Location and proposed development of all open spaces, including parks, playgrounds, and open reservations**		
III Utilities and Drainage			
1.0	**Engineers Report** (bound separately from the Stormwater Pollution Prevention Plan [SWPPP])		
1.1	Stamped/sealed and signed by NYS licensed architect or professional engineer		
1.2	Proposed water service sizing, RPZ pressure and fire safety flow and pressure calculations		
1.3	Proposed sanitary sewer facility load calculations (avg. & peak flows) including calculation of the peaking factor		
1.4	Proposed storm drainage facility calculations (see information included with this application)		
2.0	**Grading Plan**		
2.1	Existing and proposed grades indicated (proposed grades may not exceed 1 on 3)		
3.0	**Water Service**		
3.1	Location, size and material of existing and proposed facilities		
3.2	Location of existing and proposed fire hydrant location(s)		
3.3	Indicate use of sprinklers, location of Fire Department connection, and proposed fire protection systems		
3.4	Existing and proposed meter/RPZ size and location		
3.5	Applicable construction details		
4.0	**Sanitary Sewers**		
4.1	Locations, sizes, slopes, inverts, and materials of all existing and proposed facilities		

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

Town of Amherst Planning Department 5583 Main Street Williamsville-NY-14221
(716) 631-7051- Fax: (716) 631-7153

Item No.		Submitted	Official use
III Utilities and Drainage (cont'd)			
4.2	Applicable construction details		
4.3	Proposed water/oil/grease interceptor sizing calculations by a professional engineer (if applicable)		
5.0	**Storm Drainage**		
5.1	Locations, sizes, slopes, inverts, and materials of existing and proposed storm drainage facilities		
5.2	Connection of roof drains to proposed drainage system		
5.3	Applicable Town Standard construction details		
5.4	Existing and proposed swales and ditches		
5.5	Detention area cross-section and high-level elevations		
5.6	County and State approval for tie-in to existing sewers		
6.0	**Stormwater Pollution Prevention Plan (SWPPP) as applicable** (bound separately from the Engineer's Report) **See attached checklist.**		
7.0	**Natural Gas Service**		
8.0	**Location of transformers, generators and other mechanical equipment; include detail drawings (if applicable)**		
9.0	**Downstream Sanitary Capacity Analysis (DSCA) Report** (must be submitted if proposed average flows are greater than 2,500 gallons per day)		
9.1	The DSCA Report must include a detailed downstream sewer capacity analysis and the calculations of and commitment to (via Developer commitment letter) the required financial contribution to the Town's I/I mitigation fund based on peak flow conditions. The contribution must be based on $250 per gallon per minute of mitigated flow		
IV Lighting Plan			
1.0	**Photometric plan showing light spread in foot candles at property lines**		
1.1	Detail of all light standards, including dimension of height from finished grade		
1.2	Detail of all exterior lighting fixtures		
V Landscape Plan			
1.0	**Wet/raised seal and signature of a licensed Landscape Architect**		
2.0	**Provide a calculation of the total Parking area and a calculation of interior parking area in square feet and as a percentage**		
3.0	**Indicate location, size, number and type of proposed landscape materials**		
4.0	**Indicate location, type and size of <u>all</u> existing trees 4" caliper or larger and indicate which will be removed or retained**		
VI Other Required Information/General Requirements			
1.0	**Complete boundary survey that includes all existing structures, acreage, legal description with reference to a property line, street, or other known feature, and easements plotted to scale by a NYS licensed land surveyor**		

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

(716) 631-7051- Fax: (716) 631-7153

Item No.		Submitted	Official Use
VI Other Required Information/General Requirements (cont'd)			
1.1	Copies of all easements, reciprocal access agreement or similar leag documents		
2.0	**Topographic Survey with a 30 ft. buffer outside all property lines by a NYS licensed land surveyor**		
3.0	**Draft of any deed restrictions, covenants, provisions for home associations and common ownership, and reciprocal easement agreements (as applicable).**		
4.0	**For assessment purposes, state intent to apply for condominium status (if applicable).**		
5.0	**Completed and signed Environmental Assessment Form**		
5.1	Soil boring report and geotechnical report prepared by a qualified Professional Engineer (if applicable)		
5.2	Traffic Impact Study (if applicable)		
5.3	Archaeological survey (if applicable		
5.4	Wetland Delineation report (if applicable)		
6.0	**Show existing zoning(s) of both the subject property and adjacent parcels on the Site Plan and the Landscape Plan**		
7.0	**Location of NYSDEC wetlands (including buffer area) and/or federal wetlands; indicate jurisdictional status**		
8.0	**Location of Floodway and floodplain** (if applicable)		
9.0	**Documentation pertaining to any conditions of zonings, including copies of required deed restrictions; indicate date of rezoning and the parcel address under which it was rezoned (if applicable)**		
10.0	**Documentation related to any required variances granted by the ZBA**		
11.0	**For residential site plans, provide a statement from the appropriate school district that adequate school sites and facilities are available.**		
12.0	**8 1/2" X 11" reduction of primary site plan drawing (see appendix "B" of application package for specifications)**		
13.0	**A CD containing a PDF of all site plan drawings (Must also be provided with revised drawings)**		
VII Additional Required Information for Projects in the Mixed Use Districts			
1.0	**Design Advisory Board Application**		
1.1	Required for Major Site Plan		
1.2	Required at the Planning Directors Discretion for Minor Site Plans		
2.0	**Block & Street Network Plan**		
2.1	Designation of Core, Local & Alley streets		
2.2	Dimensions of Blocks		
3.0	**Block Usage Plan (as applicable)**		
3.1	Designation of site usage for each block including open space areas		
4.0	**Phasing Plan**

TOWN OF AMHERST
State Environmental Quality Review
ENVIRONMENTAL ASSESSMENT FORM
-- ADDENDUM --

1. For each applicable category of proposed new structures, including additions to existing structures, provide the following information for all soil types on the project site (*according to Soil Survey of Erie County, NY; Table 11, Building Site Development, pp 294-305):*

Soil Name	Shallow excavations	Dwellings without basements	Dwellings with basements	Small commercial buildings	Local roads and streets

2. If the Soil survey indicates either "severe" or "moderate" suitability for the proposed types of construction, a geotechnical and hydrological analysis based on one test per 3.5 acres of project area must be provided (per Town Board resolution, 3/17/03, amended 6/16/03).

   _____ Geotechnical report attached _____ Not applicable

3. Is your property located: On Youngs Road between Dodge and Klein Roads? □ Yes □ No
   On Wehrle Dr. between Spindrift Dr. and Oakwood Rd? □ Yes □ No

   If so, the property may be within an area of the Town that is affected by a moratorium on connections to the sanitary sewer system.

4. Are there alternative locations on the site for this project? □ Yes □ No

5. Location and size of real property owned by petitioner within one (1) mile of subject proposal:
   _____
   _____

6. Are you aware of current or future plans or intentions by others in the Town of Amherst to develop property within 1000± ft. of the present project request: □ Yes □ No

   Describe_____
   _____

   (Potential environmental impacts from adjacent or nearby projects undergoing the approval process will receive a coordinated environmental review to determine cumulative effects on common receivers (e.g. traffic and drainage corridors) and other relevant environmental concerns.)

7. Maximum number of vehicular trips to be generated per peak hour upon completion of project_____
   Source: _____

8. Will blasting occur during construction? □ Yes □ No

9. Does the project propose to connect and be tributary to the public sanitary sewer system? □ Yes □ No

10. Proposed net additional gallons per day (gpd) of sanitary sewer discharge upon completion of project:
    _____ average flow _____ peak flow.

    (Average flows of 2,500 gpd or greater will require an Engineer's Report that includes a detailed downstream sewer capacity analysis and the identification of and commitment to required I/I offset work during peak wastewater flow conditions.)

11. Based on the Town's *2011 Reconnaissance Level Survey of Historic Resources,* is your property 'blue-rated' for historic significance? □ Yes □ No

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

Full Environmental Assessment Form
Part 1 - Project and Setting

Instructions for Completing Part 1

Part 1 is to be completed by the applicant or project sponsor. Responses become part of the application for approval or funding, are subject to public review, and may be subject to further verification.

Complete Part 1 based on information currently available. If additional research or investigation would be needed to fully respond to any item, please answer as thoroughly as possible based on current information; indicate whether missing information does not exist, or is not reasonably available to the sponsor; and, when possible, generally describe work or studies which would be necessary to update or fully develop that information.

Applicants/sponsors must complete all items in Sections A & B. In Sections C, D & E, most items contain an initial question that must be answered either "Yes" or "No". If the answer to the initial question is "Yes", complete the sub-questions that follow. If the answer to the initial question is "No", proceed to the next question. Section F allows the project sponsor to identify and attach any additional information. Section G requires the name and signature of the project sponsor to verify that the information contained in Part 1is accurate and complete.

A. Project and Sponsor Information.

Name of Action or Project: Proposed Multi-Story Building		
Project Location (describe, and attach a general location map): 4548-4564 Main Street, 17 Freuhauf Ave, & 22 Chateau Terrace, Town of Amherst, NY 14226		
Brief Description of Proposed Action (include purpose or need): Proposed Action includes: Demolition of existing buildings along Main Street between, Fruehauf Ave and Chateau Terrace and residential property 22 Chateau Terrace and clearing of land; Proposed Multi-Story Building consisting of 48 apartments and 6,624 SF of restaurant space with associated parking garage, improved drainage and utility infrastructure, landscaping and site lighting. The total apartment units are as follows: 22 - 1 Bedroom units, 24 2 Bedroom Units and 2 - 3 Bedroom Units.		
Name of Applicant/Sponsor: Benderson Development Inc.	Telephone: 716-878-9626 E-Mail: jamesboglioli@benderson.com

B. Government Approvals

B. Government Approvals, Funding, or Sponsorship. ("Funding" includes grants, loans, tax relief, and any other forms of financial assistance.)

Government Entity	If Yes: Identify Agency and Approval(s) Required	Application Date (Actual or projected)
a. City Council, Town Board, or Village Board of Trustees ☐Yes ☑No		
b. City, Town or Village Planning Board or Commission ☑Yes ☐No	Town of Amherst Planning Board	June 2022
c. City Council, Town or Village Zoning Board of Appeals ☐Yes ☑No		
d. Other local agencies ☑Yes ☐No	Town of Amherst Traffic Safety Board Town of Amherst Historic Preservation Commision	June 2022
e. County agencies ☑Yes ☐No	Erie County Water Authority	June 2022
f. Regional agencies ☐Yes ☑No		
g. State agencies ☑Yes ☐No	NYSDOT; NYSDEC	June 2022
h. Federal agencies ☐Yes ☑No		

i. Coastal Resources.

i. Is the project site within a Coastal Area, or the waterfront area of a Designated Inland Waterway? ☐Yes ☑No

ii. Is the project site located in a community with an approved Local Waterfront Revitalization Program? ☐Yes ☑No

iii. Is the project site within a Coastal Erosion Hazard Area? ☐Yes ☑No

C. Planning and Zoning

C.1. Planning and zoning actions.

Will administrative or legislative adoption, or amendment of a plan, local law, ordinance, rule or regulation be the only approval(s) which must be granted to enable the proposed action to proceed? ☐Yes ☑No

- **If Yes,** complete sections C, F and G.
- **If No,** proceed to question C.2 and complete all remaining sections and questions in Part 1

C.2. Adopted land use plans.

a. Do any municipally- adopted (city, town, village or county) comprehensive land use plan(s) include the site where the proposed action would be located? ☑Yes ☐No

If Yes, does the comprehensive plan include specific recommendations for the site where the proposed action would be located? ☐Yes ☑No

b. Is the site of the proposed action within any local or regional special planning district (for example: Greenway Brownfield Opportunity Area (BOA); designated State or Federal heritage area; watershed management plan; or other?) ☐Yes ☑No

If Yes, identify the plan(s):

_____

_____

_____

c. Is the proposed action located wholly or partially within an area listed in an adopted municipal open space plan, or an adopted municipal farmland protection plan? ☐Yes ☑No

If Yes, identify the plan(s):

_____

_____

_____

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

C.3. Zoning

a. Is the site of the proposed action located in a municipality with an adopted zoning law or ordinance. ☑ Yes ☐ No
If Yes, what is the zoning classification(s) including any applicable overlay district?
Traditional Infill (TI-2.5)

b. Is the use permitted or allowed by a special or conditional use permit? ☑ Yes ☐ No

c. Is a zoning change requested as part of the proposed action? ☐ Yes ☑ No
If Yes,
i. What is the proposed new zoning for the site? _____

C.4. Existing community services.

a. In what school district is the project site located? Amherst CSD

b. What police or other public protection forces serve the project site?
Amherst Police Department; Erie County Sheriff; NY State Troopers

c. Which fire protection and emergency medical services serve the project site?
Amherst Fire Department - Snyder District

d. What parks serve the project site?
None

D. Project Details

D.1. Proposed and Potential Development

a. What is the general nature of the proposed action (e.g., residential, industrial, commercial, recreational; if mixed, include all components)? Residential and commercial

b. a. Total acreage of the site of the proposed action? 0.93 acres
b. Total acreage to be physically disturbed? 1.02 acres
c. Total acreage (project site and any contiguous properties) owned or controlled by the applicant or project sponsor? 0.93 acres

c. Is the proposed action an expansion of an existing project or use? ☐ Yes ☑ No
i. If Yes, what is the approximate percentage of the proposed expansion and identify the units (e.g., acres, miles, housing units, square feet)? % _____ Units: _____

d. Is the proposed action a subdivision, or does it include a subdivision? ☑ Yes ☐ No
If Yes,
i. Purpose or type of subdivision? (e.g., residential, industrial, commercial; if mixed, specify types)
Lot Combination
ii. Is a cluster/conservation layout proposed? ☐ Yes ☑ No
iii. Number of lots proposed? _____
iv. Minimum and maximum proposed lot sizes? Minimum _____ Maximum _____

e. Will proposed action be constructed in multiple phases? ☐ Yes ☑ No
i. If No, anticipated period of construction: 12 months
ii. If Yes:
- Total number of phases anticipated _____
- Anticipated commencement date of phase 1 (including demolition) _____ month _____ year
- Anticipated completion date of final phase _____ month _____year
- Generally describe connections or relationships among phases, including any contingencies where progress of one phase may determine timing or duration of future phases: _____

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

7.g

f. Does the project include new residential uses? ☑ Yes ☐ No

If Yes, show numbers of units proposed.

	One Family	Two Family	Three Family	Multiple Family (four or more)
Initial Phase	0			
At completion of all phases	48			

g. Does the proposed action include new non-residential construction (including expansions)? ☑ Yes ☐ No

If Yes,

i. Total number of structures 1

ii. Dimensions (in feet) of largest proposed structure: 35 height; 172.1 width; and 238.8 length

iii. Approximate extent of building space to be heated or cooled: 65,000 square feet

h. Does the proposed action include construction or other activities that will result in the impoundment of any liquids, such as creation of a water supply, reservoir, pond, lake, waste lagoon or other storage? ☑ Yes ☐ No

If Yes,

i. Purpose of the impoundment: Bio-retention pond

ii. If a water impoundment, the principal source of the water: ☐ Ground water ☐ Surface water streams ☑ Other specify: Non-permeable surface runoff

iii. If other than water, identify the type of impounded/contained liquids and their source.

iv. Approximate size of the proposed impoundment. Volume: 0.006 million gallons; surface area: 0.03 acres

v. Dimensions of the proposed dam or impounding structure: 1.5' height; 58' length

vi. Construction method/materials for the proposed dam or impounding structure (e.g., earth fill, rock, wood, concrete): Earth Fill

D.2. Project Operations

a. Does the proposed action include any excavation, mining, or dredging, during construction, operations, or both? (Not including general site preparation, grading or installation of utilities or foundations where all excavated materials will remain onsite) ☐ Yes ☑ No

If Yes:

i .What is the purpose of the excavation or dredging?

ii. How much material (including rock, earth, sediments, etc.) is proposed to be removed from the site?

- Volume (specify tons or cubic yards):
- Over what duration of time?

iii. Describe nature and characteristics of materials to be excavated or dredged, and plans to use, manage or dispose of them.

iv. Will there be onsite dewatering or processing of excavated materials? ☐ Yes ☐ No

If yes, describe.

v. What is the total area to be dredged or excavated? acres

vi. What is the maximum area to be worked at any one time? acres

vii. What would be the maximum depth of excavation or dredging? feet

viii. Will the excavation require blasting? ☐ Yes ☐ No

ix. Summarize site reclamation goals and plan:

b. Would the proposed action cause or result in alteration of, increase or decrease in size of, or encroachment into any existing wetland, waterbody, shoreline, beach or adjacent area? ☐ Yes ☑ No

If Yes:

i. Identify the wetland or waterbody which would be affected (by name, water index number, wetland map number or geographic description):

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

ii. Describe how the proposed action would affect that waterbody or wetland, e.g. excavation, fill, placement of structures, or alteration of channels, banks and shorelines. Indicate extent of activities, alterations and additions in square feet or acres:

iii. Will proposed action cause or result in disturbance to bottom sediments? ☐ Yes ☐ No
If Yes, describe:

iv. Will proposed action cause or result in the destruction or removal of aquatic vegetation? ☐ Yes ☐ No
If Yes:

- acres of aquatic vegetation proposed to be removed:
- expected acreage of aquatic vegetation remaining after project completion:
- purpose of proposed removal (e.g. beach clearing, invasive species control, boat access):
- proposed method of plant removal:
- if chemical/herbicide treatment will be used, specify product(s):

v. Describe any proposed reclamation/mitigation following disturbance:

c. Will the proposed action use, or create a new demand for water? ☑ Yes ☐ No
If Yes:

i. Total anticipated water usage/demand per day: 12,034 gallons/day

ii. Will the proposed action obtain water from an existing public water supply? ☑ Yes ☐ No
If Yes:

- Name of district or service area: Erie County Water Authority
- Does the existing public water supply have capacity to serve the proposal? ☑ Yes ☐ No
- Is the project site in the existing district? ☑ Yes ☐ No
- Is expansion of the district needed? ☐ Yes ☑ No
- Do existing lines serve the project site? ☑ Yes ☐ No

iii. Will line extension within an existing district be necessary to supply the project? ☐ Yes ☑ No
If Yes:

- Describe extensions or capacity expansions proposed to serve this project:
- Source(s) of supply for the district:

iv. Is a new water supply district or service area proposed to be formed to serve the project site? ☐ Yes ☑ No
If, Yes:

- Applicant/sponsor for new district:
- Date application submitted or anticipated:
- Proposed source(s) of supply for new district:

v. If a public water supply will not be used, describe plans to provide water supply for the project:

vi. If water supply will be from wells (public or private), maximum pumping capacity: _____ gallons/minute.

d. Will the proposed action generate liquid wastes? ☑ Yes ☐ No
If Yes:

i. Total anticipated liquid waste generation per day: 10,940 gallons/day

ii. Nature of liquid wastes to be generated (e.g., sanitary wastewater, industrial; if combination, describe all components and approximate volumes or proportions of each):
Sanitary Wastewater

iii. Will the proposed action use any existing public wastewater treatment facilities? ☑ Yes ☐ No
If Yes:

- Name of wastewater treatment plant to be used: Tonawanda Creek Plant #16
- Name of district: Amherst Sewer District #1
- Does the existing wastewater treatment plant have capacity to serve the project? ☑ Yes ☐ No
- Is the project site in the existing district? ☑ Yes ☐ No
- Is expansion of the district needed? ☐ Yes ☑ No

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

- Do existing sewer lines serve the project site? ☑ Yes ☐ No
- Will line extension within an existing district be necessary to serve the project? ☐ Yes ☑ No

If Yes:

- Describe extensions or capacity expansions proposed to serve this project: _____

iv. Will a new wastewater (sewage) treatment district be formed to serve the project site? ☐ Yes ☑ No

If Yes:

- Applicant/sponsor for new district: _____
- Date application submitted or anticipated: _____
- What is the receiving water for the wastewater discharge? _____

v. If public facilities will not be used, describe plans to provide wastewater treatment for the project, including specifying proposed receiving water (name and classification if surface discharge, or describe subsurface disposal plans):

vi. Describe any plans or designs to capture, recycle or reuse liquid waste: None

e. Will the proposed action disturb more than one acre and create stormwater runoff, either from new point sources (i.e. ditches, pipes, swales, curbs, gutters or other concentrated flows of stormwater) or non-point source (i.e. sheet flow) during construction or post construction? ☑ Yes ☐ No

If Yes:

i. How much impervious surface will the project create in relation to total size of project parcel?

_____ Square feet or 0.83 acres (impervious surface)

_____ Square feet or 0.93 acres (parcel size)

ii. Describe types of new point sources. Proposed 12" Storm connected to existing 12" Storm along Chateau Terrace

iii. Where will the stormwater runoff be directed (i.e. on-site stormwater management facility/structures, adjacent properties, groundwater, on-site surface water or off-site surface waters)?

Yes, through a series of trench drains, catch basins and bio-retention pond

- If to surface waters, identify receiving water bodies or wetlands: N/A
- Will stormwater runoff flow to adjacent properties? ☐ Yes ☑ No

iv. Does proposed plan minimize impervious surfaces, use pervious materials or collect and re-use stormwater? ☐ Yes ☑ No

f. Does the proposed action include, or will it use on-site, one or more sources of air emissions, including fuel combustion, waste incineration, or other processes or operations? ☐ Yes ☑ No

If Yes, identify:

i. Mobile sources during project operations (e.g., heavy equipment, fleet or delivery vehicles)

ii. Stationary sources during construction (e.g., power generation, structural heating, batch plant, crushers)

iii. Stationary sources during operations (e.g., process emissions, large boilers, electric generation)

g. Will any air emission sources named in D.2.f (above), require a NY State Air Registration, Air Facility Permit, or Federal Clean Air Act Title IV or Title V Permit? ☐ Yes ☑ No

If Yes:

i. Is the project site located in an Air quality non-attainment area? (Area routinely or periodically fails to meet ambient air quality standards for all or some parts of the year) ☐ Yes ☐ No

ii. In addition to emissions as calculated in the application, the project will generate:

- _____Tons/year (short tons) of Carbon Dioxide (CO_2)
- _____Tons/year (short tons) of Nitrous Oxide (N_2O)
- _____Tons/year (short tons) of Perfluorocarbons (PFCs)
- _____Tons/year (short tons) of Sulfur Hexafluoride (SF_6)
- _____Tons/year (short tons) of Carbon Dioxide equivalent of Hydroflourocarbons (HFCs)
- _____Tons/year (short tons) of Hazardous Air Pollutants (HAPs)

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

7.g

h. Will the proposed action generate or emit methane (including, but not limited to, sewage treatment plants, landfills, composting facilities)? ☐Yes ☑No

If Yes:

i. Estimate methane generation in tons/year (metric): _____

ii. Describe any methane capture, control or elimination measures included in project design (e.g., combustion to generate heat or electricity, flaring): _____

i. Will the proposed action result in the release of air pollutants from open-air operations or processes, such as quarry or landfill operations? ☐Yes ☑No

If Yes: Describe operations and nature of emissions (e.g., diesel exhaust, rock particulates/dust):

j. Will the proposed action result in a substantial increase in traffic above present levels or generate substantial new demand for transportation facilities or services? ☑Yes ☐No

If Yes:

i. When is the peak traffic expected (Check all that apply): ☐ Morning ☑ Evening ☐Weekend ☐ Randomly between hours of _____ to _____.

ii. For commercial activities only, projected number of semi-trailer truck trips/day: 1

iii. Parking spaces: Existing 50 Proposed 76 Net increase/decrease 26

iv. Does the proposed action include any shared use parking? ☑Yes ☐No

v. If the proposed action includes any modification of existing roads, creation of new roads or change in existing access, describe:
New Curb cut access points along Fruehauf Ave and Chateau Terrace

vi. Are public/private transportation service(s) or facilities available within ½ mile of the proposed site? ☑Yes ☐No

vii Will the proposed action include access to public transportation or accommodations for use of hybrid, electric or other alternative fueled vehicles? ☑Yes ☐No

viii. Will the proposed action include plans for pedestrian or bicycle accommodations for connections to existing pedestrian or bicycle routes? ☑Yes ☐No

k. Will the proposed action (for commercial or industrial projects only) generate new or additional demand for energy? ☑Yes ☐No

If Yes:

i. Estimate annual electricity demand during operation of the proposed action: _____
TBD

ii. Anticipated sources/suppliers of electricity for the project (e.g., on-site combustion, on-site renewable, via grid/local utility, or other):
National Grid

iii. Will the proposed action require a new, or an upgrade to, an existing substation? ☐Yes ☑No

l. Hours of operation. Answer all items which apply.

i. During Construction:

- Monday - Friday: 7 AM -9 PM (as allowed per code)
- Saturday: 7 AM -9 PM (as allowed per code
- Sunday: _____
- Holidays: _____

ii. During Operations:

- Monday - Friday: 24 hours
- Saturday: 24 hours
- Sunday: 24 hours
- Holidays: 24 hours

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

m. Will the proposed action produce noise that will exceed existing ambient noise levels during construction, operation, or both? ☑ Yes ☐ No

If yes:

i. Provide details including sources, time of day and duration:

Construction Equipment Monday - Saturday, 7am to 9 pm

ii. Will proposed action remove existing natural barriers that could act as a noise barrier or screen? ☐ Yes ☑ No

Describe: _____

n.. Will the proposed action have outdoor lighting? ☑ Yes ☐ No

If yes:

i. Describe source(s), location(s), height of fixture(s), direction/aim, and proximity to nearest occupied structures:

Parking Garage - Overhead LED Fixtures; Outdoor Seating - Architectural Poles on 1st floor

ii. Will proposed action remove existing natural barriers that could act as a light barrier or screen? ☐ Yes ☑ No

Describe: _____

o. Does the proposed action have the potential to produce odors for more than one hour per day? ☐ Yes ☑ No

If Yes, describe possible sources, potential frequency and duration of odor emissions, and proximity to nearest occupied structures: _____

p. Will the proposed action include any bulk storage of petroleum (combined capacity of over 1,100 gallons) or chemical products 185 gallons in above ground storage or any amount in underground storage? ☐ Yes ☑ No

If Yes:

i. Product(s) to be stored _____

ii. Volume(s) _____ per unit time _____ (e.g., month, year)

iii. Generally describe proposed storage facilities: _____

q. Will the proposed action (commercial, industrial and recreational projects only) use pesticides (i.e., herbicides, insecticides) during construction or operation? ☐ Yes ☑ No

If Yes:

i. Describe proposed treatment(s):

ii. Will the proposed action use Integrated Pest Management Practices? ☐ Yes ☐ No

r. Will the proposed action (commercial or industrial projects only) involve or require the management or disposal of solid waste (excluding hazardous materials)? ☐ Yes ☑ No

If Yes:

i. Describe any solid waste(s) to be generated during construction or operation of the facility:

- Construction: _____ tons per _____ (unit of time)
- Operation : _____ tons per _____ (unit of time)

ii. Describe any proposals for on-site minimization, recycling or reuse of materials to avoid disposal as solid waste:

- Construction: _____
- Operation: _____

iii. Proposed disposal methods/facilities for solid waste generated on-site:

- Construction: _____
- Operation: _____

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

7.g

s. Does the proposed action include construction or modification of a solid waste management facility? ☐ Yes ☑ No

If Yes:

i. Type of management or handling of waste proposed for the site (e.g., recycling or transfer station, composting, landfill, or other disposal activities): _____

ii. Anticipated rate of disposal/processing:

- _____ Tons/month, if transfer or other non-combustion/thermal treatment, or
- _____ Tons/hour, if combustion or thermal treatment

iii. If landfill, anticipated site life: _____ years

t. Will proposed action at the site involve the commercial generation, treatment, storage, or disposal of hazardous waste? ☐ Yes ☑ No

If Yes:

i. Name(s) of all hazardous wastes or constituents to be generated, handled or managed at facility: _____

ii. Generally describe processes or activities involving hazardous wastes or constituents: _____

iii. Specify amount to be handled or generated _____ tons/month

iv. Describe any proposals for on-site minimization, recycling or reuse of hazardous constituents: _____

v. Will any hazardous wastes be disposed at an existing offsite hazardous waste facility? ☐ Yes ☐ No

If Yes: provide name and location of facility: _____

If No: describe proposed management of any hazardous wastes which will not be sent to a hazardous waste facility:

E. Site and Setting of Proposed Action

E.1. Land uses on and surrounding the project site

a. Existing land uses.

i. Check all uses that occur on, adjoining and near the project site.

☐ Urban ☐ Industrial ☑ Commercial ☑ Residential (suburban) ☐ Rural (non-farm)
☐ Forest ☐ Agriculture ☐ Aquatic ☐ Other (specify): _____

ii. If mix of uses, generally describe:

Proposed Multi-Use Building with first floor retail and apartments

b. Land uses and covertypes on the project site.

Land use or Covertype	Current Acreage	Acreage After Project Completion	Change (Acres +/-)
• Roads, buildings, and other paved or impervious surfaces	0.80	0.83	+ 0.03
• Forested	-	-	-
• Meadows, grasslands or brushlands (non-agricultural, including abandoned agricultural)	-	-	-
• Agricultural (includes active orchards, field, greenhouse etc.)	-	-	-
• Surface water features (lakes, ponds, streams, rivers, etc.)	-	0.01	+ 0.01
• Wetlands (freshwater or tidal)	-	-	-
• Non-vegetated (bare rock, earth or fill)	0.13	0.10	-0.03
• Other Describe: _____			

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

7.g

c. Is the project site presently used by members of the community for public recreation? ☐ Yes ☑ No
i. If Yes: explain: _____

d. Are there any facilities serving children, the elderly, people with disabilities (e.g., schools, hospitals, licensed day care centers, or group homes) within 1500 feet of the project site? ☑ Yes ☐ No
If Yes,
i. Identify Facilities:
Elder Care Solutions of WNY, Daemen University, Garden Nursery School-Ahmerst, Bornhava School and The Park School of Buffalo

e. Does the project site contain an existing dam? ☐ Yes ☑ No
If Yes:
i. Dimensions of the dam and impoundment:
- Dam height: _____ feet
- Dam length: _____ feet
- Surface area: _____ acres
- Volume impounded: _____ gallons OR acre-feet

ii. Dam's existing hazard classification: _____
iii. Provide date and summarize results of last inspection:
_____

f. Has the project site ever been used as a municipal, commercial or industrial solid waste management facility, or does the project site adjoin property which is now, or was at one time, used as a solid waste management facility? ☐ Yes ☑ No
If Yes:
i. Has the facility been formally closed? ☐ Yes ☐ No
- If yes, cite sources/documentation: _____

ii. Describe the location of the project site relative to the boundaries of the solid waste management facility:
_____
iii. Describe any development constraints due to the prior solid waste activities: _____

g. Have hazardous wastes been generated, treated and/or disposed of at the site, or does the project site adjoin property which is now or was at one time used to commercially treat, store and/or dispose of hazardous waste? ☐ Yes ☑ No
If Yes:
i. Describe waste(s) handled and waste management activities, including approximate time when activities occurred:
_____

h. Potential contamination history. Has there been a reported spill at the proposed project site, or have any remedial actions been conducted at or adjacent to the proposed site? ☐ Yes ☑ No
If Yes:
i. Is any portion of the site listed on the NYSDEC Spills Incidents database or Environmental Site Remediation database? Check all that apply: ☐ Yes ☐ No
☐ Yes – Spills Incidents database — Provide DEC ID number(s): _____
☐ Yes – Environmental Site Remediation database — Provide DEC ID number(s): _____
☐ Neither database

ii. If site has been subject of RCRA corrective activities, describe control measures:_____
_____
iii. Is the project within 2000 feet of any site in the NYSDEC Environmental Site Remediation database? ☐ Yes ☐ No
If yes, provide DEC ID number(s): _____
iv. If yes to (i), (ii) or (iii) above, describe current status of site(s):
_____

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

7.g

v. Is the project site subject to an institutional control limiting property uses? ☐ Yes ☑ No

- If yes, DEC site ID number: _____
- Describe the type of institutional control (e.g., deed restriction or easement): _____
- Describe any use limitations: _____
- Describe any engineering controls: _____
- Will the project affect the institutional or engineering controls in place? ☐ Yes ☐ No
- Explain: _____

E.2. Natural Resources On or Near Project Site

a. What is the average depth to bedrock on the project site? +/- 5 feet

b. Are there bedrock outcroppings on the project site? ☐ Yes ☑ No
If Yes, what proportion of the site is comprised of bedrock outcroppings? _____%

c. Predominant soil type(s) present on project site: Ux 100 %
_____ %
_____ %

d. What is the average depth to the water table on the project site? Average: >10' feet

e. Drainage status of project site soils:
☑ Well Drained: 100 % of site
☐ Moderately Well Drained: _____% of site
☐ Poorly Drained _____% of site

f. Approximate proportion of proposed action site with slopes:
☑ 0-10%: 100 % of site
☐ 10-15%: _____% of site
☐ 15% or greater: _____% of site

g. Are there any unique geologic features on the project site? ☐ Yes ☑ No
If Yes, describe: _____

h. Surface water features.

i. Does any portion of the project site contain wetlands or other waterbodies (including streams, rivers, ponds or lakes)? ☐ Yes ☑ No

ii. Do any wetlands or other waterbodies adjoin the project site? ☐ Yes ☑ No

If Yes to either *i* or *ii*, continue. If No, skip to E.2.i.

iii. Are any of the wetlands or waterbodies within or adjoining the project site regulated by any federal, state or local agency? ☐ Yes ☐ No

iv. For each identified regulated wetland and waterbody on the project site, provide the following information:

- Streams: Name _____ Classification _____
- Lakes or Ponds: Name _____ Classification _____
- Wetlands: Name _____ Approximate Size _____
- Wetland No. (if regulated by DEC) _____

v. Are any of the above water bodies listed in the most recent compilation of NYS water quality-impaired waterbodies? ☐ Yes ☐ No

If yes, name of impaired water body/bodies and basis for listing as impaired: _____

i. Is the project site in a designated Floodway? ☐ Yes ☑ No

j. Is the project site in the 100 year Floodplain? ☐ Yes ☑ No

k. Is the project site in the 500 year Floodplain? ☐ Yes ☑ No

l. Is the project site located over, or immediately adjoining, a primary, principal or sole source aquifer? ☐ Yes ☑ No
If Yes:

i. Name of aquifer: _____

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

m. Identify the predominant wildlife species that occupy or use the project site:
None

n. Does the project site contain a designated significant natural community? ☐ Yes ☑ No
If Yes:
i. Describe the habitat/community (composition, function, and basis for designation): _____
ii. Source(s) of description or evaluation: _____
iii. Extent of community/habitat:
- Currently: _____ acres
- Following completion of project as proposed: _____ acres
- Gain or loss (indicate + or -): _____ acres

o. Does project site contain any species of plant or animal that is listed by the federal government or NYS as endangered or threatened, or does it contain any areas identified as habitat for an endangered or threatened species? ☐ Yes ☑ No

p. Does the project site contain any species of plant or animal that is listed by NYS as rare, or as a species of special concern? ☐ Yes ☑ No

q. Is the project site or adjoining area currently used for hunting, trapping, fishing or shell fishing? ☐ Yes ☑ No
If yes, give a brief description of how the proposed action may affect that use: _____

E.3. Designated Public Resources On or Near Project Site

a. Is the project site, or any portion of it, located in a designated agricultural district certified pursuant to Agriculture and Markets Law, Article 25-AA, Section 303 and 304? ☐ Yes ☑ No
If Yes, provide county plus district name/number: _____

b. Are agricultural lands consisting of highly productive soils present? ☐ Yes ☑ No
i. If Yes: acreage(s) on project site? _____
ii. Source(s) of soil rating(s): _____

c. Does the project site contain all or part of, or is it substantially contiguous to, a registered National Natural Landmark? ☐ Yes ☑ No
If Yes:
i. Nature of the natural landmark: ☐ Biological Community ☐ Geological Feature
ii. Provide brief description of landmark, including values behind designation and approximate size/extent: _____

d. Is the project site located in or does it adjoin a state listed Critical Environmental Area? ☐ Yes ☑ No
If Yes:
i. CEA name: _____
ii. Basis for designation: _____
iii. Designating agency and date: _____

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

7.g

e. Does the project site contain, or is it substantially contiguous to, a building, archaeological site, or district which is listed on, or has been nominated by the NYS Board of Historic Preservation for inclusion on, the State or National Register of Historic Places? ☐ Yes ☑ No

If Yes:

i. Nature of historic/archaeological resource: ☐ Archaeological Site ☐ Historic Building or District

ii. Name: _____

iii. Brief description of attributes on which listing is based:

_____

f. Is the project site, or any portion of it, located in or adjacent to an area designated as sensitive for archaeological sites on the NY State Historic Preservation Office (SHPO) archaeological site inventory? ☐ Yes ☑ No

g. Have additional archaeological or historic site(s) or resources been identified on the project site? ☐ Yes ☑ No

If Yes:

i. Describe possible resource(s): _____

ii. Basis for identification: _____

h. Is the project site within fives miles of any officially designated and publicly accessible federal, state, or local scenic or aesthetic resource? ☑ Yes ☐ No

If Yes:

i. Identify resource: Glen Falls - Amherst State Park

ii. Nature of, or basis for, designation (e.g., established highway overlook, state or local park, state historic trail or scenic byway, etc.): Scenic Park and waterfall

iii. Distance between project and resource: 1.8 miles.

i. Is the project site located within a designated river corridor under the Wild, Scenic and Recreational Rivers Program 6 NYCRR 666? ☐ Yes ☑ No

If Yes:

i. Identify the name of the river and its designation: _____

ii. Is the activity consistent with development restrictions contained in 6NYCRR Part 666? ☐ Yes ☐ No

F. Additional Information

Attach any additional information which may be needed to clarify your project.

If you have identified any adverse impacts which could be associated with your proposal, please describe those impacts plus any measures which you propose to avoid or minimize them.

G. Verification

I certify that the information provided is true to the best of my knowledge.

RE: Application for Site Plan Approval
Proposed Site Redevelopment
4548-4564 Main St, Amherst, NY (BDP # 5202)

Dear Chairman Gilmour and Members of the Planning Board:

Enclosed please find materials in connection with our application for site plan approval for the parcel located at 4548-4564 Main Street (the "Project Site").

The Project Site is approximately 0.93-Acres and consists for four parcels between Fruehauf Ave and Chateau Terrace on the Northside of Main Street. The two parcels along Main Street consist of two existing retail buildings with associated parking lot accessed at the northside of site. All four parcels are in the mixed-use district Traditional Infill 2.5 (TI-2.5). As part of this project, these four parcels shall be combined into a single tax lot.

The proposed project will consist of the following:

- The demolition of existing buildings located on the Project Site (13K removed) and to construct a multi-story mixed use 65,000 +/- square footage building;
- Provide 48 Apartments of various bedroom sizes and 6,995 square feet of restaurant space;
- Provide a two-level parking garage to provide 79 parking spaces and requires 77 parking spaces;
- Provide Outdoor Amenity Space in accordance with the Mixed-Use District Town code;
- Provide new curb cut access drives from Fruehauf Ave and Chateau Terrace;
- Provide new site drainage infrastructures and utilities.

The proposed site plan and building elevations have been designed to meet the intent of the requirements of the TI-2.5 zoning.

We believe the project will be an attractive improvement and look forward to reviewing this project with the Planning Board. Should you have any questions or require any additional information, please do not hesitate to contact me.

Thank you,
BENDERSON DEVELOPMENT COMPANY, LLC

RE: Proposed 4548-4564 Main Street Mixed-Use Project, Town of Amherst, NY
Traffic Impact Assessment

Dear Mr. Oates:

The purpose of this Traffic Impact Assessment (TIA) is to identify and evaluate the potential traffic impacts associated with the proposed mixed-use project to be located at 4548-4564 Main Street in the Town of Amherst, NY. This assessment identifies the operating characteristics of the proposed access drives and impacts to the adjacent roadway network and recommends mitigating measures (if needed) to minimize any operational concerns. To define traffic impact, this analysis establishes existing baseline traffic conditions, projects background traffic flow including area growth, and determines the traffic operations that would result from the proposed project.

SITE LOCATION AND STUDY AREA

The project site is to be located at 4548-4564 Main Street in the Town of Amherst, Erie County, New York. The project site, currently consisting of one to two-story buildings, is bounded by residential to the north, Chateau Terrace to the east, Main Street to the south, and Fruehauf Avenue to the west. Land uses in the vicinity of the site include residential, office, service, and retail.

To ensure a comprehensive analysis of potential traffic impacts, the following existing intersections were included in the analysis:

- Main Street (NY-5)/Chateau Terrace/Bernhardt Drive (signalized)
- Main Street/Fruehauf Avenue (unsignalized)

The site location and study area are illustrated in **Figure 1** (all figures and supporting materials are included at the end of this letter).

EXISTING TRAFFIC CONDITIONS

A. Vehicular Network Description

The following information outlined in **Table 1** provides a description of the existing roadway network within the project study area. **Figure 2** illustrates the lane geometry at the study intersections and the Annual Average Daily Traffic (AADT) volumes on the study roadways. The AADTs reflect the most recently collected data obtained from the New York State Department of Transportation (NYSDOT). Functional classification of highways within the study area is determined by the NYSDOT and the Federal Highway Administration (FHWA). Where recent data is not available, traffic data is shown as an extrapolation of turning movement counts collected by Passero Associates in 2022.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

TABLE 1: EXISTING HIGHWAY SYSTEM

ROADWAY	CLASS[1]	AGENCY[2]	SPEED LIMIT[3]	TRAVEL LANES[4]	ORIENTATION OF TRAVEL	AADT[5]
Main Street (NY-5)	14	NYSDOT	40	4	Two-way/ Northwest-Southeast	21,436 NYSDOT (2019)
Chateau Terrace	19	Town	30	2	Two-way/ North-South	1,210 Passero (2022)
Bernhardt Drive	19	Town	30	2	Two-way/ North-South	400 Passero (2022)
Fruehauf Avenue	19	Town	30	2	Two-way/ North-South	900 Passero (2022)

Notes:
1. State Functional Classification of Roadway: 14 = Urban Principal Arterial, 19 = Urban Local
2. Jurisdictional Agency of Roadway.
3. Posted or Statewide Limit in Miles per Hour (mph).
4. Number of travel lanes. Excludes turning/auxiliary lanes developed at intersections.
5. Estimated AADT in Vehicles per Day (vpd). AADT Source (Year).

B. Multi-Modal Network Description

Sidewalks are present along all study corridors. The signalized intersection of Main Street/Chateau Terrace/Bernhardt Drive consists of actuated pedestrian countdown signals, a high visibility crosswalk across Main Street, and ADA compliant curb ramps. There are no dedicated bicycle lanes, although bicyclists are allowed to share the road with motorists. The Niagara Frontier Transportation Authority has bus stops nearby.

C. Peak Intervals for Analysis

Given the functional characteristics of the study corridors, adjacent land uses, and the proposed land uses (residential, restaurants) for the project site, the peak hours selected for analysis are the weekday commuter AM and PM peak periods. The combination of site traffic and adjacent through traffic produces the greatest demand during these time periods.

D. Existing Traffic Volume Data

Turning movement traffic counts were collected on Tuesday, December 13, 2022, by Passero Associates at the study intersections. Traffic counts were conducted between 7:00-9:00 AM for the weekday AM peak period and 4:00-6:00 PM for the weekday PM peak period. The peak hour traffic periods generally occurred from 7:30-8:30 AM and 4:00-5:00 PM.

All turning movement count data was collected on a typical weekday while local schools were in session. No adverse weather conditions impacted the traffic counts. The traffic volumes were reviewed to confirm the accuracy and relative balance of the collective traffic counts. The actual differences in traffic volumes can be attributed to temporal variations in traffic volumes as well as activity related to parking in the segments between the study intersections. **Figure 3** illustrates the peak hour volumes used for analysis purposes in this study.

E. Field Observations

The study intersections were observed for the project during all peak intervals to assess current traffic operations. Signal timing and phasing information for the signalized intersection was obtained from the NYSDOT to determine peak hour phasing plans and phase durations during each interval. This information was used to support and/or calibrate capacity analysis models described in detail later in this report.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

F. Existing Peak Hour Queuing Assessment

A peak hour queuing assessment was performed along Fruehauf Avenue during the AM and PM peak hours to measure the frequency of southbound vehicles that block the proposed driveway. The centerline of the proposed driveway is located approximately 38 feet from the stop bar. Given this distance, the driveway is located approximately 1.7 vehicle lengths from the stop bar.

Our firm documented southbound queues at the intersection of Main Street/Fruehauf Avenue on Thursday, July 22, 2021, from 7:00-9:00 AM and 4:00-6:00 PM. The peak hours generally occurred from 8:00-9:00 AM and 4:30-5:30 PM. Based on this field investigation during the peak hours of study, the proposed driveway location was blocked once during the AM peak hour for a duration of five seconds and was blocked once during the PM peak hour for a duration of three seconds.

G. Existing Crash Analysis

The purpose of this crash analysis is to identify inherent safety issues by studying and quantifying historical crashes at the study intersections and identifying potential crash patterns and clusters.

A crash cluster is defined as an abnormal occurrence of similar crash types occurring at approximately the same location or involving the same geometric features. The severity of the crashes should also be considered. A history of crashes is an indication that further analysis is required to determine the cause(s) of the crash(es) and to identify what actions, if any, could be taken to mitigate the crashes.

A crash investigation within the study area was conducted to assess the safety history from July 31, 2017, through July 31, 2021. The data was provided by the New York State Department of Motor Vehicles through a Freedom of Information (FOIL) request.

Despite the COVID-19 pandemic influencing daily travel in 2020 and 2021, only one crash was reported during this period, and it occurred in 2021. This crash was included in the analysis.

Reportable (non-injury, injury, and fatal injury) type crashes are defined as damage to one person's property in the amount of $1,001 or more. The Non-Reportable type crashes result in property damage of $1,000 or less. Crash rates were computed for the study intersections and compared with NYSDOT average crash rates for similar intersections, as summarized in **Table 2**. Intersection rates are listed as crashes per million entering vehicle (CR/MEV). Pertinent crash data is provided in the Appendices.

TABLE 2: EXISTING CRASH RATES

INTERSECTION	NUMBER OF CRASHES	NUMBER OF ENTERING VEHICLES	ACTUAL CRASH RATE	STATEWIDE AVERAGE CRASH RATE
Main Street/Chateau Terrace/Bernhardt Drive	9	19,800 vpd	0.25	0.26
Main Street/Fruehauf Avenue	0	18,958 vpd	0.00	0.26

Notes:
1. vpd = vehicles per day.
2. **Bold** text denotes crash rate above statewide average

Main Street/Chateau Terrace/Bernhardt Drive

Five of the nine (56%) reported crashes were attributed to rear end collisions. This is characteristic of heavily trafficked signalized intersections. Three of the crashes occurred in the westbound direction. The causes of the rear end crashes were generally due to driver error (e.g., following too closely, driver inattention). The remaining crashes were sideswipe (2), left turn (1), and a crash into a parked vehicle. No geometric improvements are recommended.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

FUTURE AREA DEVELOPMENT AND LOCAL GROWTH

Construction of the proposed project is anticipated to reach full build-out within approximately two years. Widely accepted methodology for preparing traffic impact studies requires that any projects in the study area that are currently approved and/or under construction must be considered in the traffic analysis. Projects that are contemplated but not yet approved are not included in a traffic analysis. Local municipal personnel were contacted to discuss any other specific projects that are currently approved or under construction that would generate additional traffic in the study area. No projects were identified.

A review of historical NYSDOT traffic volume data in the vicinity of the site indicates that traffic has decreased slightly between 2015 and 2019. To account for normal increases in background traffic growth, including any unforeseen developments in the project study area, a growth rate of 1.0% was applied to the existing traffic volumes. The background traffic volumes are depicted in **Figure 4**.

PROPOSED PROJECT

A. Project Description

The proposed project consists of constructing 48 apartment units, a ±2,513 square foot (SF) fast casual restaurant, and a ±4,111 SF fine dining restaurant. Access will be provided via two full access driveways: one along Chateau Terrace which accesses a parking lot with 54 spaces and one along Fruehauf Avenue which accesses a parking lot with 22 spaces. Chateau Terrace is posted as a "No Outlet" street while Fruehauf Avenue is posted as a "Dead End" street. On-street parking is available along Main Street. Sidewalks are present throughout the adjacent neighborhood. **Figure 5** illustrates the proposed concept plan.

B. Site Traffic Generation

The volume of traffic generated by a site is dependent on the intended land use and size of the development. Trip generation is an estimate of the number of trips generated by a specific building or land use. These trips represent the volume of traffic entering and exiting the development. Trip Generation Manual (11th Edition) published by the Institute of Transportation Engineers (ITE) is used as a reference for this information. The trip rate for the peak hour of the generator may or may not coincide in time or volume with the trip rate for the peak hour of adjacent street traffic. Volumes generated during the peak hour of the adjacent street traffic and proposed land use, in this case, the weekday commuter AM and PM peaks, represent a more critical volume when analyzing the capacity of the system; those intervals will provide the basis of this analysis.

For certain types of developments, the total number of trips generated is different from the amount of new traffic added to the adjacent highway network by the generator. Service/retail-oriented developments (i.e., shopping centers, gas stations, coffee/donut shops, and restaurants) often locate adjacent to busy streets to attract the motorists already passing the site on the adjacent street. These sites attract a portion of their trips from traffic passing the site. The "pass-by" traffic refers to the amount of existing traffic already on the roadway adjacent to the site that, as it "passes by" the site, will enter the site driveways to patronize the project site. The quantifying of "pass-by" trips has the net result of reducing the volume of new traffic that is added to the site driveways and/or adjacent roadways. This site is likely to exhibit some level of pass-by traffic. However, no adjustment was made to remain conservative.

Table 3 shows the site generated trips for the proposed project.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

TABLE 3: SITE GENERATED TRIPS

DESCRIPTION	ITE LUC	SIZE	AM PEAK HOUR		PM PEAK HOUR	
			ENTER	EXIT	ENTER	EXIT
Multi-family Residential	220	48 units	5	14	15	9
Fast Casual Restaurant	930	±2,513 SF	2	2	17	15
Quality Restaurant	931	±4,111 SF	2	1	21	11
Total Site Generated Trips			**9**	**17**	**53**	**35**

Note:
1. ITE LUC = ITE Land Use Code.

The proposed project is expected to generate approximately nine entering/17 exiting vehicle trips during the AM peak hour and 53 entering/35 exiting vehicle trips during the PM peak hour.

C. Site Traffic Distribution

The cumulative effect of site generated traffic on the transportation network is dependent on the origins and destinations of that traffic and the location of the access drives serving the site. The proposed arrival/departure distribution of traffic generated by the proposed project is considered a function of several parameters, including:

- Residential and employment centers using U.S. Census Data
- Site access locations
- Existing traffic patterns
- Existing traffic conditions and controls

Based on these parameters, **Figure 6A** illustrates the anticipated trip distribution pattern percentages for the residential traffic and **Figure 6B** illustrates the anticipated trip distribution for the restaurant traffic from the proposed project. **Figure 7** illustrates the peak hour project site generated traffic based on those percentages.

D. Full Development Volumes

Proposed design hour traffic volumes were developed for the AM and PM peak hours by combining the background traffic conditions (**Figure 4**) and the total site generated traffic volumes (**Figure 7**) to yield the traffic volumes under full build conditions. The resulting design hour volumes for the proposed project are illustrated in **Figure 8** under full build-out conditions.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

CAPACITY ANALYSIS

A. Description of Capacity Analysis

A capacity analysis is a technique used for determining a measure of effectiveness for a section of roadway and/or intersection based on the number of vehicles during a specific time period. The measure of effectiveness used for the capacity analysis is referred to as a Level of Service (LOS). Levels of Service are calculated to provide an indication of the amount of delay that a motorist experiences while traveling along a roadway or through an intersection. Since the most amount of delay to motorists usually occurs at intersections, capacity analysis typically focuses on intersections, as opposed to highway segments.

Six Levels of Service are defined for analysis purposes. They are assigned letter designations, from "A" to "F", with LOS "A" representing conditions with little to no delay, and LOS "F" with very long and significant delays to motorists. Suggested ranges of service capacity and an explanation of Levels of Service are included in the Attachments. LOS “C” or better is generally desirable, but LOS “D” for signalized locations and LOS “E” for unsignalized are generally acceptable during peak periods so long as the volume to capacity ratio (v/c) is below 1.0.

The standard procedure for capacity analysis of signalized and unsignalized intersections is outlined in the Highway Capacity Manual (HCM 2016) published by the Transportation Research Board (TRB). Traffic analysis software, Synchro 11, which is based on procedures and methodologies contained in the HCM, was used to analyze operating conditions at study area intersections. The procedure yields a Level of Service based on the HCM as an indicator of how well intersections operate. This study used HCM 2000 methodology for determining operations at the unsignalized intersections in accordance with local NYSDOT Region 5 guidelines.

B. Capacity Analysis Results

Existing and background operating conditions during the peak study periods are evaluated to determine a basis for comparison with the projected future conditions. The future traffic conditions generated by the proposed project were analyzed to assess the operation of the study area intersections. Capacity results for existing, background, and full development conditions are listed in **Table 4**. The discussion following the table summarizes capacity conditions.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

TABLE 4: CAPACITY ANALYSIS RESULTS

INTERSECTION	2022 EXISTING CONDITIONS				2024 BACKGROUND CONDITIONS				2024 FULL DEVELOPMENT CONDITIONS			
	AM		PM		AM		PM		AM		PM	
1. Main Street/Chateau Terrace/Bernhardt Drive (S)												
EB Left - Main Street	A	8.3	A	7.6	A	8.5	A	7.7	A	8.9	A	8.2
EB Thru/Right - Main Street	A	7.9	A	7.9	A	8.0	A	8.0	A	8.4	A	8.4
WB Left - Main Street	A	8.1	A	7.6	A	8.2	A	7.7	A	8.6	A	7.9
WB Thru/Right - Main Street	A	7.8	A	7.6	A	7.9	A	7.7	A	8.3	A	8.0
NB - Bernhardt Drive	C	30.3	D	36.3	C	30.3	D	36.3	C	30.3	D	36.3
SB - Chateau Terrace	D	37.4	D	37.8	D	37.4	D	38.3	D	38.9	D	39.8
Overall LOS	**A**	**9.3**	**A**	**9.5**	**A**	**9.4**	**A**	**9.7**	**A**	**10.0**	**B**	**10.1**
Volume-to-Capacity (v/c) Ratio	**0.43**		**0.44**		**0.44**		**0.45**		**0.48**		**0.48**	
2. Main Street/Fruehauf Avenue (U)												
EB Left - Main Street	A	9.5	A	9.3	A	9.5	A	9.4	A	9.5	A	9.6
SB - Fruehauf Avenue	B	12.5	B	12.5	B	12.6	B	12.6	B	12.8	B	12.8
3. Fruehauf Avenue/Proposed Driveway (U)												
WB - Proposed Driveway	NA		NA		NA		NA		A	8.7	A	8.9
SB - Fruehauf Avenue									A	0.0	A	0.0
4. Chateau Terrace/Proposed Driveway (U)												
EB - Proposed Driveway	NA		NA		NA		NA		A	8.7	A	8.7
NB - Chateau Terrace									A	0.5	A	1.9

Notes:

1. A(2.8) = Level of Service (Delay in seconds per vehicle)
2. EB = Eastbound, WB = Westbound, NB = Northbound, SB = Southbound
3. (S) = Signalized; (U) = Unsignalized
4. N/A = Approach does not exist and/or was not analyzed during this condition
5. Green shaded cells indicate low delays, yellow shaded cells indicate moderate delays, red shaded cells indicate long delays.
6. The v/c ratio, also referred to as degree of saturation, represents the sufficiency of an intersection to accommodate the vehicular demand. A v/c ratio less than 0.85 generally indicates that adequate capacity is available and vehicles are not expected to experience significant queues and delays. A v/c ratio between 0.85 and 0.95 generally indicates an intersection is nearing capacity. Intersections with a v/c ratio of 1.0 or greater generally indicate conditions at or above capacity.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

1. Main Street/Chateau Terrace/Bernhardt Drive (Signalized)
All movements generally operate at LOS "D" or better under existing and projected background conditions with moderate delays for the northbound and southbound movements. The overall LOS is projected to change from "A" to "B" during the PM peak hour between background and full development conditions. However, this is a borderline condition as the threshold is 10.0 seconds of delay per vehicle. There are no other projected changes in LOS because of the proposed project. There is capacity to accommodate the additional traffic volumes and projected minor impacts from the proposed project; thus, no mitigation is warranted nor recommended.

2. Main Street/Fruehauf Avenue (Unsignalized)
All movements operate at LOS "B" or better under existing, background, and full development conditions during both peak hours. There are no projected changes in LOS between background and full development conditions. There is capacity to accommodate the additional traffic volumes and projected minor impacts from the proposed project; thus, no mitigation is warranted nor recommended.

3. Fruehauf Avenue/Proposed Driveway (Unsignalized)
All movements are projected to operate at LOS "A" under full development conditions. There is capacity to accommodate the additional traffic volumes and projected minor impacts from the proposed project; thus, no mitigation is warranted nor recommended.

4. Chateau Terrace/Proposed Driveway (Unsignalized)
All movements are projected to operate at LOS "A" under full development conditions. There is capacity to accommodate the additional traffic volumes and projected minor impacts from the proposed project; thus, no mitigation is warranted nor recommended.

SIGHT LINE EVALUATION

Based upon a review of the attached site plan, the proposed building is projected to be built in approximately the same footprint as the existing structures fronting Main Street. There is a marked stop bar for traffic exiting Fruehauf Avenue.

In this case, the primary concern is with the proposed building at the existing Main Street/Fruehauf Avenue intersection. The attached **Figure 9** illustrates the sight line evaluation performed at the intersection to the east of the intersection.

Sight distance is provided at intersections to allow drivers to perceive the presence of potentially conflicting vehicles. This should occur in sufficient time for a motorist to stop or adjust their speed, as appropriate, to avoid a collision at the intersection. Sight distance is also provided at intersections to allow the drivers of stopped vehicles a sufficient view of the intersecting highway to anticipate and avoid potential incidents. If the available sight distance for an entering or crossing vehicle is at least equal to the appropriate stopping sight distance for the major road, then drivers have sufficient sight distance to anticipate and avoid collisions.

A Policy on Geometric Design of Highways and Streets (2011) published by the American Association of State Highway and Transportation Officials (AASHTO), was used as a reference to establish the required Stopping Sight Distance (SSD) and desirable Intersection Sight Distance (ISD) for the adjacent driveway location. **Table 5** depicts the results of the sight distance evaluation at the Main Street/Fruehauf Avenue intersection.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

TABLE 5: SIGHT LINE EVALUATION

DESCRIPTION		VALUE
POSTED SPEED		40 MPH
DESIGN SPEED[1]		45 MPH
REQUIRED SSD		360 feet
DESIRABLE ISD		500 feet
AVAILABLE SIGHT DISTANCE TO THE EAST	*SSD*	>360 feet
	ISD	505 feet (no vehicles) 155 feet (parked vehicles)

Note:
1. Design speed equals posted speed plus 5 MPH.

The required SSD is satisfied to the east of the study intersection. When cars are parked in the spaces in front of the building, the ISD is not satisfied. However, with no vehicles parked, the ISD is satisfied.

It is understood that urbanized environments consist of on-street parking, limited to zero building setback lines, and other fixed objects (e.g., signs, trees, street furniture). By regulation, on-street parking is restricted within 20 feet of a crosswalk at an intersection and within 30 feet of a traffic signal or stop sign. In this case, parking is restricted for more than 60 feet along the northern side of Main Street from Fruehauf Avenue. Legally parked vehicles may be considered as allowable objects in this case. It is noted that on-street parking can be beneficial in these settings to reduce vehicle speeds and provide a buffer to pedestrians on the sidewalk. This condition is not unique to this study location and can be found in other areas along Main Street in Amherst and Williamsville.

Parking within the sight triangle may occur throughout the day and limit the sight lines, as noted on **Figure 9**. However, given the existing condition of the intersection and intermittent nature of the sight line being impacted, intersection warning signage may be considered as relief.

CONCLUSIONS & RECOMMENDATIONS

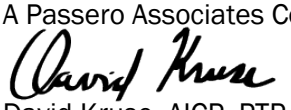
This Traffic Impact Assessment identified and evaluated the potential traffic impacts that can be expected from the proposed mixed-use project to be located at 4548-4564 Main Street in the Town of Amherst, NY. The results of this study determined that the existing transportation network can adequately accommodate the projected traffic volumes and resulting impacts to study area intersections. The following sets forth the conclusions based on the results of the analyses:

1. The proposed project is expected to generate approximately nine entering/17 exiting vehicle trips during the AM peak hour and 53 entering/35 exiting vehicle trips during the PM peak hour.

2. All movements generally operate at LOS “D” or better under existing, projected background, and full development conditions during both peak hours studied at all study intersections. Minimal impacts are projected because of the proposed project. No capacity improvements are recommended at the study intersections.

3. Based upon documentation of southbound queues at the intersection of Main Street/Fruehauf Avenue during the peak hours of study, the proposed driveway location was blocked once during the AM peak hour for a duration of five seconds and was blocked once during the PM peak hour for a duration of three seconds.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)



4. Based upon a sight line evaluation at the Main Street/Fruehauf Avenue intersection, the required SSD is satisfied to the east. However, the desirable ISD is not satisfied if/when on-street parking is present. When parked vehicles are not present, the ISD is fully satisfied. The existing and proposed ISD sight distance will be the same and the proposed building will not impact the existing sight distance.

5. For purposes of the environmental review of the proposed project pursuant to the State Environmental Quality Review Act (SEQRA), it is our firm's professional opinion that the proposed project will not result in any potentially significant adverse traffic impacts to the study area.

If you have any questions or require additional information, please do not hesitate to contact our office.

Sincerely,

LEVEL OF SERVICE: CRITERIA/DEFINITIONS

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

Level of Service Criteria

Highway Capacity Manual 2016

SIGNALIZED INTERSECTIONS

Level of Service is a qualitative measure describing operational conditions within a traffic stream, based on service measures such as speed and travel time, freedom to maneuver, traffic interruptions, comfort, and convenience. Level of Service for signalized intersections is defined in terms of delay specifically, average total delay per vehicle for a 15-minute analysis period. The ranges are as follows:

Level of Service	Control Delay per vehicle (seconds)
A	< 10
B	10 – 20
C	20 – 35
D	35 – 55
E	55 – 80
F	>80

UNSIGNALIZED INTERSECTIONS

Level of Service for unsignalized intersections is also defined in terms of delay. However, the delay criteria are different from a signalized intersection. The primary reason for this is driver expectation that a signalized intersection is designed to carry higher volumes than an unsignalized intersection. The total delay threshold for any given Level of Service is less for an unsignalized intersection than for a signalized intersection. The ranges are as follows:

Level of Service	Control Delay per vehicle (seconds)
A	< 10
B	10 – 15
C	15 – 25
D	25 – 35
E	35 - 50
F	>50

Rev. January 2023

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

Project Description

This project is a redevelopment of four parcels with a total of 0.93-acres currently occupied with two (2) multi-tenant buildings and one (1) 950 sf residential house that are all to be demolished. The project is located along Main Street in the Town of Amherst. Proposed construction will include a 34,121 sf multi-story building with associated parking garage, utility, drainage and site improvements.

The proposed sanitary demand for the proposed building will be served by a private 6" SDR-35 PVC lateral that will connect to a private 8" SDR-35 PVC sanitary sewer. The private 8" sanitary sewer will discharge to an existing Town of Amherst sewer manhole within the Fruehaut Avenue R.O.W. Flows then travel north and are ultimately conveyed to the Town of Amherst Wastewater Treatment Facility. Refer to the sewer node maps located at the end of this downstream sewer capacity analysis report.

Node 1 - Harlem Road (12"):

Existing Peak Flow measured (wet weather event)	= 3.379 cfs (2.184 mgd)*
4548-4564 Main St Peak Flow	= 0.074 cfs (0.048 mgd)**
Proposed Total Peak Flow	= 3.453 cfs

Theoretical capacity of existing 12" VTP @ 0.44% = 2.193 cfs

Conclusion: The maximum monitored wet weather flow exceeds the capacity of the existing 8" sewer pipe. One time during the monitoring period the flow depth exceeded the pipe diameter at Node 1 following a 1.56" rainfall event, but at no time during the monitoring period did the flow at any point slow or stall which would have caused a backup or flooding at the manhole. I/I mitigation shall be required for the contribution proposed for this project.

Node 2 - Park School (10"):

Existing Peak Flow measured (wet weather event)	= 1.145 cfs (0.740 mgd)*
4548-4564 Main St Peak Flow	= 0.074 cfs (0.048 mgd)**
Proposed Total Peak Flow	= 1.219 cfs

Theoretical capacity of existing 10" VTP @ 1.19% = 7.012 cfs

Conclusion: The proposed total peak flow is less than the capacity of the 10" VTP pipe, therefore there is sufficient capacity.

Node 3 - West Side Interceptor (60"):

Existing Peak Flow measured (wet weather event)	= 116.831 cfs (75.510 mgd)*
4548-4564 Main St Peak Flow	= 0.074 cfs (0.048 mgd)**
Proposed Total Peak Flow	= 116.904 cfs
Existing Peak Flow (per (T) Amherst)	= 83.705 cfs (54.100 mgd)*
4548-4564 Main St Peak Flow	= 0.074 cfs (0.048 mgd)**
Proposed Total Peak Flow	= 83.779 cfs

Capacity of existing 60" West Side Interceptor = 75.969 cfs (49.1 mgd)

Conclusion: The maximum monitored wet weather flow exceeds the capacity of the existing 60" sewer pipe. One time during the monitoring period the flow depth exceeded the pipe diameter at Node 3 following a 1.56" rainfall event, but at no time during the monitoring period did the flow at any point slow or stall which would have caused a backup or flooding at the manhole. I/I mitigation shall be required for the contribution proposed for this project.

SANITARY SEWER FLOW CAPACITY STUDY – Summary Review

Prepared For: 4558-4564 Main Capacity Analysis

Christopher Wood, PE Partner
487 Main Street, Suite 500
Buffalo, New York 14203

Project Name: 4558-4564 Main Capacity Analysis

Flow Monitoring Period: November 1, 2022 to November 29, 2022

Rain Events (> 0.5-inches) Monitored: November 11 (1.59"), November 17 (0.90"), November 18 (0.59"), and November 19 (1.49")

Number of Monitoring Nodes: Three (3) downstream manholes

Node Locations and Descriptions:

- Node 1 Harlem Rd 12" (12")
- Node 2 Park School 10" (10")
- Node 3 N. Ellicott Crk (59.75")

Summary Conclusion:

Based on the data presented in this report, specifically the flow depth measurements recorded (see graphs below)

- One time did the flow depth exceed pipe diameter at Node 1 and None 3 of the downstream monitoring points during the wet weather events monitored.
- At no time did the flow depth exceed pipe diameter at Node 2 of the downstream monitoring points during the wet weather events monitored.

Updated December 13, 2022

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

GENERAL

This project is a redevelopment of four parcels with a total of 0.93-acres currently occupied with two multi-tenant buildings totaling 12,150 S.F. with an associated parking lot, utility and drainage infrastructure and a 950 S.F. residential house with associated driveway and garage. The project is located along Rt. 5 Main Street between Fruehauf Ave and Chateau Terrace in the Town of Amherst. The property abuts general commercial properties along Main Street property and abuts residential properties along the North property line. The existing multi-tenant buildings and residential house will be demolished for the construction of this project.

Existing Conditions:

The site is currently occupied by a multi-tenant building with associated parking lot and a residential house. The site currently is sheet draining any runoff from pavement surface existing on-site drainage structures.

The site contains three existing domestic water services. A ¾" domestic service is located along Main St. that are tapped off the existing 8" water main along the Southside of Main St. A 2" domestic service is tapped off the 6" water main along Fruehauf Ave. A ¾" domestic service, for the residential home, is tapped off the Existing 1" service main along Chateau Terrace. The existing water services will be abandoned as part of this project.

Existing Sanitary Sewers are located along Main Street that discharges into the existing Town of Amherst sewer district #1.

PROJECT OVERVIEW

The proposed project *(Figure 1)* consists of; demolition of the existing 12,150 S.F. multi-tenant buildings, residential house and garage, pavement areas and the clearing of land; construction of a proposed 34,121 S.F. multi-story building with associated parking garage, drainage infrastructure and site improvements to the sites existing grading and utilities.

PROPOSED FACILITIES

Storm Water

SWPPP Engineer's Report prepared by Carmina, Wood, Morris DPC dated May, 2022

Water System

The existing water services to the site are to be abandoned for this proposed project. The proposed development will provide a new water service tap to the 6" main along Chateau Terrace. The proposed domestic and fire services will be backflowed within the proposed building.

Disinfection of the water services following installation will be continuous feed, according to AWWA C-651, latest revision.

Summary: *(Refer to Figure 2)*

Proposed Building:	34,121 S.F.
Operating Demand Increase:	22.29 gpm
Peak Demand Increase:	40.11 gpm
Water Main:	6" main along Chateau Terrace
Static Pressure:	64 PSI
Head Loss Friction:	0.0 psi
Loss through meter/RPZ:	13.0 psi
Elevation Loss:	0.8 psi
Bends Loss:	0 psi
Required Pressure after RPZ:	20 psi
Proposed Pressure after RPZ:	**50.8 PSI**

Sanitary Sewer:

Sanitary services will provide a new sanitary lateral connection to an existing manhole along Fruehauf Ave. The proposed building will be provided a 2,000 Gal grease trap with new 6" SDR-35 PVC lateral sanitary connection.

Summary:

Existing Flow:		3,165 GPD
Proposed New Building S.F.:		34,121 S.F.
Proposed Flow:	Restaurant	35 GPD * 80 Seats = 2,800 GPD
	Residential	110 GPD * 74 Bedrooms = 8,140 GPD
GPD Total =		10,940 GPD
Total Increased Sanitary Flow:		**7,775 GPD**

STORM WATER POLLUTION PREVENTION PROGRAM

801 SCOPE

A. **PURPOSE: Benderson Development LLC** has placed an emphasis on following **the New York State Department of Environmental Conservation (NYSDEC) SPDES General Permit for Stormwater Discharges from Construction Activity** governing storm water discharges during construction, and in accordance with erosion control practices. The Contractor's participation in this program is mandatory and its non-compliance is subject to various remedies, including without limitation, monetary set-offs, withholding payments; reimbursement for costs, expenses (including reasonable attorney's fees), fines and civil penalties incurred by **Benderson Development LLC*;*** and/or liquidated damages. This section provides a descriptive explanation of **Benderson Development LLC's** Storm Water Pollution Prevention Program and required Contractor participation.

The Engineer of record for this project certifies that this SWPPP meets the requirements and is in compliance with the New York State Stormwater Management Design Manual and latest NYSDEC Phase II stormwater regulation requirements.

B. **SPDES General Permit for Stormwater Discharges from Construction Activity:** Regulations promulgated by the NYSDEC to regulate the discharge of storm water from construction activities on sites where more than **one (1)** acre of soil is disturbed. One of the ways to comply with these regulations for affected sites is to request coverage under the General Permit for Construction Activities for New York State. In order to use the General Permit, a Notice of Intent (NOI) form must be completed and mailed to the **NYSDEC** at least ***5 business days*** prior to any earth-disturbing activities (this time frame may increase to 60 business days if a full review of the SWPPP is determined necessary by the NYSDEC) and a Storm Water Pollution Prevention Plan (SWPPP) for the site must be prepared and followed during the construction activities.

Approval from a regulated, traditional land use control MS4:

1. An *owner or operator* of a *construction activity* that is <u>not</u> subject to the requirements of a *regulated, traditional land use control MS4* must first develop a SWPPP in accordance with all applicable requirements of this permit and then submit a completed NOI form to the NYSDEC.

2. An *owner or operator* of a *construction activity* that is subject to the requirements of a *regulated, traditional land use control MS4* must first develop a SWPPP in accordance with all applicable requirements of this permit and then have its SWPPP reviewed and accepted by the *MS4* prior to submitting the NOI to the NYSDEC. The *owner or operator* shall have the "MS4 SWPPP Acceptance" form signed by the principal executive officer or ranking elected official from the *regulated, traditional land use control MS4*, or by a duly authorized representative of that person, and then submit that form along with the NOI to the address referenced under "Notice of Intent (NOI) Submittal".

C. **RESPONSIBILITIES OF THE CONTRACTOR:** The Contractor shall manage the discharge of storm water from the site in accordance with the **NYSDEC** General Permit for Construction Activities conditions and the following provisions of this section. The Operator shall be responsible for conducting the storm water management practices in accordance with the permit. The Contractor shall be responsible for providing qualified inspectors to conduct the inspections required by the SWPPP. The Contractor shall be responsible for any enforcement action taken or imposed by federal, state, or local agencies, including the cost of fines, construction delays, and remedial actions resulting from the Contractor's failure to comply with the permit provisions. **It shall be the responsibility of the Contractor to make any changes to the SWPPP necessary when the Contractor or any of his subcontractors elects to use borrow or fill or material storage sites, either contiguous to or remote from the construction site, when such sites are used solely for this construction site. Such sites are considered to be part of the construction site covered by the permit and this SWPPP. Off-site borrow, fill, or material storage sites which are used for multiple construction projects are not subject to this requirement, unless specifically required by state or local jurisdictional entity regulations. The Contractor should consider this requirement in negotiating with earthwork subcontractors, since the choice of an off-site borrow, fill, or material storage**

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

site may impact their duty to implement, make changes to, and perform inspections required by the SWPPP for the site.

D. **NOTICE OF INTENT:** The Operator has petitioned the **NYSDEC** for coverage under the storm water discharges during construction at this site to be covered by the **SPDES** General Permit for Construction Activity for the State of **New York.** A Notice of Intent (NOI) for coverage under this permit has been filed by the Operator. The SWPPP must be prepared prior to submittal of the NOI form. The Operator will require the Contractor to be a co-permittee with the Operator. The Contractor will be required to post the NOI at the construction site along with any building permits.

E. **CONTRACTOR CERTIFICATION & TRAINING**: Certification and Training of the Contractor's Project Manager and Superintendent will be performed at the Pre-Construction Meeting and administered by the **Operator's Project Manager** and/or **Operator's Engineer**. This Certification and Training Program has been developed to stress the importance of the following topics:

- Erosion and sediment control for water quality protection
- Implementation of erosion and sediment control plans
- The importance to proper installation of erosion and sediment control measures
- Regular inspection by the **owner/operator** and a **Qualified Professional** of erosion and sediment control measures
- Diligent maintenance of erosion and sediment control measures
- Expedient preparation of accurate and complete records regarding inspection and maintenance of erosion and sediment control measures
- Record-keeping for inspections and maintenance activities

Upon completion of the certification and training program, the project will receive a *SWPPP Ledger* for use by the Contractor's Project Manager and Superintendent with all required certifications and record keeping forms involved with the installation and/or maintenance of erosion and sediment control measures. The Operator's certification and training shall be in addition to any federal, state or local certifications or training required or available to comply with SPDES stormwater permit requirements by the Contractor.

F. **REQUIREMENTS FOR THE GENERAL CONTRACTOR AND SUBCONTRACTOR(S):** The *SWPPP Ledger* shall provide a **"Contractor's Certification Log" (Form SWPPP-1)** for both the General Contractor and Subcontractor(s) identifying the Company Name, Business Address and Telephone Number along with the Responsible Person for the Contractor and all subcontractors' who will implement the measures identified in the SWPPP. **The General Contractor and Subcontractor(s) shall also sign the "Contractor's Certification Statement" (Form SWPPP-2)** verifying they have been instructed on how to comply with and fully understand the requirements of the **SPDES** General Permit for Construction Activity for the State of **New York** and the SWPPP. These certifications must be signed, by a responsible corporate officer or other party meeting the "Signatory Requirements" of the SPDES General Permit, on behalf of each entity, prior to the beginning of any construction activities and shall be filed in the project's *SWPPP Ledger*. A Signatory Authorization Designation **(Form SWPPP-11)** must be filled out by each entity giving the authorization for the individual to sign on behalf of the entity.

G. **STORM WATER POLLUTION PREVENTION PROGRAM LOCATION REQUIREMENTS:** The *SWPPP Ledger* is meant to be a working document that shall be maintained at the site of the Construction Activities at all times throughout the project, shall be readily available upon request by the Operator's personnel or **NYSDEC** or any other agency with regulatory authority over storm water issues, and shall be kept on-site until the site complies with the Final Stabilization section of this document. **A sign or other notice must be posted near the main entrance of the construction site which contains a completed NOI, the location of the SWPPP and the name and phone number of a contact person responsible for scheduling SWPPP viewing times, and any other state specific requirements.**

H. **SWPPP LEDGER:** The SWPPP Ledger shall be a three (3) ring binder, the Ledger shall be tabbed and indexed for the following sections:

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

- **Table of Contents**
- **Written SWPPP**
- **Site Map**
- **Erosion and Sedimentation Control Plan(s)**
- **Signed NYSDEC Notice of Intent (NOI)**
- **Copy of Notice of Permit Coverage**
- **Copy of the NYSDEC SPDES General Permit for Construction Activity for the State of New York**
- **Blank Copy of NOI and Notice of Termination (NOT)**
- **Contractor's Certification Log (Form SWPPP-1)**
- **Contractor's Certification Statement (Form SWPPP-2)**
- **Inspection Report(s) (Form SWPPP-3)**
- **Stabilization Schedule (Form SWPPP-4)**
- **Final Stabilization/Termination Checklist (Form SWPPP-5)**
- **Project Rainfall Log (Form SWPPP-6)**
- **Requested Changes to the SWPPP (Form SWPPP-7)**
- **Monthly Training Log (Form SWPPP-8)**
- **Reportable Quantity Release Form (Form SWPPP-9)**
- **Implementation Schedule (Form SWPPP-10)**
- **Signatory Authorization Designation (SWPPP-11)**
- **Owner's Certification (SWPPP-12)**
- **Engineer's Certification (SWPPP-13)**
- **Sample Forms**

The Operator's Project Manager must review and evaluate for compliance the *SWPPP Ledger* at each Project Review. All Inspection and Maintenance Forms must be **signed** by the Operator's Project Manager **(or other duly authorized representative)** at this review and be submitted with the Contractor's Monthly Application for Payment. The approval of the Contractor's Application for Payment will be withheld until the *SWPPP Ledger* is deemed in compliance and all SWPPP Inspection and Maintenance Forms and have been submitted to the satisfaction of the Operator.

I. INSPECTIONS AND RECORD-KEEPING:

A. General Construction Site Inspection and Maintenance Requirements

1. The *owner or operator* must ensure that all erosion and sediment control practices and all post-construction stormwater management practices identified in the SWPPP are maintained in effective operating condition at all times.

2. The terms of this permit shall not be construed to prohibit the State of New York from exercising any authority pursuant to the ECL, common law or federal law, or prohibit New York State from taking any measures, whether civil or criminal, to prevent violations of the laws of the State of New York, or protect the public health and safety and/or the environment.

B. Owner or Operator Maintenance Inspection Requirements

1. The *owner or operator* shall inspect, in accordance with the requirements in the most current version of the technical standard, New York State Standards and Specifications for Erosion and Sediment Control, the erosion and sediment controls identified in the SWPPP to ensure that they are being maintained in effective operating condition at all times.

2. For construction sites where soil disturbance activities have been temporarily suspended (e.g. winter shutdown) and temporary stabilization measures have been applied to all disturbed areas, the *owner or operator* can stop conducting the maintenance inspections. The *owner or operator* shall begin conducting the maintenance inspections in accordance with Part IV.B.1. of the General Permit as soon as soil

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

disturbance activities resume.

3. For construction sites where soil disturbance activities have been shut down with partial project completion, the *owner or operator* can stop conducting the maintenance inspections if all areas disturbed as of the project shutdown date have achieved *final stabilization* and all post-construction stormwater management practices required for the completed portion of the project have been constructed in conformance with the SWPPP and are operational.

C. **Qualified Inspector Inspection Requirements**

The *owner or operator* shall have a *qualified inspector* conduct site inspections in conformance with the following requirements:

Note: The *trained contractor* identified in Part III.A.6 of the General Permit **cannot** conduct the *qualified inspector* site inspections unless they meet the *qualified inspector* qualifications included in Appendix A of the General Permit. In order to perform these inspections, the *trained contractor* would have to be a:

- Licensed Professional Engineer,
- Certified Professional in Erosion and Sediment Control (CPESC),
- Registered Landscape Architect, or
- Someone working under the direct supervision of, and at the same company as, the licensed Professional Engineer or Registered Landscape Architect, provided they have received four (4) hours of Department endorsed training in proper erosion and sediment control principles from a Soil and Water Conservation District, or other Department endorsed entity.

1. A *qualified inspector* shall conduct site inspections for all construction activities identified in Tables 1 and 2 of Appendix B of the General Permit, with the exception of:

   a. The construction of a single family residential subdivision with 25% or less impervious cover at total site build-out that involves a soil disturbance of one (1) or more acres of land but less than five (5) acres and is not located in one of the watersheds listed in Appendix C of the General Permit and not directly discharging to one of the 303(d) segments listed in Appendix E of the General Permit;

   b. The construction of a single family home that involves a soil disturbance of one (1) or more acres of land but less than five (5) acres and is not located in one of the watersheds listed in Appendix C and not directly discharging to one of the 303(d) segments listed in Appendix E of the General Permit;

   c. Construction on agricultural property that involves a soil disturbance of one (1) or more acres of land but less than five (5) acres; and

   d. Construction activities located in the watersheds identified in Appendix D of the General Permit that involve soil disturbances between five thousand (5000) square feet and one (1) acre of land.

2. Unless otherwise notified by the Department, the *qualified inspector* shall conduct site inspections in accordance with the following timetable:

   a. For construction sites where soil disturbance activities are on-going, the *qualified inspector* shall conduct a site inspection at least once every seven (7) calendar days.

   b. For construction sites where soil disturbance activities are on-going and the *owner or operator* has received authorization in accordance with Part II.C.3 of the General Permit to disturb greater than five (5) acres of soil at any one time, the *qualified inspector* shall conduct at least two (2) site inspections every seven (7) calendar days. The two (2) inspections shall be separated by a minimum of two (2) full calendar days.

   c. For construction sites where soil disturbance activities have been temporarily suspended (e.g. winter

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

shutdown) and temporary stabilization measures have been applied to all disturbed areas, the *qualified inspector* shall conduct a site inspection at least once every thirty (30) calendar days. The *owner or operator* shall notify the Regional Office stormwater contact person (see contact information in Appendix F of the General Permit) or, in areas under the jurisdiction of a *regulated, traditional land use control MS4,* the MS4 (provided the MS4 is not the *owner or operator* of the construction activity) in writing prior to reducing the frequency of inspections.

d. For construction sites where soil disturbance activities have been shut down with partial project completion, the *qualified inspector* can stop conducting inspections if all areas disturbed as of the project shutdown date have achieved *final stabilization* and all post-construction stormwater management practices required for the completed portion of the project have been constructed in conformance with the SWPPP and are operational. The *owner or operator* shall notify the Regional Office stormwater contact person or, in areas under the jurisdiction of a *regulated, traditional land use control MS4,* the MS4 (provided the MS4 is not the *owner or operator* of the construction activity). in writing prior to the shutdown. If soil disturbance activities are not resumed within 2 years from the date of shutdown, the *owner or operator* shall have the *qualified inspector* perform a final inspection and certify that all disturbed areas have achieved *final stabilization,* and all temporary, structural erosion and sediment control measures have been removed*;* and that all post-construction stormwater management practices have been constructed in conformance with the SWPPP by signing the "Final Stabilization" and "Post-Construction Stormwater Management Practice" certification statements on the NOT. The *owner or operator* shall then submit the completed NOT form to the address in Part II.A.1 of the General Permit.

3. At a minimum, the *qualified inspector* shall inspect all erosion and sediment control practices to ensure integrity and effectiveness, all post-construction stormwater management practices under construction to ensure that they are constructed in conformance with the SWPPP, all areas of disturbance that have not achieved *final stabilization,* all points of discharge to natural surface waterbodies located within, or immediately adjacent to, the property boundaries of the construction site, and all points of discharge from the construction site.

4. The *qualified inspector* shall prepare an inspection report subsequent to each and every inspection. At a minimum, the inspection report shall include and/or address the following:

   a. Date and time of inspection;

   b. Name and title of person(s) performing inspection;

   c. A description of the weather and soil conditions (e.g. dry, wet, saturated) at the time of the inspection;

   d. A description of the condition of the runoff at all points of discharge from the construction site. This shall include identification of any *discharges* of sediment from the construction site. Include *discharges* from conveyance systems (i.e. pipes, culverts, ditches, etc.) and overland flow;

   e. A description of the condition of all natural surface waterbodies located within, or immediately adjacent to, the property boundaries of the construction site which receive runoff from disturbed areas. This shall include identification of any *discharges* of sediment to the surface waterbody;

   f. Identification of all erosion and sediment control practices that need repair or maintenance;

   g. Identification of all erosion and sediment control practices that were not installed properly or are not functioning as designed and need to be reinstalled or replaced;

   h. Description and sketch of areas that are disturbed at the time of the inspection and areas that have been stabilized (temporary and/or final) since the last inspection;

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

i. Current phase of construction of all post-construction stormwater management practices and identification of all construction that is not in conformance with the SWPPP and technical standards;

j. Corrective action(s) that must be taken to install, repair, replace or maintain erosion and sediment control practices; and to correct deficiencies identified with the construction of the post-construction stormwater management practice(s); and

k. Digital photographs, with date stamp, that clearly show the condition of all practices that have been identified as needing corrective actions. The *qualified inspector* shall attach paper color copies of the digital photographs to the inspection report being maintained onsite within seven (7) calendar days of the date of the inspection. The *qualified inspector* shall also take digital photographs, with date stamp, that clearly show the condition of the practice(s) after the corrective action has been completed. The *qualified inspector* shall attach paper color copies of the digital photographs to the inspection report that documents the completion of the corrective action work within seven (7) calendar days of that inspection.

5. Within one business day of the completion of an inspection, the *qualified inspector* shall notify the *owner or operator* and appropriate contractor or subcontractor identified in Part III.A.6. of any corrective actions that need to be taken. The contractor or subcontractor shall begin implementing the corrective actions within one business day of this notification and shall complete the corrective actions in a reasonable time frame.

6. All inspection reports shall be signed by the *qualified inspector*. Pursuant to Part II.C.2 of the General Permit, the inspection reports shall be maintained on site with the SWPPP.

Record Retention - The *owner or operator* shall retain a copy of the NOI, NOI Acknowledgment Letter, SWPPP, MS4 SWPPP Acceptance form and any inspection reports that were prepared in conjunction with this permit for a period of at least five (5) years from the date that the site achieves *final stabilization*. This period may be extended by the Department, in its sole discretion, at any time upon written notification.

- **Form SWPPP-3** **Inspection Report**
- **Form SWPPP-4** **Stabilization Schedule**
- **Form SWPPP-5** **Final Stabilization/Termination Checklist**
- **Form SWPPP-6** **Project Rainfall Log**
- **Form SWPPP-7** **Requested Changes to the SWPPP**
- **Form SWPPP-8** **Monthly Training Log**
- **Form SWPPP-9** **Reportable Quantity Release Form**
- **Form SWPPP-10** **Implementation Schedule**
- **Form SWPPP-11** **Signatory Authorization Designation**
- **Form SWPPP-12** **Owner's Certification**
- **Form SWPPP-13** **Engineer's Certification**

J. **SWPPP MODIFICATIONS:** The inspection report should also identify if any revisions to the SWPPP are warranted due to unexpected conditions. The SWPPP is meant to be a dynamic working guide that is to be kept current and amended whenever there is a change in design, construction, operation, or maintenance at the construction site that has or could have a significant effect on the discharge of pollutants or when the plan proves to be ineffective in eliminating or significantly minimizing pollutant discharges. Any such changes to the SWPPP must be made in writing on the "**Requested Changes to the SWPPP" (Form SWPPP-7)** within 7 days of the date of such modification or amendment is made. The Contractor's failure to modify or report deficiencies to the Operator will result in the Contractor being liable for fines and construction delays resulting from any federal, state, or local agency enforcement action.

K. **CONTRACTOR'S MONTHLY TRAINING:** The Contractor shall provide monthly training sessions for all entities and subcontractors involved with installing, applying, performing, maintaining and inspection of the SWPPP. Logs of each monthly training shall be kept by the Contractor on the "Monthly Training Log" **(Form SWPPP-8)**, in the *SWPPP Ledger*. Training shall educate the attendees on the topics of:

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

- The Location and Type of Control Measures
- The Construction Requirements for the Control Measures
- Maintenance Procedures for each of the Control Measures
- Spill Prevention and Cleanup Measures
- Inspection and Maintenance Record Keeping Requirements

L. **FINAL STABILIZATION AND TERMINATION OF PERMIT COVERAGE:** A site can be considered finally stabilized when all soil disturbing activities have been completed and a uniform perennial vegetative cover with a density of **85%** for the unpaved areas and areas not covered by permanent structures has been established or equivalent permanent stabilization measures have been established and the facility no longer discharges storm water associated with construction activities and a Notice of Termination (NOT) form filed by the Operator(s) with the NYSDEC. The Operator's Project Manager must complete the NOT. The NOT must be signed by the signatory (or equivalent position) on the NOI and subsequently submitted to the appropriate agency. The Operator's Project Manager must provide a completed copy of the NOT to the Contractor for inclusion in the SWPPP, which will then be optically scanned into the final SWPPP document as required. This filing terminates coverage under the General Permit and terminates the Contractor's responsibility to implement the SWPPP, but the requirements of the SWPPP, including periodic inspections, must be continued until the NOT is filed. The owner or operator shall also have the qualified inspector perform a final site inspection prior to submitting the NOT to the Department. In addition, the qualified inspector must verify during the final inspection that all Town of Amherst requirements for Final Stabilization have been satisfied prior to Town of Amherst signature of the NOT. Upon achieving this milestone, the Contractor shall also submit "Final Stabilization Certification/Termination Checklist" **(Form SWPPP-5)**. Final payment and/or the release of retainage will be withheld until all provisions of the SWPPP have been submitted, completed and accepted by the Operator.

802 PROJECT NAME AND LOCATION

Proposed Site Redevelopment
4548-4564 Main Street
Town of Amherst, NY 14226
42.963°N, 78.782°W
Estimated Area of Site ≈ 1.02+/- acres
Estimated Area to be Disturbed by Construction Activities ≈ 1.02+/- acres

A general location map is included as Appendix A.

803 OPERATOR'S NAME AND ADDRESS

Benderson Development LLC
570 Delaware Ave
Buffalo, NY 14202
Contact Person: Matt Oates
Telephone: 716-878-9397

804 PROJECT DESCRIPTION

This redevelopment project will consist of the construction of a 3-story mixed-use building that will include apartments, restaurant space and multi-level parking. The site is located on the north side of Main Street (NY-5), between Fruehauf Ave and Chateau Terrace in the Town of Amherst. The existing site is currently occupied by a 3-story vacant building located along the Main Street frontage. Existing surface parking is located north behind the existing building. Both the existing building and parking areas will be removed as part of this project. The overall site area is approximately 0.93+/- acres, however, construction activities will result in approximately 1.02+/- acres of disturbance area.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

Soil disturbing activities will include:

A. Construction of temporary construction exit point
B. Clearing & grubbing of the site within disturbance limits
C. Construction of detention basin & bioretention area
D. Installation of storm sewer pipes and inlets
E. Construction of utilities
F. Construction of driveways and parking lot
G. Final grading & landscaping
H. Construction of building

This project is owned by **Benderson Development LLC** and will be developed by **Benderson Development LLC**. The work area consists of approximately 1.02+/- acres for which erosion and sediment controls have been developed and fully addressed in this written plan and the Erosion and Sediment Control Plans. See the construction documents for additional details

805 RUNOFF COEFFICIENT, SOILS, AND RAINFALL INFORMATION

The initial runoff curve number for the pre-construction site is "CN" = 95. The post-construction runoff curve number for the site will be "CN" = 95. Approximately 1.02+/- acres will be disturbed by construction activities.

See soils information located in Appendix D

The site is in Erie County, which receives an average of approximately 35 inches rainfall annually with the highest amounts of rainfall received in the months of May thru September. Annual snow for this area is approximately 100 inches.

806 WATERS

The runoff generated from this site will discharge to the existing closed Town of Amherst storm sewer that is ultimately tributary to Ellicott Creek and the Niagara River.

807 INDIAN COUNTRY LANDS

This project is not located on Indian Lands.

808 ENDANGERED AND THREATENED SPECIES

No endangered/threatened species have been determined to be on the site.

809 CRITICAL HABITAT

No critical habitats have been determined to be on the site.

810 HISTORIC PLACES

The assessed property is not listed in the National Register of Historical Places.

811 WETLANDS AND/OR OTHER SURFACE WATERS

No wetlands are located on the site.

812 EROSION AND SEDIMENT CONTROLS

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

812.1 STABILIZATION PRACTICES

Stabilization practices for this site include:

A. Land clearing activities shall be done only in areas where earthwork will be performed and shall progress as earthwork is needed.
B. Use of stabilization method for all slopes having a slope greater than 1V:3H.
C. Permanent seeding and planting of all unpaved areas using the hydromulching grass seeding technique.
D. Mulching exposed areas.
E. Vegetation preservation in undisturbed areas.
F. Frequent watering to minimize wind erosion during construction.

a. For sites where **5 acres or more** are disturbed at any one time: In areas where soil disturbance activity has been temporarily or permanently ceased, temporary and/or permanent soil stabilization measures shall be installed and/or implemented within seven (7) days from the date the soil disturbance activity ceased. The soil stabilization measures selected shall be in conformance with the most current version of the *New York Standards and Specifications for Erosion and Sediment Control.*
b. The owner or operator shall prepare a phasing plan that defines maximum disturbed area per phase and shows required cuts and fills.
c. The owner or operator shall install any additional measures needed to protect water quality.

812.2 STRUCTURAL PRACTICES

Structural practices for this site include:

A. Inlet protection using a method detailed in the Construction Documents.
B. Perimeter protection using temporary silt fence.
C. Outlet protection using rip-rap stone and end sections.
D. Stabilized Construction Entrance.
E. Temporary stone wash off areas.
F. Storm sewer, curb/gutter.
G. Sediment traps and basins.

812.3 SEQUENCE OF MAJOR ACTIVITIES

The Contractor will be responsible for implementing the following erosion control and storm water management control measures. The Contractor may designate these tasks to certain subcontractors as he sees fit, but the ultimate responsibility for implementing these controls and ensuring their proper functioning remains with the Contractor. The order of activities will be as follows:

A. Construct temporary construction exits at locations shown on the Demolition & Erosion Control Plan Sheet.
B. Install perimeter silt fences in the locations shown on the Demolition & Erosion Control Plan Sheet.
C. Clear & Grub site.
D. Construction of detention basin & bioretention area.
E. Commence site grading.
F. Disturbed areas of the site where construction activity has ceased for more than 14 days shall be temporarily seeded and watered.
G. Installation of proposed utilities.
H. Finalize pavement subgrade preparation.
I. Construct all curb, drainage inlets, storm sewer pipes and storm sewer manholes, as shown on the plans. Install temporary inlet protection at the locations of all inlets.
J. Dust control.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

K. Remove inlet protection around inlets and manholes no more than 48 hours prior to placing stabilized base course.
L. Install base material as required for pavement.
M. Carry out final grading and seeding and planting.
N. Clean storm system following construction.
O. Remove silt fencing only after all paving is complete and exposed surfaces are stabilized.
P. Remove temporary construction exits only prior to pavement construction in these areas.

A schedule for implementation for the activities identified above is included as Form SWPPP-4 of the SWPPP.

Note: Sediment control storage during construction (traps & basins) during construction shall be 134cy per acre of disturbance per NYSDEC requirements.

812.4 STORM WATER MANAGEMENT: See Appendix D, Engineer's Report

813 OTHER CONTROLS

813.1 OFF-SITE VEHICLE TRACKING

A stabilized construction exit will be provided to help reduce vehicle tracking of sediments. Existing paved areas will remain as long as possible and will be used for vehicle wash areas and to further aid in the reduction of vehicle tracking of sediments. The paved streets adjacent to the site entrance shall be inspected daily and swept as necessary to remove any excess mud, dirt, or rock tracked from the site. Dump trucks hauling material to/from the construction site will be covered with a tarpaulin. The job site superintendent will be responsible for seeing that these procedures are followed.

813.2 EXCAVATION SPOIL MATERIALS

Excavation spoil materials are generated during the excavation of the development's building and utilities installation. These materials must be properly managed to prevent them from contributing to storm water discharges. The materials generated from the development of this project will be hauled off-site or stockpiled for re-use in designated areas which will have temporary erosion & sediment control measures installed. Any removal from site will be done under the necessary permits required by the local governing agencies.

813.3 DUST CONTROL

Minimizing wind erosion and controlling dust will be accomplished by one or more of the following methods:
A. Frequent watering of excavation and fill areas.
B. Providing gravel or paving at entrance/exit drives, parking areas and transit paths.

813.4 WASTE DISPOSAL

If needed, all waste materials will be collected and stored in securely lidded metal dumpsters rented from an approved waste management company. The dumpster will comply with all local and state solid waste management regulations.

All trash and construction debris from the site will be deposited in the dumpsters. The dumpsters will be emptied when full and then hauled to a NYSDEC approved landfill for proper disposal. No construction waste will be buried on-site. All personnel will be instructed regarding the correct procedures for waste disposal.

813.5 SANITARY WASTE

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

If needed, portable toilet units or field offices with toilet facilities connected to the municipal sanitary sewer will be used for sanitary purposes. All portable toilet units will be emptied a minimum of once per week by a licensed portable facility provided in compliance with local and state regulations.

813.6 CONCRETE WASTE FROM CONCRETE TRUCKS

A. Emptying of excess unhardened concrete and/or washout from concrete delivery trucks will be allowed on the job site, but in either (1) specifically designated diked areas which have been prepared to prevent contact between concrete and/or washout and storm water which will be discharged from the site or (2) in locations where waste concrete will be poured into forms to make rip-rap or other useful concrete products.

B. Hardened waste concrete from the designated diked areas described above will be disposed of in accordance with applicable local and state regulations with regards to disposal of construction debris.

813.7 HAZARDOUS SUBSTANCES & HAVARDOUS WASTE

A. All hazardous waste materials will be disposed of by the Contractor in the manner specified by local, state, and/or federal regulations and by the manufacturer of such products. Site personnel will be instructed in these practices by the job superintendent, who will also be responsible for seeing these practices are followed. Material Safety Data Sheets (MSDS's) for each substance with hazardous properties that is used on the job site will be obtained and used for the proper management of potential wastes that may result from these products. An MSDS will be posted in the immediate area where such products are stored and/or used and another copy of each MSDS will be maintained in the SWPPP file at the job site construction office. Each employee who must handle a substance with hazardous properties will be instructed on the use of MSDS sheets and the specific information in the applicable MSDS for the product he/she is using, particularly regarding spill control techniques.

B. The contractor will implement the Spill Prevention Control and Countermeasures (SPCC) Plan found within this SWPPP and will train all personnel in the proper cleanup and handling of spilled materials. No spilled hazardous materials of hazardous wastes will be allowed to come in contact with storm water discharges. If such contact occurs, the storm water discharge shall be contained on site until appropriate measures in compliance with state and federal regulations are taken to dispose of such contaminated storm water. It shall be the responsibility of the job superintendent to properly train all personnel in the use of the SPCC plan.

C. Any spills of hazardous materials which are in excess of the Reportable Quantities as defined by the EPA regulations shall be immediately reported to the EPA National Response Center at 1-800-424-8802. From SWPPP-9 "Reportable Quantity Release Form" must be filled out.

D. In order to minimize the potential for a spill of hazardous materials to come in contact with storm water, the following steps will be implemented:

1. All materials with hazardous properties (such as pesticides, petroleum products, fertilizers, detergents, construction chemicals, acids, paints, paint solvents, cleaning solvents, additives for soil stabilization, concrete curing compounds and additives, etc.) will be stored in a secure location, under cover, when not in use.
2. The minimum practical quantity of all such materials will be kept on the job site.
3. A spill control and containment kit (containing for example, absorbent such as kitty litter or sawdust, acid neutralizing powder, brooms, dust pans, mops, rags, gloves, goggles, plastic and metal trash containers, etc.) will be provided at the storage site.
4. All of the product in a container will be used before the container is disposed of. All such containers will be triple rinsed with water prior to disposal. The rinse water used in these

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

containers will be disposed of in a manner in compliance with state and federal regulations and will not be allowed to mix with storm water discharges.
5. All products will be stored in and used from the original container with the original product label.
6. All products will be used in strict compliance with instructions on the product label.
7. The disposal of excess or used products will be in strict compliance with instructions on the product label.

813.8 CONTAMINATED SOILS

A. Any contaminated soils (resulting from spills of materials with hazardous properties) which may result from construction activities will be contained and cleaned up immediately in accordance with the procedures given in the Spill Prevention Control and Countermeasures (SPCC) Plan and in accordance with applicable state and federal regulations.

B. The job site superintendent will be responsible for seeing that these procedures are followed.

814 COMPLIANCE WITH FEDERAL, STATE, AND LOCAL REGULATIONS

The Contractor will obtain copies of any and all local and state regulations which are applicable to storm water management, erosion control, and pollution minimization at this job site and will comply fully with such regulations. The Contractor will submit written evidence of such compliance if requested by the Operator or any agent of a regulatory body. The Contractor will comply with all conditions of the **SPDES** General Permit for Construction Activity for the State of **New York**, including the conditions related to maintaining the SWPPP and evidence of compliance with the SWPPP at the job site and allowing regulatory personnel access to the job site and to records in order to determine compliance.

815 INSPECTION AND MAINTENANCE PROCEDURES

The following inspection and maintenance practices will be used to maintain erosion and sediment controls and stabilization measures.

1. All control measures will be inspected by the **owner/operator** at least weekly and shall continue until the site complies with the Final Stabilization section of this document (See Section 816)

2. All control measures will be inspected by a **Qualified Professional** twice a week separated by at least two (2) full calendar days and shall continue until the site complies with the Final Stabilization section of this document (See Section 816)

3. All measures will be maintained in good working order; if repairs or other measures are found to be necessary, they will be initiated within 24 hours of report.

4. Built up sediment will be removed from silt fence when it has reached one-third the height of the fence.

5. Silt fences will be inspected for depth of sediment, tears, etc., to see if the fabric is securely attached to the fence posts, and to see that the fence posts are securely in the ground.

6. Inlet protection and the stabilized construction entrance shall be inspected to see if these measures are functioning properly or if maintenance is required.

7. Temporary and permanent seeding and all other stabilization measures will be inspected for bare spots, washouts, and healthy growth.

8. A maintenance inspection report will be made after each inspection. Copies of the report forms to be completed by the inspector are included in this SWPPP.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

9. The job site superintendent will be responsible for selecting and training the individuals who will be responsible for these inspections, maintenance and repair activities, and filling out inspection and maintenance reports.

10. Personnel selected for the inspection and maintenance responsibilities will receive training from the job site superintendent. They will be trained in all the inspection and maintenance practices necessary for keeping the erosion and sediment controls that are used onsite in good working order. They will also be trained in the completion of, initiation of actions required by, and the filing of the inspection forms. Documentation of this personnel training will be kept on site with the SWPPP.

11. Disturbed areas and materials storage areas will be inspected for evidence of or potential for pollutants entering stormwater systems.

12. Report to the NYSDEC within 24 hours any noncompliance with the SWPPP that will endanger public health or the environment. Follow up with a written report within 5 days of the noncompliance event. The following events require 24 hour reporting: a) any unanticipated bypass which exceeds any effluent limitation in the permit, b) any upset which exceeds any effluent limitation in the permit, and c) a violation of a maximum daily discharge limitation for any of the pollutants listed by the NYSDEC in the permit to be reported within 24 hours. The written submission must contain a description of the non-compliance and its cause; the period of non-compliance, including exact dates and times, and if the non-compliance has not been corrected, the anticipated time it is expected to continue; and steps taken or planned to reduce, eliminate, and prevent recurrence of the non-compliance.

13. Releases of hazardous substances or oil in excess of reportable quantities (as established under 40 CFR 110, 40 CFR 117 or 40 CFR 302) must be reported.

Upon completion of construction, the property owner is responsible for ensuring that the stormwater facilities are regularly inspected and maintained. Maintenance and inspection procedures are as follows.

1. On a quarterly basis and following significant rainfall events or snow-melts, perform the following:
   - Inspect catch basins, storm manholes, treatment structures, storm piping and stormwater ponds for debris and accumulation of sediment.
   - Remove and properly dispose of any collected debris and sediment in accordance with applicable state, federal and local regulations.
   - Flush piping with water if necessary to remove accumulated sediment.
   - Clean treatment structures per manufacturer's recommendations
   - Check all stone outfall structures for erosion and re-stone if necessary to prevent further erosion.
   - Inspect grassed/landscaped areas for un-vegetated areas or areas with less than 80% healthy stand of grass and reseed and mulch as necessary. Water daily if reseeded in July and August.
   - A record of all inspections should be kept.
2. Maintain all lawn areas by regular mowing, including the grassed slopes of the stormwater ponds and any grass swales. Any eroded areas shall be regarded, seeded and mulched immediately.

816 INSPECTION AND MAINTENANCE REPORT FORMS

Once installation of any required or optional erosion control device or measure has been implemented, inspections shall be performed by a Qualified Professional at least once every seven (7) calendar days. For construction sites where soil disturbance activities are on-going and the owner or operator has received authorization in accordance with Part II.C.3 of the General Permit to disturb greater than five (5) acres of soil at any one time, the qualified inspector shall conduct at least two (2) site inspections every seven (7) calendar days. The two (2) inspections shall be separated by a minimum of two (2) full calendar days. The owner and contractor shall obtain from the MS4 an approval for disturbing more than five-acres at any given time. For construction sites where active construction has been suspended, inspection frequency under the general permit can be reduced to once every 30 days, provided temporary stabilization measures have been applied to all disturbed areas. The forms found in this SWPPP shall be used by the inspectors to inventory and report the

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

condition of each measure to assist in maintaining the erosion and sediment control measures in good working order.

These report forms shall become an integral part of the SWPPP and shall be made readily accessible to governmental inspection officials, the Operator's Engineer, and the Operator for review upon request during visits to the project site. In addition, copies of the reports shall be provided to any of these persons, upon request, via mail or facsimile transmission. Inspection and maintenance report forms are to be maintained by the permittee for five years following the final stabilization of the site.

THE TOWN OF AMHERST IS TO BE PROVIDED WITH A COPY OF ALL SWPPP INSPECTIONS WITHIN ONE WORKING DAY OF PERFORMING THE INSPECTION.

817 OTHER RECORD-KEEPING REQUIREMENTS

The Contractor shall keep the following records related to construction activities at the site:

- Dates when major grading activities occur and the areas which were graded
- Dates and details concerning the installation of structural controls
- Dates when construction activities cease in an area
- Dates when an areas is stabilized, either temporarily or permanently
- Dates of rainfall and the amount of rainfall
- Dates and descriptions of the character and amount of any spills of hazardous materials
- Records of reports filed with regulatory agencies if reportable quantities of hazardous materials spilled

818 SPILL PREVENTION CONTROL AND COUNTERMEASURES (SPCC) PLAN

818.1 MATERIALS COVERED

The following materials or substances are expected to be present onsite during construction:

Concrete/Additives/Wastes	Cleaning solvents
Detergents	Petroleum based products
Paints/Solvents	Pesticides
Acids	Fertilizers
Solid and construction wastes	Sanitary wastes
Soil stabilization additives	

818.2 MATERIAL MANAGEMENT PRACTICES

The following are the material management practices that will be used to reduce the risk of spills or other accidental exposure of materials and substances to stormwater runoff. The job site superintendent will be responsible for ensuring that these procedures are followed.

A. Good Housekeeping

The following good housekeeping practices will be followed onsite during the construction project.

1. An effort will be made to store only enough products required to do the job.
2. All materials stored onsite will be stored in a neat, orderly manner and, if possible, under a roof or in a containment area. At a minimum, all containers will be stored with their lids on when not in use. Drip pans shall be provided under all dispensers.
3. Products will be kept in their original containers with the original manufacturer's label in legible condition.
4. Substances will not be mixed with one another unless recommended by the manufacturer.
5. Whenever possible, all of a product will be used up before disposing of the container.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

6. Manufacturer's recommendations for proper use and disposal will be followed.
7. The job site superintendent will be responsible for daily inspections to ensure proper use and disposal of materials.

B. Hazardous Products

These practices will be used to reduce the risks associated with hazardous materials. Material Safety Data Sheets (MSDS's) for each substance with hazardous properties that is used on the job site will be obtained and used for the proper management of potential wastes that may result from these products. An MSDS will be posted in the immediate area where such product is stored and/or used and another copy of each MSDS will be maintained in the SWPPP file at the job site construction trailer office. Each employee who must handle a substance with hazardous properties will be instructed on the use of MSDS sheets and the specific information in the applicable MSDS for the product he/she is using, particularly regarding spill control techniques.

1. Products will be kept in original containers with the original labels in legible condition.
2. Original labels and material safety data sheets (MSDS's) will be procured and used for each material.
3. If surplus product must be disposed of, manufacturer's or local/state/federal recommended methods for proper disposal will be followed.
4. A spill control and containment kit (containing for example, absorbent such as kitty litter or sawdust, acid neutralizing powder, brooms, dust pans, mops, rags, gloves, goggles, plastic and metal trash containers, etc.) will be provided at the storage site.
5. All of the product in a container will be used before the container is disposed of. All such containers will be triple rinsed with water prior to disposal. The rinse water used in these containers will be disposed of in a manner in compliance with state and federal regulations and will not be allowed to mix with storm water discharges.

C. Hazardous Waste

All hazardous waste materials will be disposed of by the Contractor in the manner specified by local, state, and/or federal regulations and by the manufacturer of such products. Site personnel will be instructed in these practices by the job site superintendent, who will also be responsible for seeing that these practices are followed.

D. Product Specific Practices

The following product specific practices will be followed on the job site.

1. Petroleum Products

All onsite vehicles will be monitored for leaks and receive regular preventative maintenance to reduce the chance of leakage. Petroleum products will be stored in tightly sealed containers which are clearly labeled. **Any petroleum storage tanks stored onsite will be located within a containment area that is designed with an impervious surface between the tank and the ground. The secondary containment must be designed to provide a containment volume that is equal to 110% of the volume of the largest tank.** Drip pans shall be provided for all dispensers. Any asphalt substances used onsite will be applied according to the manufacturer's recommendations. The location of any fuel tanks and/or equipment storage areas must be identified on a plan by the contractor once the locations have been determined.

2. Fertilizers

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

Fertilizers will be applied only in the minimum amounts recommended by the manufacturer. Once applied, fertilizer will be worked in the soil to limit exposure to stormwater. Storage will be in a covered shed. The contents of any partially used bags of fertilizer will be transferred to a sealable plastic bin to avoid spills.

3. Paints, Paint Solvents, and Cleaning Solvents

All containers will be tightly sealed and stored when not in use. Excess paint and solvents will not be discharged to the storm sewer system but will be properly disposed of according to manufacturer's instructions or state and federal regulations.

4. Concrete Wastes

Concrete trucks will be allowed to wash out or discharge surplus concrete or drum wash water on the site, but only in either (1) specifically designated diked areas which have been prepared to prevent contact between the concrete and/or wash out and storm water which will be discharged from the site or (2) in locations where waste concrete can be poured into forms to make riprap or other useful concrete products.

The hardened residue from the concrete wash out diked areas will be disposed of in the same manner as other non-hazardous construction waste materials or may be broken up and used on site as deemed appropriate by the Contractor. The job site superintendent will be responsible for seeing that these procedures are followed.

All concrete wash out areas will be located in an area where the likelihood of the area contributing to storm water discharges is negligible. If required, additional BMPs must be implemented to prevent concrete wastes from contributing to storm water discharges. The location of concrete wash out area(s) must be identified on a plan by the contractor once the locations have been determined. In addition, a standard detail on the construction of the concrete wash out shall be included on this plan.

E. Solid and Construction Wastes

All waste materials will be collected and stored in an appropriately covered container and/or securely lidded metal dumpster rented from a local waste management company which must be a solid waste management company licensed to do business in New York and the Town of Amherst. The dumpster will comply with all local and state solid waste management regulations.

All trash and construction debris from the site will be deposited in the dumpster. The dumpster will be emptied a minimum of twice per week or more often if necessary, and the trash will be hauled to a landfill approved by the NYSDEC. No construction waste materials will be buried on site. All personnel will be instructed regarding the correct procedures for waste disposal.

All waste dumpsters and roll-off containers will be located in an area where the likelihood of the containers contributing to storm water discharges is negligible. If required, additional BMPs must be implemented, such as sandbags around the base, to prevent wastes from contributing to storm water discharges. The location of waste dumpsters and roll-off containers must be identified on a plan by the contractor once the locations have been determined.

F. Sanitary Wastes

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

Portable toilet units or field offices with toilet facilities connected to the municipal sanitary sewer will be used for sanitary purposes. All portable toilet units will be emptied a minimum of once per week by a licensed portable facility provided in compliance with local and state regulations.

All sanitary waste units will be located in an area where the likelihood of the unit contributing to storm water discharges is negligible. If required, additional BMPs must be implemented, such as sandbags around the base, to prevent wastes from contributing to storm water discharges. The location of sanitary waste units must be identified on a plan by the contractor once the locations have been determined.

G. Contaminated Soils

Any contaminated soils (resulting from spills of materials with hazardous properties) which may result from construction activities will be contained and cleaned up immediately in accordance with the procedures given in the Materials Management Plan and in accordance with applicable state and federal regulations.

818.3 SPILL PREVENTION AND RESPONSE PROCEDURES

The Contractor will train all personnel in the proper handling and cleanup of spilled materials. No spilled hazardous materials or hazardous wastes will be allowed to come in contact with storm water discharges. If such contact occurs, the storm water discharge will be contained on site until appropriate measures in compliance with state and federal regulations are taken to dispose of such contaminated storm water. It shall be the responsibility of the job site superintendent to properly train all personnel in spill prevention and clean up procedures.

A. In order to minimize the potential for a spill of hazardous materials to come into contact with storm water, the following steps will be implemented:

1. All materials with hazardous properties (such as pesticides, petroleum products, fertilizers, detergents, construction chemicals, acids, paints, paint solvents, cleaning solvents, additives for soil stabilization, concrete curing compounds and additives, etc.) will be stored in a secure location, with their lids on, preferably under cover, when not in use.

2. The minimum practical quantity of all such materials will be kept on the job site.

3. A spill control and containment kit (containing, for example, absorbent materials, acid neutralizing powder, brooms, dust pans, mops, rags, gloves, goggles, plastic and metal trash containers, etc.) will be provided at the storage site.

4. Manufacturer's recommended methods for spill cleanup will be clearly posted and site personnel will be trained regarding these procedures and the location of the information and cleanup supplies.

B. In the event of a spill, the following procedures should be followed

1. All spills will be cleaned up immediately after discovery.

2. The spill area will be kept well ventilated and personnel will wear appropriate protective clothing to prevent injury from contact with the hazardous substances.

3. The project manager and the Engineer of Record will be notified immediately.

Spills of toxic or hazardous materials will be reported to the appropriate federal, state, and/or local government agency, regardless of the size of the spill. Spills of amounts that exceed

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

Reportable Quantities of certain substances specifically mentioned in federal regulations (40 CFR 110, 40 CFR 117, and 40 CFR 302) must be immediately reported to the EPA National Response Center, telephone 1-800-424-8802. From SWPPP-9 "Reportable Quantity Release Form" must be filled out.

4. If the spill exceeds a Reportable Quantity, the SWPPP must be modified within seven (7) calendar days of knowledge of the discharge to provide a description of the release, the circumstances leading to the release, and the date of the release. The plans must identify measures to prevent the recurrence of such releases and to respond to such releases.

C. The job site superintendent will be the spill prevention and response coordinator. He will designate the individuals who will receive spill prevention and response training. These individuals will each become responsible for a particular phase of prevention and response. The names of these personnel will be posted in the material storage area and in the office trailer onsite.

819 CONTROL OF NON-STORM WATER DISCHARGES

Certain types of discharges are allowable under the **NYSDEC SPDES** General Permit for Construction Activity for the State of **New York**, and it is the intent of this SWPPP to allow such discharges. These types of discharges will be allowed under the conditions that no pollutants will be allowed to come in contact with the water prior to or after its discharge. The control measures which have been outlined previously in this SWPPP will be strictly followed to ensure that no contamination of these non-storm water discharges takes place. The following allowable non-storm water discharges which may occur at the job site include:

A. Discharges from fire fighting activities.
B. Fire hydrant flushings (see note below)
C. Waters used to wash vehicles or control dust in order to minimize offsite sediment tracking.
D. Routine external building washdown which does not use detergents.
E. Pavement washwaters where spills or leaks of hazardous materials have not occurred or detergents have not been used.
F. Air conditioning condensate.
G. Springs or other uncontaminated groundwater, including dewatering ground water infiltration.
H. Foundation or footing drains where no contamination with process materials such as solvents is present.

Note: The Contractor shall discharge any super-chlorinated water from water distribution pipe disinfection activities into sanitary sewer system

820 STORM WATER CONTROL FACILITY MAINTENANCE

The proposed stormwater drainage system area shall be inspected 2 times per year (spring and fall) for removal of silt and debris. See Appendix H: Stormwater Management Pond and Bioretention Construction and Maintenance Checklist.

1. Provide the Geographic Coordinates for the project site. To do this, go to the NYSDEC Stormwater Interactive Map on the DEC website at:

https://gisservices.dec.ny.gov/gis/stormwater/

Zoom into your Project Location such that you can accurately click on the centroid of your site. Once you have located the centroid of your project site, go to the bottom right hand corner of the map for the X, Y coordinates. Enter the coordinates into the boxes below. For problems with the interactive map use the help function.

X Coordinates (Easting)

-7 8782

Ex. -73.749

Y Coordinates (Northing)

42963

Ex. 42.652

2. What is the nature of this construction project?

○ **New Construction**

● **Redevelopment with increase in impervious area**

○ **Redevelopment with no increase in impervious area**

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

3. Select the predominant land use for both pre and post development conditions.
SELECT ONLY ONE CHOICE FOR EACH

Pre-Development Existing Land Use

- ○ FOREST
- ○ PASTURE/OPEN LAND
- ○ CULTIVATED LAND
- ○ SINGLE FAMILY HOME
- ○ SINGLE FAMILY SUBDIVISION
- ○ TOWN HOME RESIDENTIAL
- ○ MULTIFAMILY RESIDENTIAL
- ○ INSTITUTIONAL/SCHOOL
- ○ INDUSTRIAL
- ● COMMERCIAL
- ○ ROAD/HIGHWAY
- ○ RECREATIONAL/SPORTS FIELD
- ○ BIKE PATH/TRAIL
- ○ LINEAR UTILITY
- ○ PARKING LOT
- ○ OTHER

Post-Development Future Land Use

- ○ SINGLE FAMILY HOME
- ○ SINGLE FAMILY SUBDIVISION — Number of Lots
- ○ TOWN HOME RESIDENTIAL
- ○ MULTIFAMILY RESIDENTIAL
- ○ INSTITUTIONAL/SCHOOL
- ○ INDUSTRIAL
- ● COMMERCIAL
- ○ MUNICIPAL
- ○ ROAD/HIGHWAY
- ○ RECREATIONAL/SPORTS FIELD
- ○ BIKE PATH/TRAIL
- ○ LINEAR UTILITY (water, sewer, gas, etc.)
- ○ PARKING LOT
- ○ CLEARING/GRADING ONLY
- ○ DEMOLITION, NO REDEVELOPMENT
- ○ WELL DRILLING ACTIVITY *(Oil, Gas, etc.)
- ○ OTHER

***Note**: for gas well drilling, non-high volume hydraulic fractured wells only

4. In accordance with the larger common plan of development or sale, enter the total project site area; the total area to be disturbed; existing impervious area to be disturbed (for redevelopment activities); and the future impervious area constructed within the disturbed area. (Round to the nearest tenth of an acre.)

Total Site Area	Total Area To Be Disturbed	Existing Impervious Area To Be Disturbed	Future Impervious Area Within Disturbed Area
1.0	1.0	0.8	0.9

5. Do you plan to disturb more than 5 acres of soil at any one time? ○ **Yes** ● **No**

6. Indicate the percentage of each Hydrologic Soil Group(HSG) at the site.

A	B	C	D
0 %	0 %	0 %	100 %

7. Is this a phased project? ○ **Yes** ● **No**

8. Enter the planned start and end dates of the disturbance activities.

Start Date	End Date
01/01/2022	01/01/2023

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

9. Identify the nearest surface waterbody(ies) to which construction site runoff will discharge.

Name: Ellicott Creek

9a. Type of waterbody identified in Question 9?

- ○ Wetland / State Jurisdiction On Site (Answer 9b)
- ○ Wetland / State Jurisdiction Off Site
- ○ Wetland / Federal Jurisdiction On Site (Answer 9b)
- ○ Wetland / Federal Jurisdiction Off Site
- ○ Stream / Creek On Site
- ● Stream / Creek Off Site
- ○ River On Site
- ○ River Off Site
- ○ Lake On Site
- ○ Lake Off Site
- ○ Other Type On Site
- ○ Other Type Off Site

9b. How was the wetland identified?

- ○ Regulatory Map
- ○ Delineated by Consultant
- ○ Delineated by Army Corps of Engineers
- ○ Other (identify)

10. Has the surface waterbody(ies) in question 9 been identified as a 303(d) segment in Appendix E of GP-0-20-001? ● Yes ○ No

11. Is this project located in one of the Watersheds identified in Appendix C of GP-0-20-001? ○ Yes ● No

12. Is the project located in one of the watershed areas associated with AA and AA-S classified waters? ○ Yes ● No
If no, skip question 13.

13. Does this construction activity disturb land with no existing impervious cover and where the Soil Slope Phase is identified as an E or F on the USDA Soil Survey? ○ Yes ● No
If Yes, what is the acreage to be disturbed?

14. Will the project disturb soils within a State regulated wetland or the protected 100 foot adjacent area? ○ Yes ● No

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

15. Does the site runoff enter a separate storm sewer system (including roadside drains, swales, ditches, culverts, etc)? ◉ Yes ○ No ○ Unknown

16. What is the name of the municipality/entity that owns the separate storm sewer system?

Town of Amherst closed storm water drainage system

17. Does any runoff from the site enter a sewer classified as a Combined Sewer? ○ Yes ◉ No ○ Unknown

18. Will future use of this site be an agricultural property as defined by the NYS Agriculture and Markets Law? ○ Yes ◉ No

19. Is this property owned by a state authority, state agency, federal government or local government? ○ Yes ◉ No

20. Is this a remediation project being done under a Department approved work plan? (i.e. CERCLA, RCRA, Voluntary Cleanup Agreement, etc.) ○ Yes ◉ No

21. Has the required Erosion and Sediment Control component of the SWPPP been developed in conformance with the current NYS Standards and Specifications for Erosion and Sediment Control (aka Blue Book)? ◉ Yes ○ No

22. Does this construction activity require the development of a SWPPP that includes the post-construction stormwater management practice component (i.e. Runoff Reduction, Water Quality and Quantity Control practices/techniques)? ◉ Yes ○ No
If No, skip questions 23 and 27-39.

23. Has the post-construction stormwater management practice component of the SWPPP been developed in conformance with the current NYS Stormwater Management Design Manual? ◉ Yes ○ No

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

24. The Stormwater Pollution Prevention Plan (SWPPP) was prepared by:

- ● **Professional Engineer (P.E.)**
- ○ **Soil and Water Conservation District (SWCD)**
- ○ **Registered Landscape Architect (R.L.A)**
- ○ **Certified Professional in Erosion and Sediment Control (CPESC)**
- ○ **Owner/Operator**
- ○ **Other**

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

25. Has a construction sequence schedule for the planned management practices been prepared? ● Yes ○ No

26. Select **all** of the erosion and sediment control practices that will be employed on the project site:

Temporary Structural

- ○ Check Dams
- ○ Construction Road Stabilization
- ● Dust Control
- ○ Earth Dike
- ○ Level Spreader
- ○ Perimeter Dike/Swale
- ○ Pipe Slope Drain
- ○ Portable Sediment Tank
- ○ Rock Dam
- ○ Sediment Basin
- ○ Sediment Traps
- ● Silt Fence
- ● Stabilized Construction Entrance
- ● Storm Drain Inlet Protection
- ○ Straw/Hay Bale Dike
- ○ Temporary Access Waterway Crossing
- ○ Temporary Stormdrain Diversion
- ○ Temporary Swale
- ○ Turbidity Curtain
- ○ Water bars

Biotechnical

- ○ Brush Matting
- ○ Wattling

Vegetative Measures

- ○ Brush Matting
- ○ Dune Stabilization
- ○ Grassed Waterway
- ● Mulching
- ○ Protecting Vegetation
- ○ Recreation Area Improvement
- ● Seeding
- ● Sodding
- ○ Straw/Hay Bale Dike
- ○ Streambank Protection
- ○ Temporary Swale
- ● Topsoiling
- ○ Vegetating Waterways

Permanent Structural

- ○ Debris Basin
- ○ Diversion
- ○ Grade Stabilization Structure
- ○ Land Grading
- ○ Lined Waterway (Rock)
- ○ Paved Channel (Concrete)
- ○ Paved Flume
- ○ Retaining Wall
- ○ Riprap Slope Protection
- ● Rock Outlet Protection
- ○ Streambank Protection

Other

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

Post-construction Stormwater Management Practice (SMP) Requirements

Important: Completion of Questions 27-39 is not required if response to Question 22 is No.

27. Identify all site planning practices that were used to prepare the final site plan/layout for the project.

- ○ **Preservation of Undisturbed Areas**
- ○ **Preservation of Buffers**
- ○ **Reduction of Clearing and Grading**
- ● **Locating Development in Less Sensitive Areas**
- ○ **Roadway Reduction**
- ○ **Sidewalk Reduction**
- ○ **Driveway Reduction**
- ○ **Cul-de-sac Reduction**
- ○ **Building Footprint Reduction**
- ○ **Parking Reduction**

27a. Indicate which of the following soil restoration criteria was used to address the requirements in Section 5.1.6("Soil Restoration") of the Design Manual (2010 version).

- ● All disturbed areas will be restored in accordance with the Soil Restoration requirements in Table 5.3 of the Design Manual (see page 5-22).
- ○ Compacted areas were considered as impervious cover when calculating the **WQv Required**, and the compacted areas were assigned a post-construction Hydrologic Soil Group (HSG) designation that is one level less permeable than existing conditions for the hydrology analysis.

28. Provide the total Water Quality Volume (WQv) required for this project (based on final site plan/layout).

Total WQv Required

		0	.	0	2	3	**acre-feet**

29. Identify the RR techniques (Area Reduction), RR techniques(Volume Reduction) and Standard SMPs with RRv Capacity in Table 1 (See Page 9) that were used to reduce the Total WQv Required(#28).

Also, provide in Table 1 the total impervious area that contributes runoff to each technique/practice selected. For the Area Reduction Techniques, provide the total contributing area (includes pervious area) and, if applicable, the total impervious area that contributes runoff to the technique/practice.

Note: Redevelopment projects shall use Tables 1 and 2 to identify the SMPs used to treat and/or reduce the WQv required. If runoff reduction techniques will not be used to reduce the required WQv, skip to question 33a after identifying the SMPs.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

7738089822

Table 1 - Runoff Reduction (RR) Techniques and Standard Stormwater Management Practices (SMPs)

	Total Contributing Area (acres)		Total Contributing Impervious Area(acres)

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

Table 2 - Alternative SMPs (DO NOT INCLUDE PRACTICES BEING USED FOR PRETREATMENT ONLY)

Alternative SMP	Total Contributing Impervious Area(acres)
○ Hydrodynamic	
○ Wet Vault	
○ Media Filter	
○ Other	

Provide the name and manufacturer of the Alternative SMPs (i.e. proprietary practice(s)) being used for WQv treatment.

Name

Manufacturer

Note: Redevelopment projects which do not use RR techniques, shall use questions 28, 29, 33 and 33a to provide SMPs used, total WQv required and total WQv provided for the project.

30. Indicate the Total RRv provided by the RR techniques (Area/Volume Reduction) and Standard SMPs with RRv capacity identified in question 29.

Total RRv provided

0.012 **acre-feet**

31. Is the Total RRv provided (#30) greater than or equal to the total WQv required (#28).

○ **Yes** ● **No**

If Yes, go to question 36.
If No, go to question 32.

32. Provide the Minimum RRv required based on HSG.
[Minimum RRv Required = (P)(0.95)(Ai)/12, Ai=(S)(Aic)]

Minimum RRv Required

0.004 **acre-feet**

32a. Is the Total RRv provided (#30) greater than or equal to the Minimum RRv Required (#32)?

● **Yes** ○ **No**

If Yes, go to question 33.
Note: Use the space provided in question #39 to summarize the specific site limitations and justification for not reducing 100% of WQv required (#28). A detailed evaluation of the specific site limitations and justification for not reducing 100% of the WQv required (#28) must also be included in the SWPPP.
If No, sizing criteria has not been met, so NOI can not be processed. SWPPP preparer must modify design to meet sizing criteria.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

33. Identify the Standard SMPs in Table 1 and, if applicable, the Alternative SMPs in Table 2 that were used to treat the remaining total WQv(=Total WQv Required in 28 - Total RRv Provided in 30).

Also, provide in Table 1 and 2 the total impervious area that contributes runoff to each practice selected.

Note: Use Tables 1 and 2 to identify the SMPs used on Redevelopment projects.

33a. Indicate the Total WQv provided (i.e. WQv treated) by the SMPs identified in question #33 and Standard SMPs with RRv Capacity identified in question 29.

WQv Provided

0.018 **acre-feet**

Note: For the standard SMPs with RRv capacity, the WQv provided by each practice = the WQv calculated using the contributing drainage area to the practice - RRv provided by the practice. (See Table 3.5 in Design Manual)

34. Provide the sum of the Total RRv provided (#30) and the WQv provided (#33a).

0.030

35. Is the sum of the RRv provided (#30) and the WQv provided (#33a) greater than or equal to the total WQv required (#28)? ● **Yes** ○ **No**

If Yes, go to question 36.
If No, sizing criteria has not been met, so NOI can not be processed. SWPPP preparer must modify design to meet sizing criteria.

36. Provide the total Channel Protection Storage Volume (CPv) required and provided or select waiver (36a), if applicable.

CPv Required

0.019 **acre-feet**

CPv Provided

0.019 **acre-feet**

36a. The need to provide channel protection has been waived because:

○ Site discharges directly to tidal waters or a fifth order or larger stream.

○ Reduction of the total CPv is achieved on site through runoff reduction techniques or infiltration systems.

37. Provide the Overbank Flood (Qp) and Extreme Flood (Qf) control criteria or select waiver (37a), if applicable.

Total Overbank Flood Control Criteria (Qp)

Pre-Development

4.29 **CFS**

Post-development

3.62 **CFS**

Total Extreme Flood Control Criteria (Qf)

Pre-Development

7.37 **CFS**

Post-development

5.59 **CFS**

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

37a. The need to meet the Qp and Qf criteria has been waived because:

- ○ Site discharges directly to tidal waters or a fifth order or larger stream.
- ○ Downstream analysis reveals that the Qp and Qf controls are not required

38. Has a long term Operation and Maintenance Plan for the post-construction stormwater management practice(s) been developed? ● Yes ○ No

If Yes, Identify the entity responsible for the long term Operation and Maintenance

Benderson Development Company

39. Use this space to summarize the specific site limitations and justification for not reducing 100% of WQv required(#28). (See question 32a) This space can also be used for other pertinent project information.

RRv criteria is not required for redevelopment activities & onsite soils with slow infiltration rates

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

40. Identify other DEC permits, existing and new, that are required for this project/facility.

- ● None

41. Does this project require a US Army Corps of Engineers Wetland Permit? ○ **Yes** ● **No**
If Yes, Indicate Size of Impact. [ ][ ][ ][ ][ ][ ].[ ]

42. Is this project subject to the requirements of a regulated, traditional land use control MS4? ● **Yes** ○ **No**
(If No, skip question 43)

43. Has the "MS4 SWPPP Acceptance" form been signed by the principal executive officer or ranking elected official and submitted along with this NOI? ● **Yes** ○ **No**

44. If this NOI is being submitted for the purpose of continuing or transferring coverage under a general permit for stormwater runoff from construction activities, please indicate the former SPDES number assigned. [N][Y][R][ ][ ][ ][ ][ ][ ]

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

Owner/Operator Certification

I have read or been advised of the permit conditions and believe that I understand them. I also understand that, under the terms of the permit, there may be reporting requirements. I hereby certify that this document and the corresponding documents were prepared under my direction or supervision. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations. I further understand that coverage under the general permit will be identified in the acknowledgment that I will receive as a result of submitting this NOI and can be as long as sixty (60) business days as provided for in the general permit. I also understand that, by submitting this NOI, I am acknowledging that the SWPPP has been developed and will be implemented as the first element of construction, and agreeing to comply with all the terms and conditions of the general permit for which this NOI is being submitted.

MS4 SWPPP Acceptance Form - continued

V. Certification Statement - MS4 Official (principal executive officer or ranking elected official) or Duly Authorized Representative

I hereby certify that the final Stormwater Pollution Prevention Plan (SWPPP) for the construction project identified in question 5 has been reviewed and meets the substantive requirements in the SPDES General Permit For Stormwater Discharges from Municipal Separate Storm Sewer Systems (MS4s). Note: The MS4, through the acceptance of the SWPPP, assumes no responsibility for the accuracy and adequacy of the design included in the SWPPP. In addition, review and acceptance of the SWPPP by the MS4 does not relieve the owner/operator or their SWPPP preparer of responsibility or liability for errors or omissions in the plan.

Proposed Site Redevelopment
4548-4564 Main Street
Amherst, NY 14226

8/18/2021

Section 1 – Location & Description

This redevelopment project will consist of the construction of a 3-story mixed-use building that will include apartments, restaurant space and multi-level parking. The site is located on the north side of Main Street (NY-5), between Fruehauf Ave and Chateau Terrace in the Town of Amherst. The existing site is currently occupied by a 3-story vacant building located along the Main Street frontage. Existing surface parking is located north behind the existing building. Both the existing building and parking areas will be removed as part of this project. The overall site area is approximately 0.93+/- acres, however, construction activities will result in approximately 1.02+/- acres of disturbance area.

Section 2 – Stormwater Drainage System

The existing side streets, Fruehauf Ave and Chateau Terrace, slope from south to north. Existing closed stormwater drainage systems are located along Main Street (NYSDOT) and Chateau Terrace (Town of Amherst). The existing northeast parking lot area sheet drains to the north and northeast to Chateau Terrace. The existing northwest parking lot is generally flat and drains to an existing closed stormwater drainage system with unknown outlet. Existing stormwater runoff collected and conveyed from the site is ultimately tributary to Ellicott Creek and the Niagara River.

For purposes of the runoff analysis and the stormwater drainage system design, portions of the project site were classified as “Redevelopment” per NYSDEC Stormwater Management Design Manual Chapter 9 requirements. The nature of this construction project will be a “Redevelopment” with an increase in impervious area. The proposed hydrology of the site development will remain similar to existing hydrologic conditions. The proposed parking and patio areas will consist of a combination of overland sheet flow and pipe channel flow connected by a series of trench drains located throughout the runoff areas. Stormwater runoff from these areas will be conveyed to a proposed onsite stormwater management area located on the north side of the site consisting of a dry detention basin with a bioretention planting area located in the bottom of the basin. Runoff routed through the proposed basin will be discharged via a 6” HDPE outlet control pipe to the existing closed stormwater drainage system along Chateau Terrace. Proposed rooftop runoff will be discharged directly to the existing closed stormwater drainage system along Chateau Terrace.

The dry detention basin volume was designed with an outlet control pipe to attenuate proposed runoff to existing conditions prior to discharge. The bioretention area will provide Runoff Reduction and Water Quality volume requirements. The filter area planting soil depth varies throughout the bioretention

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

area but maintains a minimum of at least 18 inches of soil. The 18 inches of soil is an acceptable deviation per the NYSDEC where existing grades prevent the full 2.5'-4' foot soil depth. 6" underdrain below the planting soil will be located throughout the bioretention area connected by an overflow catch basin to convey runoff to the outlet control pipe.

The NYSDEC Stormwater Management Design Manual requires a five-step process for Stormwater Management Planning as outlined in Chapter 3. The five steps include:

1. *Site planning to preserve natural features and reduce impervious cover.*
   - Minimal natural existing features are located onsite and the site is located in a less sensitive area.
2. *Calculation of Water Quality Volume (WQv) for site.*
   - See "Stormwater Drainage Analysis".
3. *Incorporation of Green Infrastructure techniques and standard SMPs with Runoff Reduction Volume (RRv) capacity.*
   - A bioretention area was incorporated into the site design to provide required RRv. See "Stormwater Drainage Analysis".
4. *Use of standard SMPs where applicable, to treat the portion of water quality volume not addressed by green infrastructure techniques and standard SMPs with RRv capacity.*
   - 100% of required Water Quality was addressed by the bioretention area. See "Stormwater Drainage Analysis".
5. *Design of volume and peak rate control practices where required.*
   - See "Stormwater Drainage Analysis".

The NYSDEC Stormwater Management Design Manual requires (5) five different criteria be considered when designing a stormwater management system. Those criteria are Water Quality, Runoff Reduction Volume, Channel Protection, Overbank Flooding and Extreme Storm Protection. Below is a summary of each item and how it is incorporated into this project.

Water Quality:
The NYSDEC requires water quality treatment prior to discharge. This will be achieved by the application of a bioretention area. The total WQv provided was 1,301 cf and greater than the required WQv of 1,002 cf.

Runoff Reduction Volume:
The NYSDEC requires reduction of the total water quality volume by green infrastructure techniques and SMPs to replicate pre-development hydrology. A bioretention area was incorporated into the site layout to provide the required RRv for contributing runoff areas in the WQv. The RRv provided was 520 cf and greater than the required RRv min. of 172 cf.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

100% of the required WQv was not reduced due to the followings site specific limitations: *RRv criteria is not required for redevelopment activities & onsite soils with slow infiltration rates.* In addition, below is a summary of how each green infrastructure technique was evaluated and determined to be feasible or infeasible:

1) Conservation of natural areas: the site development is located in a less sensitive area.
2) Sheetflow to riparian buffers or filter strips: no riparian buffers possible on the site; filter strips not feasible given the limited area for development.
3) Vegetated Open Swales: swales are not feasible given the limited area for development.
4) Tree Plantings: new trees to be planted throughout the site.
5) Disconnection of Roof Top Runoff: roof top runoff will be connected to closed stormwater drainage system.
6) Stream Daylighting: is not feasible given the limited area for development.
7) Rain Garden: this method is not recommended for these types of projects.
8) Green Roof: the proposed use of the building makes this an unfeasible practice.
9) Stormwater Planter: this method is not recommended for these types of projects.
10) Rain Barrels & Cisterns: collected water would not be used for irrigation.
11) Porous Pavement: porous pavement is not recommended for areas with impermeable soils (Type D) and areas with sediment laden runoff (salting in winter months).

Channel Protection:
The NYSDEC requires that 24-Hour extended detention be provided for the proposed 1-year storm event. A volume of 842 cf (0.019 ac-ft) will be accommodated in the detention basin onsite.

Overbank Flooding:
The NYSDEC requires that the 10-year proposed storm event be attenuated with detention and that the outlet be restricted to the 10-year existing storm event. Storage of this storm will be provided within the detention basin onsite. At this storm event the stormwater drainage system will allow discharge of 3.62 cfs, which is below the existing peak 10-year runoff of 4.29 cfs.

Extreme Storm Protection:
The NYSDEC requires that the 100-year proposed storm event be attenuated with detention and that the outlet be restricted to the 100-year existing storm event. Storage of this storm will be provided within the detention basin onsite. At this

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

storm event the stormwater drainage system will allow discharge of 5.59 cfs, which is below the existing peak 100-year runoff of 7.37 cfs.

Town of Amherst:
The Town of Amherst requires that the 25-year proposed storm event be attenuated with detention and that the outlet be restricted to the 10-year existing storm event. Storage will be provided within the detention basin onsite. At the 25-year storm event the stormwater drainage system will allow discharge of 4.28 cfs, which is below the existing peak 10-year runoff of 4.29 cfs.

Design Criteria:
Storm pipes: 10-year storm
Detention:

- Comparison of the existing 1-year vs. the proposed 1-year runoff
- Comparison of the existing 10-year vs. the proposed 10-year runoff
- Comparison of the existing 100-year vs. the proposed 100-year runoff
- Comparison of the existing 10-year vs. the proposed 25-year runoff

Bioretention: RRv = 100% of post-development water quality volumes

RUNOFF ANALYSIS OF PROPOSED DEVELOPMENT AREA:

STORM EVENT	EXISTING RUNOFF	PROPOSED RUNOFF
1 YEAR	2.28 CFS	1.61 CFS
10 YEAR	4.29 CFS	3.62 CFS
25 YEAR	5.33 CFS	4.28 CFS
100 YEAR	7.37 CFS	5.59 CFS

WATER QUALITY SUMMARY:
WQv REQUIRED = 1,002 CF (0.023 AC-FT)
RRv MIN. REQUIRED = 172 CF (0.004 AC-FT)
RRv PROVIDED WITHIN BIORETENTION AREA = 520 CF (0.012 AC-FT)
WQv PROVIDED WITHIN BIORETENTION AREA = 1,301 CF (0.030 AC-FT)

BIORETENTION FILTER AREA & ELEVATION SUMMARY:
FILTER AREA = 1,115 SF @ 672.50

See attached “Stormwater Drainage Analysis” for additional information.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:15,800.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Erie County, New York
Survey Area Data: Version 20, Jun 11, 2020

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Jul 4, 2020—Jul 10, 2020

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Totals for Area of Interest			**0.9**	**100.0%**

Description

"Water table" refers to a saturated zone in the soil. It occurs during specified months. Estimates of the upper limit are based mainly on observations of the water table at selected sites and on evidence of a saturated zone, namely grayish colors (redoximorphic features) in the soil. A saturated zone that lasts for less than a month is not considered a water table.

This attribute is actually recorded as three separate values in the database. A low value and a high value indicate the range of this attribute for the soil component. A "representative" value indicates the expected value of this attribute for the component. For this soil property, only the representative value is used.

Rating Options

Units of Measure: centimeters

PREFACE

Pursuant to Section 402 of the Clean Water Act ("CWA"), stormwater *discharges* from certain *construction activities* are unlawful unless they are authorized by a *National Pollutant Discharge Elimination System ("NPDES")* permit or by a state permit program. New York administers the approved State Pollutant Discharge Elimination System (SPDES) program with permits issued in accordance with the New York State Environmental Conservation Law (ECL) Article 17, Titles 7, 8 and Article 70.

An *owner or operator* of a *construction activity* that is eligible for coverage under this permit must obtain coverage prior to the *commencement of construction activity*. Activities that fit the definition of "*construction activity*", as defined under 40 CFR 122.26(b)(14)(x), (15)(i), and (15)(ii), constitute construction of a *point source* and therefore, pursuant to ECL section 17-0505 and 17-0701, the *owner or operator* must have coverage under a SPDES permit prior to *commencing construction activity*. The *owner or operator* cannot wait until there is an actual *discharge* from the *construction site* to obtain permit coverage.

***Note: The italicized words/phrases within this permit are defined in Appendix A.**

Part 1. PERMIT COVERAGE AND LIMITATIONS

A. Permit Application

This permit authorizes stormwater *discharges* to *surface waters of the State* from the following *construction activities* identified within 40 CFR Parts 122.26(b)(14)(x), 122.26(b)(15)(i) and 122.26(b)(15)(ii), provided all of the eligibility provisions of this permit are met:

1. *Construction activities* involving soil disturbances of one (1) or more acres; including disturbances of less than one acre that are part of a *larger common plan of development or sale* that will ultimately disturb one or more acres of land; excluding *routine maintenance activity* that is performed to maintain the original line and grade, hydraulic capacity or original purpose of a facility;

2. *Construction activities* involving soil disturbances of less than one (1) acre where the Department has determined that a *SPDES* permit is required for stormwater *discharges* based on the potential for contribution to a violation of a *water quality standard* or for significant contribution of *pollutants* to *surface waters of the State.*

3. *Construction activities* located in the watershed(s) identified in Appendix D that involve soil disturbances between five thousand (5,000) square feet and one (1) acre of land.

B. Effluent Limitations Applicable to Discharges from Construction Activities

*Discharge*s authorized by this permit must achieve, at a minimum, the effluent limitations in Part I.B.1. (a) – (f) of this permit. These limitations represent the degree of effluent reduction attainable by the application of best practicable technology currently available.

1. Erosion and Sediment Control Requirements - The *owner or operator* must select, design, install, implement and maintain control measures to *minimize* the *discharge* of *pollutants* and prevent a violation of the *water quality standards*. The selection, design, installation, implementation, and maintenance of these control measures must meet the non-numeric effluent limitations in Part I.B.1.(a) – (f) of this permit and be in accordance with the New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016, using sound engineering judgment. Where control measures are not designed in conformance with the design criteria included in the technical standard, the *owner or operator* must include in the *Stormwater Pollution Prevention Plan* ("SWPPP") the reason(s) for the

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

deviation or alternative design and provide information which demonstrates that the deviation or alternative design is *equivalent* to the technical standard.

a. **Erosion and Sediment Controls.** Design, install and maintain effective erosion and sediment controls to *minimize* the *discharge* of *pollutants* and prevent a violation of the *water quality standards*. At a minimum, such controls must be designed, installed and maintained to:

   (i) *Minimize* soil erosion through application of runoff control and soil stabilization control measure to *minimize pollutant discharge*s;

   (ii) Control stormwater *discharge*s, including both peak flowrates and total stormwater volume, to *minimize* channel and *streambank* erosion and scour in the immediate vicinity of the *discharge* points;

   (iii) *Minimize* the amount of soil exposed during *construction activity*;

   (iv) *Minimize* the disturbance of *steep slopes*;

   (v) *Minimize* sediment *discharge*s from the site;

   (vi) Provide and maintain *natural buffer*s around surface waters, direct stormwater to vegetated areas and maximize stormwater infiltration to reduce *pollutant discharge*s, unless *infeasible*;

   (vii) *Minimize* soil compaction. Minimizing soil compaction is not required where the intended function of a specific area of the site dictates that it be compacted;

   (viii) Unless *infeasible*, preserve a sufficient amount of topsoil to complete soil restoration and establish a uniform, dense vegetative cover; and

   (ix) *Minimize* dust. On areas of exposed soil, *minimize* dust through the appropriate application of water or other dust suppression techniques to control the generation of pollutants that could be discharged from the site.

b. **Soil Stabilization**. In areas where soil disturbance activity has temporarily or permanently ceased, the application of soil stabilization measures must be initiated by the end of the next business day and completed within fourteen (14) days from the date the current soil disturbance activity ceased. For construction sites that *directly discharge* to one of the 303(d) segments

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

listed in Appendix E or is located in one of the watersheds listed in Appendix C, the application of soil stabilization measures must be initiated by the end of the next business day and completed within seven (7) days from the date the current soil disturbance activity ceased. See Appendix A for definition of *Temporarily Ceased*.

c. **Dewatering**. *Discharge*s from *dewatering* activities, including *discharge*s from *dewatering* of trenches and excavations, must be managed by appropriate control measures.

d. **Pollution Prevention Measures**. Design, install, implement, and maintain effective pollution prevention measures to *minimize* the *discharge* of *pollutants* and prevent a violation of the *water quality standards*. At a minimum, such measures must be designed, installed, implemented and maintained to:

(i) *Minimize* the *discharge* of *pollutants* from equipment and vehicle washing, wheel wash water, and other wash waters. This applies to washing operations that use clean water only. Soaps, detergents and solvents cannot be used;

(ii) *Minimize* the exposure of building materials, building products, construction wastes, trash, landscape materials, fertilizers, pesticides, herbicides, detergents, sanitary waste, hazardous and toxic waste, and other materials present on the site to precipitation and to stormwater. Minimization of exposure is not required in cases where the exposure to precipitation and to stormwater will not result in a *discharge* of *pollutants*, or where exposure of a specific material or product poses little risk of stormwater contamination (such as final products and materials intended for outdoor use) ; and

(iii) Prevent the *discharge* of *pollutants* from spills and leaks and implement chemical spill and leak prevention and response procedures.

e. **Prohibited *Discharges*.** The following *discharge*s are prohibited:

(i) Wastewater from washout of concrete;

(ii) Wastewater from washout and cleanout of stucco, paint, form release oils, curing compounds and other construction materials;

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

(iii) Fuels, oils, or other *pollutants* used in vehicle and equipment operation and maintenance;

(iv) Soaps or solvents used in vehicle and equipment washing; and

(v) Toxic or hazardous substances from a spill or other release.

f. Surface Outlets. When discharging from basins and impoundments, the outlets shall be designed, constructed and maintained in such a manner that sediment does not leave the basin or impoundment and that erosion at or below the outlet does not occur.

C. Post-construction Stormwater Management Practice Requirements

1. The *owner or operator* of a *construction activity* that requires post-construction stormwater management practices pursuant to Part III.C. of this permit must select, design, install, and maintain the practices to meet the *performance criteria* in the New York State Stormwater Management Design Manual ("Design Manual"), dated January 2015, using sound engineering judgment. Where post-construction stormwater management practices ("SMPs") are not designed in conformance with the *performance criteria* in the Design Manual, the *owner or operator* must include in the SWPPP the reason(s) for the deviation or alternative design and provide information which demonstrates that the deviation or alternative design is *equivalent* to the technical standard.

2. The *owner or operator* of a *construction activity* that requires post-construction stormwater management practices pursuant to Part III.C. of this permit must design the practices to meet the applicable *sizing criteria* in Part I.C.2.a., b., c. or d. of this permit.

a. Sizing Criteria for New Development

(i) Runoff Reduction Volume ("RRv"): Reduce the total Water Quality Volume ("WQv") by application of RR techniques and standard SMPs with RRv capacity. The total WQv shall be calculated in accordance with the criteria in Section 4.2 of the Design Manual.

(ii) Minimum RRv and Treatment of Remaining Total WQv: Construction activities that cannot meet the criteria in Part I.C.2.a.(i) of this permit due to site limitations shall direct runoff from all newly constructed impervious areas to a RR technique or standard SMP with RRv capacity unless infeasible. The specific site limitations that prevent the reduction of 100% of the WQv shall be documented in the SWPPP.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

For each impervious area that is not directed to a RR technique or standard SMP with RRv capacity, the SWPPP must include documentation which demonstrates that all options were considered and for each option explains why it is considered infeasible.

In no case shall the runoff reduction achieved from the newly constructed impervious areas be less than the Minimum RRv as calculated using the criteria in Section 4.3 of the Design Manual. The remaining portion of the total WQv that cannot be reduced shall be treated by application of standard SMPs.

(iii) Channel Protection Volume ("Cpv"): Provide 24 hour extended detention of the post-developed 1-year, 24-hour storm event; remaining after runoff reduction. The Cpv requirement does not apply when:
(1) Reduction of the entire Cpv is achieved by application of runoff reduction techniques or infiltration systems, or
(2) The site discharges directly to tidal waters, or fifth order or larger streams.

(iv) *Overbank* Flood Control Criteria ("Qp"): Requires storage to attenuate the post-development 10-year, 24-hour peak discharge rate (Qp) to predevelopment rates. The Qp requirement does not apply when:
(1) the site discharges directly to tidal waters or fifth order or larger streams, or
(2) A downstream analysis reveals that *overbank* control is not required.

(v) Extreme Flood Control Criteria ("Qf"): Requires storage to attenuate the post-development 100-year, 24-hour peak discharge rate (Qf) to predevelopment rates. The Qf requirement does not apply when:
(1) the site discharges directly to tidal waters or fifth order or larger streams, or
(2) A downstream analysis reveals that *overbank* control is not required.

b. *Sizing Criteria* for *New Development* in Enhanced Phosphorus Removal Watershed

(i) Runoff Reduction Volume (RRv): Reduce the total Water Quality Volume (WQv) by application of RR techniques and standard SMPs with RRv capacity. The total WQv is the runoff volume from the 1-year, 24 hour design storm over the post-developed watershed and shall be

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

calculated in accordance with the criteria in Section 10.3 of the Design Manual.

(ii) Minimum RRv and Treatment of Remaining Total WQv: *Construction activities* that cannot meet the criteria in Part I.C.2.b.(i) of this permit due to *site limitations* shall direct runoff from all newly constructed *impervious areas* to a RR technique or standard SMP with RRv capacity unless *infeasible*. The specific *site limitations* that prevent the reduction of 100% of the WQv shall be documented in the SWPPP. For each *impervious area* that is not directed to a RR technique or standard SMP with RRv capacity, the SWPPP must include documentation which demonstrates that all options were considered and for each option explains why it is considered *infeasible.*

In no case shall the runoff reduction achieved from the newly constructed *impervious areas* be less than the Minimum RRv as calculated using the criteria in Section 10.3 of the Design Manual. The remaining portion of the total WQv that cannot be reduced shall be treated by application of standard SMPs.

(iii) Channel Protection Volume (Cpv): Provide 24 hour extended detention of the post-developed 1-year, 24-hour storm event; remaining after runoff reduction. The Cpv requirement does not apply when:
(1) Reduction of the entire Cpv is achieved by application of runoff reduction techniques or infiltration systems, or
(2) The site *discharge*s directly to tidal waters, or fifth order or larger streams.

(iv) *Overbank* Flood Control Criteria (Qp): Requires storage to attenuate the post-development 10-year, 24-hour peak *discharge* rate (Qp) to predevelopment rates. The Qp requirement does not apply when:
(1) the site *discharge*s directly to tidal waters or fifth order or larger streams, or
(2) A downstream analysis reveals that *overbank* control is not required.

(v) Extreme Flood Control Criteria (Qf): Requires storage to attenuate the post-development 100-year, 24-hour peak *discharge* rate (Qf) to predevelopment rates. The Qf requirement does not apply when:
(1) the site *discharge*s directly to tidal waters or fifth order or larger streams, or
(2) A downstream analysis reveals that *overbank* control is not required.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

c. Sizing Criteria for Redevelopment Activity

(i) Water Quality Volume (WQv): The WQv treatment objective for *redevelopment activity* shall be addressed by one of the following options. *Redevelopment activities* located in an Enhanced Phosphorus Removal Watershed (see Part III.B.3. and Appendix C of this permit) shall calculate the WQv in accordance with Section 10.3 of the Design Manual. All other *redevelopment activities* shall calculate the WQv in accordance with Section 4.2 of the Design Manual.

(1) Reduce the existing *impervious cover* by a minimum of 25% of the total disturbed, *impervious area*. The Soil Restoration criteria in Section 5.1.6 of the Design Manual must be applied to all newly created pervious areas, or

(2) Capture and treat a minimum of 25% of the WQv from the disturbed, *impervious area* by the application of standard SMPs; or reduce 25% of the WQv from the disturbed, *impervious area* by the application of RR techniques or standard SMPs with RRv capacity., or

(3) Capture and treat a minimum of 75% of the WQv from the disturbed, *impervious area* as well as any additional runoff from tributary areas by application of the alternative practices discussed in Sections 9.3 and 9.4 of the Design Manual., or

(4) Application of a combination of 1, 2 and 3 above that provide a weighted average of at least two of the above methods. Application of this method shall be in accordance with the criteria in Section 9.2.1(B) (IV) of the Design Manual.

If there is an existing post-construction stormwater management practice located on the site that captures and treats runoff from the *impervious area* that is being disturbed, the WQv treatment option selected must, at a minimum, provide treatment equal to the treatment that was being provided by the existing practice(s) if that treatment is greater than the treatment required by options 1 – 4 above.

(ii) Channel Protection Volume (Cpv): Not required if there are no changes to hydrology that increase the *discharge* rate from the project site.

(iii) *Overbank* Flood Control Criteria (Qp): Not required if there are no changes to hydrology that increase the *discharge* rate from the project site.

(iv) Extreme Flood Control Criteria (Qf): Not required if there are no changes to hydrology that increase the *discharge* rate from the project site

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

d. Sizing Criteria for Combination of Redevelopment Activity and New Development

Construction projects that include both New Development and Redevelopment Activity shall provide post-construction stormwater management controls that meet the sizing criteria calculated as an aggregate of the Sizing Criteria in Part I.C.2.a. or b. of this permit for the New Development portion of the project and Part I.C.2.c of this permit for Redevelopment Activity portion of the project.

D. Maintaining Water Quality

The Department expects that compliance with the conditions of this permit will control *discharge*s necessary to meet applicable *water quality standards*. It shall be a violation of the *ECL* for any discharge to either cause or contribute to a violation of *water quality standards* as contained in Parts 700 through 705 of Title 6 of the Official Compilation of Codes, Rules and Regulations of the State of New York, such as:

1. There shall be no increase in turbidity that will cause a substantial visible contrast to natural conditions;

2. There shall be no increase in suspended, colloidal or settleable solids that will cause deposition or impair the waters for their best usages; and

3. There shall be no residue from oil and floating substances, nor visible oil film, nor globules of grease.

If there is evidence indicating that the stormwater *discharge*s authorized by this permit are causing, have the reasonable potential to cause, or are contributing to a violation of the *water quality standards*; the *owner or operator* must take appropriate corrective action in accordance with Part IV.C.5. of this general permit and document in accordance with Part IV.C.4. of this general permit. To address the *water quality standard* violation the *owner or operator* may need to provide additional information, include and implement appropriate controls in the SWPPP to correct the problem, or obtain an individual SPDES permit.

If there is evidence indicating that despite compliance with the terms and conditions of this general permit it is demonstrated that the stormwater *discharge*s authorized by this permit are causing or contributing to a violation of *water quality standards*, or if the Department determines that a modification of the permit is necessary to prevent a violation of *water quality standards*, the authorized *discharge*s will no longer be eligible for coverage under this permit. The Department may require the *owner or operator* to obtain an individual SPDES permit to continue discharging.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

E. Eligibility Under This General Permit

1. This permit may authorize all *discharges* of stormwater from *construction activity* to *surface waters of the State* and *groundwaters* except for ineligible *discharges* identified under subparagraph F. of this Part.

2. Except for non-stormwater *discharges* explicitly listed in the next paragraph, this permit only authorizes stormwater *discharge*s; including stormwater runoff, snowmelt runoff, and surface runoff and drainage, from *construction activities*.

3. Notwithstanding paragraphs E.1 and E.2 above, the following non-stormwater discharges are authorized by this permit: those listed in 6 NYCRR 750-1.2(a)(29)(vi), with the following exception: "Discharges from firefighting activities are authorized only when the firefighting activities are emergencies/unplanned"; waters to which other components have not been added that are used to control dust in accordance with the SWPPP; and uncontaminated *discharge*s from *construction site* de-watering operations. All non-stormwater discharges must be identified in the SWPPP. Under all circumstances, the *owner or operator* must still comply with *water quality standards* in Part I.D of this permit.

4. The *owner or operator* must maintain permit eligibility to *discharge* under this permit. Any *discharges* that are not compliant with the eligibility conditions of this permit are not authorized by the permit and the *owner or operator* must either apply for a separate permit to cover those ineligible *discharges* or take steps necessary to make the *discharge* eligible for coverage.

F. Activities Which Are Ineligible for Coverage Under This General Permit

All of the following are **not** authorized by this permit:

1. *Discharge*s after *construction activities* have been completed and the site has undergone *final stabilization*;

2. *Discharge*s that are mixed with sources of non-stormwater other than those expressly authorized under subsection E.3. of this Part and identified in the SWPPP required by this permit;

3. *Discharges* that are required to obtain an individual SPDES permit or another SPDES general permit pursuant to Part VII.K. of this permit;

4. *Construction activities* or *discharges* from *construction activities* that may adversely affect an *endangered or threatened species* unless the *owner or*

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

operator has obtained a permit issued pursuant to 6 NYCRR Part 182 for the project or the Department has issued a letter of non-jurisdiction for the project. All documentation necessary to demonstrate eligibility shall be maintained on site in accordance with Part II.D.2 of this permit;

5. *Discharges* which either cause or contribute to a violation of *water quality standards* adopted pursuant to the *ECL* and its accompanying regulations;

6. *Construction activities* for residential, commercial and institutional projects:

   a. Where the *discharge*s from the *construction activities* are tributary to waters of the state classified as AA or AA-s; and

   b. Which are undertaken on land with no existing *impervious cover*; and

   c. Which disturb one (1) or more acres of land designated on the current United States Department of Agriculture ("USDA") Soil Survey as Soil Slope Phase "D", (provided the map unit name is inclusive of slopes greater than 25%), or Soil Slope Phase "E" or "F" (regardless of the map unit name), or a combination of the three designations.

7. *Construction activities* for linear transportation projects and linear utility projects:

   a. Where the *discharge*s from the *construction activities* are tributary to waters of the state classified as AA or AA-s; and

   b. Which are undertaken on land with no existing *impervious cover*; and

   c. Which disturb two (2) or more acres of land designated on the current USDA Soil Survey as Soil Slope Phase "D" (provided the map unit name is inclusive of slopes greater than 25%), or Soil Slope Phase "E" or "F" (regardless of the map unit name), or a combination of the three designations.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

8. *Construction activities* that have the potential to affect an *historic property*, unless there is documentation that such impacts have been resolved. The following documentation necessary to demonstrate eligibility with this requirement shall be maintained on site in accordance with Part II.D.2 of this permit and made available to the Department in accordance with Part VII.F of this permit:

   a. Documentation that the *construction activity* is not within an archeologically sensitive area indicated on the sensitivity map, and that the *construction activity* is not located on or immediately adjacent to a property listed or determined to be eligible for listing on the National or State Registers of Historic Places, and that there is no new permanent building on the *construction site* within the following distances from a building, structure, or object that is more than 50 years old, or if there is such a new permanent building on the *construction site* within those parameters that NYS Office of Parks, Recreation and Historic Preservation (OPRHP), a Historic Preservation Commission of a Certified Local Government, or a qualified preservation professional has determined that the building, structure, or object more than 50 years old is not historically/archeologically significant.

      - 1-5 acres of disturbance - 20 feet
      - 5-20 acres of disturbance - 50 feet
      - 20+ acres of disturbance - 100 feet, or

   b. DEC consultation form sent to OPRHP, and copied to the NYS DEC Agency Historic Preservation Officer (APO), and
      (i) the State Environmental Quality Review (SEQR) Environmental Assessment Form (EAF) with a negative declaration or the Findings Statement, with documentation of OPRHP's agreement with the resolution; or
      (ii) documentation from OPRHP that the *construction activity* will result in No Impact; or
      (iii) documentation from OPRHP providing a determination of No Adverse Impact; or
      (iv) a Letter of Resolution signed by the owner/operator, OPRHP and the DEC APO which allows for this *construction activity* to be eligible for coverage under the general permit in terms of the State Historic Preservation Act (SHPA); or

   c. Documentation of satisfactory compliance with Section 106 of the National Historic Preservation Act for a coterminous project area:

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

(i) No Affect
(ii) No Adverse Affect
(iii) Executed Memorandum of Agreement, or

d. Documentation that:

(i) SHPA Section 14.09 has been completed by NYS DEC or another state agency.

9. *Discharge*s from *construction activities* that are subject to an existing SPDES individual or general permit where a SPDES permit for *construction activity* has been terminated or denied; or where the *owner or operator* has failed to renew an expired individual permit.

Part II. PERMIT COVERAGE

A. How to Obtain Coverage

1. An *owner or operator* of a *construction activity* that is not subject to the requirements of a regulated, traditional land use control MS4 must first prepare a SWPPP in accordance with all applicable requirements of this permit and then submit a completed Notice of Intent (NOI) to the Department to be authorized to discharge under this permit.

2. An *owner or operator* of a *construction activity* that is subject to the requirements of a *regulated, traditional land use control MS4* must first prepare a SWPPP in accordance with all applicable requirements of this permit and then have the SWPPP reviewed and accepted by the *regulated, traditional land use control MS4* prior to submitting the NOI to the Department. The *owner or operator* shall have the "MS4 SWPPP Acceptance" form signed in accordance with Part VII.H., and then submit that form along with a completed NOI to the Department.

3. The requirement for an *owner or operator* to have its SWPPP reviewed and accepted by the *regulated, traditional land use control MS4* prior to submitting the NOI to the Department does not apply to an *owner or operator* that is obtaining permit coverage in accordance with the requirements in Part II.F. (Change of *Owner or Operator*) or where the *owner or operator* of the *construction activity* is the *regulated, traditional land use control MS4* . This exemption does not apply to *construction activities* subject to the New York City Administrative Code.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

B. Notice of Intent (NOI) Submittal

1. Prior to December 21, 2020, an owner or operator shall use either the electronic (eNOI) or paper version of the NOI that the Department prepared. Both versions of the NOI are located on the Department's website (http://www.dec.ny.gov/). The paper version of the NOI shall be signed in accordance with Part VII.H. of this permit and submitted to the following address:

   NOTICE OF INTENT
   NYS DEC, Bureau of Water Permits
   625 Broadway, 4th Floor
   Albany, New York 12233-3505

2. Beginning December 21, 2020 and in accordance with EPA's 2015 NPDES Electronic Reporting Rule (40 CFR Part 127), the *owner or operator* must submit the NOI electronically using the *Department's* online NOI.

3. The *owner or operator* shall have the SWPPP preparer sign the "SWPPP Preparer Certification" statement on the NOI prior to submitting the form to the Department.

4. As of the date the NOI is submitted to the Department, the *owner or operator* shall make the NOI and SWPPP available for review and copying in accordance with the requirements in Part VII.F. of this permit.

C. Permit Authorization

1. An *owner or operator* shall not *commence construction activity* until their authorization to *discharge* under this permit goes into effect.

2. Authorization to *discharge* under this permit will be effective when the *owner or operator* has satisfied all of the following criteria:

   a. project review pursuant to the State Environmental Quality Review Act ("SEQRA") have been satisfied, when SEQRA is applicable. See the Department's website (http://www.dec.ny.gov/) for more information,

   b. where required, all necessary Department permits subject to the *Uniform Procedures Act ("UPA")* (see 6 NYCRR Part 621), or the equivalent from another New York State agency, have been obtained, unless otherwise notified by the Department pursuant to 6 NYCRR 621.3(a)(4). *Owners or operators* of *construction activities* that are required to obtain *UPA* permits

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

must submit a preliminary SWPPP to the appropriate DEC Permit Administrator at the Regional Office listed in Appendix F at the time all other necessary *UPA* permit applications are submitted. The preliminary SWPPP must include sufficient information to demonstrate that the *construction activity* qualifies for authorization under this permit,

c. the final SWPPP has been prepared, and

d. a complete NOI has been submitted to the Department in accordance with the requirements of this permit.

3. An *owner or operator* that has satisfied the requirements of Part II.C.2 above will be authorized to *discharge* stormwater from their *construction activity* in accordance with the following schedule:

   a. For *construction activities* that are not subject to the requirements of a *regulated, traditional land use control MS4*:

      (i) Five (5) business days from the date the Department receives a complete electronic version of the NOI (eNOI) for *construction activities* with a SWPPP that has been prepared in conformance with the design criteria in the technical standard referenced in Part III.B.1 and the *performance criteria* in the technical standard referenced in Parts III.B., 2 or 3, for *construction activities* that require post-construction stormwater management practices pursuant to Part III.C.; or

      (ii) Sixty (60) business days from the date the Department receives a complete NOI (electronic or paper version) for *construction activities* with a SWPPP that has not been prepared in conformance with the design criteria in technical standard referenced in Part III.B.1. or, for *construction activities* that require post-construction stormwater management practices pursuant to Part III.C., the *performance criteria* in the technical standard referenced in Parts III.B., 2 or 3, or;

      (iii) Ten (10) business days from the date the Department receives a complete paper version of the NOI for *construction activities* with a SWPPP that has been prepared in conformance with the design criteria in the technical standard referenced in Part III.B.1 and the *performance criteria* in the technical standard referenced in Parts III.B., 2 or 3, for *construction activities* that require post-construction stormwater management practices pursuant to Part III.C.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

b. For *construction activities* that are subject to the requirements of a *regulated, traditional land use control MS4*:

(i) Five (5) business days from the date the Department receives both a complete electronic version of the NOI (eNOI) and signed "*MS4* SWPPP Acceptance" form, or

(ii) Ten (10) business days from the date the Department receives both a complete paper version of the NOI and signed "MS4 SWPPP Acceptance" form.

4. Coverage under this permit authorizes stormwater *discharges* from only those areas of disturbance that are identified in the NOI. If an *owner or operator* wishes to have stormwater *discharges* from future or additional areas of disturbance authorized, they must submit a new NOI that addresses that phase of the development, unless otherwise notified by the Department. The *owner or operator* shall not *commence construction activity* on the future or additional areas until their authorization to *discharge* under this permit goes into effect in accordance with Part II.C. of this permit.

D. General Requirements For Owners or Operators With Permit Coverage

1. The *owner or operator* shall ensure that the provisions of the SWPPP are implemented from the *commencement of construction activity* until all areas of disturbance have achieved *final stabilization* and the Notice of Termination ("NOT") has been submitted to the Department in accordance with Part V. of this permit. This includes any changes made to the SWPPP pursuant to Part III.A.4. of this permit.

2. The *owner or operator* shall maintain a copy of the General Permit (GP-0-20-001), NOI, *NOI Acknowledgment Letter*, SWPPP, MS4 SWPPP Acceptance form, inspection reports, responsible contractor's or subcontractor's certification statement (see Part III.A.6.), and all documentation necessary to demonstrate eligibility with this permit at the *construction site* until all disturbed areas have achieved *final stabilization* and the NOT has been submitted to the Department. The documents must be maintained in a secure location, such as a job trailer, on-site construction office, or mailbox with lock. The secure location must be accessible during normal business hours to an individual performing a compliance inspection.

3. The *owner or operator* of a *construction activity* shall not disturb greater than five (5) acres of soil at any one time without prior written authorization from the Department or, in areas under the jurisdiction of a *regulated, traditional land*

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

use control MS4, the *regulated, traditional land use control MS4* (provided the *regulated, traditional land use control MS4* is not the *owner or operator* of the *construction activity*). At a minimum, the *owner or operator* must comply with the following requirements in order to be authorized to disturb greater than five (5) acres of soil at any one time:

a. The *owner or operator* shall have a *qualified inspector* conduct **at least** two (2) site inspections in accordance with Part IV.C. of this permit every seven (7) calendar days, for as long as greater than five (5) acres of soil remain disturbed. The two (2) inspections shall be separated by a minimum of two (2) full calendar days.

b. In areas where soil disturbance activity has temporarily or permanently ceased, the application of soil stabilization measures must be initiated by the end of the next business day and completed within seven (7) days from the date the current soil disturbance activity ceased. The soil stabilization measures selected shall be in conformance with the technical standard, New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016.

c. The *owner or operator* shall prepare a phasing plan that defines maximum disturbed area per phase and shows required cuts and fills.

d. The *owner or operator* shall install any additional site-specific practices needed to protect water quality.

e. The *owner or operator* shall include the requirements above in their SWPPP.

4. In accordance with statute, regulations, and the terms and conditions of this permit, the Department may suspend or revoke an *owner's or operator's* coverage under this permit at any time if the Department determines that the SWPPP does not meet the permit requirements or consistent with Part VII.K..

5. Upon a finding of significant non-compliance with the practices described in the SWPPP or violation of this permit, the Department may order an immediate stop to all activity at the site until the non-compliance is remedied. The stop work order shall be in writing, describe the non-compliance in detail, and be sent to the *owner or operator*.

6. For *construction activities* that are subject to the requirements of a *regulated, traditional land use control MS4*, the *owner or operator* shall notify the

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

regulated, traditional land use control MS4 in writing of any planned amendments or modifications to the post-construction stormwater management practice component of the SWPPP required by Part III.A. 4. and 5. of this permit. Unless otherwise notified by the *regulated, traditional land use control MS4*, the *owner or operator* shall have the SWPPP amendments or modifications reviewed and accepted by the *regulated, traditional land use control MS4* prior to commencing construction of the post-construction stormwater management practice.

E. Permit Coverage for Discharges Authorized Under GP-0-15-002

1. Upon renewal of SPDES General Permit for Stormwater Discharges from *Construction Activity* (Permit No. GP-0-15-002), an *owner or operator* of *a construction activity* with coverage under GP-0-15-002, as of the effective date of GP- 0-20-001, shall be authorized to *discharge* in accordance with GP- 0-20-001, unless otherwise notified by the Department.

   An *owner or operator* may continue to implement the technical/design components of the post-construction stormwater management controls provided that such design was done in conformance with the technical standards in place at the time of initial project authorization. However, they must comply with the other, non-design provisions of GP-0-20-001.

F. Change of Owner or Operator

1. When property ownership changes or when there is a change in operational control over the construction plans and specifications, the original *owner or operator* must notify the new *owner or operator*, in writing, of the requirement to obtain permit coverage by submitting a NOI with the Department. For *construction activities* subject to the requirements of a *regulated, traditional land use control MS4,* the original *owner or operator* must also notify the MS4, in writing, of the change in ownership at least 30 calendar days prior to the change in ownership.

2. Once the new *owner or operator* obtains permit coverage, the original *owner or operator* shall then submit a completed NOT with the name and permit identification number of the new *owner or operator* to the Department at the address in Part II.B.1. of this permit. If the original *owner or operator* maintains ownership of a portion of the *construction activity* and will disturb soil, they must maintain their coverage under the permit.

3. Permit coverage for the new *owner or operator* will be effective as of the date the Department receives a complete NOI, provided the original *owner or*

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

operator was not subject to a sixty (60) business day authorization period that has not expired as of the date the Department receives the NOI from the new *owner or operator*.

Part III. STORMWATER POLLUTION PREVENTION PLAN (SWPPP)

A. General SWPPP Requirements

1. A SWPPP shall be prepared and implemented by the *owner or operator* of each *construction activity* covered by this permit. The SWPPP must document the selection, design, installation, implementation and maintenance of the control measures and practices that will be used to meet the effluent limitations in Part I.B. of this permit and where applicable, the post-construction stormwater management practice requirements in Part I.C. of this permit. The SWPPP shall be prepared prior to the submittal of the NOI. The NOI shall be submitted to the Department prior to the *commencement of construction activity*. A copy of the completed, final NOI shall be included in the SWPPP.

2. The SWPPP shall describe the erosion and sediment control practices and where required, post-construction stormwater management practices that will be used and/or constructed to reduce the *pollutants* in stormwater *discharges* and to assure compliance with the terms and conditions of this permit. In addition, the SWPPP shall identify potential sources of pollution which may reasonably be expected to affect the quality of stormwater *discharges*.

3. All SWPPPs that require the post-construction stormwater management practice component shall be prepared by a *qualified professional* that is knowledgeable in the principles and practices of stormwater management and treatment.

4. The *owner or operator* must keep the SWPPP current so that it at all times accurately documents the erosion and sediment controls practices that are being used or will be used during construction, and all post-construction stormwater management practices that will be constructed on the site. At a minimum, the *owner or operator* shall amend the SWPPP, including construction drawings:

   a. whenever the current provisions prove to be ineffective in minimizing *pollutants* in stormwater *discharges* from the site;

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

b. whenever there is a change in design, construction, or operation at the *construction site* that has or could have an effect on the *discharge* of *pollutants*;

c. to address issues or deficiencies identified during an inspection by the *qualified inspector,* the Department or other regulatory authority; and

d. to document the final construction conditions.

5. The Department may notify the *owner or operator* at any time that the SWPPP does not meet one or more of the minimum requirements of this permit. The notification shall be in writing and identify the provisions of the SWPPP that require modification. Within fourteen (14) calendar days of such notification, or as otherwise indicated by the Department, the *owner or operator* shall make the required changes to the SWPPP and submit written notification to the Department that the changes have been made. If the *owner or operator* does not respond to the Department's comments in the specified time frame, the Department may suspend the *owner's or operator's* coverage under this permit or require the *owner or operator* to obtain coverage under an individual SPDES permit in accordance with Part II.D.4. of this permit.

6. Prior to the *commencement of construction activity*, the *owner or operator* must identify the contractor(s) and subcontractor(s) that will be responsible for installing, constructing, repairing, replacing, inspecting and maintaining the erosion and sediment control practices included in the SWPPP; and the contractor(s) and subcontractor(s) that will be responsible for constructing the post-construction stormwater management practices included in the SWPPP. The *owner or operator* shall have each of the contractors and subcontractors identify at least one person from their company that will be responsible for implementation of the SWPPP. This person shall be known as the *trained contractor.* The *owner or operator* shall ensure that at least one *trained contractor* is on site on a daily basis when soil disturbance activities are being performed.

   The *owner or operator* shall have each of the contractors and subcontractors identified above sign a copy of the following certification statement below before they commence any *construction activity*:

   "I hereby certify under penalty of law that I understand and agree to comply with the terms and conditions of the SWPPP and agree to implement any corrective actions identified by the *qualified inspector* during a site inspection. I also understand that the *owner or operator* must comply with

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

the terms and conditions of the most current version of the New York State Pollutant Discharge Elimination System ("SPDES") general permit for stormwater *discharge*s from *construction activities* and that it is unlawful for any person to cause or contribute to a violation of *water quality standards*. Furthermore, I am aware that there are significant penalties for submitting false information, that I do not believe to be true, including the possibility of fine and imprisonment for knowing violations"

In addition to providing the certification statement above, the certification page must also identify the specific elements of the SWPPP that each contractor and subcontractor will be responsible for and include the name and title of the person providing the signature; the name and title of the *trained contractor* responsible for SWPPP implementation; the name, address and telephone number of the contracting firm; the address (or other identifying description) of the site; and the date the certification statement is signed. The *owner or operator* shall attach the certification statement(s) to the copy of the SWPPP that is maintained at the *construction site*. If new or additional contractors are hired to implement measures identified in the SWPPP after construction has commenced, they must also sign the certification statement and provide the information listed above.

7. For projects where the Department requests a copy of the SWPPP or inspection reports, the *owner or operator* shall submit the documents in both electronic (PDF only) and paper format within five (5) business days, unless otherwise notified by the Department.

B. Required SWPPP Contents

1. Erosion and sediment control component - All SWPPPs prepared pursuant to this permit shall include erosion and sediment control practices designed in conformance with the technical standard, New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016. Where erosion and sediment control practices are not designed in conformance with the design criteria included in the technical standard, the *owner or operator* must demonstrate *equivalence* to the technical standard. At a minimum, the erosion and sediment control component of the SWPPP shall include the following:

    a. Background information about the scope of the project, including the location, type and size of project

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

b. A site map/construction drawing(s) for the project, including a general location map. At a minimum, the site map shall show the total site area; all improvements; areas of disturbance; areas that will not be disturbed; existing vegetation; on-site and adjacent off-site surface water(s); floodplain/floodway boundaries; wetlands and drainage patterns that could be affected by the *construction activity*; existing and final contours ; locations of different soil types with boundaries; material, waste, borrow or equipment storage areas located on adjacent properties; and location(s) of the stormwater *discharge*(s);

c. A description of the soil(s) present at the site, including an identification of the Hydrologic Soil Group (HSG);

d. A construction phasing plan and sequence of operations describing the intended order of *construction activities*, including clearing and grubbing, excavation and grading, utility and infrastructure installation and any other activity at the site that results in soil disturbance;

e. A description of the minimum erosion and sediment control practices to be installed or implemented for each *construction activity* that will result in soil disturbance. Include a schedule that identifies the timing of initial placement or implementation of each erosion and sediment control practice and the minimum time frames that each practice should remain in place or be implemented;

f. A temporary and permanent soil stabilization plan that meets the requirements of this general permit and the technical standard, New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016, for each stage of the project, including initial land clearing and grubbing to project completion and achievement of *final stabilization*;

g. A site map/construction drawing(s) showing the specific location(s), size(s), and length(s) of each erosion and sediment control practice;

h. The dimensions, material specifications, installation details, and operation and maintenance requirements for all erosion and sediment control practices. Include the location and sizing of any temporary sediment basins and structural practices that will be used to divert flows from exposed soils;

i. A maintenance inspection schedule for the contractor(s) identified in Part III.A.6. of this permit, to ensure continuous and effective operation of the erosion and sediment control practices. The maintenance inspection

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

schedule shall be in accordance with the requirements in the technical standard, New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016;

j. A description of the pollution prevention measures that will be used to control litter, construction chemicals and construction debris from becoming a *pollutant* source in the stormwater *discharges*;

k. A description and location of any stormwater *discharges* associated with industrial activity other than construction at the site, including, but not limited to, stormwater *discharges* from asphalt plants and concrete plants located on the *construction site*; and

l. Identification of any elements of the design that are not in conformance with the design criteria in the technical standard, New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016. Include the reason for the deviation or alternative design and provide information which demonstrates that the deviation or alternative design is *equivalent* to the technical standard.

2. Post-construction stormwater management practice component – The *owner or operator* of any construction project identified in Table 2 of Appendix B as needing post-construction stormwater management practices shall prepare a SWPPP that includes practices designed in conformance with the applicable *sizing criteria* in Part I.C.2.a., c. or d. of this permit and the *performance criteria* in the technical standard, New York State Stormwater Management Design Manual dated January 2015

   Where post-construction stormwater management practices are not designed in conformance with the *performance criteria* in the technical standard, the *owner or operator* must include in the SWPPP the reason(s) for the deviation or alternative design and provide information which demonstrates that the deviation or alternative design is *equivalent* to the technical standard.

   The post-construction stormwater management practice component of the SWPPP shall include the following:

   a. Identification of all post-construction stormwater management practices to be constructed as part of the project. Include the dimensions, material specifications and installation details for each post-construction stormwater management practice;

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

b. A site map/construction drawing(s) showing the specific location and size of each post-construction stormwater management practice;

c. A Stormwater Modeling and Analysis Report that includes:
   (i) Map(s) showing pre-development conditions, including watershed/subcatchments boundaries, flow paths/routing, and design points;

   (ii) Map(s) showing post-development conditions, including watershed/subcatchments boundaries, flow paths/routing, design points and post-construction stormwater management practices;

   (iii) Results of stormwater modeling (i.e. hydrology and hydraulic analysis) for the required storm events. Include supporting calculations (model runs), methodology, and a summary table that compares pre and post-development runoff rates and volumes for the different storm events;

   (iv) Summary table, with supporting calculations, which demonstrates that each post-construction stormwater management practice has been designed in conformance with the *sizing criteria* included in the Design Manual;

   (v) Identification of any *sizing criteria* that is not required based on the requirements included in Part I.C. of this permit; and

   (vi) Identification of any elements of the design that are not in conformance with the *performance criteria* in the Design Manual. Include the reason(s) for the deviation or alternative design and provide information which demonstrates that the deviation or alternative design is *equivalent* to the Design Manual;

d. Soil testing results and locations (test pits, borings);

e. Infiltration test results, when required; and

f. An operations and maintenance plan that includes inspection and maintenance schedules and actions to ensure continuous and effective operation of each post-construction stormwater management practice. The plan shall identify the entity that will be responsible for the long term operation and maintenance of each practice.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

3. Enhanced Phosphorus Removal Standards - All construction projects identified in Table 2 of Appendix B that are located in the watersheds identified in Appendix C shall prepare a SWPPP that includes post-construction stormwater management practices designed in conformance with the applicable *sizing criteria* in Part I.C.2. b., c. or d. of this permit and the *performance criteria,* Enhanced Phosphorus Removal Standards included in the Design Manual. At a minimum, the post-construction stormwater management practice component of the SWPPP shall include items 2.a - 2.f. above.

C. Required SWPPP Components by Project Type

Unless otherwise notified by the Department, *owners or operators* of *construction activities* identified in Table 1 of Appendix B are required to prepare a SWPPP that only includes erosion and sediment control practices designed in conformance with Part III.B.1 of this permit. *Owners or operators* of the *construction activities* identified in Table 2 of Appendix B shall prepare a SWPPP that also includes post-construction stormwater management practices designed in conformance with Part III.B.2 or 3 of this permit.

Part IV. INSPECTION AND MAINTENANCE REQUIREMENTS

A. General Construction Site Inspection and Maintenance Requirements

1. The *owner or operator* must ensure that all erosion and sediment control practices (including pollution prevention measures) and all post-construction stormwater management practices identified in the SWPPP are inspected and maintained in accordance with Part IV.B. and C. of this permit.

2. The terms of this permit shall not be construed to prohibit the State of New York from exercising any authority pursuant to the ECL, common law or federal law, or prohibit New York State from taking any measures, whether civil or criminal, to prevent violations of the laws of the State of New York or protect the public health and safety and/or the environment.

B. Contractor Maintenance Inspection Requirements

1. The *owner or operator* of each *construction activity* identified in Tables 1 and 2 of Appendix B shall have a *trained contractor* inspect the erosion and sediment control practices and pollution prevention measures being implemented within the active work area daily to ensure that they are being maintained in effective operating condition at all times. If deficiencies are identified, the contractor shall

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

begin implementing corrective actions within one business day and shall complete the corrective actions in a reasonable time frame.

2. For construction sites where soil disturbance activities have been temporarily suspended (e.g. winter shutdown) and *temporary stabilization* measures have been applied to all disturbed areas, the *trained contractor* can stop conducting the maintenance inspections. The *trained contractor* shall begin conducting the maintenance inspections in accordance with Part IV.B.1. of this permit as soon as soil disturbance activities resume.

3. For construction sites where soil disturbance activities have been shut down with partial project completion, the *trained contractor* can stop conducting the maintenance inspections if all areas disturbed as of the project shutdown date have achieved *final stabilization* and all post-construction stormwater management practices required for the completed portion of the project have been constructed in conformance with the SWPPP and are operational.

C. Qualified Inspector Inspection Requirements

The *owner or operator* shall have a *qualified inspector* conduct site inspections in conformance with the following requirements:

[Note: The *trained contractor* identified in Part III.A.6. and IV.B. of this permit **cannot** conduct the *qualified inspector* site inspections unless they meet the *qualified inspector* qualifications included in Appendix A. In order to perform these inspections, the *trained contractor* would have to be a:

- licensed Professional Engineer,
- Certified Professional in Erosion and Sediment Control (CPESC),
- New York State Erosion and Sediment Control Certificate Program holder
- Registered Landscape Architect, or
- someone working under the direct supervision of, and at the same company as, the licensed Professional Engineer or Registered Landscape Architect, provided they have received four (4) hours of Department endorsed training in proper erosion and sediment control principles from a Soil and Water Conservation District, or other Department endorsed entity].

1. A *qualified inspector* shall conduct site inspections for all *construction activities* identified in Tables 1 and 2 of Appendix B, with the exception of:

   a. the construction of a single family residential subdivision with 25% or less *impervious cover* at total site build-out that involves a soil disturbance of one (1) or more acres of land but less than five (5) acres and is not located

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

in one of the watersheds listed in Appendix C and not directly discharging to one of the 303(d) segments listed in Appendix E;

b. the construction of a single family home that involves a soil disturbance of one (1) or more acres of land but less than five (5) acres and is not located in one of the watersheds listed in Appendix C and not directly discharging to one of the 303(d) segments listed in Appendix E;

c. construction on agricultural property that involves a soil disturbance of one (1) or more acres of land but less than five (5) acres; and

d. *construction activities* located in the watersheds identified in Appendix D that involve soil disturbances between five thousand (5,000) square feet and one (1) acre of land.

2. Unless otherwise notified by the Department, the *qualified inspector* shall conduct site inspections in accordance with the following timetable:

a. For construction sites where soil disturbance activities are on-going, the *qualified inspector* shall conduct a site inspection at least once every seven (7) calendar days.

b. For construction sites where soil disturbance activities are on-going and the *owner or operator* has received authorization in accordance with Part II.D.3 to disturb greater than five (5) acres of soil at any one time, the *qualified inspector* shall conduct at least two (2) site inspections every seven (7) calendar days. The two (2) inspections shall be separated by a minimum of two (2) full calendar days.

c. For construction sites where soil disturbance activities have been temporarily suspended (e.g. winter shutdown) and *temporary stabilization* measures have been applied to all disturbed areas, the *qualified inspector* shall conduct a site inspection at least once every thirty (30) calendar days. The *owner or operator* shall notify the DOW Water (SPDES) Program contact at the Regional Office (see contact information in Appendix F) or, in areas under the jurisdiction of a *regulated, traditional land use control MS4,* the *regulated, traditional land use control MS4* (provided the *regulated, traditional land use control MS4* is not the *owner or operator* of the *construction activity*) in writing prior to reducing the frequency of inspections.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

d. For construction sites where soil disturbance activities have been shut down with partial project completion, the *qualified inspector* can stop conducting inspections if all areas disturbed as of the project shutdown date have achieved *final stabilization* and all post-construction stormwater management practices required for the completed portion of the project have been constructed in conformance with the SWPPP and are operational. The *owner or operator* shall notify the DOW Water (SPDES) Program contact at the Regional Office (see contact information in Appendix F) or, in areas under the jurisdiction of a *regulated, traditional land use control MS4,* the *regulated, traditional land use control MS4* (provided the *regulated, traditional land use control MS4* is not the *owner or operator* of the *construction activity*) in writing prior to the shutdown. If soil disturbance activities are not resumed within 2 years from the date of shutdown, the *owner or operator* shall have the *qualified inspector* perform a final inspection and certify that all disturbed areas have achieved *final stabilization,* and all temporary, structural erosion and sediment control measures have been removed*;* and that all post-construction stormwater management practices have been constructed in conformance with the SWPPP by signing the "*Final Stabilization*" and "Post-Construction Stormwater Management Practice" certification statements on the NOT. The *owner or operator* shall then submit the completed NOT form to the address in Part II.B.1 of this permit.

e. For construction sites that directly *discharge* to one of the 303(d) segments listed in Appendix E or is located in one of the watersheds listed in Appendix C, the *qualified inspector* shall conduct at least two (2) site inspections every seven (7) calendar days. The two (2) inspections shall be separated by a minimum of two (2) full calendar days.

3. At a minimum, the *qualified inspector* shall inspect all erosion and sediment control practices and pollution prevention measures to ensure integrity and effectiveness, all post-construction stormwater management practices under construction to ensure that they are constructed in conformance with the SWPPP, all areas of disturbance that have not achieved *final stabilization,* all points of *discharge* to natural surface waterbodies located within, or immediately adjacent to, the property boundaries of the *construction site*, and all points of *discharge* from the *construction site*.

4. The *qualified inspector* shall prepare an inspection report subsequent to each and every inspection. At a minimum, the inspection report shall include and/or address the following:

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

(Part IV.C.4.a)

a. Date and time of inspection;

b. Name and title of person(s) performing inspection;

c. A description of the weather and soil conditions (e.g. dry, wet, saturated) at the time of the inspection;

d. A description of the condition of the runoff at all points of *discharge* from the *construction site*. This shall include identification of any *discharges* of sediment from the *construction site*. Include *discharges* from conveyance systems (i.e. pipes, culverts, ditches, etc.) and overland flow;

e. A description of the condition of all natural surface waterbodies located within, or immediately adjacent to, the property boundaries of the *construction site* which receive runoff from disturbed areas. This shall include identification of any *discharges* of sediment to the surface waterbody;

f. Identification of all erosion and sediment control practices and pollution prevention measures that need repair or maintenance;

g. Identification of all erosion and sediment control practices and pollution prevention measures that were not installed properly or are not functioning as designed and need to be reinstalled or replaced;

h. Description and sketch of areas with active soil disturbance activity, areas that have been disturbed but are inactive at the time of the inspection, and areas that have been stabilized (temporary and/or final) since the last inspection;

i. Current phase of construction of all post-construction stormwater management practices and identification of all construction that is not in conformance with the SWPPP and technical standards;

j. Corrective action(s) that must be taken to install, repair, replace or maintain erosion and sediment control practices and pollution prevention measures; and to correct deficiencies identified with the construction of the post-construction stormwater management practice(s);

k. Identification and status of all corrective actions that were required by previous inspection; and

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

l. Digital photographs, with date stamp, that clearly show the condition of all practices that have been identified as needing corrective actions. The *qualified inspector* shall attach paper color copies of the digital photographs to the inspection report being maintained onsite within seven (7) calendar days of the date of the inspection. The *qualified inspector* shall also take digital photographs, with date stamp, that clearly show the condition of the practice(s) after the corrective action has been completed. The *qualified inspector* shall attach paper color copies of the digital photographs to the inspection report that documents the completion of the corrective action work within seven (7) calendar days of that inspection.

5. Within one business day of the completion of an inspection, the *qualified inspector* shall notify the *owner or operator* and appropriate contractor or subcontractor identified in Part III.A.6. of this permit of any corrective actions that need to be taken. The contractor or subcontractor shall begin implementing the corrective actions within one business day of this notification and shall complete the corrective actions in a reasonable time frame.

6. All inspection reports shall be signed by the *qualified inspector.* Pursuant to Part II.D.2. of this permit, the inspection reports shall be maintained on site with the SWPPP.

Part V. TERMINATION OF PERMIT COVERAGE

A. Termination of Permit Coverage

1. An *owner or operator* that is eligible to terminate coverage under this permit must submit a completed NOT form to the address in Part II.B.1 of this permit. The NOT form shall be one which is associated with this permit, signed in accordance with Part VII.H of this permit.

2. An *owner or operator* may terminate coverage when one or more the following conditions have been met:

   a. Total project completion - All *construction activity* identified in the SWPPP has been completed; and all areas of disturbance have achieved *final stabilization*; and all temporary, structural erosion and sediment control measures have been removed; and all post-construction stormwater management practices have been constructed in conformance with the SWPPP and are operational;

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

b. Planned shutdown with partial project completion - All soil disturbance activities have ceased; and all areas disturbed as of the project shutdown date have achieved *final stabilization*; and all temporary, structural erosion and sediment control measures have been removed; and all post-construction stormwater management practices required for the completed portion of the project have been constructed in conformance with the SWPPP and are operational;

c. A new *owner or operator* has obtained coverage under this permit in accordance with Part II.F. of this permit.

d. The *owner or operator* obtains coverage under an alternative SPDES general permit or an individual SPDES permit.

3. For *construction activities* meeting subdivision 2a. or 2b. of this Part, the *owner or operator* shall have the *qualified inspector* perform a final site inspection prior to submitting the NOT. The *qualified inspector* shall, by signing the "*Final Stabilization*" and "Post-Construction Stormwater Management Practice certification statements on the NOT, certify that all the requirements in Part V.A.2.a. or b. of this permit have been achieved.

4. For *construction activities* that are subject to the requirements of a *regulated, traditional land use control MS4* and meet subdivision 2a. or 2b. of this Part, the *owner or operator* shall have the *regulated, traditional land use control MS4* sign the "MS4 Acceptance" statement on the NOT in accordance with the requirements in Part VII.H. of this permit. The *regulated, traditional land use control MS4* official, by signing this statement, has determined that it is acceptable for the *owner or operator* to submit the NOT in accordance with the requirements of this Part. The *regulated, traditional land use control MS4* can make this determination by performing a final site inspection themselves or by accepting the *qualified inspector*'s final site inspection certification(s) required in Part V.A.3. of this permit.

5. For *construction activities* that require post-construction stormwater management practices and meet subdivision 2a. of this Part, the *owner or operator* must, prior to submitting the NOT, ensure one of the following:

a. the post-construction stormwater management practice(s) and any right-of-way(s) needed to maintain such practice(s) have been deeded to the municipality in which the practice(s) is located,

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

b. an executed maintenance agreement is in place with the municipality that will maintain the post-construction stormwater management practice(s),

c. for post-construction stormwater management practices that are privately owned, the *owner or operator* has a mechanism in place that requires operation and maintenance of the practice(s) in accordance with the operation and maintenance plan, such as a deed covenant in the *owner or operator's* deed of record,

d. for post-construction stormwater management practices that are owned by a public or private institution (e.g. school, university, hospital), government agency or authority, or public utility; the *owner or operator* has policy and procedures in place that ensures operation and maintenance of the practices in accordance with the operation and maintenance plan.

Part VI. REPORTING AND RETENTION RECORDS

A. Record Retention

The *owner or operator* shall retain a copy of the NOI, NOI Acknowledgment Letter, SWPPP, MS4 SWPPP Acceptance form and any inspection reports that were prepared in conjunction with this permit for a period of at least five (5) years from the date that the Department receives a complete NOT submitted in accordance with Part V. of this general permit.

B. Addresses

With the exception of the NOI, NOT, and MS4 SWPPP Acceptance form (which must be submitted to the address referenced in Part II.B.1 of this permit), all written correspondence requested by the Department, including individual permit applications, shall be sent to the address of the appropriate DOW Water (SPDES) Program contact at the Regional Office listed in Appendix F.

Part VII. STANDARD PERMIT CONDITIONS

A. Duty to Comply

The *owner or operator* must comply with all conditions of this permit. All contractors and subcontractors associated with the project must comply with the terms of the SWPPP. Any non-compliance with this permit constitutes a violation of the Clean Water

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

Act (CWA) and the ECL and is grounds for an enforcement action against the *owner or operator* and/or the contractor/subcontractor; permit revocation, suspension or modification; or denial of a permit renewal application. Upon a finding of significant non-compliance with this permit or the applicable SWPPP, the Department may order an immediate stop to all *construction activity* at the site until the non-compliance is remedied. The stop work order shall be in writing, shall describe the non-compliance in detail, and shall be sent to the *owner or operator*.

If any human remains or archaeological remains are encountered during excavation, the *owner or operator* must immediately cease, or cause to cease, all *construction activity* in the area of the remains and notify the appropriate Regional Water Engineer (RWE). *Construction activity* shall not resume until written permission to do so has been received from the RWE.

B. Continuation of the Expired General Permit

This permit expires five (5) years from the effective date. If a new general permit is not issued prior to the expiration of this general permit, an *owner or operator* with coverage under this permit may continue to operate and *discharge* in accordance with the terms and conditions of this general permit, if it is extended pursuant to the State Administrative Procedure Act and 6 NYCRR Part 621, until a new general permit is issued.

C. Enforcement

Failure of the *owner or operator,* its contractors, subcontractors, agents and/or assigns to strictly adhere to any of the permit requirements contained herein shall constitute a violation of this permit. There are substantial criminal, civil, and administrative penalties associated with violating the provisions of this permit. Fines of up to $37,500 per day for each violation and imprisonment for up to fifteen (15) years may be assessed depending upon the nature and degree of the offense.

D. Need to Halt or Reduce Activity Not a Defense

It shall not be a defense for an *owner or operator* in an enforcement action that it would have been necessary to halt or reduce the *construction activity* in order to maintain compliance with the conditions of this permit.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

E. Duty to Mitigate

The *owner or operator* and its contractors and subcontractors shall take all reasonable steps to *minimize* or prevent any *discharge* in violation of this permit which has a reasonable likelihood of adversely affecting human health or the environment.

F. Duty to Provide Information

The *owner or operator* shall furnish to the Department, within a reasonable specified time period of a written request, all documentation necessary to demonstrate eligibility and any information to determine compliance with this permit or to determine whether cause exists for modifying or revoking this permit, or suspending or denying coverage under this permit, in accordance with the terms and conditions of this permit. The NOI, SWPPP and inspection reports required by this permit are public documents that the *owner or operator* must make available for review and copying by any person within five (5) business days of the *owner or operator* receiving a written request by any such person to review these documents. Copying of documents will be done at the requester's expense.

G. Other Information

When the *owner or operator* becomes aware that they failed to submit any relevant facts, or submitted incorrect information in the NOI or in any of the documents required by this permit , or have made substantive revisions to the SWPPP (e.g. the scope of the project changes significantly, the type of post-construction stormwater management practice(s) changes, there is a reduction in the sizing of the post-construction stormwater management practice, or there is an increase in the disturbance area or *impervious area*), which were not reflected in the original NOI submitted to the Department, they shall promptly submit such facts or information to the Department using the contact information in Part II.A. of this permit. Failure of the *owner or operator* to correct or supplement any relevant facts within five (5) business days of becoming aware of the deficiency shall constitute a violation of this permit.

H. Signatory Requirements

1. All NOIs and NOTs shall be signed as follows:

    a. For a corporation these forms shall be signed by a responsible corporate officer. For the purpose of this section, a responsible corporate officer means:

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

(i) a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision-making functions for the corporation; or

(ii) the manager of one or more manufacturing, production or operating facilities, provided the manager is authorized to make management decisions which govern the operation of the regulated facility including having the explicit or implicit duty of making major capital investment recommendations, and initiating and directing other comprehensive measures to assure long term environmental compliance with environmental laws and regulations; the manager can ensure that the necessary systems are established or actions taken to gather complete and accurate information for permit application requirements; and where authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures;

b. For a partnership or sole proprietorship these forms shall be signed by a general partner or the proprietor, respectively; or

c. For a municipality, State, Federal, or other public agency these forms shall be signed by either a principal executive officer or ranking elected official. For purposes of this section, a principal executive officer of a Federal agency includes:

(i) the chief executive officer of the agency, or

(ii) a senior executive officer having responsibility for the overall operations of a principal geographic unit of the agency (e.g., Regional Administrators of EPA).

2. The SWPPP and other information requested by the Department shall be signed by a person described in Part VII.H.1. of this permit or by a duly authorized representative of that person. A person is a duly authorized representative only if:

a. The authorization is made in writing by a person described in Part VII.H.1. of this permit;

b. The authorization specifies either an individual or a position having responsibility for the overall operation of the regulated facility or activity, such as the position of plant manager, operator of a well or a well field,

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

superintendent, position of *equivalent* responsibility, or an individual or position having overall responsibility for environmental matters for the company. (A duly authorized representative may thus be either a named individual or any individual occupying a named position) and,

c. The written authorization shall include the name, title and signature of the authorized representative and be attached to the SWPPP.

3. All inspection reports shall be signed by the *qualified inspector* that performs the inspection.

4. The MS4 SWPPP Acceptance form shall be signed by the principal executive officer or ranking elected official from the *regulated, traditional land use control MS4,* or by a duly authorized representative of that person.

   It shall constitute a permit violation if an incorrect and/or improper signatory authorizes any required forms, SWPPP and/or inspection reports.

I. Property Rights

The issuance of this permit does not convey any property rights of any sort, nor any exclusive privileges, nor does it authorize any injury to private property nor any invasion of personal rights, nor any infringement of Federal, State or local laws or regulations. *Owners or operators* must obtain any applicable conveyances, easements, licenses and/or access to real property prior to *commencing construction activity*.

J. Severability

The provisions of this permit are severable, and if any provision of this permit, or the application of any provision of this permit to any circumstance, is held invalid, the application of such provision to other circumstances, and the remainder of this permit shall not be affected thereby.

K. Requirement to Obtain Coverage Under an Alternative Permit

1. The Department may require any owner or operator authorized by this permit to apply for and/or obtain either an individual SPDES permit or another SPDES general permit. When the Department requires any discharger authorized by a general permit to apply for an individual SPDES permit, it shall notify the discharger in writing that a permit application is required. This notice shall

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

include a brief statement of the reasons for this decision, an application form, a statement setting a time frame for the owner or operator to file the application for an individual SPDES permit, and a deadline, not sooner than 180 days from owner or operator receipt of the notification letter, whereby the authorization to discharge under this general permit shall be terminated. Applications must be submitted to the appropriate Permit Administrator at the Regional Office. The Department may grant additional time upon demonstration, to the satisfaction of the Department, that additional time to apply for an alternative authorization is necessary or where the Department has not provided a permit determination in accordance with Part 621 of this Title.

2. When an individual SPDES permit is issued to a discharger authorized to *discharge* under a general SPDES permit for the same *discharge*(s), the general permit authorization for outfalls authorized under the individual SPDES permit is automatically terminated on the effective date of the individual permit unless termination is earlier in accordance with 6 NYCRR Part 750.

L. Proper Operation and Maintenance

The *owner or operator* shall at all times properly operate and maintain all facilities and systems of treatment and control (and related appurtenances) which are installed or used by the *owner or operator* to achieve compliance with the conditions of this permit and with the requirements of the SWPPP.

M. Inspection and Entry

The *owner or operator* shall allow an authorized representative of the Department, EPA, applicable county health department, or, in the case of a *construction site* which *discharges* through an *MS4*, an authorized representative of the *MS4* receiving the discharge, upon the presentation of credentials and other documents as may be required by law, to:

1. Enter upon the owner’s or operator's premises where a regulated facility or activity is located or conducted or where records must be kept under the conditions of this permit;

2. Have access to and copy at reasonable times, any records that must be kept under the conditions of this permit; and

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

3. Inspect at reasonable times any facilities or equipment (including monitoring and control equipment), practices or operations regulated or required by this permit.

4. Sample or monitor at reasonable times, for purposes of assuring permit compliance or as otherwise authorized by the Act or ECL, any substances or parameters at any location.

N. Permit Actions

This permit may, at any time, be modified, suspended, revoked, or renewed by the Department in accordance with 6 NYCRR Part 621. The filing of a request by the *owner or operator* for a permit modification, revocation and reissuance, termination, a notification of planned changes or anticipated noncompliance does not limit, diminish and/or stay compliance with any terms of this permit.

O. Definitions

Definitions of key terms are included in Appendix A of this permit.

P. Re-Opener Clause

1. If there is evidence indicating potential or realized impacts on water quality due to any stormwater discharge associated with construction activity covered by this permit, the owner or operator of such discharge may be required to obtain an individual permit or alternative general permit in accordance with Part VII.K. of this permit or the permit may be modified to include different limitations and/or requirements.

2. Any Department initiated permit modification, suspension or revocation will be conducted in accordance with 6 NYCRR Part 621, 6 NYCRR 750-1.18, and 6 NYCRR 750-1.20.

Q. Penalties for Falsification of Forms and Reports

In accordance with 6NYCRR Part 750-2.4 and 750-2.5, any person who knowingly makes any false material statement, representation, or certification in any application, record, report or other document filed or required to be maintained under this permit, including reports of compliance or noncompliance shall, upon conviction, be punished in accordance with ECL §71-1933 and or Articles 175 and 210 of the New York State Penal Law.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

(Part VII.R)

R. Other Permits

Nothing in this permit relieves the *owner or operator* from a requirement to obtain any other permits required by law.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

APPENDIX A – Acronyms and Definitions

Acronyms

APO – Agency Preservation Officer
BMP – Best Management Practice
CPESC – Certified Professional in Erosion and Sediment Control
Cpv – Channel Protection Volume
CWA – Clean Water Act (or the Federal Water Pollution Control Act, 33 U.S.C. §1251 et seq)
DOW – Division of Water
EAF – Environmental Assessment Form
ECL - Environmental Conservation Law
EPA – U. S. Environmental Protection Agency
HSG – Hydrologic Soil Group
MS4 – Municipal Separate Storm Sewer System
NOI – Notice of Intent
NOT – Notice of Termination
NPDES – National Pollutant Discharge Elimination System
OPRHP – Office of Parks, Recreation and Historic Places
Qf – Extreme Flood
Qp – Overbank Flood
RRv – Runoff Reduction Volume
RWE – Regional Water Engineer
SEQR – State Environmental Quality Review
SEQRA - State Environmental Quality Review Act
SHPA – State Historic Preservation Act
SPDES – State Pollutant Discharge Elimination System
SWPPP – Stormwater Pollution Prevention Plan
TMDL – Total Maximum Daily Load
UPA – Uniform Procedures Act
USDA – United States Department of Agriculture
WQv – Water Quality Volume

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

Definitions

All definitions in this section are solely for the purposes of this permit.

Agricultural Building – a structure designed and constructed to house farm implements, hay, grain, poultry, livestock or other horticultural products; excluding any structure designed, constructed or used, in whole or in part, for human habitation, as a place of employment where agricultural products are processed, treated or packaged, or as a place used by the public.

Agricultural Property –means the land for construction of a barn, *agricultural building*, silo, stockyard, pen or other structural practices identified in Table II in the "Agricultural Management Practices Catalog for Nonpoint Source Pollution in New York State" prepared by the Department in cooperation with agencies of New York Nonpoint Source Coordinating Committee (dated June 2007).

Alter Hydrology from Pre to Post-Development Conditions - means the post-development peak flow rate(s) has increased by more than 5% of the pre-developed condition for the design storm of interest (e.g. 10 yr and 100 yr).

Combined Sewer - means a sewer that is designed to collect and convey both "sewage" and "stormwater".

Commence (Commencement of) Construction Activities - means the initial disturbance of soils associated with clearing, grading or excavation activities; or other construction related activities that disturb or expose soils such as demolition, stockpiling of fill material, and the initial installation of erosion and sediment control practices required in the SWPPP. See definition for "*Construction Activity(ies)*" also.

Construction Activity(ies) - means any clearing, grading, excavation, filling, demolition or stockpiling activities that result in soil disturbance. Clearing activities can include, but are not limited to, logging equipment operation, the cutting and skidding of trees, stump removal and/or brush root removal. Construction activity does not include routine maintenance that is performed to maintain the original line and grade, hydraulic capacity, or original purpose of a facility.

Construction Site – means the land area where *construction activity(ies)* will occur. See definition for "*Commence (Commencement of) Construction Activities"* and "*Larger Common Plan of Development or Sale" also.*

Dewatering – means the act of draining rainwater and/or groundwater from building foundations, vaults or excavations/trenches.

Direct Discharge (to a specific surface waterbody) - means that runoff flows from a *construction site* by overland flow and the first point of discharge is the specific surface waterbody, or runoff flows from a *construction site* to a separate storm sewer system

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

and the first point of discharge from the separate storm sewer system is the specific surface waterbody.

Discharge(s) - means any addition of any pollutant to waters of the State through an outlet or *point source*.

Embankment –means an earthen or rock slope that supports a road/highway.

Endangered or Threatened Species – see 6 NYCRR Part 182 of the Department's rules and regulations for definition of terms and requirements.

Environmental Conservation Law (ECL) - means chapter 43-B of the Consolidated Laws of the State of New York, entitled the Environmental Conservation Law.

Equivalent (Equivalence) – means that the practice or measure meets all the performance, longevity, maintenance, and safety objectives of the technical standard and will provide an equal or greater degree of water quality protection.

Final Stabilization - means that all soil disturbance activities have ceased and a uniform, perennial vegetative cover with a density of eighty (80) percent over the entire pervious surface has been established; or other equivalent stabilization measures, such as permanent landscape mulches, rock rip-rap or washed/crushed stone have been applied on all disturbed areas that are not covered by permanent structures, concrete or pavement.

General SPDES permit - means a SPDES permit issued pursuant to 6 NYCRR Part 750-1.21 and Section 70-0117 of the ECL authorizing a category of discharges.

Groundwater(s) - means waters in the saturated zone. The saturated zone is a subsurface zone in which all the interstices are filled with water under pressure greater than that of the atmosphere. Although the zone may contain gas-filled interstices or interstices filled with fluids other than water, it is still considered saturated.

Historic Property – means any building, structure, site, object or district that is listed on the State or National Registers of Historic Places or is determined to be eligible for listing on the State or National Registers of Historic Places.

Impervious Area (Cover) - means all impermeable surfaces that cannot effectively infiltrate rainfall. This includes paved, concrete and gravel surfaces (i.e. parking lots, driveways, roads, runways and sidewalks); building rooftops and miscellaneous impermeable structures such as patios, pools, and sheds.

Infeasible – means not technologically possible, or not economically practicable and achievable in light of best industry practices.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

Larger Common Plan of Development or Sale - means a contiguous area where multiple separate and distinct *construction activities* are occurring, or will occur, under one plan. The term "plan" in "larger common plan of development or sale" is broadly defined as any announcement or piece of documentation (including a sign, public notice or hearing, marketing plan, advertisement, drawing, permit application, State Environmental Quality Review Act (SEQRA) environmental assessment form or other documents, zoning request, computer design, etc.) or physical demarcation (including boundary signs, lot stakes, surveyor markings, etc.) indicating that *construction activities* may occur on a specific plot.

For discrete construction projects that are located within a larger common plan of development or sale that are at least 1/4 mile apart, each project can be treated as a separate plan of development or sale provided any interconnecting road, pipeline or utility project that is part of the same "common plan" is not concurrently being disturbed.

Minimize – means reduce and/or eliminate to the extent achievable using control measures (including best management practices) that are technologically available and economically practicable and achievable in light of best industry practices.

Municipal Separate Storm Sewer (MS4) - a conveyance or system of conveyances (including roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, man-made channels, or storm drains):

(i) Owned or operated by a State, city, town, borough, county, parish, district, association, or other public body (created by or pursuant to State law) having jurisdiction over disposal of sewage, industrial wastes, stormwater, or other wastes, including special districts under State law such as a sewer district, flood control district or drainage district, or similar entity, or an Indian tribe or an authorized Indian tribal organization, or a designated and approved management agency under section 208 of the CWA that discharges to surface waters of the State*;*
(ii) Designed or used for collecting or conveying stormwater;
(iii) Which is not a *combined sewer*; and
(iv) Which is not part of a Publicly Owned Treatment Works (POTW) as defined at 40 CFR 122.2.

National Pollutant Discharge Elimination System (NPDES) - means the national system for the issuance of wastewater and stormwater permits under the Federal Water Pollution Control Act (Clean Water Act).

Natural Buffer –means an undisturbed area with natural cover running along a surface water (e.g. wetland, stream, river, lake, etc.).

New Development – means any land disturbance that does not meet the definition of Redevelopment Activity included in this appendix.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

New York State Erosion and Sediment Control Certificate Program – a certificate program that establishes and maintains a process to identify and recognize individuals who are capable of developing, designing, inspecting and maintaining erosion and sediment control plans on projects that disturb soils in New York State. The certificate program is administered by the New York State Conservation District Employees Association.

NOI Acknowledgment Letter - means the letter that the Department sends to an owner or operator to acknowledge the Department's receipt and acceptance of a complete Notice of Intent. This letter documents the owner's or operator's authorization to discharge in accordance with the general permit for stormwater discharges from *construction activity*.

Nonpoint Source - means any source of water pollution or pollutants which is not a discrete conveyance or *point source* permitted pursuant to Title 7 or 8 of Article 17 of the Environmental Conservation Law (see ECL Section 17-1403).

Overbank –means flow events that exceed the capacity of the stream channel and spill out into the adjacent floodplain.

Owner or Operator - means the person, persons or legal entity which owns or leases the property on which the *construction activity* is occurring; an entity that has operational control over the construction plans and specifications, including the ability to make modifications to the plans and specifications; and/or an entity that has day-to-day operational control of those activities at a project that are necessary to ensure compliance with the permit conditions.

Performance Criteria – means the design criteria listed under the "Required Elements" sections in Chapters 5, 6 and 10 of the technical standard, New York State Stormwater Management Design Manual, dated January 2015. It does not include the Sizing Criteria (i.e. WQv, RRv, Cpv, Qp and Qf) in Part I.C.2. of the permit.

Point Source - means any discernible, confined and discrete conveyance, including but not limited to any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, vessel or other floating craft, or landfill leachate collection system from which *pollutants* are or may be discharged.

Pollutant - means dredged spoil, filter backwash, solid waste, incinerator residue, sewage, garbage, sewage sludge, munitions, chemical wastes, biological materials, radioactive materials, heat, wrecked or discarded equipment, rock, sand and industrial, municipal, agricultural waste and ballast discharged into water; which may cause or might reasonably be expected to cause pollution of the waters of the state in contravention of the standards or guidance values adopted as provided in 6 NYCRR Parts 700 et seq .

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

Qualified Inspector - means a person that is knowledgeable in the principles and practices of erosion and sediment control, such as a licensed Professional Engineer, Certified Professional in Erosion and Sediment Control (CPESC), Registered Landscape Architect, New York State Erosion and Sediment Control Certificate Program holder or other Department endorsed individual(s).

It can also mean someone working under the direct supervision of, and at the same company as, the licensed Professional Engineer or Registered Landscape Architect, provided that person has training in the principles and practices of erosion and sediment control. Training in the principles and practices of erosion and sediment control means that the individual working under the direct supervision of the licensed Professional Engineer or Registered Landscape Architect has received four (4) hours of Department endorsed training in proper erosion and sediment control principles from a Soil and Water Conservation District, or other Department endorsed entity. After receiving the initial training, the individual working under the direct supervision of the licensed Professional Engineer or Registered Landscape Architect shall receive four (4) hours of training every three (3) years.

It can also mean a person that meets the *Qualified Professional* qualifications in addition to the *Qualified Inspector* qualifications.

Note: Inspections of any post-construction stormwater management practices that include structural components, such as a dam for an impoundment, shall be performed by a licensed Professional Engineer.

Qualified Professional - means a person that is knowledgeable in the principles and practices of stormwater management and treatment, such as a licensed Professional Engineer, Registered Landscape Architect or other Department endorsed individual(s). Individuals preparing SWPPPs that require the post-construction stormwater management practice component must have an understanding of the principles of hydrology, water quality management practice design, water quantity control design, and, in many cases, the principles of hydraulics. All components of the SWPPP that involve the practice of engineering, as defined by the NYS Education Law (see Article 145), shall be prepared by, or under the direct supervision of, a professional engineer licensed to practice in the State of New York.

Redevelopment Activity(ies) – means the disturbance and reconstruction of existing impervious area, including impervious areas that were removed from a project site within five (5) years of preliminary project plan submission to the local government (i.e. site plan, subdivision, etc.).

Regulated, Traditional Land Use Control MS4 - means a city, town or village with land use control authority that is authorized to discharge under New York State DEC's

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

SPDES General Permit For Stormwater Discharges from Municipal Separate Stormwater Sewer Systems (MS4s) or the City of New York's Individual SPDES Permit for their Municipal Separate Storm Sewer Systems (NY-0287890).

Routine Maintenance Activity - means *construction activity* that is performed to maintain the original line and grade, hydraulic capacity, or original purpose of a facility, including, but not limited to:

- Re-grading of gravel roads or parking lots,
- Cleaning and shaping of existing roadside ditches and culverts that maintains the approximate original line and grade, and hydraulic capacity of the ditch,
- Cleaning and shaping of existing roadside ditches that does not maintain the approximate original grade, hydraulic capacity and purpose of the ditch if the changes to the line and grade, hydraulic capacity or purpose of the ditch are installed to improve water quality and quantity controls (e.g. installing grass lined ditch),
- Placement of aggregate shoulder backing that stabilizes the transition between the road shoulder and the ditch or *embankment*,
- Full depth milling and filling of existing asphalt pavements, replacement of concrete pavement slabs, and similar work that does not expose soil or disturb the bottom six (6) inches of subbase material,
- Long-term use of equipment storage areas at or near highway maintenance facilities,
- Removal of sediment from the edge of the highway to restore a previously existing sheet-flow drainage connection from the highway surface to the highway ditch or *embankment*,
- Existing use of Canal Corp owned upland disposal sites for the canal, and
- Replacement of curbs, gutters, sidewalks and guide rail posts.

Site limitations – means site conditions that prevent the use of an infiltration technique and or infiltration of the total WQv. Typical site limitations include: seasonal high groundwater, shallow depth to bedrock, and soils with an infiltration rate less than 0.5 inches/hour. The existence of site limitations shall be confirmed and documented using actual field testing (i.e. test pits, soil borings, and infiltration test) or using information from the most current United States Department of Agriculture (USDA) Soil Survey for the County where the project is located.

Sizing Criteria – means the criteria included in Part I.C.2 of the permit that are used to size post-construction stormwater management control practices. The criteria include; Water Quality Volume (WQv), Runoff Reduction Volume (RRv), Channel Protection Volume (Cpv), *Overbank* Flood (Qp), and Extreme Flood (Qf).

State Pollutant Discharge Elimination System (SPDES) - means the system established pursuant to Article 17 of the ECL and 6 NYCRR Part 750 for issuance of permits authorizing discharges to the waters of the state.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

Steep Slope – means land area designated on the current United States Department of Agriculture ("USDA") Soil Survey as Soil Slope Phase "D", (provided the map unit name is inclusive of slopes greater than 25%) , or Soil Slope Phase E or F, (regardless of the map unit name), or a combination of the three designations.

Streambank – as used in this permit, means the terrain alongside the bed of a creek or stream. The bank consists of the sides of the channel, between which the flow is confined.

Stormwater Pollution Prevention Plan (SWPPP) – means a project specific report, including construction drawings, that among other things: describes the construction activity(ies), identifies the potential sources of pollution at the *construction site*; describes and shows the stormwater controls that will be used to control the pollutants (i.e. erosion and sediment controls; for many projects, includes post-construction stormwater management controls); and identifies procedures the *owner or operator* will implement to comply with the terms and conditions of the permit. See Part III of the permit for a complete description of the information that must be included in the SWPPP.

Surface Waters of the State - shall be construed to include lakes, bays, sounds, ponds, impounding reservoirs, springs, rivers, streams, creeks, estuaries, marshes, inlets, canals, the Atlantic ocean within the territorial seas of the state of New York and all other bodies of surface water, natural or artificial, inland or coastal, fresh or salt, public or private (except those private waters that do not combine or effect a junction with natural surface waters), which are wholly or partially within or bordering the state or within its jurisdiction. Waters of the state are further defined in 6 NYCRR Parts 800 to 941.

Temporarily Ceased – means that an existing disturbed area will not be disturbed again within 14 calendar days of the previous soil disturbance.

Temporary Stabilization - means that exposed soil has been covered with material(s) as set forth in the technical standard, New York Standards and Specifications for Erosion and Sediment Control, to prevent the exposed soil from eroding. The materials can include, but are not limited to, mulch, seed and mulch, and erosion control mats (e.g. jute twisted yarn, excelsior wood fiber mats).

Total Maximum Daily Loads (TMDLs) - A TMDL is the sum of the allowable loads of a single pollutant from all contributing point and *nonpoint source*s. It is a calculation of the maximum amount of a pollutant that a waterbody can receive on a daily basis and still meet *water quality standards*, and an allocation of that amount to the pollutant's sources. A TMDL stipulates wasteload allocations (WLAs) for *point source* discharges, load allocations (LAs) for *nonpoint source*s, and a margin of safety (MOS).

Trained Contractor - means an employee from the contracting (construction) company, identified in Part III.A.6., that has received four (4) hours of Department endorsed

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

training in proper erosion and sediment control principles from a Soil and Water Conservation District, or other Department endorsed entity. After receiving the initial training, the *trained contractor* shall receive four (4) hours of training every three (3) years.

It can also mean an employee from the contracting (construction) company, identified in Part III.A.6., that meets the *qualified inspector* qualifications (e.g. licensed Professional Engineer, Certified Professional in Erosion and Sediment Control (CPESC), Registered Landscape Architect, New York State Erosion and Sediment Control Certificate Program holder, or someone working under the direct supervision of, and at the same company as, the licensed Professional Engineer or Registered Landscape Architect, provided they have received four (4) hours of Department endorsed training in proper erosion and sediment control principles from a Soil and Water Conservation District, or other Department endorsed entity).

The *trained contractor* is responsible for the day to day implementation of the SWPPP.

Uniform Procedures Act (UPA) Permit - means a permit required under 6 NYCRR Part 621 of the Environmental Conservation Law (ECL), Article 70.

Water Quality Standard - means such measures of purity or quality for any waters in relation to their reasonable and necessary use as promulgated in 6 NYCRR Part 700 et seq.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

APPENDIX B – Required SWPPP Components by Project Type

Table 1
Construction Activities that Require the Preparation of a SWPPP That Only Includes Erosion and Sediment Controls

The following construction activities that involve soil disturbances of one (1) or more acres of land, but less than five (5) acres:

- Single family home not located in one of the watersheds listed in Appendix C or not *directly discharging* to one of the 303(d) segments listed in Appendix E
- Single family residential subdivisions with 25% or less impervious cover at total site build-out and not located in one of the watersheds listed in Appendix C and not directly discharging to one of the 303(d) segments listed in Appendix E
- Construction of a barn or other *agricultural building*, silo, stock yard or pen.

The following construction activities that involve soil disturbances between five thousand (5000) square feet and one (1) acre of land:

All construction activities located in the watersheds identified in Appendix D that involve soil disturbances between five thousand (5,000) square feet and one (1) acre of land.

The following construction activities that involve soil disturbances of one (1) or more acres of land:

- Installation of underground, linear utilities; such as gas lines, fiber-optic cable, cable TV, electric, telephone, sewer mains, and water mains
- Environmental enhancement projects, such as wetland mitigation projects, stormwater retrofits and stream restoration projects
- Pond construction
- Linear bike paths running through areas with vegetative cover, including bike paths surfaced with an impervious cover
- Cross-country ski trails and walking/hiking trails
- Sidewalk, bike path or walking path projects, surfaced with an impervious cover, that are not part of residential, commercial or institutional development;
- Sidewalk, bike path or walking path projects, surfaced with an impervious cover, that include incidental shoulder or curb work along an existing highway to support construction of the sidewalk, bike path or walking path.
- Slope stabilization projects
- Slope flattening that changes the grade of the site, but does not significantly change the runoff characteristics

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

Table 1 (Continued) Construction Activities that Require the Preparation of a SWPPP That Only Includes Erosion and Sediment Controls

The following construction activities that involve soil disturbances of one (1) or more acres of land:

- Spoil areas that will be covered with vegetation
- Vegetated open space projects (i.e. recreational parks, lawns, meadows, fields, downhill ski trails) excluding projects that *alter hydrology from pre to post development* conditions,
- Athletic fields (natural grass) that do not include the construction or reconstruction of *impervious area* and do not *alter hydrology from pre to post development* conditions
- Demolition project where vegetation will be established, and no redevelopment is planned
- Overhead electric transmission line project that does not include the construction of permanent access roads or parking areas surfaced with *impervious cover*
- Structural practices as identified in Table II in the "Agricultural Management Practices Catalog for Nonpoint Source Pollution in New York State", excluding projects that involve soil disturbances of greater than five acres and construction activities that include the construction or reconstruction of impervious area
- Temporary access roads, median crossovers, detour roads, lanes, or other temporary impervious areas that will be restored to pre-construction conditions once the construction activity is complete

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

Table 2
CONSTRUCTION ACTIVITIES THAT REQUIRE THE PREPARATION OF A SWPPP THAT INCLUDES POST-CONSTRUCTION STORMWATER MANAGEMENT PRACTICES

The following construction activities that involve soil disturbances of one (1) or more acres of land:

- Single family home located in one of the watersheds listed in Appendix C or *directly discharging* to one of the 303(d) segments listed in Appendix E
- Single family home that disturbs five (5) or more acres of land
- Single family residential subdivisions located in one of the watersheds listed in Appendix C or *directly discharging* to one of the 303(d) segments listed in Appendix E
- Single family residential subdivisions that involve soil disturbances of between one (1) and five (5) acres of land with greater than 25% impervious cover at total site build-out
- Single family residential subdivisions that involve soil disturbances of five (5) or more acres of land, and single family residential subdivisions that involve soil disturbances of less than five (5) acres that are part of a larger common plan of development or sale that will ultimately disturb five or more acres of land
- Multi-family residential developments; includes duplexes, townhomes, condominiums, senior housing complexes, apartment complexes, and mobile home parks
- Airports
- Amusement parks
- Breweries, cideries, and wineries, including establishments constructed on agricultural land
- Campgrounds
- Cemeteries that include the construction or reconstruction of impervious area (>5% of disturbed area) or *alter the hydrology from pre to post development* conditions
- Commercial developments
- Churches and other places of worship
- Construction of a barn or other *agricultural building* (e.g. silo) and structural practices as identified in Table II in the "Agricultural Management Practices Catalog for Nonpoint Source Pollution in New York State" that include the construction or reconstruction of *impervious area*, excluding projects that involve soil disturbances of less than five acres.
- Golf courses
- Institutional development; includes hospitals, prisons, schools and colleges
- Industrial facilities; includes industrial parks
- Landfills
- Municipal facilities; includes highway garages, transfer stations, office buildings, POTW's, water treatment plants, and water storage tanks
- Office complexes
- Playgrounds that include the construction or reconstruction of impervious area
- Sports complexes
- Racetracks; includes racetracks with earthen (dirt) surface
- Road construction or reconstruction, including roads constructed as part of the construction activities listed in Table 1

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

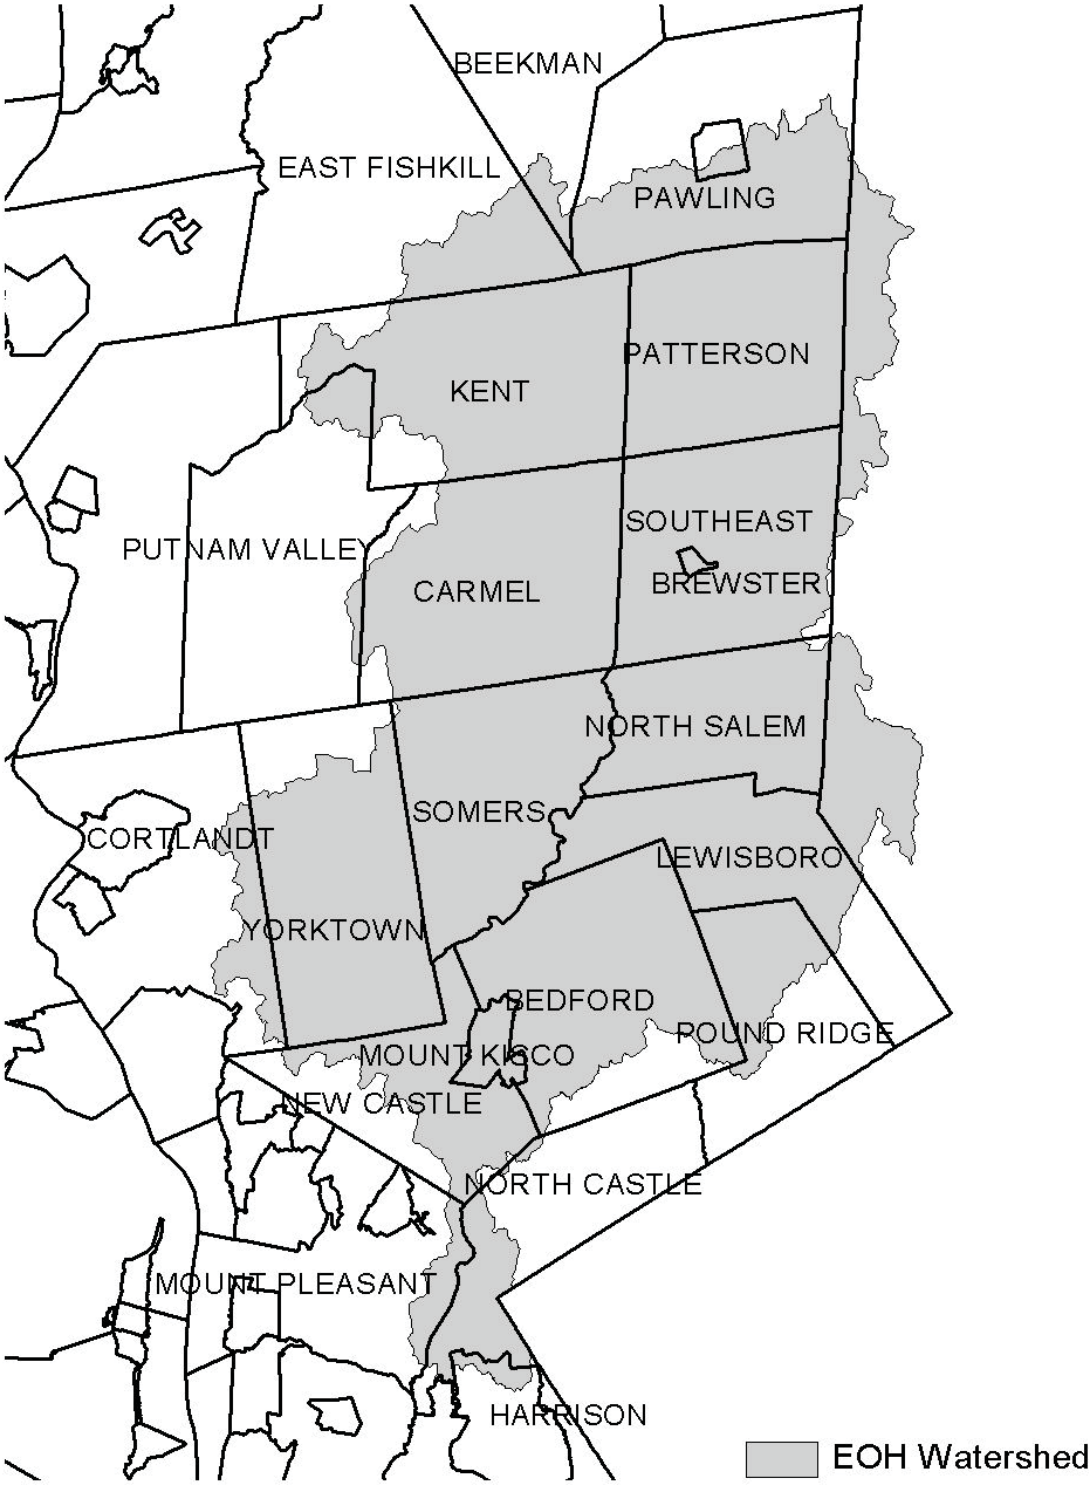
Table 2 (Continued)

CONSTRUCTION ACTIVITIES THAT REQUIRE THE PREPARATION OF A SWPPP THAT INCLUDES POST-CONSTRUCTION STORMWATER MANAGEMENT PRACTICES

The following construction activities that involve soil disturbances of one (1) or more acres of land:

- Parking lot construction or reconstruction, including parking lots constructed as part of the construction activities listed in Table 1
- Athletic fields (natural grass) that include the construction or reconstruction of impervious area (>5% of disturbed area) or *alter the hydrology from pre to post development* conditions
- Athletic fields with artificial turf
- Permanent access roads, parking areas, substations, compressor stations and well drilling pads, surfaced with *impervious cover,* and constructed as part of an over-head electric transmission line project, wind-power project, cell tower project, oil or gas well drilling project, sewer or water main project or other linear utility project
- Sidewalk, bike path or walking path projects, surfaced with an impervious cover, that are part of a residential, commercial or institutional development
- Sidewalk, bike path or walking path projects, surfaced with an impervious cover, that are part of a highway construction or reconstruction project
- All other construction activities that include the construction or reconstruction of *impervious area* or *alter the hydrology from pre to post development* conditions, and are not listed in Table 1

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)



APPENDIX C – Watersheds Requiring Enhanced Phosphorus Removal

Watersheds where *owners or operators* of construction activities identified in Table 2 of Appendix B must prepare a SWPPP that includes post-construction stormwater management practices designed in conformance with the Enhanced Phosphorus Removal Standards included in the technical standard, New York State Stormwater Management Design Manual ("Design Manual").

- Entire New York City Watershed located east of the Hudson River - Figure 1
- Onondaga Lake Watershed - Figure 2
- Greenwood Lake Watershed -Figure 3
- Oscawana Lake Watershed – Figure 4
- Kinderhook Lake Watershed – Figure 5

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

APPENDIX D – Watersheds with Lower Disturbance Threshold

Watersheds where *owners or operators* of construction activities that involve soil disturbances between five thousand (5000) square feet and one (1) acre of land must obtain coverage under this permit.

Entire New York City Watershed that is located east of the Hudson River - See Figure 1 in Appendix C

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

APPENDIX E – 303(d) Segments Impaired by Construction Related Pollutant(s)

List of 303(d) segments impaired by pollutants related to *construction activity* (e.g. silt, sediment or nutrients). The list was developed using "The Final New York State 2016 Section 303(d) List of Impaired Waters Requiring a TMDL/Other Strategy" dated November 2016. *Owners or operators* of single family home and single family residential subdivisions with 25% or less total impervious cover at total site build-out that involve soil disturbances of one or more acres of land, but less than 5 acres, and *directly discharge* to one of the listed segments below shall prepare a SWPPP that includes post-construction stormwater management practices designed in conformance with the New York State Stormwater Management Design Manual ("Design Manual"), dated January 2015.

COUNTY	WATERBODY	POLLUTANT
Albany	Ann Lee (Shakers) Pond, Stump Pond	Nutrients
Albany	Basic Creek Reservoir	Nutrients

INSPECTION REPORT (Page 1 of 2)

FORM SWPPP-3

Proposed Site Redevelopment - 4548-4564 Main Street - Amherst, NY 14226

Inspections/reports are required at least once every seven (7) calendar days.

Inspection Type: ☐ **Routine (every 7 calendar days)** ☐ **Routine (every 30 calendar days)** ☐ **Storm**

Date: _____ Week Ending: _____

Weather/Storm Event Information:

Storm Start Time: _____ Storm Duration: _____

Time Elapsed Since Last Storm: _____ Approximate Amount of Rainfall (inches): _____

Based on the results of the inspection, necessary control modifications shall be implemented within seven (7) calendar days. These reports shall be kept on file as part of the Storm Water Pollution Prevention Plan for at least five (5) years from the date of completion and submission of the Final Stabilization Certification/Termination Checklist and Notice of Termination. A copy of the SWPPP shall be kept at the site at all times during construction.

Certification Statement:
"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Name of Inspector: _____ Title of Inspector: _____

Qualifications of Inspector: _____

_____

Inspector's Signature: _____

Construction phasing/sequencing is consistent with the SWPPP and Erosion Control Plans: ☐ **Yes** ☐ **No**

Compliance Certification
I certify that, based on no incidents of non-compliance identified during the inspection, the site is in compliance with the SWPPP and the Construction General Permit.

Name of Operator's Duly Authorized Representative (Printed): _____

Signature of Operator's Duly Authorized Representative: _____

Date: _____

*Note: This Compliance Certification is only to be signed by the Operator's Duly Authorized Representative (Project Manager) when there are no **"unsatisfactory" conditions and the construction phasing/sequencing is consistent with the SWPPP, rendering the site in full compliance with** the SWPPP and the Construction General Permit.

MODIFICATION REPORT

FORM SWPPP-7

Proposed Site Redevelopment - 4548-4564 Main Street - Amherst, NY 14226

CHANGES REQUIRED FOR STORM WATER POLLUTION PREVENTION PLAN

The SWPPP must be amended whenever there is a change in design, construction, operation, or maintenance at the construction site that has a significant effect on the discharge of pollutants to the waters of the United States that has not been previously addressed in the SWPPP, if inspections or investigations by site staff, local, state or federal officials determine that discharges are causing water quality exceedances or the SWPPP is ineffective in eliminating or significantly minimizing pollutants in storm water discharges from the construction site, or based on the results of an inspection, the SWPPP must be modified to include additional or modified BMPs designed to correct identified problems. Revisions must be completed within seven (7) calendar days following the inspection.

STORM WATER POLLUTION PREVENTION PLAN
REPORTABLE QUANTITY RELEASE FORM

FORM SWPPP-9

Proposed Site Redevelopment - 4548-4564 Main Street - Amherst, NY 14226

The discharges of hazardous substances or oil in storm water discharges from construction sites must be prevented or minimized in accordance with the SWPPP. Where a release containing a hazardous substance or oil in an amount equal to or in excess of a reportable quantity established under 40CFR110, 40CFR117 and 40CFR302 occurs, the following steps must be taken:

1. All measures must be taken to contain and abate the spill and to prevent the discharge of the pollutant(s) to storm water or off-site.

2. Notice must be provided to the National Response Center (NRC) at 1-800-424-8802 and the NYSDEC in accordance with regulations referenced above as soon as site staff has knowledge of the discharge.

3. Contact the Project Manager or Engineer of Record immediately upon knowledge of release.

4. The SWPPP must be modified within seven (7) calendar days of knowledge of the discharge to provide a description of the release, the circumstances leading to the release, and the date of the release. The plans must identify measures to prevent the recurrence of such releases and to respond to such releases.

Date of Spill	Material Spilled	Approximate Quantity of Spill (in gallons)	Agency(s) Notified	Date of Notification	SWPPP Revision Date

STORM WATER POLLUTION PREVENTION PLAN
IMPLEMENTATION SCHEDULE

FORM SWPPP-10

Proposed Site Redevelopment - 4548-4564 Main Street - Amherst, NY 14226

*To be completed prior to initiation of construction by the contractor.

The Contractor will be responsible for implementing all erosion control and storm water management control structures. The Contractor may designate these tasks to certain subcontractors as they see fit, but the ultimate responsibility for implementing these controls and ensuring their proper functioning remains with the Contractor.

Refer to Section 812.3 for Sequence of Activities

Construction Activity	Proposed Initiation Date	Proposed Completion Date	Contractor Responsible for Implementation

Certification Statement - Owner/Operator

I have read or been advised of the permit conditions and believe that I understand them. I also understand that, under the terms of the permit, there may be reporting requirements. I hereby certify that this document and the corresponding documents were prepared under my direction or supervision. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations. I further understand that coverage under the general permit will be identified in the acknowledgment that I will receive as a result of submitting this NOI and can be as long as sixty (60) business days as provided for in the general permit. I also understand that, by submitting this NOI, I am acknowledging that the SWPPP has been developed and will be implemented as the first element of construction, and agreeing to comply with all the terms and conditions of the general permit for which this NOI is being submitted.

(NOTE: Submit completed form to address above)

NOTICE OF TERMINATION for Storm Water Discharges Authorized under the SPDES General Permit for Construction Activity

Please indicate your permit identification number: NYR ___ ___ ___ ___ ___ ___

I. Owner or Operator Information

1. Owner/Operator Name:

2. Street Address:

3. City/State/Zip:

4. Contact Person: | 4a.Telephone:

4b. Contact Person E-Mail:

II. Project Site Information

5. Project/Site Name:

6. Street Address:

7. City/Zip:

8. County:

III. Reason for Termination

9a. □ All disturbed areas have achieved final stabilization in accordance with the general permit and SWPPP. ***Date final stabilization completed** (month/year): _____

9b. □ Permit coverage has been transferred to new owner/operator. Indicate new owner/operator's permit identification number: NYR ___ ___ ___ ___ ___ ___
(Note: Permit coverage can not be terminated by owner identified in I.1. above until new owner/operator obtains coverage under the general permit)

9c. □ Other (Explain on Page 2)

IV. Final Site Information:

10a. Did this construction activity require the development of a SWPPP that includes post-construction stormwater management practices? □ yes □ no (If no, go to question 10f.)

10b. Have all post-construction stormwater management practices included in the final SWPPP been constructed? □ yes □ no (If no, explain on Page 2)

10c. Identify the entity responsible for long-term operation and maintenance of practice(s)?

_____

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

NOTICE OF TERMINATION for Storm Water Discharges Authorized under the SPDES General Permit for Construction Activity - continued

10d. Has the entity responsible for long-term operation and maintenance been given a copy of the operation and maintenance plan required by the general permit? □ yes □ no

10e. Indicate the method used to ensure long-term operation and maintenance of the post-construction stormwater management practice(s):

□ Post-construction stormwater management practice(s) and any right-of-way(s) needed to maintain practice(s) have been deeded to the municipality.

□ Executed maintenance agreement is in place with the municipality that will maintain the post-construction stormwater management practice(s).

□ For post-construction stormwater management practices that are privately owned, a mechanism is in place that requires operation and maintenance of the practice(s) in accordance with the operation and maintenance plan, such as a deed covenant in the owner or operator's deed of record.

□ For post-construction stormwater management practices that are owned by a public or private institution (e.g. school, university or hospital), government agency or authority, or public utility; policy and procedures are in place that ensures operation and maintenance of the practice(s) in accordance with the operation and maintenance plan.

10f. Provide the total area of impervious surface (i.e. roof, pavement, concrete, gravel, etc.) constructed within the disturbance area? _____ (acres)

11. Is this project subject to the requirements of a regulated, traditional land use control MS4? □ yes □ no

(If Yes, complete section VI - "MS4 Acceptance" statement

V. Additional Information/Explanation:

(Use this section to answer questions 9c. and 10b., if applicable)

VI. MS4 Acceptance - MS4 Official (principal executive officer or ranking elected official) or Duly Authorized Representative (Note: Not required when 9b. is checked -transfer of coverage)

I have determined that it is acceptable for the owner or operator of the construction project identified in question 5 to submit the Notice of Termination at this time.

Stormwater Management Pond and Bioretention Construction and Maintenance Checklist

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

Stormwater/Wetland Pond Construction Inspection Checklist

Project:
Location:
Site Status:

Date:

Time:

Inspector:

CONSTRUCTION SEQUENCE	SATISFACTORY/ UNSATISFACTORY	COMMENTS
Pre-Construction/Materials and Equipment		
Pre-construction meeting		
Pipe and appurtenances on-site prior to construction and dimensions checked		
1. Material (including protective coating, if specified)		
2. Diameter		
3. Dimensions of metal riser or pre-cast concrete outlet structure		
4. Required dimensions between water control structures (orifices, weirs, etc.) are in accordance with approved plans		
5. Barrel stub for prefabricated pipe structures at proper angle for design barrel slope		
6. Number and dimensions of prefabricated anti-seep collars		
7. Watertight connectors and gaskets		
8. Outlet drain valve		
Project benchmark near pond site		
Equipment for temporary de-watering		

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

CONSTRUCTION SEQUENCE	SATISFACTORY/ UNSATISFACTORY	COMMENTS
2. Subgrade Preparation		
Area beneath embankment stripped of all vegetation, topsoil, and organic matter		
3. Pipe Spillway Installation		
Method of installation detailed on plans		
A. Bed preparation		
Installation trench excavated with specified side slopes		
Stable, uniform, dry subgrade of relatively impervious material (If subgrade is wet, contractor shall have defined steps before proceeding with installation)		
Invert at proper elevation and grade		
B. Pipe placement		
Metal / plastic pipe		
1. Watertight connectors and gaskets properly installed		
2. Anti-seep collars properly spaced and having watertight connections to pipe		
3. Backfill placed and tamped by hand under “haunches” of pipe		
4. Remaining backfill placed in max. 8 inch lifts using small power tamping equipment until 2 feet cover over pipe is reached		

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

CONSTRUCTION SEQUENCE	SATISFACTORY/ UNSATISFACTORY	COMMENTS
3. Pipe Spillway Installation		
Concrete pipe		
1. Pipe set on blocks or concrete slab for pouring of low cradle		
2. Pipe installed with rubber gasket joints with no spalling in gasket interface area		
3. Excavation for lower half of anti-seep collar(s) with reinforcing steel set		
4. Entire area where anti-seep collar(s) will come in contact with pipe coated with mastic or other approved waterproof sealant		
5. Low cradle and bottom half of anti-seep collar installed as monolithic pour and of an approved mix		
6. Upper half of anti-seep collar(s) formed with reinforcing steel set		
7. Concrete for collar of an approved mix and vibrated into place (protected from freezing while curing, if necessary)		
8. Forms stripped and collar inspected for honeycomb prior to backfilling. Parge if necessary.		
C. Backfilling		
Fill placed in maximum 8 inch lifts		
Backfill taken minimum 2 feet above top of anti-seep collar elevation before traversing with heavy equipment		

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

CONSTRUCTION SEQUENCE	SATISFACTORY/ UNSATISFACTORY	COMMENTS
4. Riser / Outlet Structure Installation		
Riser located within embankment		
A. Metal riser		
Riser base excavated or formed on stable subgrade to design dimensions		
Set on blocks to design elevations and plumbed		
Reinforcing bars placed at right angles and projecting into sides of riser		
Concrete poured so as to fill inside of riser to invert of barrel		
B. Pre-cast concrete structure		
Dry and stable subgrade		
Riser base set to design elevation		
If more than one section, no spalling in gasket interface area; gasket or approved caulking material placed securely		
Watertight and structurally sound collar or gasket joint where structure connects to pipe spillway		
C. Poured concrete structure		
Footing excavated or formed on stable subgrade, to design dimensions with reinforcing steel set		
Structure formed to design dimensions, with reinforcing steel set as per plan		
Concrete of an approved mix and vibrated into place (protected from freezing while curing, if necessary)		
Forms stripped & inspected for “honeycomb” prior to backfilling; parge if necessary		

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

CONSTRUCTION SEQUENCE	SATISFACTORY/ UNSATISFACTORY	COMMENTS
5. Embankment Construction		
Fill material		
Compaction		
Embankment		
1. Fill placed in specified lifts and compacted with appropriate equipment		
2. Constructed to design cross-section, side slopes and top width		
3. Constructed to design elevation plus allowance for settlement		
6. Impounded Area Construction		
Excavated / graded to design contours and side slopes		
Inlet pipes have adequate outfall protection		
Forebay(s)		
Pond benches		
7. Earth Emergency Spillway Construction		
Spillway located in cut or structurally stabilized with riprap, gabions, concrete, etc.		
Excavated to proper cross-section, side slopes and bottom width		
Entrance channel, crest, and exit channel constructed to design grades and elevations		

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

CONSTRUCTION SEQUENCE	SATISFACTORY / UNSATISFACTORY	COMMENTS
8. Outlet Protection		
A. End section		
Securely in place and properly backfilled		
B. Endwall		
Footing excavated or formed on stable subgrade, to design dimensions and reinforcing steel set, if specified		
Endwall formed to design dimensions with reinforcing steel set as per plan		
Concrete of an approved mix and vibrated into place (protected from freezing, if necessary)		
Forms stripped and structure inspected for "honeycomb" prior to backfilling; parge if necessary		
C. Riprap apron / channel		
Apron / channel excavated to design cross-section with proper transition to existing ground		
Filter fabric in place		
Stone sized as per plan and uniformly place at the thickness specified		
9. Vegetative Stabilization		
Approved seed mixture or sod		
Proper surface preparation and required soil amendments		
Excelsior mat or other stabilization, as per plan		

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

CONSTRUCTION SEQUENCE	SATISFACTORY/ UNSATISFACTORY	COMMENTS
10. Miscellaneous		
Drain for ponds having a permanent pool		
Trash rack / anti-vortex device secured to outlet structure		
Trash protection for low flow pipes, orifices, etc.		
Fencing (when required)		
Access road		
Set aside for clean-out maintenance		
11. Stormwater Wetlands		
Adequate water balance		
Variety of depth zones present		
Approved pondscaping plan in place Reinforcement budget for additional plantings		
Plants and materials ordered 6 months prior to construction		
Construction planned to allow for adequate planting and establishment of plant community (April-June planting window)		
Wetland buffer area preserved to maximum extent possible		

Comments:

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

Actions to be Taken:

Bioretention Construction Inspection Checklist

Project:
Location:
Site Status:

Date:

Time:

Inspector:

CONSTRUCTION SEQUENCE	SATISFACTORY/ UNSATISFACTORY	COMMENTS
1. Pre-Construction		
Pre-construction meeting		
Runoff diverted		
Facility area cleared		
If designed as exfilter, soil testing for permeability		
Facility location staked out		
2. Excavation		
Size and location		
Lateral slopes completely level		
If designed as exfilter, ensure that excavation does not compact susoils.		
Longitudinal slopes within design range		

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

CONSTRUCTION SEQUENCE	SATISFACTORY / UNSATISFACTORY	COMMENTS
3. Structural Components		
Stone diaphragm installed correctly		
Outlets installed correctly		
Underdrain		
Pretreatment devices installed		
Soil bed composition and texture		
4. Vegetation		
Complies with planting specs		
Topsoil adequate in composition and placement		
Adequate erosion control measures in place		
5. Final Inspection		
Dimensions		
Proper stone diaphragm		
Proper outlet		
Soil/ filter bed permeability testing		
Effective stand of vegetation and stabilization		
Construction generated sediments removed		
Contributing watershed stabilized before flow is diverted to the practice		

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

Stormwater Pond/Wetland Operation, Maintenance and Management Inspection Checklist

Project _____
Location: _____
Site Status: _____

Date: _____
Time: _____

Inspector: _____

Maintenance Item	Satisfactory/ Unsatisfactory	Comments
1. Embankment and emergency spillway (Annual, After Major Storms)		
1. Vegetation and ground cover adequate		
2. Embankment erosion		
3. Animal burrows		
4. Unauthorized planting		
5. Cracking, bulging, or sliding of dam		
a. Upstream face		
b. Downstream face		
c. At or beyond toe		
downstream		
upstream		
d. Emergency spillway		
6.Pond, toe & chimney drains clear and functioning		
7.Seeps/leaks on downstream face		
8.Slope protection or riprap failure		
9. Vertical/horizontal alignment of top of dam “As-Built”		

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

Maintenance Item	Satisfactory/ Unsatisfactory	Comments
10. Emergency spillway clear of obstructions and debris		
11. Other (specify)		
2. Riser and principal spillway (Annual)		
Type: Reinforced concrete _____ Corrugated pipe _____ Masonry _____ 1. Low flow orifice obstructed		
2. Low flow trash rack. a. Debris removal necessary		
b. Corrosion control		
3. Weir trash rack maintenance a. Debris removal necessary		
b. corrosion control		
4. Excessive sediment accumulation insider riser		
5. Concrete/masonry condition riser and barrels a. cracks or displacement		
b. Minor spalling (<1")		
c. Major spalling (rebars exposed)		
d. Joint failures		
e. Water tightness		
6. Metal pipe condition		
7. Control valve a. Operational/exercised		
b. Chained and locked		
8. Pond drain valve a. Operational/exercised		
b. Chained and locked		
9. Outfall channels functioning		
10. Other (specify)		

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

Maintenance Item	Satisfactory/ Unsatisfactory	Comments
3. Permanent Pool (Wet Ponds) (monthly)		
1. Undesirable vegetative growth		
2. Floating or floatable debris removal required		
3. Visible pollution		
4. Shoreline problem		
5. Other (specify)		
4. Sediment Forebays		
1.Sedimentation noted		
2. Sediment cleanout when depth < 50% design depth		
5. Dry Pond Areas		
1. Vegetation adequate		
2. Undesirable vegetative growth		
3. Undesirable woody vegetation		
4. Low flow channels clear of obstructions		
5. Standing water or wet spots		
6. Sediment and / or trash accumulation		
7. Other (specify)		
6. Condition of Outfalls (Annual , After Major Storms)		
1. Riprap failures		
2. Slope erosion		
3. Storm drain pipes		
4.Endwalls / Headwalls		
5. Other (specify)		
7. Other (Monthly)		
1. Encroachment on pond, wetland or easement area		

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

Maintenance Item	Satisfactory/ Unsatisfactory	Comments
2. Complaints from residents		
3.Aesthetics a. Grass growing required		
b. Graffiti removal needed		
c. Other (specify)		
4. Conditions of maintenance access routes.		
5. Signs of hydrocarbon build-up		
6. Any public hazards (specify)		
8. Wetland Vegetation (Annual)		
1. Vegetation healthy and growing Wetland maintaining 50% surface area coverage of wetland plants after the second growing season. (If unsatisfactory, reinforcement plantings needed)		
2. Dominant wetland plants: Survival of desired wetland plant species Distribution according to landscaping plan?		
3. Evidence of invasive species		
4. Maintenance of adequate water depths for desired wetland plant species		
5. Harvesting of emergent plantings needed		
6. Have sediment accumulations reduced pool volume significantly or are plants “choked” with sediment		
7. Eutrophication level of the wetland.		
8. Other (specify)		

Comments:

Bioretention Operation, Maintenance and Management Inspection Checklist

Project:
Location:
Site Status:

Date:

Time:

Inspector:

MAINTENANCE ITEM	SATISFACTORY / UNSATISFACTORY	COMMENTS
1. Debris Cleanout (Monthly)		
Bioretention and contributing areas clean of debris		
No dumping of yard wastes into practice		
Litter (branches, etc.) have been removed		
2. Vegetation (Monthly)		
Plant height not less than design water depth		
Fertilized per specifications		
Plant composition according to approved plans		
No placement of inappropriate plants		
Grass height not greater than 6 inches		
No evidence of erosion		
3. Check Dams/Energy Dissipaters/Sumps (Annual, After Major Storms)		
No evidence of sediment buildup		

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

MAINTENANCE ITEM	SATISFACTORY / UNSATISFACTORY	COMMENTS
Sumps should not be more than 50% full of sediment		
No evidence of erosion at downstream toe of drop structure		
4. Dewatering (Monthly)		
Dewaters between storms		
No evidence of standing water		
5. Sediment Deposition (Annual)		
Swale clean of sediments		
Sediments should not be > 20% of swale design depth		
6. Outlet/Overflow Spillway (Annual, After Major Storms)		
Good condition, no need for repair		
No evidence of erosion		
No evidence of any blockages		
7. Integrity of Filter Bed (Annual)		
Filter bed has not been blocked or filled inappropriately

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

GENERAL NOTES:
1. INSTALL ALL MATERIALS TO MANUFACTURERS RECOMMENDATIONS AND BEST STANDARDS OF TRADE INVOLVED.
2. SUBSTITUTIONS SHALL BE MADE ONLY WITH OWNER'S APPROVAL AND BE OF EQUIVALENT QUALITY TO WHAT IS SPECIFIED.
3. WORK SHALL BE COMPLETED IN STRICT ACCORDANCE WITH ALL LOCAL CODES AND OSHA SAFETY RULES AND REGULATIONS.
4. CONTRACTOR SHALL VERIFY ALL EXISTING CONDITIONS AND DIMENSIONS AT THE SITE. NOTIFY OWNER & ENGINEER OF DISCREPANCIES IN CONDITIONS SHOWN ON DRAWINGS PRIOR TO PROCEEDING WITH THE WORK.
5. CONTRACTOR SHALL BE RESPONSIBLE FOR PROTECTION OF ANY EXISTING STRUCTURES TO REMAIN AND ANY FINISH MATERIAL INSTALLED WHILE WORKING ON OTHER COMPONENTS.
6. CONTRACTOR SHALL KEEP JOB FREE OF DEBRIS AND MAKE FINAL CLEANUP TO THE SATISFACTION OF OWNER.
7. CONTRACTOR SHALL ASCERTAIN THE LOCATION OF ALL UTILITIES PRIOR TO CONSTRUCTION SO THAT THIS WORK WILL NOT DISTURB EXISTING LINES AND/OR INSTALLATIONS EXCEPT AS DETAILED ON THE PLANS. COORDINATE ALL WORK WITH THE APPLICABLE UTILITY COMPANIES.
8. CONTRACTOR SHALL OBTAIN AND PAY FOR ALL REQUIRED PERMITS NECESSARY TO PERFORM THE WORK.
9. BUILDING DIMENSIONS ARE APPROXIMATE. REFER TO ARCHITECTURAL DRAWINGS FOR LAYOUT DIMENSIONS.
10. SIDEWALK DIMENSIONS ARE APPROXIMATE. REFER TO ARCHITECTURAL DRAWINGS FOR THE SIDEWALK PLAN.
11. CONCRETE SIDEWALK SEALERS (REFER TO ARCHITECTURAL PLANS FOR LOCATION OF CONCRETE TYPES.)
11.1. GREY CONCRETE SIDEWALKS SHALL HAVE CHEMMASTERS SILENCURE WITHIN 2HRS AFTER FINAL FINISHING OF CONCRETE AND ALL BLEED WATER HAS DISSIPATED.
11.2. EXPOSED AGGREGATE/STAMPED CONCRETE SIDEWALKS SHALL HAVE ONE (#1) COAT CHEMMASTERS - SILENCURE AS SOON AS CONCRETE HAS DRIED AFTER PRESSURE WASHING THE RELEASE AGENT OFF. APRX 30 DAYS AFTER THIS (IF WEATHER PERMITS) APPLY ONE (#1) COAT OF CHEMMASTERS - POLYSEAL EZ.
12. LIGHTING FIXTURE ARROW SYMBOLS REFER TO THE DIRECTION THAT THE FIXTURES ARE REQUIRED TO FACE. SPECIFIC MOUNT BRACKETS WILL BE REQUIRED DEPENDING ON ORIENTATION AND FIXTURE COUNT.
13. CURB ISLAND DIMENSIONS ARE FROM INSIDE OF CURB TO INSIDE OF CURB.

DEMOLITION & EROSION NOTES:
1. USE ENTRANCE FROM FRUEHAUF AVE. FOR CONSTRUCTION ENTRANCE
2. INSTALL TEMPORARY EROSION CONTROL DEVICES AS DIRECTED WITHIN THE WORKING AREA TO PREVENT SEDIMENT MIGRATION. ALL EROSION CONTROL DEVICES SHALL BE INSTALLED IN ACCORDANCE WITH THE DETAILS PROVIDED.
3. ALL EROSION CONTROL DEVICES SHALL BE REPLACED WHEREVER THEY BECOME INOPERABLE.
4. THE CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTENANCE AND REMOVAL OF TEMPORARY SEDIMENTATION CONTROLS.
5. THE CONTRACTOR MUST CONTROL DUST DURING CONSTRUCTION, DURING EARTHWORK OPERATIONS, WATER-SPREADING EQUIPMENT SHALL BE PROVIDED BY THE CONTRACTOR, AND WATER SPREAD AS NECESSARY AND AS DIRECTED IN ORDER TO CONTROL DUST.
6. DIRT OR DEBRIS LEFT ON LOCAL PUBLIC ROADS AS A RESULT OF THIS CONSTRUCTION PROJECT SHALL BE REMOVED AND ROAD SURFACES CLEANED BY THE CONTRACTORS ON A DAILY BASIS, OR MORE FREQUENTLY IF DEEMED NECESSARY.
7. ALL DISTURBED AREAS (EXCEPT AREAS TO BE PAVED OR BUILT UPON) SHALL BE TOPSOILED TO A MINIMUM OF 4" DEPTH AND SEEDED IMMEDIATELY AFTER FINE GRADING TAKES PLACE AND AS SOON AS PHYSICALLY POSSIBLE.
8. THE CONTRACTOR IS RESPONSIBLY FOR THE MAINTENANCE OF DOWNSTREAM STORM SEWERS, DITCHES AND CULVERTS. SILT &/OR FOUND TO BE A RESULT OF THIS SITE CONSTRUCTION WORK SHALL BE REMOVED FROM DOWNSTREAM CULVERTS, DETENTION PONDS, BY THE CONTRACTOR AT NO ADDITIONAL EXPENSE TO THE OWNER OR CITY.
9. ALL SOIL EROSION AND SEDIMENT CONTROL DEVICES AND MATERIALS SHALL BE IN PLACE PRIOR TO BEGINNING EARTHWORK OPERATIONS AND SHALL BE MAINTAINED UNTIL THE ALL GRADING WORKS ARE COMPLETE.

DEMOLITION LEGEND:
- Property Line
- Existing Electric
- Existing Gas
- Existing Water
- Existing Overhead Utility
- Existing Sanitary
- Existing Storm
- Existing Telecoms
- Saw Cut Line
- Silt Fence/Sock
- Inlet Protection "Sedi-Bag" or similar
- Existing Easement to be removed.
- Existing Building to be removed.

DEMOLITION NOTES:
1. Existing Buildings to be removed.
2. Existing Pavement to be removed.
3. Existing R.O.W. Driveway, Curb and Sidewalk to be removed.
4. Existing Retaining Wall and Steps to be removed.
5. Existing Landscape Area to be removed.
6. Existing Fence to be removed.
7. Existing Utility to be removed.
8. Existing Storm Drainage/CB to be removed.
9. Existing Sign to be removed.
10. Existing Curb to remain.
11. Existing Pavement to remain.
12. Existing Landscape area to remain.
13. Eising Sidewalk to remain.
14. Existing Storm Drainage/CB to remain and be protected during Construction.
15. Existing Utility to remain and be protected dering construction.
16. Existing Light Pole to remain and be poteded during construction.
17. Existing Sign to be relocated.

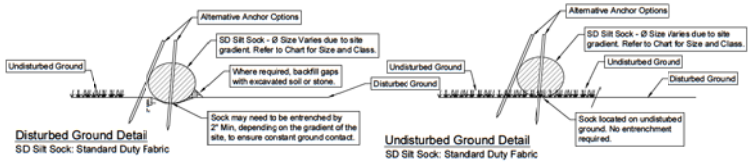
STABILIZED CONSTRUCTION ENTRANCE DETAIL



NOT TO SCALE

1. STONE SIZE - USE 2" STONE, OR RECLAIMED OR RECYCLED CONCRETE EQUIVALENT
2. LENGTH - NOT LESS THAN 50 FEET (EXCEPT ON A SINGLE RESIDENCE LOT WHERE A 30 FOOT MINIMUM LENGTH WOULD APPLY).
3. THICKNESS - NOT LESS THAN SIX (6) INCHES.
4. WIDTH - TWELVE (12) FOOT MINIMUM, BUT NOT LESS THAN THE FULL WIDTH AT POINTS WHERE INGRESS OR EGRESS OCCURS. TWENTY-FOUR (24) FOOT IF SINGLE ENTRANCE TO SITE.
5. FILTER CLOTH - WILL BE PLACED OVER THE ENTIRE AREA PRIOR TO PLACING OF STONE.
6. SURFACE WATER - ALL SURFACE WATER FLOWING OR DIVERTED TOWARD CONSTRUCTION ENTRANCES SHALL BE PIPED ACROSS THE ENTRANCE. IF PIPING IS IMPRACTICAL, A MOUNTABLE BERM WITH 5:1 SLOPES WILL BE PERMITTED.
7. MAINTENANCE - THE ENTRANCE SHALL BE MAINTAINED IN A CONDITION WHICH WILL PREVENT TRACKING OR FLOWING OF SEDIMENT ONTO PUBLIC RIGHTS-OF-WAY. ALL SEDIMENT SPILLED, DROPPED, WASHED OR TRACTED ONTO PUBLIC RIGHTS-OF-WAY MUST BE REMOVED IMMEDIATELY.
8. WHEN WASHING IS REQUIRED, IT SHALL BE DONE ON A AREA STABILIZED WITH STONE AND WHICH DRAINS INTO AN APPROVED SEDIMENT TRAPPING DEVICE.
9. PERIODIC INSPECTION AND NEEDED MAINTENANCE SHALL BE PROVIDED AFTER EACH RAIN.

SD SILT SOCK DETAIL

SD Silt Sock: Standard Duty Fabric

TYPICAL CONCRETE WASH OUT DETAIL

NOTES:
1. CONSTRUCT TO 2016 NYSDEC BLUE BOOK DESIGN CRITERIA

Notes:

1 - Do not use sock below the normal watermark or perpendicular to flow in river and where the maximum incline is greater than 50%.
2 - Contractors shoud be aware of federal, state and local laws, rules regulations or permit requirements for the use of Silt Socks on site.
3 - Sock should be positioned on the outline of the area to be protected, but must be installed between 45° to 90° from directions of flow.
4 - Sock may be required to be entrenched a minimum of 2" on disturbed ground to ensure constant ground contact.
5 - All gaps and ruts must be backfilled with soil or sock material.
6 - Sock overlap should be in the direction of the flow. Overlap amount will be between 12" and 24". Contractor to check with local town for requirements.
7 - If sediment collects to 1/2 the height of the sock, then a second sock may be stacked immediately up slope of the original instead of removing the sediment.
8 - Sock joint is where two sock sections meet on a level grade, overlap and adjoining ends, tightening the ends together, and anchoring through each end. Where two sections meet on un-level ground, j-hook higher elevated end, anchor, and begin new section just below. Back fill any gaps.
9 - Sock should be inspected and repaired as neeced.
10 - If ruts begin under the sock they should be backfilled with soil and compacted so that the ground and sock have continuous contact.
11 - If sock rolls out of place, the sock should be repositioned and secured with additional anchors.
12 - Tears in the Sock fabric may be repaired by wrapping a new piece of fabric over the sock and securing, or by place a second sock immediately up slope with the required overlap beyond deformation.
13 - A section of sock should be replaced whenever it has weakened to such an extent that the efficiency is reduced or diminished. Weakening can occur because the natural mesh fabric breaks down over time of from being moved/dragged on site.
14 - Sock should be replaced when sediment has built up and has been removed three times.
15 - All sediment in disturbed area next to sock must be removed and correctly disposed of before the sock can be removed.
16 - When removing, cut sock open and spread the filler material around. The neting should be removed from site.
17 - Sock should be installed before works commence on site.

3. WORK SHALL BE COMPLETED IN STRICT ACCORDANCE WITH ALL LOCAL CODES AND OSHA SAFETY RULES AND REGULATIONS.
4. CONTRACTOR SHALL VERIFY ALL EXISTING CONDITIONS AND DIMENSIONS AT THE SITE. NOTIFY OWNER & ENGINEER OF DISCREPANCIES IN CONDITIONS SHOWN ON DRAWINGS PRIOR TO PROCEEDING WITH THE WORK.
5. CONTRACTOR SHALL BE RESPONSIBLE FOR PROTECTION OF ANY EXISTING STRUCTURES TO REMAIN AND ANY FINISH MATERIAL INSTALLED WHILE WORKING ON OTHER COMPONENTS.
6. CONTRACTOR SHALL KEEP JOB FREE OF DEBRIS AND MAKE FINAL CLEANUP TO THE SATISFACTION OF OWNER.
7. CONTRACTOR SHALL ASCERTAIN THE LOCATION OF ALL UTILITIES PRIOR TO CONSTRUCTION SO THAT THIS WORK WILL NOT DISTURB EXISTING LINES AND/OR INSTALLATIONS EXCEPT AS DETAILED ON THE PLANS. COORDINATE ALL WORK WITH THE APPLICABLE UTILITY COMPANIES.
8. CONTRACTOR SHALL OBTAIN AND PAY FOR ALL REQUIRED PERMITS NECESSARY TO PERFORM THE WORK.
9. BUILDING DIMENSIONS ARE APPROXIMATE. REFER TO ARCHITECTURAL DRAWINGS FOR LAYOUT DIMENSIONS.
10. SIDEWALK DIMENSIONS ARE APPROXIMATE. REFER TO ARCHITECTURAL DRAWINGS FOR THE SIDEWALK PLAN.
11. CONCRETE SIDEWALK SEALERS (REFER TO ARCHITECTURAL PLANS FOR LOCATION OF CONCRETE TYPES.)
11.1. GREY CONCRETE SIDEWALKS SHALL HAVE CHEMMASTERS - SILENCURE WITHIN 2 HRS AFTER FINAL FINISHING OF CONCRETE AND ALL BLEED WATER HAS DISSIPATED.
11.2. EXPOSED AGGREGATE/STAMPED CONCRETE SIDEWALKS SHALL HAVE ONE (x1) COAT CHEMMASTERS - SILENCURE AS SOON AS CONCRETE HAS DRIED AFTER PRESSURE-WASHING THE RELEASE AGENT OFF. APRX 30 DAYS AFTER THIS (IF WEATHER PERMITS) APPLY ONE (x1) COAT OF CHEMMASTERS - POLYSEAL EZ.
12. LIGHTING FIXTURE ARROW SYMBOLS REFER TO THE DIRECTION THAT THE FIXTURES ARE REQUIRED TO FACE. SPECIFIC MOUNT BRACKETS WILL BE REQUIRED DEPENDING ON ORIENTATION AND FIXTURE COUNT.
13. CURB ISLAND DIMENSIONS ARE FROM INSIDE OF CURB TO INSIDE OF CURB.

SANITARY SEWER NOTES:
1. THE CONTRACTOR IS ADVISED THAT A TRENCH SHIELD AND/OR SHORING DESIGNED IN ACCORDANCE WITH OSHA STANDARDS SHALL BE USED IN ALL OPEN TRENCH EXCAVATIONS.
2. ANY CONTRACTOR AND/OR PLUMBER PERFORMING WORKING IN A CONFINED SPACE (ie MANHOLES, WETWELLS, CHAMBERS) OWNED BY THE TOWN MUST CERTIFY TO THE TOWN THAT THEY HAVE THEIR OWN CONFINED SPACE ENTRY PROGRAM THAT MEETS OR EXCEEDS OSHA'S REGULATIONS. CERTIFICATION MUST BE NOTARIZED BY A NOTARY PUBLIC.
3. CONSTRUCTION SHALL CONFORM TO THE RULES AND REGULATIONS OF THE TOWN AND NEW YORK STATE CODES.
4. IF ANY PROPOSED SEWER LATERAL RUNS UNDER PAVED AREA AND HAS LESS THAN 4' COVER, CONCRETE ENCASEMENT IS REQUIRED. IF MORE THAN 4' COVER IS PROVIDED IN PAVED AREAS SELECT FILL IS REQUIRED.
5. THE CONTRACTOR MUST NOTIFY THE TOWN ENGINEER OFFICE AND THE PLUMBING INSPECTOR 24 HOURS IN ADVANCE OF CONSTRUCTION.
6. CLEANOUTS ARE REQUIRED EVERY 100' AND AT CHANGE IN DIRECTION.
7. ABANDONED SANITARY SEWER CONNECTIONS FROM THE SITE, IF ANY, REQUIRE PROOF OF A DISTRICT PERMIT FOR DISCONNECTION PRIOR TO THE NEW CONNECTION BEING MADE.

UTILITY NOTES:
1. PROVIDE FITTINGS AND BLOCKING AS NECESSARY AT ALL BENDS IN WATER LINES.
2. WHERE UTILITIES ARE INSTALLED IN EXISTING PAVEMENT, LANDSCAPED AREA ETC. ANY ITEMS REMOVED/DAMAGED SHALL BE REPLACED IN KIND.
3. IT IS THE RESPONSIBILITY OF THE CONTRACTOR TO OBTAIN ALL PERMITS NECESSARY: STATE, COUNTY, AND TOWN.
4. WATER MAINS TO HAVE MINIMUM 5FT COVER.

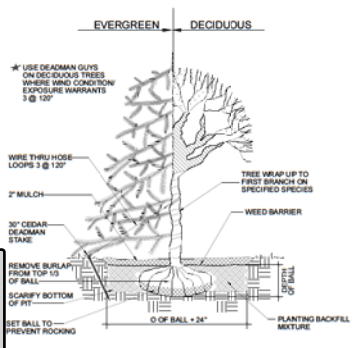
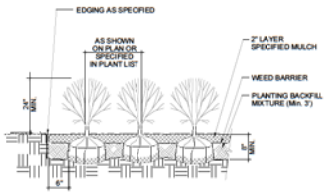
GENERAL NOTES:



1. INSTALL ALL MATERIALS TO MANUFACTURER'S RECOMMENDATIONS AND BEST STANDARDS OF TRADE INVOLVED.
2. SUBSTITUTIONS SHALL BE MADE ONLY WITH OWNER'S APPROVAL AND BE OF EQUIVALENT QUALITY TO WHAT IS SPECIFIED.
3. WORK SHALL BE COMPLETED IN STRICT ACCORDANCE WITH ALL LOCAL CODES AND OSHA SAFETY RULES AND REGULATIONS.
4. CONTRACTOR SHALL VERIFY ALL EXISTING CONDITIONS AND DIMENSIONS AT THE SITE. NOTIFY OWNER & ENGINEER OF DISCREPANCIES IN CONDITIONS SHOWN ON DRAWINGS PRIOR TO PROCEEDING WITH THE WORK.
5. CONTRACTOR SHALL BE RESPONSIBLE FOR PROTECTION OF ANY EXISTING STRUCTURES TO REMAIN AND ANY FINISH MATERIAL INSTALLED WHILE WORKING ON OTHER COMPONENTS.
6. CONTRACTOR SHALL KEEP JOB FREE OF DEBRIS AND MAKE FINAL CLEANUP TO THE SATISFACTION OF OWNER.
7. CONTRACTOR SHALL ASCERTAIN THE LOCATION OF ALL UTILITIES PRIOR TO CONSTRUCTION SO THAT THIS WORK WILL NOT DISTURB EXISTING LINES AND/OR INSTALLATIONS EXCEPT AS DETAILED ON THE PLANS. COORDINATE ALL WORK WITH THE APPLICABLE UTILITY COMPANIES.
8. CONTRACTOR SHALL OBTAIN AND PAY FOR ALL REQUIRED PERMITS NECESSARY TO PERFORM THE WORK.
9. BUILDING DIMENSIONS ARE APPROXIMATE. REFER TO ARCHITECTURAL DRAWINGS FOR LAYOUT DIMENSIONS.
10. SIDEWALK DIMENSIONS ARE APPROXIMATE. REFER TO ARCHITECTURAL DRAWINGS FOR THE SIDEWALK PLAN.
11. CONCRETE SIDEWALK SEALERS: (REFER TO ARCHITECTURAL PLANS FOR LOCATION OF CONCRETE TYPES.)
    11.1 GREY CONCRETE SIDEWALKS SHALL HAVE CHEMMASTERS - SILENCURE WITHIN 2HRS AFTER FINAL FINISHING OF CONCRETE AND ALL BLEED WATER HAS DISSIPATED.
    11.2 EXPOSED AGGREGATE/STAMPED CONCRETE SIDEWALKS SHALL HAVE ONE (x1) COAT CHEMMASTERS - SILENCURE AS SOON AS CONCRETE HAS DRIED AFTER PRESSURE-WASHING THE RELEASE AGENT OFF. APPX 30 DAYS AFTER THIS (IF WEATHER PERMITS) APPLY ONE (x1) COAT OF CHEMMASTERS - POLYSEAL EZ.
12. LIGHTING FIXTURE ARROW SYMBOLS REFER TO THE DIRECTION THAT THE FIXTURES ARE REQUIRED TO FACE. SPECIFIC MOUNT BRACKETS WILL BE REQUIRED DEPENDING ON ORIENTATION AND FIXTURE COUNT.
13. ISLAND ISLAND DIMENSIONS ARE FROM INSIDE OF CURB TO INSIDE OF CURB.

LANDSCAPE NOTES:



1. ALL PLANTS INSTALLED SHALL MEET OR EXCEED THE MINIMUM REQUIREMENTS AS NOTED ON THE PLANS AND IN THE LATEST EDITION ON THE AMERICAN STANDARD FOR NURSERY STOCK, BY THE AMERICAN ASSOCIATION OF NURSERYMEN, ANSI Z60.1
2. THE CONTRACTOR SHALL BE RESPONSIBLE FOR HIS OWN QUANTITY TAKEOFF. THE QUANTITIES SHOWN ARE A MINIMUM AND ARE FOR REFERENCE ONLY.
3. THE CONTRACTOR SHALL PERFORM A ROUGH FIELD STAKEOUT OF ALL PLANTING MATERIAL LOCATIONS AND CONTACT THE OWNERS FIELD REPRESENTATIVE PRIOR TO ACTUALL INSTALLING. THE PLANTING MATERIAL LOCATIONS SHOWN ON THE PLANS ARE TO CONVEY THE DESIGN INTENT ONLY. ACTUAL LOCATIONS WILL BE FINALIZED BY THE OWNERS FIELD REPRESENTATIVE AT THE TIME OF INSTALLATION.
4. THE CONTRACTOR IS HEREBY NOTIFIED THAT IF UNDERGROUND UTILITIES EXIST IN THE VICINITY OF THE PLANTINGS, ALL PROPOSED PLANTINGS SHALL BE INSTALLED A MINIMUM OF 5' FROM ANY UNDERGROUND UTILITY. CONTACT THE OWNERS FIELD REPRESENTATIVE IF PLANTINGS SHOWN ON THE PLANS VIOLATE THIS SITUATION.
5. ALL TREES SHALL BE INSTALLED A MINIMUM OF 20' FROM ANY OVERHEAD ELECTRIC LINES.
6. PLANTING BACKFILL MIXTURE SHALL CONSIST OF 4 PARTS TOPSOIL, 1 PART PEAT MOSS, ½ PART WELL ROTTED MANURE, 10 LBS 5-10-5 PLANTING FERTILIZER THOROUGHLY MIXED PER CUBIC YARD.
7. STAKE AND WRAP TREES IMMEDIATELY FOLLOWING INSTALLATION.
8. ALL PLANTED AREAS SHALL RECEIVE A MIN. 2" LAYER OF COCOA BROWN MULCH. WEED MAT EQUAL TO "WEEDBLOCK" BY EASY GARDENER OR DEWITT WEED BARRIER.
9. ALL DISTURBED AREAS NOT RECEIVING PLANTINGS (INCLUDING RIGHT-OF-WAYS) SHALL BE PROVIDED WITH SOD. SEED PERMITTED AT DETENTION POND IF PLANTED EARLY ENOUGH TO ESTABLISH.
10. THE AREAS ON THE PLAN TO BE SEEDED SHALL HAVE 4" MINIMUM OF TOPSOIL, DISK PLOWED, LEVELED AND HAND RAKED SMOOTH. SURFACE SHALL BE ROLLED TO REMOVE LUMPS.
11. ALL SEEDED AREAS SHALL BE HYDROSEEDED IN ACCORDANCE WITH THE SPECIFICATION INDICATED. WHERE REQUIRED BY CLIMATIC CONDITIONS, SLOPE OR SEASON OF PLANTING.
    HYDROSEED SPEC: 20% RYE, 20% BLUE GRASS, 60% TURF TYPE FESCUE
    SOD MAY BE SUBSTITUTED FOR SEED DOWN IN ORDER TO ACHIEVE THE REQUIRED COVERAGE (REFER TO CONTRACTOR FOR SOD/SEED COVERAGE).
12. THE CONTRACTOR SHALL BE RESPONSIBLE FOR WATERING, MOWING AND OTHER MAINTENANCE TO SEEDED AREAS UNTIL THE PROJECT IS ACCEPTED BY THE OWNER. THIS SHALL INCLUDE WATERING DAILY FOR 15 DAYS OR, AS REQUIRED BY WEATHER CONDITIONS, AND RE-SEEDING OF THIN SPOTS FOLLOWING THE GERMINATION OF THE SEEDS.
13. CONTRACTOR IS RESPONSIBLE TO PROTECT ALL EXISTING TREES ONSITE AND OFFSITE, WHICH ARE TO BE PRESERVED, FROM ALL POSSIBLE TYPES OF ROOT, TRUNK, AND LIMB DAMAGE.

OSQ Series

OSQ™ LED Area/Flood Luminaire featuring Cree TrueWhite® Technology – Medium & Large

Rev. Date: V5 09/14/2021

Product Description

The OSQ™ Area/Flood luminaire blends extreme optical control, advanced thermal management and modern, clean aesthetics. Built to last, the housing is rugged cast aluminum with an integral, weathertight LED driver compartment. Versatile mounting configurations offer simple installation. Its slim, low-profile design minimizes wind load requirements and blends seamlessly into the site providing even, quality illumination. The 6L lumen package is a suitable upgrade for HID applications up to 250 Watt, and the 11L lumen package is a suitable upgrade for HID applications up to 400 Watt. The 22L lumen package is a suitable upgrade for HID applications up to 750 Watts, and the 30L lumen package is a suitable upgrade for HID applications up to 1000 Watts.

Applications: Parking lots, walkways, campuses, car dealerships, office complexes, tunnels, underpasses, and internal roadways

Performance Summary

Utilizes Cree TrueWhite® Technology on 5000K Luminaires

NanoOptic® Precision Delivery Grid™ optic

Assembled in the U.S.A. of U.S. and imported parts

Initial Delivered Lumens: 4,000 - 30,000

Efficacy: Up to 173 LPW

CRI: Minimum 70 CRI (3000K, 4000K & 5700K); 90 CRI (5000K)

CCT: 3000K, 4000K, 5000K, 5700K

Limited Warranty*: 10 years on luminaire; 10 years on ColorFast DeltaGuard® finish; up to 5 years for Synapse® accessories; 1 year on luminaire accessories

*See http://creelighting.com/warranty for warranty terms. For Synapse accessories, consult Synapse spec sheets for details on warranty terms.

Ordering Information

Fully assembled luminaire is composed of two components that must be ordered separately:

Example: **Mount:** OSQ-ML-B-AA-BK + **Luminaire:** OSQM-8L-4L-30K7-3M-UL-NH-BK

OSQ-ML-B-DA Mount

OSQM: 25.0" (635mm)
OSQL: 27.2" (691mm)

CREE LIGHTING

IG Series

LED Parking Garage Luminaire

Rev. Date: V6 09/13/2020

Product Description

Cree Lighting innovates again to reset the performance benchmark in parking garage applications with the IG Series featuring WaveMax® Technology, our innovative optical waveguide platform. Available in 30 watt and 60 watt, two lumen packages are offered to satisfy IES RP-8-18 and IES Security Zone 0-1-03 requirements for environments seeking higher light levels for improved safety and security. The streamlined design breaks away from dated traditional designs, blending form and function, to deliver superior low glare illumination.

For enhanced performance and versatility, a range of optional integrated lighting controllers bring advanced capabilities andenergy savings to the IG Series. From the stand-alone multi-level (PML) option to the full-featuredLimelight by Lutron or Synapse® wireless control options, the IG Series provides the features andflexibility designed to meet the needs of today's most demanding parking garage applications.

Applications: Parking garages

Performance Summary

Utilizes WaveMax® Technology

Initial Delivered Lumens: 3,860 or 7,300 lumens

Input Power: 33 or 60 watts

Efficacy: Up to 126 LPW

Optic: Type V Short Distribution

Assembled in the USA of U.S. and imported parts

CCT: 3000K, 3500K, 4000K, 5700K

CRI: Minimum 80 CRI

Limited Warranty*: 10years on luminaire; 5 years on PML and Limelight options; up to 5 years for Synapse® accessories;1 year on luminaire accessories

*See http://creelighting.com/warranty for warranty terms. For Synapse accessories, consult Synapse spec sheets for details on warranty terms.

CPY Series - Version C

CPY250® LED Canopy/Soffit Luminaire

Rev. Date: V3 02/01/2022

Product Description

The CPY250® LED Canopy/Soffit Luminaire has an extremely thin profile constructed of rugged cast aluminum. It can be surface mounted easily from below the canopy deck and can be pendant mounted. Direct imaging of the LEDs is eliminated with a highly efficient patterned flat or EF1™ (23mm) drop glass lens.

Applications: Petroleum canopies, CNG fueling stations, soffits

Performance Summary

Assembled in the USA by Cree Lighting from US and imported parts

Initial Delivered Lumens: Up to 21,000

Efficacy: Up to 165 LPW

CRI: Minimum 70 CRI (40K, 50K, 57K); 80 CRI (30K); 90 CRI (40K, 50K)

CCT: 3000K, 4000K, 5000K, 5700K

Limited Warranty*: 10 years on luminaire/10 years on ColorFast DeltaGuard® finish/5 years on PML, sensor/1 year on field-installed accessories

IP66 Rated (select models only)

Class I, Division 2 Hazardous Location for select models

*See http://creelighting.com/warranty for warranty terms.

Accessories

Field-Installed

Direct Mount Luminaires
Canopy Upgrade Kits: 18 ga. steel, except where noted:
CPY-AFSS* – for use with Cree Lighting CAN-36k luminaires, 16 ga. 5052 aluminum
KA-EGCCMW – for use with Jet-Pitch, 21.44° (545mm) square, white
KA-EGCCMW – for use with Cisco Francisco, 33.06" (840mm) square, white
KA-EGCCPW – for use with LSI Dakota or Masters, 23.50" (597mm) square, white
KA-EGCCQW – for use with Whitney Reece or Ray-A-Lite, 20.40" (517mm) square, white
KA-EGCCRW – for use with Cisco Merrit, 19.06" (485mm) square, white
KA-EGCCSW – for use with LSI Richmond or Whiteway Civic, 23.00" (584mm) L x 9.00" (229mm) W x 1.00" (25mm) H
Direct Mount Junction Box/Trim Kit
KA-EGCCJBOX – 6.0" (152mm) H x 10¼" (259mm) NPT Stem
• Watertight
• Rated for feed through #14 in, 4 out #12 AWC conductors
Direct Mount Beauty Plates
KA-EGCCBPW – 24.17" (605mm) Beauty Plate (16 ga. steel), white
KA-EGCCBPW DM – 24.17" (605mm) Beauty Plate (16 ga. steel,) w/14" (305mm) Backer Plate (14 ga. steel), white
• Provides a finished look where deck opening is larger than what is required for mounting the CPY250 luminaire. Maximum deck opening 15.79" x 15" (380mm x 379mm)
KA-EGCCBPB kit – 24.17" (605mm) Beauty Plate (16 ga. steel,) w/14" (305mm) Backer Plate (14 ga. steel), white
• Provides a finished look where deck opening is larger than what is required for mounting the CPY250 luminaire. Maximum deck opening 15" x 15" (380mm x 379mm)

*Must specify color: BK (Black), BZ (Bronze), SV (Silver) or WH (White)

Pendant Mount Luminaires
Pendant Mount Kits
KA-PSX2M77 – 5" (127mm) pendant
KA-PSX2M177 – 11" (279mm) pendant
KA-PSX2M77 – 10' (3m) rod pendant
• Includes two conduit fittings and (1) 14.70"ft pipe threaded on two ends
Hand-Held Remote
SA-SENSREM
• For successful implementation of the programmable multi-level option, a minimum of one hand-held remote is required
Synapse® Simplynx 10V Interface
DMG-LISSP
• 10V-277V
• Requires other Synapse components to complete system
• Refer to DMG-LISSP spec sheet for details

DM Mount / DM Mount with HZ Option

Flat Lens
Drop Lens
0.91" (23mm) Drop Lens
2.0" (50mm) Flat Glass Lens
¾" (19mm) NPT Conduit Entry
Gasket to Seal up to 4.25" (108mm) Canopy Cutout
7.3" (183mm)
15.0" (380mm)
11.0" (279mm)
Mounts with (4) Supplied Self-Sealing Sheet Metal Screws

Weight
12.5 lbs. (5.7kg)

THE EDGE® Series

LED Area Luminaire - Round

Rev. Date: V10 12/19/2021

Product Description

THE EDGE® Series has a slim, low profile design. Its rugged cast aluminum housing minimizes wind load requirements and fixtures an integral, weathertight LED driver compartment, opal-vented cover, high performance aluminum heat sinks and leaf/debris guard.

Applications: Auto Dealerships, parking lots, campuses, facade lighting and general site lighting applications

Performance Summary

Patented NanoOptic® Product Technology

Assembled in the USA by Cree Lighting from US and imported parts

Initial Delivered Lumens: Up to 25,165

CRI: Minimum 70 CRI 6,000K & 5700K); 80 CRI (3000K); 90 CRI (5000K)

CCT: Turtle Friendly Amber, 3030K(+/- 300K), 4000K (+/- 300K), 5000K (+/- 500K), 5700K (+/- 500K) standard

RE: Geotechnical Engineering Report
Proposed Two-Story Building with Underground Garage
4548 & 4564 Main Street, 22 Chateau Terrace, and 17 Fruehauf Avenue
Town of Amherst, Erie Co., New York 14226

Gentlemen:

This report presents the findings of the subsurface investigation program and geotechnical engineering recommendations for the above referenced project. The geographic orientation of the project site is illustrated on the U.S. Geologic Survey (USGS) site location map in Figure No. 1. The project site is illustrated in Figure No. 2, entitled "Test Boring Location Plan", which includes: the approximate location of six test borings that were drilled by Buffalo Drilling Company, Inc. (BDC); relative ground surface elevations; and additional site details.

EXPLORATION METHODS

Sampling Method: A truck-mounted Diedrich D-50 rotary drill rig was used to drill six borings each to auger refusal below ground surface by using 2-1/4 inch and 4-1/4 inch inside diameter (ID), continuous flight hollow stem augers. Samples were recovered by driving a standard split-spoon sampler (2-foot long by 1-3/8 inch inside diameter) 24 inches with a 140-pound hammer falling 30 inches per blow per the American Society of Testing and Materials (ASTM) Standard D1586. The number of blows from six to 18 inches of penetration is defined as the Standard Penetration Test (SPT) N-value. Auger refusal, which may infer the top of bedrock, was encountered at each boring location at depths ranging from about two to six feet. At borings B-1 and B-6, bedrock was confirmed by coring to a depth of five feet below auger refusal. Bedrock coring efforts were done with an Nx-sized (2-1/8 ± inch I.D.) core barrel and impregnated diamond bit in accordance with ASTM Method D2113.

Any encountered groundwater conditions are documented in the field on the driller's logs for each test boring. If indicators of groundwater are observed on the sampling equipment, the depth to groundwater is also checked and measured through the hollow stem augers at the completion of the sampling efforts.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

Classification: The retrieved soil and fill samples were initially logged in the field by the driller, and a portion of each sample was placed and sealed in a glass jar. The boring logs, which are included in Appendix A, were based upon the field logs and a second visual classification of recovered samples in the laboratory by a geologist. Classification/identification of samples, as noted on the boring logs, is based on the Unified Soil Classification System (USCS) in ASTM D2487/D2488. Refer to Appendix B entitled, "Geotechnical Reference Standards", for an explanation of the terminology that is used for soil and rock descriptions.

Each rock core was examined on a run-by-run basis to determine the percentage of core recovery and Rock Quality Designation (RQD). Core recovery percentage is the ratio of the sample length recovered divided by the length of the core run times 100 percent. RQD is defined as the total length of all pieces of core that are greater than four inches divided by the length of the core run times 100 percent. Core recovery and RQD percentages are noted on the boring logs.

Laboratory Testing: Laboratory soil testing was undertaken on several retrieved split spoon samples. The overall laboratory testing program consisted of the following test methods:

- Unconfined Compressive Strength of Intact Rock Core Specimens ASTM D2938

Table No. 1 presents the tabulated results of bedrock physical property data.

SITE AND SUBSURFACE CONDITIONS

General: The proposed site for development consists of four parcels addressed as 4548 & 4564 Main Street, 22 Chateau Terrace, and 17 Fruehauf Avenue in the Town of Amherst, Erie County, New York. The project will include a mixed-use, two-story building with both retail spaces and residential apartments. The majority of the structure will have a lower basement/underground parking garage beneath it. The site topography slopes to the northwest across the boring locations with ground surface elevations varying by approximately five feet.

Subsurface Soil Conditions: In general, subsurface conditions, underlying the topsoil at B-2 and the asphalt pavement with crushed limestone base layer at the remaining borings, consist of naturally deposited cohesive/fine-grained glacial till that extends to auger refusal.

Beneath the asphalt/gravel base or topsoil, a naturally deposited cohesive/fine-grained glacial till exists and extends to auger refusal. The unit ranges in thickness from two to five fee and consists of moderately plastic, silty clay with lesser amounts of sub-rounded fine-sized to coarse-sized sand and gravel. The consistency of this soil is primarily very stiff to hard with moisture contents of retrieved samples noted to be moist.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

Bedrock: Auger refusal, which is generally inferred to be the top of the apparent bedrock surface, was not encountered at each boring approximately two to six feet below ground surface, ranging in elevation from 675.00 to 671.20+/- feet. The proposed footing bearing grade for the building, approximate elevation 671.30 +/- feet, will be at or within the bedrock which will make it necessary to remove almost four feet of bedrock.

Rock coring efforts were undertaken at borings B-1 and B-6 to depths of five feet, below auger refusal. Based upon the regional geology and recovered core samples, the bedrock type is the Onondaga Limestone and is described as a hard and slightly weathered, medium dark gray, banded to thinly bedded, finely crystalline limestone that is porous and calcareous. The percent recoveries for the cores ranged from 33 percent to 83 percent with RQD values of 0 percent (very poor quality) to 29 percent (poor quality).

Table No. 1 provides the laboratory uniaxial compressive strength and density data for the intact limestone specimens near the bottom part of the B-1 cored interval C-1 and middle of B-6 cored interval C-2. The density data is characteristic of a limestone rock. The uniaxial compressive strengths ranged from approximately 4,000 to 7,500 pounds per square inch (psi); which is on the low to middle portion of the range for limestone. The intact bedrock uniaxial compressive strength and other rock properties (e.g., RQD) can be used in the estimation of the strength properties for the bedrock mass.

Groundwater: Groundwater was not encountered during subsurface exploration. Note that the groundwater readings were taken at the completion of drilling efforts and, therefore, an adequate amount of time for the groundwater level to recharge to static conditions was probably not allowed. Fluctuations in the groundwater level may occur due to other factors than those present during field operations.

EARTHQUAKE/SEISMIC CONSIDERATIONS

Site Class Definition: For the given site conditions, the most applicable site definition is Site Class B, as listed in Table 1613.5.2 of the Building Code of New York State, © 2010.

Liquefaction Potential: For the Site Class B, the design spectral response acceleration parameters S_{DS}, at 0.2 seconds, and S_{D1}, at one second, are 0.15g and 0.03g (g = 32.2 feet/sec^2), respectively, for this part of Erie County, New York (see Appendix C). These values have a two percent probability of being exceeded in 50 years. Based upon the above conditions and an approximate magnitude 6.0 earthquake on the Richter Scale, the potential for liquefaction or settlement of Site Class B rock is considered non-existent.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

FOUNDATION DESIGN AND CONSTRUCTION RECOMMENDATIONS

General: This section will present and discuss recommendations on foundation design and construction and placement of controlled fills, and subgrade and base layer requirements for concrete floor slabs, paved parking and roadway areas.

As shown in Figure No. 2, the proposed development will include a two-story mixed-use building with underground parking garage. The existing ground surface slopes to the northwest across the proposed development areas with ground surface elevations varying by approximately five feet. As per drawings provided via email with client representatives, finish first floor elevation of the building is at elevation 683.80 ± feet and steps up to 685.00 ± feet. The basement level and underground parking garage will have a finish floor elevation that is 11.5 feet beneath the first floor at approximate elevation 672.3 ± feet. Final exterior grades are assumed to match existing, from about elevation 685.00 ± feet to 675.00 ± feet. The maximum design exterior bearing wall and column loads are not expected to exceed 10 kips per lineal foot and 100 kips, respectively. The maximum design interior bearing column load is not expected to exceed 120 kips.

Site Preparation and Earthwork: General site preparation will include the demolition and complete removal of any encountered foundations and floor slabs, and removing all unsuitable surficial material (i.e., asphalt pavement, concrete, brick, expansive slag, organic or topsoil layer, and construction and demolition-like fill) to a depth where firm, granular or cohesive fills or naturally occurring soils are encountered. It is recommended, particularly in the location of the proposed structure, that any slag and/or cinder/ash containing material, if encountered, should be tested to determine the expansion and corrosion characteristics (where applicable for direct or potential contact with foundation elements and buried utilities) of these materials prior to their use on-site. Any rubble-like and brick fill, boulders, or wood fill in particular, if encountered, will require undercutting. The proposed building and any paved areas are to be proof rolled with a fully loaded ten-wheel dump truck. All encountered soft and disturbed zones should be undercut and stabilized with granular fill that is placed in compacted lifts prior to placement of additional fill materials above. Refer to Appendix D entitled "General Earthwork Specification" for definition of the fill types and gradations, recommended minimum compaction requirements for various site developments, and placement and compaction methods. The NYS Department of Transportation (NYSDOT) specification numbers for typical aggregate subbase/base course components that are included in the select granular fill category as are as follows: Item No. 304.12 (Metric) Subbase Course, Type 2 (< 2-inch maximum size), which is preferred; or Item No. 304.14 (Metric) Subbase Course, Type 4 (< 2-inch maximum size).

Other than the existing buildings along Main Street and the house and garage at 22 Chateau Terrace that will be demolished, it is unknown if any former residential/commercial structures, existed at the project site and if any former footings and foundation walls may be buried within the addition footprint. Septic tank and

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

system locations and the abandonment conditions or practices are normally unknown. If encountered during site development, it is recommended that any tanks and systems should be properly removed/treated/remediated relative to the proposed development and under the applicable local and state regulations. The remaining cavities, from the aforementioned items, should be backfilled with select/approved granular fill that is placed in thin lifts and compacted to the minimum recommendation, as presented in this report, for the proposed development at that cavity location.

Shallow Foundation: The recommended foundation type is shallow footings. Continuous strip and spread exterior footings and interior spread footings would bear at an elevation of four feet or lower below final grade, at elevation 670.80 ± feet. The bearing elevation is also approximated based upon the basement/parking garage finish floor elevation of 672.30 ± feet. A four-foot minimum footing depth (as required by local or New York State code) is needed to provide adequate protection from frost for exterior footings.

Basement/parking garage will require the removal of up to four feet of limestone bedrock. If the approved bedrock depth is less than four feet below final exterior grade, hooked rebar dowels are recommended to be placed in grout filled holes at approximately a four-foot spacing and extending to a minimum total depth of four feet into approved bedrock. This precaution is needed to confirm adequate bedrock quality and to incorporate the rock mass into the perimeter footing system.

The exterior and interior footings are recommended to bear at the same relative elevation on stable, natural, approved limestone bedrock or on thin layers of thoroughly compacted (minimum of 95 percent of the maximum dry density by ASTM D 1557) select/approved granular fill that is placed on an approved subgrade. If needed, a geotextile strength and filter fabric (such as, Mirafi 600X) may be used to line the excavation bottom for the purpose of stabilizing the excavation and placement of the select/approved granular fill.

Undercut areas beneath proposed foundations must extend laterally beyond each vertically projected edge of the foundation by a minimum distance equal to one-half the total depth of the undercut or equating to a slope of two vertical to one horizontal from the bottom foundation corner. The undercuts and placement of compacted select/approved granular fill are required to ensure a suitable and more uniform bearing media for the footings, and to prevent unacceptable differential settlements.

Wall footings should have a minimum two-foot width and column footings should have a minimum three-foot width. Based on the above described conditions, the recommended maximum net allowable foundation bearing pressure is 5,000 pounds per square foot (psf) of bearing area. All footings for the proposed building are recommended to be designed near the same contact pressure. The recommended

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

maximum net allowable foundation bearing pressure is based on generally accepted design methods for cohesive soil conditions. Based on the provisions of the above recommendations and estimated design requirements and utilization of proper construction procedures and experienced field supervision and testing personnel, total and differential settlements are estimated to be less than one inch and 3/4's inch, respectively. Refer to Appendix C for additional foundation design and construction details.

Additional Foundation Considerations: In addition to the above, the following recommendations will provide additional assurances with regard to proper foundation construction.

a) All fill placed beneath, adjacent, or above foundations must comply with the "General Earthwork Specification", included as Appendix D.

b) Backfill of foundations with approved select granular fill must be completed prior to placement of substantial superstructure loads, except for basement walls or substructure areas that may additionally require superstructure loads and possibly internal bracing.

c) The upper silty materials may rut and “pump” if exposed to excessive surface water and repeated construction traffic. Proper site management and fill placement operations are needed to minimize costly undercuts and subgrade repairs prior to placement of concrete slabs and asphalt pavement. It is noted that construction during wet/rainy and/or Fall and Spring conditions may require added precautions and possibly a thicker base layer to maintain a stable subgrade condition.

d) Step footings, if utilized, should have a rise to run ratio of 1:2, with a two-foot maximum rise and a four-foot minimum run between steps or as recommended by the design structural engineer.

e) The recommended at rest (rigid wall), active, and passive static earth pressure coefficients for unsaturated, select granular sandy gravel fill against an earth retaining structure/wall are 0.76, 0.24, and 2.8 (with an ultimate value of 4.2), respectively. The respective equivalent static lateral fluid pressures are recommended to be 90, 30 and 330 (with an ultimate value of 500) pounds per square foot (psf) per foot depth which are based upon a moist, compacted unit backfill weight of 120 pounds per cubic foot (pcf). The at rest value would account for the average expected compaction induced stresses and/or the potential influences of hydrostatic pressure. The static lateral fluid pressures can be directly proportioned for other unit weights.

Stabilization of Excavations/Underground Structures: The trench/excavation sidewall stability concerns can be addressed with the Occupational Safety and Health Act (OSHA) requirements as set forth in Subpart P of 29 CFR Part 1926, Sections 1926.650 to 1926.652. In lieu of a properly designed shoring system, side slopes of the trench excavation should be one on one (vertical to horizontal distance) or flatter in cohesive soils or one on one and one-half or flatter in the granular materials, as required by OSHA.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

In areas where sloped excavations are impractical, a land cofferdam (e.g., sheet piling or soldier piles with lagging and walers-struts/tiebacks, as needed) must be installed to effectuate the installation of the proposed underground parking structure. The aforementioned system(s) must be designed by a licensed New York State professional engineer with proven experience. These types of designs are outside the scope of this report.

Water must not be allowed to accumulate or pond on exposed foundation bearing grades. Surface water and groundwater from within the excavation must be either pumped, diverted or channelized by gravity flow to effectuate the construction of the proposed foundation. Pockets of localized perched groundwater may seasonally be expected to be encountered at footing and/or footing undercut bearing grades. At these locations, dewatering with surface sumps may be required to maintain stable side slopes and excavation bottom.

Substructures/Retaining Walls: While not a unique design concern, proposed basement/underground parking substructures must be adequately designed and constructed to support horizontal soil pressures and surface loads. Refer to Appendix C and the following recommendations that will provide additional assurances with regard to proper design and construction of free standing retaining walls and fixed/restrained walls.

a) At the location of the proposed structure(s), design the wall foundation based on the previously recommended maximum net allowable bearing capacity and bearing conditions.

b) Cantilever (such as, retaining) walls and fixed/restrained walls must be adequately designed and constructed to support horizontal soil pressures and surface loads.

c) Uniformly distributed surface surcharge loads should be applied at 100 percent of the load times the appropriate lateral earth pressure coefficient to the retaining wall. The lateral design stress on the wall is the sum of the equivalent lateral fluid pressure and other applied surface stresses and subsurface stresses (i.e., footings).

d) The recommended at rest (rigid wall), active, and passive static earth pressure coefficients for unsaturated, select granular sandy gravel fill against an earth retaining structure/wall are 0.76, 0.24, and 2.8 (with an ultimate value of 4.2), respectively. The respective equivalent static lateral fluid pressures are recommended to be 90, 30 and 330 (with an ultimate value of 500) pounds per square foot (psf) per foot depth, which are based upon a moist, compacted unit backfill weight of 120 pounds per cubic foot (pcf). The at rest value would account for the average expected compaction induced stresses and/or the potential influences of hydrostatic pressure. If a moist, compacted granular sandy silt or silty sand fill is used, the recommended active and passive static earth pressure coefficients are 0.33 and 2.0 (with an ultimate value of 3.0) and the equivalent static

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

lateral fluid pressures are 45 and 270 (with an ultimate value of 405) psf per foot depth, which is based upon a unit backfill weight of 135 pcf. The static lateral fluid pressures can be directly proportioned for other unit weights.

e) For a soil/fill that is at or near a saturated/liquefied state, the equivalent static lateral fluid pressure on a wall from earthquake/seismic induced loading is recommended to be at least equal to the unit weight of the backfill. For unsaturated backfill conditions under earthquake/seismic induced loading, it is recommended that an additional (to the static) lateral load per foot of wall length (in pounds/foot) to a non-yielding wall will be located at 0.6 times the earth height behind the wall, as taken from the base of the wall, and will be equal to 6.8 times (for S_{ds} = 0.25g) to 13.5 times (for S_{ds} = 0.50g) the earth height squared behind the wall, in feet (for a soil backfill unit weight of 120 pcf and for Site Class C to E soils). As applied to yielding walls, these multiplying factors may be reduced by 33 percent. The earthquake/seismic lateral pressures or loads can be directly proportioned for other unit weights and S_{ds} values. Use a 1.75 multiplier to the earthquake/seismic lateral pressures or loads for walls bearing on Site Class B/A rock. Since non-yielding/rigid walls may move into the backfill, the equivalent lateral static fluid pressure for the static passive condition would also be a structural engineering design concern.

f) Lateral stresses from surface loading (such as, trucks) would not generally be a design concern if the load is transient and the loading is at a horizontal distance from the subsurface wall that is greater than the depth of the subsurface cavity. The geotechnical engineer should be consulted once the type and magnitude of the surface loading are identified.

g) The ultimate values of the friction factor or coefficient of sliding friction for the concrete footing of a retaining wall or foundation wall are recommended to be 0.35 on a silty sand/non-plastic sandy silt interface, 0.45 on non-plastic sand and gravel mixtures with less than five percent silt or on NYSDOT Item No. 304.12, Type 2 and Item No. 304.14, Type 4 gravel interfaces, and 0.60 if cast against a clean, sound and rough bedrock interface (which has a Factor of Safety = 1.0). Use a value of 0.5 for a smooth surface of either bedrock or if a dental concrete leveling course, without bonding reinforcing bars, is to be placed on the bedrock surface prior to casting the footing/foundation wall. For foundations on very stiff to hard natural cohesive soils, the cohesion/adhesion for sliding resistance is limited to 1,000 psf. The minimum recommended factor of safety against sliding is 1.5.

h) The minimum recommended factors of safety against overturning of a retaining wall are 1.5 for a clean/silt-free compacted granular backfill or for foundations on approved rock and 2.0 for a compacted cohesive backfill.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

i) Relieve any hydrostatic or water pressure that develops behind the walls from in-flowing groundwater as is normally provided in practice. The exterior and interior sides of walls are to have a properly designed and installed dewatering system or as determined by the design civil/structural engineer.

Concrete Interior Floor Slab(s)/Pad: For the most part and based on test results for similar soils/fills, moderately plastic cohesive natural soils/fills may be somewhat difficult to compact in a controlled manner considering the varying soil plasticity and natural moisture contents that are estimated to be at to wet of optimum, at the time of this investigation. Excavated and approvable cohesive soil/fill types are not expected to be available in any reasonable quantities. These soils/fills may be expected to be suitable for re-use as general fill with the implementation of uniformly applied soil conditioning (i.e., drying and blending) and compaction methods, if additional volume of soil for backfill is needed.

Excavated and approvable granular (i.e., sand or gravel and non-plastic silt and sand) soil/fill are expected to be available in very limited quantity and associated with the base layer beneath the existing asphalt pavement. For the most part, granular (i.e., sand or gravel) soil/fill is expected to be acceptable for on-site re-use, as general/ordinary fill without substantial reworking and/or modification, while silty fine-sized sand may first require drying and blending.

Dissimilar excavated materials should not be commingled prior to their use elsewhere on-site, unless designated for a green/vegetation area. General fill material is also recommended to be placed on prepared and approved subgrade and in accordance with previous recommendations.

A geotextile fabric (such as, Mirafi 600X or equal) that separates the subgrade and the approved/select granular base layer may be needed and is particularly recommended for sensitive cohesive/fine-grained/silty clay subgrade soil/fills. This approach will stabilize and provide a workable building pad condition with minimal required repairs.

The approved subgrades will consist of very stiff or better/thoroughly compacted (i.e., minimum 92 percent of the maximum dry density by ASTM D 1557) cohesive/fine-grained glacial till, stable approved limestone bedrock, or thoroughly compacted imported select/approved granular fill. Above the approved subgrades, a minimum 12-inch thick select granular fill (i.e., number two crusher run stone or equal) layer is recommended as the base course for the basement/parking garage concrete floor slab. The NYSDOT specification numbers for typical aggregate subbase/base course components are Item No. 304.12 (Metric) Subbase Course, Type 2 (< 2-inch maximum), which is preferred, or Item No. 304.14 (Metric) Subbase Course, Type 4 (< 2-inch maximum). This select granular base layer would be compacted to a minimum 95 percent of the maximum dry density by ASTM D 1557. The basement/parking garage floor slab is recommended to be a six-inch minimum thickness or is as determined by the design structural engineer.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

The floor slab reinforcement should be provided through placement of wire mesh or plastic fibers and is also as determined by the design structural engineer.

At the discretion of the design architect, a vapor barrier may be considered for use in the proposed structure. The use of a thin gravel cushion, as a capillary break, or a thin sand cushion over a vapor barrier that is placed beneath the concrete slab(s) are at the discretion of the design architect/engineer or as required by local code. Gradations of gravels that are satisfactory capillary breaks include 1 ¼-inch or ¾-inch crushed stone or aggregate per the ASTM D2321 Types IA, IB and II with less than 5 % fines. A number two crusher run stone may also be applicable, but the gradation and material property specifications must qualify.

Exterior Concrete Slabs-On-Grade/Pad/Parking and Roadway Facilities: The characteristics of the natural soils and the known frost penetration in Western New York require that specific attention is provided to the design and construction of paved roadway and parking areas. For new pavement sections, isolated pockets of surficial silty/cohesive/fine-grained soil/fill may be encountered and may be too soft and wet in the proposed parking and roadway areas. These types of soil/fill may be adequately conditioned (i.e., dried and blended) and compacted (i.e., minimum 90 percent compaction) to support necessary construction equipment and normal pavement section. Otherwise, the removal/undercutting of the silty/cohesive/fine-grained soil/fill to a firm, approved subgrade and subsequent placement and compaction of select or approved granular fill will be required in order to accommodate the recommended pavement sections.

For new pavement sections, it is recommended that the subgrade surface is adequately graded and/or underdrains are installed to prevent water accumulation. Above the approved subgrade surface (i.e., minimum 90 percent compaction), a minimum eight-inch thick select granular layer is recommended as the base course for lightly traveled roadway and parking areas (standard duty section). A geotextile filter and strength fabric (such as, Mirafi 600X or equal) and minimum 12-inch thick base course are recommended for all truck routes and heavily traveled roadways (heavy duty section). If “pumping” of the silty/cohesive/fine-grained soil subgrade occurs or is difficult to stabilize during construction, an increase in the base thickness to that of the heavy-duty section and/or a geotextile filter and strength fabric is recommended to be placed on the prepared and approved subgrade for the standard duty section. The NYS Department of Transportation (NYSDOT) specification numbers for typical aggregate subbase/base course components are Item No. 304.12 (Metric) Subbase Course, Type 2 (< 2-inch maximum size), which is preferred, or Item No. 304.14 (Metric) Subbase Course, Type 4 (< 2-inch maximum size). The granular aggregate base layer is recommended to be compacted to at least 95 percent of maximum dry density by ASTM D1557.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

The thickness of top and binder course layers should be determined in accordance with AASHTO methods. In summary, the minimum recommended asphalt thicknesses for the heavy-duty section and standard duty section are three and one-half inches and three inches, respectively. The top and binder course layers are recommended to be designed and constructed in accordance with New York State Department of Transportation Standard Specification.

Limitations, Field Inspections and Monitoring: This report is based on the preliminary information that is provided by project representatives and the subsurface conditions that were encountered at the test boring locations. Due to the nature of the investigation method, test pit excavation will provide a greater level of delineation of the subsurface soil/fill/rock conditions than can be defined by the test boring data alone. As detailed in Appendix E "Limitations", modification regarding proposed building/structure locations and other site developments can result in changes to provided recommendations. It is recommended that the geotechnical engineer be provided the opportunity to generally review the final detailed design and contract specifications. Required earthwork and foundation construction should be done under the supervision of experienced construction personnel and in a manner consistent with proven methods. All site work should be carefully monitored and tested by experienced geotechnical personnel to assure compliance with earthwork and foundation construction specifications.

Thank you for the opportunity to assist on this project. If questions should arise, please call the undersigned at your earliest convenience.

Very truly yours,
BARRON & ASSOCIATES, INC.

TEST BORING LOG

JOB No.: BORING No.:

PROJECT:

EXAMPLE

DRILLER:
SAMPLING METHODS:
DATE STARTED:
DATE COMPLETED:

TYPE OF DRILL RIG:
SIZE AND TYPE OF BIT:
SURFACE ELEVATION (ft.):
GROUNDWATER DEPTH (ft.):
(measured at completion unless indicated below)

Elevation/ Depth (feet)	Soil Symbols Sampler Symbols Field Test Data	Sample No. : Range	N-Value	% REC (RQD)	Soil and Rock Description / Remarks
100 — 0	1 1 1 2 / 6 8 11 14	S-1 : 0.0'- 2.0'	2	50	Dk. brown, soft, CLAY, some Silt, little f. Sand, tr. Gravel, tr. Roots, tr. Organic matter, mod. plastic, wet (CL)
		S-2 : 2.0'- 4.0'	19	50	Brown, m. dense f. SAND, some Silt, tr. Gravel, tr. Clay, tr. Roots, non-plastic, moist (SM)

Elevation/Depth: The depth column provides the vertical scale of the boring log in feet below ground surface.

Sample No. : Range: Disturbed samples are identified with “S” preceding the sample number. Undisturbed (Shelby-tube) samples are identified with “U” preceding the sample number. Rock core samples identified with “C” preceding the core run. The range of elevation/depth where the sample was taken is identified in one-tenth foot increments.

N-value: The Standard Penetration Test N-value, as specified by ASTM D1586, is defined as the number of blows required by a 140-pound hammer falling 30 inches, each blow, to drive a 2-in outside diameter split-spoon sampler 12 inches.

% REC (RQD): “Percent Recovery” is the length of samples recovered divided by the total length sampled. The result is numerically expressed as a percent. The Rock Quality Designation (RQD) is the total length of places >4 inches divided by the total length of core run.

Soil and Rock Description / Remarks: This column denotes the exact depth of recovery and general documentation of drilling efforts. Description and classification are based on visual inspection of samples and boring operations. The stratum lines shown on the boring logs are based upon interpretation and may not represent precise subsurface conditions. Water-level readings have been made in the drill holes at time under conditions stated on the boring logs. Fluctuations in the water level may occur due to other factors than those present the time measurement was taken. See attached sheet.

Soil and Rock Description / Remarks: Terminology Used for Soil Description

Density Description of Granular Soil

Number of Blows per ft., N	*Relative Density*
0 - 4	Very Loose
4 - 10	Loose
10 - 30	Medium
30 - 50	Dense
Over 50	Very Dense

Abbreviations Used in Soil Sample Classification

f - fine	v - very
m - medium	gr - gray
c - coarse	bn - brown
f/m - fine to medium	yel - yellow
f/c - fine to coarse	sl - slight
tr - trace	dk - dark

Consistency Description of Cohesive Soil

Number of Blows per ft., N	*Consistency*
Below 2	Very Soft
2 - 4	Soft
4 - 8	Medium
8 - 15	Stiff
15 - 30	Very Stiff
Over 30	Hard

Bedding

Parting	Less than 0.02 ft.
Band	0.02 - 0.2 ft.
Thin bed	0.2 - 0.5 ft.
Medium bed	0.5 - 1.0 ft.
Thick bed	1.0 - 2.0 ft.
Massive	Over 2.0 ft.

Grain Size

	Passing / Retained on
Boulder	LARGE / 12-in sieve
Cobble	12-in / 3-in sieve
Gravel	3-in sieve / No. 4 sieve
	No. 4 sieve / No. 10 sieve
Sand	No. 10 sieve / No. 40 sieve
	No. 40 sieve / No. 200 sieve
Silt	No. 200 sieve / 0.005 mm sieve
Clay	Smaller than 0.005 mm

Hardness

Very Soft or Plastic	Can be indented with thumb
Soft	Can be scratched with fingernail
Moderately Hard	Can be scratched with knife
Hard	Difficulty to scratch with knife
Very hard	Cannot be scratched with knife

Percentage Terminology Used in Soil Classification

Trace	0 - 10 %	Some	20 - 35 %
Little	10 - 20 %	And	35 - 50 %

Moisture

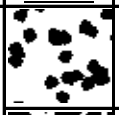
Dry	Absence of moisture, dusty, dry to the touch.
Moisture	Small quantity of moisture. Soil usually above groundwater level.
Wet	Moisture noticeable to the touch. Soil may be below groundwater level.
Saturated	Visible free water, usually soil is below groundwater level.

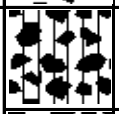
Plasticity

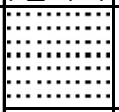
Non-plastic	An 1/8-in thread cannot be rolled at any water content.
Slight plasticity	Thread can be barley rolled.
Moderate plasticity	Thread is easy to roll and little time is required to reach the plastic limit (PL).
Plasticity	Considerable time is required to reach PL. Thread can be re-rolled several times after reaching the PL.

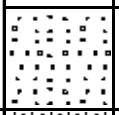
Crystallinity or Texture

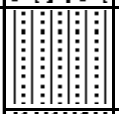
Dense	Crystals are to small they cannot be distinguished with the naked eye.
Very Fine Crystalline	Crystals barely discernable with the naked eye.
Crystalline	Crystals are medium size, up to 1/8-in diameter.
Very Coarsely Crystalline	Crystals larger than 1/8-in diameter.

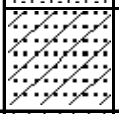


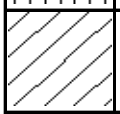


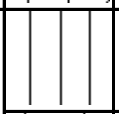


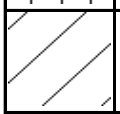


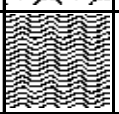


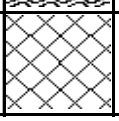












Voids

Porous	Smaller than pinhead. Their presence is indicated by the degree of absorbency.
Pitted	Pinhead size to 1/4 in. If thin walls separate the individuals pits, the core may be described as honeycomb.
Vug	1/4 inch to the diameter of the core. The upper limit will vary with core size.
Cavity	Larger than the diameter of the core.

Soil Classification Chart: Unified Soil Classification System (USCS)

Major Divisions			Pattern	USCS ID	Typical Descriptions
Coarse-Grained Soils: More than 50% of material larger than No. 200 sieve	**Gravels**: More than 50% of coarse fraction larger than No. 4 sieve	Clean Gravels (little or no fines)		GW	Well-graded gravels, gravel-sand mixtures, little or no fines
				GP	Poorly-graded gravels, gravel-sand mixtures, little or no fines
		Gravels with appreciable amounts of fines		GM	Silty gravels, gravel-sand-silt mixtures
				GC	Clayey gravels, gravel-sand-silt mixtures
	Sands: Less than 50% of coarse fraction larger than No. 4 sieve	Clean sands (little or no fines)		SW	Well-graded sands, gravelly sands, little or no fines
				SP	Poorly-graded sands, gravelly sands, little or no fines
		Sand with appreciable amount of fines		SM	Silty sands, silt-sand mixtures
				SC	Clayey sands, sand-clay mixtures
Fine-Grained Soils: Less than 50% of material larger than No. 200 sieve	**Silts and Clays, Low plasticity**: Liquid Limit < 50%			ML	Inorganic silts and very fine sands, rock flour, silty or clayey fine sands or clayey silts with slight plasticity
				CL	Inorganic clays of low to medium plasticity, gravely clays, sandy clays, silty clays, lean clays
				OL	Organic silts and organic silty clays of low plasticity
	Silts and Clays, High plasticity: Liquid Limit > 50%			MH	Inorganic silts, micaceous or diatomaceous fine sand or silty soils
				CH	Inorganic clays of high plasticity, fat clays
				OH	Organic clays of medium to high plasticity, organic silts
Highly Organic Soils				Pt	Peat, humus, swamp soils with organic contents
Miscellaneous Fill				FILL	Miscellaneous fill may belong in any division but is identified as FILL

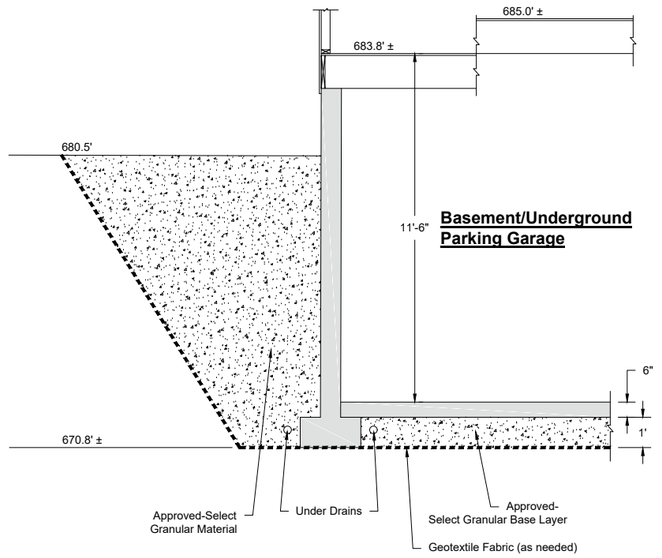
APPENDIX C



ENGINEERING COMPUTATIONS AND SCHEMATICS

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

"PROFILE" OF BORINGS

Exterior Perimeter Footing Detail (Typical):

Note: Bear footings on stable, natural, approved limestone bedrock or on approved select granular fill section placed in loose lifts no greater than 12 inches thick and compacted to 95% of max. dry density as per ASTM D1557.

Basement/parking garage will require the removal of up to four feet of limestone bedrock. If the approved bedrock depth is less than four feet below final exterior grade, hooked rebar dowels (No. 4 or 5) are recommended to be placed in grout filled holes at approximately a four-foot spacing and extending to a minimum total depth of four feet into approved bedrock.

On above conditions: USE Q_{ALLOW} = 5,000 PSF

Paving
Gravel Fill
Cohesive Glacial till
Limestone
Topsoil
Poorly graded silty fine sand
Drill rejection

B&A JOB NO.: 20-533

DATE: 07/16/20

LATERAL EARTH PRESSURE ON GENERIC BLOCK FOUNDATIONS FOR SIGNS, FREE-STANDING RETAINING WALLS, OR BELOW GRADE/BASEMENT/TANK/POOL RETAINING WALLS (Less Than 20 Feet High)

a) Porous filter media, in contact with the basement/below grade foundation wall or retaining walls, protects and is in contact with a minimum 4 inch diameter perforated drainage pipes at the footing/base of the foundation/structural wall (exterior backfill side and interior basement side) and/or weep pipes through the wall, as needed and as applicable.

b) Where recommended, a geotextile filter fabric will protect the gravel filter media from the earth backfill. Overlap unsewn seams as per the manufacturer's recommendations.

c) Waterproof earth side of wall, as is customarily provided in practice.

d) Drainage pipes are connected to an appropriately designed collector pipe, conveyance, and/or sump pump system as is applicable for the intended purpose of the wall and as customarily provided/installed in practice.

e) For potential groundwater table conditions above the top of the basement slab-on-grade condition, install continuous waterstops (with no joints in stop) at wall and floor construction joints, as is customarily provided in practice. Interior intermediate drainage pipes beneath the slab, that are spaced on-center and in both directions, do appear to be needed.

f) Assume a uniformly graded, clean coarse sand or sandy gravel backfills:

* equivalent N-value in a dense state: $(N_1)_{60}$ = 40 blows/foot
* friction angle: ϕ' = 38 degrees {Teng, pg. 12}
* average in-place densities: moist - γ_m = 120 pcf
  saturated - γ_{sat} = 132 pcf submerged - $\gamma' = (\gamma_{sat} - \gamma_w)$ = 70 pcf

g) Assume at base of wall/footing, coefficient of friction against sliding (f_s) at base of wall (Refer to Teng, pg. 320-1):

f_s = tan (0.58 x ϕ') = 0.40 (AREA silty soil to silty coarse-grained soil)

h) Use equivalent fluid pressure design approach {Hough, pg. 249 and NAVFAC pg. 7-10-9}:

* at rest pressure coefficient - K_0 = 1 - sin (ϕ') = 0.38
* effective lateral pressure of soil - γ'_l = K_o x γ' = 26.6 pcf
* hydrostatic pressure - γ_w = 62.4 pcf
* equivalent fluid pressure with water level at the top of the grade at the wall - γ_{eo} = $\gamma'_l + \gamma_w$ = 89 pcf (say 90 pcf)
* equivalent fluid pressure with compaction induced lateral stress increase (W&F, pg 409) γ_{eo} = 2 x K_o x γ_m = 91 pcf (say 90 pcf)
* active pressure case - K_a = [1 - sin (ϕ')] / [1 + sin (ϕ')] = 0.24
  γ_{ea} = K_a x γ_m = 29 pcf (say 30 pcf)
* passive pressure case - K_p = [1 + sin (ϕ')] / [1 - sin (ϕ')] = 4.2
  γ_{ep} = K_p x γ_m = 504 pcf (say 330 pcf with a F.S. = 1.5)

			Thoroughly Compacted ⇒⇒ Uniformly Graded & Clean Coarse Sand or Sandy Gravel Fill	Non-Plastic Silty Sand or Sandy Silt Fill	
USE:	Earth Pressure Coefficient	Static Active =	0.24	0.33	
		Static At-Rest =	0.76	1.00	
		Static Passive =	2.80	2.00	(with F.S. = 1.5)
		Static Passive =	4.20	3.00	(with F.S. = 1.0)
USE:	Equivalent Fluid Pressure	Static Active =	30 pcf		
		Static At-Rest =	90 pcf (for rigid walls)		
		Static Passive =	330 pcf (with F.S. = 1.5)	[500 pcf with (with F.S. = 1.0)]	

[For earthquakes, structural engineer may elect to use the above Static Passive case instead of the below Earthquake Lateral Load for Non-Yielding Wall movement into the soil backfill.]

USE: Simplified Model for Earthquake Lateral Load/Ft. Wall Length @ 0.6 H_{bw} above base. Loads for Non-Yielding Wall. H_{bw} = Earth Height Behind Wall (feet)

Reduce load by 33% for Yielding Wall (active case) = (6.8 psf / foot) x H_{bw}^2 (NYS, S_{ds} = 0.25 g)

(γ_m = 120 pcf for S_{ds} value. Add to Static At Rest/ Active Pressure/Load for unsaturated backfill case) = (13.5 psf / foot) x H_{bw}^2 (NYS, S_{ds} = 0.50 g)

= (17.5 psf / foot) x H_{bw}^2 (NEern NYS, $S_{ds} \leq 0.65$ g)

[Above for Site Class C to E soils. Interpolate for other S_{ds} values.
Use 1.75 x values for walls on Class B/A rock or on rigid foundation base. (FEMA NEHRP Guidelines)]

Saturated/Liquified Soil During Earthquake = 132 pcf
(Equivalent Fluid Pressure. Add to inertial hydrodynamic pressure, not presented here.)

{For looser/denser backfills, adjust above pressures by the ratio = new density / 120 pcf or / 132 pcf (for saturated case)}

USE:	Coefficient of Friction Against Sliding (f_s)	= 0.45	(on compacted NYSDOT Item #304.12 or #304.14 gravels)
	(use lowest f_s with no underlying weaker layers)	= 0.35	(on compacted granular soil & non-plastic silt)
		= 0.20	(slab-on-grade on polyethylene on granular fill)
	[with a F.S. = 1.0]	= 0.60/0.50	(on clean, rough, & sound bedrock/smooth bedrock)
	Min. Factor of Safety Against Sliding	= 1.5	*[Rev.9-30-09]*

APPENDIX D

GENERAL EARTHWORK SPECIFICATION

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

Barron & Associates, P.C.
GENERAL EARTHWORK SPECIFICATION

PART 1 GENERAL

1.1 SITE AND SUBSURFACE CONDITIONS

1.1.1 Overview

This specification is included as a courtesy to the clients of Barron & Associates, P.C, and addresses earthwork site preparation. Additions and modifications are necessary to create a job-specific specification. This specification may serve as a basis for the development for a technical specification under Division 2, *Site Work*.

1.1.2 Site Conditions

The site-specific conditions are described under separate cover or may be available from the OWNER.

1.1.3 Subsurface Conditions

The site-specific subsurface conditions are described under separate cover or may be available from the OWNER.

1.2 REFERENCES

American Standard for Testing and Measurement (ASTM):

ASTM C136	Method for Sieve Analysis of Fine and Coarse Aggregates
ASTM C2922	Density for Soil and Soil-Aggregate in Place by Nuclear Methods
ASTM D422	Test Method for Particle-Size Analysis of Soils
ASTM D1140	Amount of Material in Soils Finer Than the No. 200 Sieve
ASTM D1557	Laboratory Compaction Characteristics of Soil Using Modified Effort (56,000 ft-lb/ft^3)
ASTM D2216	Test Method for Laboratory Determination of Water (Moisture) Content of Soil and Rock
ASTM D2487	1990 Classification of Soils for Engineering Purposes
ASTM D4318	Test Method for Liquid Limit, Plastic Limit, and Plasticity Index of Soils.

1.3 DEFINITIONS

1.3.1 Unacceptable Material

Soil material containing debris, wood, scrap material, vegetation, refuse, soft unsound particles, and other organic, frozen, deleterious, or objectionable materials. Contaminated soils shall be properly documented and removed or remediated on site. If necessary, remediation procedure will be defined by the OWNER.

1.3.2 Unsuitable Material

Brown, organic topsoil and underlying soft pockets of organic silt or wet, reworked silty clay.

1.3.3 Ordinary Fill

Friable soil containing no stone greater than two-thirds loose lift thickness and no unacceptable or unsuitable materials. In general, existing random fill is expected to be acceptable for reuse as ordinary fill given proper sorting, blending, drying, and controlled placement methods.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

1.3.4 Granular Fill

Ordinary fill meeting the designation of ASTM D2487 classification of GW with a maximum of 10 percent by weight passing ASTM D1140, No. 200 sieve.

1.3.5 Select Granular Fill

Clean, uncoated soil which contains no unacceptable materials and conforms to the gradation requirements defined in Table A: Select Granular Fill.

Table A: Select Granular Fill	
Sieve Size	Percent Finer by Weight
2/3 of the loose lift thickness	100
No. 10	30 - 95
No. 40	10 - 70
No. 200	0 - 15

1.3.6 Sand and Gravel

Clean, hard, durable, uncoated particle of sand and gravel, free from lumps of clay, containing no unacceptable matter, and conforming to gradation requirements of *Table B : Sand and Gravel*

Table B: Sand and Gravel	
Sieve	Percent Finer by Weight
*	100
No. 4	50 - 85
No. 10	--
No. 40	10 - 35
No. 100	--
No. 200	0 - 8

* Job-Specific. To be determined by the ENGINEER

1.3.7 Crushed Stone

Clean, durable, sharp-angled fragments of rock or crushed gravel stone of uniform quality, containing no unacceptable matter, free from coatings, and conforming to gradation requirements of *Table C: Crushed Stone*

Table C: Crushed Stone		
	Percent Passing	
Sieve Size	¾-inch Stone	1 ¼-inch Stone
1 ½-inch	__	100
1 ¼-inch	__	85-100
1- inch	100	__
¾-inch	90-100	10-40
5/8-inch	__	__
½-inch	10-50	0-8
3/8-inch	0-20	__
#4	0-5	__

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

1.3.8 Flowable Fill

Also known as Controlled Low Strength Material – Controlled Density Fill (CLSM-CDF), this material is available under a variety of producer names (e.g., K-Krete©, M-Crete, Flash Fill©, Flowable Mortar, Unshrinkable Fill, etc.). This non-settling backfill mixture is most commonly used for its flowable characteristics, its support strength under traffic loads, and its removability at a later date. The material may be produced on-site or off-site. In either case, the producer of such materials and the product must meet certain certification criteria. Such information is beyond the scope of this specification and will be considered on a site-specific basis.

Flowable fill may be acceptable for use as a backfill for utility trenches of other low-lying areas which require a compacted granular fill. Its use and warranty of performance is left to the CONTRACTOR in such applications.

The use of flowable fill under load-bearing structural components in place of properly placed and compacted granular fill is NOT common and is questionable. The localized use of such material may have profound affects on the performance of a foundation system. Site-specific conditions and the extent of anticipated use of flowable fill must be examined by geotechnical engineer. Cost of such consultation shall be borne by the CONTRACTOR unless specifically directed by the OWNER to seek such consultation. Without such consultation, warranty of performance for such use is left to the CONTRACTOR.

1.4 SUBMITTALS

The following submittals shall be provided in accordance with approved submittals procedures.

1. Fill Source: Provide name and source locations of fill material.

2. Field Test Reports: Field tests will be performed by OWNER's Representative as needed. CONTRACTOR may be required to perform such tests on proposed off-site fill materials.
a. Fill material grain size analyses per ASTM C136, D422, D1140, D2487
b. Moisture/Density test results per ASTM D2216
c. Liquid limit, plastic limit, and plasticity index per ASTM D4318
d. Compaction/Density test results per ASTM C2922 and D1557

3. Sample: Geotextile fabric

PART 2 PRODUCTS

Geotextile Fabric: Mirafi 600X or equal. (Also referred to as synthetic fabric).

PART 3 EXECUTION

3.1 PROTECTION

3.1.1 General

Manner of excavation shall minimize disturbance of underlying natural ground. If deemed necessary by the Engineer, alter construction procedures to reduce subgrade disturbance. Excavate areas which have been excessively disturbed to firm ground and backfill with properly compacted granular fill.

3.1.2 Roads and Walks

Keep roads and walks free of dirt and debris at all times.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

3.1.3 Trees, Shrubs, and Existing Facilities

Protect from any damage all vegetation and facilities identified to remain.

3.1.4 Utility Lines

Locate all utilities within the area of disturbance prior to the start of work. Show locations on initial plans. Protect utility lines from damage. Notify the ENGINEER immediately of damage to or an encounter with an unknown utility. Damage to utility lines are to be repaired by the CONTRACTOR at no additional cost. The CONTRACTOR shall have underground utility owners stake out utility locations prior to the start of clearing and excavation operations.

3.2 VERIFICATION OF CONDITIONS/PROOF-ROLLING

Prior to placement of the initial layer of fill over the natural ground, proof-roll the exposed natural ground above the groundwater table elevation by making two passes with a fully-loaded ten-wheel truck. Excavate unstable areas detected by this process and replace with compacted granular fill.

3.3 PREPARATION

3.3.1 Surface Preparation

Within the site limits indicated on the drawings, excavate all unsuitable material to firm natural ground in the manner specified herein. Follow a construction procedure which permits visual identification of firm natural ground. In the even that groundwater is encountered, the ENGINEER may require that the size of the open excavation be limited to that which can be handled by open pumping to allow visual inspection of the excavation bottom and the performance of backfill operations to be conducted in a dry state.

Excavation of unsuitable material shall be limited to the greater of the following:

- A distance of 5 feet beyond building lines or
- The area defined by a one-horizontal to one-vertical line sloping down from the outside bottom edge of exterior footings to firm natural ground.

3.4 PLACEMENT AND COMPACTION

3.4.1 General

Place fill in accordance with *Table D: Compaction Alternatives*. These alternatives are provided as minimum compaction
standards only and in no way relieve the CONTRACTOR of his obligation to achieve any specified degree of compaction by whatever means may be necessary.

Grade to provide positive drainage and a smooth surface which will readily shed water. To the extent practicable, compact each layer to the specified density on the same day placed. Place fill in horizontal layers. Where horizontal layers meet a natural slope, key layer into slope by cutting a bench.

Fill that is too wet for proper compaction: Disc, harrow, or otherwise dry to proper moisture content for compaction to the required density.

Fill that is too dry for proper compaction: Uniformly apply water over the surface of the loose layer in sufficient quantity to allow compaction to the required density.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

Table D: Compaction Alternatives					
Compaction Method	Max. Stone Size	Maximum Loose Lift Thickness (inches)		Maximum Number of Passes	
		Below Structure and Pavements	Less Critical Areas	Below Structure and Pavements	Less Critical Areas
Hand operated vibratory plate of light roller in confined areas	3	4	4	4	4
Hand operated vibratory drum rollers weighing at least 1,000 pounds in confined areas	4	6	8	4	4
Loaded 10-wheel truck or D-8 crawler	6	10	12	4	2
Light vibratory drum roller; Min. weight at drum 8,000lbs; Min. dynamic force 10,000lbs.	8	12	12	6	2
Minimum vibratory drum; Min. weight at drum 10,000lbs; Min. dynamic force 20,000lbs.	8	18	18	6	4

3.4.2 Dewatering

Provide adequate pumping and drainage facilities to keep excavated areas sufficiently dry of groundwater and surface run-off. Dewatering shall avoid adversely affection construction procedures or causing excessive disturbance of underlying natural ground. Drain all pumped water in such a manner as to avoid damage to adjacent property.

If requested by the ENGINEER, place a 6-inch to 12-inch layer of sand and gravel or crushed stone over the natural underlying soil to stabilize area which have been disturbed due to groundwater seepage pressures and to expedite dewatering operations. Particular attention shall be given areas under proposed foundations.

3.5 FIELD QUALITY CONTROL

3.5.1 Compaction Requirements

Allow the ENGINEER sufficient time to make necessary observations and tests. Base the degree of compaction on maximum dry density as determined by ASTM D1557. The minimum degree of compaction for placed fill shall be as indicated *in Table E: Compaction Requirements.*

Table E: Compaction Requirements	
Area	Minimum Degree of Compaction (%)
Below foundation	95
Pavement and building subbase and base courses	95
Below building slab base course and above bottom of foundation	92
Below pavement subbase and base courses	90
Trench backfill outside of building	90
Trench backfill inside of building	Refer to one of the above-listed categories
Ordinary fill within 5 feet of grade	90
Vegetated areas below 5 feet of grade	85

3.5.2 Testing

Site work should be monitored and tested by geotechnical ENGINEER or his representative and in accordance with requirements of the design team to assure compliance with earthwork and foundation construction specifications.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

The owner will retain a geotechnical ENGINEER or his representative to perform on-site observations and testing during this phase of construction operations. The geotechnical ENGINEER or his representative will:

- Observe excavation and dewatering of building and controlled fill areas;
- Observe backfill and compaction within building and controlled fill areas;
- Laboratory test and analyze fill material; and
- Observe construction – and performing water content, gradation, and compaction tests.

On a timely basis, the CONTRACTOR will receive copies of test results submitted to the OWNER. In addition, during construction the geotechnical ENGINEER will advise the OWNER and CONTRACTOR in writing of conditions which fail to conform to the Contract Documents. The CONTRACTOR shall take immediate action to remedy indicated deficiencies.

The geotechnical ENGINEER or his representative will not supervise or direct the actual work of the CONTRACTOR or employees and representatives of the CONTRACTOR. The presence of, observations by, and testing performed by the geotechnical ENGINEER or his representatives shall not excuse the CONTRACTOR from defects discovered in the work.

APPENDIX E

LIMITATIONS

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

LIMITATIONS

1. This report is based on the data that was obtained from the subsurface explorations and on the design of the proposed two-story building with underground garage as submitted to the geotechnical engineer. A geotechnical engineer, who is experienced in foundation construction and earthwork, should be engaged to review the final design and specifications in order to determine whether any change in concept may have any effect on the validity of the conclusions presented herein, and whether these conclusions have, in fact, been implemented in the design and specifications.

2. The subsurface conditions, including thickness, between the exploration locations are approximate and simplified representations of the strata and transitions. There is the possibility that variations in soil and rock conditions and boundaries will be encountered during construction. In order to permit correlation between the exploratory soil data and the actual soil conditions encountered during construction and so as to assess conformance with the plans and specifications as originally contemplated, it is recommended that a geotechnical engineer, who is experienced in foundation construction and earthwork monitoring, should be retained to perform continuous construction review during the site preparation and foundation construction operations.

3. The subsurface exploration logs and subsurface conditions may aid in estimating material quality and quantities, such as topsoil/organic matter, fills, natural soils, and rock, but are not to be relied upon as the exclusive means for bid preparation purposes. It is the responsibility of the contractor to perform any additional site examinations and explorations and to prepare an accurate bid.

4. Disclaimers:

   a. In the event that any changes in the nature, design or location of the structure are planned, the conclusions that are contained in this report shall not be considered valid unless the changes are reviewed and the conclusions of this report are modified or verified in writing.

   b. The geotechnical engineering report has been prepared for this project by Barron & Associates, P.C. This report is for assistance in design only and is not a sufficient basis on which to prepare an accurate bid.

   c. This report has been prepared for the exclusive use of Benderson Development Company, LLC of Buffalo, New York, their client(s) and their designated design representatives, for specific application to the construction of a two-story building with underground garage at 4548 & 4564 Main Street, 22 Chateau Terrace, and 17 Fruehauf Avenue in the Town of Amherst, Erie County, New York and in accordance with generally accepted geotechnical engineering practice. No other warranty, expressed or implied, is made.

Project Summary

Commonwealth Heritage Group, Inc. (Commonwealth) prepared this documentation report for the property at 22 Chateau Terrace in the Snyder area of the Town of Amherst, Erie County, New York, under contract to Benderson Development Company, LLC (Figures 1 and 2).[1] This documentation report includes a State and National Registers of Historic Places (S/NRHPs) eligibility assessment of the ca. 1920 residence at 22 Chateau Terrace. It was prepared for submittal to the Town of Amherst Historic Preservation Commission to comply with the "Historic Preservation Law of the Town of Amherst." The study included exterior and interior photographic documentation (see Appendix A), historical research, and an architectural investigation of the building. On-site field investigation was conducted in April 2022. Christine M. Longiaru, M.A., served as Principal Investigator and Senior Architectural Historian. Mr. Mark A. Steinback, M.A., New York Regional Director/ Senior Historian, was the Project Director. Ms. Longiaru and Mr. Steinback exceed the professional qualifications requirements (36 CFR 61) for their respective disciplines.

Figure 1. The property at 22 Chateau Terrace, Town of Amherst, Erie County, New York *(Commonwealth 2022).*

[1] Note, Commonwealth's New York Regional Office in Buffalo was formerly Panamerican Consultants, Inc. The Buffalo office has conducted 50 cultural resources investigations in the Town of Amherst.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

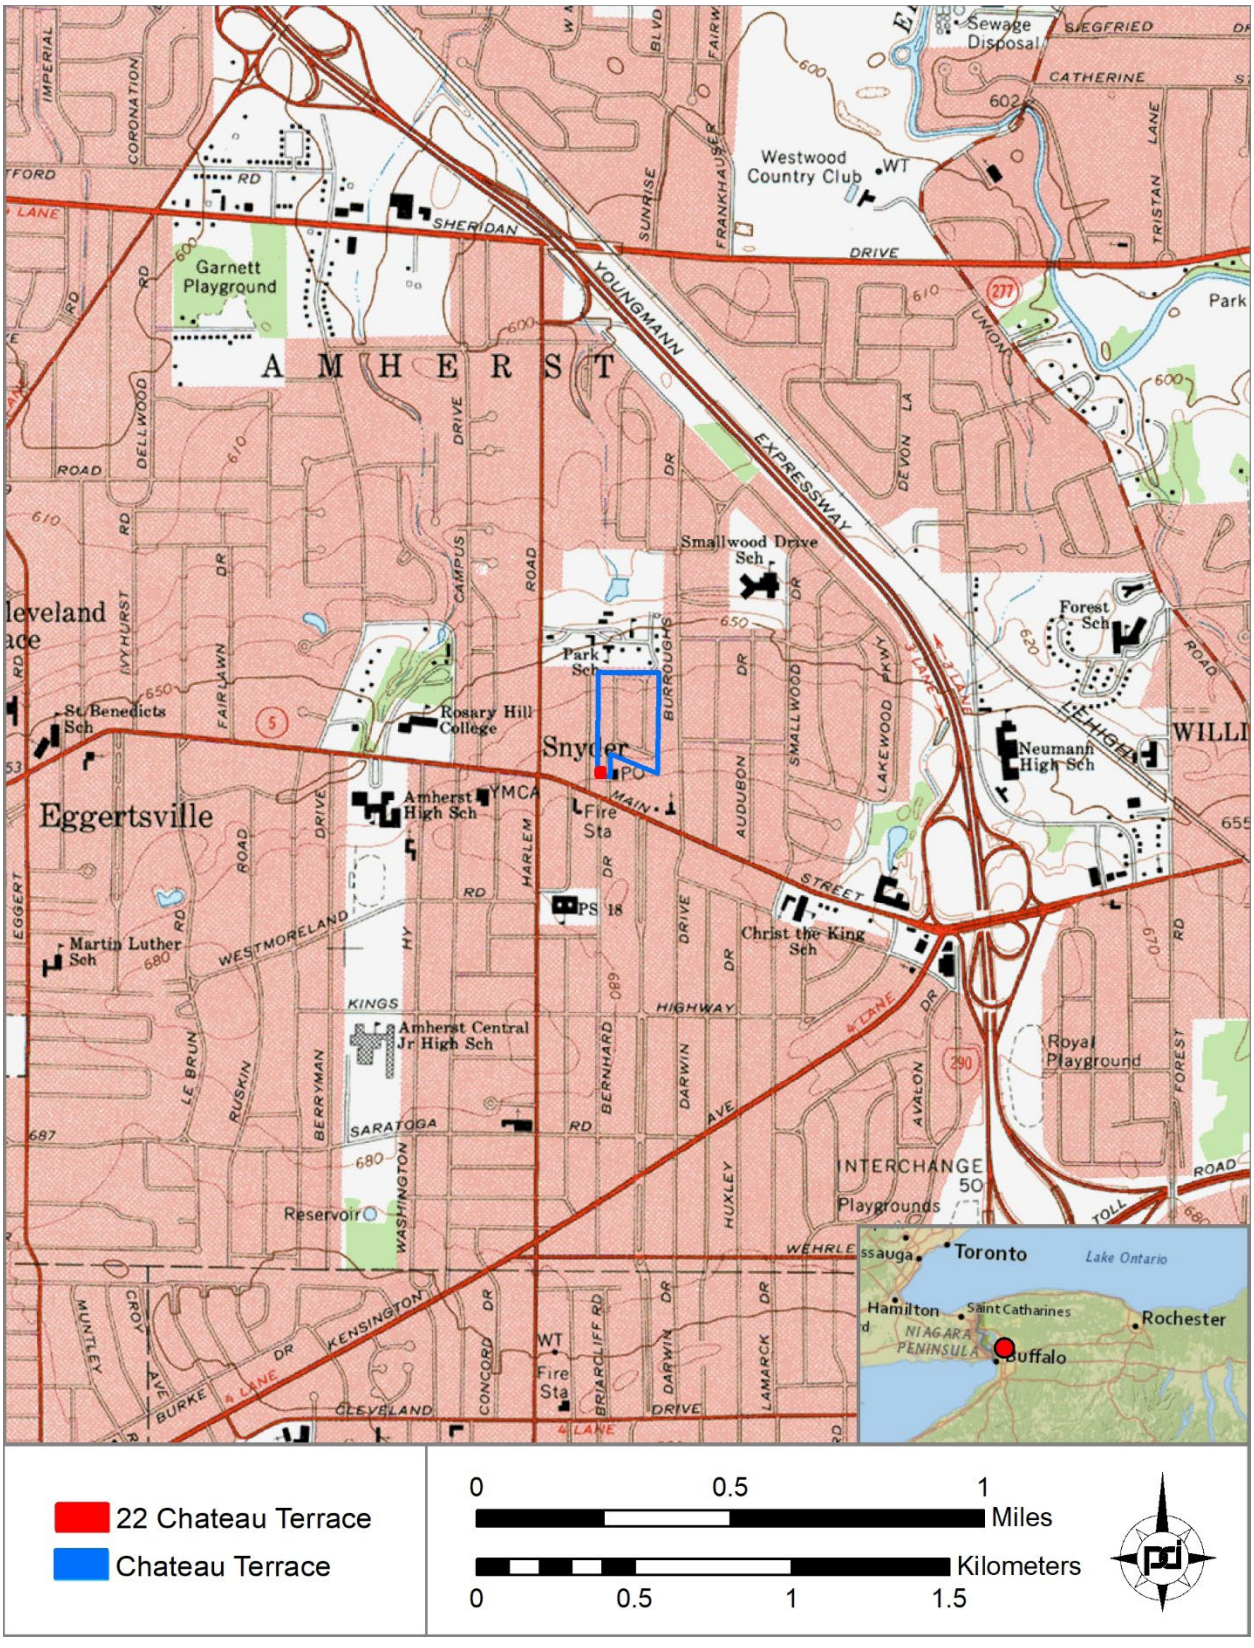

Figure 2 Location of the property at 22 Chateau Terrace, Town of Amherst, Erie County, New York *(USGS Buffalo Northeast, 1965).*

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

Current State-level Inventory Status. The residence at 22 Chateau Terrace is in the Chateau Terrace Study Area (New York State Office of Parks, Recreation, and Historic Preservation [NYS OPRHP] Unique Site Number [USN] 02902.001453), which has not been formally evaluated for listing on the State and National Registers of Historic Places (New York State Cultural Resources Information System (CRIS 2022). A general boundary for the study area is delineated in CRIS, though individual residences in the Chateau Terrace Study Area have not been assigned USNs (Figure 3). Audubon Terrace Study Area adjacent to Chateau Terrace (USN 02902.001454) to the east is also a contemporary unevaluated subdivision.

Figure 3. Chateau Terrace Study Area at left as delineated by the NYS OPRHP. The general location of 22 Chateau Terrace is depicted by the red-shaded circle. Note, the adjacent Audubon Terrace Study Area boundary at right *(CRIS 2022).*

Previous Surveys

Local-level Historic Resources Survey Documentation. Chateau Terrace Study Area was first recommended as a potential historic district in the 1997 *Reconnaissance Level Survey of Historic Resources, Town of Amherst* (Bero 1997:Appendix F-6). The residence at 22 Chateau Terrace was identified as a contributing resource to a proposed historic district. In 1997, Chateau Terrace consisted of approximately 73 houses (52 contributing; 21 non-contributing). It included the following properties: 121 Chateau Terrace North; 7-65 and 10-42 Chateau Terrace South, 11-69 and 20-80 Chateau Terrace East 1-121 and 22-120 Chateau Terrace.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

As initially reported, Chateau Terrace Historic District was characterized as a cohesive early twentieth-century residential district consisting of modest scale houses. Chateau Terrace residences were primarily built during the 1920s and 1930s. A variety of popular residential architectural styles are represented in the neighborhood including Bungalow, Craftsman, American Foursquare, Colonial Revival, and Dutch Colonial Revival (Figure 4). Other features of Chateau Terrace include a winding street pattern with mature street trees. The 1997 survey also noted Chateau Terrace's significance at the local level for its association with Amherst's early twentieth-century suburban development.

The 1997 survey assigned a "yellow" color code for Chateau Terrace, which is the third level of color coding for properties in the reconnaissance survey's Annotated List (Bero 1997: Appendix F-6). A "yellow" designation for a property represents a property with moderate architectural and/or historical significance (Bero 1997: 101). Chateau Terrace was one of nine historic districts in Amherst recommended for the intensive level survey. However, the historic districts were not included in the 1998 intensive level survey (Bero 1998:2).

Figure 4. A representative view of 27, 23, and 19 Chateau Terrace in 1997 (*Reproduced from Bero 1997: Photo No. 52*).

In 2011, Chateau Terrace was reassessed in the *Updated Reconnaissance Level Survey of Historic Resources, Town of Amherst* (KTA 2011: Appendix 1-6). The 2011 survey determined Chateau Terrace Historic District met the criteria for a "blue rated" property. The definition of a "blue rated" property is presented below:

> **BLUE:** Extremely high architectural and/or historic significance. These properties would likely also meet the criteria for to be considered National Register eligible. A locally significant district. A resource that is rare and lacks individual distinction. All districts are considered Blue as are most farmsteads.

Seventy properties were identified in Chateau Terrace in 2011; 47 contributing and 23 noncontributing (KTA 2011:Appendix 1-6). The residence at 22 Chateau Terrace is included as a contributing resource (KTA 2011: Area 6-9). Chateau Terrace consists of the following properties: 11 to 77 Chateau Terrace East and 20 to 80 Chateau Terrace East; 7 to 47 Chateau Terrace South and 10 to 42 Chateau Terrace South; 22 to 120 Chateau Terrace and 65 to 121 Chateau Terrace (Figure 5).

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

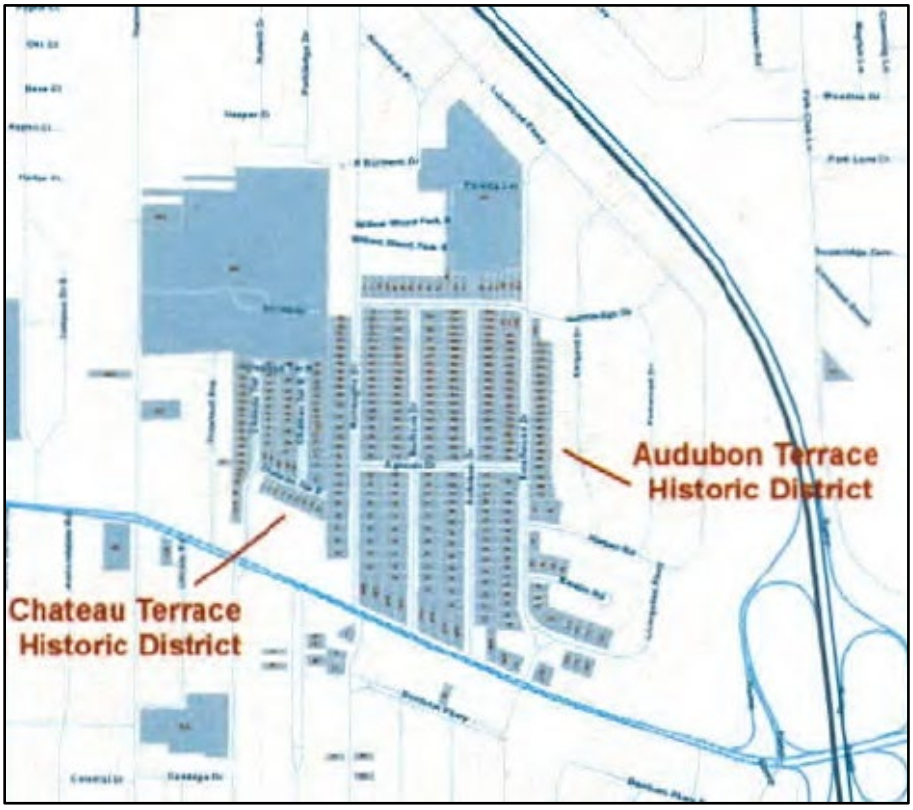

Figure 5. Chateau Terrace Historic District and the adjacent Audubon Terrace District in 2011 (*Reproduced from KTA 2011: Area 6*).

Methodology

Methodologies, historic overviews, and recommendations presented in previous historic resources surveys of the Town of Amherst informed this S/NRHP eligibility assessment for the individual subject property at 22 Chateau Terrace. To assess the historic significance of 22 Chateau Terrace further research was conducted on the development history of the Chateau Terrace Study Area and its surrounding area in the Snyder community. In April 2022, an online Freedom of Information Law (FOIL) request was made with the Town of Amherst Building Department and Planning Department for the following: 1) subdivision files for Chateau Terrace (Suor & Suor Building Company) and 2) building permit records for 22 Chateau Terrace (Online FOIL Request: 2134). The FOIL request did not yield any relevant historical information about the residence or the subdivision.[2]

A research inquiry for Chateau Terrace subdivision was also made with the The Niederlander Research Library of Buffalo Niagara Heritage Museum.[3] The library does not presently hold records specific to Chateau Terrace. Research was conducted at the Eggertsville-Snyder Branch Library and The Grosvenor Room-Special Collections department at the Central Library of the Buffalo & Erie County Public Library. Other research included online searches of relevant genealogical and newspaper web sites.

[2] Online FOIL Request #2134, Town of Amherst, NY (April 28, 2022). FOIL responses were received on May 4 and June 8, 2022.

[3] Rachel Ravago (Deputy Director for Collections and Interpretation, Buffalo Niagara Heritage Museum) in discussion with the author, May 2022.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

On-site documentation of the property was conducted on April 28, 2022. As noted above, the investigation included digital photography of the property's setting and the existing conditions of exterior and interior of the building (see Appendix A). Intact architectural details and the overall condition of the building were noted as were any changes to the building. A cursory drive through of the Chateau Terrace development was also carried out to support the S/NRHP eligibility assessment. The National Register Criteria for Evaluation was applied only to the individual property at 22 Chateau Terrace (National Park Service 2002).

> Criterion A: (Event) Properties that are associated with events that have made a significant contribution to the broad patterns of our history; or
>
> Criterion B: (Person) Properties that are associated with the lives of persons significant in our past; or
>
> Criterion C: (Design/Construction) Properties that embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; or
>
> Criterion D: (Information Potential) Properties that have yielded, or may be likely to yield, information important in prehistory or history (*NPS Bulletin 15*, referencing 36 CFR 60).

A property is not eligible if it cannot be related to a particular time period or cultural group and thereby lacks any historic context with which to evaluate the importance of the cultural resource. The cultural property (e.g., historic structure or landscape) must also retain the historic integrity of those features necessary to convey its significance. Seven aspects or qualities of integrity recognized by the National Register are location, design, setting, materials, workmanship, feeling, and association. Actual determinations of eligibility for the S./NRHPs are made by the NYS OPRHP.

Historical Overview

Early Development of Town of Amherst. European-American settlement of the Niagara Frontier dates from the end of the American Revolution in 1783. During the next decade large grants of land in western New York would be sold to private investors who attempted to open the land to settlement. The land's initial purchasers, a syndicate of speculators headed by Oliver Phelps and Nathaniel Gorham, forfeited their obligations, and the rights to the unsurveyed portion of the area were sold to Robert Morris in 1791. Reserving a portion of the land for his own purposes, Morris sold the remainder, including all of present Erie County, to a consortium of Dutch investors, called the Holland Land Company, in 1792-1793 (Turner 1974 [1850]; Silsby 1961).

Joseph Ellicott was contracted in July 1797 to survey the company's land in western New York and divide it into townships. The process began in the spring of the following year. The current path of Main Street (NY Route 5), completed in 1803, was known as the Buffalo-Batavia Road to the early settlers. This road and the future City of Buffalo were laid out by Ellicott (White 1898). Once townships had been surveyed and roads in the area cut, settlement and growth followed quickly. The first land sales in Amherst were made in the autumn of 1803 to Samuel Kelsey, Henry Lake, Benjamin Gardner, and William Lewis, among others. The earliest settlers arrived the following year and included Timothy and Orlando Hopkins, John Hershey, Samuel McConnell, Alexander Logan, Caleb Rogers, Stephen Colvin, John King, and Joel Chamberlain. By 1808 Ellicott Creek (then known as Eleven Mile Creek) had been dammed and a grist mill was operating in what was then called Williams Mill. Erected by Jonas Williams, the mill was joined by a sawmill and later a tannery (Glover 1972:2). Niagara County (consisting of what are now Erie and Niagara counties) was formed from Genesee County in 1808.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

The War of 1812 stunted growth in Western New York which served as one of the primary theaters of that conflict, and areas near the border with Upper Canada (the current province of Ontario) were ravaged by attacks and counterattacks. After the war, Eleven Mile Creek (Ellicott Creek) offered a prime power source for nascent industrial growth, which in turn attracted settlers to the area. With increased population, new political divisions were made. The Town of Amherst was separated from the Town of Buffalo in April 1818 and named for Sir Jeffrey (or Geoffrey) Amherst, Commander of British forces in America in 1759 and 1760 and an early advocate of biological warfare (i.e., blankets infected with small-pox) against the Indians (White 1898:I:493-494; Fenn 2000:1573-1579). Erie County was created when all the land south of Tonawanda Creek was removed from Niagara County in 1821. The Town of Amherst achieved its present size in 1839 when the Town of Cheektowaga was created (White 1898:I:493-494).

The area received a tremendous economic boost when one terminus of the Erie Canal was located at the village of Buffalo. Begun in 1817, the Erie Canal linked Buffalo and Lake Erie with New York City when it opened on October 26, 1825. The completion of the canal attracted additional settlers to the region, including many German-speaking Alsatians, who began to populate the largely agricultural and unoccupied northern portions of the Town of Amherst in the early 1830s (Young 1965:260). Progress was slow since Ellicott Creek flooded regularly, and the nearby land had to be drained before it could be cultivated (Smith 1884:I:400). Despite these endeavors, the center of settlement in the Town of Amherst remained at Williamsville near the creek. Homesteaders focused on growing grain, notably wheat, and grazing cattle. The town's numerous creeks supported a variety of rural industries, including grist mills, a carding mill, sawmills, a tannery, a shoe-and-boot factory, a broom factory, a slaughterhouse, and two furnaces for processing iron needed by area blacksmiths (Glover 1972:2-3; League of Women Voters 1985:6; Amherst Museum 1997). The Fogelsonger limestone quarry was located between Snyder and Williamsville near what is now the entrance to the New York State Thruway. The population of the town increased during the middle decades of the nineteenth century from 4,153 in 1850 to 4,807 in 1875 (Beers 1880:18-19).

First completed to Buffalo in the 1840s, railroads played an important part in the development of western New York as an economic power during the nineteenth and twentieth centuries. As part of the effort "to connect the Hudson River and Lake Erie with a 'ribbon of rails'" the Batavia branch of the New York Central Railroad passed through the central part of the Town of Amherst (Eberle and Grande 1987:52; Stone and Stewart 1866; Beers 1880). This line was abandoned in the twentieth century, and the tracks were pulled up. The New York West Shore & Buffalo Railroad ran passenger service along this route, stopping at Transit Station and Getzville beginning in 1884 (White 1898:I:539; USGS 1905). By 1896, a branch of the Lehigh Valley Railroad ran diagonally through the town, west and south of the project area (Young 1965:264; USGS 1905, 1948).

During the late nineteenth century, the Town of Amherst underwent a period of infrastructure improvements, including the widening and paving of streets and roadways, and the erection of bridges. The first telephone was installed in 1879 (although dial service did not begin until 1949) and the first water system was created in 1895. After the turn of the nineteenth century, other public services began to improve living conditions in the town: water power generated by Niagara Falls was used to provide the town's electricity as electric lights were erected along Main Street in 1901; a natural-gas franchise was granted in 1902; the first water meters were installed in 1919 (League of Women Voters 1985:7; Young 1965:264-265).

Industry in the town at that time centered on processing grain. Large and active flour mills ground wheat grown in the town as well as grain brought to Williamsville from the docks of Buffalo. By the 1890s, however, "electric power from Niagara Falls became available in unlimited quantities. [As a result,] except for the Chalmers gelatine factory [in Williamsville], founded in the 1872, industry disappeared, and Amherst turned toward developing itself as a residential area" (Glover 1972:6-7; see also Young 1965:116-117). Improvements and developments in transportation networks during the 1890s into the twentieth

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

century, as well as the prosperity of the cities of Buffalo and Tonawanda facilitated the trend toward creating residential communities. In 1892, an electric trolley system connected Williamsville to Buffalo, which operated until 1930, when gasoline buses and cars proved more popular with commuters (Glover 1972:6; Young 1965:263). These transportation improvements offered suburban living opportunities for urban workers.

Agriculture remained prominent in the town well into the twentieth century although the trend of subdividing former farms or unproductive areas into residential developments accelerated after World War I (Dunn 1972:212; Eberle and Grande 1987:202).

Synderville. To the west of William's Mill, a small community formed in the future Snyder area when in 1804 Timothy Hopkins purchased a large farm on Main Street which extended west from Washington Highway (approximately three blocks west of Harlem Road) to Amherstdale Road (Fiddler-Woite 1998:11). Settlement progressed slowly in the Snyder area during the early nineteenth century. The Schenck family moved to the area from Pennsylvania in 1821. Two years later, Abraham Snyder and his family also moved from Pennsylvania and settled near their cousins, the Schencks.

Other early families include Schenck, Freuhauf, Helfer, LeBrun, Miller, Fisher, Schuler, Cable, Witmer, Beck, Crout, Harrison, Kern, Frick, and Fogelsanger (Fiddler-Woite 2009:63,65). In 1830, the Hopkins sold their property to the Schenk family (Fiddler-Woite 2009:14). Abraham Snyder, his wife Veronica, and their two sons (Michael and Jacob) lived in a log cabin on Main Street near Harlem Road. In 1832, Mr. Snyder mysteriously disappeared leaving the burden of supporting the family on young Michael (Fiddler-Woite 2009:20). Within 5 years, Michael Snyder moved the family into a plank house on the northeast corner of Main Street and Harlem Road. He opened a mercantile with John Schenk in the front room of the house. He later expanded the house and opened Snyder's Inn to cater to travelers on the Buffalo Road. He established a U.S. Post Office, according to Snyder family records, as early as the late 1840s (Fiddler-Woite 2009:23). The first post office stood on the northwest corner of Main Street and Harlem Road. However, Michael Snyder was not formally listed as the postmaster of the Snyderville Post Office until 1882 (Fiddler-Woite 2009:24).

An unnamed crossroads community centered on Main Street and Harlem Road is depicted on the 1855 atlas map of Erie County (Geil 1855). The area near Chateau Terrace along Main Street was lined with structures, one of which was a school house. One map-documented structure was a property owned by Mrs. Snyder, which would later be adjacent to the side of Chateau Terrace. A log and brick school house (District #18) was also located near the future site of the Chateau Terrace development (Grande 2000:51). In 1860, Michael Snyder acquired additional property to the east on Main Street near present Chateau Terrace. Snyderville is first identified on the 1866 map of Erie County (Stone & Stewart 1866). M. Snyder's Store and Post Office are depicted on the northeast corner of the intersection on Lot 13.

Tobias Witmer, surveyor, carried out the original survey of Farm Lot 13, the future location of Chateau Terrace, in 1852 (Holland Company Land Title & Abstract Company 2017). Mid-to late nineteenth-century land owners of the Chateau Terrace section of Lot 3 (east section) included Michael Shenk, Michael Shenk Jr., and Philip J. Ferkel. By 1880, Lot 13 had been further subdivided, and G. Demerest owned the largest tract with 61 acres on the east side of Lot 13. (Beers 1880; Figure 6). John and Jacob Snyder owned adjacent parcels on Lot 12, to the east. In 1896, a branch of Lehigh Valley Railroad was constructed through Amherst (Young 1965:264) to the north and east of Snyder. An 1898 map depicts the Lehigh Valley Railroad and the Buffalo & Williamsville Electric Railroad on Main Street extending through Snyder (The Matthews-Northrup Co. 1898). Lot 13, the future location of 22 Chateau Terrace, remained undeveloped. The first residential development in the Snyder vicinity was laid out along Getzville Road and Main Street by this time.

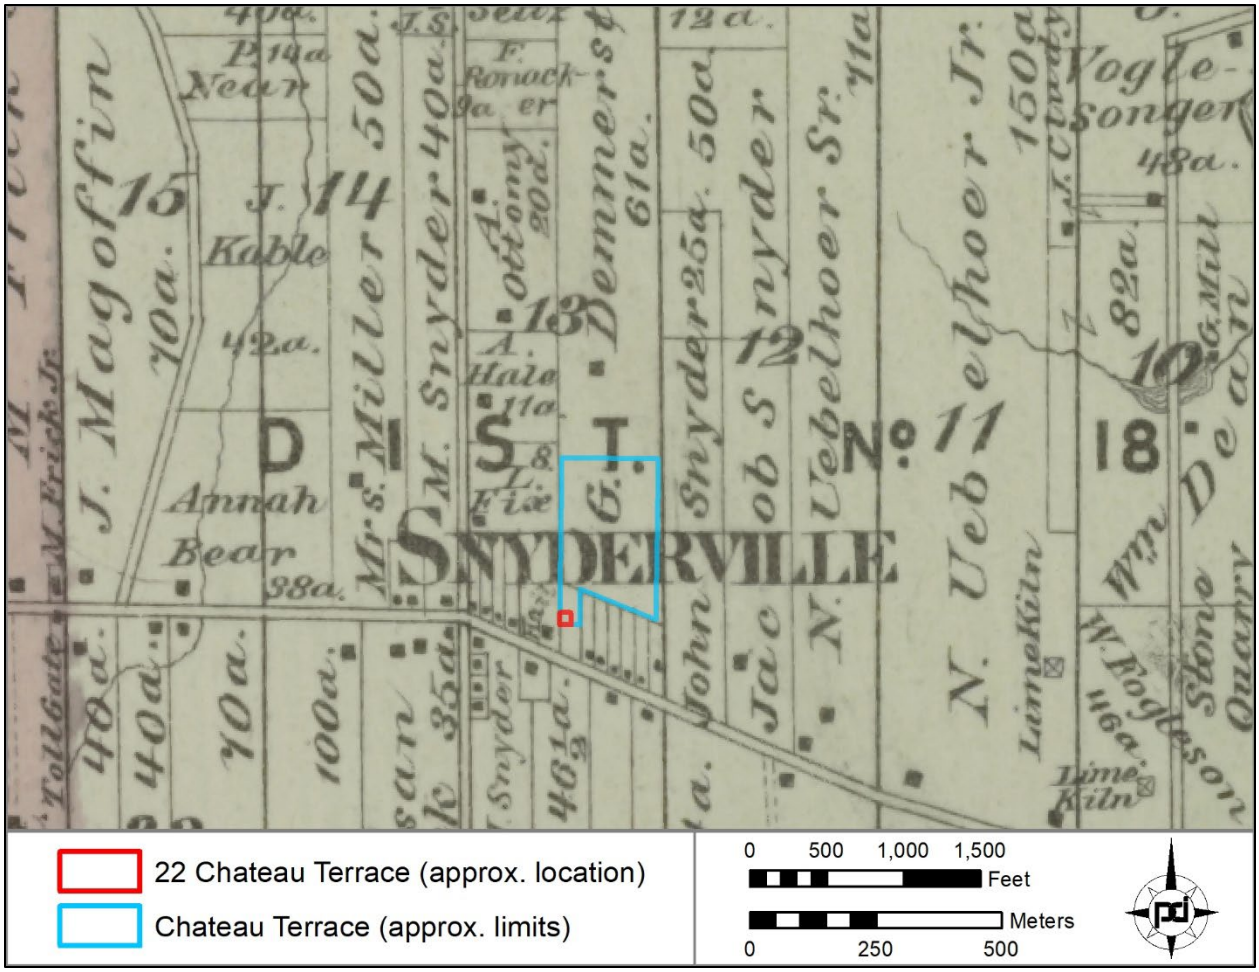

Figure 6. The general location of 22 Chateau Terrace on the 1880 map of the Town of Amherst (*Century Map Co. 1915).*

Twentieth-Century Development in Snyder. Early twentieth-century growth of the Snyder area has been attributed to the opening of Buffalo & Williamsville Electronic Railway (aka Toonerville Trolley in 1893 and the advent of the automobile (Grande 200:145; Fiddler-Woite 2009:38). Running along the north side of Main Street, the trolley line connected Buffalo and Williamsville. Efficient and dependable transportation attracted the interest of future homebuyers in new housing developments (Fiddler-Woite 2009:93). In operation until 1930, the trolley provided access for middle class families to purchase a home in Snyder.

In 1911, brothers William Charles Taylor Suor (1873-1959) and Arthur M. Suor (1874-1936) purchased 99 acres of the Kabel family's farm for the College Hill neighborhood development, which they first called "Amherst Heights" (Grande 2000:149). Formed in 1894, Suor & Suor were initially engaged in real estate business development projects near the Central Park and Parkside neighborhoods of Buffalo (White 1898:439). The brothers developed a few one-block streets near some of the main thoroughfares of Central Park, including Starin and Vorhees Avenues (Moriarty 2017). Their developments on Revere Place, Taft Place, and Sagamore Terrace were speculatively built homes erected on modest lots (Moriarty 2017). Suor & Suor offered affordable single-family homes with modern amenities which appealed to middle class consumers (Moriarty 2017).

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

Suor & Suor had been previously involved in more traditional real estate interests of acquiring and selling farm houses (Grande 2000:149). Within a few years the firm would further expand development in Snyder with the College Hill - Chateau Terrace subdivision. A third brother, John Russell Suor (1882-1959), was also involved in the development of Snyder (Buffalo Evening News [BEN] 1953:25). He started his real estate career in Buffalo and later moved to Snyder. For roughly 25 years, John Suor was associated with the Erie County Real Estate Department and the county attorney's office as an appraiser (BEN 1953:25).

In Snyder, the Suors envisioned a new type of residential development on the south side of Main Street between Getzville and Harlem roads. Washington Highway formed the central point of what became known as the College Hill (Fiddler-Woite 2009:93). Suor & Suor's College Hill Office was erected on the southwest corner of Main Street (#4363) and Washington Highway (Fiddler-Woite 2009:94). The company built middle-class-sized homes which typically consisted of a two-story building with four bedrooms, a den, and a bathroom on each floor (Fiddler-Woite 2009:95). In February 1917, there were 40 homes in College Hill (BEN 1917). Suor & Suor advertised their new modern homes in local Buffalo newspapers to attract potential buyers to relocate to Snyder (Figures 7 and 8).

The brothers continued to acquire more tracts of land for their development in Snyder. Suor & Suor purchased an additional 65-acres of the Tobias Witmer farm south of College Hill by 1919 (Fiddler-Woite 2009:95). Named College Hill Terrace, the new 331-lot development extended toward Kensington Avenue. It was laid out with large lots for more upscale homes with landscaping and street furniture (Fiddler-Woite 2009:95). The Suors also endeavored in commercial development. In 1920, the Town of Amherst's population had increased by 36 percent from 4,629 in 1910 to 6,286 with much of the increase in the Snyder-Eggertsville area (Grande 2000:145). This rise in population included both new owners of large estates as well as an increased migration of middle-class commuters who purchased homes in the new subdivisions (Grande 2000:146).

By early 1920s, new residential neighborhoods were established west of Williamsville along Main Street which included the following: Rosedale Park, College Hill, Chateau Terrace, Audubon Terrace, and Amherst Estates. From 1923 to 1930, a town committee on building construction approved 73 major subdivisions (Grande 2000:189). The 1920s building boom in Amherst contributed to a 110 percent increase in population from 6,286 in 1920 to 13,181 in 1920 (Grande 2000:183). This growth is evident on a 1927 aerial photograph of the Snyder area (see Figure 14). The 1938 map of Snyder shows extensive residential subdivisions on the north and east sides of Main Street west of Harlem Road and on the south side of Main Street west of Harlem Road (Niagara Frontier Planning Board 1938a, 1938b).

Chateau Terrace Area. In 1909, G. Demert is identified with the east portion of Lot 13, which would become the future site of Chateau Terrace subdivision (Century Map Co.1909 [Figures 9 and 10]). The southern portion of Lot 13 consisted of a residential-width parcel consistent with the other lots along Main Street. It would later become the entrance road to Chateau Terrace. J. Freuhaut [sic] owned the adjacent properties on the west side of the southern portion of Lot 13. The south end of the street that became Fruehauf Avenue is shown between the two Frauhaut parcels fronting Main Street in 1909. A parcel owned by A. Snyder is adjacent to the east side of the south section of Lot 13, which became the Chateau Terrace entrance. Five other parcels on Main Street bordered the south boundary of Lot 13, one of which included the 1900 two-story brick school house (District 18). The rectangular-shaped north section of Lot 13 was bound to the west by residences on Harlem Road.

The 1915 Century Atlas map contains a discrepancy in property ownership of Lot 13. Chauncey Hamlin was identified on the Snyder sub plan as the owner of the G. Demert property on Lot 13, while the 1915 map of the Town of Amherst documents G. Demert as the owner of the 61-acre parcel (Century Map Co. 1915a, 1915b [Figures 11 and 12]). Hamlin's country estate stood on a separate parcel that fronted Harlem Road. Adjacent to the west side of the property was "J.C. Fruehaups Sub Div.," which consisted of 23 home sites with eleven frame buildings. Other subdivisions documented in Snyder at this time included Meadow Crest on the west side of Harlem Avenue north of Main Street and College Hill south side of Main Street along Washington Highway. According to the results of the title search, Chauncey Hamlin had the parcel surveyed in November 1917 (Holland Company Land Title & Abstract Company 2017: Table 1).

In 1920, The Park School of Buffalo purchased 100 acres on the east side of Harlem Road from the Hamlin Estate for the location of their new school campus which bordered the north boundary of the new Chateau Terrace subdivision (The Park School of Buffalo 2022; Fiddler-Woite 2009:126). In 1922, the Burkhardt Company purchased the Tobias Witmer farm on the east side of Chateau Terrace for the Audubon Terrace subdivision (Fiddler-Woite 2009:148).

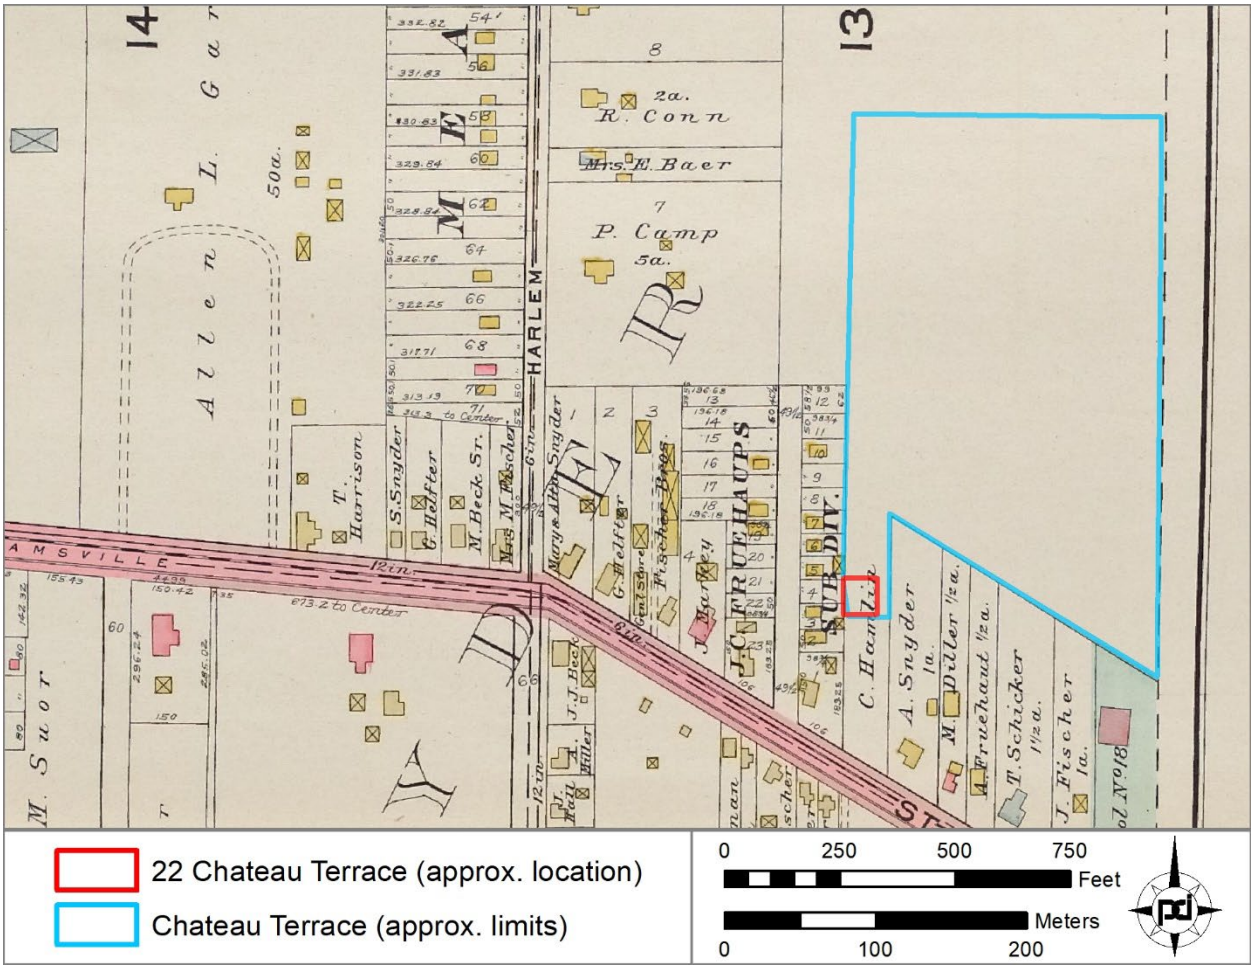

Figure 12. The general location of 22 Chateau Terrace on the 1915 sub-plan of Snyder *(Century 1915b).*

In July 1919, William C.T. Suor and Arthur M. Suor purchased land from Chauncey J. and Emily G. Hamlin for their new College Hill-Chateau Terrace development (Liber 1423 of Deeds, page 240). Louis W. & Josephine E. Ball purchased the parcel at 22 Chateau Terrace on September 1, 1920 (Liber 1555 of Deeds, page 138). The lot was subject to building restriction for a period of 25 years from July 1, 1919. By March 1921, Suor & Suor were listing new homes in the Chateau Terrace development (Buffalo Courier 1921). The house at 30 Chateau Terrace, on the adjacent lot to the north of 22 Chateau Terrace, was advertised with four bedrooms on an 80-foot-wide lot at a list price of $9,000. At 65 Chateau Terrace, the company built a three-bedroom house on a 50-ft by 132-ft lot which listed for $9,500.

By 1923, Chateau Terrace subdivision was platted and sparsely developed with only 13 residences, three of which were on the west side of Chateau Terrace just north of Main Street (Sanborn 1923 [Figure 13]). Individual lot numbers in Chateau Terrace do not appear on the 1923 map. Nos. 22, 30, and 38 Chateau Terrace along the south entrance to the subdivision had been constructed by this time. The Craftsman-style detached garage at 22 Chateau Terrace had yet to be constructed. Roads within the subdivision were 50 ft wide. The Park School campus is documented on the north side of Chateau Terrace for the first time in 1923. By this time, Freuhauf subdivision had acquired additional land extending north to the school property. The properties south of Chateau Terrace South included four dwellings with detached garages and School House No. 18. In 1924, District #18 School moved from the two-story brick schoolhouse to a new location on Harlem Road (Fiddler-Woite 2009:110).

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

Charles S. Burkhardt Co., developer of the adjacent Audubon Subdivision, also built homes in Chateau Terrace. In April 1923, Burkhardt advertised two new homes in Chateau Terrace featuring all modern conveniences, garages, and large lots. Ranging in price between $14,000 and $14,500, each house included three bedrooms and tile baths (Buffalo Courier 1923a).

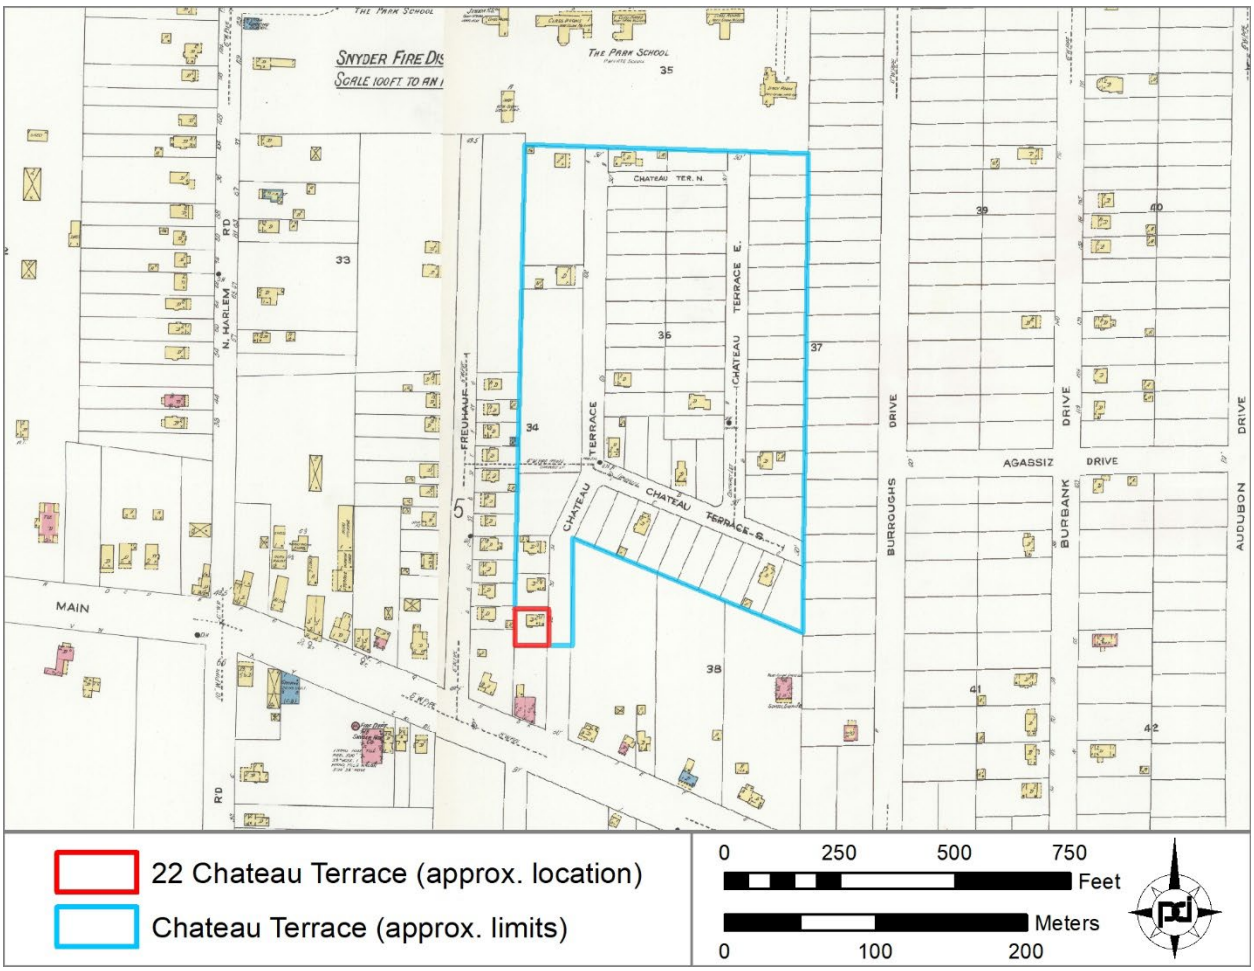

Figure 13. The location and footprint of the house at 22 Chateau Terrace as documented on the 1923 Sanborn Fire Insurance Map *(Sanborn 1923).*

Chateau Terrace was laid out off Main Street serving as the only entrance road to the subdivision. In 1927, Chateau Terrace remained a partially developed subdivision (ECDPW 1927 [Figure 14]). The three residences depicted on the 1923 map on west side of Chateau Terrace, south of the where the road bends, are visible in the aerial photograph. The southernmost of which is 22 Chateau Terrace. By 1932, homes were erected on Chateau Terrace South and Chateau Terrace East along with some construction on Chateau Terrace (KTA 2011: Area 6-9).

On the 1938 map of Snyder, Chateau Terrace consisted of 74 numbered lots. The west side of Chateau Terrace was divided into 20 lots with the lots 1 through 4 located between Main Street and the bend south of Chateau Terrace South (Figure 15). The residence at 22 Chateau Terrace was constructed on Lot #2. The three houses noted on the 1927 aerial had 80 frontages on Chateau Terrace. The other parcels were laid out with 50-ft frontages along Chateau Terrace to the north, the south side Chateau Terrace East, and the south side of Chateau Terrace South. A 1951 aerial view shows additional development in Snyder (Figure 16).

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

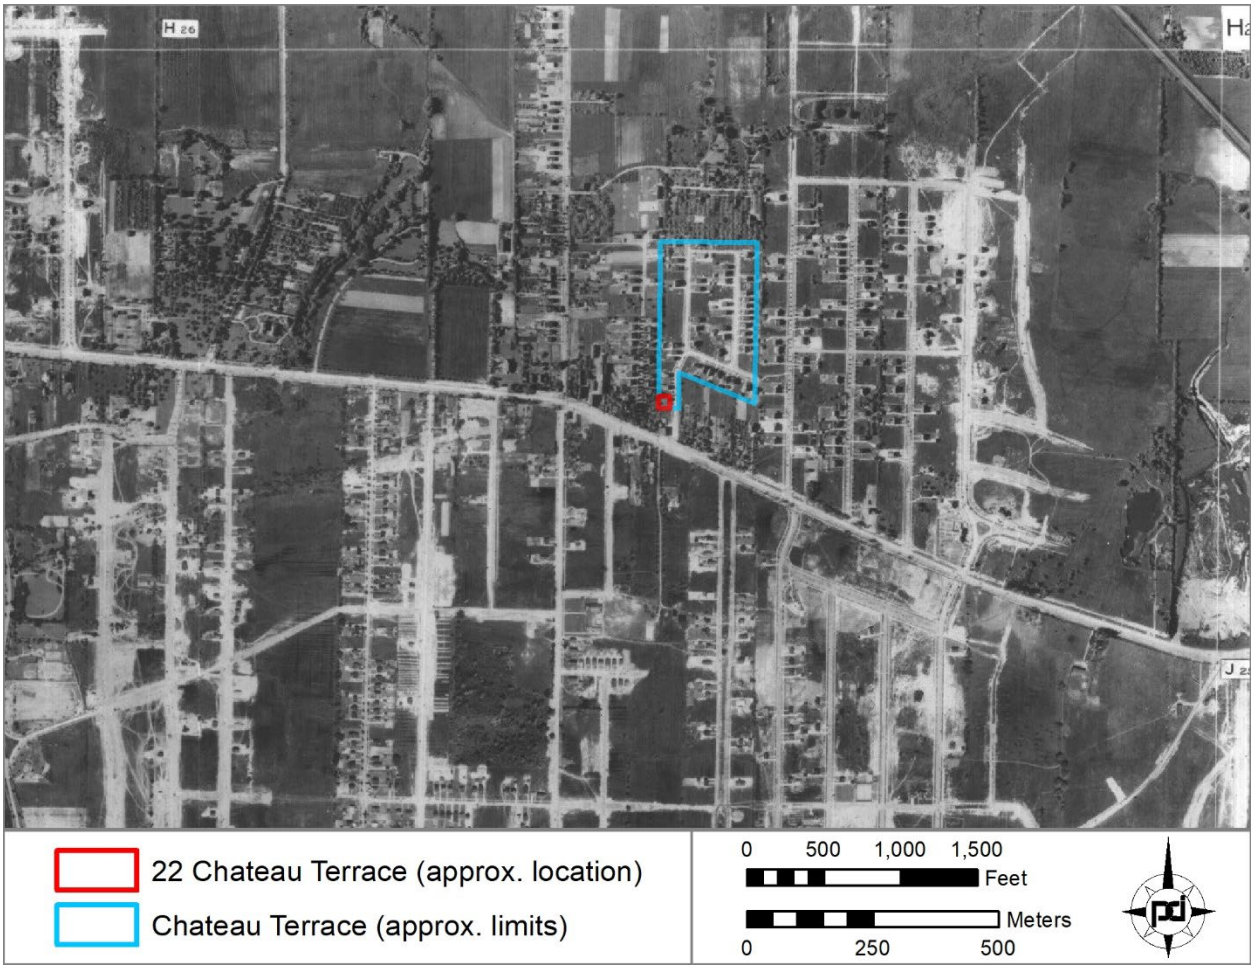

Figure 14. A 1927 aerial view of Chateau Terrace showing residential development in the subdivision and the surrounding area of Snyder *(Erie County Department of Public Works [ECDPW] 1927).*

The former Abram L. Snyder house on the northeast corner of Main Street and Chateau Terrace was demolished in 1957 (Fiddler-Woite 2009:148). A new U.S. Post Office branch (now occupied by the Bornhava school) was erected across the street from 22 Chateau Terrace on the site of the old homestead tract. Willliam C.T. Suor died at 85 years old in January 1959. An editorial on his passing credited the Suor brothers for beginning the trek to the North Buffalo suburbs with their Central Park development and continuing with the suburban development in Snyder (BEN 1959).

Lewis Ball died on August 20, 1968. His widow, Josephine E. Ball, sold the property in July 1971 to Edmund Karnofsky (Liber 7812 of Deeds, page 1). In 1975, the former school building on Main Street was demolished, and the adjacent property to the south of Chateau Terrace was subdivided into parcels (Snyder-Eggertsville Library and Ascension Lutheran Church [Fiddler-Woite 2009:110]). Karnofsky owned the property for 15 years, later selling it to E/K Realty Group LLC in September 2008. The subsequent owner 570 DAB 3 LLC purchased the property in March 2018. Table 1 presents a summary of deed information for Subdivision Lot 2 (22 Chateau Terrace/Parcel B).

William Charles Taylor Suor and Arthur M. Suor. The Suor brothers were the sons of Charles and Anna (Taylor) Suor (White 1898:439). Their grandfather Joseph Suor was a native of Germany (White 1898:439). Charles Suor operated a wood turning establishment on the corner of Clinton and Oak streets in Buffalo and served as supervisor of the old Eleventh ward (White 1898:439). He died in 1887 when the boys were teenagers.

Arthur M. Suor was educated in public schools and the College of Commerce in Buffalo. He was first employed for three years with the T. C. Tanke's jewelry store and later in the Western Transit Company for a short time. In 1890, he accepted a position with the real estate firm of Thorne & Angell. He was associated with the firm until 1894, when he formed a partnership with his brother, William C. T. Suor (White 1898:439). In 1896, he married Ida Clare Heeb of Buffalo. They had one son, Arthur M., Jr. He was a member of Parish Lodge No. 292, F. & A. M., and of Trinity Lodge, I. O. O. F.

Architectural Summary

Setting. Chateau Terrace on the north side of Main Street east of Harlem Road is nestled between two early-to-mid-twentieth-century residential subdivisions, Freuhauf to the west and Audubon Terrace to the east. Chateau Terrace was laid out to serve as the entrance road for the development. The subdivision was designed with four roads that form a near rectangular-shaped central plan. These include two north-south roads (Chateau Terrace & Chateau Terrace East), one northwest-southeast road (Chateau Terrace South), and one east-west road (Chateau Terrace North). The south end of Chateau Terrace has a bend to the northeast just south of Chateau Terrace South. Street trees were planted throughout Chateau Terrace. Trees lining the entrance road, and the road's winding alignment were designed to provide screening as well as privacy. Chateau Terrace was originally designed with three dead end roads. The north end of Chateau Terrace East is open for access to the Park School of Buffalo Campus. Commercial properties, a school, medical offices, and a public library border the south boundary of the subdivision.

Site. Located on the west side of the street, the single-family residence and detached garage at 22 Chateau Terrace is the first residential property in the subdivision north of Main Street. The parcel measures 80 ft wide by 73.34 ft deep. The house has a narrow 9.77-ft setback and a small, enclosed backyard measuring roughly 22 ft wide by 20 ft deep. A mature 24-inch green ash tree is centered in front of the house on the road verge. Other mature trees include are on the south side of the driveway and along west edge of the parcel. Concrete walkways (2.5 ft-2.6 ft) are on the north and west sides of the house. A low concrete retaining wall stretches across the south property line. Parking lots associated with commercial properties fronting Main Street (Nos. 4558-4560 & 4548) border the south, southwest, and west perimeters of the parcel. Residential properties are adjacent to the north (20 Chateau Terrace) and northwest (23 Fruehauf).

Description of Exterior. The residence at 22 Chateau Terrace is a frame, two-story Craftsman-style building with a front-gabled roof with asphalt shingles, stucco exterior, wood belt course, and stone foundation. It has a rectangular plan and measures approximately 24.20 ft wide by 40.66 ft deep. Window openings are single, paired, and triple groupings. These openings feature simple molded wood surrounds and wood double-hung sash (1/1 and 9/1). Original basement windows have two lights.

The east façade has an enclosed entry porch with a wood stoop in the north bay, a one-story sunroom with a low-pitched gabled roof, and a triple window grouping with bracketed pent. The entrance door features six lights over two lights and two panels. It is flanked by sidelights of four over one, a wood panel, and a single corner pilaster. Six lights over one light windows are on the north side of the entry porch. Stylistic details include wide overhanging eaves with single triangular knee brackets, beveled windows, and paneled and glazed doors.

Exterior alterations include a few replacement windows, a replacement wood rail on the front stoop, and asphalt roofing shingles.

Description of Interior. The open first-floor layout consists of a sunroom, dining room, living room, kitchen, and basement/side entrance hall. Three bedrooms, a bathroom, and a hall closet are on the second floor. It has an unfinished basement. The interior has painted plaster walls. Floor finishes include carpeting, hardwood, linoleum, and tile. Hardwood floors are covered on the first floor and primary bedroom. Interior windows are accented with simple wood trim. Extant interior doors are wood with six panels.

The living room has a central brick fireplace with a wood mantel supported by three brick corbels, built-in wood shelving, and Craftsman-style staircase (quarter turn stairs) with corner pier along the north wall. The Craftsman-type living room entrance door has a single panel and four lights. An original push button switch panel is on right side of front door. A Craftsman-type beveled glass window is in the north wall of the living room and west wall of the dining room. Original wooden baseboards and metal baseboard registers are

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

intact. The kitchen has built-in cabinets. Original cabinet doors have been removed from the upper cabinet shelves on the west wall and a new sink with cabinets has been installed on the east wall. The side entrance/ basement hall is on the north side of the house.

The primary bedroom on the second floor is in the upper front (east) of the house. It features two closets and window seat. The other two bedrooms have a single window and closet. The bathroom retains its white hexagonal floor tile, built-in closet, and built-in medicine cabinet.

The basement retains its original door and wood stairs. It has exposed stone walls and a row of built-in cabinets along the west wall. The chimney has a basement clean.

Interior alterations include the following: removal of portions of built-in kitchen cabinets and sink; removal of original light fixtures; drop ceiling in the dining room; new kitchen flooring; removal of a few original doors; and removal of original bathroom sink and tub.

Garage. A detached, frame, two-bay Craftsman-style garage is on the southwest side of the house. The 3.66.5 sq ft garage (18.35 ft wide by 20.15 ft deep) has a hipped roof with overhanging eaves, and asphalt roof shingles, and wood exterior siding. Garage doors feature multiple pane fixed windows and wood panels. The garage is presently structurally unstable. A section of the roof has partially collapsed on the south slope (Photograph 14 in Appendix A).

Conclusions

The ca. 1920 residence with garage at 22 Chateau Terrace does not appear to meet the State/National Register of Historic Places (S/NRHP) criteria for individual eligibility. Though the building retains much of its original materials and stylistic elements, it is a representative example of a modest single-family home type constructed in the first quarter of the twentieth century in Buffalo and suburban neighborhoods. Previous historic resources surveys have also identified the building at 22 Chateau Terrace as not individually eligible for listing on the S/NRHP (Bero 1997; KTA 2011), but instead they recommended the property as a contributing resource to a Chateau Terrace Historic District (Chateau Terrace Study Area in CRIS). Note, Chateau Terrace was not included in the NRHP Multiple Documentation Form for Multiple Resources Associated with the Suburban Development of Buffalo.

As previously recognized in the historic resources survey, Chateau Terrace Study Area is historically significant at the local level for its association with the suburban development of the Town of Amherst during the early to mid-twentieth century. A S/NRHP eligibility assessment for the entire Chateau Terrace Study Area is beyond the scope of this documentation report. Further survey work and documentation of the neighborhood, as well as additional research, would be required to provide an informed S/NRHP recommendation for Chateau Terrace Study Area. The NRHP Multiple Documentation Form for *Multiple Resources Associated with the Suburban Development of Buffalo, New York* (2015) and guidance provided in *Historic Residential Suburbs Guidelines For Evaluation And Documentation For The National Register Of Historic Places* (Ames and Flint 2002) would also need to be applied for an NRHP eligibility recommendation.

July 30, 2021

RE: Proposed Mixed-Use Project, 4548-4564 Main Street, Town of Amherst, NY
Traffic Engineering Assessment Letter

Dear Mr. Oates:

The purpose of this technical letter is to provide a traffic engineering assessment related to the proposed mixed-use project located at 4548-4564 Main Street in the Town of Amherst, NY for informational purposes and to understand the possible traffic impacts resulting from the proposed project. The concept site plan, figures, and supporting data are included in the attachments. This letter evaluates:

- Projected trip generation estimates and discusses the thresholds for completing a Traffic Impact Study (TIS).
- Southbound queuing on Fruehauf Avenue during the AM and PM peak periods.
- Sight line evaluation at the Main Street/Fruehauf Avenue intersesction.

PROJECT DESCRIPTION

The proposed project consists of developing 57 units of one and two-bedroom apartment units, a ±3,628 square foot (SF) quality restaurant, and a ±3,137 SF fast casual restaurant in a three-story building. Access is provided via two full access driveways: one along Chateau Terrace which accesses a parking lot with 50 spaces and one along Fruehauf Avenue which accesses a parking lot with 20 spaces. Chateau Terrace is posted as a "No Outlet" street while Fruehauf Avenue is posted as a "Dead End" street. On-street parking is available along Main Street. Sidewalks are present throughout the adjacent neighborhood.

TRIP GENERATION

Data contained in the Institute of Transportation Engineers (ITE) Trip Generation Manual (10th Edition) was used to project the volume of the traffic generated by the proposed project. Data published by the ITE is the nationally accepted standard for generating trips for new uses. Given the functional characteristics of the corridors and the land uses proposed for the site, the peak hours selected for analysis are the weekday morning (AM) and weekday evening (PM) peak periods. The combination of site traffic and adjacent street traffic produces the greatest demand during these peak periods.

The proposed project as depicted on the site plan consists of two different land uses (residential and restaurant) and is considered mixed-use (multi-use). According to the Institute of Transportation Engineers Trip Generation Handbook (3rd Edition), "…a multi-use development is typically a single real-estate project that consists of two or more ITE land use classifications between which trips can be made without using the off-site road system. Because of the nature of these land uses, the trip-making

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

characteristics are interrelated, and some trips are made among the on-site uses. This capture of trips internal to the site has the net effect of reducing vehicle trip generation between the overall development site and the external street system (compared to the total number of trips generated by comparable, standalone sites)." "In some multi-use developments, these internal trips can be made by walking or by vehicles entirely on internal pathways or internal roadways without using streets external to the site."

The Handbook indicates internal capture rates for trips within a multi-use development to vary between residential, office, retail, restaurant, and entertainment and recreational uses during the AM and PM peak hours. Given the proposed land use components and interconnection between these components, multi-use total volume trips will likely occur.

Methodology contained in National Cooperative Highway Research Program (NCHRP) Report 684: Enhancing Internal Trip Capture Estimation for Mixed-Use Development was consulted to perform the mixed-use adjustment. The NCHRP 684 model reported an internal baseline capture percentage of 0% during the AM peak hour and 10% during the PM peak hour.

These multi-use trip projection adjustments were applied to the respective site generated trips and subtracted from the traffic entering and exiting the site during the PM peak period. The internal capture calculation considers baseline mode shares and vehicle occupancy factors for the proposed land uses, as described in the Handbook.

For certain types of developments, the total number of trips generated is different from the amount of new traffic added to the adjacent highway network by the generator. Service/retail-oriented developments (i.e., shopping centers, gas stations, coffee/donut shops, and restaurants) often locate adjacent to busy streets to attract the motorists already passing the site on the adjacent street. These sites attract a portion of their trips from traffic passing the site. The "pass-by" traffic refers to the amount of existing traffic already on the roadway adjacent to the site that, as it "passes by" the site, will enter the site driveways to patronize the project site. The quantifying of "pass-by" trips has the net result of reducing the volume of new traffic that is added to the site driveways and/or adjacent roadways.

This site is likely to exhibit some level of pass-by traffic. The ITE Trip Generation Handbook (3rd Edition) was used as a reference to determine pass-by rates. For quality restaurants, the ITE data reports a range of rates during the PM peak period from 26% to 82% with an average pass-by rate of 44%. No data is available for the AM peak period. To remain conservative, this study used a 20% pass-by rate during the PM peak period.

The ITE does not have data for fast casual restaurants. Therefore, fast food restaurants with drive-thru was considered a comparable use. The ITE data reports a range of rates during the PM peak period from 25% to 71% with an average pass-by rate of 50%. To remain conservative, this study used a 20% pass-by rate during the PM peak period.

Table 1 shows the total site generated trips for the peak hours of study with the pass-by trip adjustment.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

TABLE 1: SITE GENERATED TRIPS AND ADJUSTMENTS

DESCRIPTION	ITE LUC	SIZE	AM PEAK HOUR		PM PEAK HOUR	
			ENTER	EXIT	ENTER	EXIT
Multi-family Residential	220	57 units	6	22	23	13
Quality Restaurant	931	±3,628 SF	1	1	19	9
Fast Casual Restaurant	930	±3,137 SF	4	2	24	20
Sub-Total Trips			**11**	**25**	**66**	**42**
Mixed-Use Adjustment			*0*	*0*	*-5*	*-5*
Sub-Total Driveway Trips			**11**	**25**	**61**	**37**
Pass-by Adjustment			*0*	*0*	*-9*	*-6*
Total Primary (New) Vehicle Trips			**11**	**25**	**52**	**31**

Note:
1. ITE LUC = ITE Land Use Code.

Prior to considering mixed-use and pass-by adjustments, the proposed project is expected to generate 11 entering/25 exiting vehicle trips during the AM peak hour and 66 entering/42 exiting vehicle trips during the PM peak hour. When considering ITE published mixed-use and pass-by trip rates and our professional judgement, the proposed project is expected to generate the following new vehicle trips: 11 entering/25 exiting vehicle trips during the AM peak hour and 52 entering/31 exiting vehicle trips during the PM peak hour.

TRIP DISTRIBUTION

The cumulative effect of site-generated traffic on the transportation network is dependent on the origins and destinations of that traffic and the location of the driveways serving the site. The proposed arrival/departure distribution of traffic generated by the proposed project is considered a function of several parameters, including:

- Commercial/employment and residential centers in the area using US Census Data (e.g., OnTheMap).
- Site access locations.
- Hourly traffic patterns using most recent available Annual Average Daily Traffic (AADT) data obtained from the New York State Department of Transportation (NYSDOT) along Main Street.
- Turning movement counts using the most recent available data obtained from the Greater Buffalo-Niagara Regional Transportation Council (GBNRTC) at the intersections of Main Street/Chateau Terrace/Bernhardt Drive and Main Street/Lamarck Drive/Livingston Parkway.
- Existing traffic controls.

Figure 1 shows the anticipated trip distribution pattern percentages for the traffic from the proposed project for the residential program while Figure 2 illustrates the trip distribution for the restaurant program. Figure 3 illustrates the residential peak hour site generated traffic based on the percentages in Figure 1. Figures 4-5 illustrate the restaurant peak hour site generated traffic based on the percentages in Figure 2 for the project's primary and pass-by trips, respectively. Figure 6 illustrates the total site generated trips. The roads anticipated to be used by the additional trips generated by the proposed project are listed in Table 2.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

To remain conservative, all site generated traffic was assumed to enter and exit the site via the proposed driveways along Fruehauf Avenue and Chateau Terrace. A portion of site visitors may use available on-street parking along Main Street (notably the restaurant patrons); thus, reducing the projected number of vehicle trips entering and exiting Fruehauf Avenue and Chateau Terrace.

TABLE 2: EXISTING HIGHWAY SYSTEM

ROADWAY[1]	CLASS[2]	AGENCY[3]	SPEED LIMIT[4]	# OF TRAVEL LANES[5]	TRAVEL PATTERN	EST. AADT[6] & SOURCE[7]
Main Street (NY-5)	14	NYSDOT	40	4	Two-way/ East-West	21,436 NYSDOT (2019)
Chateau Terrace	19	Town	30	2	Two-way/ North-South	No Data Available
Fruehauf Avenue	19	Town	30	2	Two-way/ North-South	No Data Available

Notes:
1. Route Name and Number.
2. State Functional Classification of Roadway: 14 = Urban Principal Arterial, 19 = Local.
3. Jurisdictional Agency of Roadway.
4. Posted or Statewide Limit in Miles per Hour (mph).
5. Excludes turning/auxiliary lanes developed at intersections.
6. Estimated AADT in Vehicles per Day (vpd).
7. AADT Source (Year).

THRESHOLDS FOR THE REQUIREMENT OF A TRAFFIC IMPACT STUDY

Many reviewing agencies, including the NYSDOT and Erie County Department of Public Works (ECDPW), use a guideline in determining whether a project warrants the preparation of a Traffic Impact Study (TIS). The applicable guideline is that if a proposed project is projected to add 100 or more site generated vehicles per hour (vph) to an adjacent intersection during either peak study period, then that intersection should be studied for potential traffic impacts.

Based upon the ITE trip generation projections and the resulting traffic assignment estimates shown in Figure 6, the projected new vehicle trips are added to the following intersections during the AM and PM peak hours:

- Main Street/Chateau Terrace/Bernhardt Drive: 29 (58)
- Main Street/Fruehauf Drive: 23 (83)
- Fruehauf Drive/Proposed Driveway: 14 (80)
- Chateau Terrace/Proposed Driveway: 22 (33)

Given that fewer than 85 peak hour trips are added to a single intersection during the peak hours studied, a TIS is not warranted.

PEAK HOUR QUEUING ASSESSMENT

A peak hour queuing assessment was performed along Fruehauf Avenue during the AM and PM peak hours to measure the frequency of southbound vehicles that block the proposed driveway. The centerline of the proposed driveway is located approximately 38 feet from the stop bar. Given this distance, the driveway is located approximately 1.7 vehicle lengths from the stop bar.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

Our firm documented southbound queues at the intersection of Main Street/Fruehauf Avenue on Thursday, July 22, 2021, from 7:00-9:00 AM and 4:00-6:00 PM. The peak hours generally occurred from 8:00-9:00 AM and 4:30-5:30 PM. Based on this field investigation during the peak hours of study, the proposed driveway location was blocked once during the AM peak hour for a duration of five seconds and was blocked once during the PM peak hour for a duration of three seconds.

SIGHT LINE EVALUATION

Based upon a review of the attached site plan, the proposed building is projected to be built in approximately the same footprint as the existing structures fronting Main Street. There is a marked stop bar for traffic exiting Fruehauf Avenue.

In this case, the primary concern is with the proposed building at the existing Main Street/Fruehauf Avenue intersection. The attached figure illustrates the sight line evaluation performed at the intersection to the east of the intersection.

Sight distance is provided at intersections to allow drivers to perceive the presence of potentially conflicting vehicles. This should occur in sufficient time for a motorist to stop or adjust their speed, as appropriate, to avoid a collision at the intersection. Sight distance is also provided at intersections to allow the drivers of stopped vehicles a sufficient view of the intersecting highway to anticipate and avoid potential incidents. If the available sight distance for an entering or crossing vehicle is at least equal to the appropriate stopping sight distance for the major road, then drivers have sufficient sight distance to anticipate and avoid collisions.

A Policy on Geometric Design of Highways and Streets (2011) published by the American Association of State Highway and Transportation Officials (AASHTO), was used as a reference to establish the required Stopping Sight Distance (SSD) and desirable Intersection Sight Distance (ISD) for the adjacent driveway location. Table 3 depicts the results of the sight distance evaluation at the Main Street/Fruehauf Avenue intersection.

TABLE 3: SIGHT LINE EVALUATION

DESCRIPTION		VALUE
POSTED SPEED		40 MPH
DESIGN SPEED[1]		45 MPH
REQUIRED SSD		360 feet
DESIRABLE ISD		500 feet
AVAILABLE SIGHT DISTANCE TO THE EAST	*SSD*	>360 feet
	ISD	385 feet (no vehicles) 145 feet (parked vehicles)

Note:
1. Design speed equals posted speed plus 5 MPH.

The required SSD is satisfied to the east of the study intersection. However, the desirable ISD is not satisfied. The existing and proposed ISD sight distance will be the same and the proposed building will not impact the existing sight distance.

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

It is noted that the intersection is in an urbanized area with numerous side roads where drivers expect traffic to be entering and exiting. Further, the intersection is located downstream of the signalized intersection of Main Street/Chateau Terrace/Bernhardt Drive and motorists turning out of Fruehauf Avenue will be afforded gap opportunities when the Main Street approaches are in the red phase. As this distance is not satisfied, potential relief consists of installing intersection warning signage for westbound traffic.

CONCLUSIONS AND RECOMMENDATIONS

The following sets forth the findings and recommendations of this assessment:

1. When considering ITE published mixed-use and pass-by trip rates and our professional judgement, the proposed project is expected to generate the following new vehicle trips: 11 entering/25 exiting vehicle trips during the AM peak hour and 52 entering/31 exiting vehicle trips during the PM peak hour.

2. Given the projected site traffic distribution, it is our firm's professional opinion that the adjacent intersections and surrounding roadway network will not experience significant adverse traffic impacts. Given these conditions, no further study is warranted nor recommended at this time.

3. Based upon documentation of southbound queues at the intersection of Main Street/Fruehauf Avenue during the peak hours of study, the proposed driveway location was blocked once during the AM peak hour for a duration of five seconds and was blocked once during the PM peak hour for a duration of three seconds.

4. Based upon a sight line evaluation at the Main Street/Fruehauf Avenue intersection, the required SSD is satisfied to the east. However, the desirable ISD is not satisfied. The existing and proposed ISD sight distance will be the same and the proposed building will not impact the existing sight distance. As this distance is not satisfied, potential relief consists of installing intersection warning signage for westbound traffic.

If you have any questions or require additional information, please do not hesitate to contact our office.

Sincerely,
SRF Associates, D.P.C.

David Kruse, AICP, PTP

GENERAL NOTES:

1. INSTALL ALL MATERIALS TO MANUFACTURER'S RECOMMENDATIONS AND BEST STANDARDS OF TRADE INVOLVED.
2. SUBSTITUTIONS SHALL BE MADE ONLY WITH OWNER'S APPROVAL AND BE OF EQUIVALENT QUALITY TO WHAT IS SPECIFIED.
3. WORK SHALL BE COMPLETED IN STRICT ACCORDANCE WITH ALL LOCAL CODES AND OSHA SAFETY RULES AND REGULATIONS.
4. CONTRACTOR SHALL VERIFY ALL EXISTING CONDITIONS AND DIMENSIONS AT THE SITE. NOTIFY OWNER & ENGINEER OF DISCREPANCIES IN CONDITIONS SHOWN ON DRAWINGS PRIOR TO PROCEEDING WITH THE WORK.
5. CONTRACTOR SHALL BE RESPONSIBLE FOR PROTECTION OF ANY EXISTING STRUCTURES TO REMAIN AND ANY FINISH MATERIAL INSTALLED WHILE WORKING ON OTHER COMPONENTS.
6. CONTRACTOR SHALL KEEP JOB FREE OF DEBRIS AND MAKE FINAL CLEANUP TO THE SATISFACTION OF OWNER.
7. CONTRACTOR SHALL ASCERTAIN THE LOCATION OF ALL UTILITIES PRIOR TO CONSTRUCTION SO THAT THIS WORK WILL NOT DISTURB EXISTING LINES AND/OR INSTALLATIONS EXCEPT AS DETAILED ON THE PLANS. COORDINATE ALL WORK WITH THE APPLICABLE UTILITY COMPANIES.
8. CONTRACTOR SHALL OBTAIN AND PAY FOR ALL REQUIRED PERMITS NECESSARY TO PERFORM THE WORK.
9. BUILDING DIMENSIONS ARE APPROXIMATE. REFER TO ARCHITECTURAL DRAWINGS FOR LAYOUT DIMENSIONS.
10. SIDEWALK DIMENSIONS ARE APPROXIMATE. REFER TO ARCHITECTURAL DRAWINGS FOR THE SIDEWALK PLAN .
11. CONCRETE SIDEWALK SEALERS: (REFER TO ARCHITECTURAL PLANS FOR LOCATION OF CONCRETE TYPES.)
    11.1. GREY CONCRETE SIDEWALKS SHALL HAVE CHEMMASTERS - SILENCURE WITHIN 2HRS AFTER FINAL FINISHING OF CONCRETE AND ALL BLEED WATER HAS DISSIPATED.
    11.2. EXPOSED AGGREGATE/STAMPED CONCRETE SIDEWALKS SHALL HAVE ONE (x1) COAT CHEMMASTERS - SILENCURE AS SOON AS CONCRETE HAS DRIED AFTER PRESSURE-WASHING THE RELEASE AGENT OFF. APRX 30 DAYS AFTER THIS (IF WEATHER PERMITS) APPLY ONE (x1) COAT OF CHEMMASTERS - POLYSEAL EZ.
12. LIGHTING FIXTURE ARROW SYMBOLS REFER TO THE DIRECTION THAT THE FIXTURES ARE REQUIRED TO FACE. SPECIFIC MOUNT BRACKETS WILL BE REQUIRED DEPENDING ON ORIENTATION AND FIXTURE COUNT.
13. CURB ISLAND DIMENSIONS ARE FROM INSIDE OF CURB TO INSIDE OF CURB.

SITE LEGEND:

- Property line
- 6" Curb (typ).
- Proposed sign & pole
- Proposed landscape
- Proposed Concrete Pavement
- Proposed Heavy Duty Pavement

* All curb radii are 3ft unless noted.

RE: Proposed Snyder Mixed Use Building – Design Exception Request
4548 & 4564 Main Street, 17 Fruehauf Ave, and 22 Chateau Terrace
Amherst, NY 14226
BDC Property No. 5202

Dear Chairman Gilmour and Members of the Planning Board:

Benderson Development Company, LLC is requesting four (4) design exceptions from Town Code section 203-5A-2-4 B and 203-5A-2-4 D as it relates to the code requirement that the building length along a road frontage be a minimum lot frontage length of 90% and a maximum street-facing building length of 200 feet. The requested design exceptions are as follows:

1) Minimum required lot frontage along Chateau Terrace – 90% required and 88.5% provided.
2) Maximum allowed street facing building length along Chateau Terrace – 200 foot maximum required and 239 foot maximum proposed.
3) Minimum required lot frontage along Fruehauf Ave – 90% required and 84.7% provided.
4) No tree grates provided on Fruehauf and Chateau Terrace

In support of these four (4) designs exception requests, we offer the following:

- The Amherst Town Code is conflicting with request to the Code sections noted above. The Amherst Town Code requires both 200 feet of maximum building frontage and 90% minimum lot frontage along a Village Frontage Street. The Code required minimum 90% street facing frontage does not consider the amount of frontage length as a result once the 90% is calculated it is direct conflict with the street frontage maximum requirement. In order to resolve this conflict, a design wavier is required as the code does distinguish as to which Code section should prevail.

  In this case, the building frontage length along Chateau Terrace was designed to a length that provided the best architectural design for the property along this street frontage and as such requires a design exception for both the minimum required street facing frontage and the maximum allowable street facing frontage because the length falls between both requirements while satisfying neither. If one design exception is eliminated, then the other design exception request would be increased. This proposed length with two (2) design exceptions requires provides for the best overall design.

  For the Fruehauf Ave frontage length, along with the angle of Fruehauf Ave with Main Street, the only way to meet the required frontage would be to provide an angle point along the Main Street frontage and extend the façade on Fruehauf Ave closer to the adjacent residential property. The angle point along Main Street would impact the required build to percentage for that street frontage and may create an

Attachment: SP-2022-11_application_031623 (26951 : Sp-2022-11)

BENDERSON DEVELOPMENT
570 DELAWARE AVENUE
BUFFALO, NEW YORK 14202
716.886.0211.P : : 716.886.1026.F

additional design exception and would reduce the buffer to the adjacent residential property. This reduced frontage percentage still meets the intent of the Code by having a large percentage of the building along the street while still provide a buffer to the adjacent property. In addition, if the building length is met we will be unable to meet the 20' buffer requirement.

New York Courts have held that local zoning regulations are in derogation of the common law and must be strictly construed against the municipality which has enacted them and seeks to enforce them, and any ambiguity in the language must be resolved in favor of the property owner. See, Matter of Hess Realty Corp v. Planning Commn. Of Town of Rotterdam, 198 A.D.2d 588 (3d Dept. 1993). New York Courts have further stated that a Town must apply the definition which is in its code and cannot ignore a defined term when there is no ambiguity. See Rivendell Winery, LLC v. Donovan, 74 AD3d 1594 (3d Dept., 2010). As noted above, even if there was some ambiguity (which there is not here), Courts have held "any ambiguities in a zoning ordinance must be resolved in favor of the property owner." BRANCATO v. Zoning Board of appeals, 30 AD2d 515 (2nd Dept. 2006). Further, in interpreting a zoning law, a Town "may not insert conditions or criteria into a zoning ordinance … that are not contained in the statutory language adopted" See, Winterton Properties, LLC v. Town of Mamakating Zoning Board of Appeals, 132 A.D.2d 1141 (3d Dept., 2015).

- Based upon the site grades for Chateau Terrace as it relates to Main Street and Fruehauf Ave., the driveway needs to be pushed as far south along Chateau Terrace to allow access to the basement parking field. If the building façade was reduced along Chateau Terrace to meet the maximum allowable building lot frontage, this would open up the view corridor into the underground parking garage rather than providing additional screening of the parking from the public R.O.W. Further it would increase the design exception request for the minimum amount of street facing building frontage that is required.

- The site design has been updated to provide additional buffer from the adjacent residential property on Chateau Terrace to the entrance lane for the parking garage, increasing the buffer space to 20 feet. This allows the required landscape buffer to be extended the full length of this residential property along with adding a 6 foot tall vinyl fence.

- Instead of providing concrete and tree grates, the project proposed to maintain a green landscaping strip in which the trees will be planted along Fruehauf and Chateau Terrace. The greenspace is attractive and will soften the pedestrian amenities around the building.

It is our opinion, based upon the above that the site, as designed, meets the intent of the Town of Amherst code and that the three design exceptions should be granted. If you have any questions or further comments, please do not hesitate to contact me at 716-878-9626 or via email at jamesboglioli@benderson.com.

RE: Proposed Snyder Mixed Use Building
4548 & 4564 Main Street, 17 Fruehauf Ave, and 22 Chateau Terrace
Amherst, NY 14226
BDC Property No. 5202

Dear Mr. Howard:

Benderson Development Company, LLC is pleased to be submitting this response letter in regards to the February 2, 2023 Traffic Safety Board comment letter. Regarding the comments that were issued, we offer the following:

1. The issue of visibility on Main Street from Fruehauf is an existing condition, which is not impacted by the proposed project. As demonstrated by information submitted, the proposed building does not impact visibility and is outside the sight triangle. Benderson is willing to make the request to the NYSDOT for the installation of the additional requested bulb-outs along Main Street and will install them, if approved. Any such condition is limited to making the request and not the installation. Neither the project approval nor the construction and occupancy of the building can be tied to the installation of the bulb-outs because the bulb-outs are not required as mitigation for this project and can only be installed at the discretion of the NYSDOT. Further, Benderson will support the Town requesting from the NYSDOT that the parking spaces in front of the building on Main Street be restricted to loading and unloading and/or be reduced by one space to improve the existing visibility.

2. The TIS indicates that 25% of the residential traffic will use the Fruehauf entrance which is 6 total (enter and exit) trips during the PM peak and 10% of the commercial traffic will use Chateau which is also 6 total (enter and exit) trips. If the trips were redistributed they would cancel each other out and not change the total vehicles going through either intersection so the traffic analysis wouldn't change.

If you have any questions or further comments, please do not hesitate to contact me at 716-878-9626 or via email at jamesboglioli@benderson.com.

Thank you,

RE: Proposed Snyder Mixed Use Building
4548 & 4564 Main Street, 17 Fruehauf Ave, and 22 Chateau Terrace
Amherst, NY 14226
BDC Property No. 5202

Dear Mr. Howard:

In connection with the above-referenced project, a concern was by the resident at 23 Fruehauf Ave. that the proposed project would shade the solar panels installed on their roof and which face the project site. To address this concern, enclosed please find the following:

- An aerial photograph which shows the location of that property in relation to the project site (**Exhibit A**);
- A photograph of the residential dwelling (**Exhibit B**); and
- A Sun Study prepared utilizing modeling software (**Exhibit C**).

The Sun Study was run on December 21st (the shortest day in the year and when the angle of the sun is the lowest) and June 21st (the longest day in the year and when the angle of the sun is the highest). The model clearly shows that the proposed project will not shade the rooftop solar panels or the dwelling. Please include this material in the record of this project.

If you have any questions or further comments, please do not hesitate to contact me at 716-878-9626 or via email at jamesboglioli@benderson.com.

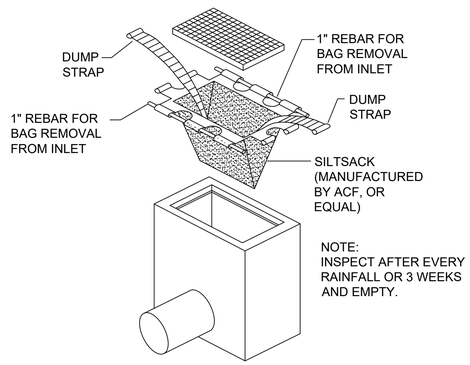
STABILIZED CONSTRUCTION ENTRANCE DETAIL



NOT TO SCALE

1. STONE SIZE - USE 2" STONE, OR RECLAIMED OR RECYCLED CONCRETE EQUIVALENT.
2. LENGTH - NOT LESS THAN 50 FEET (EXCEPT ON A SINGLE RESIDENCE LOT WHERE A 30 FOOT MINIMUM LENGTH WOULD APPLY).
3. THICKNESS - NOT LESS THAN SIX (6) INCHES.
4. WIDTH - TWELVE (12) FOOT MINIMUM, BUT NOT LESS THAN THE FULL WIDTH AT POINTS WHERE INGRESS OR EGRESS OCCURS. TWENTY-FOUR (24) FOOT IF SINGLE ENTRANCE TO SITE.
5. FILTER CLOTH - WILL BE PLACED OVER THE ENTIRE AREA PRIOR TO PLACING OF STONE.
6. SURFACE WATER - ALL SURFACE WATER FLOWING OR DIVERTED TOWARD CONSTRUCTION ENTRANCES SHALL BE PIPED ACROSS THE ENTRANCE. IF PIPING IS IMPRACTICAL, A MOUNTABLE BERM WITH 5:1 SLOPES WILL BE PERMITTED.
7. MAINTENANCE - THE ENTRANCE SHALL BE MAINTAINED IN A CONDITION WHICH WILL PREVENT TRACKING OR FLOWING OF SEDIMENT ONTO PUBLIC RIGHTS-OF-WAY, ALL SEDIMENT SPILLED, DROPPED, WASHED OR TRACTED ONTO PUBLIC RIGHTS-OF-WAY MUST BE REMOVED IMMEDIATELY.
8. WHEN WASHING IS REQUIRED, IT SHALL BE DONE ON A AREA STABILIZED WITH STONE AND WHICH DRAINS INTO AN APPROVED SEDIMENT TRAPPING DEVICE.
9. PERIODIC INSPECTION AND NEEDED MAINTENANCE SHALL BE PROVIDED AFTER EACH RAIN.

TYPICAL CONCRETE WASH OUT DETAIL

NOTES:
1. CONSTRUCT TO 2016 NYSDEC BLUE BOOK DESIGN CRITERIA

Notes:

1 - Do not use sock below the normal watermark or perpendicular to flow in river and where the maximum incline is greater than 50%.
2 - Contractors should be aware of federal, state and local laws, rules regulations or permit requirements for the use of Silt Socks on site.
3 - Sock should be positioned on the outline of the area to be protected, but must be installed between 45° to 90° from directions of flow.
4 - Sock may be required to be entrenched a minimum of 2" on disturbed ground to ensure constant ground contact.
5 - All gaps and ruts must be backfilled with soil or sock material.
6 - Sock overlap should be in the direction of the flow. Overlap amount will be between 12" and 24". Contractor to check with local town for requirements.
7 - If sediment collects to 1/2 the height of the sock, then a second sock may be stacked immediately up slope of the original instead of removing the sediment.
8 - Sock joint is where two sock sections meet on a level grade, overlap and adjoining ends, tightening the ends together, and anchoring through each end. Where two sections meet on un-level ground, j-hook higher elevated end, anchor, and begin new section just below. Back fill any gaps.
9 - Sock should be inspected and repaired as needed.
10 - If ruts begin under the sock they should be backfilled with soil and compacted so that the ground and sock have continuous contact.
11 - If sock rolls out of place, the sock should be repositioned and secured with additional anchors.
12 - Tears in the Sock fabric may be repaired by wrapping a new piece of fabric over the sock and securing, or by place a second sock immediately up slope with the required overlap beyond deformation.
13 - A section of sock should be replaced whenever it has weakened to such an extent that the efficiency is reduced or diminished. Weakening can occur because the natural mesh fabric breaks down over time of from being moved/dragged on site.
14 - Sock should be replaced when sediment has built up and has been removed three times.
15 - All sediment in disturbed area next to sock must be removed and correctly disposed of before the sock can be removed.
16 - When removing, cut sock open and spread the filler material around. The netting should be removed from site.
17 - Sock should be installed before works commence on site.

5. CONTRACTOR SHALL BE RESPONSIBLE FOR PROTECTION OF ANY EXISTING STRUCTURES TO REMAIN AND ANY FINISH MATERIAL INSTALLED WHILE WORKING ON OTHER COMPONENTS.
6. CONTRACTOR SHALL KEEP JOB FREE OF DEBRIS AND MAKE FINAL CLEANUP TO THE SATISFACTION OF OWNER.
7. CONTRACTOR SHALL ASCERTAIN THE LOCATION OF ALL UTILITIES PRIOR TO CONSTRUCTION SO THAT THIS WORK WILL NOT DISTURB EXISTING LINES AND/OR INSTALLATIONS EXCEPT AS DETAILED ON THE PLANS. COORDINATE ALL WORK WITH THE APPLICABLE UTILITY COMPANIES.
8. CONTRACTOR SHALL OBTAIN AND PAY FOR ALL REQUIRED PERMITS NECESSARY TO PERFORM THE WORK.
9. BUILDING DIMENSIONS ARE APPROXIMATE. REFER TO ARCHITECTURAL DRAWINGS FOR LAYOUT DIMENSIONS.
10. SIDEWALK DIMENSIONS ARE APPROXIMATE. REFER TO ARCHITECTURAL DRAWINGS FOR THE SIDEWALK PLAN .
11. CONCRETE SIDEWALK SEALERS: (REFER TO ARCHITECTURAL PLANS FOR LOCATION OF CONCRETE TYPES.)
11.1. GREY CONCRETE SIDEWALKS SHALL HAVE CHEMMASTERS - SILENCURE WITHIN 2HRS AFTER FINAL FINISHING OF CONCRETE AND ALL BLEED WATER HAS DISSIPATED.
11.2. EXPOSED AGGREGATE/STAMPED CONCRETE SIDEWALKS SHALL HAVE ONE (x1) COAT CHEMMASTERS - SILENCURE AS SOON AS CONCRETE HAS DRIED AFTER PRESSURE-WASHING THE RELEASE AGENT OFF. APRX 30 DAYS AFTER THIS (IF WEATHER PERMITS) APPLY ONE (x1) COAT OF CHEMMASTERS - POLYSEAL EZ.
12. LIGHTING FIXTURE ARROW SYMBOLS REFER TO THE DIRECTION THAT THE FIXTURES ARE REQUIRED TO FACE. SPECIFIC MOUNT BRACKETS WILL BE REQUIRED DEPENDING ON ORIENTATION AND FIXTURE COUNT.
13. CURB ISLAND DIMENSIONS ARE FROM INSIDE OF CURB TO INSIDE OF CURB.

SANITARY SEWER NOTES:
1. THE CONTRACTOR IS ADVISED THAT A TRENCH SHIELD AND/OR SHORING DESIGNED IN ACCORDANCE WITH OSHA STANDARDS SHALL BE USED IN ALL OPEN TRENCH EXCAVATIONS.
2. ANY CONTRACTOR AND/OR PLUMBER PERFORMING WORKING IN A CONFINED SPACE (ie MANHOLES, WETWELLS, CHAMBERS) OWNED BY THE TOWN MUST CERTIFY TO THE TOWN THAT THEY HAVE THEIR OWN CONFINED SPACE ENTRY PROGRAM THAT MEETS OR EXCEEDS OSHA'S REGULATIONS. CERTIFICATION MUST BE NOTARIZED BY A NOTARY PUBLIC.
3. CONSTRUCTION SHALL CONFORM TO THE RULES AND REGULATIONS OF THE TOWN AND NEW YORK STATE CODES.
4. IF ANY PROPOSED SEWER LATERAL RUNS UNDER PAVED AREA AND HAS LESS THAN 4' COVER, CONCRETE ENCASEMENT IS REQUIRED. IF MORE THAN 4' COVER IS PROVIDED IN PAVED AREAS SELECT FILL IS REQUIRED.
5. THE CONTRACTOR MUST NOTIFY THE TOWN ENGINEER OFFICE AND THE PLUMBING INSPECTOR 24 HOURS IN ADVANCE OF CONSTRUCTION.
6. CLEANOUTS ARE REQUIRED EVERY 100' AND AT CHANGE IN DIRECTION.
7. ABANDONED SANITARY SEWER CONNECTIONS FROM THE SITE, IF ANY, REQUIRE PROOF OF A DISTRICT PERMIT FOR DISCONNECTION PRIOR TO THE NEW CONNECTION BEING MADE.

UTILITY NOTES:
1. PROVIDE FITTINGS AND BLOCKING AS NECESSARY AT ALL BENDS IN WATER LINES.
2. WHERE UTILITIES ARE INSTALLED IN EXISTING PAVEMENT, LANDSCAPED AREA ETC. ANY ITEMS REMOVED/DAMAGED SHALL BE REPLACED IN KIND.
3. IT IS THE RESPONSIBILITY OF THE CONTRACTOR TO OBTAIN ALL PERMITS NECESSARY: STATE, COUNTY, AND TOWN.
4. WATER MAINS TO HAVE MINIMUM 5FT COVER,

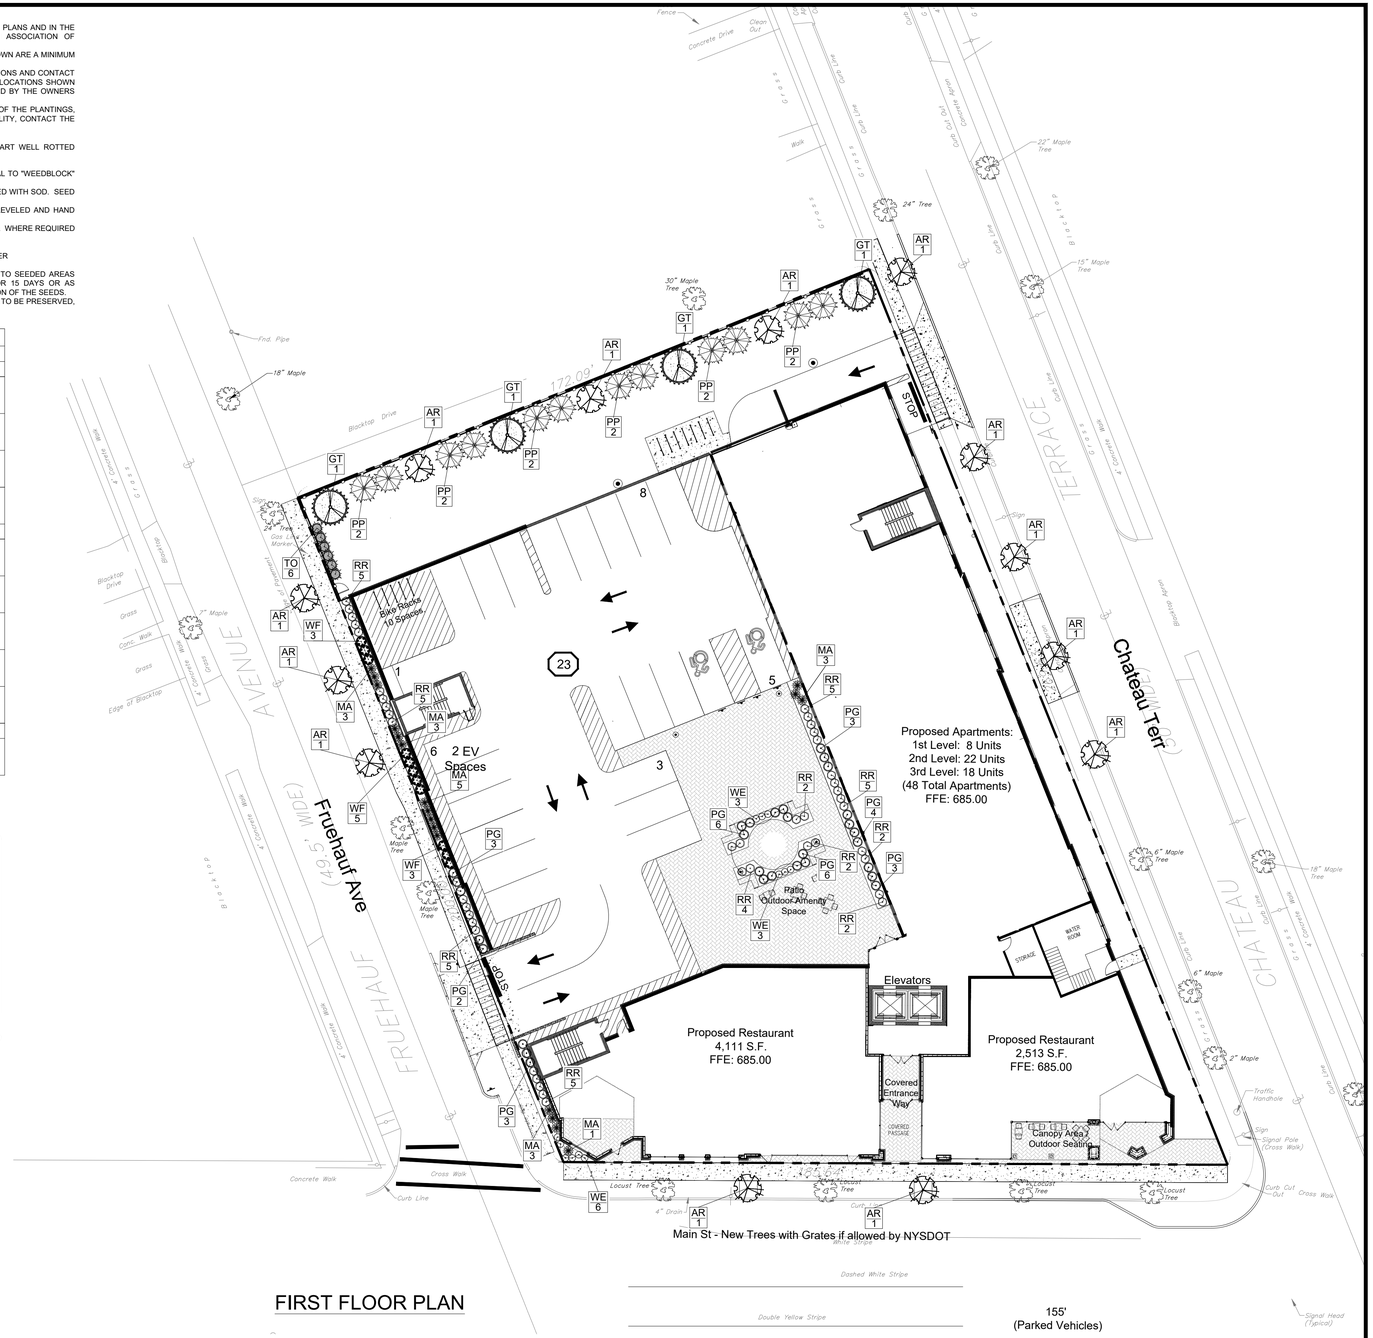
13. CURB ISLAND DIMENSIONS ARE FROM INSIDE OF CURB TO INSIDE OF CURB.

LANDSCAPE NOTES:



1. ALL PLANTS INSTALLED SHALL MEET OR EXCEED THE MINIMUM REQUIREMENTS AS NOTED ON THE PLANS AND IN THE LATEST EDITION ON THE AMERICAN STANDARD FOR NURSERY STOCK, BY THE AMERICAN ASSOCIATION OF NURSERYMEN, ANSI 260.1
2. THE CONTRACTOR SHALL BE RESPONSIBLE FOR HIS OWN QUANTITY TAKEOFF, THE QUANTITIES SHOWN ARE A MINIMUM AND ARE FOR REFERENCE ONLY.
3. THE CONTRACTOR SHALL PERFORM A ROUGH FIELD STAKEOUT OF ALL PLANTING MATERIAL LOCATIONS AND CONTACT THE OWNERS FIELD REPRESENTATIVE PRIOR TO ACTUALL INSTALLING. THE PLANTING MATERIAL LOCATIONS SHOWN ON THE PLANS ARE TO CONVEY THE DESIGN INTENT ONLY, ACTUAL LOCATIONS WILL BE FINALIZED BY THE OWNERS FIELD REPRESENTATIVE AT THE TIME OF INSTALLATION.
4. THE CONTRACTOR IS HEREBY NOTIFIED THAT IF UNDERGROUND UTILITIES EXIST IN THE VICINITY OF THE PLANTINGS, ALL PROPOSED PLANTINGS SHALL BE INSTALLED A MINIMUM OF 5' FROM ANY UNDERGROUND UTILITY, CONTACT THE OWNERS FIELD REPRESENTATIVE IF PLANTINGS SHOWN ON THE PLANS VIOLATE THIS SITUATION.
5. ALL TREES SHALL BE INSTALLED A MINIMUM OF 20' FROM ANY OVERHEAD ELECTRIC LINES.
6. PLANTING BACKFILL MIXTURE SHALL CONSIST OF 4 PARTS TOPSOIL, 1 PART PEAT MOSS, ½ PART WELL ROTTED MANURE, 10 LBS 5-10-5 PLANTING FERTILIZER THOROUGHLY MIXED PER CUBIC YARD.
7. STAKE AND WRAP TREES IMMEDIATELY FOLLOWING INSTALLATION.
8. ALL PLANTED AREAS SHALL RECEIVE A MAX. 2" LAYER OF COCOA BROWN MULCH. WEED MAT EQUAL TO "WEEDBLOCK" BY EASY GARDENER OR DEWITT WEED BARRIER.
9. ALL DISTURBED AREAS NOT RECEIVING PLANTINGS (INCLUDING RIGHT-OF-WAYS) SHALL BE PROVIDED WITH SOD. SEED PERMITTED AT DETENTION POND IF PLANTED EARLY ENOUGH TO ESTABLISH.
10. THE AREAS ON THE PLAN TO BE SEEDED SHALL HAVE 4" MINIMUM OF TOPSOIL, DISK PLOWED, LEVELED AND HAND RAKED SMOOTH. SURFACE SHALL BE ROLLED TO REMOVE LUMPS.
11. ALL SEEDED AREAS SHALL BE HYDROSEEDED IN ACCORDANCE WITH THE SPECIFICATION INDICATED. WHERE REQUIRED BY CLIMATIC CONDITIONS, SLOPE OR SEASON OF PLANTING.
    HYDROSEED SPEC: 20% RYE, 20% BLUE GRASS, 60% TURF TYPE FESCUE.
    SOD MAY BE SUBSTITUTED FOR SEEDING IN ORDER TO ACHIEVE THE REQUIRED COVERAGE (REFER TO CONTRACTOR FOR SOD/SEED COVERAGE).
12. THE CONTRACTOR SHALL BE RESPONSIBLE FOR WATERING, MOWING AND OTHER MAINTENANCE TO SEEDED AREAS UNTIL THE PROJECT IS ACCEPTED BY THE OWNER, THIS SHALL INCLUDE WATERING DAILY FOR 15 DAYS OR AS REQUIRED BY WEATHER CONDITIONS AND RE-SEEDING OF THIN SPOTS FOLLOWING THE GERMINATION OF THE SEEDS.
13. CONTRACTOR IS RESPONSIBLE TO PROTECT ALL EXISTING TREES ONSITE AND OFFSITE, WHICH ARE TO BE PRESERVED, FROM ALL POSSIBLE TYPES OF ROOT, TRUNK, AND LIMB DAMAGE.

BASEMENT FLOOR PLAN

FIRST FLOOR PLAN

GENERAL NOTES:

1. INSTALL ALL MATERIALS TO MANUFACTURER'S RECOMMENDATIONS AND BEST STANDARDS OF TRADE INVOLVED.
2. SUBSTITUTIONS SHALL BE MADE ONLY WITH OWNER'S APPROVAL AND BE OF EQUIVALENT QUALITY TO WHAT IS SPECIFIED.
3. WORK SHALL BE COMPLETED IN STRICT ACCORDANCE WITH ALL LOCAL CODES AND OSHA SAFETY RULES AND REGULATIONS.
4. CONTRACTOR SHALL VERIFY ALL EXISTING CONDITIONS AND DIMENSIONS AT THE SITE. NOTIFY OWNER & ENGINEER OF DISCREPANCIES IN CONDITIONS SHOWN ON DRAWINGS PRIOR TO PROCEEDING WITH THE WORK.
5. CONTRACTOR SHALL BE RESPONSIBLE FOR PROTECTION OF ANY EXISTING STRUCTURES TO REMAIN AND ANY FINISH MATERIAL INSTALLED WHILE WORKING ON OTHER COMPONENTS.
6. CONTRACTOR SHALL KEEP JOB FREE OF DEBRIS AND MAKE FINAL CLEANUP TO THE SATISFACTION OF OWNER.
7. CONTRACTOR SHALL ASCERTAIN THE LOCATION OF ALL UTILITIES PRIOR TO CONSTRUCTION SO THAT THIS WORK WILL NOT DISTURB EXISTING LINES AND/OR INSTALLATIONS EXCEPT AS DETAILED ON THE PLANS. COORDINATE ALL WORK WITH THE APPLICABLE UTILITY COMPANIES.
8. CONTRACTOR SHALL OBTAIN AND PAY FOR ALL REQUIRED PERMITS NECESSARY TO PERFORM THE WORK.
9. BUILDING DIMENSIONS ARE APPROXIMATE. REFER TO ARCHITECTURAL DRAWINGS FOR LAYOUT DIMENSIONS.
10. SIDEWALK DIMENSIONS ARE APPROXIMATE. REFER TO ARCHITECTURAL DRAWINGS FOR THE SIDEWALK PLAN .
11. CONCRETE SIDEWALK SEALERS: (REFER TO ARCHITECTURAL PLANS FOR LOCATION OF CONCRETE TYPES.)
    - 11.1. GREY CONCRETE SIDEWALKS SHALL HAVE CHEMMASTERS - SILENCURE WITHIN 2HRS AFTER FINAL FINISHING OF CONCRETE AND ALL BLEED WATER HAS DISSIPATED.
    - 11.2. EXPOSED AGGREGATE/STAMPED CONCRETE SIDEWALKS SHALL HAVE ONE (x1) COAT CHEMMASTERS - SILENCURE AS SOON AS CONCRETE HAS DRIED AFTER PRESSURE-WASHING THE RELEASE AGENT OFF. APRX 30 DAYS AFTER THIS (IF WEATHER PERMITS) APPLY ONE (x1) COAT OF CHEMMASTERS - POLYSEAL EZ
12. LIGHTING FIXTURE ARROW SYMBOLS REFER TO THE DIRECTION THAT THE FIXTURES ARE REQUIRED TO FACE. SPECIFIC MOUNT BRACKETS WILL BE REQUIRED DEPENDING ON ORIENTATION AND FIXTURE COUNT.
13. CURB ISLAND DIMENSIONS ARE FROM INSIDE OF CURB TO INSIDE OF CURB.

OSQ Series

OSQ™ LED Area/Flood Luminaire featuring Cree TrueWhite® Technology – Medium & Large

Rev. Date: V5 09/14/2021

Product Description

The OSQ™ Area/Flood luminaire blends extreme optical control, advanced thermal management and modern, clean aesthetics. Built to last, the housing is rugged cast aluminum with an integral, weathertight LED driver compartment. Versatile mounting configurations offer simple installation. Its slim, low-profile design minimizes wind load requirements and blends seamlessly into the site providing even, quality illumination. The 4L lumen package is a suitable upgrade for HID applications up to 250 Watt, and the 11L lumen package is a suitable upgrade for HID applications up to 400 Watt. The 22L lumen package is a suitable upgrade for HID applications up to 750 Watts, and the 30L lumen package is a suitable upgrade for HID applications up to 1000 Watts.
Applications: Parking lots, walkways, campuses, car dealerships, office complexes, tunnels, underpasses, and internal roadways

Performance Summary

Utilizes Cree TrueWhite® Technology on 5000K Luminaires

NanoOptic® Precision Delivery Grid™ optic

Assembled in the U.S.A. of U.S. and imported parts

Initial Delivered Lumens: 4,000 - 30,000

Efficacy: Up to 173 LPW

CRI: Minimum 70 CRI (3000K, 4000K & 5700K); 90 CRI (5000K)

CCT: 3000K, 4000K, 5000K, 5700K

Limited Warranty*: 10 years on luminaire; 13 years on Colorfast DeltaGuard® finish; up to 5 years for Synapse® accessories; 1 year on luminaire accessories

*See http://creelighting.com/warranty for warranty terms. For Synapse accessories, consult Synapse spec sheets for details on warranty terms.

Ordering Information

Fully assembled luminaire is composed of two components that must be ordered separately:
Example: **Mount:** OSQ-ML-B-AA-BK + **Luminaire:** OSQM-B-4L-30K7-2M-UL-NM-BK

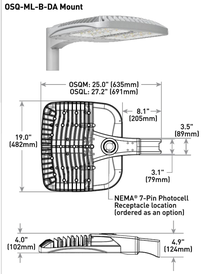
Mount (Luminaire must be ordered separately)*

OSQ-

OSQ-ML-B-AA Adjustable Arm
OSQ-ML-B-DA Direct Arm
OSQ-ML-B-TSP Transportation Mount (stainless steel; do not specify color)
OSQ-ML-B-TM Trunnion Mount

Color Options: **SV** Silver **BK** Black **BZ** Bronze **WH** White

* Reference EPA and pole configuration suitability data beginning on page 10



Luminaire (Mount must be ordered separately)

CPY Series - Version C

CPY250® LED Canopy/Soffit Luminaire

Rev. Date: V3 02/01/2022

Product Description

The CPY250® LED Canopy/Soffit Luminaire has an extremely thin profile constructed of rugged cast aluminum. It can be surface mounted easily from below the canopy deck and can be pendant mounted. Direct imaging of the LEDs is eliminated with a highly efficient patterned flat or 0.91" (23mm) drop glass lens.
Applications: Petroleum canopies, CNG fueling stations, soffits

Performance Summary

Assembled in the USA by Cree Lighting from US and imported parts

Initial Delivered Lumens: Up to 21,000

Efficacy: Up to 165 LPW

CRI: Minimum 70 CRI (40K, 50K, 57K); 80 CRI (30K); 90 CRI (40K, 50K)

CCT: 3000K, 4000K, 5000K, 5700K

Limited Warranty*: 10 years on luminaire/10 years on Colorfast DeltaGuard® finish/5 years on PML sensor/1 year on field-installed accessories

IP66 Rated (select models only)

Class I, Division 2 Hazardous Location for select models

*See http://creelighting.com/warranty for warranty terms

Accessories

Field-Installed

Direct Mount Luminaires
Canopy Upgrade Kits (18 ga. steel, except where noted)
CPY-AP06/* - for use with Cree Lighting CAN-304 luminaires, 16 ga. 5052 aluminum
XA-BXCCMW – for use with Jet-Philips, 21.40" (569mm) square, white
XA-BXCCNW – for use with Elsco Franciscan, 22.06" (560mm) square, white
XA-BXCCPW – for use with LSI Dakota or Masters, 22.50" (572mm) square, white
XA-BXCCQW – for use with Whiteway Riviera or Rig-A-Lite, 20.60" (523mm) square, white
XA-BXCCRW – for use with Elsco Merrit, 18.06" (459mm) square, white
XA-BXCCSW – for use with LSI Richmond or Whiteway Civic, 23.00" (584mm) L x 13.00" (330mm) W, white
Direct Mount Junction Box/Stem Kit
XA-BXCCJBOX – 6.0" (152mm) H x 3/4" (19mm) NPT Stem
- Watertight
- Rated for feed through 8 (4 in, 4 out) #12 AWG conductors
Direct Mount Beauty Plates
XA-BXCCBPW – 24.17" (665mm) Beauty Plate Only (18 ga. steel), white
XA-BXCCBPB13W – 24.17" (665mm) Beauty Plate (18 ga. steel) w/13" (305mm) Backer Plate (16 ga. steel), white
- For use in canopies where deck opening is larger than what is required for mounting the CPY250 luminaire. Maximum deck opening 10.75" x 15" (183mm x 275mm)
XA-BXCCBPB16W – 24.17" (665mm) Beauty Plate (18 ga. steel) w/16" (406mm) Backer Plate (16 ga. steel), white
- For use in canopies where deck opening is larger than what is required for mounting the CPY250 luminaire. Maximum deck opening 12" x 15" (305mm x 375mm)

Pendant Mount Luminaires
Pendant Mount Kits
XA-PS12KIT* – 5" (127mm) pendant
XA-PS18KIT* – 11" (279mm) pendant
XA-PS22KIT* – 15" (381mm) pendant
- Includes two conduit fittings and 3/4-14 NPT pipe threaded on two ends

Hand-Held Remote
XA-SENSREM
- For successful implementation of the programmable multi-level option, a minimum of one hand-held remote is required

Synapse® SimplySnap 10V Interface
DIM10-220F
- 120V-277V
- Requires other Synapse components to complete system
- Refer to DIM10-220F spec sheet for details

Backlight Control Shields
XA-20BLS-4
- Four-pack
- Unpainted stainless steel
- For use with SM and SS optics
- Consult factory for shielding for use with 2M, 3M, and 4M optics

* Must specify color: BK (Black), BZ (Bronze), SV (Silver) or WH (White)

DM Mount / DM Mount with HZ Option

Weight
12.5 lbs. (5.7kg)

Refer to Page 4 for additional mounts.

IG Series

LED Parking Garage Luminaire

Rev. Date: V6 09/17/2020

Product Description

Cree Lighting innovates again to reset the performance benchmark in parking garage applications with the IG Series featuring WaveMax® Technology, our innovative optical waveguide platform. Available in 33 watt and 60 watt, two lumen packages are offered to satisfy IES RP-8-18 and IES Security Zone 0-1-03 requirements for environments seeking higher light levels for improved safety and security. The streamlined design breaks away from dated traditional designs, blending form and function, to deliver superior low-glare illumination.

For enhanced performance and versatility, a range of optional integrated lighting controllers bring advanced capabilities and energy savings to the IG Series. From the stand-alone multi-level (PML) option to the full-featured Limelight by Lutron or Synapse® wireless control options, the IG Series provides the features and flexibility designed to meet the needs of today's most demanding parking garage applications.

Applications: Parking garages

Performance Summary

Utilizes WaveMax® Technology

Initial Delivered Lumens: 3,860 or 7,550 lumens

Input Power: 33 or 60 watts

Efficacy: Up to 126 LPW

Optic: Type V Short Distribution

Assembled in the USA of U.S. and imported parts

CCT: 3000K, 3500K, 4000K, 5700K

CRI: Minimum 80 CRI

Limited Warranty*: 10 years on luminaire; 5 years on PML and Limelight options; up to 5 years for Synapse® accessories; 1 year on luminaire accessories

*See http://creelighting.com/warranty for warranty terms. For Synapse accessories, consult Synapse spec sheets for details on warranty terms.

THE EDGE® Series

LED Area Luminaire – Round

Rev. Date: V10 12/10/2021

Product Description

THE EDGE® Series has a slim, low profile design. Its rugged cast aluminum housing minimizes wind load requirements and features an integral, weathertight LED driver compartment, spun vented cover, high performance aluminum heat sinks and leaf/debris guard.
Applications: Auto Dealerships, parking lots, campuses, facade lighting and general site lighting applications

Performance Summary

Patented NanoOptic® Product Technology

Assembled in the USA by Cree Lighting from US and imported parts

Initial Delivered Lumens: Up to 25,065

CRI: Minimum 70 CRI (4000K & 5700K); 80 CRI (3000K); 90 CRI (5000K)

CCT: Turtle Friendly Amber, 3000K (+/-300K), 4000K (+/-300K), 5000K (+/- 500K), 5700K (+/- 500K) standard

Limited Warranty*: 10 years on luminaire/10 years on Colorfast DeltaGuard® finish /1 year on accessories

*See http://creelighting.com/warranty for warranty terms

SEQR
Negative Declaration

NOTICE OF DETERMINATION OF NON-SIGNIFICANCE

Lead Agency: Town of Amherst
Planning Board

Project: SP-2022-11

Address: 5583 Main Street
Williamsville, NY 14221
(716) 631-7051

Date:

This notice is issued pursuant to Part 617 and Local Law #3-82, as amended, of the implementing regulations pertaining to Article 8 (State Environmental Quality Review) of the Environmental Conservation Law.

The Lead Agency has determined that the proposed action described below will not have a significant adverse effect on the environment.

Title of Action: Site Plan Review

SEQR Status: Unlisted Action

Description of Action: Demolish all existing structures located on the subject parcels and construct a proposed 2½ story mixed use building containing 48 apartment units (22 one bedroom, 24 two bedroom & 2 three bedroom) with 2 commercial (restaurant) tenant spaces totaling 6,624± sq. ft. Parking is provided for 76 vehicles which is internal to the building. Work will include the site improvements not specifically stated above, including, stormwater, utilities, grading, lighting, paving, and landscaping.

Location: 4548 & 4564 Main Street, 17 Fruehauf Avenue, and 22 Chateau Terrace, Amherst, Erie County

Petitioner: Benderson Development Company, LLC

Attachment: SP-2022-11_draft neg dec_031623 (26951 : Sp-2022-11)

Reasons Supporting This Determination

Based on information submitted by the applicant including a Full Environmental Assessment Form (EAF) - Part I, (as amended) and Part 2 and a complete site plan application, a preliminary staff analysis was undertaken. Compared to the criteria listed in Section 617.7, all indications are that this action will not have a significant impact on the environment, as follows:

1. The project is not expected to cause a substantial adverse change in existing air quality, ground or surface water quality or quantity, or noise levels; a substantial increase in solid waste production; or a substantial increase in the potential for erosion, flooding, leaching or drainage problems. The Engineering Department on **January 12, 2023** reviewed the Grading, Drainage and Utility Plans submitted on **January 9, 2023,** Engineer's Report submitted on September 30, 2022, Erosion Control Plan submitted on **January 9, 2023** and Geotechnical Report prepared by Barron & Associates, PC and submitted on **September 30, 2022**. The Stormwater Pollution Prevention Plan (SWPPP) submitted on **January 9, 2023** was also reviewed on **February 7, 2023**. Based on its review of these documents, the Department has determined that the project has or will have met all applicable requirements and has no objection to its approval.

2. The project will not result in the removal or destruction of large quantities of vegetation or fauna; or in significant adverse impacts to fish or wildlife species, habitats or other natural resources. The properties involved with this action are entirely developed for commercial and residential activities and are proposed for redevelopment. The Planning Department reviewed a Landscape Plan submitted on **January 9, 2023** and determined that it meets or exceeds Zoning Ordinance requirements for greenspace. The Landscape Plan has or will have met all Zoning Ordinance and Town requirements for landscaping.

3. The project is not expected to create any substantive conflict with the Town Comprehensive Plan. The Planning Department in their review of **January 20, 2023** and the Zoning Enforcement Officer in his/her review dated **January 20, 2023** has reviewed the application documents and Building Department in their review of **January 12, 2023** has reviewed the application documents along with the Geotechnical Report submitted on **September 30, 2022** and determined that the subject project has or will have met all International Building Code – ~~2015~~ **2018** and Zoning Ordinance regulations.

4. The project is within an area identified by the State as having potential archaeological or historical significance. The properties involved with this action have been previously disturbed in their entirety by the construction of the existing commercial and residential uses on the properties. A report prepared by Commonwealth Heritage Group, Inc. dated June 2022 and received on September 30, 2022 indicates the residence and garage located at 22 Chateau Terrace do not appear to meet the State/National Register of Historic Places criteria for individual eligibility. The property and residence located at 22 Chateau Terrace is located within a potential Town of Amherst Historic District and will require approval of a certificate of appropriateness to allow for the demolition of the residence and ~~associates~~ **associated** garage structure by the Town of Amherst Historic Preservation Commission.

Attachment: SP-2022-11_draft neg dec_031623 (26951 : Sp-2022-11)

The removal of the structure will not occur unless it is deemed non-significant by the Town of Amherst Historic Preservation commission with concurrence of the New York State Office of Parks Recreation and Historic Preservation. Therefore it is anticipated that the development will not impair the character or quality of important historical resources.

5. The project will not impair the character or quality of important aesthetic resources or of existing community or neighborhood character. The project is located in the Traditional Infill 2.5 District (TI-2.5) zoning district; neighboring uses are commercial, educational and single family residential and zoned Traditional Infill 2.5 District (TI-2.5) and Residential District Three (R-3); therefore, the project is consistent with surrounding land use.

6. The proposed subject development will include a 2½ story mixed use building containing 48 apartment units with 6,624± sq. ft. of commercial space and 76 vehicle parking spaces that are internal to the building which will not cause a major change in the use of either the quantity or type of energy.

7. The project will not create any hazard to human health. The Fire Chief's Association on **February 10, 2023** has reviewed the project and has no objection to the approval of the site plan, as all requirements of this agency has or will have been met.

8. The project will ~~not~~ cause a ~~substantial~~ change in the use, or intensity of use, of land including agricultural, open space or recreational resources, ~~or in its~~ **however the site has** capacity to support ~~existing~~ **the proposed** uses. The 2½ story mixed commercial and residential building will be consistent **in its form and character** ~~with the scale of~~ surrounding land uses.

9. The function of the proposed mixed use building containing commercial spaces and residential units will not significantly increase the number of people using the site over its historical previous level of use.

10. Review by the Town Traffic/Safety Board dated February 2, 2023 and NYSDOT dated January 11, 2023 **indicates** that significant negative traffic impacts are not expected to result from the proposed project. Review of the Traffic Impact Assessment prepared by Passero Associates submitted to the planning Department on **January 20, 2023** and reviewed by the Town Traffic/Safety Board on **February 2, 2023** and NYSDOT on **January 11, 2023** indicates that significant negative traffic impacts are not expected to result from the proposed project. **The petitioner has agreed to improve traffic safety by modifying the curb line and limiting parking along the Main Street frontage if permitted by NYSDOT.**

11. A coordinated review of the project has been undertaken by Town Departments, in addition to those mentioned above, Highway on **November 16, 2022,** Assessor on **January 18, 2023,** Plumbing Division on **January 13, 2023** and Right-of-Way Agent on **October 17, 2022** along with outside agencies including the Erie County Department of Environment and Planning on _____, New York State Department of Transportation on **January 11,**

Attachment: SP-2022-11_draft neg dec_031623 (26951 : Sp-2022-11)

2023 and the New York State Office of Parks, Recreation and Historic Preservation on _____. These reviews have not identified any significant environmental issues and indicate that the proposal will not have a significant damaging impact on the environment.

12. Issues not specifically mentioned above and/or those not specifically reviewed were not raised by Town departments, outside agencies or the public and are not determined to cause significant negative environmental impacts.

DRAFT (3/16/23)
TOWN OF AMHERST
PLANNING BOARD
DESIGN EXCEPTION RESOLUTION
SP-2022-11

PETITIONER

Benderson Development
570 Delaware Avenue
Buffalo, NY 14202

PROPERTY LOCATION

4548 & 4564 Main Street, 17 Fruehauf Avenue, and 22 Chateau Terrace

WHEREAS, the Town of Amherst Planning Board on Thursday, February 16, 2023 held a public hearing on a Site Plan for which design exceptions to the design standards of the mixed use districts is being sought, and

WHEREAS, the Planning Board reviewed the design exception request and reasoning in the petitioners letter to the Planning Board dated January 27, 2023 and received on February 8, 2023 by the Planning Department for the subject site plan, and

WHEREAS, in accordance with Section 5A of the Zoning Ordinance, the following are the required design standards for which design exceptions are being sought

~~A. Section 5A-2-4 B requires the building face lengths along Chateau Terrace and Fruehauf Avenue to be 90% of the lot frontage. The required building face length along Chateau Terrace is 242.67 feet (269.63 ft. x 0.9) and along Fruehauf Avenue is 180.00 feet (200.00 ft. x 0.90).~~

~~B. Section 5A-2-4 D limits the building length along Chateau Terrace to be 200 feet.~~

~~C. Section 5A-5-4 requires a 30 foot minimum setback to the protected district (north property line) which limits the maximum allowed building length along Chateau Terrace to be 239.63 feet and along Fruehauf Avenue to be 170.00 feet.~~

~~D~~ **A**. Section 5A-2-4 K requires tree planting in grates along Chateau Terrace & Fruehauf Avenue.

WHEREAS, in accordance with Section 5A-7-19 of the Zoning Ordinance, the Planning Board finds that:

A. The alternative design approach satisfies the overall intent of the design standards for which the design exceptions are being sought.

B. The design exceptions meet the intent of the applicable standards in an alternative way.

C. The design exceptions are equivalent to or produce a better outcome than the applicable standards in Section 5A of the Zoning Ordinance.

PETITIONER

Benderson Development
570 Delaware Avenue
Buffalo, NY 14202

PROPERTY LOCATION

4548 & 4564 Main Street, 17 Fruehauf Avenue, and 22 Chateau Terrace

WHEREAS, the Town of Amherst Planning Board on Thursday, February 16, 2023 held a public hearing on a Site Plan for a 2½ story mixed use building containing 48 apartment units 6,624± sq. ft. of commercial space and parking for 76 vehicles which is internal to the building, and

WHEREAS, the Planning Board reviewed the plans and specifications for the proposed project, and

WHEREAS, the Site Plan was referred to the Town's various review agencies, and

WHEREAS, the site and building plans were reviewed by the Town's Design Advisory Board and their recommendations were provided, and

WHEREAS, in accordance with Section 8-7-8 of the Zoning Ordinance, the Planning Board finds that:

A. The site plan includes usable space for active and passive recreation, including pedestrian connections.

B. The site plan does not include open space lands for public ownership and use offered for dedication or other disposition to the Town or other public entity.

C. School sites and facilities are adequate to accommodate the proposed site plan.

D. The site plan does not include the extension of roadways to adjacent property, and

WHEREAS, in accordance with Section 8-7-9 of the Zoning Ordinance, the Planning Board finds that:

A. The proposed site plan is consistent with the development plan if one is required.

B. The proposed site plan is consistent with the purpose and specific requirements of the Zoning Ordinance and generally consistent with the policies of the Comprehensive Plan.

C. Adequate services and utilities will be available prior to occupancy.

Attachment: SP-2022-11_draft site plan resolution_031623 (26951 : Sp-2022-11)

PLANNING BOARD
SITE PLAN RESOLUTION
SP-2022-11

PETITIONER	PROPERTY LOCATION
Benderson Development	4548 & 4564 Main Street, 17 Fruehauf Avenue, and 22 Chateau Terrace

D. The site plan is consistent with all other applicable laws.

E. Pursuant to Local Law #3-82, as amended, the Planning Board has determined that the requirements of SEQR are complete and that the subject proposal is not expected to have a significant adverse effect on the environment.

F. Review by the US Army Corps of Engineers under Section 404 of the Clean Water Act may be waived because the parcel is developed, and

WHEREAS, in accordance with Section 5A-7-19 of the Zoning Ordinance, the Planning Board has approved design exceptions for the proposed site plan, and

WHEREAS, in accordance with Section B-7f of the Design Guidelines for Mixed-Use Districts, the Planning Board allows the use of Exterior Insulation Finish System as a decorative material on the upper stories of the building,

NOW THEREFORE BE IT RESOLVED that in accordance with 6 NYCRR, Part 617 and Local Law #3-82, as amended, the Planning Board has issued a Negative Declaration attached hereto, and

BE IT FURTHER RESOLVED that the Planning Board, in accordance with Section 8-7 of the Zoning Ordinance **approves~~/denies~~** said Site Plan subject to the following conditions:

1. That the consideration of signs is specifically excluded from this approval as they require a separate review and approval by the Town.

2. That all dumpsters/trash containers and all mechanical equipment, utility structures, multiple meter boards, generators, and similar appurtenances, including those which are mounted on any part of a primary structure shall be appropriately screened with a fence, wall, and/or landscaping. Provide gate on dumpster enclosure that shall be closed whenever dumpster is not being serviced, enclosure shall be high enough to screen the dumpster(s) within.

3. That as-built record drawings, including location of utilities, be provided to the Engineering Department prior to issuance of a Certificate of Occupancy by the Building Department.

TOWN OF AMHERST

APPLICATION & REVIEW PROCEDURE

MAJOR SITE PLAN

MATERIALS MUST BE PROVIDED IN AN ELECTRONIC FORMAT THAT CONTAINS PDF FILES OF THE APPLICATION, EAF, SITE PLAN DRAWING SET SURVEY, LANDSCAPE PLAN, PRELIMINARY BUILDING FLOO PLANS / ELEVATIONS & ANY OTHER SUPPORTING INFORMATION. THIS MUST BE SUBMITTED WITH YOUR APPLICATION. APPLICATIONS WILL NOT BE TRANSMITTED WITHOUT THIS ELECTRONIC INFORMATION.

THIS ALSO APPLIES TO REVISED MATERIALS THAT AR SUBMITTED.

This application package includes the following:

- Application Procedures
- Application Form & Checklist
- Stormwater Pollution Prevention Plan Checklist
- Appendix A Town of Amherst EAF Addendum
- Appendix B Criteria for Required 8½" x 11" Sketches
- Appendix C Erie Sewer District No. 5 – Commercial / Industrial New & Existing Buildings Requirements

- IMPORTANT-

1. A pre-submittal consultation with Planning Department staff is *strongly recommended* prior to submitting an application. The pre-submittal meeting gives the applicant an opportunity to discuss with staff such items as:
   - classifying the action as a major site plan, minor site plan, or minor site plan adjustment;
   - determining what specific information will be required to be submitted with the application;
   - identifying and discussing issues that must be addressed as part of the SEQR review;
   - identifying any potential variances required to implement the project as proposed.

   An appointment is required for all meetings with Planning Department staff.

2. This site plan petition is subject to the requirements of 6 NYCRR Part 617, State Environmental Quality Review Act (SEQR), and Chapter 104 of the Town of Amherst Code, as amended. The Planning Board cannot make a SEQR determination unless a complete Environmental Assessment Form (EAF), including Town of Amherst EAF Addendum, and any required supplementary information such as traffic impact studies, archaeological reports, wetland delineations or geotechnical reports, are submitted. SEQR issues may be discussed with Planning Department staff at a recommended pre-submittal meeting. Unlisted Actions require a Short EAF; Type I Actions require a Full EAF. The following is a link to the NYSDEC website and fillable forms with instructions*:*
   http://www.dec.ny.gov/permits/6191.html.

3. **Review by the Town Design Advisory Board (DAB) is required for Major Site Plans located in the following Mixed-Use zoning districts:**

   Traditional Infill 2.5 (TI-2.5)
   Traditional Infill 4 (TI-4)
   Shallow Corridor 3 (SC-3)
   Deep Corridor 3 (DC-3)
   Deep Corridor 5 (DC-5)
   Center 2.5 (CTR-2.5)
   Center 5 (CTR-5)
   Center 8 (CTR-8)

   The application for DAB review is required to be filed in conjunction with the major site plan application.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

4. The application shall be executed or consented to in writing by the owner of the property.

5. **Any variances from the Zoning Board of Appeals, or any decision from the Town Board (e.g. removal of deed restrictions) must be obtained prior to action by the Planning Board on a Site Plan application.**

6. Submittal of an application grants permission to Town staff and Planning Board members to access the parcel(s) under consideration.

7. All site plan drawings must be prepared by a Registered Architect, Professional Engineer, Landscape Architect, or Land Surveyor (as applicable) licensed to practice in New York State.

8. If you wish to include a Coordinated Sign Plan application with the site plan petition, a separate application must be completed. Contact the Planning Department for a copy of a Coordinated Sign Plan application package.

9. All drawings should be no larger than 24 in. x 36 in. If site characteristics warrant larger plan sheets, they may be accepted subject to Planning Department concurrence. All drawings must also reserve a 4 in. x 6 in. area in the lower right hand corner for official Town use.

APPLICATION PROCEDURES

1. Applicant secures application package from the Planning Department, 5583 Main Street, Williamsville, NY 14221. (716) 631-7051. Forms are also available online at: www.amherst.ny.us, (keyword: Planning).

2. Applicant prepares information as required on the Site Plan Submittal Checklist, attached. NOTE: Some proposals may not require all items on the checklist; please verify with the Planning Department.

3. Applicant schedules an appointment with the Planning Department to review the following:
   - a complete set of site plan drawings, preliminary building elevations and floor plans (no larger than 24" x 36" in size)
   - Environmental Assessment Form (EAF) & Town EAF Addendum
   - any supporting reports and materials
   - verification from the Town Assessor that the address in the application is correct

4. Applicant schedules an application submittal appointment with the Planning Department. NO SITE PLAN WILL BE ACCEPTED FOR REVIEW WITHOUT A PRE-SET SUBMITTAL APPOINTMENT.

5. At the submittal appointment, applicant provides fourteen (14) complete and collated sets of drawings and application information to the Planning Department **(materials will not be accepted unless folded into 9" x 12" in size),** including**:**
   - application form
   - Environmental Assessment Form (EAF)
   - supporting reports / materials
   - complete set of site plan drawings, preliminary building elevations and floor plans (**at least one (1) set of drawings must bear a raised or wet seal and signature of the design professional** who prepared the plans; the remaining copies may be submitted with a facsimile of the seal and signature)
   - digital files of all materials in pdf format
   - an 8½" x 11" reduction of the sketch plan or plat drawing (see Appendix B)

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

6. After approval for filing by the Planning Department, applicant submits all necessary fees to the Town Clerk. **(See Schedule of Fees on first page of application and make checks payable to: Town of Amherst.)**

7. The applicant returns a copy of the filing receipt to the Planning Department.

8. The Planning Department transmits remaining thirteen (13) copies of the application and supporting materials to:
   - Assessor
   - Commissioner of Building
   - Town Engineer
   - Superintendent of Highways
   - Traffic/Safety Board
   - Fire Chiefs' Association
   - Plumbing Division
   - Right-of-Way Agent
   - Police Department (if applicable)
   - Zoning Enforcement Officer
   - Other Town and outside agencies, as applicable

9. Within 30 days of its receipt of the complete application for Site Plan approval, each agency completes its review and notifies the Planning Department in writing of its comments or recommendations as required by Ordinance.

10. The applicant may be required to submit revised plans, reports, or materials to address review agency comments. The procedures for submittal of revised plans are as follows:

    - A cover letter addressing all comments received to date is required.
    - "Highlight" the area of change on the drawings and provide a notation describing the change.
    - Revised plans/materials are required. Planning staff should be contacted to determine the number of sets needed.
    - All revised plans and materials must also be provided in an electronic format that contains pdf files of the revised information.

11. The Planning Board reviews the EAF to determine whether a Draft Environmental Impact Statement (DEIS) is required. The petitioner will be advised in the event that a DEIS is required and afforded the opportunity to prepare it. If the petitioner declines, the Planning Board will prepare the DEIS at the petitioner's expense. The public hearing will be held on the DEIS concurrently with the Planning Board hearing on the application.

12. Planning Board Meeting Procedures:

    The applicant or representative presents the project at the public hearing before the Planning Board and is available to answer any questions. The Planning Board may take any of the following actions:

    - Adjourn the hearing to a future Planning Board meeting (hearing remains open).
    - Close the hearing and table action on the site plan to a future Planning Board meeting. (The Planning Board may remove the item from the agenda until such time as all required information is provided.)
    - Close the hearing and make a decision on the site plan.

    All determinations on matters before the Planning Board are made after all public hearings on that meeting's agenda are completed.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

13. A copy of the Planning Board's determination will be provided to the applicant, his / her representative, the Building Commissioner and the Town Clerk approximately 1 week following the Planning Board meeting at which it was heard.

14. If the Planning Board approves a Site Plan with conditions, the Planning Department will work with the applicant to ensure that all conditions of the approval are satisfactorily addressed. When all conditions are satisfied, the applicant submits **seven (7) final copies** of the complete set of all site plan drawings, folded into 9" x 12". For site plans in the Mixed-Use zoning districts, building elevations will also be required.

    All 7 sets must have original wet seals and include the required 4 in. x 6 in area in the lower right hand corner for official Town use. These drawings will be stamped and signed "Approved" by the Planning Director and transmitted to Town Departments for their files and use.

15. A building permit will not be issued by the Building Department until the stamped and signed Site Plan is issued by the Planning Director.

NOTE: Please check with the Planning Department to determine the deadline date for filing applications. Due to the public hearing notice requirements and department reviews, no site plan application will be placed on the Planning Board agenda after the deadline for filing has closed. Scheduling may be delayed if an application is incomplete.

MAJOR SITE PLAN APPLICATION (con't) ***Page 2***

Representative (Architect, Engineer, Landscape Architect, Surveyor, or Attorney)**:**

Name: James A. Boglioli

Address: 570 Delaware Avenue

Buffalo , New York 14202
city state zip code

Phone: 716-878-9626 Fax: _____

E Mail: jmb@benderson.com

Project Location (must be verified by Town Assessor's Office)**:**

Address: 4548 - 4564 Main Street

SBL No(s): 68.17-5-219.20, 68.17-5-219.21, 68.17-5-219.22

Project Name: _____

Project Description:

Property is currently occupied by a 2 story brick and wood retail/office building which faces Main Street. The rear and sides on Château and Freihauf contain split level areas. This will be demolished and removed. The new development will be a mixed uses, including approximately 7,000 square feet of commercial space on Main Street level with 45 to 50 apartments on upper levels. The area between the "U" shaped development will contain a terrace area and partial parking area at the Main Street level. Additional parking is accessible from Chateau Street at the rear of the site, Also, a 30' landscape buffer area will be constructed at the rear of the site. Building architecture will meet design guidelines.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

MAJOR SITE PLAN APPLICATION (con't) ***Page 3***

If this petition is an amendment to a previously approved site plan, please describe the proposed changes (include type and size of existing structures and number of existing parking spaces):

Please see the attached letter of intent

	existing	proposed	total
Gross Floor Area (non-residential):	12,146 sf	6,998 sf	-5,148 sf
Gross Floor Area Residential:	N/A	56,204 sf	56,204 sf
Number of Residential Units:	N/A	48 units	48 units
Number of Parking Spaces:	N/A	79	79

Acreage of Parcel: .93+/-

(list each parcel separately)

Frontage on Public Roads: Main Street – 185.64' Fruehauf – 200.0'

(list each road separately) Chateau – 269.63'

Existing Zoning District(s) TI-2.5

Site Plan Submittal Requirements and Checklist

The following checklist outlines the information required by the Planning Department to accept a Site Plan application for review. ***It is strongly recommended that you make an appointment with Planning Staff to determine which items apply to your application***.

Item No.	Item	Submitted	Official use
I Basic Drawing Information			
1.0	**Drawing size not to exceed 24" x 36"**		
2.0	**Title of Drawing**		
3.0	**Name and address of Applicant**		
4.0	**Name of person preparing drawing**		
5.0	**Wet seal/raised seal and signature of NYS licensed architect, engineer, landscape architect, or surveyor (as applicable)**		
6.0	**Project address**		
7.0	**Zoning of subject property and adjacent parcels**		
8.0	**North point, scale, date, and revision date(s)**		
9.0	**4" x 6" reserved area in lower right hand corner for official Town use**		
II Structures, Paved Areas, & Open Space			
1.0	**Existing and Proposed Streets**		
1.1	Names of all existing and proposed streets		
1.2	Width and radii of proposed curb-cuts		
1.3	Existing curb-cuts on adjacent and opposite properties		
1.4	Show ROW width, pavement dimensions, lane widths, pavement markings, and proposed signage on proposed streets		
1.5	Show proposed ROW consistent with planned NYSDOT, Erie County, or Town road projects (if applicable)		
1.6	Show location of proposed cross access to adjacent parcels along with a draft easement		
1.7	Designation of Fire Lanes (if applicable)		
1.8	Fire apparatus access roads		
1.9	Label any proposed roads as public or private		
1.10	Location and dimensions of sidewalks		
1.11	Typical cross sections and profiles of proposed streets, pedestrian walkways, and bikeways		
2.0	**Proposed Structures**		
2.1	Location and complete dimensions of proposed structures		
2.2	Setback dimensions of structure(s) to all property lines		
2.3	Proposed use of structures		
2.4	Gross square feet area of each structure		
2.5	Location of all building entrances		
2.6	Indicate type of roof construction/materials		
2.7	Location, height, and design detail of existing and proposed fences and walls		
2.8	Location of light standards and building mounted lights		
2.9	Location of dumpster and detail of dumpster enclosure with gate		
2.10	Layout and dimensions of the lot(s) proposed for development		

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

Town of Amherst Planning Department 5583 Main Street Williamsville-NY-14221
(716) 631-7051- Fax: (716) 631-7153

Item No.	Item	Submitted	Official use
II Structures, Paved Areas, & Open Space (cont'd)			
3.0	**Floor Plans with individual rooms and spaces labeled** (fully dimensioned)		
4.0	**Building elevations with height dimensions from finished grade to the highest point of the roof and to midpoint of gable or hip of a pitched roof.** (fully dimensioned)		
4.1	Show screening of mechanical equipment		
5.0	**Parking/Loading/Stacking Areas**		
5.1	Location and complete dimensions of all paved areas		
5.2	Setback dimensions of all paved areas to property lines		
5.3	Dimension of typical parking space and drive aisles		
5.4	Location and layout of handicapped parking spaces & access aisles		
5.5	Detail of vertical signage for handicapped parking and access aisles		
5.6	Indicate minimum parking requirement & number of spaces provided		
5.7	Proposed signage for directing and guiding traffic		
5.8	Curb cut permits from NYS, Erie County, or Town (if applicable)		
5.9	Pedestrian connections (from proposed structures to public sidewalk network)		
6.0	**Location and proposed development of all open spaces, including parks, playgrounds, and open reservations**		
III Utilities and Drainage			
1.0	**Engineers Report** (bound separately from the Stormwater Pollution Prevention Plan [SWPPP])		
1.1	Stamped/sealed and signed by NYS licensed architect or professional engineer		
1.2	Proposed water service sizing, RPZ pressure and fire safety flow and pressure calculations		
1.3	Proposed sanitary sewer facility load calculations (avg. & peak flows) including calculation of the peaking factor		
1.4	Proposed storm drainage facility calculations (see information included with this application)		
2.0	**Grading Plan**		
2.1	Existing and proposed grades indicated (proposed grades may not exceed 1 on 3)		
3.0	**Water Service**		
3.1	Location, size and material of existing and proposed facilities		
3.2	Location of existing and proposed fire hydrant location(s)		
3.3	Indicate use of sprinklers, location of Fire Department connection, and proposed fire protection systems		
3.4	Existing and proposed meter/RPZ size and location		
3.5	Applicable construction details		
4.0	**Sanitary Sewers**		
4.1	Locations, sizes, slopes, inverts, and materials of all existing and proposed facilities		

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

Town of Amherst Planning Department 5583 Main Street Williamsville-NY-14221
(716) 631-7051- Fax: (716) 631-7153

Item No.		Submitted	Official use
III Utilities and Drainage (cont'd)			
4.2	Applicable construction details		
4.3	Proposed water/oil/grease interceptor sizing calculations by a professional engineer (if applicable)		
5.0	**Storm Drainage**		
5.1	Locations, sizes, slopes, inverts, and materials of existing and proposed storm drainage facilities		
5.2	Connection of roof drains to proposed drainage system		
5.3	Applicable Town Standard construction details		
5.4	Existing and proposed swales and ditches		
5.5	Detention area cross-section and high-level elevations		
5.6	County and State approval for tie-in to existing sewers		
6.0	**Stormwater Pollution Prevention Plan (SWPPP) as applicable** (bound separately from the Engineer's Report) **See attached checklist.**		
7.0	**Natural Gas Service**		
8.0	**Location of transformers, generators and other mechanical equipment; include detail drawings (if applicable)**		
9.0	**Downstream Sanitary Capacity Analysis (DSCA) Report** (must be submitted if proposed average flows are greater than 2,500 gallons per day)		
9.1	The DSCA Report must include a detailed downstream sewer capacity analysis and the calculations of and commitment to (via Developer commitment letter) the required financial contribution to the Town's I/I mitigation fund based on peak flow conditions. The contribution must be based on $250 per gallon per minute of mitigated flow		
IV Lighting Plan			
1.0	**Photometric plan showing light spread in foot candles at property lines**		
1.1	Detail of all light standards, including dimension of height from finished grade		
1.2	Detail of all exterior lighting fixtures		
V Landscape Plan			
1.0	**Wet/raised seal and signature of a licensed Landscape Architect**		
2.0	**Provide a calculation of the total Parking area and a calculation of interior parking area in square feet and as a percentage**		
3.0	**Indicate location, size, number and type of proposed landscape materials**		
4.0	**Indicate location, type and size of <u>all</u> existing trees 4" caliper or larger and indicate which will be removed or retained**		
VI Other Required Information/General Requirements			
1.0	**Complete boundary survey that includes all existing structures, acreage, legal description with reference to a property line, street, or other known feature, and easements plotted to scale by a NYS licensed land surveyor**		

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

(716) 631-7051- Fax: (716) 631-7153

Item No.		Submitted	Official Use
VI Other Required Information/General Requirements (cont'd)			
1.1	Copies of all easements, reciprocal access agreement or similar leag documents		
2.0	**Topographic Survey with a 30 ft. buffer outside all property lines by a NYS licensed land surveyor**		
3.0	**Draft of any deed restrictions, covenants, provisions for home associations and common ownership, and reciprocal easement agreements (as applicable).**		
4.0	**For assessment purposes, state intent to apply for condominium status (if applicable).**		
5.0	**Completed and signed Environmental Assessment Form**		
5.1	Soil boring report and geotechnical report prepared by a qualified Professional Engineer (if applicable)		
5.2	Traffic Impact Study (if applicable)		
5.3	Archaeological survey (if applicable		
5.4	Wetland Delineation report (if applicable)		
6.0	**Show existing zoning(s) of both the subject property and adjacent parcels on the Site Plan and the Landscape Plan**		
7.0	**Location of NYSDEC wetlands (including buffer area) and/or federal wetlands; indicate jurisdictional status**		
8.0	**Location of Floodway and floodplain** (if applicable)		
9.0	**Documentation pertaining to any conditions of zonings, including copies of required deed restrictions; indicate date of rezoning and the parcel address under which it was rezoned (if applicable)**		
10.0	**Documentation related to any required variances granted by the ZBA**		
11.0	**For residential site plans, provide a statement from the appropriate school district that adequate school sites and facilities are available.**		
12.0	**8 1/2" X 11" reduction of primary site plan drawing (see appendix "B" of application package for specifications)**		
13.0	**A CD containing a PDF of all site plan drawings (Must also be provided with revised drawings)**		
VII Additional Required Information for Projects in the Mixed Use Districts			
1.0	**Design Advisory Board Application**		
1.1	Required for Major Site Plan		
1.2	Required at the Planning Directors Discretion for Minor Site Plans		
2.0	**Block & Street Network Plan**		
2.1	Designation of Core, Local & Alley streets		
2.2	Dimensions of Blocks		
3.0	**Block Usage Plan (as applicable)**		
3.1	Designation of site usage for each block including open space areas		
4.0	**Phasing Plan**

TOWN OF AMHERST
State Environmental Quality Review
ENVIRONMENTAL ASSESSMENT FORM
-- ADDENDUM --

1. For each applicable category of proposed <u>new</u> structures, including additions to existing structures, provide the following information for all soil types on the project site (*according to Soil Survey of Erie County, NY; Table 11, Building Site Development, pp 294-305):*

Soil Name	Shallow excavations	Dwellings without basements	Dwellings with basements	Small commercial buildings	Local roads and streets

2. If the Soil survey indicates either "severe" or "moderate" suitability for the proposed types of construction, a geotechnical and hydrological analysis based on one test per 3.5 acres of project area must be provided (per Town Board resolution, 3/17/03, amended 6/16/03).

   _____ Geotechnical report attached _____ Not applicable

3. Is your property located: On Youngs Road between Dodge and Klein Roads? □ Yes □ No
   On Wehrle Dr. between Spindrift Dr. and Oakwood Rd? □ Yes □ No

   If so, the property may be within an area of the Town that is affected by a moratorium on connections to the sanitary sewer system.

4. Are there alternative locations on the site for this project? □ Yes □ No

5. Location and size of real property owned by petitioner within one (1) mile of subject proposal:
   _____
   _____

6. Are you aware of current or future plans or intentions by others in the Town of Amherst to develop property within 1000± ft. of the present project request: □ Yes □ No

   Describe_____
   _____

   (Potential environmental impacts from adjacent or nearby projects undergoing the approval process will receive a coordinated environmental review to determine cumulative effects on common receivers (e.g. traffic and drainage corridors) and other relevant environmental concerns.)

7. Maximum number of vehicular trips to be generated per peak hour upon completion of project_____
   Source: _____

8. Will blasting occur during construction? □ Yes □ No

9. Does the project propose to connect and be tributary to the public sanitary sewer system? □ Yes □ No

10. Proposed net additional gallons per day (gpd) of sanitary sewer discharge upon completion of project:
    _____ average flow _____ peak flow.

    (Average flows of 2,500 gpd or greater will require an Engineer's Report that includes a detailed downstream sewer capacity analysis and the identification of and commitment to required I/I offset work during peak wastewater flow conditions.)

11. Based on the Town's *2011 Reconnaissance Level Survey of Historic Resources,* is your property 'blue-rated' for historic significance? □ Yes □ No

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

Full Environmental Assessment Form
Part 1 - Project and Setting

Instructions for Completing Part 1

Part 1 is to be completed by the applicant or project sponsor. Responses become part of the application for approval or funding, are subject to public review, and may be subject to further verification.

Complete Part 1 based on information currently available. If additional research or investigation would be needed to fully respond to any item, please answer as thoroughly as possible based on current information; indicate whether missing information does not exist, or is not reasonably available to the sponsor; and, when possible, generally describe work or studies which would be necessary to update or fully develop that information.

Applicants/sponsors must complete all items in Sections A & B. In Sections C, D & E, most items contain an initial question that must be answered either "Yes" or "No". If the answer to the initial question is "Yes", complete the sub-questions that follow. If the answer to the initial question is "No", proceed to the next question. Section F allows the project sponsor to identify and attach any additional information. Section G requires the name and signature of the project sponsor to verify that the information contained in Part 1is accurate and complete.

A. Project and Sponsor Information.

Name of Action or Project: Proposed Multi-Story Building		
Project Location (describe, and attach a general location map): 4548-4564 Main Street, 17 Freuhauf Ave, & 22 Chateau Terrace, Town of Amherst, NY 14226		
Brief Description of Proposed Action (include purpose or need): Proposed Action includes: Demolition of existing buildings along Main Street between, Fruehauf Ave and Chateau Terrace and residential property 22 Chateau Terrace and clearing of land; Proposed Multi-Story Building consisting of 48 apartments and 6,624 SF of restaurant space with associated parking garage, improved drainage and utility infrastructure, landscaping and site lighting. The total apartment units are as follows: 22 - 1 Bedroom units, 24 2 Bedroom Units and 2 - 3 Bedroom Units.		
Name of Applicant/Sponsor: Benderson Development Inc.	Telephone: 716-878-9626 E-Mail: jamesboglioli@benderson.com	
Address: 570 Delaware Ave		
City/PO: Buffalo	State: NY	Zip Code: 14202
Project Contact (if not same as sponsor; give name and title/role): James Boglioli, Esq	Telephone: 716-878-9626 E-Mail: jamesboglioli@benderson.com	
Address: 570 Delaware Ave		
City/PO: Buffalo	State: NY	Zip Code: 14202
Property Owner (if not same as sponsor):	Telephone: E-Mail:	
Address:		
City/PO:	State:	Zip Code:

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

B. Government Approvals

B. Government Approvals, Funding, or Sponsorship. ("Funding" includes grants, loans, tax relief, and any other forms of financial assistance.)

Government Entity	If Yes: Identify Agency and Approval(s) Required	Application Date (Actual or projected)
a. City Council, Town Board, or Village Board of Trustees ☐Yes ☑No		
b. City, Town or Village Planning Board or Commission ☑Yes ☐No	Town of Amherst Planning Board	June 2022
c. City Council, Town or Village Zoning Board of Appeals ☐Yes ☑No		
d. Other local agencies ☑Yes ☐No	Town of Amherst Traffic Safety Board Town of Amherst Historic Preservation Commision	June 2022
e. County agencies ☑Yes ☐No	Erie County Water Authority	June 2022
f. Regional agencies ☐Yes ☑No		
g. State agencies ☑Yes ☐No	NYSDOT; NYSDEC	June 2022
h. Federal agencies ☐Yes ☑No		

i. Coastal Resources.

i. Is the project site within a Coastal Area, or the waterfront area of a Designated Inland Waterway? ☐Yes ☑No

ii. Is the project site located in a community with an approved Local Waterfront Revitalization Program? ☐Yes ☑No

iii. Is the project site within a Coastal Erosion Hazard Area? ☐Yes ☑No

C. Planning and Zoning

C.1. Planning and zoning actions.

Will administrative or legislative adoption, or amendment of a plan, local law, ordinance, rule or regulation be the only approval(s) which must be granted to enable the proposed action to proceed? ☐Yes ☑No

- **If Yes,** complete sections C, F and G.
- **If No,** proceed to question C.2 and complete all remaining sections and questions in Part 1

C.2. Adopted land use plans.

a. Do any municipally- adopted (city, town, village or county) comprehensive land use plan(s) include the site where the proposed action would be located? ☑Yes ☐No

If Yes, does the comprehensive plan include specific recommendations for the site where the proposed action would be located? ☐Yes ☑No

b. Is the site of the proposed action within any local or regional special planning district (for example: Greenway Brownfield Opportunity Area (BOA); designated State or Federal heritage area; watershed management plan; or other?) ☐Yes ☑No

If Yes, identify the plan(s):

_____

_____

_____

c. Is the proposed action located wholly or partially within an area listed in an adopted municipal open space plan, or an adopted municipal farmland protection plan? ☐Yes ☑No

If Yes, identify the plan(s):

_____

_____

_____

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

C.3. Zoning

a. Is the site of the proposed action located in a municipality with an adopted zoning law or ordinance. ☑ Yes ☐ No
If Yes, what is the zoning classification(s) including any applicable overlay district?
Traditional Infill (TI-2.5)

b. Is the use permitted or allowed by a special or conditional use permit? ☑ Yes ☐ No

c. Is a zoning change requested as part of the proposed action? ☐ Yes ☑ No
If Yes,
i. What is the proposed new zoning for the site? _____

C.4. Existing community services.

a. In what school district is the project site located? Amherst CSD

b. What police or other public protection forces serve the project site?
Amherst Police Department; Erie County Sheriff; NY State Troopers

c. Which fire protection and emergency medical services serve the project site?
Amherst Fire Department - Snyder District

d. What parks serve the project site?
None

D. Project Details

D.1. Proposed and Potential Development

a. What is the general nature of the proposed action (e.g., residential, industrial, commercial, recreational; if mixed, include all components)? Residential and commercial

b. a. Total acreage of the site of the proposed action? 0.93 acres
b. Total acreage to be physically disturbed? 1.02 acres
c. Total acreage (project site and any contiguous properties) owned or controlled by the applicant or project sponsor? 0.93 acres

c. Is the proposed action an expansion of an existing project or use? ☐ Yes ☑ No
i. If Yes, what is the approximate percentage of the proposed expansion and identify the units (e.g., acres, miles, housing units, square feet)? % _____ Units: _____

d. Is the proposed action a subdivision, or does it include a subdivision? ☑ Yes ☐ No
If Yes,
i. Purpose or type of subdivision? (e.g., residential, industrial, commercial; if mixed, specify types)
Lot Combination
ii. Is a cluster/conservation layout proposed? ☐ Yes ☑ No
iii. Number of lots proposed? _____
iv. Minimum and maximum proposed lot sizes? Minimum _____ Maximum _____

e. Will proposed action be constructed in multiple phases? ☐ Yes ☑ No
i. If No, anticipated period of construction: 12 months
ii. If Yes:
- Total number of phases anticipated _____
- Anticipated commencement date of phase 1 (including demolition) _____ month _____ year
- Anticipated completion date of final phase _____ month _____year
- Generally describe connections or relationships among phases, including any contingencies where progress of one phase may determine timing or duration of future phases: _____

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

f. Does the project include new residential uses? ☑ Yes ☐ No

If Yes, show numbers of units proposed.

	One Family	Two Family	Three Family	Multiple Family (four or more)
Initial Phase	0			
At completion of all phases	48			

g. Does the proposed action include new non-residential construction (including expansions)? ☑ Yes ☐ No

If Yes,

i. Total number of structures 1

ii. Dimensions (in feet) of largest proposed structure: 35 height; 172.1 width; and 238.8 length

iii. Approximate extent of building space to be heated or cooled: 65,000 square feet

h. Does the proposed action include construction or other activities that will result in the impoundment of any liquids, such as creation of a water supply, reservoir, pond, lake, waste lagoon or other storage? ☑ Yes ☐ No

If Yes,

i. Purpose of the impoundment: Bio-retention pond

ii. If a water impoundment, the principal source of the water: ☐ Ground water ☐ Surface water streams ☑ Other specify: Non-permeable surface runoff

iii. If other than water, identify the type of impounded/contained liquids and their source.

iv. Approximate size of the proposed impoundment. Volume: 0.006 million gallons; surface area: 0.03 acres

v. Dimensions of the proposed dam or impounding structure: 1.5' height; 58' length

vi. Construction method/materials for the proposed dam or impounding structure (e.g., earth fill, rock, wood, concrete): Earth Fill

D.2. Project Operations

a. Does the proposed action include any excavation, mining, or dredging, during construction, operations, or both? (Not including general site preparation, grading or installation of utilities or foundations where all excavated materials will remain onsite) ☐ Yes ☑ No

If Yes:

i .What is the purpose of the excavation or dredging?

ii. How much material (including rock, earth, sediments, etc.) is proposed to be removed from the site?

- Volume (specify tons or cubic yards):
- Over what duration of time?

iii. Describe nature and characteristics of materials to be excavated or dredged, and plans to use, manage or dispose of them.

iv. Will there be onsite dewatering or processing of excavated materials? ☐ Yes ☐ No

If yes, describe.

v. What is the total area to be dredged or excavated? acres

vi. What is the maximum area to be worked at any one time? acres

vii. What would be the maximum depth of excavation or dredging? feet

viii. Will the excavation require blasting? ☐ Yes ☐ No

ix. Summarize site reclamation goals and plan:

b. Would the proposed action cause or result in alteration of, increase or decrease in size of, or encroachment into any existing wetland, waterbody, shoreline, beach or adjacent area? ☐ Yes ☑ No

If Yes:

i. Identify the wetland or waterbody which would be affected (by name, water index number, wetland map number or geographic description):

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

ii. Describe how the proposed action would affect that waterbody or wetland, e.g. excavation, fill, placement of structures, or alteration of channels, banks and shorelines. Indicate extent of activities, alterations and additions in square feet or acres:

iii. Will proposed action cause or result in disturbance to bottom sediments? ☐ Yes ☐ No
If Yes, describe:

iv. Will proposed action cause or result in the destruction or removal of aquatic vegetation? ☐ Yes ☐ No
If Yes:

- acres of aquatic vegetation proposed to be removed:
- expected acreage of aquatic vegetation remaining after project completion:
- purpose of proposed removal (e.g. beach clearing, invasive species control, boat access):
- proposed method of plant removal:
- if chemical/herbicide treatment will be used, specify product(s):

v. Describe any proposed reclamation/mitigation following disturbance:

c. Will the proposed action use, or create a new demand for water? ☑ Yes ☐ No
If Yes:

i. Total anticipated water usage/demand per day: 12,034 gallons/day

ii. Will the proposed action obtain water from an existing public water supply? ☑ Yes ☐ No
If Yes:

- Name of district or service area: Erie County Water Authority
- Does the existing public water supply have capacity to serve the proposal? ☑ Yes ☐ No
- Is the project site in the existing district? ☑ Yes ☐ No
- Is expansion of the district needed? ☐ Yes ☑ No
- Do existing lines serve the project site? ☑ Yes ☐ No

iii. Will line extension within an existing district be necessary to supply the project? ☐ Yes ☑ No
If Yes:

- Describe extensions or capacity expansions proposed to serve this project:
- Source(s) of supply for the district:

iv. Is a new water supply district or service area proposed to be formed to serve the project site? ☐ Yes ☑ No
If, Yes:

- Applicant/sponsor for new district:
- Date application submitted or anticipated:
- Proposed source(s) of supply for new district:

v. If a public water supply will not be used, describe plans to provide water supply for the project:

vi. If water supply will be from wells (public or private), maximum pumping capacity: _____ gallons/minute.

d. Will the proposed action generate liquid wastes? ☑ Yes ☐ No
If Yes:

i. Total anticipated liquid waste generation per day: 10,940 gallons/day

ii. Nature of liquid wastes to be generated (e.g., sanitary wastewater, industrial; if combination, describe all components and approximate volumes or proportions of each):
Sanitary Wastewater

iii. Will the proposed action use any existing public wastewater treatment facilities? ☑ Yes ☐ No
If Yes:

- Name of wastewater treatment plant to be used: Tonawanda Creek Plant #16
- Name of district: Amherst Sewer District #1
- Does the existing wastewater treatment plant have capacity to serve the project? ☑ Yes ☐ No
- Is the project site in the existing district? ☑ Yes ☐ No
- Is expansion of the district needed? ☐ Yes ☑ No

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

- Do existing sewer lines serve the project site? ☑ Yes ☐ No
- Will line extension within an existing district be necessary to serve the project? ☐ Yes ☑ No

If Yes:

- Describe extensions or capacity expansions proposed to serve this project: _____

iv. Will a new wastewater (sewage) treatment district be formed to serve the project site? ☐ Yes ☑ No

If Yes:

- Applicant/sponsor for new district: _____
- Date application submitted or anticipated: _____
- What is the receiving water for the wastewater discharge? _____

v. If public facilities will not be used, describe plans to provide wastewater treatment for the project, including specifying proposed receiving water (name and classification if surface discharge, or describe subsurface disposal plans):

vi. Describe any plans or designs to capture, recycle or reuse liquid waste: None

e. Will the proposed action disturb more than one acre and create stormwater runoff, either from new point sources (i.e. ditches, pipes, swales, curbs, gutters or other concentrated flows of stormwater) or non-point source (i.e. sheet flow) during construction or post construction? ☑ Yes ☐ No

If Yes:

i. How much impervious surface will the project create in relation to total size of project parcel?

_____ Square feet or 0.83 acres (impervious surface)

_____ Square feet or 0.93 acres (parcel size)

ii. Describe types of new point sources. Proposed 12" Storm connected to existing 12" Storm along Chateau Terrace

iii. Where will the stormwater runoff be directed (i.e. on-site stormwater management facility/structures, adjacent properties, groundwater, on-site surface water or off-site surface waters)?

Yes, through a series of trench drains, catch basins and bio-retention pond

- If to surface waters, identify receiving water bodies or wetlands: N/A
- Will stormwater runoff flow to adjacent properties? ☐ Yes ☑ No

iv. Does proposed plan minimize impervious surfaces, use pervious materials or collect and re-use stormwater? ☐ Yes ☑ No

f. Does the proposed action include, or will it use on-site, one or more sources of air emissions, including fuel combustion, waste incineration, or other processes or operations? ☐ Yes ☑ No

If Yes, identify:

i. Mobile sources during project operations (e.g., heavy equipment, fleet or delivery vehicles)

ii. Stationary sources during construction (e.g., power generation, structural heating, batch plant, crushers)

iii. Stationary sources during operations (e.g., process emissions, large boilers, electric generation)

g. Will any air emission sources named in D.2.f (above), require a NY State Air Registration, Air Facility Permit, or Federal Clean Air Act Title IV or Title V Permit? ☐ Yes ☑ No

If Yes:

i. Is the project site located in an Air quality non-attainment area? (Area routinely or periodically fails to meet ambient air quality standards for all or some parts of the year) ☐ Yes ☐ No

ii. In addition to emissions as calculated in the application, the project will generate:

- _____Tons/year (short tons) of Carbon Dioxide (CO_2)
- _____Tons/year (short tons) of Nitrous Oxide (N_2O)
- _____Tons/year (short tons) of Perfluorocarbons (PFCs)
- _____Tons/year (short tons) of Sulfur Hexafluoride (SF_6)
- _____Tons/year (short tons) of Carbon Dioxide equivalent of Hydroflourocarbons (HFCs)
- _____Tons/year (short tons) of Hazardous Air Pollutants (HAPs)

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

h. Will the proposed action generate or emit methane (including, but not limited to, sewage treatment plants, landfills, composting facilities)? ☐Yes ☑No

If Yes:

i. Estimate methane generation in tons/year (metric): _____

ii. Describe any methane capture, control or elimination measures included in project design (e.g., combustion to generate heat or electricity, flaring): _____

i. Will the proposed action result in the release of air pollutants from open-air operations or processes, such as quarry or landfill operations? ☐Yes ☑No

If Yes: Describe operations and nature of emissions (e.g., diesel exhaust, rock particulates/dust):

j. Will the proposed action result in a substantial increase in traffic above present levels or generate substantial new demand for transportation facilities or services? ☑Yes ☐No

If Yes:

i. When is the peak traffic expected (Check all that apply): ☐ Morning ☑ Evening ☐Weekend ☐ Randomly between hours of _____ to _____.

ii. For commercial activities only, projected number of semi-trailer truck trips/day: 1

iii. Parking spaces: Existing 50 Proposed 76 Net increase/decrease 26

iv. Does the proposed action include any shared use parking? ☑Yes ☐No

v. If the proposed action includes any modification of existing roads, creation of new roads or change in existing access, describe:
New Curb cut access points along Fruehauf Ave and Chateau Terrace

vi. Are public/private transportation service(s) or facilities available within ½ mile of the proposed site? ☑Yes ☐No

vii Will the proposed action include access to public transportation or accommodations for use of hybrid, electric or other alternative fueled vehicles? ☑Yes ☐No

viii. Will the proposed action include plans for pedestrian or bicycle accommodations for connections to existing pedestrian or bicycle routes? ☑Yes ☐No

k. Will the proposed action (for commercial or industrial projects only) generate new or additional demand for energy? ☑Yes ☐No

If Yes:

i. Estimate annual electricity demand during operation of the proposed action: _____
TBD

ii. Anticipated sources/suppliers of electricity for the project (e.g., on-site combustion, on-site renewable, via grid/local utility, or other):
National Grid

iii. Will the proposed action require a new, or an upgrade to, an existing substation? ☐Yes ☑No

l. Hours of operation. Answer all items which apply.

i. During Construction:

- Monday - Friday: 7 AM -9 PM (as allowed per code)
- Saturday: 7 AM -9 PM (as allowed per code
- Sunday: _____
- Holidays: _____

ii. During Operations:

- Monday - Friday: 24 hours
- Saturday: 24 hours
- Sunday: 24 hours
- Holidays: 24 hours

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

m. Will the proposed action produce noise that will exceed existing ambient noise levels during construction, operation, or both? ☑ Yes ☐ No

If yes:

i. Provide details including sources, time of day and duration:

Construction Equipment Monday - Saturday, 7am to 9 pm

ii. Will proposed action remove existing natural barriers that could act as a noise barrier or screen? ☐ Yes ☑ No

Describe: _____

n.. Will the proposed action have outdoor lighting? ☑ Yes ☐ No

If yes:

i. Describe source(s), location(s), height of fixture(s), direction/aim, and proximity to nearest occupied structures:

Parking Garage - Overhead LED Fixtures; Outdoor Seating - Architectural Poles on 1st floor

ii. Will proposed action remove existing natural barriers that could act as a light barrier or screen? ☐ Yes ☑ No

Describe: _____

o. Does the proposed action have the potential to produce odors for more than one hour per day? ☐ Yes ☑ No

If Yes, describe possible sources, potential frequency and duration of odor emissions, and proximity to nearest occupied structures: _____

p. Will the proposed action include any bulk storage of petroleum (combined capacity of over 1,100 gallons) or chemical products 185 gallons in above ground storage or any amount in underground storage? ☐ Yes ☑ No

If Yes:

i. Product(s) to be stored _____

ii. Volume(s) _____ per unit time _____ (e.g., month, year)

iii. Generally describe proposed storage facilities: _____

q. Will the proposed action (commercial, industrial and recreational projects only) use pesticides (i.e., herbicides, insecticides) during construction or operation? ☐ Yes ☑ No

If Yes:

i. Describe proposed treatment(s):

ii. Will the proposed action use Integrated Pest Management Practices? ☐ Yes ☐ No

r. Will the proposed action (commercial or industrial projects only) involve or require the management or disposal of solid waste (excluding hazardous materials)? ☐ Yes ☑ No

If Yes:

i. Describe any solid waste(s) to be generated during construction or operation of the facility:

- Construction: _____ tons per _____ (unit of time)
- Operation : _____ tons per _____ (unit of time)

ii. Describe any proposals for on-site minimization, recycling or reuse of materials to avoid disposal as solid waste:

- Construction: _____
- Operation: _____

iii. Proposed disposal methods/facilities for solid waste generated on-site:

- Construction: _____
- Operation: _____

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

s. Does the proposed action include construction or modification of a solid waste management facility? ☐ Yes ☑ No

If Yes:

i. Type of management or handling of waste proposed for the site (e.g., recycling or transfer station, composting, landfill, or other disposal activities): _____

ii. Anticipated rate of disposal/processing:

- _____ Tons/month, if transfer or other non-combustion/thermal treatment, or
- _____ Tons/hour, if combustion or thermal treatment

iii. If landfill, anticipated site life: _____ years

t. Will proposed action at the site involve the commercial generation, treatment, storage, or disposal of hazardous waste? ☐ Yes ☑ No

If Yes:

i. Name(s) of all hazardous wastes or constituents to be generated, handled or managed at facility: _____

ii. Generally describe processes or activities involving hazardous wastes or constituents: _____

iii. Specify amount to be handled or generated _____ tons/month

iv. Describe any proposals for on-site minimization, recycling or reuse of hazardous constituents: _____

v. Will any hazardous wastes be disposed at an existing offsite hazardous waste facility? ☐ Yes ☐ No

If Yes: provide name and location of facility: _____

If No: describe proposed management of any hazardous wastes which will not be sent to a hazardous waste facility:

E. Site and Setting of Proposed Action

E.1. Land uses on and surrounding the project site

a. Existing land uses.

i. Check all uses that occur on, adjoining and near the project site.

☐ Urban ☐ Industrial ☑ Commercial ☑ Residential (suburban) ☐ Rural (non-farm)
☐ Forest ☐ Agriculture ☐ Aquatic ☐ Other (specify): _____

ii. If mix of uses, generally describe:

Proposed Multi-Use Building with first floor retail and apartments

b. Land uses and covertypes on the project site.

Land use or Covertype	Current Acreage	Acreage After Project Completion	Change (Acres +/-)
• Roads, buildings, and other paved or impervious surfaces	0.80	0.83	+ 0.03
• Forested	-	-	-
• Meadows, grasslands or brushlands (non-agricultural, including abandoned agricultural)	-	-	-
• Agricultural (includes active orchards, field, greenhouse etc.)	-	-	-
• Surface water features (lakes, ponds, streams, rivers, etc.)	-	0.01	+ 0.01
• Wetlands (freshwater or tidal)	-	-	-
• Non-vegetated (bare rock, earth or fill)	0.13	0.10	-0.03
• Other Describe: _____			

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

c. Is the project site presently used by members of the community for public recreation? ☐ Yes ☑ No
i. If Yes: explain: _____

d. Are there any facilities serving children, the elderly, people with disabilities (e.g., schools, hospitals, licensed day care centers, or group homes) within 1500 feet of the project site? ☑ Yes ☐ No
If Yes,
i. Identify Facilities:
Elder Care Solutions of WNY, Daemen University, Garden Nursery School-Ahmerst, Bornhava School and The Park School of Buffalo

e. Does the project site contain an existing dam? ☐ Yes ☑ No
If Yes:
i. Dimensions of the dam and impoundment:
- Dam height: _____ feet
- Dam length: _____ feet
- Surface area: _____ acres
- Volume impounded: _____ gallons OR acre-feet

ii. Dam's existing hazard classification: _____
iii. Provide date and summarize results of last inspection:
_____

f. Has the project site ever been used as a municipal, commercial or industrial solid waste management facility, or does the project site adjoin property which is now, or was at one time, used as a solid waste management facility? ☐ Yes ☑ No
If Yes:
i. Has the facility been formally closed? ☐ Yes ☐ No
- If yes, cite sources/documentation: _____

ii. Describe the location of the project site relative to the boundaries of the solid waste management facility:
_____
iii. Describe any development constraints due to the prior solid waste activities: _____

g. Have hazardous wastes been generated, treated and/or disposed of at the site, or does the project site adjoin property which is now or was at one time used to commercially treat, store and/or dispose of hazardous waste? ☐ Yes ☑ No
If Yes:
i. Describe waste(s) handled and waste management activities, including approximate time when activities occurred:
_____

h. Potential contamination history. Has there been a reported spill at the proposed project site, or have any remedial actions been conducted at or adjacent to the proposed site? ☐ Yes ☑ No
If Yes:
i. Is any portion of the site listed on the NYSDEC Spills Incidents database or Environmental Site Remediation database? Check all that apply: ☐ Yes ☐ No
☐ Yes – Spills Incidents database — Provide DEC ID number(s): _____
☐ Yes – Environmental Site Remediation database — Provide DEC ID number(s): _____
☐ Neither database

ii. If site has been subject of RCRA corrective activities, describe control measures:_____

iii. Is the project within 2000 feet of any site in the NYSDEC Environmental Site Remediation database? ☐ Yes ☐ No
If yes, provide DEC ID number(s): _____

iv. If yes to (i), (ii) or (iii) above, describe current status of site(s):

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

v. Is the project site subject to an institutional control limiting property uses? ☐ Yes ☑ No

- If yes, DEC site ID number: _____
- Describe the type of institutional control (e.g., deed restriction or easement): _____
- Describe any use limitations: _____
- Describe any engineering controls: _____
- Will the project affect the institutional or engineering controls in place? ☐ Yes ☐ No
- Explain: _____

E.2. Natural Resources On or Near Project Site

a. What is the average depth to bedrock on the project site? +/- 5 feet

b. Are there bedrock outcroppings on the project site? ☐ Yes ☑ No
If Yes, what proportion of the site is comprised of bedrock outcroppings? _____%

c. Predominant soil type(s) present on project site: Ux 100 %
_____ _____%
_____ _____%

d. What is the average depth to the water table on the project site? Average: >10' feet

e. Drainage status of project site soils: ☑ Well Drained: 100 % of site
☐ Moderately Well Drained: _____% of site
☐ Poorly Drained _____% of site

f. Approximate proportion of proposed action site with slopes: ☑ 0-10%: 100 % of site
☐ 10-15%: _____% of site
☐ 15% or greater: _____% of site

g. Are there any unique geologic features on the project site? ☐ Yes ☑ No
If Yes, describe: _____

h. Surface water features.

i. Does any portion of the project site contain wetlands or other waterbodies (including streams, rivers, ponds or lakes)? ☐ Yes ☑ No

ii. Do any wetlands or other waterbodies adjoin the project site? ☐ Yes ☑ No

If Yes to either *i* or *ii*, continue. If No, skip to E.2.i.

iii. Are any of the wetlands or waterbodies within or adjoining the project site regulated by any federal, state or local agency? ☐ Yes ☐ No

iv. For each identified regulated wetland and waterbody on the project site, provide the following information:

- Streams: Name _____ Classification _____
- Lakes or Ponds: Name _____ Classification _____
- Wetlands: Name _____ Approximate Size _____
- Wetland No. (if regulated by DEC) _____

v. Are any of the above water bodies listed in the most recent compilation of NYS water quality-impaired waterbodies? ☐ Yes ☐ No

If yes, name of impaired water body/bodies and basis for listing as impaired: _____

i. Is the project site in a designated Floodway? ☐ Yes ☑ No

j. Is the project site in the 100 year Floodplain? ☐ Yes ☑ No

k. Is the project site in the 500 year Floodplain? ☐ Yes ☑ No

l. Is the project site located over, or immediately adjoining, a primary, principal or sole source aquifer? ☐ Yes ☑ No
If Yes:

i. Name of aquifer: _____

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

m. Identify the predominant wildlife species that occupy or use the project site: None

n. Does the project site contain a designated significant natural community? ☐ Yes ☑ No
If Yes:
i. Describe the habitat/community (composition, function, and basis for designation): _____
ii. Source(s) of description or evaluation: _____
iii. Extent of community/habitat:
- Currently: _____ acres
- Following completion of project as proposed: _____ acres
- Gain or loss (indicate + or -): _____ acres

o. Does project site contain any species of plant or animal that is listed by the federal government or NYS as endangered or threatened, or does it contain any areas identified as habitat for an endangered or threatened species? ☐ Yes ☑ No

p. Does the project site contain any species of plant or animal that is listed by NYS as rare, or as a species of special concern? ☐ Yes ☑ No

q. Is the project site or adjoining area currently used for hunting, trapping, fishing or shell fishing? ☐ Yes ☑ No
If yes, give a brief description of how the proposed action may affect that use: _____

E.3. Designated Public Resources On or Near Project Site

a. Is the project site, or any portion of it, located in a designated agricultural district certified pursuant to Agriculture and Markets Law, Article 25-AA, Section 303 and 304? ☐ Yes ☑ No
If Yes, provide county plus district name/number: _____

b. Are agricultural lands consisting of highly productive soils present? ☐ Yes ☑ No
i. If Yes: acreage(s) on project site? _____
ii. Source(s) of soil rating(s): _____

c. Does the project site contain all or part of, or is it substantially contiguous to, a registered National Natural Landmark? ☐ Yes ☑ No
If Yes:
i. Nature of the natural landmark: ☐ Biological Community ☐ Geological Feature
ii. Provide brief description of landmark, including values behind designation and approximate size/extent: _____

d. Is the project site located in or does it adjoin a state listed Critical Environmental Area? ☐ Yes ☑ No
If Yes:
i. CEA name: _____
ii. Basis for designation: _____
iii. Designating agency and date: _____

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

e. Does the project site contain, or is it substantially contiguous to, a building, archaeological site, or district which is listed on, or has been nominated by the NYS Board of Historic Preservation for inclusion on, the State or National Register of Historic Places? ☐ Yes ☑ No

If Yes:

i. Nature of historic/archaeological resource: ☐ Archaeological Site ☐ Historic Building or District

ii. Name: _____

iii. Brief description of attributes on which listing is based:

_____

f. Is the project site, or any portion of it, located in or adjacent to an area designated as sensitive for archaeological sites on the NY State Historic Preservation Office (SHPO) archaeological site inventory? ☐ Yes ☑ No

g. Have additional archaeological or historic site(s) or resources been identified on the project site? ☐ Yes ☑ No

If Yes:

i. Describe possible resource(s): _____

ii. Basis for identification: _____

h. Is the project site within fives miles of any officially designated and publicly accessible federal, state, or local scenic or aesthetic resource? ☑ Yes ☐ No

If Yes:

i. Identify resource: Glen Falls - Amherst State Park

ii. Nature of, or basis for, designation (e.g., established highway overlook, state or local park, state historic trail or scenic byway, etc.): Scenic Park and waterfall

iii. Distance between project and resource: 1.8 miles.

i. Is the project site located within a designated river corridor under the Wild, Scenic and Recreational Rivers Program 6 NYCRR 666? ☐ Yes ☑ No

If Yes:

i. Identify the name of the river and its designation: _____

ii. Is the activity consistent with development restrictions contained in 6NYCRR Part 666? ☐ Yes ☐ No

F. Additional Information

Attach any additional information which may be needed to clarify your project.

If you have identified any adverse impacts which could be associated with your proposal, please describe those impacts plus any measures which you propose to avoid or minimize them.

G. Verification

I certify that the information provided is true to the best of my knowledge.

Williamsville, NY 14221

RE: Application for Site Plan Approval
Proposed Site Redevelopment
4548-4564 Main St, Amherst, NY (BDP # 5202)

Dear Chairman Gilmour and Members of the Planning Board:

Enclosed please find materials in connection with our application for site plan approval for the parcel located at 4548-4564 Main Street (the "Project Site").

The Project Site is approximately 0.93-Acres and consists for four parcels between Fruehauf Ave and Chateau Terrace on the Northside of Main Street. The two parcels along Main Street consist of two existing retail buildings with associated parking lot accessed at the northside of site. All four parcels are in the mixed-use district Traditional Infill 2.5 (TI-2.5). As part of this project, these four parcels shall be combined into a single tax lot.

The proposed project will consist of the following:

- The demolition of existing buildings located on the Project Site (13K removed) and to construct a multi-story mixed use 65,000 +/- square footage building;
- Provide 48 Apartments of various bedroom sizes and 6,995 square feet of restaurant space;
- Provide a two-level parking garage to provide 79 parking spaces and requires 77 parking spaces;
- Provide Outdoor Amenity Space in accordance with the Mixed-Use District Town code;
- Provide new curb cut access drives from Fruehauf Ave and Chateau Terrace;
- Provide new site drainage infrastructures and utilities.

The proposed site plan and building elevations have been designed to meet the intent of the requirements of the TI-2.5 zoning.

We believe the project will be an attractive improvement and look forward to reviewing this project with the Planning Board. Should you have any questions or require any additional information, please do not hesitate to contact me.

Thank you,
BENDERSON DEVELOPMENT COMPANY, LLC

RE: Proposed 4548-4564 Main Street Mixed-Use Project, Town of Amherst, NY
Traffic Impact Assessment

Dear Mr. Oates:

The purpose of this Traffic Impact Assessment (TIA) is to identify and evaluate the potential traffic impacts associated with the proposed mixed-use project to be located at 4548-4564 Main Street in the Town of Amherst, NY. This assessment identifies the operating characteristics of the proposed access drives and impacts to the adjacent roadway network and recommends mitigating measures (if needed) to minimize any operational concerns. To define traffic impact, this analysis establishes existing baseline traffic conditions, projects background traffic flow including area growth, and determines the traffic operations that would result from the proposed project.

SITE LOCATION AND STUDY AREA

The project site is to be located at 4548-4564 Main Street in the Town of Amherst, Erie County, New York. The project site, currently consisting of one to two-story buildings, is bounded by residential to the north, Chateau Terrace to the east, Main Street to the south, and Fruehauf Avenue to the west. Land uses in the vicinity of the site include residential, office, service, and retail.

To ensure a comprehensive analysis of potential traffic impacts, the following existing intersections were included in the analysis:

- Main Street (NY-5)/Chateau Terrace/Bernhardt Drive (signalized)
- Main Street/Fruehauf Avenue (unsignalized)

The site location and study area are illustrated in **Figure 1** (all figures and supporting materials are included at the end of this letter).

EXISTING TRAFFIC CONDITIONS

A. Vehicular Network Description

The following information outlined in **Table 1** provides a description of the existing roadway network within the project study area. **Figure 2** illustrates the lane geometry at the study intersections and the Annual Average Daily Traffic (AADT) volumes on the study roadways. The AADTs reflect the most recently collected data obtained from the New York State Department of Transportation (NYSDOT). Functional classification of highways within the study area is determined by the NYSDOT and the Federal Highway Administration (FHWA). Where recent data is not available, traffic data is shown as an extrapolation of turning movement counts collected by Passero Associates in 2022.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

TABLE 1: EXISTING HIGHWAY SYSTEM

ROADWAY	CLASS[1]	AGENCY[2]	SPEED LIMIT[3]	TRAVEL LANES[4]	ORIENTATION OF TRAVEL	AADT[5]
Main Street (NY-5)	14	NYSDOT	40	4	Two-way/ Northwest-Southeast	21,436 NYSDOT (2019)
Chateau Terrace	19	Town	30	2	Two-way/ North-South	1,210 Passero (2022)
Bernhardt Drive	19	Town	30	2	Two-way/ North-South	400 Passero (2022)
Fruehauf Avenue	19	Town	30	2	Two-way/ North-South	900 Passero (2022)

Notes:
1. State Functional Classification of Roadway: 14 = Urban Principal Arterial, 19 = Urban Local
2. Jurisdictional Agency of Roadway.
3. Posted or Statewide Limit in Miles per Hour (mph).
4. Number of travel lanes. Excludes turning/auxiliary lanes developed at intersections.
5. Estimated AADT in Vehicles per Day (vpd). AADT Source (Year).

B. Multi-Modal Network Description

Sidewalks are present along all study corridors. The signalized intersection of Main Street/Chateau Terrace/Bernhardt Drive consists of actuated pedestrian countdown signals, a high visibility crosswalk across Main Street, and ADA compliant curb ramps. There are no dedicated bicycle lanes, although bicyclists are allowed to share the road with motorists. The Niagara Frontier Transportation Authority has bus stops nearby.

C. Peak Intervals for Analysis

Given the functional characteristics of the study corridors, adjacent land uses, and the proposed land uses (residential, restaurants) for the project site, the peak hours selected for analysis are the weekday commuter AM and PM peak periods. The combination of site traffic and adjacent through traffic produces the greatest demand during these time periods.

D. Existing Traffic Volume Data

Turning movement traffic counts were collected on Tuesday, December 13, 2022, by Passero Associates at the study intersections. Traffic counts were conducted between 7:00-9:00 AM for the weekday AM peak period and 4:00-6:00 PM for the weekday PM peak period. The peak hour traffic periods generally occurred from 7:30-8:30 AM and 4:00-5:00 PM.

All turning movement count data was collected on a typical weekday while local schools were in session. No adverse weather conditions impacted the traffic counts. The traffic volumes were reviewed to confirm the accuracy and relative balance of the collective traffic counts. The actual differences in traffic volumes can be attributed to temporal variations in traffic volumes as well as activity related to parking in the segments between the study intersections. **Figure 3** illustrates the peak hour volumes used for analysis purposes in this study.

E. Field Observations

The study intersections were observed for the project during all peak intervals to assess current traffic operations. Signal timing and phasing information for the signalized intersection was obtained from the NYSDOT to determine peak hour phasing plans and phase durations during each interval. This information was used to support and/or calibrate capacity analysis models described in detail later in this report.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

F. Existing Peak Hour Queuing Assessment

A peak hour queuing assessment was performed along Fruehauf Avenue during the AM and PM peak hours to measure the frequency of southbound vehicles that block the proposed driveway. The centerline of the proposed driveway is located approximately 38 feet from the stop bar. Given this distance, the driveway is located approximately 1.7 vehicle lengths from the stop bar.

Our firm documented southbound queues at the intersection of Main Street/Fruehauf Avenue on Thursday, July 22, 2021, from 7:00-9:00 AM and 4:00-6:00 PM. The peak hours generally occurred from 8:00-9:00 AM and 4:30-5:30 PM. Based on this field investigation during the peak hours of study, the proposed driveway location was blocked once during the AM peak hour for a duration of five seconds and was blocked once during the PM peak hour for a duration of three seconds.

G. Existing Crash Analysis

The purpose of this crash analysis is to identify inherent safety issues by studying and quantifying historical crashes at the study intersections and identifying potential crash patterns and clusters.

A crash cluster is defined as an abnormal occurrence of similar crash types occurring at approximately the same location or involving the same geometric features. The severity of the crashes should also be considered. A history of crashes is an indication that further analysis is required to determine the cause(s) of the crash(es) and to identify what actions, if any, could be taken to mitigate the crashes.

A crash investigation within the study area was conducted to assess the safety history from July 31, 2017, through July 31, 2021. The data was provided by the New York State Department of Motor Vehicles through a Freedom of Information (FOIL) request.

Despite the COVID-19 pandemic influencing daily travel in 2020 and 2021, only one crash was reported during this period, and it occurred in 2021. This crash was included in the analysis.

Reportable (non-injury, injury, and fatal injury) type crashes are defined as damage to one person's property in the amount of $1,001 or more. The Non-Reportable type crashes result in property damage of $1,000 or less. Crash rates were computed for the study intersections and compared with NYSDOT average crash rates for similar intersections, as summarized in **Table 2**. Intersection rates are listed as crashes per million entering vehicle (CR/MEV). Pertinent crash data is provided in the Appendices.

TABLE 2: EXISTING CRASH RATES

INTERSECTION	NUMBER OF CRASHES	NUMBER OF ENTERING VEHICLES	ACTUAL CRASH RATE	STATEWIDE AVERAGE CRASH RATE
Main Street/Chateau Terrace/Bernhardt Drive	9	19,800 vpd	0.25	0.26
Main Street/Fruehauf Avenue	0	18,958 vpd	0.00	0.26

Notes:
1. vpd = vehicles per day.
2. **Bold** text denotes crash rate above statewide average

Main Street/Chateau Terrace/Bernhardt Drive

Five of the nine (56%) reported crashes were attributed to rear end collisions. This is characteristic of heavily trafficked signalized intersections. Three of the crashes occurred in the westbound direction. The causes of the rear end crashes were generally due to driver error (e.g., following too closely, driver inattention). The remaining crashes were sideswipe (2), left turn (1), and a crash into a parked vehicle. No geometric improvements are recommended.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

FUTURE AREA DEVELOPMENT AND LOCAL GROWTH

Construction of the proposed project is anticipated to reach full build-out within approximately two years. Widely accepted methodology for preparing traffic impact studies requires that any projects in the study area that are currently approved and/or under construction must be considered in the traffic analysis. Projects that are contemplated but not yet approved are not included in a traffic analysis. Local municipal personnel were contacted to discuss any other specific projects that are currently approved or under construction that would generate additional traffic in the study area. No projects were identified.

A review of historical NYSDOT traffic volume data in the vicinity of the site indicates that traffic has decreased slightly between 2015 and 2019. To account for normal increases in background traffic growth, including any unforeseen developments in the project study area, a growth rate of 1.0% was applied to the existing traffic volumes. The background traffic volumes are depicted in **Figure 4**.

PROPOSED PROJECT

A. Project Description

The proposed project consists of constructing 48 apartment units, a ±2,513 square foot (SF) fast casual restaurant, and a ±4,111 SF fine dining restaurant. Access will be provided via two full access driveways: one along Chateau Terrace which accesses a parking lot with 54 spaces and one along Fruehauf Avenue which accesses a parking lot with 22 spaces. Chateau Terrace is posted as a "No Outlet" street while Fruehauf Avenue is posted as a "Dead End" street. On-street parking is available along Main Street. Sidewalks are present throughout the adjacent neighborhood. **Figure 5** illustrates the proposed concept plan.

B. Site Traffic Generation

The volume of traffic generated by a site is dependent on the intended land use and size of the development. Trip generation is an estimate of the number of trips generated by a specific building or land use. These trips represent the volume of traffic entering and exiting the development. Trip Generation Manual (11th Edition) published by the Institute of Transportation Engineers (ITE) is used as a reference for this information. The trip rate for the peak hour of the generator may or may not coincide in time or volume with the trip rate for the peak hour of adjacent street traffic. Volumes generated during the peak hour of the adjacent street traffic and proposed land use, in this case, the weekday commuter AM and PM peaks, represent a more critical volume when analyzing the capacity of the system; those intervals will provide the basis of this analysis.

For certain types of developments, the total number of trips generated is different from the amount of new traffic added to the adjacent highway network by the generator. Service/retail-oriented developments (i.e., shopping centers, gas stations, coffee/donut shops, and restaurants) often locate adjacent to busy streets to attract the motorists already passing the site on the adjacent street. These sites attract a portion of their trips from traffic passing the site. The "pass-by" traffic refers to the amount of existing traffic already on the roadway adjacent to the site that, as it "passes by" the site, will enter the site driveways to patronize the project site. The quantifying of "pass-by" trips has the net result of reducing the volume of new traffic that is added to the site driveways and/or adjacent roadways. This site is likely to exhibit some level of pass-by traffic. However, no adjustment was made to remain conservative.

Table 3 shows the site generated trips for the proposed project.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

TABLE 3: SITE GENERATED TRIPS

DESCRIPTION	ITE LUC	SIZE	AM PEAK HOUR		PM PEAK HOUR	
			ENTER	EXIT	ENTER	EXIT
Multi-family Residential	220	48 units	5	14	15	9
Fast Casual Restaurant	930	±2,513 SF	2	2	17	15
Quality Restaurant	931	±4,111 SF	2	1	21	11
Total Site Generated Trips			**9**	**17**	**53**	**35**

Note:
1. ITE LUC = ITE Land Use Code.

The proposed project is expected to generate approximately nine entering/17 exiting vehicle trips during the AM peak hour and 53 entering/35 exiting vehicle trips during the PM peak hour.

C. Site Traffic Distribution

The cumulative effect of site generated traffic on the transportation network is dependent on the origins and destinations of that traffic and the location of the access drives serving the site. The proposed arrival/departure distribution of traffic generated by the proposed project is considered a function of several parameters, including:

- Residential and employment centers using U.S. Census Data
- Site access locations
- Existing traffic patterns
- Existing traffic conditions and controls

Based on these parameters, **Figure 6A** illustrates the anticipated trip distribution pattern percentages for the residential traffic and **Figure 6B** illustrates the anticipated trip distribution for the restaurant traffic from the proposed project. **Figure 7** illustrates the peak hour project site generated traffic based on those percentages.

D. Full Development Volumes

Proposed design hour traffic volumes were developed for the AM and PM peak hours by combining the background traffic conditions (**Figure 4**) and the total site generated traffic volumes (**Figure 7**) to yield the traffic volumes under full build conditions. The resulting design hour volumes for the proposed project are illustrated in **Figure 8** under full build-out conditions.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

CAPACITY ANALYSIS

A. Description of Capacity Analysis

A capacity analysis is a technique used for determining a measure of effectiveness for a section of roadway and/or intersection based on the number of vehicles during a specific time period. The measure of effectiveness used for the capacity analysis is referred to as a Level of Service (LOS). Levels of Service are calculated to provide an indication of the amount of delay that a motorist experiences while traveling along a roadway or through an intersection. Since the most amount of delay to motorists usually occurs at intersections, capacity analysis typically focuses on intersections, as opposed to highway segments.

Six Levels of Service are defined for analysis purposes. They are assigned letter designations, from "A" to "F", with LOS "A" representing conditions with little to no delay, and LOS "F" with very long and significant delays to motorists. Suggested ranges of service capacity and an explanation of Levels of Service are included in the Attachments. LOS “C” or better is generally desirable, but LOS “D” for signalized locations and LOS “E” for unsignalized are generally acceptable during peak periods so long as the volume to capacity ratio (v/c) is below 1.0.

The standard procedure for capacity analysis of signalized and unsignalized intersections is outlined in the Highway Capacity Manual (HCM 2016) published by the Transportation Research Board (TRB). Traffic analysis software, Synchro 11, which is based on procedures and methodologies contained in the HCM, was used to analyze operating conditions at study area intersections. The procedure yields a Level of Service based on the HCM as an indicator of how well intersections operate. This study used HCM 2000 methodology for determining operations at the unsignalized intersections in accordance with local NYSDOT Region 5 guidelines.

B. Capacity Analysis Results

Existing and background operating conditions during the peak study periods are evaluated to determine a basis for comparison with the projected future conditions. The future traffic conditions generated by the proposed project were analyzed to assess the operation of the study area intersections. Capacity results for existing, background, and full development conditions are listed in **Table 4**. The discussion following the table summarizes capacity conditions.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

TABLE 4: CAPACITY ANALYSIS RESULTS

INTERSECTION	2022 EXISTING CONDITIONS				2024 BACKGROUND CONDITIONS				2024 FULL DEVELOPMENT CONDITIONS			
	AM		PM		AM		PM		AM		PM	
1. Main Street/Chateau Terrace/Bernhardt Drive (S)												
EB Left - Main Street	A	8.3	A	7.6	A	8.5	A	7.7	A	8.9	A	8.2

WB Left - Main Street	A	8.1	A	7.6	A	8.2	A	7.7	A	8.6	A	7.9
WB Thru/Right - Main Street	A	7.8	A	7.6	A	7.9	A	7.7	A	8.3	A	8.0
NB - Bernhardt Drive	C	30.3	D	36.3	C	30.3	D	36.3	C	30.3	D	36.3
SB - Chateau Terrace	D	37.4	D	37.8	D	37.4	D	38.3	D	38.9	D	39.8
Overall LOS	**A**	**9.3**	**A**	**9.5**	**A**	**9.4**	**A**	**9.7**	**A**	**10.0**	**B**	**10.1**
Volume-to-Capacity (v/c) Ratio	**0.43**		**0.44**		**0.44**		**0.45**		**0.48**		**0.48**	
2. Main Street/Fruehauf Avenue (U)												
EB Left - Main Street	A	9.5	A	9.3	A	9.5	A	9.4	A	9.5	A	9.6
SB - Fruehauf Avenue	B	12.5	B	12.5	B	12.6	B	12.6	B	12.8	B	12.8
3. Fruehauf Avenue/Proposed Driveway (U)												
WB - Proposed Driveway	NA		NA		NA		NA		A	8.7	A	8.9
SB - Fruehauf Avenue									A	0.0	A	0.0
4. Chateau Terrace/Proposed Driveway (U)												
EB - Proposed Driveway	NA		NA		NA		NA		A	8.7	A	8.7
NB - Chateau Terrace									A	0.5	A	1.9

Notes:

1. A(2.8) = Level of Service (Delay in seconds per vehicle)
2. EB = Eastbound, WB = Westbound, NB = Northbound, SB = Southbound
3. (S) = Signalized; (U) = Unsignalized
4. N/A = Approach does not exist and/or was not analyzed during this condition
5. Green shaded cells indicate low delays, yellow shaded cells indicate moderate delays, red shaded cells indicate long delays.
6. The v/c ratio, also referred to as degree of saturation, represents the sufficiency of an intersection to accommodate the vehicular demand. A v/c ratio less than 0.85 generally indicates that adequate capacity is available and vehicles are not expected to experience significant queues and delays. A v/c ratio between 0.85 and 0.95 generally indicates an intersection is nearing capacity. Intersections with a v/c ratio of 1.0 or greater generally indicate conditions at or above capacity.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

1. Main Street/Chateau Terrace/Bernhardt Drive (Signalized)
All movements generally operate at LOS "D" or better under existing and projected background conditions with moderate delays for the northbound and southbound movements. The overall LOS is projected to change from "A" to "B" during the PM peak hour between background and full development conditions. However, this is a borderline condition as the threshold is 10.0 seconds of delay per vehicle. There are no other projected changes in LOS because of the proposed project. There is capacity to accommodate the additional traffic volumes and projected minor impacts from the proposed project; thus, no mitigation is warranted nor recommended.

2. Main Street/Fruehauf Avenue (Unsignalized)
All movements operate at LOS "B" or better under existing, background, and full development conditions during both peak hours. There are no projected changes in LOS between background and full development conditions. There is capacity to accommodate the additional traffic volumes and projected minor impacts from the proposed project; thus, no mitigation is warranted nor recommended.

3. Fruehauf Avenue/Proposed Driveway (Unsignalized)
All movements are projected to operate at LOS "A" under full development conditions. There is capacity to accommodate the additional traffic volumes and projected minor impacts from the proposed project; thus, no mitigation is warranted nor recommended.

4. Chateau Terrace/Proposed Driveway (Unsignalized)
All movements are projected to operate at LOS "A" under full development conditions. There is capacity to accommodate the additional traffic volumes and projected minor impacts from the proposed project; thus, no mitigation is warranted nor recommended.

SIGHT LINE EVALUATION

Based upon a review of the attached site plan, the proposed building is projected to be built in approximately the same footprint as the existing structures fronting Main Street. There is a marked stop bar for traffic exiting Fruehauf Avenue.

In this case, the primary concern is with the proposed building at the existing Main Street/Fruehauf Avenue intersection. The attached **Figure 9** illustrates the sight line evaluation performed at the intersection to the east of the intersection.

Sight distance is provided at intersections to allow drivers to perceive the presence of potentially conflicting vehicles. This should occur in sufficient time for a motorist to stop or adjust their speed, as appropriate, to avoid a collision at the intersection. Sight distance is also provided at intersections to allow the drivers of stopped vehicles a sufficient view of the intersecting highway to anticipate and avoid potential incidents. If the available sight distance for an entering or crossing vehicle is at least equal to the appropriate stopping sight distance for the major road, then drivers have sufficient sight distance to anticipate and avoid collisions.

A Policy on Geometric Design of Highways and Streets (2011) published by the American Association of State Highway and Transportation Officials (AASHTO), was used as a reference to establish the required Stopping Sight Distance (SSD) and desirable Intersection Sight Distance (ISD) for the adjacent driveway location. **Table 5** depicts the results of the sight distance evaluation at the Main Street/Fruehauf Avenue intersection.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

TABLE 5: SIGHT LINE EVALUATION

DESCRIPTION		VALUE
POSTED SPEED		40 MPH
DESIGN SPEED[1]		45 MPH
REQUIRED SSD		360 feet
DESIRABLE ISD		500 feet
AVAILABLE SIGHT DISTANCE TO THE EAST	*SSD*	>360 feet
	ISD	505 feet (no vehicles) 155 feet (parked vehicles)

Note:
1. Design speed equals posted speed plus 5 MPH.

The required SSD is satisfied to the east of the study intersection. When cars are parked in the spaces in front of the building, the ISD is not satisfied. However, with no vehicles parked, the ISD is satisfied.

It is understood that urbanized environments consist of on-street parking, limited to zero building setback lines, and other fixed objects (e.g., signs, trees, street furniture). By regulation, on-street parking is restricted within 20 feet of a crosswalk at an intersection and within 30 feet of a traffic signal or stop sign. In this case, parking is restricted for more than 60 feet along the northern side of Main Street from Fruehauf Avenue. Legally parked vehicles may be considered as allowable objects in this case. It is noted that on-street parking can be beneficial in these settings to reduce vehicle speeds and provide a buffer to pedestrians on the sidewalk. This condition is not unique to this study location and can be found in other areas along Main Street in Amherst and Williamsville.

Parking within the sight triangle may occur throughout the day and limit the sight lines, as noted on **Figure 9**. However, given the existing condition of the intersection and intermittent nature of the sight line being impacted, intersection warning signage may be considered as relief.

CONCLUSIONS & RECOMMENDATIONS

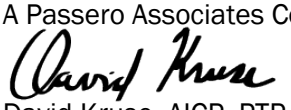
This Traffic Impact Assessment identified and evaluated the potential traffic impacts that can be expected from the proposed mixed-use project to be located at 4548-4564 Main Street in the Town of Amherst, NY. The results of this study determined that the existing transportation network can adequately accommodate the projected traffic volumes and resulting impacts to study area intersections. The following sets forth the conclusions based on the results of the analyses:

1. The proposed project is expected to generate approximately nine entering/17 exiting vehicle trips during the AM peak hour and 53 entering/35 exiting vehicle trips during the PM peak hour.

2. All movements generally operate at LOS “D” or better under existing, projected background, and full development conditions during both peak hours studied at all study intersections. Minimal impacts are projected because of the proposed project. No capacity improvements are recommended at the study intersections.

3. Based upon documentation of southbound queues at the intersection of Main Street/Fruehauf Avenue during the peak hours of study, the proposed driveway location was blocked once during the AM peak hour for a duration of five seconds and was blocked once during the PM peak hour for a duration of three seconds.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)



4. Based upon a sight line evaluation at the Main Street/Fruehauf Avenue intersection, the required SSD is satisfied to the east. However, the desirable ISD is not satisfied if/when on-street parking is present. When parked vehicles are not present, the ISD is fully satisfied. The existing and proposed ISD sight distance will be the same and the proposed building will not impact the existing sight distance.

5. For purposes of the environmental review of the proposed project pursuant to the State Environmental Quality Review Act (SEQRA), it is our firm's professional opinion that the proposed project will not result in any potentially significant adverse traffic impacts to the study area.

If you have any questions or require additional information, please do not hesitate to contact our office.

LEVEL OF SERVICE: CRITERIA/DEFINITIONS

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

Level of Service Criteria

Highway Capacity Manual 2016

SIGNALIZED INTERSECTIONS

Level of Service is a qualitative measure describing operational conditions within a traffic stream, based on service measures such as speed and travel time, freedom to maneuver, traffic interruptions, comfort, and convenience. Level of Service for signalized intersections is defined in terms of delay specifically, average total delay per vehicle for a 15-minute analysis period. The ranges are as follows:

Level of Service	Control Delay per vehicle (seconds)
A	< 10
B	10 – 20
C	20 – 35
D	35 – 55
E	55 – 80
F	>80

UNSIGNALIZED INTERSECTIONS

Level of Service for unsignalized intersections is also defined in terms of delay. However, the delay criteria are different from a signalized intersection. The primary reason for this is driver expectation that a signalized intersection is designed to carry higher volumes than an unsignalized intersection. The total delay threshold for any given Level of Service is less for an unsignalized intersection than for a signalized intersection. The ranges are as follows:

Level of Service	Control Delay per vehicle (seconds)
A	< 10
B	10 – 15
C	15 – 25
D	25 – 35
E	35 - 50
F	>50

Rev. January 2023

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

Project Description

This project is a redevelopment of four parcels with a total of 0.93-acres currently occupied with two (2) multi-tenant buildings and one (1) 950 sf residential house that are all to be demolished. The project is located along Main Street in the Town of Amherst. Proposed construction will include a 34,121 sf multi-story building with associated parking garage, utility, drainage and site improvements.

The proposed sanitary demand for the proposed building will be served by a private 6" SDR-35 PVC lateral that will connect to a private 8" SDR-35 PVC sanitary sewer. The private 8" sanitary sewer will discharge to an existing Town of Amherst sewer manhole within the Fruehaut Avenue R.O.W. Flows then travel north and are ultimately conveyed to the Town of Amherst Wastewater Treatment Facility. Refer to the sewer node maps located at the end of this downstream sewer capacity analysis report.

Node 1 - Harlem Road (12"):

Existing Peak Flow measured (wet weather event)	= 3.379 cfs (2.184 mgd)*
4548-4564 Main St Peak Flow	= 0.074 cfs (0.048 mgd)**
Proposed Total Peak Flow	= 3.453 cfs

Theoretical capacity of existing 12" VTP @ 0.44% = 2.193 cfs

Conclusion: The maximum monitored wet weather flow exceeds the capacity of the existing 8" sewer pipe. One time during the monitoring period the flow depth exceeded the pipe diameter at Node 1 following a 1.56" rainfall event, but at no time during the monitoring period did the flow at any point slow or stall which would have caused a backup or flooding at the manhole. I/I mitigation shall be required for the contribution proposed for this project.

Node 2 - Park School (10"):

Existing Peak Flow measured (wet weather event)	= 1.145 cfs (0.740 mgd)*
4548-4564 Main St Peak Flow	= 0.074 cfs (0.048 mgd)**
Proposed Total Peak Flow	= 1.219 cfs

Theoretical capacity of existing 10" VTP @ 1.19% = 7.012 cfs

Conclusion: The proposed total peak flow is less than the capacity of the 10" VTP pipe, therefore there is sufficient capacity.

Node 3 - West Side Interceptor (60"):

Existing Peak Flow measured (wet weather event)	= 116.831 cfs (75.510 mgd)*
4548-4564 Main St Peak Flow	= 0.074 cfs (0.048 mgd)**
Proposed Total Peak Flow	= 116.904 cfs
Existing Peak Flow (per (T) Amherst)	= 83.705 cfs (54.100 mgd)*
4548-4564 Main St Peak Flow	= 0.074 cfs (0.048 mgd)**
Proposed Total Peak Flow	= 83.779 cfs

Capacity of existing 60" West Side Interceptor = 75.969 cfs (49.1 mgd)

Conclusion: The maximum monitored wet weather flow exceeds the capacity of the existing 60" sewer pipe. One time during the monitoring period the flow depth exceeded the pipe diameter at Node 3 following a 1.56" rainfall event, but at no time during the monitoring period did the flow at any point slow or stall which would have caused a backup or flooding at the manhole. I/I mitigation shall be required for the contribution proposed for this project.

SANITARY SEWER FLOW CAPACITY STUDY – Summary Review

Prepared For: 4558-4564 Main Capacity Analysis

Christopher Wood, PE Partner
487 Main Street, Suite 500
Buffalo, New York 14203

Project Name: 4558-4564 Main Capacity Analysis

Flow Monitoring Period: November 1, 2022 to November 29, 2022

Rain Events (> 0.5-inches) Monitored: November 11 (1.59"), November 17 (0.90"), November 18 (0.59"), and November 19 (1.49")

Number of Monitoring Nodes: Three (3) downstream manholes

Node Locations and Descriptions:

- Node 1 Harlem Rd 12" (12")
- Node 2 Park School 10" (10")
- Node 3 N. Ellicott Crk (59.75")

Summary Conclusion:

Based on the data presented in this report, specifically the flow depth measurements recorded (see graphs below)

- One time did the flow depth exceed pipe diameter at Node 1 and None 3 of the downstream monitoring points during the wet weather events monitored.
- At no time did the flow depth exceed pipe diameter at Node 2 of the downstream monitoring points during the wet weather events monitored.

GENERAL

This project is a redevelopment of four parcels with a total of 0.93-acres currently occupied with two multi-tenant buildings totaling 12,150 S.F. with an associated parking lot, utility and drainage infrastructure and a 950 S.F. residential house with associated driveway and garage. The project is located along Rt. 5 Main Street between Fruehauf Ave and Chateau Terrace in the Town of Amherst. The property abuts general commercial properties along Main Street property and abuts residential properties along the North property line. The existing multi-tenant buildings and residential house will be demolished for the construction of this project.

Existing Conditions:

The site is currently occupied by a multi-tenant building with associated parking lot and a residential house. The site currently is sheet draining any runoff from pavement surface existing on-site drainage structures.

The site contains three existing domestic water services. A ¾" domestic service is located along Main St. that are tapped off the existing 8" water main along the Southside of Main St. A 2" domestic service is tapped off the 6" water main along Fruehauf Ave. A ¾" domestic service, for the residential home, is tapped off the Existing 1" service main along Chateau Terrace. The existing water services will be abandoned as part of this project.

Existing Sanitary Sewers are located along Main Street that discharges into the existing Town of Amherst sewer district #1.

PROJECT OVERVIEW

The proposed project *(Figure 1)* consists of; demolition of the existing 12,150 S.F. multi-tenant buildings, residential house and garage, pavement areas and the clearing of land; construction of a proposed 34,121 S.F. multi-story building with associated parking garage, drainage infrastructure and site improvements to the sites existing grading and utilities.

PROPOSED FACILITIES

Storm Water

SWPPP Engineer's Report prepared by Carmina, Wood, Morris DPC dated May, 2022

Water System

The existing water services to the site are to be abandoned for this proposed project. The proposed development will provide a new water service tap to the 6" main along Chateau Terrace. The proposed domestic and fire services will be backflowed within the proposed building.

Disinfection of the water services following installation will be continuous feed, according to AWWA C-651, latest revision.

Summary: *(Refer to Figure 2)*

Proposed Building:	34,121 S.F.
Operating Demand Increase:	22.29 gpm
Peak Demand Increase:	40.11 gpm
Water Main:	6" main along Chateau Terrace
Static Pressure:	64 PSI
Head Loss Friction:	0.0 psi
Loss through meter/RPZ:	13.0 psi
Elevation Loss:	0.8 psi
Bends Loss:	0 psi
Required Pressure after RPZ:	20 psi
Proposed Pressure after RPZ:	**50.8 PSI**

Sanitary Sewer:

Sanitary services will provide a new sanitary lateral connection to an existing manhole along Fruehauf Ave. The proposed building will be provided a 2,000 Gal grease trap with new 6" SDR-35 PVC lateral sanitary connection.

Summary:

Existing Flow:		3,165 GPD
Proposed New Building S.F.:		34,121 S.F.
Proposed Flow:	Restaurant	35 GPD * 80 Seats = 2,800 GPD
	Residential	110 GPD * 74 Bedrooms = 8,140 GPD
GPD Total =		10,940 GPD
Total Increased Sanitary Flow:		**7,775 GPD**

STORM WATER POLLUTION PREVENTION PROGRAM

801 SCOPE

A. **PURPOSE: Benderson Development LLC** has placed an emphasis on following **the New York State Department of Environmental Conservation (NYSDEC) SPDES General Permit for Stormwater Discharges from Construction Activity** governing storm water discharges during construction, and in accordance with erosion control practices. The Contractor's participation in this program is mandatory and its non-compliance is subject to various remedies, including without limitation, monetary set-offs, withholding payments; reimbursement for costs, expenses (including reasonable attorney's fees), fines and civil penalties incurred by **Benderson Development LLC*;*** and/or liquidated damages. This section provides a descriptive explanation of **Benderson Development LLC's** Storm Water Pollution Prevention Program and required Contractor participation.

The Engineer of record for this project certifies that this SWPPP meets the requirements and is in compliance with the New York State Stormwater Management Design Manual and latest NYSDEC Phase II stormwater regulation requirements.

B. **SPDES General Permit for Stormwater Discharges from Construction Activity:** Regulations promulgated by the NYSDEC to regulate the discharge of storm water from construction activities on sites where more than **one (1)** acre of soil is disturbed. One of the ways to comply with these regulations for affected sites is to request coverage under the General Permit for Construction Activities for New York State. In order to use the General Permit, a Notice of Intent (NOI) form must be completed and mailed to the **NYSDEC** at least ***5 business days*** prior to any earth-disturbing activities (this time frame may increase to 60 business days if a full review of the SWPPP is determined necessary by the NYSDEC) and a Storm Water Pollution Prevention Plan (SWPPP) for the site must be prepared and followed during the construction activities.

Approval from a regulated, traditional land use control MS4:

1. An *owner or operator* of a *construction activity* that is <u>not</u> subject to the requirements of a *regulated, traditional land use control MS4* must first develop a SWPPP in accordance with all applicable requirements of this permit and then submit a completed NOI form to the NYSDEC.

2. An *owner or operator* of a *construction activity* that is subject to the requirements of a *regulated, traditional land use control MS4* must first develop a SWPPP in accordance with all applicable requirements of this permit and then have its SWPPP reviewed and accepted by the *MS4* prior to submitting the NOI to the NYSDEC. The *owner or operator* shall have the "MS4 SWPPP Acceptance" form signed by the principal executive officer or ranking elected official from the *regulated, traditional land use control MS4*, or by a duly authorized representative of that person, and then submit that form along with the NOI to the address referenced under "Notice of Intent (NOI) Submittal".

C. **RESPONSIBILITIES OF THE CONTRACTOR:** The Contractor shall manage the discharge of storm water from the site in accordance with the **NYSDEC** General Permit for Construction Activities conditions and the following provisions of this section. The Operator shall be responsible for conducting the storm water management practices in accordance with the permit. The Contractor shall be responsible for providing qualified inspectors to conduct the inspections required by the SWPPP. The Contractor shall be responsible for any enforcement action taken or imposed by federal, state, or local agencies, including the cost of fines, construction delays, and remedial actions resulting from the Contractor's failure to comply with the permit provisions. **It shall be the responsibility of the Contractor to make any changes to the SWPPP necessary when the Contractor or any of his subcontractors elects to use borrow or fill or material storage sites, either contiguous to or remote from the construction site, when such sites are used solely for this construction site. Such sites are considered to be part of the construction site covered by the permit and this SWPPP. Off-site borrow, fill, or material storage sites which are used for multiple construction projects are not subject to this requirement, unless specifically required by state or local jurisdictional entity regulations. The Contractor should consider this requirement in negotiating with earthwork subcontractors, since the choice of an off-site borrow, fill, or material storage**

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

site may impact their duty to implement, make changes to, and perform inspections required by the SWPPP for the site.

D. **NOTICE OF INTENT:** The Operator has petitioned the **NYSDEC** for coverage under the storm water discharges during construction at this site to be covered by the **SPDES** General Permit for Construction Activity for the State of **New York.** A Notice of Intent (NOI) for coverage under this permit has been filed by the Operator. The SWPPP must be prepared prior to submittal of the NOI form. The Operator will require the Contractor to be a co-permittee with the Operator. The Contractor will be required to post the NOI at the construction site along with any building permits.

E. **CONTRACTOR CERTIFICATION & TRAINING**: Certification and Training of the Contractor's Project Manager and Superintendent will be performed at the Pre-Construction Meeting and administered by the **Operator's Project Manager** and/or **Operator's Engineer**. This Certification and Training Program has been developed to stress the importance of the following topics:

- Erosion and sediment control for water quality protection
- Implementation of erosion and sediment control plans
- The importance to proper installation of erosion and sediment control measures
- Regular inspection by the **owner/operator** and a **Qualified Professional** of erosion and sediment control measures
- Diligent maintenance of erosion and sediment control measures
- Expedient preparation of accurate and complete records regarding inspection and maintenance of erosion and sediment control measures
- Record-keeping for inspections and maintenance activities

Upon completion of the certification and training program, the project will receive a *SWPPP Ledger* for use by the Contractor's Project Manager and Superintendent with all required certifications and record keeping forms involved with the installation and/or maintenance of erosion and sediment control measures. The Operator's certification and training shall be in addition to any federal, state or local certifications or training required or available to comply with SPDES stormwater permit requirements by the Contractor.

F. **REQUIREMENTS FOR THE GENERAL CONTRACTOR AND SUBCONTRACTOR(S):** The *SWPPP Ledger* shall provide a **"Contractor's Certification Log" (Form SWPPP-1)** for both the General Contractor and Subcontractor(s) identifying the Company Name, Business Address and Telephone Number along with the Responsible Person for the Contractor and all subcontractors' who will implement the measures identified in the SWPPP. **The General Contractor and Subcontractor(s) shall also sign the "Contractor's Certification Statement" (Form SWPPP-2)** verifying they have been instructed on how to comply with and fully understand the requirements of the **SPDES** General Permit for Construction Activity for the State of **New York** and the SWPPP. These certifications must be signed, by a responsible corporate officer or other party meeting the "Signatory Requirements" of the SPDES General Permit, on behalf of each entity, prior to the beginning of any construction activities and shall be filed in the project's *SWPPP Ledger*. A Signatory Authorization Designation **(Form SWPPP-11)** must be filled out by each entity giving the authorization for the individual to sign on behalf of the entity.

G. **STORM WATER POLLUTION PREVENTION PROGRAM LOCATION REQUIREMENTS:** The *SWPPP Ledger* is meant to be a working document that shall be maintained at the site of the Construction Activities at all times throughout the project, shall be readily available upon request by the Operator's personnel or **NYSDEC** or any other agency with regulatory authority over storm water issues, and shall be kept on-site until the site complies with the Final Stabilization section of this document. **A sign or other notice must be posted near the main entrance of the construction site which contains a completed NOI, the location of the SWPPP and the name and phone number of a contact person responsible for scheduling SWPPP viewing times, and any other state specific requirements.**

H. **SWPPP LEDGER:** The SWPPP Ledger shall be a three (3) ring binder, the Ledger shall be tabbed and indexed for the following sections:

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

- **Table of Contents**
- **Written SWPPP**
- **Site Map**
- **Erosion and Sedimentation Control Plan(s)**
- **Signed NYSDEC Notice of Intent (NOI)**
- **Copy of Notice of Permit Coverage**
- **Copy of the NYSDEC SPDES General Permit for Construction Activity for the State of New York**
- **Blank Copy of NOI and Notice of Termination (NOT)**
- **Contractor's Certification Log (Form SWPPP-1)**
- **Contractor's Certification Statement (Form SWPPP-2)**
- **Inspection Report(s) (Form SWPPP-3)**
- **Stabilization Schedule (Form SWPPP-4)**
- **Final Stabilization/Termination Checklist (Form SWPPP-5)**
- **Project Rainfall Log (Form SWPPP-6)**
- **Requested Changes to the SWPPP (Form SWPPP-7)**
- **Monthly Training Log (Form SWPPP-8)**
- **Reportable Quantity Release Form (Form SWPPP-9)**
- **Implementation Schedule (Form SWPPP-10)**
- **Signatory Authorization Designation (SWPPP-11)**
- **Owner's Certification (SWPPP-12)**
- **Engineer's Certification (SWPPP-13)**
- **Sample Forms**

The Operator's Project Manager must review and evaluate for compliance the *SWPPP Ledger* at each Project Review. All Inspection and Maintenance Forms must be **signed** by the Operator's Project Manager **(or other duly authorized representative)** at this review and be submitted with the Contractor's Monthly Application for Payment. The approval of the Contractor's Application for Payment will be withheld until the *SWPPP Ledger* is deemed in compliance and all SWPPP Inspection and Maintenance Forms and have been submitted to the satisfaction of the Operator.

I. INSPECTIONS AND RECORD-KEEPING:

A. General Construction Site Inspection and Maintenance Requirements

1. The *owner or operator* must ensure that all erosion and sediment control practices and all post-construction stormwater management practices identified in the SWPPP are maintained in effective operating condition at all times.

2. The terms of this permit shall not be construed to prohibit the State of New York from exercising any authority pursuant to the ECL, common law or federal law, or prohibit New York State from taking any measures, whether civil or criminal, to prevent violations of the laws of the State of New York, or protect the public health and safety and/or the environment.

B. Owner or Operator Maintenance Inspection Requirements

1. The *owner or operator* shall inspect, in accordance with the requirements in the most current version of the technical standard, New York State Standards and Specifications for Erosion and Sediment Control, the erosion and sediment controls identified in the SWPPP to ensure that they are being maintained in effective operating condition at all times.

2. For construction sites where soil disturbance activities have been temporarily suspended (e.g. winter shutdown) and temporary stabilization measures have been applied to all disturbed areas, the *owner or operator* can stop conducting the maintenance inspections. The *owner or operator* shall begin conducting the maintenance inspections in accordance with Part IV.B.1. of the General Permit as soon as soil

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

disturbance activities resume.

3. For construction sites where soil disturbance activities have been shut down with partial project completion, the *owner or operator* can stop conducting the maintenance inspections if all areas disturbed as of the project shutdown date have achieved *final stabilization* and all post-construction stormwater management practices required for the completed portion of the project have been constructed in conformance with the SWPPP and are operational.

C. **Qualified Inspector Inspection Requirements**

The *owner or operator* shall have a *qualified inspector* conduct site inspections in conformance with the following requirements:

Note: The *trained contractor* identified in Part III.A.6 of the General Permit **cannot** conduct the *qualified inspector* site inspections unless they meet the *qualified inspector* qualifications included in Appendix A of the General Permit. In order to perform these inspections, the *trained contractor* would have to be a:

- Licensed Professional Engineer,
- Certified Professional in Erosion and Sediment Control (CPESC),
- Registered Landscape Architect, or
- Someone working under the direct supervision of, and at the same company as, the licensed Professional Engineer or Registered Landscape Architect, provided they have received four (4) hours of Department endorsed training in proper erosion and sediment control principles from a Soil and Water Conservation District, or other Department endorsed entity.

1. A *qualified inspector* shall conduct site inspections for all construction activities identified in Tables 1 and 2 of Appendix B of the General Permit, with the exception of:

   a. The construction of a single family residential subdivision with 25% or less impervious cover at total site build-out that involves a soil disturbance of one (1) or more acres of land but less than five (5) acres and is not located in one of the watersheds listed in Appendix C of the General Permit and not directly discharging to one of the 303(d) segments listed in Appendix E of the General Permit;

   b. The construction of a single family home that involves a soil disturbance of one (1) or more acres of land but less than five (5) acres and is not located in one of the watersheds listed in Appendix C and not directly discharging to one of the 303(d) segments listed in Appendix E of the General Permit;

   c. Construction on agricultural property that involves a soil disturbance of one (1) or more acres of land but less than five (5) acres; and

   d. Construction activities located in the watersheds identified in Appendix D of the General Permit that involve soil disturbances between five thousand (5000) square feet and one (1) acre of land.

2. Unless otherwise notified by the Department, the *qualified inspector* shall conduct site inspections in accordance with the following timetable:

   a. For construction sites where soil disturbance activities are on-going, the *qualified inspector* shall conduct a site inspection at least once every seven (7) calendar days.

   b. For construction sites where soil disturbance activities are on-going and the *owner or operator* has received authorization in accordance with Part II.C.3 of the General Permit to disturb greater than five (5) acres of soil at any one time, the *qualified inspector* shall conduct at least two (2) site inspections every seven (7) calendar days. The two (2) inspections shall be separated by a minimum of two (2) full calendar days.

   c. For construction sites where soil disturbance activities have been temporarily suspended (e.g. winter

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

shutdown) and temporary stabilization measures have been applied to all disturbed areas, the *qualified inspector* shall conduct a site inspection at least once every thirty (30) calendar days. The *owner or operator* shall notify the Regional Office stormwater contact person (see contact information in Appendix F of the General Permit) or, in areas under the jurisdiction of a *regulated, traditional land use control MS4,* the MS4 (provided the MS4 is not the *owner or operator* of the construction activity) in writing prior to reducing the frequency of inspections.

d. For construction sites where soil disturbance activities have been shut down with partial project completion, the *qualified inspector* can stop conducting inspections if all areas disturbed as of the project shutdown date have achieved *final stabilization* and all post-construction stormwater management practices required for the completed portion of the project have been constructed in conformance with the SWPPP and are operational. The *owner or operator* shall notify the Regional Office stormwater contact person or, in areas under the jurisdiction of a *regulated, traditional land use control MS4,* the MS4 (provided the MS4 is not the *owner or operator* of the construction activity). in writing prior to the shutdown. If soil disturbance activities are not resumed within 2 years from the date of shutdown, the *owner or operator* shall have the *qualified inspector* perform a final inspection and certify that all disturbed areas have achieved *final stabilization,* and all temporary, structural erosion and sediment control measures have been removed*;* and that all post-construction stormwater management practices have been constructed in conformance with the SWPPP by signing the "Final Stabilization" and "Post-Construction Stormwater Management Practice" certification statements on the NOT. The *owner or operator* shall then submit the completed NOT form to the address in Part II.A.1 of the General Permit.

3. At a minimum, the *qualified inspector* shall inspect all erosion and sediment control practices to ensure integrity and effectiveness, all post-construction stormwater management practices under construction to ensure that they are constructed in conformance with the SWPPP, all areas of disturbance that have not achieved *final stabilization,* all points of discharge to natural surface waterbodies located within, or immediately adjacent to, the property boundaries of the construction site, and all points of discharge from the construction site.

4. The *qualified inspector* shall prepare an inspection report subsequent to each and every inspection. At a minimum, the inspection report shall include and/or address the following:

   a. Date and time of inspection;

   b. Name and title of person(s) performing inspection;

   c. A description of the weather and soil conditions (e.g. dry, wet, saturated) at the time of the inspection;

   d. A description of the condition of the runoff at all points of discharge from the construction site. This shall include identification of any *discharges* of sediment from the construction site. Include *discharges* from conveyance systems (i.e. pipes, culverts, ditches, etc.) and overland flow;

   e. A description of the condition of all natural surface waterbodies located within, or immediately adjacent to, the property boundaries of the construction site which receive runoff from disturbed areas. This shall include identification of any *discharges* of sediment to the surface waterbody;

   f. Identification of all erosion and sediment control practices that need repair or maintenance;

   g. Identification of all erosion and sediment control practices that were not installed properly or are not functioning as designed and need to be reinstalled or replaced;

   h. Description and sketch of areas that are disturbed at the time of the inspection and areas that have been stabilized (temporary and/or final) since the last inspection;

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

i. Current phase of construction of all post-construction stormwater management practices and identification of all construction that is not in conformance with the SWPPP and technical standards;

j. Corrective action(s) that must be taken to install, repair, replace or maintain erosion and sediment control practices; and to correct deficiencies identified with the construction of the post-construction stormwater management practice(s); and

k. Digital photographs, with date stamp, that clearly show the condition of all practices that have been identified as needing corrective actions. The *qualified inspector* shall attach paper color copies of the digital photographs to the inspection report being maintained onsite within seven (7) calendar days of the date of the inspection. The *qualified inspector* shall also take digital photographs, with date stamp, that clearly show the condition of the practice(s) after the corrective action has been completed. The *qualified inspector* shall attach paper color copies of the digital photographs to the inspection report that documents the completion of the corrective action work within seven (7) calendar days of that inspection.

5. Within one business day of the completion of an inspection, the *qualified inspector* shall notify the *owner or operator* and appropriate contractor or subcontractor identified in Part III.A.6. of any corrective actions that need to be taken. The contractor or subcontractor shall begin implementing the corrective actions within one business day of this notification and shall complete the corrective actions in a reasonable time frame.

6. All inspection reports shall be signed by the *qualified inspector*. Pursuant to Part II.C.2 of the General Permit, the inspection reports shall be maintained on site with the SWPPP.

Record Retention - The *owner or operator* shall retain a copy of the NOI, NOI Acknowledgment Letter, SWPPP, MS4 SWPPP Acceptance form and any inspection reports that were prepared in conjunction with this permit for a period of at least five (5) years from the date that the site achieves *final stabilization*. This period may be extended by the Department, in its sole discretion, at any time upon written notification.

- **Form SWPPP-3** **Inspection Report**
- **Form SWPPP-4** **Stabilization Schedule**
- **Form SWPPP-5** **Final Stabilization/Termination Checklist**
- **Form SWPPP-6** **Project Rainfall Log**
- **Form SWPPP-7** **Requested Changes to the SWPPP**
- **Form SWPPP-8** **Monthly Training Log**
- **Form SWPPP-9** **Reportable Quantity Release Form**
- **Form SWPPP-10** **Implementation Schedule**
- **Form SWPPP-11** **Signatory Authorization Designation**
- **Form SWPPP-12** **Owner's Certification**
- **Form SWPPP-13** **Engineer's Certification**

J. **SWPPP MODIFICATIONS:** The inspection report should also identify if any revisions to the SWPPP are warranted due to unexpected conditions. The SWPPP is meant to be a dynamic working guide that is to be kept current and amended whenever there is a change in design, construction, operation, or maintenance at the construction site that has or could have a significant effect on the discharge of pollutants or when the plan proves to be ineffective in eliminating or significantly minimizing pollutant discharges. Any such changes to the SWPPP must be made in writing on the "**Requested Changes to the SWPPP" (Form SWPPP-7)** within 7 days of the date of such modification or amendment is made. The Contractor's failure to modify or report deficiencies to the Operator will result in the Contractor being liable for fines and construction delays resulting from any federal, state, or local agency enforcement action.

K. **CONTRACTOR'S MONTHLY TRAINING:** The Contractor shall provide monthly training sessions for all entities and subcontractors involved with installing, applying, performing, maintaining and inspection of the SWPPP. Logs of each monthly training shall be kept by the Contractor on the "Monthly Training Log" **(Form SWPPP-8)**, in the *SWPPP Ledger*. Training shall educate the attendees on the topics of:

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

- The Location and Type of Control Measures
- The Construction Requirements for the Control Measures
- Maintenance Procedures for each of the Control Measures
- Spill Prevention and Cleanup Measures
- Inspection and Maintenance Record Keeping Requirements

L. **FINAL STABILIZATION AND TERMINATION OF PERMIT COVERAGE:** A site can be considered finally stabilized when all soil disturbing activities have been completed and a uniform perennial vegetative cover with a density of **85%** for the unpaved areas and areas not covered by permanent structures has been established or equivalent permanent stabilization measures have been established and the facility no longer discharges storm water associated with construction activities and a Notice of Termination (NOT) form filed by the Operator(s) with the NYSDEC. The Operator's Project Manager must complete the NOT. The NOT must be signed by the signatory (or equivalent position) on the NOI and subsequently submitted to the appropriate agency. The Operator's Project Manager must provide a completed copy of the NOT to the Contractor for inclusion in the SWPPP, which will then be optically scanned into the final SWPPP document as required. This filing terminates coverage under the General Permit and terminates the Contractor's responsibility to implement the SWPPP, but the requirements of the SWPPP, including periodic inspections, must be continued until the NOT is filed. The owner or operator shall also have the qualified inspector perform a final site inspection prior to submitting the NOT to the Department. In addition, the qualified inspector must verify during the final inspection that all Town of Amherst requirements for Final Stabilization have been satisfied prior to Town of Amherst signature of the NOT. Upon achieving this milestone, the Contractor shall also submit "Final Stabilization Certification/Termination Checklist" **(Form SWPPP-5)**. Final payment and/or the release of retainage will be withheld until all provisions of the SWPPP have been submitted, completed and accepted by the Operator.

802 PROJECT NAME AND LOCATION

Proposed Site Redevelopment
4548-4564 Main Street
Town of Amherst, NY 14226
42.963°N, 78.782°W
Estimated Area of Site ≈ 1.02+/- acres
Estimated Area to be Disturbed by Construction Activities ≈ 1.02+/- acres

A general location map is included as Appendix A.

803 OPERATOR'S NAME AND ADDRESS

Benderson Development LLC
570 Delaware Ave
Buffalo, NY 14202
Contact Person: Matt Oates
Telephone: 716-878-9397

804 PROJECT DESCRIPTION

This redevelopment project will consist of the construction of a 3-story mixed-use building that will include apartments, restaurant space and multi-level parking. The site is located on the north side of Main Street (NY-5), between Fruehauf Ave and Chateau Terrace in the Town of Amherst. The existing site is currently occupied by a 3-story vacant building located along the Main Street frontage. Existing surface parking is located north behind the existing building. Both the existing building and parking areas will be removed as part of this project. The overall site area is approximately 0.93+/- acres, however, construction activities will result in approximately 1.02+/- acres of disturbance area.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

Soil disturbing activities will include:

A. Construction of temporary construction exit point
B. Clearing & grubbing of the site within disturbance limits
C. Construction of detention basin & bioretention area
D. Installation of storm sewer pipes and inlets
E. Construction of utilities
F. Construction of driveways and parking lot
G. Final grading & landscaping
H. Construction of building

This project is owned by **Benderson Development LLC** and will be developed by **Benderson Development LLC**. The work area consists of approximately 1.02+/- acres for which erosion and sediment controls have been developed and fully addressed in this written plan and the Erosion and Sediment Control Plans. See the construction documents for additional details

805 RUNOFF COEFFICIENT, SOILS, AND RAINFALL INFORMATION

The initial runoff curve number for the pre-construction site is "CN" = 95. The post-construction runoff curve number for the site will be "CN" = 95. Approximately 1.02+/- acres will be disturbed by construction activities.

See soils information located in Appendix D

The site is in Erie County, which receives an average of approximately 35 inches rainfall annually with the highest amounts of rainfall received in the months of May thru September. Annual snow for this area is approximately 100 inches.

806 WATERS

The runoff generated from this site will discharge to the existing closed Town of Amherst storm sewer that is ultimately tributary to Ellicott Creek and the Niagara River.

807 INDIAN COUNTRY LANDS

This project is not located on Indian Lands.

808 ENDANGERED AND THREATENED SPECIES

No endangered/threatened species have been determined to be on the site.

809 CRITICAL HABITAT

No critical habitats have been determined to be on the site.

810 HISTORIC PLACES

The assessed property is not listed in the National Register of Historical Places.

811 WETLANDS AND/OR OTHER SURFACE WATERS

No wetlands are located on the site.

812 EROSION AND SEDIMENT CONTROLS

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

812.1 STABILIZATION PRACTICES

Stabilization practices for this site include:

A. Land clearing activities shall be done only in areas where earthwork will be performed and shall progress as earthwork is needed.
B. Use of stabilization method for all slopes having a slope greater than 1V:3H.
C. Permanent seeding and planting of all unpaved areas using the hydromulching grass seeding technique.
D. Mulching exposed areas.
E. Vegetation preservation in undisturbed areas.
F. Frequent watering to minimize wind erosion during construction.

a. For sites where **5 acres or more** are disturbed at any one time: In areas where soil disturbance activity has been temporarily or permanently ceased, temporary and/or permanent soil stabilization measures shall be installed and/or implemented within seven (7) days from the date the soil disturbance activity ceased. The soil stabilization measures selected shall be in conformance with the most current version of the *New York Standards and Specifications for Erosion and Sediment Control.*
b. The owner or operator shall prepare a phasing plan that defines maximum disturbed area per phase and shows required cuts and fills.
c. The owner or operator shall install any additional measures needed to protect water quality.

812.2 STRUCTURAL PRACTICES

Structural practices for this site include:

A. Inlet protection using a method detailed in the Construction Documents.
B. Perimeter protection using temporary silt fence.
C. Outlet protection using rip-rap stone and end sections.
D. Stabilized Construction Entrance.
E. Temporary stone wash off areas.
F. Storm sewer, curb/gutter.
G. Sediment traps and basins.

812.3 SEQUENCE OF MAJOR ACTIVITIES

The Contractor will be responsible for implementing the following erosion control and storm water management control measures. The Contractor may designate these tasks to certain subcontractors as he sees fit, but the ultimate responsibility for implementing these controls and ensuring their proper functioning remains with the Contractor. The order of activities will be as follows:

A. Construct temporary construction exits at locations shown on the Demolition & Erosion Control Plan Sheet.
B. Install perimeter silt fences in the locations shown on the Demolition & Erosion Control Plan Sheet.
C. Clear & Grub site.
D. Construction of detention basin & bioretention area.
E. Commence site grading.
F. Disturbed areas of the site where construction activity has ceased for more than 14 days shall be temporarily seeded and watered.
G. Installation of proposed utilities.
H. Finalize pavement subgrade preparation.
I. Construct all curb, drainage inlets, storm sewer pipes and storm sewer manholes, as shown on the plans. Install temporary inlet protection at the locations of all inlets.
J. Dust control.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

K. Remove inlet protection around inlets and manholes no more than 48 hours prior to placing stabilized base course.
L. Install base material as required for pavement.
M. Carry out final grading and seeding and planting.
N. Clean storm system following construction.
O. Remove silt fencing only after all paving is complete and exposed surfaces are stabilized.
P. Remove temporary construction exits only prior to pavement construction in these areas.

A schedule for implementation for the activities identified above is included as Form SWPPP-4 of the SWPPP.

Note: Sediment control storage during construction (traps & basins) during construction shall be 134cy per acre of disturbance per NYSDEC requirements.

812.4 STORM WATER MANAGEMENT: See Appendix D, Engineer's Report

813 OTHER CONTROLS

813.1 OFF-SITE VEHICLE TRACKING

A stabilized construction exit will be provided to help reduce vehicle tracking of sediments. Existing paved areas will remain as long as possible and will be used for vehicle wash areas and to further aid in the reduction of vehicle tracking of sediments. The paved streets adjacent to the site entrance shall be inspected daily and swept as necessary to remove any excess mud, dirt, or rock tracked from the site. Dump trucks hauling material to/from the construction site will be covered with a tarpaulin. The job site superintendent will be responsible for seeing that these procedures are followed.

813.2 EXCAVATION SPOIL MATERIALS

Excavation spoil materials are generated during the excavation of the development's building and utilities installation. These materials must be properly managed to prevent them from contributing to storm water discharges. The materials generated from the development of this project will be hauled off-site or stockpiled for re-use in designated areas which will have temporary erosion & sediment control measures installed. Any removal from site will be done under the necessary permits required by the local governing agencies.

813.3 DUST CONTROL

Minimizing wind erosion and controlling dust will be accomplished by one or more of the following methods:
A. Frequent watering of excavation and fill areas.
B. Providing gravel or paving at entrance/exit drives, parking areas and transit paths.

813.4 WASTE DISPOSAL

If needed, all waste materials will be collected and stored in securely lidded metal dumpsters rented from an approved waste management company. The dumpster will comply with all local and state solid waste management regulations.

All trash and construction debris from the site will be deposited in the dumpsters. The dumpsters will be emptied when full and then hauled to a NYSDEC approved landfill for proper disposal. No construction waste will be buried on-site. All personnel will be instructed regarding the correct procedures for waste disposal.

813.5 SANITARY WASTE

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

If needed, portable toilet units or field offices with toilet facilities connected to the municipal sanitary sewer will be used for sanitary purposes. All portable toilet units will be emptied a minimum of once per week by a licensed portable facility provided in compliance with local and state regulations.

813.6 CONCRETE WASTE FROM CONCRETE TRUCKS

A. Emptying of excess unhardened concrete and/or washout from concrete delivery trucks will be allowed on the job site, but in either (1) specifically designated diked areas which have been prepared to prevent contact between concrete and/or washout and storm water which will be discharged from the site or (2) in locations where waste concrete will be poured into forms to make rip-rap or other useful concrete products.

B. Hardened waste concrete from the designated diked areas described above will be disposed of in accordance with applicable local and state regulations with regards to disposal of construction debris.

813.7 HAZARDOUS SUBSTANCES & HAVARDOUS WASTE

A. All hazardous waste materials will be disposed of by the Contractor in the manner specified by local, state, and/or federal regulations and by the manufacturer of such products. Site personnel will be instructed in these practices by the job superintendent, who will also be responsible for seeing these practices are followed. Material Safety Data Sheets (MSDS's) for each substance with hazardous properties that is used on the job site will be obtained and used for the proper management of potential wastes that may result from these products. An MSDS will be posted in the immediate area where such products are stored and/or used and another copy of each MSDS will be maintained in the SWPPP file at the job site construction office. Each employee who must handle a substance with hazardous properties will be instructed on the use of MSDS sheets and the specific information in the applicable MSDS for the product he/she is using, particularly regarding spill control techniques.

B. The contractor will implement the Spill Prevention Control and Countermeasures (SPCC) Plan found within this SWPPP and will train all personnel in the proper cleanup and handling of spilled materials. No spilled hazardous materials of hazardous wastes will be allowed to come in contact with storm water discharges. If such contact occurs, the storm water discharge shall be contained on site until appropriate measures in compliance with state and federal regulations are taken to dispose of such contaminated storm water. It shall be the responsibility of the job superintendent to properly train all personnel in the use of the SPCC plan.

C. Any spills of hazardous materials which are in excess of the Reportable Quantities as defined by the EPA regulations shall be immediately reported to the EPA National Response Center at 1-800-424-8802. From SWPPP-9 "Reportable Quantity Release Form" must be filled out.

D. In order to minimize the potential for a spill of hazardous materials to come in contact with storm water, the following steps will be implemented:

1. All materials with hazardous properties (such as pesticides, petroleum products, fertilizers, detergents, construction chemicals, acids, paints, paint solvents, cleaning solvents, additives for soil stabilization, concrete curing compounds and additives, etc.) will be stored in a secure location, under cover, when not in use.
2. The minimum practical quantity of all such materials will be kept on the job site.
3. A spill control and containment kit (containing for example, absorbent such as kitty litter or sawdust, acid neutralizing powder, brooms, dust pans, mops, rags, gloves, goggles, plastic and metal trash containers, etc.) will be provided at the storage site.
4. All of the product in a container will be used before the container is disposed of. All such containers will be triple rinsed with water prior to disposal. The rinse water used in these

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

containers will be disposed of in a manner in compliance with state and federal regulations and will not be allowed to mix with storm water discharges.

5. All products will be stored in and used from the original container with the original product label.
6. All products will be used in strict compliance with instructions on the product label.
7. The disposal of excess or used products will be in strict compliance with instructions on the product label.

813.8 CONTAMINATED SOILS

A. Any contaminated soils (resulting from spills of materials with hazardous properties) which may result from construction activities will be contained and cleaned up immediately in accordance with the procedures given in the Spill Prevention Control and Countermeasures (SPCC) Plan and in accordance with applicable state and federal regulations.

B. The job site superintendent will be responsible for seeing that these procedures are followed.

814 COMPLIANCE WITH FEDERAL, STATE, AND LOCAL REGULATIONS

The Contractor will obtain copies of any and all local and state regulations which are applicable to storm water management, erosion control, and pollution minimization at this job site and will comply fully with such regulations. The Contractor will submit written evidence of such compliance if requested by the Operator or any agent of a regulatory body. The Contractor will comply with all conditions of the **SPDES** General Permit for Construction Activity for the State of **New York**, including the conditions related to maintaining the SWPPP and evidence of compliance with the SWPPP at the job site and allowing regulatory personnel access to the job site and to records in order to determine compliance.

815 INSPECTION AND MAINTENANCE PROCEDURES

The following inspection and maintenance practices will be used to maintain erosion and sediment controls and stabilization measures.

1. All control measures will be inspected by the **owner/operator** at least weekly and shall continue until the site complies with the Final Stabilization section of this document (See Section 816)

2. All control measures will be inspected by a **Qualified Professional** twice a week separated by at least two (2) full calendar days and shall continue until the site complies with the Final Stabilization section of this document (See Section 816)

3. All measures will be maintained in good working order; if repairs or other measures are found to be necessary, they will be initiated within 24 hours of report.

4. Built up sediment will be removed from silt fence when it has reached one-third the height of the fence.

5. Silt fences will be inspected for depth of sediment, tears, etc., to see if the fabric is securely attached to the fence posts, and to see that the fence posts are securely in the ground.

6. Inlet protection and the stabilized construction entrance shall be inspected to see if these measures are functioning properly or if maintenance is required.

7. Temporary and permanent seeding and all other stabilization measures will be inspected for bare spots, washouts, and healthy growth.

8. A maintenance inspection report will be made after each inspection. Copies of the report forms to be completed by the inspector are included in this SWPPP.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

9. The job site superintendent will be responsible for selecting and training the individuals who will be responsible for these inspections, maintenance and repair activities, and filling out inspection and maintenance reports.

10. Personnel selected for the inspection and maintenance responsibilities will receive training from the job site superintendent. They will be trained in all the inspection and maintenance practices necessary for keeping the erosion and sediment controls that are used onsite in good working order. They will also be trained in the completion of, initiation of actions required by, and the filing of the inspection forms. Documentation of this personnel training will be kept on site with the SWPPP.

11. Disturbed areas and materials storage areas will be inspected for evidence of or potential for pollutants entering stormwater systems.

12. Report to the NYSDEC within 24 hours any noncompliance with the SWPPP that will endanger public health or the environment. Follow up with a written report within 5 days of the noncompliance event. The following events require 24 hour reporting: a) any unanticipated bypass which exceeds any effluent limitation in the permit, b) any upset which exceeds any effluent limitation in the permit, and c) a violation of a maximum daily discharge limitation for any of the pollutants listed by the NYSDEC in the permit to be reported within 24 hours. The written submission must contain a description of the non-compliance and its cause; the period of non-compliance, including exact dates and times, and if the non-compliance has not been corrected, the anticipated time it is expected to continue; and steps taken or planned to reduce, eliminate, and prevent recurrence of the non-compliance.

13. Releases of hazardous substances or oil in excess of reportable quantities (as established under 40 CFR 110, 40 CFR 117 or 40 CFR 302) must be reported.

Upon completion of construction, the property owner is responsible for ensuring that the stormwater facilities are regularly inspected and maintained. Maintenance and inspection procedures are as follows.

1. On a quarterly basis and following significant rainfall events or snow-melts, perform the following:
   - Inspect catch basins, storm manholes, treatment structures, storm piping and stormwater ponds for debris and accumulation of sediment.
   - Remove and properly dispose of any collected debris and sediment in accordance with applicable state, federal and local regulations.
   - Flush piping with water if necessary to remove accumulated sediment.
   - Clean treatment structures per manufacturer's recommendations
   - Check all stone outfall structures for erosion and re-stone if necessary to prevent further erosion.
   - Inspect grassed/landscaped areas for un-vegetated areas or areas with less than 80% healthy stand of grass and reseed and mulch as necessary. Water daily if reseeded in July and August.
   - A record of all inspections should be kept.
2. Maintain all lawn areas by regular mowing, including the grassed slopes of the stormwater ponds and any grass swales. Any eroded areas shall be regarded, seeded and mulched immediately.

816 INSPECTION AND MAINTENANCE REPORT FORMS

Once installation of any required or optional erosion control device or measure has been implemented, inspections shall be performed by a Qualified Professional at least once every seven (7) calendar days. For construction sites where soil disturbance activities are on-going and the owner or operator has received authorization in accordance with Part II.C.3 of the General Permit to disturb greater than five (5) acres of soil at any one time, the qualified inspector shall conduct at least two (2) site inspections every seven (7) calendar days. The two (2) inspections shall be separated by a minimum of two (2) full calendar days. The owner and contractor shall obtain from the MS4 an approval for disturbing more than five-acres at any given time. For construction sites where active construction has been suspended, inspection frequency under the general permit can be reduced to once every 30 days, provided temporary stabilization measures have been applied to all disturbed areas. The forms found in this SWPPP shall be used by the inspectors to inventory and report the

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

condition of each measure to assist in maintaining the erosion and sediment control measures in good working order.

These report forms shall become an integral part of the SWPPP and shall be made readily accessible to governmental inspection officials, the Operator's Engineer, and the Operator for review upon request during visits to the project site. In addition, copies of the reports shall be provided to any of these persons, upon request, via mail or facsimile transmission. Inspection and maintenance report forms are to be maintained by the permittee for five years following the final stabilization of the site.

THE TOWN OF AMHERST IS TO BE PROVIDED WITH A COPY OF ALL SWPPP INSPECTIONS WITHIN ONE WORKING DAY OF PERFORMING THE INSPECTION.

817 OTHER RECORD-KEEPING REQUIREMENTS

The Contractor shall keep the following records related to construction activities at the site:

- Dates when major grading activities occur and the areas which were graded
- Dates and details concerning the installation of structural controls
- Dates when construction activities cease in an area
- Dates when an areas is stabilized, either temporarily or permanently
- Dates of rainfall and the amount of rainfall
- Dates and descriptions of the character and amount of any spills of hazardous materials
- Records of reports filed with regulatory agencies if reportable quantities of hazardous materials spilled

818 SPILL PREVENTION CONTROL AND COUNTERMEASURES (SPCC) PLAN

818.1 MATERIALS COVERED

The following materials or substances are expected to be present onsite during construction:

Concrete/Additives/Wastes	Cleaning solvents
Detergents	Petroleum based products
Paints/Solvents	Pesticides
Acids	Fertilizers
Solid and construction wastes	Sanitary wastes
Soil stabilization additives	

818.2 MATERIAL MANAGEMENT PRACTICES

The following are the material management practices that will be used to reduce the risk of spills or other accidental exposure of materials and substances to stormwater runoff. The job site superintendent will be responsible for ensuring that these procedures are followed.

A. Good Housekeeping

The following good housekeeping practices will be followed onsite during the construction project.

1. An effort will be made to store only enough products required to do the job.
2. All materials stored onsite will be stored in a neat, orderly manner and, if possible, under a roof or in a containment area. At a minimum, all containers will be stored with their lids on when not in use. Drip pans shall be provided under all dispensers.
3. Products will be kept in their original containers with the original manufacturer's label in legible condition.
4. Substances will not be mixed with one another unless recommended by the manufacturer.
5. Whenever possible, all of a product will be used up before disposing of the container.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

6. Manufacturer's recommendations for proper use and disposal will be followed.
7. The job site superintendent will be responsible for daily inspections to ensure proper use and disposal of materials.

B. Hazardous Products

These practices will be used to reduce the risks associated with hazardous materials. Material Safety Data Sheets (MSDS's) for each substance with hazardous properties that is used on the job site will be obtained and used for the proper management of potential wastes that may result from these products. An MSDS will be posted in the immediate area where such product is stored and/or used and another copy of each MSDS will be maintained in the SWPPP file at the job site construction trailer office. Each employee who must handle a substance with hazardous properties will be instructed on the use of MSDS sheets and the specific information in the applicable MSDS for the product he/she is using, particularly regarding spill control techniques.

1. Products will be kept in original containers with the original labels in legible condition.
2. Original labels and material safety data sheets (MSDS's) will be procured and used for each material.
3. If surplus product must be disposed of, manufacturer's or local/state/federal recommended methods for proper disposal will be followed.
4. A spill control and containment kit (containing for example, absorbent such as kitty litter or sawdust, acid neutralizing powder, brooms, dust pans, mops, rags, gloves, goggles, plastic and metal trash containers, etc.) will be provided at the storage site.
5. All of the product in a container will be used before the container is disposed of. All such containers will be triple rinsed with water prior to disposal. The rinse water used in these containers will be disposed of in a manner in compliance with state and federal regulations and will not be allowed to mix with storm water discharges.

C. Hazardous Waste

All hazardous waste materials will be disposed of by the Contractor in the manner specified by local, state, and/or federal regulations and by the manufacturer of such products. Site personnel will be instructed in these practices by the job site superintendent, who will also be responsible for seeing that these practices are followed.

D. Product Specific Practices

The following product specific practices will be followed on the job site.

1. Petroleum Products

All onsite vehicles will be monitored for leaks and receive regular preventative maintenance to reduce the chance of leakage. Petroleum products will be stored in tightly sealed containers which are clearly labeled. **Any petroleum storage tanks stored onsite will be located within a containment area that is designed with an impervious surface between the tank and the ground. The secondary containment must be designed to provide a containment volume that is equal to 110% of the volume of the largest tank.** Drip pans shall be provided for all dispensers. Any asphalt substances used onsite will be applied according to the manufacturer's recommendations. The location of any fuel tanks and/or equipment storage areas must be identified on a plan by the contractor once the locations have been determined.

2. Fertilizers

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

Fertilizers will be applied only in the minimum amounts recommended by the manufacturer. Once applied, fertilizer will be worked in the soil to limit exposure to stormwater. Storage will be in a covered shed. The contents of any partially used bags of fertilizer will be transferred to a sealable plastic bin to avoid spills.

3. Paints, Paint Solvents, and Cleaning Solvents

All containers will be tightly sealed and stored when not in use. Excess paint and solvents will not be discharged to the storm sewer system but will be properly disposed of according to manufacturer's instructions or state and federal regulations.

4. Concrete Wastes

Concrete trucks will be allowed to wash out or discharge surplus concrete or drum wash water on the site, but only in either (1) specifically designated diked areas which have been prepared to prevent contact between the concrete and/or wash out and storm water which will be discharged from the site or (2) in locations where waste concrete can be poured into forms to make riprap or other useful concrete products.

The hardened residue from the concrete wash out diked areas will be disposed of in the same manner as other non-hazardous construction waste materials or may be broken up and used on site as deemed appropriate by the Contractor. The job site superintendent will be responsible for seeing that these procedures are followed.

All concrete wash out areas will be located in an area where the likelihood of the area contributing to storm water discharges is negligible. If required, additional BMPs must be implemented to prevent concrete wastes from contributing to storm water discharges. The location of concrete wash out area(s) must be identified on a plan by the contractor once the locations have been determined. In addition, a standard detail on the construction of the concrete wash out shall be included on this plan.

E. Solid and Construction Wastes

All waste materials will be collected and stored in an appropriately covered container and/or securely lidded metal dumpster rented from a local waste management company which must be a solid waste management company licensed to do business in New York and the Town of Amherst. The dumpster will comply with all local and state solid waste management regulations.

All trash and construction debris from the site will be deposited in the dumpster. The dumpster will be emptied a minimum of twice per week or more often if necessary, and the trash will be hauled to a landfill approved by the NYSDEC. No construction waste materials will be buried on site. All personnel will be instructed regarding the correct procedures for waste disposal.

All waste dumpsters and roll-off containers will be located in an area where the likelihood of the containers contributing to storm water discharges is negligible. If required, additional BMPs must be implemented, such as sandbags around the base, to prevent wastes from contributing to storm water discharges. The location of waste dumpsters and roll-off containers must be identified on a plan by the contractor once the locations have been determined.

F. Sanitary Wastes

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

Portable toilet units or field offices with toilet facilities connected to the municipal sanitary sewer will be used for sanitary purposes. All portable toilet units will be emptied a minimum of once per week by a licensed portable facility provided in compliance with local and state regulations.

All sanitary waste units will be located in an area where the likelihood of the unit contributing to storm water discharges is negligible. If required, additional BMPs must be implemented, such as sandbags around the base, to prevent wastes from contributing to storm water discharges. The location of sanitary waste units must be identified on a plan by the contractor once the locations have been determined.

G. Contaminated Soils

Any contaminated soils (resulting from spills of materials with hazardous properties) which may result from construction activities will be contained and cleaned up immediately in accordance with the procedures given in the Materials Management Plan and in accordance with applicable state and federal regulations.

818.3 SPILL PREVENTION AND RESPONSE PROCEDURES

The Contractor will train all personnel in the proper handling and cleanup of spilled materials. No spilled hazardous materials or hazardous wastes will be allowed to come in contact with storm water discharges. If such contact occurs, the storm water discharge will be contained on site until appropriate measures in compliance with state and federal regulations are taken to dispose of such contaminated storm water. It shall be the responsibility of the job site superintendent to properly train all personnel in spill prevention and clean up procedures.

A. In order to minimize the potential for a spill of hazardous materials to come into contact with storm water, the following steps will be implemented:

1. All materials with hazardous properties (such as pesticides, petroleum products, fertilizers, detergents, construction chemicals, acids, paints, paint solvents, cleaning solvents, additives for soil stabilization, concrete curing compounds and additives, etc.) will be stored in a secure location, with their lids on, preferably under cover, when not in use.

2. The minimum practical quantity of all such materials will be kept on the job site.

3. A spill control and containment kit (containing, for example, absorbent materials, acid neutralizing powder, brooms, dust pans, mops, rags, gloves, goggles, plastic and metal trash containers, etc.) will be provided at the storage site.

4. Manufacturer's recommended methods for spill cleanup will be clearly posted and site personnel will be trained regarding these procedures and the location of the information and cleanup supplies.

B. In the event of a spill, the following procedures should be followed

1. All spills will be cleaned up immediately after discovery.

2. The spill area will be kept well ventilated and personnel will wear appropriate protective clothing to prevent injury from contact with the hazardous substances.

3. The project manager and the Engineer of Record will be notified immediately.

Spills of toxic or hazardous materials will be reported to the appropriate federal, state, and/or local government agency, regardless of the size of the spill. Spills of amounts that exceed

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

Reportable Quantities of certain substances specifically mentioned in federal regulations (40 CFR 110, 40 CFR 117, and 40 CFR 302) must be immediately reported to the EPA National Response Center, telephone 1-800-424-8802. From SWPPP-9 "Reportable Quantity Release Form" must be filled out.

4. If the spill exceeds a Reportable Quantity, the SWPPP must be modified within seven (7) calendar days of knowledge of the discharge to provide a description of the release, the circumstances leading to the release, and the date of the release. The plans must identify measures to prevent the recurrence of such releases and to respond to such releases.

C. The job site superintendent will be the spill prevention and response coordinator. He will designate the individuals who will receive spill prevention and response training. These individuals will each become responsible for a particular phase of prevention and response. The names of these personnel will be posted in the material storage area and in the office trailer onsite.

819 CONTROL OF NON-STORM WATER DISCHARGES

Certain types of discharges are allowable under the **NYSDEC SPDES** General Permit for Construction Activity for the State of **New York**, and it is the intent of this SWPPP to allow such discharges. These types of discharges will be allowed under the conditions that no pollutants will be allowed to come in contact with the water prior to or after its discharge. The control measures which have been outlined previously in this SWPPP will be strictly followed to ensure that no contamination of these non-storm water discharges takes place. The following allowable non-storm water discharges which may occur at the job site include:

A. Discharges from fire fighting activities.
B. Fire hydrant flushings (see note below)
C. Waters used to wash vehicles or control dust in order to minimize offsite sediment tracking.
D. Routine external building washdown which does not use detergents.
E. Pavement washwaters where spills or leaks of hazardous materials have not occurred or detergents have not been used.
F. Air conditioning condensate.
G. Springs or other uncontaminated groundwater, including dewatering ground water infiltration.
H. Foundation or footing drains where no contamination with process materials such as solvents is present.

Note: The Contractor shall discharge any super-chlorinated water from water distribution pipe disinfection activities into sanitary sewer system

820 STORM WATER CONTROL FACILITY MAINTENANCE

The proposed stormwater drainage system area shall be inspected 2 times per year (spring and fall) for removal of silt and debris. See Appendix H: Stormwater Management Pond and Bioretention Construction and Maintenance Checklist.

1. Provide the Geographic Coordinates for the project site. To do this, go to the NYSDEC Stormwater Interactive Map on the DEC website at:

https://gisservices.dec.ny.gov/gis/stormwater/

Zoom into your Project Location such that you can accurately click on the centroid of your site. Once you have located the centroid of your project site, go to the bottom right hand corner of the map for the X, Y coordinates. Enter the coordinates into the boxes below. For problems with the interactive map use the help function.

X Coordinates (Easting)

-7 8782

Ex. -73.749

Y Coordinates (Northing)

42963

Ex. 42.652

2. What is the nature of this construction project?

○ **New Construction**

● **Redevelopment with increase in impervious area**

○ **Redevelopment with no increase in impervious area**

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

3. Select the predominant land use for both pre and post development conditions.
SELECT ONLY ONE CHOICE FOR EACH

Pre-Development Existing Land Use

- ○ FOREST
- ○ PASTURE/OPEN LAND
- ○ CULTIVATED LAND
- ○ SINGLE FAMILY HOME
- ○ SINGLE FAMILY SUBDIVISION
- ○ TOWN HOME RESIDENTIAL
- ○ MULTIFAMILY RESIDENTIAL
- ○ INSTITUTIONAL/SCHOOL
- ○ INDUSTRIAL
- ● COMMERCIAL
- ○ ROAD/HIGHWAY
- ○ RECREATIONAL/SPORTS FIELD
- ○ BIKE PATH/TRAIL
- ○ LINEAR UTILITY
- ○ PARKING LOT
- ○ OTHER

Post-Development Future Land Use

- ○ SINGLE FAMILY HOME
- ○ SINGLE FAMILY SUBDIVISION — Number of Lots
- ○ TOWN HOME RESIDENTIAL
- ○ MULTIFAMILY RESIDENTIAL
- ○ INSTITUTIONAL/SCHOOL
- ○ INDUSTRIAL
- ● COMMERCIAL
- ○ MUNICIPAL
- ○ ROAD/HIGHWAY
- ○ RECREATIONAL/SPORTS FIELD
- ○ BIKE PATH/TRAIL
- ○ LINEAR UTILITY (water, sewer, gas, etc.)
- ○ PARKING LOT
- ○ CLEARING/GRADING ONLY
- ○ DEMOLITION, NO REDEVELOPMENT
- ○ WELL DRILLING ACTIVITY *(Oil, Gas, etc.)
- ○ OTHER

***Note**: for gas well drilling, non-high volume hydraulic fractured wells only

4. In accordance with the larger common plan of development or sale, enter the total project site area; the total area to be disturbed; existing impervious area to be disturbed (for redevelopment activities); and the future impervious area constructed within the disturbed area. (Round to the nearest tenth of an acre.)

Total Site Area	Total Area To Be Disturbed	Existing Impervious Area To Be Disturbed	Future Impervious Area Within Disturbed Area
1.0	1.0	0.8	0.9

5. Do you plan to disturb more than 5 acres of soil at any one time? ○ **Yes** ● **No**

6. Indicate the percentage of each Hydrologic Soil Group(HSG) at the site.

A	B	C	D
0 %	0 %	0 %	100 %

7. Is this a phased project? ○ **Yes** ● **No**

8. Enter the planned start and end dates of the disturbance activities.

Start Date	End Date
01/01/2022	01/01/2023

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

9. Identify the nearest surface waterbody(ies) to which construction site runoff will discharge.

Name

Ellicott Creek

9a. Type of waterbody identified in Question 9?

- ○ Wetland / State Jurisdiction On Site (Answer 9b)
- ○ Wetland / State Jurisdiction Off Site
- ○ Wetland / Federal Jurisdiction On Site (Answer 9b)
- ○ Wetland / Federal Jurisdiction Off Site
- ○ Stream / Creek On Site
- ● Stream / Creek Off Site
- ○ River On Site
- ○ River Off Site
- ○ Lake On Site
- ○ Lake Off Site
- ○ Other Type On Site
- ○ Other Type Off Site

9b. How was the wetland identified?

- ○ Regulatory Map
- ○ Delineated by Consultant
- ○ Delineated by Army Corps of Engineers
- ○ Other (identify)

10. Has the surface waterbody(ies) in question 9 been identified as a 303(d) segment in Appendix E of GP-0-20-001? ● Yes ○ No

11. Is this project located in one of the Watersheds identified in Appendix C of GP-0-20-001? ○ Yes ● No

12. Is the project located in one of the watershed areas associated with AA and AA-S classified waters? ○ Yes ● No
If no, skip question 13.

13. Does this construction activity disturb land with no existing impervious cover and where the Soil Slope Phase is identified as an E or F on the USDA Soil Survey? ○ Yes ● No
If Yes, what is the acreage to be disturbed?

.

14. Will the project disturb soils within a State regulated wetland or the protected 100 foot adjacent area? ○ Yes ● No

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

15. Does the site runoff enter a separate storm sewer system (including roadside drains, swales, ditches, culverts, etc)? ◉ Yes ○ No ○ Unknown

16. What is the name of the municipality/entity that owns the separate storm sewer system?

Town of Amherst closed storm water drainage system

17. Does any runoff from the site enter a sewer classified as a Combined Sewer? ○ Yes ◉ No ○ Unknown

18. Will future use of this site be an agricultural property as defined by the NYS Agriculture and Markets Law? ○ Yes ◉ No

19. Is this property owned by a state authority, state agency, federal government or local government? ○ Yes ◉ No

20. Is this a remediation project being done under a Department approved work plan? (i.e. CERCLA, RCRA, Voluntary Cleanup Agreement, etc.) ○ Yes ◉ No

21. Has the required Erosion and Sediment Control component of the SWPPP been developed in conformance with the current NYS Standards and Specifications for Erosion and Sediment Control (aka Blue Book)? ◉ Yes ○ No

22. Does this construction activity require the development of a SWPPP that includes the post-construction stormwater management practice component (i.e. Runoff Reduction, Water Quality and Quantity Control practices/techniques)? ◉ Yes ○ No
If No, skip questions 23 and 27-39.

23. Has the post-construction stormwater management practice component of the SWPPP been developed in conformance with the current NYS Stormwater Management Design Manual? ◉ Yes ○ No

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

24. The Stormwater Pollution Prevention Plan (SWPPP) was prepared by:

- ● **Professional Engineer (P.E.)**
- ○ **Soil and Water Conservation District (SWCD)**
- ○ **Registered Landscape Architect (R.L.A)**
- ○ **Certified Professional in Erosion and Sediment Control (CPESC)**
- ○ **Owner/Operator**
- ○ **Other**

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

25. Has a construction sequence schedule for the planned management practices been prepared? ● Yes ○ No

26. Select **all** of the erosion and sediment control practices that will be employed on the project site:

Temporary Structural

- ○ Check Dams
- ○ Construction Road Stabilization
- ● Dust Control
- ○ Earth Dike
- ○ Level Spreader
- ○ Perimeter Dike/Swale
- ○ Pipe Slope Drain
- ○ Portable Sediment Tank
- ○ Rock Dam
- ○ Sediment Basin
- ○ Sediment Traps
- ● Silt Fence
- ● Stabilized Construction Entrance
- ● Storm Drain Inlet Protection
- ○ Straw/Hay Bale Dike
- ○ Temporary Access Waterway Crossing
- ○ Temporary Stormdrain Diversion
- ○ Temporary Swale
- ○ Turbidity Curtain
- ○ Water bars

Biotechnical

- ○ Brush Matting
- ○ Wattling

Vegetative Measures

- ○ Brush Matting
- ○ Dune Stabilization
- ○ Grassed Waterway
- ● Mulching
- ○ Protecting Vegetation
- ○ Recreation Area Improvement
- ● Seeding
- ● Sodding
- ○ Straw/Hay Bale Dike
- ○ Streambank Protection
- ○ Temporary Swale
- ● Topsoiling
- ○ Vegetating Waterways

Permanent Structural

- ○ Debris Basin
- ○ Diversion
- ○ Grade Stabilization Structure
- ○ Land Grading
- ○ Lined Waterway (Rock)
- ○ Paved Channel (Concrete)
- ○ Paved Flume
- ○ Retaining Wall
- ○ Riprap Slope Protection
- ● Rock Outlet Protection
- ○ Streambank Protection

Other

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

Post-construction Stormwater Management Practice (SMP) Requirements

Important: Completion of Questions 27-39 is not required if response to Question 22 is No.

27. Identify all site planning practices that were used to prepare the final site plan/layout for the project.

- ○ **Preservation of Undisturbed Areas**
- ○ **Preservation of Buffers**
- ○ **Reduction of Clearing and Grading**
- ● **Locating Development in Less Sensitive Areas**
- ○ **Roadway Reduction**
- ○ **Sidewalk Reduction**
- ○ **Driveway Reduction**
- ○ **Cul-de-sac Reduction**
- ○ **Building Footprint Reduction**
- ○ **Parking Reduction**

27a. Indicate which of the following soil restoration criteria was used to address the requirements in Section 5.1.6("Soil Restoration") of the Design Manual (2010 version).

- ● All disturbed areas will be restored in accordance with the Soil Restoration requirements in Table 5.3 of the Design Manual (see page 5-22).
- ○ Compacted areas were considered as impervious cover when calculating the **WQv Required**, and the compacted areas were assigned a post-construction Hydrologic Soil Group (HSG) designation that is one level less permeable than existing conditions for the hydrology analysis.

28. Provide the total Water Quality Volume (WQv) required for this project (based on final site plan/layout).

Total WQv Required

		0	.	0	2	3	**acre-feet**

29. Identify the RR techniques (Area Reduction), RR techniques(Volume Reduction) and Standard SMPs with RRv Capacity in Table 1 (See Page 9) that were used to reduce the Total WQv Required(#28).

Also, provide in Table 1 the total impervious area that contributes runoff to each technique/practice selected. For the Area Reduction Techniques, provide the total contributing area (includes pervious area) and, if applicable, the total impervious area that contributes runoff to the technique/practice.

Note: Redevelopment projects shall use Tables 1 and 2 to identify the SMPs used to treat and/or reduce the WQv required. If runoff reduction techniques will not be used to reduce the required WQv, skip to question 33a after identifying the SMPs.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

7738089822

Table 1 - Runoff Reduction (RR) Techniques and Standard Stormwater Management Practices (SMPs)

	Total Contributing Area (acres)		Total Contributing Impervious Area(acres)	
RR Techniques (Area Reduction)				
○ Conservation of Natural Areas (RR-1)		and/or		
○ Sheetflow to Riparian Buffers/Filters Strips (RR-2)		and/or		
○ Tree Planting/Tree Pit (RR-3)		and/or		
○ Disconnection of Rooftop Runoff (RR-4)		and/or		
RR Techniques (Volume Reduction)				
○ Vegetated Swale (RR-5)				
○ Rain Garden (RR-6)				
○ Stormwater Planter (RR-7)				
○ Rain Barrel/Cistern (RR-8)				
○ Porous Pavement (RR-9)				
○ Green Roof (RR-10)				
Standard SMPs with RRv Capacity				
○ Infiltration Trench (I-1)

○ Shallow Wetland (W-1)				
○ Extended Detention Wetland (W-2)				
○ Pond/Wetland System (W-3)				
○ Pocket Wetland (W-4)				
○ Wet Swale (O-2)				

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

Table 2 - Alternative SMPs (DO NOT INCLUDE PRACTICES BEING USED FOR PRETREATMENT ONLY)

Alternative SMP	Total Contributing Impervious Area(acres)
○ Hydrodynamic	
○ Wet Vault	
○ Media Filter	
○ Other [ ]	

Provide the name and manufacturer of the Alternative SMPs (i.e. proprietary practice(s)) being used for WQv treatment.

Name

Manufacturer

Note: Redevelopment projects which do not use RR techniques, shall use questions 28, 29, 33 and 33a to provide SMPs used, total WQv required and total WQv provided for the project.

30. Indicate the Total RRv provided by the RR techniques (Area/Volume Reduction) and Standard SMPs with RRv capacity identified in question 29.

Total RRv provided

0.012 **acre-feet**

31. Is the Total RRv provided (#30) greater than or equal to the total WQv required (#28).

○ **Yes** ● **No**

If Yes, go to question 36.
If No, go to question 32.

32. Provide the Minimum RRv required based on HSG.
[Minimum RRv Required = (P)(0.95)(Ai)/12, Ai=(S)(Aic)]

Minimum RRv Required

0.004 **acre-feet**

32a. Is the Total RRv provided (#30) greater than or equal to the Minimum RRv Required (#32)?

● **Yes** ○ **No**

If Yes, go to question 33.
Note: Use the space provided in question #39 to summarize the specific site limitations and justification for not reducing 100% of WQv required (#28). A detailed evaluation of the specific site limitations and justification for not reducing 100% of the WQv required (#28) must also be included in the SWPPP.
If No, sizing criteria has not been met, so NOI can not be processed. SWPPP preparer must modify design to meet sizing criteria.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

33. Identify the Standard SMPs in Table 1 and, if applicable, the Alternative SMPs in Table 2 that were used to treat the remaining total WQv(=Total WQv Required in 28 - Total RRv Provided in 30).

Also, provide in Table 1 and 2 the total impervious area that contributes runoff to each practice selected.

Note: Use Tables 1 and 2 to identify the SMPs used on Redevelopment projects.

33a. Indicate the Total WQv provided (i.e. WQv treated) by the SMPs identified in question #33 and Standard SMPs with RRv Capacity identified in question 29.

WQv Provided

0.018 **acre-feet**

Note: For the standard SMPs with RRv capacity, the WQv provided by each practice = the WQv calculated using the contributing drainage area to the practice - RRv provided by the practice. (See Table 3.5 in Design Manual)

34. Provide the sum of the Total RRv provided (#30) and the WQv provided (#33a).

0.030

35. Is the sum of the RRv provided (#30) and the WQv provided (#33a) greater than or equal to the total WQv required (#28)? ● **Yes** ○ **No**

If Yes, go to question 36.
If No, sizing criteria has not been met, so NOI can not be processed. SWPPP preparer must modify design to meet sizing criteria.

36. Provide the total Channel Protection Storage Volume (CPv) required and provided or select waiver (36a), if applicable.

CPv Required

0.019 **acre-feet**

CPv Provided

0.019 **acre-feet**

36a. The need to provide channel protection has been waived because:

○ Site discharges directly to tidal waters or a fifth order or larger stream.

○ Reduction of the total CPv is achieved on site through runoff reduction techniques or infiltration systems.

37. Provide the Overbank Flood (Qp) and Extreme Flood (Qf) control criteria or select waiver (37a), if applicable.

Total Overbank Flood Control Criteria (Qp)

Pre-Development

4.29 **CFS**

Post-development

3.62 **CFS**

Total Extreme Flood Control Criteria (Qf)

Pre-Development

7.37 **CFS**

Post-development

5.59 **CFS**

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

37a. The need to meet the Qp and Qf criteria has been waived because:

- ○ Site discharges directly to tidal waters or a fifth order or larger stream.
- ○ Downstream analysis reveals that the Qp and Qf controls are not required

38. Has a long term Operation and Maintenance Plan for the post-construction stormwater management practice(s) been developed? ● Yes ○ No

If Yes, Identify the entity responsible for the long term Operation and Maintenance

Benderson Development Company

39. Use this space to summarize the specific site limitations and justification for not reducing 100% of WQv required(#28). (See question 32a) This space can also be used for other pertinent project information.

RRv criteria is not required for redevelopment activities & onsite soils with slow infiltration rates

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

40. Identify other DEC permits, existing and new, that are required for this project/facility.

- ○ Air Pollution Control
- ○ Coastal Erosion
- ○ Hazardous Waste
- ○ Long Island Wells
- ○ Mined Land Reclamation
- ○ Solid Waste
- ○ Navigable Waters Protection / Article 15
- ○ Water Quality Certificate
- ○ Dam Safety
- ○ Water Supply
- ○ Freshwater Wetlands/Article 24
- ○ Tidal Wetlands
- ○ Wild, Scenic and Recreational Rivers
- ○ Stream Bed or Bank Protection / Article 15
- ○ Endangered or Threatened Species(Incidental Take Permit)
- ○ Individual SPDES
- ○ SPDES Multi-Sector GP [N][Y][R][ ][ ][ ][ ][ ][ ]
- ○ Other [ ]
- ● None

41. Does this project require a US Army Corps of Engineers Wetland Permit? ○ **Yes** ● **No**
If Yes, Indicate Size of Impact. [ ][ ][ ][ ][ ][ ].[ ]

42. Is this project subject to the requirements of a regulated, traditional land use control MS4? ● **Yes** ○ **No**
(If No, skip question 43)

43. Has the "MS4 SWPPP Acceptance" form been signed by the principal executive officer or ranking elected official and submitted along with this NOI? ● **Yes** ○ **No**

44. If this NOI is being submitted for the purpose of continuing or transferring coverage under a general permit for stormwater runoff from construction activities, please indicate the former SPDES number assigned. [N][Y][R][ ][ ][ ][ ][ ][ ]

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

Owner/Operator Certification

I have read or been advised of the permit conditions and believe that I understand them. I also understand that, under the terms of the permit, there may be reporting requirements. I hereby certify that this document and the corresponding documents were prepared under my direction or supervision. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations. I further understand that coverage under the general permit will be identified in the acknowledgment that I will receive as a result of submitting this NOI and can be as long as sixty (60) business days as provided for in the general permit. I also understand that, by submitting this NOI, I am acknowledging that the SWPPP has been developed and will be implemented as the first element of construction, and agreeing to comply with all the terms and conditions of the general permit for which this NOI is being submitted.

MS4 SWPPP Acceptance Form - continued

V. Certification Statement - MS4 Official (principal executive officer or ranking elected official) or Duly Authorized Representative

I hereby certify that the final Stormwater Pollution Prevention Plan (SWPPP) for the construction project identified in question 5 has been reviewed and meets the substantive requirements in the SPDES General Permit For Stormwater Discharges from Municipal Separate Storm Sewer Systems (MS4s). Note: The MS4, through the acceptance of the SWPPP, assumes no responsibility for the accuracy and adequacy of the design included in the SWPPP. In addition, review and acceptance of the SWPPP by the MS4 does not relieve the owner/operator or their SWPPP preparer of responsibility or liability for errors or omissions in the plan.

Proposed Site Redevelopment
4548-4564 Main Street
Amherst, NY 14226

8/18/2021

Section 1 – Location & Description

This redevelopment project will consist of the construction of a 3-story mixed-use building that will include apartments, restaurant space and multi-level parking. The site is located on the north side of Main Street (NY-5), between Fruehauf Ave and Chateau Terrace in the Town of Amherst. The existing site is currently occupied by a 3-story vacant building located along the Main Street frontage. Existing surface parking is located north behind the existing building. Both the existing building and parking areas will be removed as part of this project. The overall site area is approximately 0.93+/- acres, however, construction activities will result in approximately 1.02+/- acres of disturbance area.

Section 2 – Stormwater Drainage System

The existing side streets, Fruehauf Ave and Chateau Terrace, slope from south to north. Existing closed stormwater drainage systems are located along Main Street (NYSDOT) and Chateau Terrace (Town of Amherst). The existing northeast parking lot area sheet drains to the north and northeast to Chateau Terrace. The existing northwest parking lot is generally flat and drains to an existing closed stormwater drainage system with unknown outlet. Existing stormwater runoff collected and conveyed from the site is ultimately tributary to Ellicott Creek and the Niagara River.

For purposes of the runoff analysis and the stormwater drainage system design, portions of the project site were classified as “Redevelopment” per NYSDEC Stormwater Management Design Manual Chapter 9 requirements. The nature of this construction project will be a “Redevelopment” with an increase in impervious area. The proposed hydrology of the site development will remain similar to existing hydrologic conditions. The proposed parking and patio areas will consist of a combination of overland sheet flow and pipe channel flow connected by a series of trench drains located throughout the runoff areas. Stormwater runoff from these areas will be conveyed to a proposed onsite stormwater management area located on the north side of the site consisting of a dry detention basin with a bioretention planting area located in the bottom of the basin. Runoff routed through the proposed basin will be discharged via a 6” HDPE outlet control pipe to the existing closed stormwater drainage system along Chateau Terrace. Proposed rooftop runoff will be discharged directly to the existing closed stormwater drainage system along Chateau Terrace.

The dry detention basin volume was designed with an outlet control pipe to attenuate proposed runoff to existing conditions prior to discharge. The bioretention area will provide Runoff Reduction and Water Quality volume requirements. The filter area planting soil depth varies throughout the bioretention

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

area but maintains a minimum of at least 18 inches of soil. The 18 inches of soil is an acceptable deviation per the NYSDEC where existing grades prevent the full 2.5'-4' foot soil depth. 6" underdrain below the planting soil will be located throughout the bioretention area connected by an overflow catch basin to convey runoff to the outlet control pipe.

The NYSDEC Stormwater Management Design Manual requires a five-step process for Stormwater Management Planning as outlined in Chapter 3. The five steps include:

1. *Site planning to preserve natural features and reduce impervious cover.*
   - Minimal natural existing features are located onsite and the site is located in a less sensitive area.
2. *Calculation of Water Quality Volume (WQv) for site.*
   - See "Stormwater Drainage Analysis".
3. *Incorporation of Green Infrastructure techniques and standard SMPs with Runoff Reduction Volume (RRv) capacity.*
   - A bioretention area was incorporated into the site design to provide required RRv. See "Stormwater Drainage Analysis".
4. *Use of standard SMPs where applicable, to treat the portion of water quality volume not addressed by green infrastructure techniques and standard SMPs with RRv capacity.*
   - 100% of required Water Quality was addressed by the bioretention area. See "Stormwater Drainage Analysis".
5. *Design of volume and peak rate control practices where required.*
   - See "Stormwater Drainage Analysis".

The NYSDEC Stormwater Management Design Manual requires (5) five different criteria be considered when designing a stormwater management system. Those criteria are Water Quality, Runoff Reduction Volume, Channel Protection, Overbank Flooding and Extreme Storm Protection. Below is a summary of each item and how it is incorporated into this project.

Water Quality:
The NYSDEC requires water quality treatment prior to discharge. This will be achieved by the application of a bioretention area. The total WQv provided was 1,301 cf and greater than the required WQv of 1,002 cf.

Runoff Reduction Volume:
The NYSDEC requires reduction of the total water quality volume by green infrastructure techniques and SMPs to replicate pre-development hydrology. A bioretention area was incorporated into the site layout to provide the required RRv for contributing runoff areas in the WQv. The RRv provided was 520 cf and greater than the required RRv min. of 172 cf.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

100% of the required WQv was not reduced due to the followings site specific limitations: *RRv criteria is not required for redevelopment activities & onsite soils with slow infiltration rates.* In addition, below is a summary of how each green infrastructure technique was evaluated and determined to be feasible or infeasible:

1) Conservation of natural areas: the site development is located in a less sensitive area.
2) Sheetflow to riparian buffers or filter strips: no riparian buffers possible on the site; filter strips not feasible given the limited area for development.
3) Vegetated Open Swales: swales are not feasible given the limited area for development.
4) Tree Plantings: new trees to be planted throughout the site.
5) Disconnection of Roof Top Runoff: roof top runoff will be connected to closed stormwater drainage system.
6) Stream Daylighting: is not feasible given the limited area for development.
7) Rain Garden: this method is not recommended for these types of projects.
8) Green Roof: the proposed use of the building makes this an unfeasible practice.
9) Stormwater Planter: this method is not recommended for these types of projects.
10) Rain Barrels & Cisterns: collected water would not be used for irrigation.
11) Porous Pavement: porous pavement is not recommended for areas with impermeable soils (Type D) and areas with sediment laden runoff (salting in winter months).

Channel Protection:
The NYSDEC requires that 24-Hour extended detention be provided for the proposed 1-year storm event. A volume of 842 cf (0.019 ac-ft) will be accommodated in the detention basin onsite.

Overbank Flooding:
The NYSDEC requires that the 10-year proposed storm event be attenuated with detention and that the outlet be restricted to the 10-year existing storm event. Storage of this storm will be provided within the detention basin onsite. At this storm event the stormwater drainage system will allow discharge of 3.62 cfs, which is below the existing peak 10-year runoff of 4.29 cfs.

Extreme Storm Protection:
The NYSDEC requires that the 100-year proposed storm event be attenuated with detention and that the outlet be restricted to the 100-year existing storm event. Storage of this storm will be provided within the detention basin onsite. At this

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

storm event the stormwater drainage system will allow discharge of 5.59 cfs, which is below the existing peak 100-year runoff of 7.37 cfs.

Town of Amherst:
The Town of Amherst requires that the 25-year proposed storm event be attenuated with detention and that the outlet be restricted to the 10-year existing storm event. Storage will be provided within the detention basin onsite. At the 25-year storm event the stormwater drainage system will allow discharge of 4.28 cfs, which is below the existing peak 10-year runoff of 4.29 cfs.

Design Criteria:
Storm pipes: 10-year storm
Detention:

- Comparison of the existing 1-year vs. the proposed 1-year runoff
- Comparison of the existing 10-year vs. the proposed 10-year runoff
- Comparison of the existing 100-year vs. the proposed 100-year runoff
- Comparison of the existing 10-year vs. the proposed 25-year runoff

Bioretention: RRv = 100% of post-development water quality volumes

RUNOFF ANALYSIS OF PROPOSED DEVELOPMENT AREA:

STORM EVENT	EXISTING RUNOFF	PROPOSED RUNOFF
1 YEAR	2.28 CFS	1.61 CFS
10 YEAR	4.29 CFS	3.62 CFS
25 YEAR	5.33 CFS	4.28 CFS
100 YEAR	7.37 CFS	5.59 CFS

WATER QUALITY SUMMARY:
WQv REQUIRED = 1,002 CF (0.023 AC-FT)
RRv MIN. REQUIRED = 172 CF (0.004 AC-FT)
RRv PROVIDED WITHIN BIORETENTION AREA = 520 CF (0.012 AC-FT)
WQv PROVIDED WITHIN BIORETENTION AREA = 1,301 CF (0.030 AC-FT)

BIORETENTION FILTER AREA & ELEVATION SUMMARY:
FILTER AREA = 1,115 SF @ 672.50

See attached “Stormwater Drainage Analysis” for additional information.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:15,800.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Erie County, New York
Survey Area Data: Version 20, Jun 11, 2020

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Jul 4, 2020—Jul 10, 2020

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Description

"Water table" refers to a saturated zone in the soil. It occurs during specified months. Estimates of the upper limit are based mainly on observations of the water table at selected sites and on evidence of a saturated zone, namely grayish colors (redoximorphic features) in the soil. A saturated zone that lasts for less than a month is not considered a water table.

This attribute is actually recorded as three separate values in the database. A low value and a high value indicate the range of this attribute for the soil component. A "representative" value indicates the expected value of this attribute for the component. For this soil property, only the representative value is used.

PREFACE

Pursuant to Section 402 of the Clean Water Act ("CWA"), stormwater *discharges* from certain *construction activities* are unlawful unless they are authorized by a *National Pollutant Discharge Elimination System ("NPDES")* permit or by a state permit program. New York administers the approved State Pollutant Discharge Elimination System (SPDES) program with permits issued in accordance with the New York State Environmental Conservation Law (ECL) Article 17, Titles 7, 8 and Article 70.

An *owner or operator* of a *construction activity* that is eligible for coverage under this permit must obtain coverage prior to the *commencement of construction activity*. Activities that fit the definition of "*construction activity*", as defined under 40 CFR 122.26(b)(14)(x), (15)(i), and (15)(ii), constitute construction of a *point source* and therefore, pursuant to ECL section 17-0505 and 17-0701, the *owner or operator* must have coverage under a SPDES permit prior to *commencing construction activity*. The *owner or operator* cannot wait until there is an actual *discharge* from the *construction site* to obtain permit coverage.

***Note: The italicized words/phrases within this permit are defined in Appendix A.**

Part 1. PERMIT COVERAGE AND LIMITATIONS

A. Permit Application

This permit authorizes stormwater *discharges* to *surface waters of the State* from the following *construction activities* identified within 40 CFR Parts 122.26(b)(14)(x), 122.26(b)(15)(i) and 122.26(b)(15)(ii), provided all of the eligibility provisions of this permit are met:

1. *Construction activities* involving soil disturbances of one (1) or more acres; including disturbances of less than one acre that are part of a *larger common plan of development or sale* that will ultimately disturb one or more acres of land; excluding *routine maintenance activity* that is performed to maintain the original line and grade, hydraulic capacity or original purpose of a facility;

2. *Construction activities* involving soil disturbances of less than one (1) acre where the Department has determined that a *SPDES* permit is required for stormwater *discharges* based on the potential for contribution to a violation of a *water quality standard* or for significant contribution of *pollutants* to *surface waters of the State.*

3. *Construction activities* located in the watershed(s) identified in Appendix D that involve soil disturbances between five thousand (5,000) square feet and one (1) acre of land.

B. Effluent Limitations Applicable to Discharges from Construction Activities

*Discharge*s authorized by this permit must achieve, at a minimum, the effluent limitations in Part I.B.1. (a) – (f) of this permit. These limitations represent the degree of effluent reduction attainable by the application of best practicable technology currently available.

1. Erosion and Sediment Control Requirements - The *owner or operator* must select, design, install, implement and maintain control measures to *minimize* the *discharge* of *pollutants* and prevent a violation of the *water quality standards*. The selection, design, installation, implementation, and maintenance of these control measures must meet the non-numeric effluent limitations in Part I.B.1.(a) – (f) of this permit and be in accordance with the New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016, using sound engineering judgment. Where control measures are not designed in conformance with the design criteria included in the technical standard, the *owner or operator* must include in the *Stormwater Pollution Prevention Plan* ("SWPPP") the reason(s) for the

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

deviation or alternative design and provide information which demonstrates that the deviation or alternative design is *equivalent* to the technical standard.

a. **Erosion and Sediment Controls.** Design, install and maintain effective erosion and sediment controls to *minimize* the *discharge* of *pollutants* and prevent a violation of the *water quality standards*. At a minimum, such controls must be designed, installed and maintained to:

   (i) *Minimize* soil erosion through application of runoff control and soil stabilization control measure to *minimize pollutant discharge*s;

   (ii) Control stormwater *discharge*s, including both peak flowrates and total stormwater volume, to *minimize* channel and *streambank* erosion and scour in the immediate vicinity of the *discharge* points;

   (iii) *Minimize* the amount of soil exposed during *construction activity*;

   (iv) *Minimize* the disturbance of *steep slopes*;

   (v) *Minimize* sediment *discharge*s from the site;

   (vi) Provide and maintain *natural buffer*s around surface waters, direct stormwater to vegetated areas and maximize stormwater infiltration to reduce *pollutant discharge*s, unless *infeasible*;

   (vii) *Minimize* soil compaction. Minimizing soil compaction is not required where the intended function of a specific area of the site dictates that it be compacted;

   (viii) Unless *infeasible*, preserve a sufficient amount of topsoil to complete soil restoration and establish a uniform, dense vegetative cover; and

   (ix) *Minimize* dust. On areas of exposed soil, *minimize* dust through the appropriate application of water or other dust suppression techniques to control the generation of pollutants that could be discharged from the site.

b. **Soil Stabilization**. In areas where soil disturbance activity has temporarily or permanently ceased, the application of soil stabilization measures must be initiated by the end of the next business day and completed within fourteen (14) days from the date the current soil disturbance activity ceased. For construction sites that *directly discharge* to one of the 303(d) segments

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

listed in Appendix E or is located in one of the watersheds listed in Appendix C, the application of soil stabilization measures must be initiated by the end of the next business day and completed within seven (7) days from the date the current soil disturbance activity ceased. See Appendix A for definition of *Temporarily Ceased*.

c. **Dewatering**. *Discharge*s from *dewatering* activities, including *discharge*s from *dewatering* of trenches and excavations, must be managed by appropriate control measures.

d. **Pollution Prevention Measures**. Design, install, implement, and maintain effective pollution prevention measures to *minimize* the *discharge* of *pollutants* and prevent a violation of the *water quality standards*. At a minimum, such measures must be designed, installed, implemented and maintained to:

(i) *Minimize* the *discharge* of *pollutants* from equipment and vehicle washing, wheel wash water, and other wash waters. This applies to washing operations that use clean water only. Soaps, detergents and solvents cannot be used;

(ii) *Minimize* the exposure of building materials, building products, construction wastes, trash, landscape materials, fertilizers, pesticides, herbicides, detergents, sanitary waste, hazardous and toxic waste, and other materials present on the site to precipitation and to stormwater. Minimization of exposure is not required in cases where the exposure to precipitation and to stormwater will not result in a *discharge* of *pollutants*, or where exposure of a specific material or product poses little risk of stormwater contamination (such as final products and materials intended for outdoor use) ; and

(iii) Prevent the *discharge* of *pollutants* from spills and leaks and implement chemical spill and leak prevention and response procedures.

e. **Prohibited *Discharges*.** The following *discharge*s are prohibited:

(i) Wastewater from washout of concrete;

(ii) Wastewater from washout and cleanout of stucco, paint, form release oils, curing compounds and other construction materials;

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

(iii) Fuels, oils, or other *pollutants* used in vehicle and equipment operation and maintenance;

(iv) Soaps or solvents used in vehicle and equipment washing; and

(v) Toxic or hazardous substances from a spill or other release.

f. Surface Outlets. When discharging from basins and impoundments, the outlets shall be designed, constructed and maintained in such a manner that sediment does not leave the basin or impoundment and that erosion at or below the outlet does not occur.

C. Post-construction Stormwater Management Practice Requirements

1. The *owner or operator* of a *construction activity* that requires post-construction stormwater management practices pursuant to Part III.C. of this permit must select, design, install, and maintain the practices to meet the *performance criteria* in the New York State Stormwater Management Design Manual ("Design Manual"), dated January 2015, using sound engineering judgment. Where post-construction stormwater management practices ("SMPs") are not designed in conformance with the *performance criteria* in the Design Manual, the *owner or operator* must include in the SWPPP the reason(s) for the deviation or alternative design and provide information which demonstrates that the deviation or alternative design is *equivalent* to the technical standard.

2. The *owner or operator* of a *construction activity* that requires post-construction stormwater management practices pursuant to Part III.C. of this permit must design the practices to meet the applicable *sizing criteria* in Part I.C.2.a., b., c. or d. of this permit.

a. Sizing Criteria for New Development

(i) Runoff Reduction Volume ("RRv"): Reduce the total Water Quality Volume ("WQv") by application of RR techniques and standard SMPs with RRv capacity. The total WQv shall be calculated in accordance with the criteria in Section 4.2 of the Design Manual.

(ii) Minimum RRv and Treatment of Remaining Total WQv: Construction activities that cannot meet the criteria in Part I.C.2.a.(i) of this permit due to site limitations shall direct runoff from all newly constructed impervious areas to a RR technique or standard SMP with RRv capacity unless infeasible. The specific site limitations that prevent the reduction of 100% of the WQv shall be documented in the SWPPP.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

For each impervious area that is not directed to a RR technique or standard SMP with RRv capacity, the SWPPP must include documentation which demonstrates that all options were considered and for each option explains why it is considered infeasible.

In no case shall the runoff reduction achieved from the newly constructed impervious areas be less than the Minimum RRv as calculated using the criteria in Section 4.3 of the Design Manual. The remaining portion of the total WQv that cannot be reduced shall be treated by application of standard SMPs.

(iii) Channel Protection Volume ("Cpv"): Provide 24 hour extended detention of the post-developed 1-year, 24-hour storm event; remaining after runoff reduction. The Cpv requirement does not apply when:
(1) Reduction of the entire Cpv is achieved by application of runoff reduction techniques or infiltration systems, or
(2) The site discharges directly to tidal waters, or fifth order or larger streams.

(iv) *Overbank* Flood Control Criteria ("Qp"): Requires storage to attenuate the post-development 10-year, 24-hour peak discharge rate (Qp) to predevelopment rates. The Qp requirement does not apply when:
(1) the site discharges directly to tidal waters or fifth order or larger streams, or
(2) A downstream analysis reveals that *overbank* control is not required.

(v) Extreme Flood Control Criteria ("Qf"): Requires storage to attenuate the post-development 100-year, 24-hour peak discharge rate (Qf) to predevelopment rates. The Qf requirement does not apply when:
(1) the site discharges directly to tidal waters or fifth order or larger streams, or
(2) A downstream analysis reveals that *overbank* control is not required.

b. *Sizing Criteria* for *New Development* in Enhanced Phosphorus Removal Watershed

(i) Runoff Reduction Volume (RRv): Reduce the total Water Quality Volume (WQv) by application of RR techniques and standard SMPs with RRv capacity. The total WQv is the runoff volume from the 1-year, 24 hour design storm over the post-developed watershed and shall be

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

calculated in accordance with the criteria in Section 10.3 of the Design Manual.

(ii) Minimum RRv and Treatment of Remaining Total WQv: *Construction activities* that cannot meet the criteria in Part I.C.2.b.(i) of this permit due to *site limitations* shall direct runoff from all newly constructed *impervious areas* to a RR technique or standard SMP with RRv capacity unless *infeasible*. The specific *site limitations* that prevent the reduction of 100% of the WQv shall be documented in the SWPPP. For each *impervious area* that is not directed to a RR technique or standard SMP with RRv capacity, the SWPPP must include documentation which demonstrates that all options were considered and for each option explains why it is considered *infeasible.*

In no case shall the runoff reduction achieved from the newly constructed *impervious areas* be less than the Minimum RRv as calculated using the criteria in Section 10.3 of the Design Manual. The remaining portion of the total WQv that cannot be reduced shall be treated by application of standard SMPs.

(iii) Channel Protection Volume (Cpv): Provide 24 hour extended detention of the post-developed 1-year, 24-hour storm event; remaining after runoff reduction. The Cpv requirement does not apply when:
(1) Reduction of the entire Cpv is achieved by application of runoff reduction techniques or infiltration systems, or
(2) The site *discharge*s directly to tidal waters, or fifth order or larger streams.

(iv) *Overbank* Flood Control Criteria (Qp): Requires storage to attenuate the post-development 10-year, 24-hour peak *discharge* rate (Qp) to predevelopment rates. The Qp requirement does not apply when:
(1) the site *discharge*s directly to tidal waters or fifth order or larger streams, or
(2) A downstream analysis reveals that *overbank* control is not required.

(v) Extreme Flood Control Criteria (Qf): Requires storage to attenuate the post-development 100-year, 24-hour peak *discharge* rate (Qf) to predevelopment rates. The Qf requirement does not apply when:
(1) the site *discharge*s directly to tidal waters or fifth order or larger streams, or
(2) A downstream analysis reveals that *overbank* control is not required.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

c. Sizing Criteria for Redevelopment Activity

(i) Water Quality Volume (WQv): The WQv treatment objective for *redevelopment activity* shall be addressed by one of the following options. *Redevelopment activities* located in an Enhanced Phosphorus Removal Watershed (see Part III.B.3. and Appendix C of this permit) shall calculate the WQv in accordance with Section 10.3 of the Design Manual. All other *redevelopment activities* shall calculate the WQv in accordance with Section 4.2 of the Design Manual.

(1) Reduce the existing *impervious cover* by a minimum of 25% of the total disturbed, *impervious area*. The Soil Restoration criteria in Section 5.1.6 of the Design Manual must be applied to all newly created pervious areas, or

(2) Capture and treat a minimum of 25% of the WQv from the disturbed, *impervious area* by the application of standard SMPs; or reduce 25% of the WQv from the disturbed, *impervious area* by the application of RR techniques or standard SMPs with RRv capacity., or

(3) Capture and treat a minimum of 75% of the WQv from the disturbed, *impervious area* as well as any additional runoff from tributary areas by application of the alternative practices discussed in Sections 9.3 and 9.4 of the Design Manual., or

(4) Application of a combination of 1, 2 and 3 above that provide a weighted average of at least two of the above methods. Application of this method shall be in accordance with the criteria in Section 9.2.1(B) (IV) of the Design Manual.

If there is an existing post-construction stormwater management practice located on the site that captures and treats runoff from the *impervious area* that is being disturbed, the WQv treatment option selected must, at a minimum, provide treatment equal to the treatment that was being provided by the existing practice(s) if that treatment is greater than the treatment required by options 1 – 4 above.

(ii) Channel Protection Volume (Cpv): Not required if there are no changes to hydrology that increase the *discharge* rate from the project site.

(iii) *Overbank* Flood Control Criteria (Qp): Not required if there are no changes to hydrology that increase the *discharge* rate from the project site.

(iv) Extreme Flood Control Criteria (Qf): Not required if there are no changes to hydrology that increase the *discharge* rate from the project site

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

d. Sizing Criteria for Combination of Redevelopment Activity and New Development

Construction projects that include both New Development and Redevelopment Activity shall provide post-construction stormwater management controls that meet the sizing criteria calculated as an aggregate of the Sizing Criteria in Part I.C.2.a. or b. of this permit for the New Development portion of the project and Part I.C.2.c of this permit for Redevelopment Activity portion of the project.

D. Maintaining Water Quality

The Department expects that compliance with the conditions of this permit will control *discharge*s necessary to meet applicable *water quality standards*. It shall be a violation of the *ECL* for any discharge to either cause or contribute to a violation of *water quality standards* as contained in Parts 700 through 705 of Title 6 of the Official Compilation of Codes, Rules and Regulations of the State of New York, such as:

1. There shall be no increase in turbidity that will cause a substantial visible contrast to natural conditions;

2. There shall be no increase in suspended, colloidal or settleable solids that will cause deposition or impair the waters for their best usages; and

3. There shall be no residue from oil and floating substances, nor visible oil film, nor globules of grease.

If there is evidence indicating that the stormwater *discharge*s authorized by this permit are causing, have the reasonable potential to cause, or are contributing to a violation of the *water quality standards*; the *owner or operator* must take appropriate corrective action in accordance with Part IV.C.5. of this general permit and document in accordance with Part IV.C.4. of this general permit. To address the *water quality standard* violation the *owner or operator* may need to provide additional information, include and implement appropriate controls in the SWPPP to correct the problem, or obtain an individual SPDES permit.

If there is evidence indicating that despite compliance with the terms and conditions of this general permit it is demonstrated that the stormwater *discharge*s authorized by this permit are causing or contributing to a violation of *water quality standards*, or if the Department determines that a modification of the permit is necessary to prevent a violation of *water quality standards*, the authorized *discharge*s will no longer be eligible for coverage under this permit. The Department may require the *owner or operator* to obtain an individual SPDES permit to continue discharging.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

E. Eligibility Under This General Permit

1. This permit may authorize all *discharges* of stormwater from *construction activity* to *surface waters of the State* and *groundwaters* except for ineligible *discharges* identified under subparagraph F. of this Part.

2. Except for non-stormwater *discharges* explicitly listed in the next paragraph, this permit only authorizes stormwater *discharge*s; including stormwater runoff, snowmelt runoff, and surface runoff and drainage, from *construction activities*.

3. Notwithstanding paragraphs E.1 and E.2 above, the following non-stormwater discharges are authorized by this permit: those listed in 6 NYCRR 750-1.2(a)(29)(vi), with the following exception: “Discharges from firefighting activities are authorized only when the firefighting activities are emergencies/unplanned”; waters to which other components have not been added that are used to control dust in accordance with the SWPPP; and uncontaminated *discharge*s from *construction site* de-watering operations. All non-stormwater discharges must be identified in the SWPPP. Under all circumstances, the *owner or operator* must still comply with *water quality standards* in Part I.D of this permit.

4. The *owner or operator* must maintain permit eligibility to *discharge* under this permit. Any *discharges* that are not compliant with the eligibility conditions of this permit are not authorized by the permit and the *owner or operator* must either apply for a separate permit to cover those ineligible *discharges* or take steps necessary to make the *discharge* eligible for coverage.

F. Activities Which Are Ineligible for Coverage Under This General Permit

All of the following are **not** authorized by this permit:

1. *Discharge*s after *construction activities* have been completed and the site has undergone *final stabilization*;

2. *Discharge*s that are mixed with sources of non-stormwater other than those expressly authorized under subsection E.3. of this Part and identified in the SWPPP required by this permit;

3. *Discharges* that are required to obtain an individual SPDES permit or another SPDES general permit pursuant to Part VII.K. of this permit;

4. *Construction activities* or *discharges* from *construction activities* that may adversely affect an *endangered or threatened species* unless the *owner or*

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

operator has obtained a permit issued pursuant to 6 NYCRR Part 182 for the project or the Department has issued a letter of non-jurisdiction for the project. All documentation necessary to demonstrate eligibility shall be maintained on site in accordance with Part II.D.2 of this permit;

5. *Discharges* which either cause or contribute to a violation of *water quality standards* adopted pursuant to the *ECL* and its accompanying regulations;

6. *Construction activities* for residential, commercial and institutional projects:

   a. Where the *discharge*s from the *construction activities* are tributary to waters of the state classified as AA or AA-s; and

   b. Which are undertaken on land with no existing *impervious cover*; and

   c. Which disturb one (1) or more acres of land designated on the current United States Department of Agriculture ("USDA") Soil Survey as Soil Slope Phase "D", (provided the map unit name is inclusive of slopes greater than 25%), or Soil Slope Phase "E" or "F" (regardless of the map unit name), or a combination of the three designations.

7. *Construction activities* for linear transportation projects and linear utility projects:

   a. Where the *discharge*s from the *construction activities* are tributary to waters of the state classified as AA or AA-s; and

   b. Which are undertaken on land with no existing *impervious cover*; and

   c. Which disturb two (2) or more acres of land designated on the current USDA Soil Survey as Soil Slope Phase "D" (provided the map unit name is inclusive of slopes greater than 25%), or Soil Slope Phase "E" or "F" (regardless of the map unit name), or a combination of the three designations.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

8. *Construction activities* that have the potential to affect an *historic property*, unless there is documentation that such impacts have been resolved. The following documentation necessary to demonstrate eligibility with this requirement shall be maintained on site in accordance with Part II.D.2 of this permit and made available to the Department in accordance with Part VII.F of this permit:

   a. Documentation that the *construction activity* is not within an archeologically sensitive area indicated on the sensitivity map, and that the *construction activity* is not located on or immediately adjacent to a property listed or determined to be eligible for listing on the National or State Registers of Historic Places, and that there is no new permanent building on the *construction site* within the following distances from a building, structure, or object that is more than 50 years old, or if there is such a new permanent building on the *construction site* within those parameters that NYS Office of Parks, Recreation and Historic Preservation (OPRHP), a Historic Preservation Commission of a Certified Local Government, or a qualified preservation professional has determined that the building, structure, or object more than 50 years old is not historically/archeologically significant.

      - 1-5 acres of disturbance - 20 feet
      - 5-20 acres of disturbance - 50 feet
      - 20+ acres of disturbance - 100 feet, or

   b. DEC consultation form sent to OPRHP, and copied to the NYS DEC Agency Historic Preservation Officer (APO), and
      (i) the State Environmental Quality Review (SEQR) Environmental Assessment Form (EAF) with a negative declaration or the Findings Statement, with documentation of OPRHP's agreement with the resolution; or
      (ii) documentation from OPRHP that the *construction activity* will result in No Impact; or
      (iii) documentation from OPRHP providing a determination of No Adverse Impact; or
      (iv) a Letter of Resolution signed by the owner/operator, OPRHP and the DEC APO which allows for this *construction activity* to be eligible for coverage under the general permit in terms of the State Historic Preservation Act (SHPA); or

   c. Documentation of satisfactory compliance with Section 106 of the National Historic Preservation Act for a coterminous project area:

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

(i) No Affect
(ii) No Adverse Affect
(iii) Executed Memorandum of Agreement, or

d. Documentation that:

(i) SHPA Section 14.09 has been completed by NYS DEC or another state agency.

9. *Discharge*s from *construction activities* that are subject to an existing SPDES individual or general permit where a SPDES permit for *construction activity* has been terminated or denied; or where the *owner or operator* has failed to renew an expired individual permit.

Part II. PERMIT COVERAGE

A. How to Obtain Coverage

1. An *owner or operator* of a *construction activity* that is not subject to the requirements of a regulated, traditional land use control MS4 must first prepare a SWPPP in accordance with all applicable requirements of this permit and then submit a completed Notice of Intent (NOI) to the Department to be authorized to discharge under this permit.

2. An *owner or operator* of a *construction activity* that is subject to the requirements of a *regulated, traditional land use control MS4* must first prepare a SWPPP in accordance with all applicable requirements of this permit and then have the SWPPP reviewed and accepted by the *regulated, traditional land use control MS4* prior to submitting the NOI to the Department. The *owner or operator* shall have the "MS4 SWPPP Acceptance" form signed in accordance with Part VII.H., and then submit that form along with a completed NOI to the Department.

3. The requirement for an *owner or operator* to have its SWPPP reviewed and accepted by the *regulated, traditional land use control MS4* prior to submitting the NOI to the Department does not apply to an *owner or operator* that is obtaining permit coverage in accordance with the requirements in Part II.F. (Change of *Owner or Operator*) or where the *owner or operator* of the *construction activity* is the *regulated, traditional land use control MS4* . This exemption does not apply to *construction activities* subject to the New York City Administrative Code.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

B. Notice of Intent (NOI) Submittal

1. Prior to December 21, 2020, an owner or operator shall use either the electronic (eNOI) or paper version of the NOI that the Department prepared. Both versions of the NOI are located on the Department's website (http://www.dec.ny.gov/). The paper version of the NOI shall be signed in accordance with Part VII.H. of this permit and submitted to the following address:

   NOTICE OF INTENT
   NYS DEC, Bureau of Water Permits
   625 Broadway, 4th Floor
   Albany, New York 12233-3505

2. Beginning December 21, 2020 and in accordance with EPA's 2015 NPDES Electronic Reporting Rule (40 CFR Part 127), the *owner or operator* must submit the NOI electronically using the *Department's* online NOI.

3. The *owner or operator* shall have the SWPPP preparer sign the "SWPPP Preparer Certification" statement on the NOI prior to submitting the form to the Department.

4. As of the date the NOI is submitted to the Department, the *owner or operator* shall make the NOI and SWPPP available for review and copying in accordance with the requirements in Part VII.F. of this permit.

C. Permit Authorization

1. An *owner or operator* shall not *commence construction activity* until their authorization to *discharge* under this permit goes into effect.

2. Authorization to *discharge* under this permit will be effective when the *owner or operator* has satisfied all of the following criteria:

   a. project review pursuant to the State Environmental Quality Review Act ("SEQRA") have been satisfied, when SEQRA is applicable. See the Department's website (http://www.dec.ny.gov/) for more information,

   b. where required, all necessary Department permits subject to the *Uniform Procedures Act ("UPA")* (see 6 NYCRR Part 621), or the equivalent from another New York State agency, have been obtained, unless otherwise notified by the Department pursuant to 6 NYCRR 621.3(a)(4). *Owners or operators* of *construction activities* that are required to obtain *UPA* permits

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

must submit a preliminary SWPPP to the appropriate DEC Permit Administrator at the Regional Office listed in Appendix F at the time all other necessary *UPA* permit applications are submitted. The preliminary SWPPP must include sufficient information to demonstrate that the *construction activity* qualifies for authorization under this permit,

c. the final SWPPP has been prepared, and

d. a complete NOI has been submitted to the Department in accordance with the requirements of this permit.

3. An *owner or operator* that has satisfied the requirements of Part II.C.2 above will be authorized to *discharge* stormwater from their *construction activity* in accordance with the following schedule:

   a. For *construction activities* that are not subject to the requirements of a *regulated, traditional land use control MS4*:

      (i) Five (5) business days from the date the Department receives a complete electronic version of the NOI (eNOI) for *construction activities* with a SWPPP that has been prepared in conformance with the design criteria in the technical standard referenced in Part III.B.1 and the *performance criteria* in the technical standard referenced in Parts III.B., 2 or 3, for *construction activities* that require post-construction stormwater management practices pursuant to Part III.C.; or

      (ii) Sixty (60) business days from the date the Department receives a complete NOI (electronic or paper version) for *construction activities* with a SWPPP that has not been prepared in conformance with the design criteria in technical standard referenced in Part III.B.1. or, for *construction activities* that require post-construction stormwater management practices pursuant to Part III.C., the *performance criteria* in the technical standard referenced in Parts III.B., 2 or 3, or;

      (iii) Ten (10) business days from the date the Department receives a complete paper version of the NOI for *construction activities* with a SWPPP that has been prepared in conformance with the design criteria in the technical standard referenced in Part III.B.1 and the *performance criteria* in the technical standard referenced in Parts III.B., 2 or 3, for *construction activities* that require post-construction stormwater management practices pursuant to Part III.C.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

b. For *construction activities* that are subject to the requirements of a *regulated, traditional land use control MS4*:

(i) Five (5) business days from the date the Department receives both a complete electronic version of the NOI (eNOI) and signed "*MS4* SWPPP Acceptance" form, or

(ii) Ten (10) business days from the date the Department receives both a complete paper version of the NOI and signed "MS4 SWPPP Acceptance" form.

4. Coverage under this permit authorizes stormwater *discharges* from only those areas of disturbance that are identified in the NOI. If an *owner or operator* wishes to have stormwater *discharges* from future or additional areas of disturbance authorized, they must submit a new NOI that addresses that phase of the development, unless otherwise notified by the Department. The *owner or operator* shall not *commence construction activity* on the future or additional areas until their authorization to *discharge* under this permit goes into effect in accordance with Part II.C. of this permit.

D. General Requirements For Owners or Operators With Permit Coverage

1. The *owner or operator* shall ensure that the provisions of the SWPPP are implemented from the *commencement of construction activity* until all areas of disturbance have achieved *final stabilization* and the Notice of Termination ("NOT") has been submitted to the Department in accordance with Part V. of this permit. This includes any changes made to the SWPPP pursuant to Part III.A.4. of this permit.

2. The *owner or operator* shall maintain a copy of the General Permit (GP-0-20-001), NOI, *NOI Acknowledgment Letter*, SWPPP, MS4 SWPPP Acceptance form, inspection reports, responsible contractor's or subcontractor's certification statement (see Part III.A.6.), and all documentation necessary to demonstrate eligibility with this permit at the *construction site* until all disturbed areas have achieved *final stabilization* and the NOT has been submitted to the Department. The documents must be maintained in a secure location, such as a job trailer, on-site construction office, or mailbox with lock. The secure location must be accessible during normal business hours to an individual performing a compliance inspection.

3. The *owner or operator* of a *construction activity* shall not disturb greater than five (5) acres of soil at any one time without prior written authorization from the Department or, in areas under the jurisdiction of a *regulated, traditional land*

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

use control MS4, the *regulated, traditional land use control MS4* (provided the *regulated, traditional land use control MS4* is not the *owner or operator* of the *construction activity*). At a minimum, the *owner or operator* must comply with the following requirements in order to be authorized to disturb greater than five (5) acres of soil at any one time:

a. The *owner or operator* shall have a *qualified inspector* conduct **at least** two (2) site inspections in accordance with Part IV.C. of this permit every seven (7) calendar days, for as long as greater than five (5) acres of soil remain disturbed. The two (2) inspections shall be separated by a minimum of two (2) full calendar days.

b. In areas where soil disturbance activity has temporarily or permanently ceased, the application of soil stabilization measures must be initiated by the end of the next business day and completed within seven (7) days from the date the current soil disturbance activity ceased. The soil stabilization measures selected shall be in conformance with the technical standard, New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016.

c. The *owner or operator* shall prepare a phasing plan that defines maximum disturbed area per phase and shows required cuts and fills.

d. The *owner or operator* shall install any additional site-specific practices needed to protect water quality.

e. The *owner or operator* shall include the requirements above in their SWPPP.

4. In accordance with statute, regulations, and the terms and conditions of this permit, the Department may suspend or revoke an *owner's or operator's* coverage under this permit at any time if the Department determines that the SWPPP does not meet the permit requirements or consistent with Part VII.K..

5. Upon a finding of significant non-compliance with the practices described in the SWPPP or violation of this permit, the Department may order an immediate stop to all activity at the site until the non-compliance is remedied. The stop work order shall be in writing, describe the non-compliance in detail, and be sent to the *owner or operator*.

6. For *construction activities* that are subject to the requirements of a *regulated, traditional land use control MS4*, the *owner or operator* shall notify the

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

regulated, traditional land use control MS4 in writing of any planned amendments or modifications to the post-construction stormwater management practice component of the SWPPP required by Part III.A. 4. and 5. of this permit. Unless otherwise notified by the *regulated, traditional land use control MS4*, the *owner or operator* shall have the SWPPP amendments or modifications reviewed and accepted by the *regulated, traditional land use control MS4* prior to commencing construction of the post-construction stormwater management practice.

E. Permit Coverage for Discharges Authorized Under GP-0-15-002

1. Upon renewal of SPDES General Permit for Stormwater Discharges from *Construction Activity* (Permit No. GP-0-15-002), an *owner or operator* of *a construction activity* with coverage under GP-0-15-002, as of the effective date of GP- 0-20-001, shall be authorized to *discharge* in accordance with GP- 0-20-001, unless otherwise notified by the Department.

   An *owner or operator* may continue to implement the technical/design components of the post-construction stormwater management controls provided that such design was done in conformance with the technical standards in place at the time of initial project authorization. However, they must comply with the other, non-design provisions of GP-0-20-001.

F. Change of Owner or Operator

1. When property ownership changes or when there is a change in operational control over the construction plans and specifications, the original *owner or operator* must notify the new *owner or operator*, in writing, of the requirement to obtain permit coverage by submitting a NOI with the Department. For *construction activities* subject to the requirements of a *regulated, traditional land use control MS4,* the original *owner or operator* must also notify the MS4, in writing, of the change in ownership at least 30 calendar days prior to the change in ownership.

2. Once the new *owner or operator* obtains permit coverage, the original *owner or operator* shall then submit a completed NOT with the name and permit identification number of the new *owner or operator* to the Department at the address in Part II.B.1. of this permit. If the original *owner or operator* maintains ownership of a portion of the *construction activity* and will disturb soil, they must maintain their coverage under the permit.

3. Permit coverage for the new *owner or operator* will be effective as of the date the Department receives a complete NOI, provided the original *owner or*

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

operator was not subject to a sixty (60) business day authorization period that has not expired as of the date the Department receives the NOI from the new *owner or operator*.

Part III. STORMWATER POLLUTION PREVENTION PLAN (SWPPP)

A. General SWPPP Requirements

1. A SWPPP shall be prepared and implemented by the *owner or operator* of each *construction activity* covered by this permit. The SWPPP must document the selection, design, installation, implementation and maintenance of the control measures and practices that will be used to meet the effluent limitations in Part I.B. of this permit and where applicable, the post-construction stormwater management practice requirements in Part I.C. of this permit. The SWPPP shall be prepared prior to the submittal of the NOI. The NOI shall be submitted to the Department prior to the *commencement of construction activity*. A copy of the completed, final NOI shall be included in the SWPPP.

2. The SWPPP shall describe the erosion and sediment control practices and where required, post-construction stormwater management practices that will be used and/or constructed to reduce the *pollutants* in stormwater *discharges* and to assure compliance with the terms and conditions of this permit. In addition, the SWPPP shall identify potential sources of pollution which may reasonably be expected to affect the quality of stormwater *discharges*.

3. All SWPPPs that require the post-construction stormwater management practice component shall be prepared by a *qualified professional* that is knowledgeable in the principles and practices of stormwater management and treatment.

4. The *owner or operator* must keep the SWPPP current so that it at all times accurately documents the erosion and sediment controls practices that are being used or will be used during construction, and all post-construction stormwater management practices that will be constructed on the site. At a minimum, the *owner or operator* shall amend the SWPPP, including construction drawings:

    a. whenever the current provisions prove to be ineffective in minimizing *pollutants* in stormwater *discharges* from the site;

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

b. whenever there is a change in design, construction, or operation at the *construction site* that has or could have an effect on the *discharge* of *pollutants*;

c. to address issues or deficiencies identified during an inspection by the *qualified inspector,* the Department or other regulatory authority; and

d. to document the final construction conditions.

5. The Department may notify the *owner or operator* at any time that the SWPPP does not meet one or more of the minimum requirements of this permit. The notification shall be in writing and identify the provisions of the SWPPP that require modification. Within fourteen (14) calendar days of such notification, or as otherwise indicated by the Department, the *owner or operator* shall make the required changes to the SWPPP and submit written notification to the Department that the changes have been made. If the *owner or operator* does not respond to the Department's comments in the specified time frame, the Department may suspend the *owner's or operator's* coverage under this permit or require the *owner or operator* to obtain coverage under an individual SPDES permit in accordance with Part II.D.4. of this permit.

6. Prior to the *commencement of construction activity*, the *owner or operator* must identify the contractor(s) and subcontractor(s) that will be responsible for installing, constructing, repairing, replacing, inspecting and maintaining the erosion and sediment control practices included in the SWPPP; and the contractor(s) and subcontractor(s) that will be responsible for constructing the post-construction stormwater management practices included in the SWPPP. The *owner or operator* shall have each of the contractors and subcontractors identify at least one person from their company that will be responsible for implementation of the SWPPP. This person shall be known as the *trained contractor.* The *owner or operator* shall ensure that at least one *trained contractor* is on site on a daily basis when soil disturbance activities are being performed.

   The *owner or operator* shall have each of the contractors and subcontractors identified above sign a copy of the following certification statement below before they commence any *construction activity*:

   "I hereby certify under penalty of law that I understand and agree to comply with the terms and conditions of the SWPPP and agree to implement any corrective actions identified by the *qualified inspector* during a site inspection. I also understand that the *owner or operator* must comply with

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

the terms and conditions of the most current version of the New York State Pollutant Discharge Elimination System ("SPDES") general permit for stormwater *discharge*s from *construction activities* and that it is unlawful for any person to cause or contribute to a violation of *water quality standards*. Furthermore, I am aware that there are significant penalties for submitting false information, that I do not believe to be true, including the possibility of fine and imprisonment for knowing violations"

In addition to providing the certification statement above, the certification page must also identify the specific elements of the SWPPP that each contractor and subcontractor will be responsible for and include the name and title of the person providing the signature; the name and title of the *trained contractor* responsible for SWPPP implementation; the name, address and telephone number of the contracting firm; the address (or other identifying description) of the site; and the date the certification statement is signed. The *owner or operator* shall attach the certification statement(s) to the copy of the SWPPP that is maintained at the *construction site*. If new or additional contractors are hired to implement measures identified in the SWPPP after construction has commenced, they must also sign the certification statement and provide the information listed above.

7. For projects where the Department requests a copy of the SWPPP or inspection reports, the *owner or operator* shall submit the documents in both electronic (PDF only) and paper format within five (5) business days, unless otherwise notified by the Department.

B. Required SWPPP Contents

1. Erosion and sediment control component - All SWPPPs prepared pursuant to this permit shall include erosion and sediment control practices designed in conformance with the technical standard, New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016. Where erosion and sediment control practices are not designed in conformance with the design criteria included in the technical standard, the *owner or operator* must demonstrate *equivalence* to the technical standard. At a minimum, the erosion and sediment control component of the SWPPP shall include the following:

   a. Background information about the scope of the project, including the location, type and size of project

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

b. A site map/construction drawing(s) for the project, including a general location map. At a minimum, the site map shall show the total site area; all improvements; areas of disturbance; areas that will not be disturbed; existing vegetation; on-site and adjacent off-site surface water(s); floodplain/floodway boundaries; wetlands and drainage patterns that could be affected by the *construction activity*; existing and final contours ; locations of different soil types with boundaries; material, waste, borrow or equipment storage areas located on adjacent properties; and location(s) of the stormwater *discharge*(s);

c. A description of the soil(s) present at the site, including an identification of the Hydrologic Soil Group (HSG);

d. A construction phasing plan and sequence of operations describing the intended order of *construction activities*, including clearing and grubbing, excavation and grading, utility and infrastructure installation and any other activity at the site that results in soil disturbance;

e. A description of the minimum erosion and sediment control practices to be installed or implemented for each *construction activity* that will result in soil disturbance. Include a schedule that identifies the timing of initial placement or implementation of each erosion and sediment control practice and the minimum time frames that each practice should remain in place or be implemented;

f. A temporary and permanent soil stabilization plan that meets the requirements of this general permit and the technical standard, New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016, for each stage of the project, including initial land clearing and grubbing to project completion and achievement of *final stabilization*;

g. A site map/construction drawing(s) showing the specific location(s), size(s), and length(s) of each erosion and sediment control practice;

h. The dimensions, material specifications, installation details, and operation and maintenance requirements for all erosion and sediment control practices. Include the location and sizing of any temporary sediment basins and structural practices that will be used to divert flows from exposed soils;

i. A maintenance inspection schedule for the contractor(s) identified in Part III.A.6. of this permit, to ensure continuous and effective operation of the erosion and sediment control practices. The maintenance inspection

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

schedule shall be in accordance with the requirements in the technical standard, New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016;

j. A description of the pollution prevention measures that will be used to control litter, construction chemicals and construction debris from becoming a *pollutant* source in the stormwater *discharges*;

k. A description and location of any stormwater *discharges* associated with industrial activity other than construction at the site, including, but not limited to, stormwater *discharges* from asphalt plants and concrete plants located on the *construction site*; and

l. Identification of any elements of the design that are not in conformance with the design criteria in the technical standard, New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016. Include the reason for the deviation or alternative design and provide information which demonstrates that the deviation or alternative design is *equivalent* to the technical standard.

2. Post-construction stormwater management practice component – The *owner or operator* of any construction project identified in Table 2 of Appendix B as needing post-construction stormwater management practices shall prepare a SWPPP that includes practices designed in conformance with the applicable *sizing criteria* in Part I.C.2.a., c. or d. of this permit and the *performance criteria* in the technical standard, New York State Stormwater Management Design Manual dated January 2015

   Where post-construction stormwater management practices are not designed in conformance with the *performance criteria* in the technical standard, the *owner or operator* must include in the SWPPP the reason(s) for the deviation or alternative design and provide information which demonstrates that the deviation or alternative design is *equivalent* to the technical standard.

   The post-construction stormwater management practice component of the SWPPP shall include the following:

   a. Identification of all post-construction stormwater management practices to be constructed as part of the project. Include the dimensions, material specifications and installation details for each post-construction stormwater management practice;

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

b. A site map/construction drawing(s) showing the specific location and size of each post-construction stormwater management practice;

c. A Stormwater Modeling and Analysis Report that includes:
   (i) Map(s) showing pre-development conditions, including watershed/subcatchments boundaries, flow paths/routing, and design points;

   (ii) Map(s) showing post-development conditions, including watershed/subcatchments boundaries, flow paths/routing, design points and post-construction stormwater management practices;

   (iii) Results of stormwater modeling (i.e. hydrology and hydraulic analysis) for the required storm events. Include supporting calculations (model runs), methodology, and a summary table that compares pre and post-development runoff rates and volumes for the different storm events;

   (iv) Summary table, with supporting calculations, which demonstrates that each post-construction stormwater management practice has been designed in conformance with the *sizing criteria* included in the Design Manual;

   (v) Identification of any *sizing criteria* that is not required based on the requirements included in Part I.C. of this permit; and

   (vi) Identification of any elements of the design that are not in conformance with the *performance criteria* in the Design Manual. Include the reason(s) for the deviation or alternative design and provide information which demonstrates that the deviation or alternative design is *equivalent* to the Design Manual;

d. Soil testing results and locations (test pits, borings);

e. Infiltration test results, when required; and

f. An operations and maintenance plan that includes inspection and maintenance schedules and actions to ensure continuous and effective operation of each post-construction stormwater management practice. The plan shall identify the entity that will be responsible for the long term operation and maintenance of each practice.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

3. Enhanced Phosphorus Removal Standards - All construction projects identified in Table 2 of Appendix B that are located in the watersheds identified in Appendix C shall prepare a SWPPP that includes post-construction stormwater management practices designed in conformance with the applicable *sizing criteria* in Part I.C.2. b., c. or d. of this permit and the *performance criteria,* Enhanced Phosphorus Removal Standards included in the Design Manual. At a minimum, the post-construction stormwater management practice component of the SWPPP shall include items 2.a - 2.f. above.

C. Required SWPPP Components by Project Type

Unless otherwise notified by the Department, *owners or operators* of *construction activities* identified in Table 1 of Appendix B are required to prepare a SWPPP that only includes erosion and sediment control practices designed in conformance with Part III.B.1 of this permit. *Owners or operators* of the *construction activities* identified in Table 2 of Appendix B shall prepare a SWPPP that also includes post-construction stormwater management practices designed in conformance with Part III.B.2 or 3 of this permit.

Part IV. INSPECTION AND MAINTENANCE REQUIREMENTS

A. General Construction Site Inspection and Maintenance Requirements

1. The *owner or operator* must ensure that all erosion and sediment control practices (including pollution prevention measures) and all post-construction stormwater management practices identified in the SWPPP are inspected and maintained in accordance with Part IV.B. and C. of this permit.

2. The terms of this permit shall not be construed to prohibit the State of New York from exercising any authority pursuant to the ECL, common law or federal law, or prohibit New York State from taking any measures, whether civil or criminal, to prevent violations of the laws of the State of New York or protect the public health and safety and/or the environment.

B. Contractor Maintenance Inspection Requirements

1. The *owner or operator* of each *construction activity* identified in Tables 1 and 2 of Appendix B shall have a *trained contractor* inspect the erosion and sediment control practices and pollution prevention measures being implemented within the active work area daily to ensure that they are being maintained in effective operating condition at all times. If deficiencies are identified, the contractor shall

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

begin implementing corrective actions within one business day and shall complete the corrective actions in a reasonable time frame.

2. For construction sites where soil disturbance activities have been temporarily suspended (e.g. winter shutdown) and *temporary stabilization* measures have been applied to all disturbed areas, the *trained contractor* can stop conducting the maintenance inspections. The *trained contractor* shall begin conducting the maintenance inspections in accordance with Part IV.B.1. of this permit as soon as soil disturbance activities resume.

3. For construction sites where soil disturbance activities have been shut down with partial project completion, the *trained contractor* can stop conducting the maintenance inspections if all areas disturbed as of the project shutdown date have achieved *final stabilization* and all post-construction stormwater management practices required for the completed portion of the project have been constructed in conformance with the SWPPP and are operational.

C. Qualified Inspector Inspection Requirements

The *owner or operator* shall have a *qualified inspector* conduct site inspections in conformance with the following requirements:

[Note: The *trained contractor* identified in Part III.A.6. and IV.B. of this permit **cannot** conduct the *qualified inspector* site inspections unless they meet the *qualified inspector* qualifications included in Appendix A. In order to perform these inspections, the *trained contractor* would have to be a:

- licensed Professional Engineer,
- Certified Professional in Erosion and Sediment Control (CPESC),
- New York State Erosion and Sediment Control Certificate Program holder
- Registered Landscape Architect, or
- someone working under the direct supervision of, and at the same company as, the licensed Professional Engineer or Registered Landscape Architect, provided they have received four (4) hours of Department endorsed training in proper erosion and sediment control principles from a Soil and Water Conservation District, or other Department endorsed entity].

1. A *qualified inspector* shall conduct site inspections for all *construction activities* identified in Tables 1 and 2 of Appendix B, with the exception of:

   a. the construction of a single family residential subdivision with 25% or less *impervious cover* at total site build-out that involves a soil disturbance of one (1) or more acres of land but less than five (5) acres and is not located

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

in one of the watersheds listed in Appendix C and not directly discharging to one of the 303(d) segments listed in Appendix E;

b. the construction of a single family home that involves a soil disturbance of one (1) or more acres of land but less than five (5) acres and is not located in one of the watersheds listed in Appendix C and not directly discharging to one of the 303(d) segments listed in Appendix E;

c. construction on agricultural property that involves a soil disturbance of one (1) or more acres of land but less than five (5) acres; and

d. *construction activities* located in the watersheds identified in Appendix D that involve soil disturbances between five thousand (5,000) square feet and one (1) acre of land.

2. Unless otherwise notified by the Department, the *qualified inspector* shall conduct site inspections in accordance with the following timetable:

a. For construction sites where soil disturbance activities are on-going, the *qualified inspector* shall conduct a site inspection at least once every seven (7) calendar days.

b. For construction sites where soil disturbance activities are on-going and the *owner or operator* has received authorization in accordance with Part II.D.3 to disturb greater than five (5) acres of soil at any one time, the *qualified inspector* shall conduct at least two (2) site inspections every seven (7) calendar days. The two (2) inspections shall be separated by a minimum of two (2) full calendar days.

c. For construction sites where soil disturbance activities have been temporarily suspended (e.g. winter shutdown) and *temporary stabilization* measures have been applied to all disturbed areas, the *qualified inspector* shall conduct a site inspection at least once every thirty (30) calendar days. The *owner or operator* shall notify the DOW Water (SPDES) Program contact at the Regional Office (see contact information in Appendix F) or, in areas under the jurisdiction of a *regulated, traditional land use control MS4,* the *regulated, traditional land use control MS4* (provided the *regulated, traditional land use control MS4* is not the *owner or operator* of the *construction activity*) in writing prior to reducing the frequency of inspections.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

d. For construction sites where soil disturbance activities have been shut down with partial project completion, the *qualified inspector* can stop conducting inspections if all areas disturbed as of the project shutdown date have achieved *final stabilization* and all post-construction stormwater management practices required for the completed portion of the project have been constructed in conformance with the SWPPP and are operational. The *owner or operator* shall notify the DOW Water (SPDES) Program contact at the Regional Office (see contact information in Appendix F) or, in areas under the jurisdiction of a *regulated, traditional land use control MS4,* the *regulated, traditional land use control MS4* (provided the *regulated, traditional land use control MS4* is not the *owner or operator* of the *construction activity*) in writing prior to the shutdown. If soil disturbance activities are not resumed within 2 years from the date of shutdown, the *owner or operator* shall have the *qualified inspector* perform a final inspection and certify that all disturbed areas have achieved *final stabilization,* and all temporary, structural erosion and sediment control measures have been removed*;* and that all post-construction stormwater management practices have been constructed in conformance with the SWPPP by signing the "*Final Stabilization*" and "Post-Construction Stormwater Management Practice" certification statements on the NOT. The *owner or operator* shall then submit the completed NOT form to the address in Part II.B.1 of this permit.

e. For construction sites that directly *discharge* to one of the 303(d) segments listed in Appendix E or is located in one of the watersheds listed in Appendix C, the *qualified inspector* shall conduct at least two (2) site inspections every seven (7) calendar days. The two (2) inspections shall be separated by a minimum of two (2) full calendar days.

3. At a minimum, the *qualified inspector* shall inspect all erosion and sediment control practices and pollution prevention measures to ensure integrity and effectiveness, all post-construction stormwater management practices under construction to ensure that they are constructed in conformance with the SWPPP, all areas of disturbance that have not achieved *final stabilization,* all points of *discharge* to natural surface waterbodies located within, or immediately adjacent to, the property boundaries of the *construction site*, and all points of *discharge* from the *construction site*.

4. The *qualified inspector* shall prepare an inspection report subsequent to each and every inspection. At a minimum, the inspection report shall include and/or address the following:

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

a. Date and time of inspection;

b. Name and title of person(s) performing inspection;

c. A description of the weather and soil conditions (e.g. dry, wet, saturated) at the time of the inspection;

d. A description of the condition of the runoff at all points of *discharge* from the *construction site*. This shall include identification of any *discharges* of sediment from the *construction site*. Include *discharges* from conveyance systems (i.e. pipes, culverts, ditches, etc.) and overland flow;

e. A description of the condition of all natural surface waterbodies located within, or immediately adjacent to, the property boundaries of the *construction site* which receive runoff from disturbed areas. This shall include identification of any *discharges* of sediment to the surface waterbody;

f. Identification of all erosion and sediment control practices and pollution prevention measures that need repair or maintenance;

g. Identification of all erosion and sediment control practices and pollution prevention measures that were not installed properly or are not functioning as designed and need to be reinstalled or replaced;

h. Description and sketch of areas with active soil disturbance activity, areas that have been disturbed but are inactive at the time of the inspection, and areas that have been stabilized (temporary and/or final) since the last inspection;

i. Current phase of construction of all post-construction stormwater management practices and identification of all construction that is not in conformance with the SWPPP and technical standards;

j. Corrective action(s) that must be taken to install, repair, replace or maintain erosion and sediment control practices and pollution prevention measures; and to correct deficiencies identified with the construction of the post-construction stormwater management practice(s);

k. Identification and status of all corrective actions that were required by previous inspection; and

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

l. Digital photographs, with date stamp, that clearly show the condition of all practices that have been identified as needing corrective actions. The *qualified inspector* shall attach paper color copies of the digital photographs to the inspection report being maintained onsite within seven (7) calendar days of the date of the inspection. The *qualified inspector* shall also take digital photographs, with date stamp, that clearly show the condition of the practice(s) after the corrective action has been completed. The *qualified inspector* shall attach paper color copies of the digital photographs to the inspection report that documents the completion of the corrective action work within seven (7) calendar days of that inspection.

5. Within one business day of the completion of an inspection, the *qualified inspector* shall notify the *owner or operator* and appropriate contractor or subcontractor identified in Part III.A.6. of this permit of any corrective actions that need to be taken. The contractor or subcontractor shall begin implementing the corrective actions within one business day of this notification and shall complete the corrective actions in a reasonable time frame.

6. All inspection reports shall be signed by the *qualified inspector.* Pursuant to Part II.D.2. of this permit, the inspection reports shall be maintained on site with the SWPPP.

Part V. TERMINATION OF PERMIT COVERAGE

A. Termination of Permit Coverage

1. An *owner or operator* that is eligible to terminate coverage under this permit must submit a completed NOT form to the address in Part II.B.1 of this permit. The NOT form shall be one which is associated with this permit, signed in accordance with Part VII.H of this permit.

2. An *owner or operator* may terminate coverage when one or more the following conditions have been met:

   a. Total project completion - All *construction activity* identified in the SWPPP has been completed; and all areas of disturbance have achieved *final stabilization*; and all temporary, structural erosion and sediment control measures have been removed; and all post-construction stormwater management practices have been constructed in conformance with the SWPPP and are operational;

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

b. Planned shutdown with partial project completion - All soil disturbance activities have ceased; and all areas disturbed as of the project shutdown date have achieved *final stabilization*; and all temporary, structural erosion and sediment control measures have been removed; and all post-construction stormwater management practices required for the completed portion of the project have been constructed in conformance with the SWPPP and are operational;

c. A new *owner or operator* has obtained coverage under this permit in accordance with Part II.F. of this permit.

d. The *owner or operator* obtains coverage under an alternative SPDES general permit or an individual SPDES permit.

3. For *construction activities* meeting subdivision 2a. or 2b. of this Part, the *owner or operator* shall have the *qualified inspector* perform a final site inspection prior to submitting the NOT. The *qualified inspector* shall, by signing the "*Final Stabilization*" and "Post-Construction Stormwater Management Practice certification statements on the NOT, certify that all the requirements in Part V.A.2.a. or b. of this permit have been achieved.

4. For *construction activities* that are subject to the requirements of a *regulated, traditional land use control MS4* and meet subdivision 2a. or 2b. of this Part, the *owner or operator* shall have the *regulated, traditional land use control MS4* sign the "MS4 Acceptance" statement on the NOT in accordance with the requirements in Part VII.H. of this permit. The *regulated, traditional land use control MS4* official, by signing this statement, has determined that it is acceptable for the *owner or operator* to submit the NOT in accordance with the requirements of this Part. The *regulated, traditional land use control MS4* can make this determination by performing a final site inspection themselves or by accepting the *qualified inspector*'s final site inspection certification(s) required in Part V.A.3. of this permit.

5. For *construction activities* that require post-construction stormwater management practices and meet subdivision 2a. of this Part, the *owner or operator* must, prior to submitting the NOT, ensure one of the following:

a. the post-construction stormwater management practice(s) and any right-of-way(s) needed to maintain such practice(s) have been deeded to the municipality in which the practice(s) is located,

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

b. an executed maintenance agreement is in place with the municipality that will maintain the post-construction stormwater management practice(s),

c. for post-construction stormwater management practices that are privately owned, the *owner or operator* has a mechanism in place that requires operation and maintenance of the practice(s) in accordance with the operation and maintenance plan, such as a deed covenant in the *owner or operator's* deed of record,

d. for post-construction stormwater management practices that are owned by a public or private institution (e.g. school, university, hospital), government agency or authority, or public utility; the *owner or operator* has policy and procedures in place that ensures operation and maintenance of the practices in accordance with the operation and maintenance plan.

Part VI. REPORTING AND RETENTION RECORDS

A. Record Retention

The *owner or operator* shall retain a copy of the NOI, NOI Acknowledgment Letter, SWPPP, MS4 SWPPP Acceptance form and any inspection reports that were prepared in conjunction with this permit for a period of at least five (5) years from the date that the Department receives a complete NOT submitted in accordance with Part V. of this general permit.

B. Addresses

With the exception of the NOI, NOT, and MS4 SWPPP Acceptance form (which must be submitted to the address referenced in Part II.B.1 of this permit), all written correspondence requested by the Department, including individual permit applications, shall be sent to the address of the appropriate DOW Water (SPDES) Program contact at the Regional Office listed in Appendix F.

Part VII. STANDARD PERMIT CONDITIONS

A. Duty to Comply

The *owner or operator* must comply with all conditions of this permit. All contractors and subcontractors associated with the project must comply with the terms of the SWPPP. Any non-compliance with this permit constitutes a violation of the Clean Water

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

Act (CWA) and the ECL and is grounds for an enforcement action against the *owner or operator* and/or the contractor/subcontractor; permit revocation, suspension or modification; or denial of a permit renewal application. Upon a finding of significant non-compliance with this permit or the applicable SWPPP, the Department may order an immediate stop to all *construction activity* at the site until the non-compliance is remedied. The stop work order shall be in writing, shall describe the non-compliance in detail, and shall be sent to the *owner or operator*.

If any human remains or archaeological remains are encountered during excavation, the *owner or operator* must immediately cease, or cause to cease, all *construction activity* in the area of the remains and notify the appropriate Regional Water Engineer (RWE). *Construction activity* shall not resume until written permission to do so has been received from the RWE.

B. Continuation of the Expired General Permit

This permit expires five (5) years from the effective date. If a new general permit is not issued prior to the expiration of this general permit, an *owner or operator* with coverage under this permit may continue to operate and *discharge* in accordance with the terms and conditions of this general permit, if it is extended pursuant to the State Administrative Procedure Act and 6 NYCRR Part 621, until a new general permit is issued.

C. Enforcement

Failure of the *owner or operator,* its contractors, subcontractors, agents and/or assigns to strictly adhere to any of the permit requirements contained herein shall constitute a violation of this permit. There are substantial criminal, civil, and administrative penalties associated with violating the provisions of this permit. Fines of up to $37,500 per day for each violation and imprisonment for up to fifteen (15) years may be assessed depending upon the nature and degree of the offense.

D. Need to Halt or Reduce Activity Not a Defense

It shall not be a defense for an *owner or operator* in an enforcement action that it would have been necessary to halt or reduce the *construction activity* in order to maintain compliance with the conditions of this permit.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

E. Duty to Mitigate

The *owner or operator* and its contractors and subcontractors shall take all reasonable steps to *minimize* or prevent any *discharge* in violation of this permit which has a reasonable likelihood of adversely affecting human health or the environment.

F. Duty to Provide Information

The *owner or operator* shall furnish to the Department, within a reasonable specified time period of a written request, all documentation necessary to demonstrate eligibility and any information to determine compliance with this permit or to determine whether cause exists for modifying or revoking this permit, or suspending or denying coverage under this permit, in accordance with the terms and conditions of this permit. The NOI, SWPPP and inspection reports required by this permit are public documents that the *owner or operator* must make available for review and copying by any person within five (5) business days of the *owner or operator* receiving a written request by any such person to review these documents. Copying of documents will be done at the requester's expense.

G. Other Information

When the *owner or operator* becomes aware that they failed to submit any relevant facts, or submitted incorrect information in the NOI or in any of the documents required by this permit , or have made substantive revisions to the SWPPP (e.g. the scope of the project changes significantly, the type of post-construction stormwater management practice(s) changes, there is a reduction in the sizing of the post-construction stormwater management practice, or there is an increase in the disturbance area or *impervious area*), which were not reflected in the original NOI submitted to the Department, they shall promptly submit such facts or information to the Department using the contact information in Part II.A. of this permit. Failure of the *owner or operator* to correct or supplement any relevant facts within five (5) business days of becoming aware of the deficiency shall constitute a violation of this permit.

H. Signatory Requirements

1. All NOIs and NOTs shall be signed as follows:

    a. For a corporation these forms shall be signed by a responsible corporate officer. For the purpose of this section, a responsible corporate officer means:

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

(i) a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision-making functions for the corporation; or

(ii) the manager of one or more manufacturing, production or operating facilities, provided the manager is authorized to make management decisions which govern the operation of the regulated facility including having the explicit or implicit duty of making major capital investment recommendations, and initiating and directing other comprehensive measures to assure long term environmental compliance with environmental laws and regulations; the manager can ensure that the necessary systems are established or actions taken to gather complete and accurate information for permit application requirements; and where authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures;

b. For a partnership or sole proprietorship these forms shall be signed by a general partner or the proprietor, respectively; or

c. For a municipality, State, Federal, or other public agency these forms shall be signed by either a principal executive officer or ranking elected official. For purposes of this section, a principal executive officer of a Federal agency includes:

(i) the chief executive officer of the agency, or

(ii) a senior executive officer having responsibility for the overall operations of a principal geographic unit of the agency (e.g., Regional Administrators of EPA).

2. The SWPPP and other information requested by the Department shall be signed by a person described in Part VII.H.1. of this permit or by a duly authorized representative of that person. A person is a duly authorized representative only if:

a. The authorization is made in writing by a person described in Part VII.H.1. of this permit;

b. The authorization specifies either an individual or a position having responsibility for the overall operation of the regulated facility or activity, such as the position of plant manager, operator of a well or a well field,

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

superintendent, position of *equivalent* responsibility, or an individual or position having overall responsibility for environmental matters for the company. (A duly authorized representative may thus be either a named individual or any individual occupying a named position) and,

c. The written authorization shall include the name, title and signature of the authorized representative and be attached to the SWPPP.

3. All inspection reports shall be signed by the *qualified inspector* that performs the inspection.

4. The MS4 SWPPP Acceptance form shall be signed by the principal executive officer or ranking elected official from the *regulated, traditional land use control MS4,* or by a duly authorized representative of that person.

   It shall constitute a permit violation if an incorrect and/or improper signatory authorizes any required forms, SWPPP and/or inspection reports.

I. Property Rights

The issuance of this permit does not convey any property rights of any sort, nor any exclusive privileges, nor does it authorize any injury to private property nor any invasion of personal rights, nor any infringement of Federal, State or local laws or regulations. *Owners or operators* must obtain any applicable conveyances, easements, licenses and/or access to real property prior to *commencing construction activity*.

J. Severability

The provisions of this permit are severable, and if any provision of this permit, or the application of any provision of this permit to any circumstance, is held invalid, the application of such provision to other circumstances, and the remainder of this permit shall not be affected thereby.

K. Requirement to Obtain Coverage Under an Alternative Permit

1. The Department may require any owner or operator authorized by this permit to apply for and/or obtain either an individual SPDES permit or another SPDES general permit. When the Department requires any discharger authorized by a general permit to apply for an individual SPDES permit, it shall notify the discharger in writing that a permit application is required. This notice shall

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

include a brief statement of the reasons for this decision, an application form, a statement setting a time frame for the owner or operator to file the application for an individual SPDES permit, and a deadline, not sooner than 180 days from owner or operator receipt of the notification letter, whereby the authorization to discharge under this general permit shall be terminated. Applications must be submitted to the appropriate Permit Administrator at the Regional Office. The Department may grant additional time upon demonstration, to the satisfaction of the Department, that additional time to apply for an alternative authorization is necessary or where the Department has not provided a permit determination in accordance with Part 621 of this Title.

2. When an individual SPDES permit is issued to a discharger authorized to *discharge* under a general SPDES permit for the same *discharge*(s), the general permit authorization for outfalls authorized under the individual SPDES permit is automatically terminated on the effective date of the individual permit unless termination is earlier in accordance with 6 NYCRR Part 750.

L. Proper Operation and Maintenance

The *owner or operator* shall at all times properly operate and maintain all facilities and systems of treatment and control (and related appurtenances) which are installed or used by the *owner or operator* to achieve compliance with the conditions of this permit and with the requirements of the SWPPP.

M. Inspection and Entry

The *owner or operator* shall allow an authorized representative of the Department, EPA, applicable county health department, or, in the case of a *construction site* which *discharges* through an *MS4*, an authorized representative of the *MS4* receiving the discharge, upon the presentation of credentials and other documents as may be required by law, to:

1. Enter upon the owner’s or operator's premises where a regulated facility or activity is located or conducted or where records must be kept under the conditions of this permit;

2. Have access to and copy at reasonable times, any records that must be kept under the conditions of this permit; and

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

3. Inspect at reasonable times any facilities or equipment (including monitoring and control equipment), practices or operations regulated or required by this permit.

4. Sample or monitor at reasonable times, for purposes of assuring permit compliance or as otherwise authorized by the Act or ECL, any substances or parameters at any location.

N. Permit Actions

This permit may, at any time, be modified, suspended, revoked, or renewed by the Department in accordance with 6 NYCRR Part 621. The filing of a request by the *owner or operator* for a permit modification, revocation and reissuance, termination, a notification of planned changes or anticipated noncompliance does not limit, diminish and/or stay compliance with any terms of this permit.

O. Definitions

Definitions of key terms are included in Appendix A of this permit.

P. Re-Opener Clause

1. If there is evidence indicating potential or realized impacts on water quality due to any stormwater discharge associated with construction activity covered by this permit, the owner or operator of such discharge may be required to obtain an individual permit or alternative general permit in accordance with Part VII.K. of this permit or the permit may be modified to include different limitations and/or requirements.

2. Any Department initiated permit modification, suspension or revocation will be conducted in accordance with 6 NYCRR Part 621, 6 NYCRR 750-1.18, and 6 NYCRR 750-1.20.

Q. Penalties for Falsification of Forms and Reports

In accordance with 6NYCRR Part 750-2.4 and 750-2.5, any person who knowingly makes any false material statement, representation, or certification in any application, record, report or other document filed or required to be maintained under this permit, including reports of compliance or noncompliance shall, upon conviction, be punished in accordance with ECL §71-1933 and or Articles 175 and 210 of the New York State Penal Law.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

(Part VII.R)

R. Other Permits

Nothing in this permit relieves the *owner or operator* from a requirement to obtain any other permits required by law.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

APPENDIX A – Acronyms and Definitions

Acronyms

APO – Agency Preservation Officer
BMP – Best Management Practice
CPESC – Certified Professional in Erosion and Sediment Control
Cpv – Channel Protection Volume
CWA – Clean Water Act (or the Federal Water Pollution Control Act, 33 U.S.C. §1251 et seq)
DOW – Division of Water
EAF – Environmental Assessment Form
ECL - Environmental Conservation Law
EPA – U. S. Environmental Protection Agency
HSG – Hydrologic Soil Group
MS4 – Municipal Separate Storm Sewer System
NOI – Notice of Intent
NOT – Notice of Termination
NPDES – National Pollutant Discharge Elimination System
OPRHP – Office of Parks, Recreation and Historic Places
Qf – Extreme Flood
Qp – Overbank Flood
RRv – Runoff Reduction Volume
RWE – Regional Water Engineer
SEQR – State Environmental Quality Review
SEQRA - State Environmental Quality Review Act
SHPA – State Historic Preservation Act
SPDES – State Pollutant Discharge Elimination System
SWPPP – Stormwater Pollution Prevention Plan
TMDL – Total Maximum Daily Load
UPA – Uniform Procedures Act
USDA – United States Department of Agriculture
WQv – Water Quality Volume

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

Definitions

All definitions in this section are solely for the purposes of this permit.

Agricultural Building – a structure designed and constructed to house farm implements, hay, grain, poultry, livestock or other horticultural products; excluding any structure designed, constructed or used, in whole or in part, for human habitation, as a place of employment where agricultural products are processed, treated or packaged, or as a place used by the public.

Agricultural Property –means the land for construction of a barn, *agricultural building*, silo, stockyard, pen or other structural practices identified in Table II in the "Agricultural Management Practices Catalog for Nonpoint Source Pollution in New York State" prepared by the Department in cooperation with agencies of New York Nonpoint Source Coordinating Committee (dated June 2007).

Alter Hydrology from Pre to Post-Development Conditions - means the post-development peak flow rate(s) has increased by more than 5% of the pre-developed condition for the design storm of interest (e.g. 10 yr and 100 yr).

Combined Sewer - means a sewer that is designed to collect and convey both "sewage" and "stormwater".

Commence (Commencement of) Construction Activities - means the initial disturbance of soils associated with clearing, grading or excavation activities; or other construction related activities that disturb or expose soils such as demolition, stockpiling of fill material, and the initial installation of erosion and sediment control practices required in the SWPPP. See definition for "*Construction Activity(ies)*" also.

Construction Activity(ies) - means any clearing, grading, excavation, filling, demolition or stockpiling activities that result in soil disturbance. Clearing activities can include, but are not limited to, logging equipment operation, the cutting and skidding of trees, stump removal and/or brush root removal. Construction activity does not include routine maintenance that is performed to maintain the original line and grade, hydraulic capacity, or original purpose of a facility.

Construction Site – means the land area where *construction activity(ies)* will occur. See definition for "*Commence (Commencement of) Construction Activities"* and "*Larger Common Plan of Development or Sale" also.*

Dewatering – means the act of draining rainwater and/or groundwater from building foundations, vaults or excavations/trenches.

Direct Discharge (to a specific surface waterbody) - means that runoff flows from a *construction site* by overland flow and the first point of discharge is the specific surface waterbody, or runoff flows from a *construction site* to a separate storm sewer system

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

and the first point of discharge from the separate storm sewer system is the specific surface waterbody.

Discharge(s) - means any addition of any pollutant to waters of the State through an outlet or *point source*.

Embankment –means an earthen or rock slope that supports a road/highway.

Endangered or Threatened Species – see 6 NYCRR Part 182 of the Department's rules and regulations for definition of terms and requirements.

Environmental Conservation Law (ECL) - means chapter 43-B of the Consolidated Laws of the State of New York, entitled the Environmental Conservation Law.

Equivalent (Equivalence) – means that the practice or measure meets all the performance, longevity, maintenance, and safety objectives of the technical standard and will provide an equal or greater degree of water quality protection.

Final Stabilization - means that all soil disturbance activities have ceased and a uniform, perennial vegetative cover with a density of eighty (80) percent over the entire pervious surface has been established; or other equivalent stabilization measures, such as permanent landscape mulches, rock rip-rap or washed/crushed stone have been applied on all disturbed areas that are not covered by permanent structures, concrete or pavement.

General SPDES permit - means a SPDES permit issued pursuant to 6 NYCRR Part 750-1.21 and Section 70-0117 of the ECL authorizing a category of discharges.

Groundwater(s) - means waters in the saturated zone. The saturated zone is a subsurface zone in which all the interstices are filled with water under pressure greater than that of the atmosphere. Although the zone may contain gas-filled interstices or interstices filled with fluids other than water, it is still considered saturated.

Historic Property – means any building, structure, site, object or district that is listed on the State or National Registers of Historic Places or is determined to be eligible for listing on the State or National Registers of Historic Places.

Impervious Area (Cover) - means all impermeable surfaces that cannot effectively infiltrate rainfall. This includes paved, concrete and gravel surfaces (i.e. parking lots, driveways, roads, runways and sidewalks); building rooftops and miscellaneous impermeable structures such as patios, pools, and sheds.

Infeasible – means not technologically possible, or not economically practicable and achievable in light of best industry practices.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

Larger Common Plan of Development or Sale - means a contiguous area where multiple separate and distinct *construction activities* are occurring, or will occur, under one plan. The term "plan" in "larger common plan of development or sale" is broadly defined as any announcement or piece of documentation (including a sign, public notice or hearing, marketing plan, advertisement, drawing, permit application, State Environmental Quality Review Act (SEQRA) environmental assessment form or other documents, zoning request, computer design, etc.) or physical demarcation (including boundary signs, lot stakes, surveyor markings, etc.) indicating that *construction activities* may occur on a specific plot.

For discrete construction projects that are located within a larger common plan of development or sale that are at least 1/4 mile apart, each project can be treated as a separate plan of development or sale provided any interconnecting road, pipeline or utility project that is part of the same "common plan" is not concurrently being disturbed.

Minimize – means reduce and/or eliminate to the extent achievable using control measures (including best management practices) that are technologically available and economically practicable and achievable in light of best industry practices.

Municipal Separate Storm Sewer (MS4) - a conveyance or system of conveyances (including roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, man-made channels, or storm drains):

(i) Owned or operated by a State, city, town, borough, county, parish, district, association, or other public body (created by or pursuant to State law) having jurisdiction over disposal of sewage, industrial wastes, stormwater, or other wastes, including special districts under State law such as a sewer district, flood control district or drainage district, or similar entity, or an Indian tribe or an authorized Indian tribal organization, or a designated and approved management agency under section 208 of the CWA that discharges to surface waters of the State*;*
(ii) Designed or used for collecting or conveying stormwater;
(iii) Which is not a *combined sewer*; and
(iv) Which is not part of a Publicly Owned Treatment Works (POTW) as defined at 40 CFR 122.2.

National Pollutant Discharge Elimination System (NPDES) - means the national system for the issuance of wastewater and stormwater permits under the Federal Water Pollution Control Act (Clean Water Act).

Natural Buffer –means an undisturbed area with natural cover running along a surface water (e.g. wetland, stream, river, lake, etc.).

New Development – means any land disturbance that does not meet the definition of Redevelopment Activity included in this appendix.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

New York State Erosion and Sediment Control Certificate Program – a certificate program that establishes and maintains a process to identify and recognize individuals who are capable of developing, designing, inspecting and maintaining erosion and sediment control plans on projects that disturb soils in New York State. The certificate program is administered by the New York State Conservation District Employees Association.

NOI Acknowledgment Letter - means the letter that the Department sends to an owner or operator to acknowledge the Department's receipt and acceptance of a complete Notice of Intent. This letter documents the owner's or operator's authorization to discharge in accordance with the general permit for stormwater discharges from *construction activity*.

Nonpoint Source - means any source of water pollution or pollutants which is not a discrete conveyance or *point source* permitted pursuant to Title 7 or 8 of Article 17 of the Environmental Conservation Law (see ECL Section 17-1403).

Overbank –means flow events that exceed the capacity of the stream channel and spill out into the adjacent floodplain.

Owner or Operator - means the person, persons or legal entity which owns or leases the property on which the *construction activity* is occurring; an entity that has operational control over the construction plans and specifications, including the ability to make modifications to the plans and specifications; and/or an entity that has day-to-day operational control of those activities at a project that are necessary to ensure compliance with the permit conditions.

Performance Criteria – means the design criteria listed under the "Required Elements" sections in Chapters 5, 6 and 10 of the technical standard, New York State Stormwater Management Design Manual, dated January 2015. It does not include the Sizing Criteria (i.e. WQv, RRv, Cpv, Qp and Qf) in Part I.C.2. of the permit.

Point Source - means any discernible, confined and discrete conveyance, including but not limited to any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, vessel or other floating craft, or landfill leachate collection system from which *pollutants* are or may be discharged.

Pollutant - means dredged spoil, filter backwash, solid waste, incinerator residue, sewage, garbage, sewage sludge, munitions, chemical wastes, biological materials, radioactive materials, heat, wrecked or discarded equipment, rock, sand and industrial, municipal, agricultural waste and ballast discharged into water; which may cause or might reasonably be expected to cause pollution of the waters of the state in contravention of the standards or guidance values adopted as provided in 6 NYCRR Parts 700 et seq .

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

Qualified Inspector - means a person that is knowledgeable in the principles and practices of erosion and sediment control, such as a licensed Professional Engineer, Certified Professional in Erosion and Sediment Control (CPESC), Registered Landscape Architect, New York State Erosion and Sediment Control Certificate Program holder or other Department endorsed individual(s).

It can also mean someone working under the direct supervision of, and at the same company as, the licensed Professional Engineer or Registered Landscape Architect, provided that person has training in the principles and practices of erosion and sediment control. Training in the principles and practices of erosion and sediment control means that the individual working under the direct supervision of the licensed Professional Engineer or Registered Landscape Architect has received four (4) hours of Department endorsed training in proper erosion and sediment control principles from a Soil and Water Conservation District, or other Department endorsed entity. After receiving the initial training, the individual working under the direct supervision of the licensed Professional Engineer or Registered Landscape Architect shall receive four (4) hours of training every three (3) years.

It can also mean a person that meets the *Qualified Professional* qualifications in addition to the *Qualified Inspector* qualifications.

Note: Inspections of any post-construction stormwater management practices that include structural components, such as a dam for an impoundment, shall be performed by a licensed Professional Engineer.

Qualified Professional - means a person that is knowledgeable in the principles and practices of stormwater management and treatment, such as a licensed Professional Engineer, Registered Landscape Architect or other Department endorsed individual(s). Individuals preparing SWPPPs that require the post-construction stormwater management practice component must have an understanding of the principles of hydrology, water quality management practice design, water quantity control design, and, in many cases, the principles of hydraulics. All components of the SWPPP that involve the practice of engineering, as defined by the NYS Education Law (see Article 145), shall be prepared by, or under the direct supervision of, a professional engineer licensed to practice in the State of New York.

Redevelopment Activity(ies) – means the disturbance and reconstruction of existing impervious area, including impervious areas that were removed from a project site within five (5) years of preliminary project plan submission to the local government (i.e. site plan, subdivision, etc.).

Regulated, Traditional Land Use Control MS4 - means a city, town or village with land use control authority that is authorized to discharge under New York State DEC's

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

SPDES General Permit For Stormwater Discharges from Municipal Separate Stormwater Sewer Systems (MS4s) or the City of New York's Individual SPDES Permit for their Municipal Separate Storm Sewer Systems (NY-0287890).

Routine Maintenance Activity - means *construction activity* that is performed to maintain the original line and grade, hydraulic capacity, or original purpose of a facility, including, but not limited to:

- Re-grading of gravel roads or parking lots,
- Cleaning and shaping of existing roadside ditches and culverts that maintains the approximate original line and grade, and hydraulic capacity of the ditch,
- Cleaning and shaping of existing roadside ditches that does not maintain the approximate original grade, hydraulic capacity and purpose of the ditch if the changes to the line and grade, hydraulic capacity or purpose of the ditch are installed to improve water quality and quantity controls (e.g. installing grass lined ditch),
- Placement of aggregate shoulder backing that stabilizes the transition between the road shoulder and the ditch or *embankment*,
- Full depth milling and filling of existing asphalt pavements, replacement of concrete pavement slabs, and similar work that does not expose soil or disturb the bottom six (6) inches of subbase material,
- Long-term use of equipment storage areas at or near highway maintenance facilities,
- Removal of sediment from the edge of the highway to restore a previously existing sheet-flow drainage connection from the highway surface to the highway ditch or *embankment*,
- Existing use of Canal Corp owned upland disposal sites for the canal, and
- Replacement of curbs, gutters, sidewalks and guide rail posts.

Site limitations – means site conditions that prevent the use of an infiltration technique and or infiltration of the total WQv. Typical site limitations include: seasonal high groundwater, shallow depth to bedrock, and soils with an infiltration rate less than 0.5 inches/hour. The existence of site limitations shall be confirmed and documented using actual field testing (i.e. test pits, soil borings, and infiltration test) or using information from the most current United States Department of Agriculture (USDA) Soil Survey for the County where the project is located.

Sizing Criteria – means the criteria included in Part I.C.2 of the permit that are used to size post-construction stormwater management control practices. The criteria include; Water Quality Volume (WQv), Runoff Reduction Volume (RRv), Channel Protection Volume (Cpv), *Overbank* Flood (Qp), and Extreme Flood (Qf).

State Pollutant Discharge Elimination System (SPDES) - means the system established pursuant to Article 17 of the ECL and 6 NYCRR Part 750 for issuance of permits authorizing discharges to the waters of the state.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

Steep Slope – means land area designated on the current United States Department of Agriculture ("USDA") Soil Survey as Soil Slope Phase "D", (provided the map unit name is inclusive of slopes greater than 25%) , or Soil Slope Phase E or F, (regardless of the map unit name), or a combination of the three designations.

Streambank – as used in this permit, means the terrain alongside the bed of a creek or stream. The bank consists of the sides of the channel, between which the flow is confined.

Stormwater Pollution Prevention Plan (SWPPP) – means a project specific report, including construction drawings, that among other things: describes the construction activity(ies), identifies the potential sources of pollution at the *construction site*; describes and shows the stormwater controls that will be used to control the pollutants (i.e. erosion and sediment controls; for many projects, includes post-construction stormwater management controls); and identifies procedures the *owner or operator* will implement to comply with the terms and conditions of the permit. See Part III of the permit for a complete description of the information that must be included in the SWPPP.

Surface Waters of the State - shall be construed to include lakes, bays, sounds, ponds, impounding reservoirs, springs, rivers, streams, creeks, estuaries, marshes, inlets, canals, the Atlantic ocean within the territorial seas of the state of New York and all other bodies of surface water, natural or artificial, inland or coastal, fresh or salt, public or private (except those private waters that do not combine or effect a junction with natural surface waters), which are wholly or partially within or bordering the state or within its jurisdiction. Waters of the state are further defined in 6 NYCRR Parts 800 to 941.

Temporarily Ceased – means that an existing disturbed area will not be disturbed again within 14 calendar days of the previous soil disturbance.

Temporary Stabilization - means that exposed soil has been covered with material(s) as set forth in the technical standard, New York Standards and Specifications for Erosion and Sediment Control, to prevent the exposed soil from eroding. The materials can include, but are not limited to, mulch, seed and mulch, and erosion control mats (e.g. jute twisted yarn, excelsior wood fiber mats).

Total Maximum Daily Loads (TMDLs) - A TMDL is the sum of the allowable loads of a single pollutant from all contributing point and *nonpoint source*s. It is a calculation of the maximum amount of a pollutant that a waterbody can receive on a daily basis and still meet *water quality standards*, and an allocation of that amount to the pollutant's sources. A TMDL stipulates wasteload allocations (WLAs) for *point source* discharges, load allocations (LAs) for *nonpoint source*s, and a margin of safety (MOS).

Trained Contractor - means an employee from the contracting (construction) company, identified in Part III.A.6., that has received four (4) hours of Department endorsed

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

training in proper erosion and sediment control principles from a Soil and Water Conservation District, or other Department endorsed entity. After receiving the initial training, the *trained contractor* shall receive four (4) hours of training every three (3) years.

It can also mean an employee from the contracting (construction) company, identified in Part III.A.6., that meets the *qualified inspector* qualifications (e.g. licensed Professional Engineer, Certified Professional in Erosion and Sediment Control (CPESC), Registered Landscape Architect, New York State Erosion and Sediment Control Certificate Program holder, or someone working under the direct supervision of, and at the same company as, the licensed Professional Engineer or Registered Landscape Architect, provided they have received four (4) hours of Department endorsed training in proper erosion and sediment control principles from a Soil and Water Conservation District, or other Department endorsed entity).

The *trained contractor* is responsible for the day to day implementation of the SWPPP.

Uniform Procedures Act (UPA) Permit - means a permit required under 6 NYCRR Part 621 of the Environmental Conservation Law (ECL), Article 70.

Water Quality Standard - means such measures of purity or quality for any waters in relation to their reasonable and necessary use as promulgated in 6 NYCRR Part 700 et seq.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

APPENDIX B – Required SWPPP Components by Project Type

Table 1
Construction Activities that Require the Preparation of a SWPPP That Only Includes Erosion and Sediment Controls

The following construction activities that involve soil disturbances of one (1) or more acres of land, but less than five (5) acres:

- Single family home not located in one of the watersheds listed in Appendix C or not *directly discharging* to one of the 303(d) segments listed in Appendix E
- Single family residential subdivisions with 25% or less impervious cover at total site build-out and not located in one of the watersheds listed in Appendix C and not directly discharging to one of the 303(d) segments listed in Appendix E
- Construction of a barn or other *agricultural building*, silo, stock yard or pen.

The following construction activities that involve soil disturbances between five thousand (5000) square feet and one (1) acre of land:

All construction activities located in the watersheds identified in Appendix D that involve soil disturbances between five thousand (5,000) square feet and one (1) acre of land.

The following construction activities that involve soil disturbances of one (1) or more acres of land:

- Installation of underground, linear utilities; such as gas lines, fiber-optic cable, cable TV, electric, telephone, sewer mains, and water mains
- Environmental enhancement projects, such as wetland mitigation projects, stormwater retrofits and stream restoration projects
- Pond construction
- Linear bike paths running through areas with vegetative cover, including bike paths surfaced with an impervious cover
- Cross-country ski trails and walking/hiking trails
- Sidewalk, bike path or walking path projects, surfaced with an impervious cover, that are not part of residential, commercial or institutional development;
- Sidewalk, bike path or walking path projects, surfaced with an impervious cover, that include incidental shoulder or curb work along an existing highway to support construction of the sidewalk, bike path or walking path.
- Slope stabilization projects
- Slope flattening that changes the grade of the site, but does not significantly change the runoff characteristics

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

Table 1 (Continued) CONSTRUCTION ACTIVITIES THAT REQUIRE THE PREPARATION OF A SWPPP THAT ONLY INCLUDES EROSION AND SEDIMENT CONTROLS

The following construction activities that involve soil disturbances of one (1) or more acres of land:

- Spoil areas that will be covered with vegetation
- Vegetated open space projects (i.e. recreational parks, lawns, meadows, fields, downhill ski trails) excluding projects that *alter hydrology from pre to post development* conditions,
- Athletic fields (natural grass) that do not include the construction or reconstruction of *impervious area* and do not *alter hydrology from pre to post development* conditions
- Demolition project where vegetation will be established, and no redevelopment is planned
- Overhead electric transmission line project that does not include the construction of permanent access roads or parking areas surfaced with *impervious cover*
- Structural practices as identified in Table II in the "Agricultural Management Practices Catalog for Nonpoint Source Pollution in New York State", excluding projects that involve soil disturbances of greater than five acres and construction activities that include the construction or reconstruction of impervious area
- Temporary access roads, median crossovers, detour roads, lanes, or other temporary impervious areas that will be restored to pre-construction conditions once the construction activity is complete

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

Table 2
CONSTRUCTION ACTIVITIES THAT REQUIRE THE PREPARATION OF A SWPPP THAT INCLUDES POST-CONSTRUCTION STORMWATER MANAGEMENT PRACTICES

The following construction activities that involve soil disturbances of one (1) or more acres of land:

- Single family home located in one of the watersheds listed in Appendix C or *directly discharging* to one of the 303(d) segments listed in Appendix E
- Single family home that disturbs five (5) or more acres of land
- Single family residential subdivisions located in one of the watersheds listed in Appendix C or *directly discharging* to one of the 303(d) segments listed in Appendix E
- Single family residential subdivisions that involve soil disturbances of between one (1) and five (5) acres of land with greater than 25% impervious cover at total site build-out
- Single family residential subdivisions that involve soil disturbances of five (5) or more acres of land, and single family residential subdivisions that involve soil disturbances of less than five (5) acres that are part of a larger common plan of development or sale that will ultimately disturb five or more acres of land
- Multi-family residential developments; includes duplexes, townhomes, condominiums, senior housing complexes, apartment complexes, and mobile home parks
- Airports
- Amusement parks
- Breweries, cideries, and wineries, including establishments constructed on agricultural land
- Campgrounds
- Cemeteries that include the construction or reconstruction of impervious area (>5% of disturbed area) or *alter the hydrology from pre to post development* conditions
- Commercial developments
- Churches and other places of worship
- Construction of a barn or other *agricultural building* (e.g. silo) and structural practices as identified in Table II in the "Agricultural Management Practices Catalog for Nonpoint Source Pollution in New York State" that include the construction or reconstruction of *impervious area*, excluding projects that involve soil disturbances of less than five acres.
- Golf courses
- Institutional development; includes hospitals, prisons, schools and colleges
- Industrial facilities; includes industrial parks
- Landfills
- Municipal facilities; includes highway garages, transfer stations, office buildings, POTW's, water treatment plants, and water storage tanks
- Office complexes
- Playgrounds that include the construction or reconstruction of impervious area
- Sports complexes
- Racetracks; includes racetracks with earthen (dirt) surface
- Road construction or reconstruction, including roads constructed as part of the construction activities listed in Table 1

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

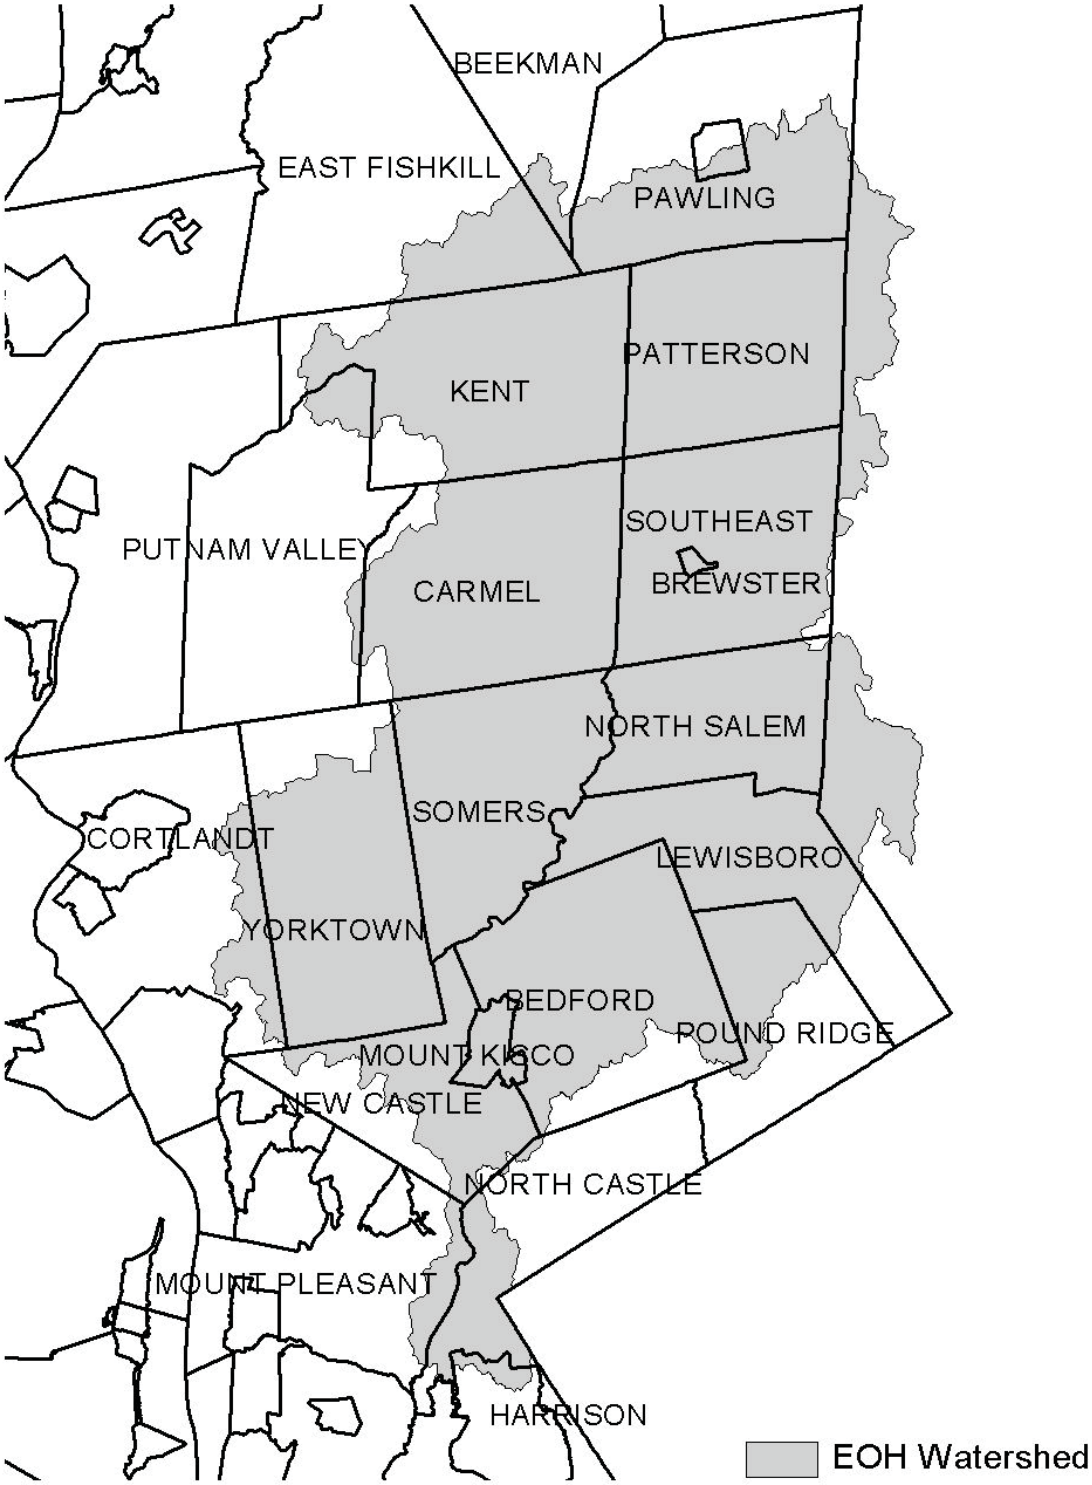
Table 2 (Continued)

CONSTRUCTION ACTIVITIES THAT REQUIRE THE PREPARATION OF A SWPPP THAT INCLUDES POST-CONSTRUCTION STORMWATER MANAGEMENT PRACTICES

The following construction activities that involve soil disturbances of one (1) or more acres of land:

- Parking lot construction or reconstruction, including parking lots constructed as part of the construction activities listed in Table 1
- Athletic fields (natural grass) that include the construction or reconstruction of impervious area (>5% of disturbed area) or *alter the hydrology from pre to post development* conditions
- Athletic fields with artificial turf
- Permanent access roads, parking areas, substations, compressor stations and well drilling pads, surfaced with *impervious cover,* and constructed as part of an over-head electric transmission line project, wind-power project, cell tower project, oil or gas well drilling project, sewer or water main project or other linear utility project
- Sidewalk, bike path or walking path projects, surfaced with an impervious cover, that are part of a residential, commercial or institutional development
- Sidewalk, bike path or walking path projects, surfaced with an impervious cover, that are part of a highway construction or reconstruction project
- All other construction activities that include the construction or reconstruction of *impervious area* or *alter the hydrology from pre to post development* conditions, and are not listed in Table 1

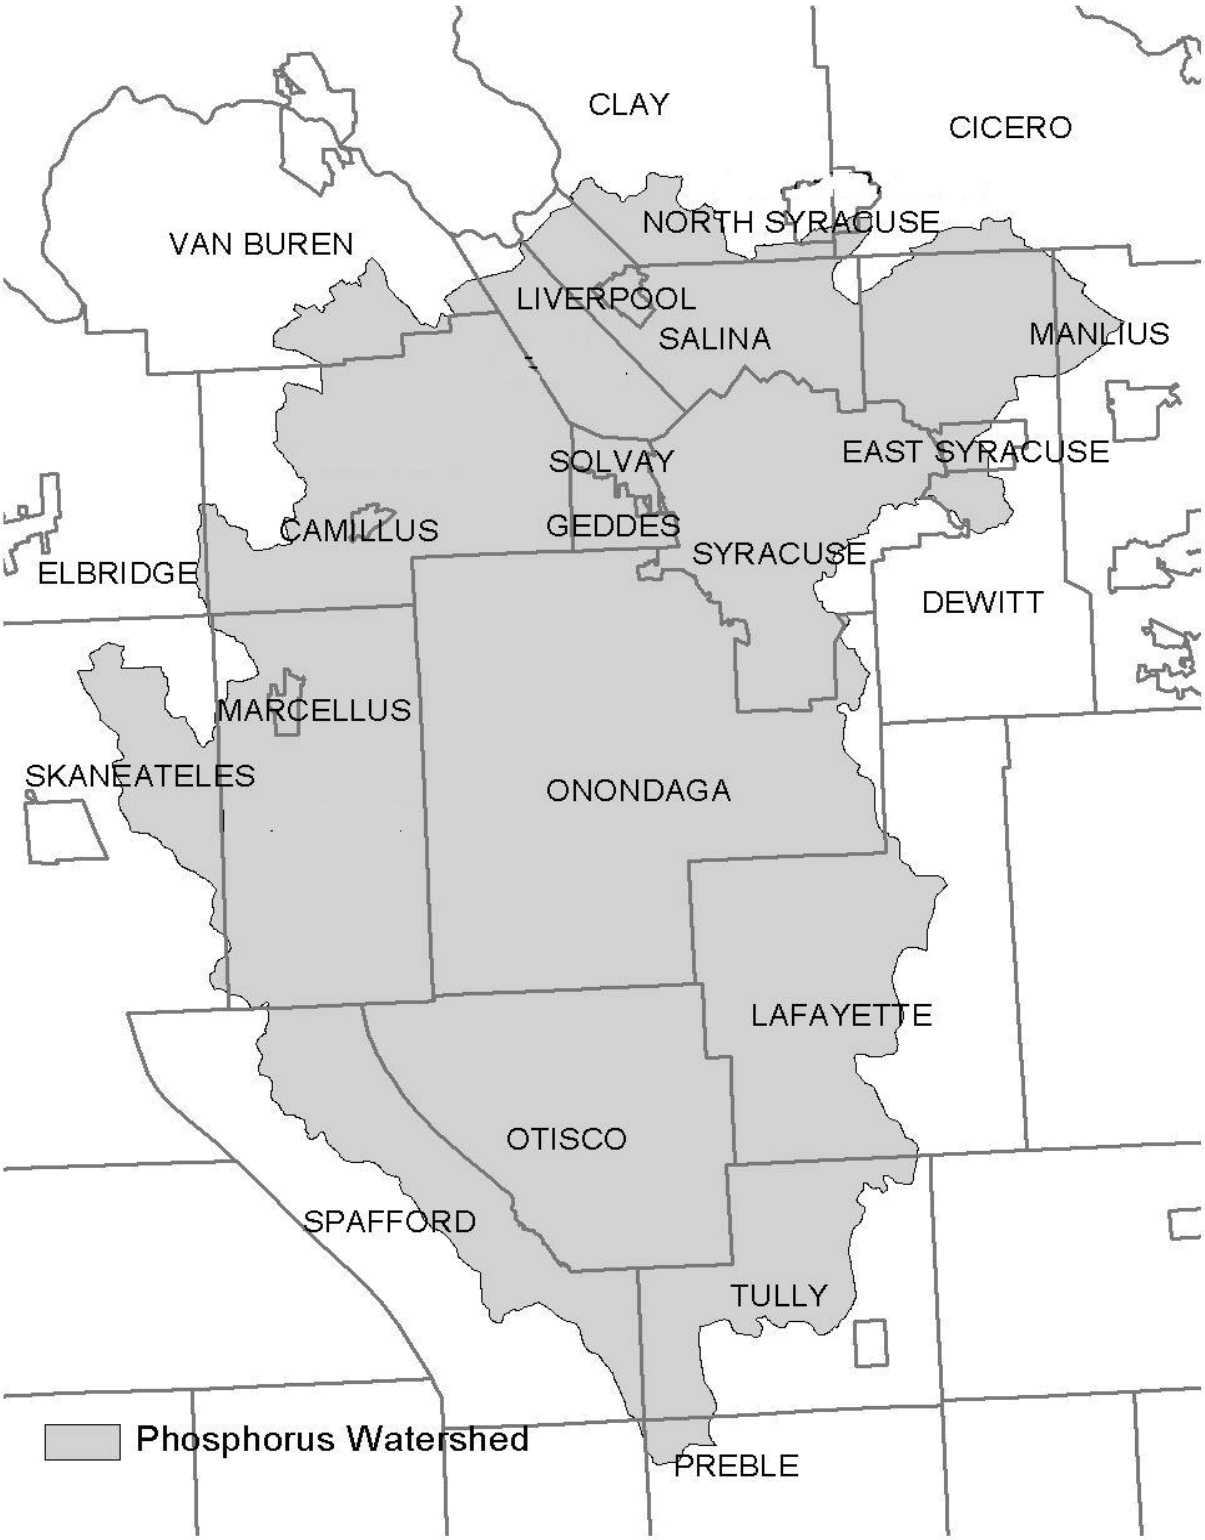
Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)



APPENDIX C – Watersheds Requiring Enhanced Phosphorus Removal

Watersheds where *owners or operators* of construction activities identified in Table 2 of Appendix B must prepare a SWPPP that includes post-construction stormwater management practices designed in conformance with the Enhanced Phosphorus Removal Standards included in the technical standard, New York State Stormwater Management Design Manual ("Design Manual").

- Entire New York City Watershed located east of the Hudson River - Figure 1
- Onondaga Lake Watershed - Figure 2
- Greenwood Lake Watershed -Figure 3
- Oscawana Lake Watershed – Figure 4
- Kinderhook Lake Watershed – Figure 5



Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

APPENDIX D – Watersheds with Lower Disturbance Threshold

Watersheds where *owners or operators* of construction activities that involve soil disturbances between five thousand (5000) square feet and one (1) acre of land must obtain coverage under this permit.

Entire New York City Watershed that is located east of the Hudson River - See Figure 1 in Appendix C

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

APPENDIX E – 303(d) Segments Impaired by Construction Related Pollutant(s)

List of 303(d) segments impaired by pollutants related to *construction activity* (e.g. silt, sediment or nutrients). The list was developed using "The Final New York State 2016 Section 303(d) List of Impaired Waters Requiring a TMDL/Other Strategy" dated November 2016. *Owners or operators* of single family home and single family residential subdivisions with 25% or less total impervious cover at total site build-out that involve soil disturbances of one or more acres of land, but less than 5 acres, and *directly discharge* to one of the listed segments below shall prepare a SWPPP that includes post-construction stormwater management practices designed in conformance with the New York State Stormwater Management Design Manual ("Design Manual"), dated January 2015.

COUNTY	WATERBODY	POLLUTANT
Albany	Ann Lee (Shakers) Pond, Stump Pond	Nutrients

STORM WATER POLLUTION PREVENTION PROGRAM

Proposed Site Redevelopment - 4548-4564 Main Street - Amherst, NY 14226

SUBCONTRACTOR'S CERTIFICATION:

"I certify under penalty of law that I understand and agree to comply with the terms and conditions of the SWPPP for the construction site identified in such SWPPP as a condition of authorization to discharge storm water. I also understand that the operator must comply with the terms and conditions of the New York State Pollutant Discharge Elimination System (SPDES) general permit for storm water discharges from construction activities and that it is unlawful for any person to cause or contribute to a violation of water quality standards."

Note: The contractor shall have at least one NYSDEC trained individual onsite at all times when earthwork and other SWPPP associated work is being performed from each contractor(s) and subcontractor(s). Each contractor(s) and subcontractor(s) shall provide copies of these individuals' certifications to the Town of Orchard Park.

STORM WATER POLLUTION PREVENTION PLAN
INSPECTION REPORT (Page 1 of 2)

FORM SWPPP-3

Proposed Site Redevelopment - 4548-4564 Main Street - Amherst, NY 14226

Inspections/reports are required at least once every seven (7) calendar days.

Inspection Type: ☐ **Routine (every 7 calendar days)** ☐ **Routine (every 30 calendar days)** ☐ **Storm**

Date: _____ Week Ending: _____

Weather/Storm Event Information:

Storm Start Time: _____ Storm Duration: _____

Time Elapsed Since Last Storm: _____ Approximate Amount of Rainfall (inches): _____

Based on the results of the inspection, necessary control modifications shall be implemented within seven (7) calendar days. These reports shall be kept on file as part of the Storm Water Pollution Prevention Plan for at least five (5) years from the date of completion and submission of the Final Stabilization Certification/Termination Checklist and Notice of Termination. A copy of the SWPPP shall be kept at the site at all times during construction.

Certification Statement:
"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Name of Inspector: _____ Title of Inspector: _____

Qualifications of Inspector: _____
_____

Inspector's Signature: _____

Construction phasing/sequencing is consistent with the SWPPP and Erosion Control Plans: ☐ **Yes** ☐ **No**

Compliance Certification
I certify that, based on no incidents of non-compliance identified during the inspection, the site is in compliance with the SWPPP and the Construction General Permit.

Name of Operator's Duly Authorized Representative (Printed): _____

Signature of Operator's Duly Authorized Representative: _____

Date: _____

*Note: This Compliance Certification is only to be signed by the Operator's Duly Authorized Representative (Project Manager) when there are no **"unsatisfactory" conditions and the construction phasing/sequencing is consistent with the SWPPP, rendering the site in full compliance with** the SWPPP and the Construction General Permit.

STORM WATER POLLUTION PREVENTION PLAN
MODIFICATION REPORT

FORM SWPPP-7

Proposed Site Redevelopment - 4548-4564 Main Street - Amherst, NY 14226

CHANGES REQUIRED FOR STORM WATER POLLUTION PREVENTION PLAN

The SWPPP must be amended whenever there is a change in design, construction, operation, or maintenance at the construction site that has a significant effect on the discharge of pollutants to the waters of the United States that has not been previously addressed in the SWPPP, if inspections or investigations by site staff, local, state or federal officials determine that discharges are causing water quality exceedances or the SWPPP is ineffective in eliminating or significantly minimizing pollutants in storm water discharges from the construction site, or based on the results of an inspection, the SWPPP must be modified to include additional or modified BMPs designed to correct identified problems. Revisions must be completed within seven (7) calendar days following the inspection.

STORM WATER POLLUTION PREVENTION PLAN
REPORTABLE QUANTITY RELEASE FORM

FORM SWPPP-9

Proposed Site Redevelopment - 4548-4564 Main Street - Amherst, NY 14226

The discharges of hazardous substances or oil in storm water discharges from construction sites must be prevented or minimized in accordance with the SWPPP. Where a release containing a hazardous substance or oil in an amount equal to or in excess of a reportable quantity established under 40CFR110, 40CFR117 and 40CFR302 occurs, the following steps must be taken:

1. All measures must be taken to contain and abate the spill and to prevent the discharge of the pollutant(s) to storm water or off-site.

2. Notice must be provided to the National Response Center (NRC) at 1-800-424-8802 and the NYSDEC in accordance with regulations referenced above as soon as site staff has knowledge of the discharge.

3. Contact the Project Manager or Engineer of Record immediately upon knowledge of release.

4. The SWPPP must be modified within seven (7) calendar days of knowledge of the discharge to provide a description of the release, the circumstances leading to the release, and the date of the release. The plans must identify measures to prevent the recurrence of such releases and to respond to such releases.

Date of Spill	Material Spilled	Approximate Quantity of Spill (in gallons)	Agency(s) Notified	Date of Notification	SWPPP Revision Date

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

STORM WATER POLLUTION PREVENTION PLAN
IMPLEMENTATION SCHEDULE

FORM SWPPP-10

Proposed Site Redevelopment - 4548-4564 Main Street - Amherst, NY 14226

*To be completed prior to initiation of construction by the contractor.

The Contractor will be responsible for implementing all erosion control and storm water management control structures. The Contractor may designate these tasks to certain subcontractors as they see fit, but the ultimate responsibility for implementing these controls and ensuring their proper functioning remains with the Contractor.

Refer to Section 812.3 for Sequence of Activities

Construction Activity	Proposed Initiation Date	Proposed Completion Date	Contractor Responsible for Implementation

Certification Statement - Owner/Operator

I have read or been advised of the permit conditions and believe that I understand them. I also understand that, under the terms of the permit, there may be reporting requirements. I hereby certify that this document and the corresponding documents were prepared under my direction or supervision. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations. I further understand that coverage under the general permit will be identified in the acknowledgment that I will receive as a result of submitting this NOI and can be as long as sixty (60) business days as provided for in the general permit. I also understand that, by submitting this NOI, I am acknowledging that the SWPPP has been developed and will be implemented as the first element of construction, and agreeing to comply with all the terms and conditions of the general permit for which this NOI is being submitted.

(NOTE: Submit completed form to address above)

NOTICE OF TERMINATION for Storm Water Discharges Authorized under the SPDES General Permit for Construction Activity

Please indicate your permit identification number: NYR ___ ___ ___ ___ ___ ___

I. Owner or Operator Information

1. Owner/Operator Name:

2. Street Address:

3. City/State/Zip:

4. Contact Person: | 4a.Telephone:

4b. Contact Person E-Mail:

II. Project Site Information

5. Project/Site Name:

6. Street Address:

7. City/Zip:

8. County:

III. Reason for Termination

9a. □ All disturbed areas have achieved final stabilization in accordance with the general permit and SWPPP. ***Date final stabilization completed** (month/year): _____

9b. □ Permit coverage has been transferred to new owner/operator. Indicate new owner/operator's permit identification number: NYR ___ ___ ___ ___ ___ ___
(Note: Permit coverage can not be terminated by owner identified in I.1. above until new owner/operator obtains coverage under the general permit)

9c. □ Other (Explain on Page 2)

IV. Final Site Information:

10a. Did this construction activity require the development of a SWPPP that includes post-construction stormwater management practices? □ yes □ no (If no, go to question 10f.)

10b. Have all post-construction stormwater management practices included in the final SWPPP been constructed? □ yes □ no (If no, explain on Page 2)

10c. Identify the entity responsible for long-term operation and maintenance of practice(s)?

_____

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

NOTICE OF TERMINATION for Storm Water Discharges Authorized under the SPDES General Permit for Construction Activity - continued

10d. Has the entity responsible for long-term operation and maintenance been given a copy of the operation and maintenance plan required by the general permit? □ yes □ no

10e. Indicate the method used to ensure long-term operation and maintenance of the post-construction stormwater management practice(s):

□ Post-construction stormwater management practice(s) and any right-of-way(s) needed to maintain practice(s) have been deeded to the municipality.

□ Executed maintenance agreement is in place with the municipality that will maintain the post-construction stormwater management practice(s).

□ For post-construction stormwater management practices that are privately owned, a mechanism is in place that requires operation and maintenance of the practice(s) in accordance with the operation and maintenance plan, such as a deed covenant in the owner or operator's deed of record.

□ For post-construction stormwater management practices that are owned by a public or private institution (e.g. school, university or hospital), government agency or authority, or public utility; policy and procedures are in place that ensures operation and maintenance of the practice(s) in accordance with the operation and maintenance plan.

10f. Provide the total area of impervious surface (i.e. roof, pavement, concrete, gravel, etc.) constructed within the disturbance area? _____ (acres)

11. Is this project subject to the requirements of a regulated, traditional land use control MS4? □ yes □ no

(If Yes, complete section VI - "MS4 Acceptance" statement

V. Additional Information/Explanation:

(Use this section to answer questions 9c. and 10b., if applicable)

VI. MS4 Acceptance - MS4 Official (principal executive officer or ranking elected official) or Duly Authorized Representative (Note: Not required when 9b. is checked -transfer of coverage)

I have determined that it is acceptable for the owner or operator of the construction project identified in question 5 to submit the Notice of Termination at this time.

CONSTRUCTION SEQUENCE	SATISFACTORY/ UNSATISFACTORY	COMMENTS
4. Riser / Outlet Structure Installation		
Riser located within embankment		
A. Metal riser		
Riser base excavated or formed on stable subgrade to design dimensions		
Set on blocks to design elevations and plumbed		
Reinforcing bars placed at right angles and projecting into sides of riser		
Concrete poured so as to fill inside of riser to invert of barrel		
B. Pre-cast concrete structure		
Dry and stable subgrade		
Riser base set to design elevation		
If more than one section, no spalling in gasket interface area; gasket or approved caulking material placed securely		
Watertight and structurally sound collar or gasket joint where structure connects to pipe spillway		
C. Poured concrete structure		
Footing excavated or formed on stable subgrade, to design dimensions with reinforcing steel set		
Structure formed to design dimensions, with reinforcing steel set as per plan		
Concrete of an approved mix and vibrated into place (protected from freezing while curing, if necessary)		
Forms stripped & inspected for “honeycomb” prior to backfilling; parge if necessary		

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

CONSTRUCTION SEQUENCE	SATISFACTORY/ UNSATISFACTORY	COMMENTS
5. Embankment Construction		
Fill material		
Compaction		
Embankment		
1. Fill placed in specified lifts and compacted with appropriate equipment		
2. Constructed to design cross-section, side slopes and top width		
3. Constructed to design elevation plus allowance for settlement		
6. Impounded Area Construction		
Excavated / graded to design contours and side slopes		
Inlet pipes have adequate outfall protection		
Forebay(s)		
Pond benches		
7. Earth Emergency Spillway Construction		
Spillway located in cut or structurally stabilized with riprap, gabions, concrete, etc.		
Excavated to proper cross-section, side slopes and bottom width		
Entrance channel, crest, and exit channel constructed to design grades and elevations		

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

CONSTRUCTION SEQUENCE	SATISFACTORY / UNSATISFACTORY	COMMENTS
8. Outlet Protection		
A. End section		
Securely in place and properly backfilled		
B. Endwall		
Footing excavated or formed on stable subgrade, to design dimensions and reinforcing steel set, if specified		
Endwall formed to design dimensions with reinforcing steel set as per plan		
Concrete of an approved mix and vibrated into place (protected from freezing, if necessary)		
Forms stripped and structure inspected for "honeycomb" prior to backfilling; parge if necessary		
C. Riprap apron / channel		
Apron / channel excavated to design cross-section with proper transition to existing ground		
Filter fabric in place		
Stone sized as per plan and uniformly place at the thickness specified		
9. Vegetative Stabilization		
Approved seed mixture or sod		
Proper surface preparation and required soil amendments		
Excelsior mat or other stabilization, as per plan		

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

CONSTRUCTION SEQUENCE	SATISFACTORY/ UNSATISFACTORY	COMMENTS
10. Miscellaneous		
Drain for ponds having a permanent pool		
Trash rack / anti-vortex device secured to outlet structure		
Trash protection for low flow pipes, orifices, etc.		
Fencing (when required)		
Access road		
Set aside for clean-out maintenance		
11. Stormwater Wetlands		
Adequate water balance		
Variety of depth zones present		
Approved pondscaping plan in place Reinforcement budget for additional plantings		
Plants and materials ordered 6 months prior to construction		
Construction planned to allow for adequate planting and establishment of plant community (April-June planting window)		
Wetland buffer area preserved to maximum extent possible

CONSTRUCTION SEQUENCE	SATISFACTORY/ UNSATISFACTORY	COMMENTS
1. Pre-Construction		
Pre-construction meeting		
Runoff diverted		
Facility area cleared		
If designed as exfilter, soil testing for permeability		
Facility location staked out		
2. Excavation		
Size and location		
Lateral slopes completely level		
If designed as exfilter, ensure that excavation does not compact susoils.		
Longitudinal slopes within design range		

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

CONSTRUCTION SEQUENCE	SATISFACTORY / UNSATISFACTORY	COMMENTS
3. Structural Components		
Stone diaphragm installed correctly		
Outlets installed correctly		
Underdrain		
Pretreatment devices installed		
Soil bed composition and texture		
4. Vegetation		
Complies with planting specs		
Topsoil adequate in composition and placement		
Adequate erosion control measures in place		
5. Final Inspection		
Dimensions		
Proper stone diaphragm		
Proper outlet		
Soil/ filter bed permeability testing		
Effective stand of vegetation and stabilization		
Construction generated sediments removed		
Contributing watershed stabilized before flow is diverted to the practice

Bioretention Operation, Maintenance and Management Inspection Checklist

Project:
Location:
Site Status:

Date:

Time:

Inspector:

MAINTENANCE ITEM	SATISFACTORY / UNSATISFACTORY	COMMENTS
1. Debris Cleanout (Monthly)		
Bioretention and contributing areas clean of debris		
No dumping of yard wastes into practice		
Litter (branches, etc.) have been removed		
2. Vegetation (Monthly)		
Plant height not less than design water depth		
Fertilized per specifications		
Plant composition according to approved plans		
No placement of inappropriate plants		
Grass height not greater than 6 inches		
No evidence of erosion		
3. Check Dams/Energy Dissipaters/Sumps (Annual, After Major Storms)		
No evidence of sediment buildup		

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

MAINTENANCE ITEM	SATISFACTORY / UNSATISFACTORY	COMMENTS
Sumps should not be more than 50% full of sediment		
No evidence of erosion at downstream toe of drop structure		
4. Dewatering (Monthly)		
Dewaters between storms		
No evidence of standing water		
5. Sediment Deposition (Annual)		
Swale clean of sediments		
Sediments should not be > 20% of swale design depth		
6. Outlet/Overflow Spillway (Annual, After Major Storms)		
Good condition, no need for repair		
No evidence of erosion		
No evidence of any blockages		
7. Integrity of Filter Bed (Annual)		
Filter bed has not been blocked or filled inappropriately

GENERAL NOTES:
1. INSTALL ALL MATERIALS TO MANUFACTURERS RECOMMENDATIONS AND BEST STANDARDS OF TRADE INVOLVED.
2. SUBSTITUTIONS SHALL BE MADE ONLY WITH OWNER'S APPROVAL AND BE OF EQUIVALENT QUALITY TO WHAT IS SPECIFIED.
3. WORK SHALL BE COMPLETED IN STRICT ACCORDANCE WITH ALL LOCAL CODES AND OSHA SAFETY RULES AND REGULATIONS.
4. CONTRACTOR SHALL VERIFY ALL EXISTING CONDITIONS AND DIMENSIONS AT THE SITE. NOTIFY OWNER & ENGINEER OF DISCREPANCIES IN CONDITIONS SHOWN ON DRAWINGS PRIOR TO PROCEEDING WITH THE WORK.
5. CONTRACTOR SHALL BE RESPONSIBLE FOR PROTECTION OF ANY EXISTING STRUCTURES TO REMAIN AND ANY FINISH MATERIAL INSTALLED WHILE WORKING ON OTHER COMPONENTS.
6. CONTRACTOR SHALL KEEP JOB FREE OF DEBRIS AND MAKE FINAL CLEANUP TO THE SATISFACTION OF OWNER.
7. CONTRACTOR SHALL ASCERTAIN THE LOCATION OF ALL UTILITIES PRIOR TO CONSTRUCTION SO THAT THIS WORK WILL NOT DISTURB EXISTING LINES AND/OR INSTALLATIONS EXCEPT AS DETAILED ON THE PLANS. COORDINATE ALL WORK WITH THE APPLICABLE UTILITY COMPANIES.
8. CONTRACTOR SHALL OBTAIN AND PAY FOR ALL REQUIRED PERMITS NECESSARY TO PERFORM THE WORK.
9. BUILDING DIMENSIONS ARE APPROXIMATE. REFER TO ARCHITECTURAL DRAWINGS FOR LAYOUT DIMENSIONING.
10. SIDEWALK DIMENSIONS ARE APPROXIMATE. REFER TO ARCHITECTURAL DRAWINGS FOR THE SIDEWALK PLAN.
11. CONCRETE SIDEWALK SEALERS (REFER TO ARCHITECTURAL PLANS FOR LOCATION OF CONCRETE TYPES.)
11.1. GREY CONCRETE SIDEWALKS SHALL HAVE CHEMMASTERS SILENCURE WITHIN 2HRS AFTER FINAL FINISHING OF CONCRETE AND ALL BLEED WATER HAS DISSIPATED.
11.2. EXPOSED AGGREGATE/STAMPED CONCRETE SIDEWALKS SHALL HAVE ONE (#1) COAT CHEMMASTERS - SILENCURE AS SOON AS CONCRETE HAS DRIED AFTER PRESSURE WASHING THE RELEASE AGENT OFF. APRX 30 DAYS AFTER THIS (IF WEATHER PERMITS) APPLY ONE (#1) COAT OF CHEMMASTERS - POLYSEAL EZ.
12. LIGHTING FIXTURE ARROW SYMBOLS REFER TO THE DIRECTION THAT THE FIXTURES ARE REQUIRED TO FACE. SPECIFIC MOUNT BRACKETS WILL BE REQUIRED DEPENDING ON ORIENTATION AND FIXTURE COUNT.
13. CURB ISLAND DIMENSIONS ARE FROM INSIDE OF CURB TO INSIDE OF CURB.

DEMOLITION & EROSION NOTES:
1. USE ENTRANCE FROM FRUEHAUF AVE. FOR CONSTRUCTION ENTRANCE
2. INSTALL TEMPORARY EROSION CONTROL DEVICES AS DIRECTED WITHIN THE WORKING AREA TO PREVENT SEDIMENT MIGRATION. ALL EROSION CONTROL DEVICES SHALL BE INSTALLED IN ACCORDANCE WITH THE DETAILS PROVIDED.
3. ALL EROSION CONTROL DEVICES SHALL BE REPLACED WHEREVER THEY BECOME INOPERABLE.
4. THE CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTENANCE AND REMOVAL OF TEMPORARY SEDIMENTATION CONTROLS.
5. THE CONTRACTOR MUST CONTROL DUST DURING CONSTRUCTION. DURING EARTHWORK OPERATIONS, WATER-SPREADING EQUIPMENT SHALL BE PROVIDED BY THE CONTRACTOR, AND WATER SPREAD AS NECESSARY AND AS DIRECTED IN ORDER TO CONTROL DUST.
6. DIRT OR DEBRIS LEFT ON LOCAL PUBLIC ROADS AS A RESULT OF THIS CONSTRUCTION PROJECT SHALL BE REMOVED AND ROAD SURFACES CLEANED BY THE CONTRACTORS ON A DAILY BASIS, OR MORE FREQUENTLY IF DEEMED NECESSARY.
7. ALL DISTURBED AREAS (EXCEPT AREAS TO BE PAVED OR BUILT UPON) SHALL BE TOPSOILED TO A MINIMUM OF 4" DEPTH AND SEEDED IMMEDIATELY AFTER FINE GRADING TAKES PLACE AND AS SOON AS PHYSICALLY POSSIBLE.
8. THE CONTRACTOR IS RESPONSIBLY FOR THE MAINTENANCE OF DOWNSTREAM STORM SEWERS, DITCHES AND CULVERTS. SILT BUILDUP FOUND TO BE A RESULT OF THIS SITE CONSTRUCTION WORK SHALL BE REMOVED FROM DOWNSTREAM CULVERTS, DETENTION PONDS, BY THE CONTRACTOR AT NO ADDITIONAL EXPENSE TO THE OWNER OR CITY.
9. ALL SOIL EROSION AND SEDIMENT CONTROL DEVICES AND MATERIALS SHALL BE IN PLACE PRIOR TO BEGINNING EARTHWORK OPERATIONS AND SHALL BE MAINTAINED UNTIL THE ALL GRADING WORKS ARE COMPLETE.

DEMOLITION LEGEND:
- Property Line
- Existing Electric
- Existing Gas
- Existing Water
- Existing Overhead Utility
- Existing Sanitary
- Existing Storm
- Existing Telecoms
- Saw Cut Line
- Silt Fence/Sock
- Inlet Protection "Sedi-Bag" or similar
- Existing Easement to be removed.
- Existing Building to be removed.

DEMOLITION NOTES: (#)
1. Existing Buildings to be removed.
2. Existing Pavement to be removed.
3. Existing R.O.W. Driveway, Curb and Sidewalk to be removed.
4. Existing Retaining Wall and Steps to be removed.
5. Existing Landscape Area to be removed.
6. Existing Fence to be removed.
7. Existing Utility to be removed.
8. Existing Storm Drainage/CB to be removed.
9. Existing Sign to be removed.
10. Existing Curb to remain.
11. Existing Pavement to remain.
12. Existing Landscape area to remain.
13. Eising Sidewalk to remain.
14. Existing Storm Drainage/CB to remain and be protected during Construction.
15. Existing Utility to remain and be protected during construction.
16. Existing Light Pole to remain and be poteded during construction.
17. Existing Sign to be relocated.

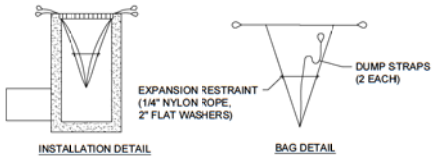
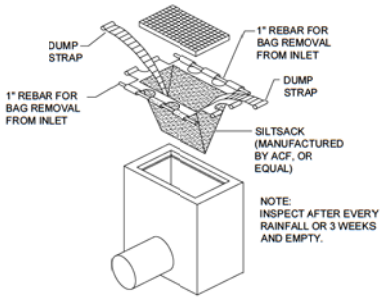
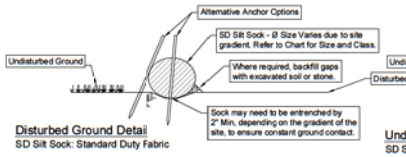
BORING LOCATION PLAN



SCALE: 1:20
DRAWN BY: DMZ
CHECKED BY: JAR
DATE: 05.05.2022
DRAWING NO.: C3.1

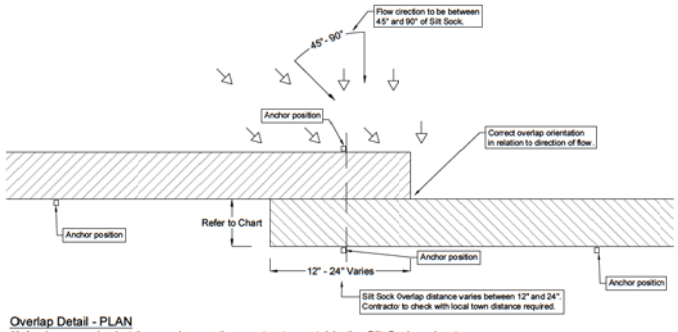


STABILIZED CONSTRUCTION ENTRANCE DETAIL



NOT TO SCALE

1. STONE SIZE - USE 2" STONE, OR RECLAIMED OR RECYCLED CONCRETE EQUIVALENT
2. LENGTH - NOT LESS THAN 50 FEET (EXCEPT ON A SINGLE RESIDENCE LOT WHERE A 30 FOOT MINIMUM LENGTH WOULD APPLY).
3. THICKNESS - NOT LESS THAN SIX (6) INCHES.
4. WIDTH - TWELVE (12) FOOT MINIMUM, BUT NOT LESS THAN THE FULL WIDTH AT POINTS WHERE INGRESS OR EGRESS OCCURS. TWENTY-FOUR (24) FOOT IF SINGLE ENTRANCE TO SITE.
5. FILTER CLOTH - WILL BE PLACED OVER THE ENTIRE AREA PRIOR TO PLACING OF STONE.
6. SURFACE WATER - ALL SURFACE WATER FLOWING OR DIVERTED TOWARD CONSTRUCTION ENTRANCES SHALL BE PIPED ACROSS THE ENTRANCE. IF PIPING IS IMPRACTICAL, A MOUNTABLE BERM WITH 5:1 SLOPES WILL BE PERMITTED.
7. MAINTENANCE - THE ENTRANCE SHALL BE MAINTAINED IN A CONDITION WHICH WILL PREVENT TRACKING OR FLOWING OF SEDIMENT ONTO PUBLIC RIGHTS-OF-WAY. ALL SEDIMENT SPILLED, DROPPED, WASHED OR TRACTED ONTO PUBLIC RIGHTS-OF-WAY MUST BE REMOVED IMMEDIATELY.
8. WHEN WASHING IS REQUIRED, IT SHALL BE DONE ON A AREA STABILIZED WITH STONE AND WHICH DRAINS INTO AN APPROVED SEDIMENT TRAPPING DEVICE.
9. PERIODIC INSPECTION AND NEEDED MAINTENANCE SHALL BE PROVIDED AFTER EACH RAIN.



SILT SACK DETAIL

10.1 - 33%	10	15	20
> 33%	5	10	15

SD SILT SOCK DETAIL

SD Silt Sock: Standard Duty Fabric

TYPICAL CONCRETE WASH OUT DETAIL

NOTES:
1. CONSTRUCT TO 2016 NYSDEC BLUE BOOK DESIGN CRITERIA

Notes:

1 - Do not use sock below the normal watermark or perpendicular to flow in river and where the maximum incline is greater than 50%.
2 - Contractors shoud be aware of federal, state and local laws, rules regulations or permit requirements for the use of Silt Socks on site.
3 - Sock should be positioned on the outline of the area to be protected, but must be installed between 45° to 90° from directions of flow.
4 - Sock may be required to be entrenched a minimum of 2" on disturbed ground to ensure constant ground contact.
5 - All gaps and ruts must be backfilled with soil or sock material.
6 - Sock overlap should be in the direction of the flow. Overlap amount will be between 12" and 24". Contractor to check with local town for requirements.
7 - If sediment collects to 1/2 the height of the sock, then a second sock may be stacked immediately up slope of the original instead of removing the sediment.
8 - Sock joint is where two sock sections meet on a level grade, overlap and adjoining ends, tightening the ends together, and anchoring through each end. Where two sections meet on un-level ground, j-hook higher elevated end, anchor, and begin new section just below. Back fill any gaps.
9 - Sock should be inspected and repaired as neeced.
10 - If ruts begin under the sock they should be backfilled with soil and compacted so that the ground and sock have continuous contact.
11 - If sock rolls out of place, the sock should be repositioned and secured with additional anchors.
12 - Tears in the Sock fabric may be repaired by wrapping a new piece of fabric over the sock and securing, or by place a second sock immediately up slope with the required overlap beyond deformation.
13 - A section of sock should be replaced whenever it has weakened to such an extent that the efficiency is reduced or diminished. Weakening can occur because the natural mesh fabric breaks down over time of from being moved/dragged on site.
14 - Sock should be replaced when sediment has built up and has been removed three times.
15 - All sediment in disturbed area next to sock must be removed and correctly disposed of before the sock can be removed.
16 - When removing, cut sock open and spread the filler material around. The neting should be removed from site.
17 - Sock should be installed before works commence on site.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

GENERAL NOTES:

1. INSTALL ALL MATERIALS TO MANUFACTURER'S RECOMMENDATIONS AND BEST STANDARDS OF TRADE INVOLVED.
2. SUBSTITUTIONS SHALL BE MADE ONLY WITH OWNER'S APPROVAL AND BE OF EQUIVALENT QUALITY TO WHAT IS SPECIFIED.
3. WORK SHALL BE COMPLETED IN STRICT ACCORDANCE WITH ALL LOCAL CODES AND OSHA SAFETY RULES AND REGULATIONS.
4. CONTRACTOR SHALL VERIFY ALL EXISTING CONDITIONS AND DIMENSIONS AT THE SITE. NOTIFY OWNER & ENGINEER OF DISCREPANCIES IN CONDITIONS SHOWN ON DRAWINGS PRIOR TO PROCEEDING WITH THE WORK.
5. CONTRACTOR SHALL BE RESPONSIBLE FOR PROTECTION OF ANY EXISTING STRUCTURES TO REMAIN AND ANY FINISH MATERIAL INSTALLED WHILE WORKING ON OTHER COMPONENTS.
6. CONTRACTOR SHALL KEEP JOB FREE OF DEBRIS AND MAKE FINAL CLEANUP TO THE SATISFACTION OF OWNER.
7. CONTRACTOR SHALL ASCERTAIN THE LOCATION OF ALL UTILITIES PRIOR TO CONSTRUCTION SO THAT THIS WORK WILL NOT DISTURB EXISTING LINES AND/OR INSTALLATIONS EXCEPT AS DETAILED ON THE PLANS. COORDINATE ALL WORK WITH THE APPLICABLE UTILITY COMPANIES.
8. CONTRACTOR SHALL OBTAIN AND PAY FOR ALL REQUIRED PERMITS NECESSARY TO PERFORM THE WORK.
9. BUILDING DIMENSIONS ARE APPROXIMATE. REFER TO ARCHITECTURAL DRAWINGS FOR LAYOUT DIMENSIONS.
10. SIDEWALK DIMENSIONS ARE APPROXIMATE. REFER TO ARCHITECTURAL DRAWINGS FOR THE SIDEWALK PLAN.
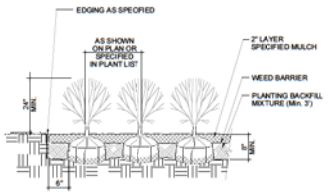
11. CONCRETE SIDEWALK SEALERS: (REFER TO ARCHITECTURAL PLANS FOR LOCATION OF CONCRETE TYPES.)
    11.1 GREY CONCRETE SIDEWALKS SHALL HAVE CHEMMASTERS - SILENCURE WITHIN 2HRS AFTER FINAL FINISHING OF CONCRETE AND ALL BLEED WATER HAS DISSIPATED.
    11.2 EXPOSED AGGREGATE/STAMPED CONCRETE SIDEWALKS SHALL HAVE ONE (x1) COAT CHEMMASTERS - SILENCURE AS SOON AS CONCRETE HAS DRIED AFTER PRESSURE-WASHING THE RELEASE AGENT OFF. APPX 30 DAYS AFTER THIS (IF WEATHER PERMITS) APPLY ONE (x1) COAT OF CHEMMASTERS - POLYSEAL EZ.
12. LIGHTING FIXTURE ARROW SYMBOLS REFER TO THE DIRECTION THAT THE FIXTURES ARE REQUIRED TO FACE. SPECIFIC MOUNT BRACKETS WILL BE REQUIRED DEPENDING ON ORIENTATION AND FIXTURE COUNT.
13. CURB ISLAND DIMENSIONS ARE FROM INSIDE OF CURB TO INSIDE OF CURB.

LANDSCAPE NOTES:



1. ALL PLANTS INSTALLED SHALL MEET OR EXCEED THE MINIMUM REQUIREMENTS AS NOTED ON THE PLANS AND IN THE LATEST EDITION ON THE AMERICAN STANDARD FOR NURSERY STOCK, BY THE AMERICAN ASSOCIATION OF NURSERYMEN, ANSI Z60.1
2. THE CONTRACTOR SHALL BE RESPONSIBLE FOR HIS OWN QUANTITY TAKEOFF. THE QUANTITIES SHOWN ARE A MINIMUM AND ARE FOR REFERENCE ONLY.
3. THE CONTRACTOR SHALL PERFORM A ROUGH FIELD STAKEOUT OF ALL PLANTING MATERIAL LOCATIONS AND CONTACT THE OWNERS FIELD REPRESENTATIVE PRIOR TO ACTUALL INSTALLING. THE PLANTING MATERIAL LOCATIONS SHOWN ON THE PLANS ARE TO CONVEY THE DESIGN INTENT ONLY. ACTUAL LOCATIONS WILL BE FINALIZED BY THE OWNERS FIELD REPRESENTATIVE AT THE TIME OF INSTALLATION.
4. THE CONTRACTOR IS HEREBY NOTIFIED THAT IF UNDERGROUND UTILITIES EXIST IN THE VICINITY OF THE PLANTINGS, ALL PROPOSED PLANTINGS SHALL BE INSTALLED A MINIMUM OF 5' FROM ANY UNDERGROUND UTILITY. CONTACT THE OWNERS FIELD REPRESENTATIVE IF PLANTINGS SHOWN ON THE PLANS VIOLATE THIS SITUATION.
5. ALL TREES SHALL BE INSTALLED A MINIMUM OF 20' FROM ANY OVERHEAD ELECTRIC LINES.
6. PLANTING BACKFILL MIXTURE SHALL CONSIST OF 4 PARTS TOPSOIL, 1 PART PEAT MOSS, ½ PART WELL ROTTED MANURE, 10 LBS 5-10-5 PLANTING FERTILIZER THOROUGHLY MIXED PER CUBIC YARD.
7. STAKE AND WRAP TREES IMMEDIATELY FOLLOWING INSTALLATION.
8. ALL PLANTED AREAS SHALL RECEIVE A MIN. 2" LAYER OF COCOA BROWN MULCH. WEED MAT EQUAL TO "WEEDBLOCK" BY EASY GARDENER OR DEWITT WEED BARRIER.
9. ALL DISTURBED AREAS NOT RECEIVING PLANTINGS (INCLUDING RIGHT-OF-WAYS) SHALL BE PROVIDED WITH SOD. SEED PERMITTED AT DETENTION POND IF PLANTED EARLY ENOUGH TO ESTABLISH.
10. THE AREAS ON THE PLAN TO BE SEEDED SHALL HAVE 4" MINIMUM OF TOPSOIL, DISK PLOWED, LEVELED AND HAND RAKED SMOOTH. SURFACE SHALL BE ROLLED TO REMOVE LUMPS.
11. ALL SEEDED AREAS SHALL BE HYDROSEEDED IN ACCORDANCE WITH THE SPECIFICATION INDICATED. WHERE REQUIRED BY CLIMATIC CONDITIONS, SLOPE OR SEASON OF PLANTING.
    HYDROSEED SPEC: 20% RYE, 20% BLUE GRASS, 60% TURF TYPE FESCUE
    SOD MAY BE SUBSTITUTED FOR SEED DOWN IN ORDER TO ACHIEVE THE REQUIRED COVERAGE (REFER TO CONTRACTOR FOR SOD/SEED COVERAGE).
12. THE CONTRACTOR SHALL BE RESPONSIBLE FOR WATERING, MOWING AND OTHER MAINTENANCE TO SEEDED AREAS UNTIL THE PROJECT IS ACCEPTED BY THE OWNER. THIS SHALL INCLUDE WATERING DAILY FOR 15 DAYS OR AS REQUIRED BY WEATHER CONDITIONS AND RE-SEEDING OF THIN SPOTS FOLLOWING THE GERMINATION OF THE SEEDS.
13. CONTRACTOR IS RESPONSIBLE TO PROTECT ALL EXISTING TREES ONSITE AND OFFSITE, WHICH ARE TO BE PRESERVED, FROM ALL POSSIBLE TYPES OF ROOT, TRUNK, AND LIMB DAMAGE.

OSQ Series

OSQ™ LED Area/Flood Luminaire featuring Cree TrueWhite® Technology – Medium & Large

Rev. Date: V5 09/14/2021

Product Description

The OSQ™ Area/Flood luminaire blends extreme optical control, advanced thermal management and modern, clean aesthetics. Built to last, the housing is rugged cast aluminum with an integral, weathertight LED driver compartment. Versatile mounting configurations offer simple installation. Its slim, low-profile design minimizes wind load requirements and blends seamlessly into the site providing even, quality illumination. The 6L lumen package is a suitable upgrade for HID applications up to 250 Watt, and the 11L lumen package is a suitable upgrade for HID applications up to 400 Watt. The 22L lumen package is a suitable upgrade for HID applications up to 750 Watts, and the 30L lumen package is a suitable upgrade for HID applications up to 1000 Watts.

Applications: Parking lots, walkways, campuses, car dealerships, office complexes, tunnels, underpasses, and internal roadways

Performance Summary

Utilizes Cree TrueWhite® Technology on 5000K Luminaires

NanoOptic® Precision Delivery Grid™ optic

Assembled in the U.S.A. of U.S. and imported parts

Initial Delivered Lumens: 4,000 - 30,000

Efficacy: Up to 173 LPW

CRI: Minimum 70 CRI (3000K, 4000K & 5700K); 90 CRI (5000K)

CCT: 3000K, 4000K, 5000K, 5700K

Limited Warranty*: 10 years on luminaire; 10 years on ColorFast DeltaGuard® finish; up to 5 years for Synapse® accessories; 1 year on luminaire accessories

* See DTLEDLighting.com/warranty for warranty terms. For Synapse accessories, consult Synapse spec sheets for details on warranty terms.

Ordering Information

Fully assembled luminaire is composed of two components that must be ordered separately:

Example: **Mount:** OSQ-ML-B-AA-BK + **Luminaire:** OSQM-8L-4L-30K7-3M-UL-NH-BK

Mount (Luminaire must be ordered separately)*

CREE ≑ LIGHTING

CPY Series - Version C

CPY250® LED Canopy/Soffit Luminaire

Rev. Date: V3 02/01/2022

Product Description

The CPY250® LED Canopy/Soffit Luminaire has an extremely thin profile constructed of rugged cast aluminum. It can be surface mounted easily from below the canopy deck and can be pendant mounted. Direct imaging of the LEDs is eliminated with a highly efficient patterned flat or EF1° (23mm) drop glass lens.

Applications: Petroleum canopies, CNG fueling stations, soffits

Performance Summary

Assembled in the USA by Cree Lighting from US and imported parts

Initial Delivered Lumens: Up to 21,000

Efficacy: Up to 165 LPW

CRI: Minimum 70 CRI (aLX, S8K, STK); 80 CRI (S0K); 90 CRI (LLX, S8K

CCT: 3000K, 4000K, 5000K, 5700K

Limited Warranty*: 10 years on luminaire/10 years on ColorFast DeltaGuard® finish/5 years on PML sensor/1 year on field-installed accessories

IP66 Rated (select models only)

Class I, Division 2 Hazardous Location for select models

* See DTLEDLighting.com/warranty for warranty terms

CREE ≑ LIGHTING

IG Series

LED Parking Garage Luminaire

Rev. Date: V6 09/17/2020

Product Description

Cree Lighting innovates again to reset the performance benchmark in parking garage applications with the IG Series featuring WaveMax® Technology, our innovative optical waveguide platform. Available in 30 watt and 60 watt, two lumen packages are offered to satisfy IES RP-8-18 and IES Security Zone 0-1-03 requirements for environments seeking higher light levels for improved safety and security. The streamlined design breaks away from dated traditional designs, blending form and function, to deliver superior low glare illumination.

For enhanced performance and versatility, a range of optional integrated lighting controllers bring advanced capabilities andenergy savings to the IG Series. From the stand-alone multi-level (PML) option to the full-featuredLimelight by Lutron or Synapse® wireless control options, the IG Series provides the features andflexibility designed to meet the needs of today's most demanding parking garage applications.

Applications: Parking garages

Performance Summary

Utilizes WaveMax® Technology

Initial Delivered Lumens: 3,860 or 7,300 lumens

Input Power: 33 or 60 watts

Efficacy: Up to 126 LPW

Optic: Type V Short Distribution

Assembled in the USA of U.S. and imported parts

CCT: 3000K, 3500K, 4000K, 5700K

CRI: Minimum 80 CRI

Limited Warranty*: 10years on luminaire; 5 years on PML and Limelight options; up to 5 years for Synapse® accessories;1 year on luminaire accessories

* See DTLEDLighting.com/warranty for warranty terms. For Synapse accessories, consult Synapse spec sheets for details on warranty terms.

CREE ≑ LIGHTING

THE EDGE® Series

LED Area Luminaire - Round

Rev. Date: V10 12/19/2021

Product Description

THE EDGE® Series has a slim, low profile design. Its rugged cast aluminum housing minimizes wind load requirements and features an integral, weathertight LED driver compartment, spun-rivetted cover, high performance aluminum heat sinks and leaf/debris guard.

Applications: Auto Dealerships, parking lots, campuses, facade lighting and general site lighting applications

Performance Summary

Patented NanoOptic® Product Technology

Assembled in the USA by Cree Lighting from US and imported parts

Initial Delivered Lumens: Up to 25,165

CRI: Minimum 70 CRI 6,000K & 5700K); 80 CRI (3000K); 90 CRI (5000K)

CCT: Turtle Friendly Amber, 3030K(+/- 300K), 4000K (+/- 300K), 5000K (+/- 500K), 5700K (+/- 500K) standard

Limited Warranty*: 10years on Luminaire/10 years on ColorFast DeltaGuard® finish /1 year on accessories

* See DTLEDLighting.com/warranty for warranty terms

Accessories

Field-Installed

Bird Spikes
KA-SMBSPK
• Requires other Synapse components to complete system
• Refer to DMG-1SSP spec sheet for details

Backlight Control Shields
KA-SSBLS-4
KA-SSBLS-6
• Unpainted stainless steel.
• For use with SW and TS optics
• Consult factory for shielding for use with 2M, 3M, and 4M optics

R3 Mount

LED Count (x 14)	Weight
04	33.8 lbs. (15.3kg)
06	35.3 lbs. (15.9kg)
08	37.9 lbs. (16.8kg)
10	40.7 lbs. (18.5kg)
12	43.4 lbs. (19.3kg)

R4/R5 Mount – see page 14 for weight & dimensions

RE: Geotechnical Engineering Report
Proposed Two-Story Building with Underground Garage
4548 & 4564 Main Street, 22 Chateau Terrace, and 17 Fruehauf Avenue
Town of Amherst, Erie Co., New York 14226

Gentlemen:

This report presents the findings of the subsurface investigation program and geotechnical engineering recommendations for the above referenced project. The geographic orientation of the project site is illustrated on the U.S. Geologic Survey (USGS) site location map in Figure No. 1. The project site is illustrated in Figure No. 2, entitled "Test Boring Location Plan", which includes: the approximate location of six test borings that were drilled by Buffalo Drilling Company, Inc. (BDC); relative ground surface elevations; and additional site details.

EXPLORATION METHODS

Sampling Method: A truck-mounted Diedrich D-50 rotary drill rig was used to drill six borings each to auger refusal below ground surface by using 2-1/4 inch and 4-1/4 inch inside diameter (ID), continuous flight hollow stem augers. Samples were recovered by driving a standard split-spoon sampler (2-foot long by 1-3/8 inch inside diameter) 24 inches with a 140-pound hammer falling 30 inches per blow per the American Society of Testing and Materials (ASTM) Standard D1586. The number of blows from six to 18 inches of penetration is defined as the Standard Penetration Test (SPT) N-value. Auger refusal, which may infer the top of bedrock, was encountered at each boring location at depths ranging from about two to six feet. At borings B-1 and B-6, bedrock was confirmed by coring to a depth of five feet below auger refusal. Bedrock coring efforts were done with an Nx-sized (2-1/8 ± inch I.D.) core barrel and impregnated diamond bit in accordance with ASTM Method D2113.

Any encountered groundwater conditions are documented in the field on the driller's logs for each test boring. If indicators of groundwater are observed on the sampling equipment, the depth to groundwater is also checked and measured through the hollow stem augers at the completion of the sampling efforts.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

Classification: The retrieved soil and fill samples were initially logged in the field by the driller, and a portion of each sample was placed and sealed in a glass jar. The boring logs, which are included in Appendix A, were based upon the field logs and a second visual classification of recovered samples in the laboratory by a geologist. Classification/identification of samples, as noted on the boring logs, is based on the Unified Soil Classification System (USCS) in ASTM D2487/D2488. Refer to Appendix B entitled, "Geotechnical Reference Standards", for an explanation of the terminology that is used for soil and rock descriptions.

Each rock core was examined on a run-by-run basis to determine the percentage of core recovery and Rock Quality Designation (RQD). Core recovery percentage is the ratio of the sample length recovered divided by the length of the core run times 100 percent. RQD is defined as the total length of all pieces of core that are greater than four inches divided by the length of the core run times 100 percent. Core recovery and RQD percentages are noted on the boring logs.

Laboratory Testing: Laboratory soil testing was undertaken on several retrieved split spoon samples. The overall laboratory testing program consisted of the following test methods:

- Unconfined Compressive Strength of Intact Rock Core Specimens ASTM D2938

Table No. 1 presents the tabulated results of bedrock physical property data.

SITE AND SUBSURFACE CONDITIONS

General: The proposed site for development consists of four parcels addressed as 4548 & 4564 Main Street, 22 Chateau Terrace, and 17 Fruehauf Avenue in the Town of Amherst, Erie County, New York. The project will include a mixed-use, two-story building with both retail spaces and residential apartments. The majority of the structure will have a lower basement/underground parking garage beneath it. The site topography slopes to the northwest across the boring locations with ground surface elevations varying by approximately five feet.

Subsurface Soil Conditions: In general, subsurface conditions, underlying the topsoil at B-2 and the asphalt pavement with crushed limestone base layer at the remaining borings, consist of naturally deposited cohesive/fine-grained glacial till that extends to auger refusal.

Beneath the asphalt/gravel base or topsoil, a naturally deposited cohesive/fine-grained glacial till exists and extends to auger refusal. The unit ranges in thickness from two to five fee and consists of moderately plastic, silty clay with lesser amounts of sub-rounded fine-sized to coarse-sized sand and gravel. The consistency of this soil is primarily very stiff to hard with moisture contents of retrieved samples noted to be moist.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

Bedrock: Auger refusal, which is generally inferred to be the top of the apparent bedrock surface, was not encountered at each boring approximately two to six feet below ground surface, ranging in elevation from 675.00 to 671.20+/- feet. The proposed footing bearing grade for the building, approximate elevation 671.30 +/- feet, will be at or within the bedrock which will make it necessary to remove almost four feet of bedrock.

Rock coring efforts were undertaken at borings B-1 and B-6 to depths of five feet, below auger refusal. Based upon the regional geology and recovered core samples, the bedrock type is the Onondaga Limestone and is described as a hard and slightly weathered, medium dark gray, banded to thinly bedded, finely crystalline limestone that is porous and calcareous. The percent recoveries for the cores ranged from 33 percent to 83 percent with RQD values of 0 percent (very poor quality) to 29 percent (poor quality).

Table No. 1 provides the laboratory uniaxial compressive strength and density data for the intact limestone specimens near the bottom part of the B-1 cored interval C-1 and middle of B-6 cored interval C-2. The density data is characteristic of a limestone rock. The uniaxial compressive strengths ranged from approximately 4,000 to 7,500 pounds per square inch (psi); which is on the low to middle portion of the range for limestone. The intact bedrock uniaxial compressive strength and other rock properties (e.g., RQD) can be used in the estimation of the strength properties for the bedrock mass.

Groundwater: Groundwater was not encountered during subsurface exploration. Note that the groundwater readings were taken at the completion of drilling efforts and, therefore, an adequate amount of time for the groundwater level to recharge to static conditions was probably not allowed. Fluctuations in the groundwater level may occur due to other factors than those present during field operations.

EARTHQUAKE/SEISMIC CONSIDERATIONS

Site Class Definition: For the given site conditions, the most applicable site definition is Site Class B, as listed in Table 1613.5.2 of the Building Code of New York State, © 2010.

Liquefaction Potential: For the Site Class B, the design spectral response acceleration parameters S_{DS}, at 0.2 seconds, and S_{D1}, at one second, are 0.15g and 0.03g (g = 32.2 feet/sec^2), respectively, for this part of Erie County, New York (see Appendix C). These values have a two percent probability of being exceeded in 50 years. Based upon the above conditions and an approximate magnitude 6.0 earthquake on the Richter Scale, the potential for liquefaction or settlement of Site Class B rock is considered non-existent.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

FOUNDATION DESIGN AND CONSTRUCTION RECOMMENDATIONS

General: This section will present and discuss recommendations on foundation design and construction and placement of controlled fills, and subgrade and base layer requirements for concrete floor slabs, paved parking and roadway areas.

As shown in Figure No. 2, the proposed development will include a two-story mixed-use building with underground parking garage. The existing ground surface slopes to the northwest across the proposed development areas with ground surface elevations varying by approximately five feet. As per drawings provided via email with client representatives, finish first floor elevation of the building is at elevation 683.80 ± feet and steps up to 685.00 ± feet. The basement level and underground parking garage will have a finish floor elevation that is 11.5 feet beneath the first floor at approximate elevation 672.3 ± feet. Final exterior grades are assumed to match existing, from about elevation 685.00 ± feet to 675.00 ± feet. The maximum design exterior bearing wall and column loads are not expected to exceed 10 kips per lineal foot and 100 kips, respectively. The maximum design interior bearing column load is not expected to exceed 120 kips.

Site Preparation and Earthwork: General site preparation will include the demolition and complete removal of any encountered foundations and floor slabs, and removing all unsuitable surficial material (i.e., asphalt pavement, concrete, brick, expansive slag, organic or topsoil layer, and construction and demolition-like fill) to a depth where firm, granular or cohesive fills or naturally occurring soils are encountered. It is recommended, particularly in the location of the proposed structure, that any slag and/or cinder/ash containing material, if encountered, should be tested to determine the expansion and corrosion characteristics (where applicable for direct or potential contact with foundation elements and buried utilities) of these materials prior to their use on-site. Any rubble-like and brick fill, boulders, or wood fill in particular, if encountered, will require undercutting. The proposed building and any paved areas are to be proof rolled with a fully loaded ten-wheel dump truck. All encountered soft and disturbed zones should be undercut and stabilized with granular fill that is placed in compacted lifts prior to placement of additional fill materials above. Refer to Appendix D entitled "General Earthwork Specification" for definition of the fill types and gradations, recommended minimum compaction requirements for various site developments, and placement and compaction methods. The NYS Department of Transportation (NYSDOT) specification numbers for typical aggregate subbase/base course components that are included in the select granular fill category as are as follows: Item No. 304.12 (Metric) Subbase Course, Type 2 (< 2-inch maximum size), which is preferred; or Item No. 304.14 (Metric) Subbase Course, Type 4 (< 2-inch maximum size).

Other than the existing buildings along Main Street and the house and garage at 22 Chateau Terrace that will be demolished, it is unknown if any former residential/commercial structures, existed at the project site and if any former footings and foundation walls may be buried within the addition footprint. Septic tank and

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

system locations and the abandonment conditions or practices are normally unknown. If encountered during site development, it is recommended that any tanks and systems should be properly removed/treated/remediated relative to the proposed development and under the applicable local and state regulations. The remaining cavities, from the aforementioned items, should be backfilled with select/approved granular fill that is placed in thin lifts and compacted to the minimum recommendation, as presented in this report, for the proposed development at that cavity location.

Shallow Foundation: The recommended foundation type is shallow footings. Continuous strip and spread exterior footings and interior spread footings would bear at an elevation of four feet or lower below final grade, at elevation 670.80 ± feet. The bearing elevation is also approximated based upon the basement/parking garage finish floor elevation of 672.30 ± feet. A four-foot minimum footing depth (as required by local or New York State code) is needed to provide adequate protection from frost for exterior footings.

Basement/parking garage will require the removal of up to four feet of limestone bedrock. If the approved bedrock depth is less than four feet below final exterior grade, hooked rebar dowels are recommended to be placed in grout filled holes at approximately a four-foot spacing and extending to a minimum total depth of four feet into approved bedrock. This precaution is needed to confirm adequate bedrock quality and to incorporate the rock mass into the perimeter footing system.

The exterior and interior footings are recommended to bear at the same relative elevation on stable, natural, approved limestone bedrock or on thin layers of thoroughly compacted (minimum of 95 percent of the maximum dry density by ASTM D 1557) select/approved granular fill that is placed on an approved subgrade. If needed, a geotextile strength and filter fabric (such as, Mirafi 600X) may be used to line the excavation bottom for the purpose of stabilizing the excavation and placement of the select/approved granular fill.

Undercut areas beneath proposed foundations must extend laterally beyond each vertically projected edge of the foundation by a minimum distance equal to one-half the total depth of the undercut or equating to a slope of two vertical to one horizontal from the bottom foundation corner. The undercuts and placement of compacted select/approved granular fill are required to ensure a suitable and more uniform bearing media for the footings, and to prevent unacceptable differential settlements.

Wall footings should have a minimum two-foot width and column footings should have a minimum three-foot width. Based on the above described conditions, the recommended maximum net allowable foundation bearing pressure is 5,000 pounds per square foot (psf) of bearing area. All footings for the proposed building are recommended to be designed near the same contact pressure. The recommended

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

maximum net allowable foundation bearing pressure is based on generally accepted design methods for cohesive soil conditions. Based on the provisions of the above recommendations and estimated design requirements and utilization of proper construction procedures and experienced field supervision and testing personnel, total and differential settlements are estimated to be less than one inch and 3/4's inch, respectively. Refer to Appendix C for additional foundation design and construction details.

Additional Foundation Considerations: In addition to the above, the following recommendations will provide additional assurances with regard to proper foundation construction.

a) All fill placed beneath, adjacent, or above foundations must comply with the "General Earthwork Specification", included as Appendix D.

b) Backfill of foundations with approved select granular fill must be completed prior to placement of substantial superstructure loads, except for basement walls or substructure areas that may additionally require superstructure loads and possibly internal bracing.

c) The upper silty materials may rut and “pump” if exposed to excessive surface water and repeated construction traffic. Proper site management and fill placement operations are needed to minimize costly undercuts and subgrade repairs prior to placement of concrete slabs and asphalt pavement. It is noted that construction during wet/rainy and/or Fall and Spring conditions may require added precautions and possibly a thicker base layer to maintain a stable subgrade condition.

d) Step footings, if utilized, should have a rise to run ratio of 1:2, with a two-foot maximum rise and a four-foot minimum run between steps or as recommended by the design structural engineer.

e) The recommended at rest (rigid wall), active, and passive static earth pressure coefficients for unsaturated, select granular sandy gravel fill against an earth retaining structure/wall are 0.76, 0.24, and 2.8 (with an ultimate value of 4.2), respectively. The respective equivalent static lateral fluid pressures are recommended to be 90, 30 and 330 (with an ultimate value of 500) pounds per square foot (psf) per foot depth which are based upon a moist, compacted unit backfill weight of 120 pounds per cubic foot (pcf). The at rest value would account for the average expected compaction induced stresses and/or the potential influences of hydrostatic pressure. The static lateral fluid pressures can be directly proportioned for other unit weights.

Stabilization of Excavations/Underground Structures: The trench/excavation sidewall stability concerns can be addressed with the Occupational Safety and Health Act (OSHA) requirements as set forth in Subpart P of 29 CFR Part 1926, Sections 1926.650 to 1926.652. In lieu of a properly designed shoring system, side slopes of the trench excavation should be one on one (vertical to horizontal distance) or flatter in cohesive soils or one on one and one-half or flatter in the granular materials, as required by OSHA.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

In areas where sloped excavations are impractical, a land cofferdam (e.g., sheet piling or soldier piles with lagging and walers-struts/tiebacks, as needed) must be installed to effectuate the installation of the proposed underground parking structure. The aforementioned system(s) must be designed by a licensed New York State professional engineer with proven experience. These types of designs are outside the scope of this report.

Water must not be allowed to accumulate or pond on exposed foundation bearing grades. Surface water and groundwater from within the excavation must be either pumped, diverted or channelized by gravity flow to effectuate the construction of the proposed foundation. Pockets of localized perched groundwater may seasonally be expected to be encountered at footing and/or footing undercut bearing grades. At these locations, dewatering with surface sumps may be required to maintain stable side slopes and excavation bottom.

Substructures/Retaining Walls: While not a unique design concern, proposed basement/underground parking substructures must be adequately designed and constructed to support horizontal soil pressures and surface loads. Refer to Appendix C and the following recommendations that will provide additional assurances with regard to proper design and construction of free standing retaining walls and fixed/restrained walls.

a) At the location of the proposed structure(s), design the wall foundation based on the previously recommended maximum net allowable bearing capacity and bearing conditions.

b) Cantilever (such as, retaining) walls and fixed/restrained walls must be adequately designed and constructed to support horizontal soil pressures and surface loads.

c) Uniformly distributed surface surcharge loads should be applied at 100 percent of the load times the appropriate lateral earth pressure coefficient to the retaining wall. The lateral design stress on the wall is the sum of the equivalent lateral fluid pressure and other applied surface stresses and subsurface stresses (i.e., footings).

d) The recommended at rest (rigid wall), active, and passive static earth pressure coefficients for unsaturated, select granular sandy gravel fill against an earth retaining structure/wall are 0.76, 0.24, and 2.8 (with an ultimate value of 4.2), respectively. The respective equivalent static lateral fluid pressures are recommended to be 90, 30 and 330 (with an ultimate value of 500) pounds per square foot (psf) per foot depth, which are based upon a moist, compacted unit backfill weight of 120 pounds per cubic foot (pcf). The at rest value would account for the average expected compaction induced stresses and/or the potential influences of hydrostatic pressure. If a moist, compacted granular sandy silt or silty sand fill is used, the recommended active and passive static earth pressure coefficients are 0.33 and 2.0 (with an ultimate value of 3.0) and the equivalent static

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

lateral fluid pressures are 45 and 270 (with an ultimate value of 405) psf per foot depth, which is based upon a unit backfill weight of 135 pcf. The static lateral fluid pressures can be directly proportioned for other unit weights.

e) For a soil/fill that is at or near a saturated/liquefied state, the equivalent static lateral fluid pressure on a wall from earthquake/seismic induced loading is recommended to be at least equal to the unit weight of the backfill. For unsaturated backfill conditions under earthquake/seismic induced loading, it is recommended that an additional (to the static) lateral load per foot of wall length (in pounds/foot) to a non-yielding wall will be located at 0.6 times the earth height behind the wall, as taken from the base of the wall, and will be equal to 6.8 times (for S_{ds} = 0.25g) to 13.5 times (for S_{ds} = 0.50g) the earth height squared behind the wall, in feet (for a soil backfill unit weight of 120 pcf and for Site Class C to E soils). As applied to yielding walls, these multiplying factors may be reduced by 33 percent. The earthquake/seismic lateral pressures or loads can be directly proportioned for other unit weights and S_{ds} values. Use a 1.75 multiplier to the earthquake/seismic lateral pressures or loads for walls bearing on Site Class B/A rock. Since non-yielding/rigid walls may move into the backfill, the equivalent lateral static fluid pressure for the static passive condition would also be a structural engineering design concern.

f) Lateral stresses from surface loading (such as, trucks) would not generally be a design concern if the load is transient and the loading is at a horizontal distance from the subsurface wall that is greater than the depth of the subsurface cavity. The geotechnical engineer should be consulted once the type and magnitude of the surface loading are identified.

g) The ultimate values of the friction factor or coefficient of sliding friction for the concrete footing of a retaining wall or foundation wall are recommended to be 0.35 on a silty sand/non-plastic sandy silt interface, 0.45 on non-plastic sand and gravel mixtures with less than five percent silt or on NYSDOT Item No. 304.12, Type 2 and Item No. 304.14, Type 4 gravel interfaces, and 0.60 if cast against a clean, sound and rough bedrock interface (which has a Factor of Safety = 1.0). Use a value of 0.5 for a smooth surface of either bedrock or if a dental concrete leveling course, without bonding reinforcing bars, is to be placed on the bedrock surface prior to casting the footing/foundation wall. For foundations on very stiff to hard natural cohesive soils, the cohesion/adhesion for sliding resistance is limited to 1,000 psf. The minimum recommended factor of safety against sliding is 1.5.

h) The minimum recommended factors of safety against overturning of a retaining wall are 1.5 for a clean/silt-free compacted granular backfill or for foundations on approved rock and 2.0 for a compacted cohesive backfill.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

i) Relieve any hydrostatic or water pressure that develops behind the walls from in-flowing groundwater as is normally provided in practice. The exterior and interior sides of walls are to have a properly designed and installed dewatering system or as determined by the design civil/structural engineer.

Concrete Interior Floor Slab(s)/Pad: For the most part and based on test results for similar soils/fills, moderately plastic cohesive natural soils/fills may be somewhat difficult to compact in a controlled manner considering the varying soil plasticity and natural moisture contents that are estimated to be at to wet of optimum, at the time of this investigation. Excavated and approvable cohesive soil/fill types are not expected to be available in any reasonable quantities. These soils/fills may be expected to be suitable for re-use as general fill with the implementation of uniformly applied soil conditioning (i.e., drying and blending) and compaction methods, if additional volume of soil for backfill is needed.

Excavated and approvable granular (i.e., sand or gravel and non-plastic silt and sand) soil/fill are expected to be available in very limited quantity and associated with the base layer beneath the existing asphalt pavement. For the most part, granular (i.e., sand or gravel) soil/fill is expected to be acceptable for on-site re-use, as general/ordinary fill without substantial reworking and/or modification, while silty fine-sized sand may first require drying and blending.

Dissimilar excavated materials should not be commingled prior to their use elsewhere on-site, unless designated for a green/vegetation area. General fill material is also recommended to be placed on prepared and approved subgrade and in accordance with previous recommendations.

A geotextile fabric (such as, Mirafi 600X or equal) that separates the subgrade and the approved/select granular base layer may be needed and is particularly recommended for sensitive cohesive/fine-grained/silty clay subgrade soil/fills. This approach will stabilize and provide a workable building pad condition with minimal required repairs.

The approved subgrades will consist of very stiff or better/thoroughly compacted (i.e., minimum 92 percent of the maximum dry density by ASTM D 1557) cohesive/fine-grained glacial till, stable approved limestone bedrock, or thoroughly compacted imported select/approved granular fill. Above the approved subgrades, a minimum 12-inch thick select granular fill (i.e., number two crusher run stone or equal) layer is recommended as the base course for the basement/parking garage concrete floor slab. The NYSDOT specification numbers for typical aggregate subbase/base course components are Item No. 304.12 (Metric) Subbase Course, Type 2 (< 2-inch maximum), which is preferred, or Item No. 304.14 (Metric) Subbase Course, Type 4 (< 2-inch maximum). This select granular base layer would be compacted to a minimum 95 percent of the maximum dry density by ASTM D 1557. The basement/parking garage floor slab is recommended to be a six-inch minimum thickness or is as determined by the design structural engineer.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

The floor slab reinforcement should be provided through placement of wire mesh or plastic fibers and is also as determined by the design structural engineer.

At the discretion of the design architect, a vapor barrier may be considered for use in the proposed structure. The use of a thin gravel cushion, as a capillary break, or a thin sand cushion over a vapor barrier that is placed beneath the concrete slab(s) are at the discretion of the design architect/engineer or as required by local code. Gradations of gravels that are satisfactory capillary breaks include 1 ¼-inch or ¾-inch crushed stone or aggregate per the ASTM D2321 Types IA, IB and II with less than 5 % fines. A number two crusher run stone may also be applicable, but the gradation and material property specifications must qualify.

Exterior Concrete Slabs-On-Grade/Pad/Parking and Roadway Facilities: The characteristics of the natural soils and the known frost penetration in Western New York require that specific attention is provided to the design and construction of paved roadway and parking areas. For new pavement sections, isolated pockets of surficial silty/cohesive/fine-grained soil/fill may be encountered and may be too soft and wet in the proposed parking and roadway areas. These types of soil/fill may be adequately conditioned (i.e., dried and blended) and compacted (i.e., minimum 90 percent compaction) to support necessary construction equipment and normal pavement section. Otherwise, the removal/undercutting of the silty/cohesive/fine-grained soil/fill to a firm, approved subgrade and subsequent placement and compaction of select or approved granular fill will be required in order to accommodate the recommended pavement sections.

For new pavement sections, it is recommended that the subgrade surface is adequately graded and/or underdrains are installed to prevent water accumulation. Above the approved subgrade surface (i.e., minimum 90 percent compaction), a minimum eight-inch thick select granular layer is recommended as the base course for lightly traveled roadway and parking areas (standard duty section). A geotextile filter and strength fabric (such as, Mirafi 600X or equal) and minimum 12-inch thick base course are recommended for all truck routes and heavily traveled roadways (heavy duty section). If “pumping” of the silty/cohesive/fine-grained soil subgrade occurs or is difficult to stabilize during construction, an increase in the base thickness to that of the heavy-duty section and/or a geotextile filter and strength fabric is recommended to be placed on the prepared and approved subgrade for the standard duty section. The NYS Department of Transportation (NYSDOT) specification numbers for typical aggregate subbase/base course components are Item No. 304.12 (Metric) Subbase Course, Type 2 (< 2-inch maximum size), which is preferred, or Item No. 304.14 (Metric) Subbase Course, Type 4 (< 2-inch maximum size). The granular aggregate base layer is recommended to be compacted to at least 95 percent of maximum dry density by ASTM D1557.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

The thickness of top and binder course layers should be determined in accordance with AASHTO methods. In summary, the minimum recommended asphalt thicknesses for the heavy-duty section and standard duty section are three and one-half inches and three inches, respectively. The top and binder course layers are recommended to be designed and constructed in accordance with New York State Department of Transportation Standard Specification.

Limitations, Field Inspections and Monitoring: This report is based on the preliminary information that is provided by project representatives and the subsurface conditions that were encountered at the test boring locations. Due to the nature of the investigation method, test pit excavation will provide a greater level of delineation of the subsurface soil/fill/rock conditions than can be defined by the test boring data alone. As detailed in Appendix E "Limitations", modification regarding proposed building/structure locations and other site developments can result in changes to provided recommendations. It is recommended that the geotechnical engineer be provided the opportunity to generally review the final detailed design and contract specifications. Required earthwork and foundation construction should be done under the supervision of experienced construction personnel and in a manner consistent with proven methods. All site work should be carefully monitored and tested by experienced geotechnical personnel to assure compliance with earthwork and foundation construction specifications.

Thank you for the opportunity to assist on this project. If questions should arise, please call the undersigned at your earliest convenience.

Very truly yours,
BARRON & ASSOCIATES, INC.
and
BUFFALO DRILLING COMPANY, INC.

JOB No.: BORING No.:

PROJECT:

EXAMPLE

DRILLER:
SAMPLING METHODS:
DATE STARTED:
DATE COMPLETED:

TYPE OF DRILL RIG:
SIZE AND TYPE OF BIT:
SURFACE ELEVATION (ft.):
GROUNDWATER DEPTH (ft.):
(measured at completion unless indicated below)

Elevation/ Depth (feet)	Soil Symbols Sampler Symbols Field Test Data	Sample No. : Range	N-Value	% REC (RQD)	Soil and Rock Description / Remarks
100 — 0	1 1 1 2 / 6 8 11 14	S-1 : 0.0'- 2.0'	2	50	Dk. brown, soft, CLAY, some Silt, little f. Sand, tr. Gravel, tr. Roots, tr. Organic matter, mod. plastic, wet (CL)
		S-2 : 2.0'- 4.0'	19	50	Brown, m. dense f. SAND, some Silt, tr. Gravel, tr. Clay, tr. Roots, non-plastic, moist (SM)

Elevation/Depth: The depth column provides the vertical scale of the boring log in feet below ground surface.

Sample No. : Range: Disturbed samples are identified with “S” preceding the sample number. Undisturbed (Shelby-tube) samples are identified with “U” preceding the sample number. Rock core samples identified with “C” preceding the core run. The range of elevation/depth where the sample was taken is identified in one-tenth foot increments.

N-value: The Standard Penetration Test N-value, as specified by ASTM D1586, is defined as the number of blows required by a 140-pound hammer falling 30 inches, each blow, to drive a 2-in outside diameter split-spoon sampler 12 inches.

% REC (RQD): “Percent Recovery” is the length of samples recovered divided by the total length sampled. The result is numerically expressed as a percent. The Rock Quality Designation (RQD) is the total length of places >4 inches divided by the total length of core run.

Soil and Rock Description / Remarks: This column denotes the exact depth of recovery and general documentation of drilling efforts. Description and classification are based on visual inspection of samples and boring operations. The stratum lines shown on the boring logs are based upon interpretation and may not represent precise subsurface conditions. Water-level readings have been made in the drill holes at time under conditions stated on the boring logs. Fluctuations in the water level may occur due to other factors than those present the time measurement was taken. See attached sheet.

Soil and Rock Description / Remarks: Terminology Used for Soil Description

Density Description of Granular Soil

Number of Blows per ft., N	*Relative Density*
0 - 4	Very Loose
4 - 10	Loose
10 - 30	Medium
30 - 50	Dense
Over 50	Very Dense

Abbreviations Used in Soil Sample Classification

f - fine	v - very
m - medium	gr - gray
c - coarse	bn - brown
f/m - fine to medium	yel - yellow
f/c - fine to coarse	sl - slight
tr - trace	dk - dark

Consistency Description of Cohesive Soil

Number of Blows per ft., N	*Consistency*
Below 2	Very Soft
2 - 4	Soft
4 - 8	Medium
8 - 15	Stiff
15 - 30	Very Stiff
Over 30	Hard

Bedding

Parting	Less than 0.02 ft.
Band	0.02 - 0.2 ft.
Thin bed	0.2 - 0.5 ft.
Medium bed	0.5 - 1.0 ft.
Thick bed	1.0 - 2.0 ft.
Massive	Over 2.0 ft.

Grain Size

	Passing / Retained on
Boulder	LARGE / 12-in sieve
Cobble	12-in / 3-in sieve
Gravel	3-in sieve / No. 4 sieve
	No. 4 sieve / No. 10 sieve
Sand	No. 10 sieve / No. 40 sieve
	No. 40 sieve / No. 200 sieve
Silt	No. 200 sieve / 0.005 mm sieve
Clay	Smaller than 0.005 mm

Hardness

Very Soft or Plastic	Can be indented with thumb
Soft	Can be scratched with fingernail
Moderately Hard	Can be scratched with knife
Hard	Difficulty to scratch with knife
Very hard	Cannot be scratched with knife

Percentage Terminology Used in Soil Classification

Trace	0 - 10 %	Some	20 - 35 %
Little	10 - 20 %	And	35 - 50 %

Moisture

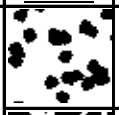
Dry	Absence of moisture, dusty, dry to the touch.
Moisture	Small quantity of moisture. Soil usually above groundwater level.
Wet	Moisture noticeable to the touch. Soil may be below groundwater level.
Saturated	Visible free water, usually soil is below groundwater level.

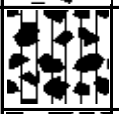
Plasticity

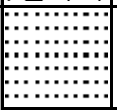
Non-plastic	An 1/8-in thread cannot be rolled at any water content.
Slight plasticity	Thread can be barley rolled.
Moderate plasticity	Thread is easy to roll and little time is required to reach the plastic limit (PL).
Plasticity	Considerable time is required to reach PL. Thread can be re-rolled several times after reaching the PL.

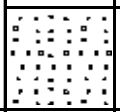
Crystallinity or Texture

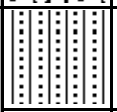
Dense	Crystals are to small they cannot be distinguished with the naked eye.
Very Fine Crystalline	Crystals barely discernable with the naked eye.
Crystalline	Crystals are medium size, up to 1/8-in diameter.
Very Coarsely Crystalline	Crystals larger than 1/8-in diameter.

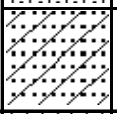


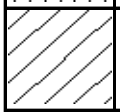


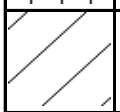


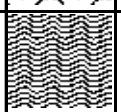


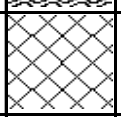












Voids

Porous	Smaller than pinhead. Their presence is indicated by the degree of absorbency.
Pitted	Pinhead size to 1/4 in. If thin walls separate the individuals pits, the core may be described as honeycomb.
Vug	1/4 inch to the diameter of the core. The upper limit will vary with core size.
Cavity	Larger than the diameter of the core.

Soil Classification Chart: Unified Soil Classification System (USCS)

Major Divisions			Pattern	USCS ID	Typical Descriptions
Coarse-Grained Soils: More than 50% of material larger than No. 200 sieve	**Gravels**: More than 50% of coarse fraction larger than No. 4 sieve	Clean Gravels (little or no fines)		GW	Well-graded gravels, gravel-sand mixtures, little or no fines
				GP	Poorly-graded gravels, gravel-sand mixtures, little or no fines
		Gravels with appreciable amounts of fines		GM	Silty gravels, gravel-sand-silt mixtures
				GC	Clayey gravels, gravel-sand-silt mixtures
	Sands: Less than 50% of coarse fraction larger than No. 4 sieve	Clean sands (little or no fines)		SW	Well-graded sands, gravelly sands, little or no fines
				SP	Poorly-graded sands, gravelly sands, little or no fines
		Sand with appreciable amount of fines		SM	Silty sands, silt-sand mixtures
				SC	Clayey sands, sand-clay mixtures
Fine-Grained Soils: Less than 50% of material larger than No. 200 sieve	**Silts and Clays, Low plasticity**: Liquid Limit < 50%			ML	Inorganic silts and very fine sands, rock flour, silty or clayey fine sands or clayey silts with slight plasticity
				CL	Inorganic clays of low to medium plasticity, gravely clays, sandy clays, silty clays, lean clays
				OL	Organic silts and organic silty clays of low plasticity
	Silts and Clays, High plasticity: Liquid Limit > 50%			MH	Inorganic silts, micaceous or diatomaceous fine sand or silty soils
				CH	Inorganic clays of high plasticity, fat clays
				OH	Organic clays of medium to high plasticity, organic silts
Highly Organic Soils				Pt	Peat, humus, swamp soils with organic contents
Miscellaneous Fill				FILL	Miscellaneous fill may belong in any division but is identified as FILL

APPENDIX C

ENGINEERING COMPUTATIONS AND SCHEMATICS

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

"PROFILE" OF BORINGS

Exterior Perimeter Footing Detail (Typical):

Note: Bear footings on stable, natural, approved limestone bedrock or on approved select granular fill section placed in loose lifts no greater than 12 inches thick and compacted to 95% of max. dry density as per ASTM D1557.

Basement/parking garage will require the removal of up to four feet of limestone bedrock. If the approved bedrock depth is less than four feet below final exterior grade, hooked rebar dowels (No. 4 or 5) are recommended to be placed in grout filled holes at approximately a four-foot spacing and extending to a minimum total depth of four feet into approved bedrock.

On above conditions: USE Q_{ALLOW} = 5,000 PSF

Paving
Gravel Fill
Cohesive Glacial till
Limestone
Topsoil
Poorly graded silty fine sand
Drill rejection

B&A JOB NO.: 20-533

DATE: 07/16/20

LATERAL EARTH PRESSURE ON GENERIC BLOCK FOUNDATIONS FOR SIGNS, FREE-STANDING RETAINING WALLS, OR BELOW GRADE/BASEMENT/TANK/POOL RETAINING WALLS (Less Than 20 Feet High)

a) Porous filter media, in contact with the basement/below grade foundation wall or retaining walls, protects and is in contact with a minimum 4 inch diameter perforated drainage pipes at the footing/base of the foundation/structural wall (exterior backfill side and interior basement side) and/or weep pipes through the wall, as needed and as applicable.

b) Where recommended, a geotextile filter fabric will protect the gravel filter media from the earth backfill. Overlap unsewn seams as per the manufacturer's recommendations.

c) Waterproof earth side of wall, as is customarily provided in practice.

d) Drainage pipes are connected to an appropriately designed collector pipe, conveyance, and/or sump pump system as is applicable for the intended purpose of the wall and as customarily provided/installed in practice.

e) For potential groundwater table conditions above the top of the basement slab-on-grade condition, install continuous waterstops (with no joints in stop) at wall and floor construction joints, as is customarily provided in practice. Interior intermediate drainage pipes beneath the slab, that are spaced on-center and in both directions, do appear to be needed.

f) Assume a uniformly graded, clean coarse sand or sandy gravel backfills:

* equivalent N-value in a dense state: $(N_1)_{60}$ = 40 blows/foot
* friction angle: ϕ' = 38 degrees {Teng, pg. 12}
* average in-place densities: moist - γ_m = 120 pcf
  saturated - γ_{sat} = 132 pcf submerged - $\gamma' = (\gamma_{sat} - \gamma_w)$ = 70 pcf

g) Assume at base of wall/footing, coefficient of friction against sliding (f_s) at base of wall (Refer to Teng, pg. 320-1):

f_s = tan (0.58 x ϕ') = 0.40 (AREA silty soil to silty coarse-grained soil)

h) Use equivalent fluid pressure design approach {Hough, pg. 249 and NAVFAC pg. 7-10-9}:

* at rest pressure coefficient - K_0 = 1 - sin (ϕ') = 0.38
* effective lateral pressure of soil - γ'_l = K_o x γ' = 26.6 pcf
* hydrostatic pressure - γ_w = 62.4 pcf
* equivalent fluid pressure with water level at the top of the grade at the wall - γ_{eo} = $\gamma'_l + \gamma_w$ = 89 pcf (say 90 pcf)
* equivalent fluid pressure with compaction induced lateral stress increase (W&F, pg 409) - γ_{eo} = 2 x K_o x γ_m = 91 pcf (say 90 pcf)
* active pressure case - K_a = [1 - sin (ϕ')] / [1 + sin (ϕ')] = 0.24
  γ_{ea} = K_a x γ_m = 29 pcf (say 30 pcf)
* passive pressure case - K_p = [1 + sin (ϕ')] / [1 - sin (ϕ')] = 4.2
  γ_{ep} = K_p x γ_m = 504 pcf (say 330 pcf with a F.S. = 1.5)

		Thoroughly Compacted ⇒⇒		Uniformly Graded & Clean Coarse Sand or Sandy Gravel Fill	Non-Plastic Silty Sand or Sandy Silt Fill	
USE:	Earth Pressure Coefficient	Static Active	=	0.24	0.33	
		Static At-Rest	=	0.76	1.00	
		Static Passive	=	2.80	2.00	(with F.S. = 1.5)
		Static Passive	=	4.20	3.00	(with F.S. = 1.0)
USE:	Equivalent Fluid Pressure	Static Active	=	30 pcf		
		Static At-Rest	=	90 pcf (for rigid walls)		
		Static Passive	=	330 pcf (with F.S. = 1.5)	[500 pcf with (with F.S. = 1.0)]	

[For earthquakes, structural engineer may elect to use the above Static Passive case instead of the below Earthquake Lateral Load for Non-Yielding Wall movement into the soil backfill.]

USE: Simplified Model for Earthquake Lateral Load/Ft. Wall Length @ 0.6 H_{bw} above base. Loads for Non-Yielding Wall. H_{bw} = Earth Height Behind Wall (feet)

Reduce load by 33% for Yielding Wall (active case) = (6.8 psf / foot) x H_{bw}^2 (NYS, S_{ds} = 0.25 g)
(γ_m = 120 pcf for S_{ds} value. Add to Static At Rest/ Active Pressure/Load for unsaturated backfill case) = (13.5 psf / foot) x H_{bw}^2 (NYS, S_{ds} = 0.50 g)
= (17.5 psf / foot) x H_{bw}^2 (NEern NYS, $S_{ds} \leq 0.65$ g)

[Above for Site Class C to E soils. Interpolate for other S_{ds} values.
Use 1.75 x values for walls on Class B/A rock or on rigid foundation base. (FEMA NEHRP Guidelines)]

Saturated/Liquified Soil During Earthquake = 132 pcf
(Equivalent Fluid Pressure. Add to inertial hydrodynamic pressure, not presented here.)

{For looser/denser backfills, adjust above pressures by the ratio = new density / 120 pcf or / 132 pcf (for saturated case)}

USE:	Coefficient of Friction Against Sliding (f_s)	=	0.45	(on compacted NYSDOT Item #304.12 or #304.14 gravels)
	(use lowest f_s with no underlying weaker layers)	=	0.35	(on compacted granular soil & non-plastic silt)
		=	0.20	(slab-on-grade on polyethylene on granular fill)
	[with a F.S. = 1.0]	=	0.60/0.50	(on clean, rough, & sound bedrock/smooth bedrock)
	Min. Factor of Safety Against Sliding	=	1.5	*[Rev.9-30-09]*

APPENDIX D

GENERAL EARTHWORK SPECIFICATION

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

Barron & Associates, P.C.
GENERAL EARTHWORK SPECIFICATION

PART 1 GENERAL

1.1 SITE AND SUBSURFACE CONDITIONS

1.1.1 Overview

This specification is included as a courtesy to the clients of Barron & Associates, P.C, and addresses earthwork site preparation. Additions and modifications are necessary to create a job-specific specification. This specification may serve as a basis for the development for a technical specification under Division 2, *Site Work*.

1.1.2 Site Conditions

The site-specific conditions are described under separate cover or may be available from the OWNER.

1.1.3 Subsurface Conditions

The site-specific subsurface conditions are described under separate cover or may be available from the OWNER.

1.2 REFERENCES

American Standard for Testing and Measurement (ASTM):

ASTM C136	Method for Sieve Analysis of Fine and Coarse Aggregates
ASTM C2922	Density for Soil and Soil-Aggregate in Place by Nuclear Methods
ASTM D422	Test Method for Particle-Size Analysis of Soils
ASTM D1140	Amount of Material in Soils Finer Than the No. 200 Sieve
ASTM D1557	Laboratory Compaction Characteristics of Soil Using Modified Effort (56,000 ft-lb/ft^3)
ASTM D2216	Test Method for Laboratory Determination of Water (Moisture) Content of Soil and Rock
ASTM D2487	1990 Classification of Soils for Engineering Purposes
ASTM D4318	Test Method for Liquid Limit, Plastic Limit, and Plasticity Index of Soils.

1.3 DEFINITIONS

1.3.1 Unacceptable Material

Soil material containing debris, wood, scrap material, vegetation, refuse, soft unsound particles, and other organic, frozen, deleterious, or objectionable materials. Contaminated soils shall be properly documented and removed or remediated on site. If necessary, remediation procedure will be defined by the OWNER.

1.3.2 Unsuitable Material

Brown, organic topsoil and underlying soft pockets of organic silt or wet, reworked silty clay.

1.3.3 Ordinary Fill

Friable soil containing no stone greater than two-thirds loose lift thickness and no unacceptable or unsuitable materials. In general, existing random fill is expected to be acceptable for reuse as ordinary fill given proper sorting, blending, drying, and controlled placement methods.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

1.3.4 Granular Fill

Ordinary fill meeting the designation of ASTM D2487 classification of GW with a maximum of 10 percent by weight passing ASTM D1140, No. 200 sieve.

1.3.5 Select Granular Fill

Clean, uncoated soil which contains no unacceptable materials and conforms to the gradation requirements defined in Table A: Select Granular Fill.

Table A: Select Granular Fill	
Sieve Size	Percent Finer by Weight
2/3 of the loose lift thickness	100
No. 10	30 - 95
No. 40	10 - 70
No. 200	0 - 15

1.3.6 Sand and Gravel

Clean, hard, durable, uncoated particle of sand and gravel, free from lumps of clay, containing no unacceptable matter, and conforming to gradation requirements of *Table B : Sand and Gravel*

Table B: Sand and Gravel	
Sieve	Percent Finer by Weight
*	100
No. 4	50 - 85
No. 10	--
No. 40	10 - 35
No. 100	--
No. 200	0 - 8

* Job-Specific. To be determined by the ENGINEER

1.3.7 Crushed Stone

Clean, durable, sharp-angled fragments of rock or crushed gravel stone of uniform quality, containing no unacceptable matter, free from coatings, and conforming to gradation requirements of *Table C: Crushed Stone*

Table C: Crushed Stone		
	Percent Passing	
Sieve Size	¾-inch Stone	1 ¼-inch Stone
1 ½-inch	__	100
1 ¼-inch	__	85-100
1- inch	100	__
¾-inch	90-100	10-40
5/8-inch	__	__
½-inch	10-50	0-8
3/8-inch	0-20	__
#4	0-5	__

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

1.3.8 Flowable Fill

Also known as Controlled Low Strength Material – Controlled Density Fill (CLSM-CDF), this material is available under a variety of producer names (e.g., K-Krete©, M-Crete, Flash Fill©, Flowable Mortar, Unshrinkable Fill, etc.). This non-settling backfill mixture is most commonly used for its flowable characteristics, its support strength under traffic loads, and its removability at a later date. The material may be produced on-site or off-site. In either case, the producer of such materials and the product must meet certain certification criteria. Such information is beyond the scope of this specification and will be considered on a site-specific basis.

Flowable fill may be acceptable for use as a backfill for utility trenches of other low-lying areas which require a compacted granular fill. Its use and warranty of performance is left to the CONTRACTOR in such applications.

The use of flowable fill under load-bearing structural components in place of properly placed and compacted granular fill is NOT common and is questionable. The localized use of such material may have profound affects on the performance of a foundation system. Site-specific conditions and the extent of anticipated use of flowable fill must be examined by geotechnical engineer. Cost of such consultation shall be borne by the CONTRACTOR unless specifically directed by the OWNER to seek such consultation. Without such consultation, warranty of performance for such use is left to the CONTRACTOR.

1.4 SUBMITTALS

The following submittals shall be provided in accordance with approved submittals procedures.

1. Fill Source: Provide name and source locations of fill material.

2. Field Test Reports: Field tests will be performed by OWNER's Representative as needed. CONTRACTOR may be required to perform such tests on proposed off-site fill materials.
a. Fill material grain size analyses per ASTM C136, D422, D1140, D2487
b. Moisture/Density test results per ASTM D2216
c. Liquid limit, plastic limit, and plasticity index per ASTM D4318
d. Compaction/Density test results per ASTM C2922 and D1557

3. Sample: Geotextile fabric

PART 2 PRODUCTS

Geotextile Fabric: Mirafi 600X or equal. (Also referred to as synthetic fabric).

PART 3 EXECUTION

3.1 PROTECTION

3.1.1 General

Manner of excavation shall minimize disturbance of underlying natural ground. If deemed necessary by the Engineer, alter construction procedures to reduce subgrade disturbance. Excavate areas which have been excessively disturbed to firm ground and backfill with properly compacted granular fill.

3.1.2 Roads and Walks

Keep roads and walks free of dirt and debris at all times.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

3.1.3 Trees, Shrubs, and Existing Facilities

Protect from any damage all vegetation and facilities identified to remain.

3.1.4 Utility Lines

Locate all utilities within the area of disturbance prior to the start of work. Show locations on initial plans. Protect utility lines from damage. Notify the ENGINEER immediately of damage to or an encounter with an unknown utility. Damage to utility lines are to be repaired by the CONTRACTOR at no additional cost. The CONTRACTOR shall have underground utility owners stake out utility locations prior to the start of clearing and excavation operations.

3.2 VERIFICATION OF CONDITIONS/PROOF-ROLLING

Prior to placement of the initial layer of fill over the natural ground, proof-roll the exposed natural ground above the groundwater table elevation by making two passes with a fully-loaded ten-wheel truck. Excavate unstable areas detected by this process and replace with compacted granular fill.

3.3 PREPARATION

3.3.1 Surface Preparation

Within the site limits indicated on the drawings, excavate all unsuitable material to firm natural ground in the manner specified herein. Follow a construction procedure which permits visual identification of firm natural ground. In the even that groundwater is encountered, the ENGINEER may require that the size of the open excavation be limited to that which can be handled by open pumping to allow visual inspection of the excavation bottom and the performance of backfill operations to be conducted in a dry state.

Excavation of unsuitable material shall be limited to the greater of the following:

- A distance of 5 feet beyond building lines or
- The area defined by a one-horizontal to one-vertical line sloping down from the outside bottom edge of exterior footings to firm natural ground.

3.4 PLACEMENT AND COMPACTION

3.4.1 General

Place fill in accordance with *Table D: Compaction Alternatives*. These alternatives are provided as minimum compaction
standards only and in no way relieve the CONTRACTOR of his obligation to achieve any specified degree of compaction by whatever means may be necessary.

Grade to provide positive drainage and a smooth surface which will readily shed water. To the extent practicable, compact each layer to the specified density on the same day placed. Place fill in horizontal layers. Where horizontal layers meet a natural slope, key layer into slope by cutting a bench.

Fill that is too wet for proper compaction: Disc, harrow, or otherwise dry to proper moisture content for compaction to the required density.

Fill that is too dry for proper compaction: Uniformly apply water over the surface of the loose layer in sufficient quantity to allow compaction to the required density.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

Table D: Compaction Alternatives					
Compaction Method	Max. Stone Size	Maximum Loose Lift Thickness (inches)		Maximum Number of Passes	
		Below Structure and Pavements	Less Critical Areas	Below Structure and Pavements	Less Critical Areas
Hand operated vibratory plate of light roller in confined areas	3	4	4	4	4
Hand operated vibratory drum rollers weighing at least 1,000 pounds in confined areas	4	6	8	4	4
Loaded 10-wheel truck or D-8 crawler	6	10	12	4	2
Light vibratory drum roller; Min. weight at drum 8,000lbs; Min. dynamic force 10,000lbs.	8	12	12	6	2
Minimum vibratory drum; Min. weight at drum 10,000lbs; Min. dynamic force 20,000lbs.	8	18	18	6	4

3.4.2 Dewatering

Provide adequate pumping and drainage facilities to keep excavated areas sufficiently dry of groundwater and surface run-off. Dewatering shall avoid adversely affection construction procedures or causing excessive disturbance of underlying natural ground. Drain all pumped water in such a manner as to avoid damage to adjacent property.

If requested by the ENGINEER, place a 6-inch to 12-inch layer of sand and gravel or crushed stone over the natural underlying soil to stabilize area which have been disturbed due to groundwater seepage pressures and to expedite dewatering operations. Particular attention shall be given areas under proposed foundations.

3.5 FIELD QUALITY CONTROL

3.5.1 Compaction Requirements

Allow the ENGINEER sufficient time to make necessary observations and tests. Base the degree of compaction on maximum dry density as determined by ASTM D1557. The minimum degree of compaction for placed fill shall be as indicated *in Table E: Compaction Requirements.*

Table E: Compaction Requirements	
Area	Minimum Degree of Compaction (%)
Below foundation	95
Pavement and building subbase and base courses	95
Below building slab base course and above bottom of foundation	92
Below pavement subbase and base courses	90
Trench backfill outside of building	90
Trench backfill inside of building	Refer to one of the above-listed categories
Ordinary fill within 5 feet of grade	90
Vegetated areas below 5 feet of grade	85

3.5.2 Testing

Site work should be monitored and tested by geotechnical ENGINEER or his representative and in accordance with requirements of the design team to assure compliance with earthwork and foundation construction specifications.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

The owner will retain a geotechnical ENGINEER or his representative to perform on-site observations and testing during this phase of construction operations. The geotechnical ENGINEER or his representative will:

- Observe excavation and dewatering of building and controlled fill areas;
- Observe backfill and compaction within building and controlled fill areas;
- Laboratory test and analyze fill material; and
- Observe construction – and performing water content, gradation, and compaction tests.

On a timely basis, the CONTRACTOR will receive copies of test results submitted to the OWNER. In addition, during construction the geotechnical ENGINEER will advise the OWNER and CONTRACTOR in writing of conditions which fail to conform to the Contract Documents. The CONTRACTOR shall take immediate action to remedy indicated deficiencies.

The geotechnical ENGINEER or his representative will not supervise or direct the actual work of the CONTRACTOR or employees and representatives of the CONTRACTOR. The presence of, observations by, and testing performed by the geotechnical ENGINEER or his representatives shall not excuse the CONTRACTOR from defects discovered in the work.

APPENDIX E

LIMITATIONS

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

LIMITATIONS

1. This report is based on the data that was obtained from the subsurface explorations and on the design of the proposed two-story building with underground garage as submitted to the geotechnical engineer. A geotechnical engineer, who is experienced in foundation construction and earthwork, should be engaged to review the final design and specifications in order to determine whether any change in concept may have any effect on the validity of the conclusions presented herein, and whether these conclusions have, in fact, been implemented in the design and specifications.

2. The subsurface conditions, including thickness, between the exploration locations are approximate and simplified representations of the strata and transitions. There is the possibility that variations in soil and rock conditions and boundaries will be encountered during construction. In order to permit correlation between the exploratory soil data and the actual soil conditions encountered during construction and so as to assess conformance with the plans and specifications as originally contemplated, it is recommended that a geotechnical engineer, who is experienced in foundation construction and earthwork monitoring, should be retained to perform continuous construction review during the site preparation and foundation construction operations.

3. The subsurface exploration logs and subsurface conditions may aid in estimating material quality and quantities, such as topsoil/organic matter, fills, natural soils, and rock, but are not to be relied upon as the exclusive means for bid preparation purposes. It is the responsibility of the contractor to perform any additional site examinations and explorations and to prepare an accurate bid.

4. Disclaimers:

   a. In the event that any changes in the nature, design or location of the structure are planned, the conclusions that are contained in this report shall not be considered valid unless the changes are reviewed and the conclusions of this report are modified or verified in writing.

   b. The geotechnical engineering report has been prepared for this project by Barron & Associates, P.C. This report is for assistance in design only and is not a sufficient basis on which to prepare an accurate bid.

   c. This report has been prepared for the exclusive use of Benderson Development Company, LLC of Buffalo, New York, their client(s) and their designated design representatives, for specific application to the construction of a two-story building with underground garage at 4548 & 4564 Main Street, 22 Chateau Terrace, and 17 Fruehauf Avenue in the Town of Amherst, Erie County, New York and in accordance with generally accepted geotechnical engineering practice. No other warranty, expressed or implied, is made.

Project Summary

Commonwealth Heritage Group, Inc. (Commonwealth) prepared this documentation report for the property at 22 Chateau Terrace in the Snyder area of the Town of Amherst, Erie County, New York, under contract to Benderson Development Company, LLC (Figures 1 and 2).[1] This documentation report includes a State and National Registers of Historic Places (S/NRHPs) eligibility assessment of the ca. 1920 residence at 22 Chateau Terrace. It was prepared for submittal to the Town of Amherst Historic Preservation Commission to comply with the "Historic Preservation Law of the Town of Amherst." The study included exterior and interior photographic documentation (see Appendix A), historical research, and an architectural investigation of the building. On-site field investigation was conducted in April 2022. Christine M. Longiaru, M.A., served as Principal Investigator and Senior Architectural Historian. Mr. Mark A. Steinback, M.A., New York Regional Director/ Senior Historian, was the Project Director. Ms. Longiaru and Mr. Steinback exceed the professional qualifications requirements (36 CFR 61) for their respective disciplines.

Figure 1. The property at 22 Chateau Terrace, Town of Amherst, Erie County, New York *(Commonwealth 2022).*

[1] Note, Commonwealth's New York Regional Office in Buffalo was formerly Panamerican Consultants, Inc. The Buffalo office has conducted 50 cultural resources investigations in the Town of Amherst.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

Current State-level Inventory Status. The residence at 22 Chateau Terrace is in the Chateau Terrace Study Area (New York State Office of Parks, Recreation, and Historic Preservation [NYS OPRHP] Unique Site Number [USN] 02902.001453), which has not been formally evaluated for listing on the State and National Registers of Historic Places (New York State Cultural Resources Information System (CRIS 2022). A general boundary for the study area is delineated in CRIS, though individual residences in the Chateau Terrace Study Area have not been assigned USNs (Figure 3). Audubon Terrace Study Area adjacent to Chateau Terrace (USN 02902.001454) to the east is also a contemporary unevaluated subdivision.

Figure 3. Chateau Terrace Study Area at left as delineated by the NYS OPRHP. The general location of 22 Chateau Terrace is depicted by the red-shaded circle. Note, the adjacent Audubon Terrace Study Area boundary at right *(CRIS 2022).*

Previous Surveys

Local-level Historic Resources Survey Documentation. Chateau Terrace Study Area was first recommended as a potential historic district in the 1997 *Reconnaissance Level Survey of Historic Resources, Town of Amherst* (Bero 1997:Appendix F-6). The residence at 22 Chateau Terrace was identified as a contributing resource to a proposed historic district. In 1997, Chateau Terrace consisted of approximately 73 houses (52 contributing; 21 non-contributing). It included the following properties: 121 Chateau Terrace North; 7-65 and 10-42 Chateau Terrace South, 11-69 and 20-80 Chateau Terrace East 1-121 and 22-120 Chateau Terrace.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

As initially reported, Chateau Terrace Historic District was characterized as a cohesive early twentieth-century residential district consisting of modest scale houses. Chateau Terrace residences were primarily built during the 1920s and 1930s. A variety of popular residential architectural styles are represented in the neighborhood including Bungalow, Craftsman, American Foursquare, Colonial Revival, and Dutch Colonial Revival (Figure 4). Other features of Chateau Terrace include a winding street pattern with mature street trees. The 1997 survey also noted Chateau Terrace's significance at the local level for its association with Amherst's early twentieth-century suburban development.

The 1997 survey assigned a "yellow" color code for Chateau Terrace, which is the third level of color coding for properties in the reconnaissance survey's Annotated List (Bero 1997: Appendix F-6). A "yellow" designation for a property represents a property with moderate architectural and/or historical significance (Bero 1997: 101). Chateau Terrace was one of nine historic districts in Amherst recommended for the intensive level survey. However, the historic districts were not included in the 1998 intensive level survey (Bero 1998:2).

Figure 4. A representative view of 27, 23, and 19 Chateau Terrace in 1997 (*Reproduced from Bero 1997: Photo No. 52*).

In 2011, Chateau Terrace was reassessed in the *Updated Reconnaissance Level Survey of Historic Resources, Town of Amherst* (KTA 2011: Appendix 1-6). The 2011 survey determined Chateau Terrace Historic District met the criteria for a "blue rated" property. The definition of a "blue rated" property is presented below:

> **BLUE:** Extremely high architectural and/or historic significance. These properties would likely also meet the criteria for to be considered National Register eligible. A locally significant district. A resource that is rare and lacks individual distinction. All districts are considered Blue as are most farmsteads.

Seventy properties were identified in Chateau Terrace in 2011; 47 contributing and 23 noncontributing (KTA 2011:Appendix 1-6). The residence at 22 Chateau Terrace is included as a contributing resource (KTA 2011: Area 6-9). Chateau Terrace consists of the following properties: 11 to 77 Chateau Terrace East and 20 to 80 Chateau Terrace East; 7 to 47 Chateau Terrace South and 10 to 42 Chateau Terrace South; 22 to 120 Chateau Terrace and 65 to 121 Chateau Terrace (Figure 5).

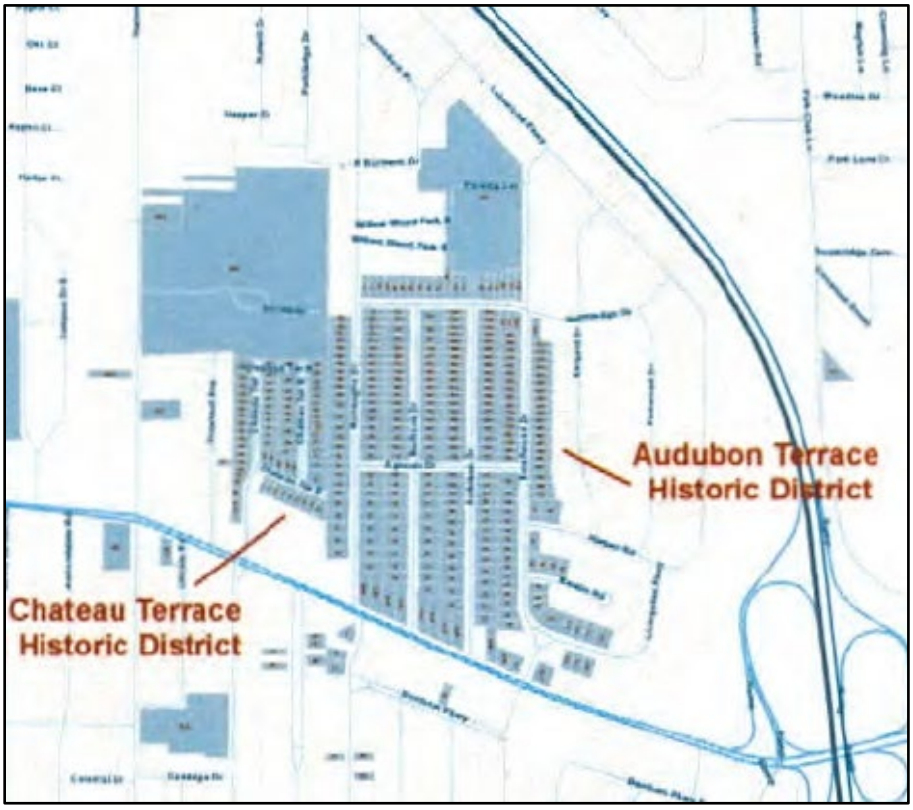

Figure 5. Chateau Terrace Historic District and the adjacent Audubon Terrace District in 2011 (*Reproduced from KTA 2011: Area 6*).

Methodology

Methodologies, historic overviews, and recommendations presented in previous historic resources surveys of the Town of Amherst informed this S/NRHP eligibility assessment for the individual subject property at 22 Chateau Terrace. To assess the historic significance of 22 Chateau Terrace further research was conducted on the development history of the Chateau Terrace Study Area and its surrounding area in the Snyder community. In April 2022, an online Freedom of Information Law (FOIL) request was made with the Town of Amherst Building Department and Planning Department for the following: 1) subdivision files for Chateau Terrace (Suor & Suor Building Company) and 2) building permit records for 22 Chateau Terrace (Online FOIL Request: 2134). The FOIL request did not yield any relevant historical information about the residence or the subdivision.[2]

A research inquiry for Chateau Terrace subdivision was also made with the The Niederlander Research Library of Buffalo Niagara Heritage Museum.[3] The library does not presently hold records specific to Chateau Terrace. Research was conducted at the Eggertsville-Snyder Branch Library and The Grosvenor Room-Special Collections department at the Central Library of the Buffalo & Erie County Public Library. Other research included online searches of relevant genealogical and newspaper web sites.

[2] Online FOIL Request #2134, Town of Amherst, NY (April 28, 2022). FOIL responses were received on May 4 and June 8, 2022.

[3] Rachel Ravago (Deputy Director for Collections and Interpretation, Buffalo Niagara Heritage Museum) in discussion with the author, May 2022.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

On-site documentation of the property was conducted on April 28, 2022. As noted above, the investigation included digital photography of the property's setting and the existing conditions of exterior and interior of the building (see Appendix A). Intact architectural details and the overall condition of the building were noted as were any changes to the building. A cursory drive through of the Chateau Terrace development was also carried out to support the S/NRHP eligibility assessment. The National Register Criteria for Evaluation was applied only to the individual property at 22 Chateau Terrace (National Park Service 2002).

> Criterion A: (Event) Properties that are associated with events that have made a significant contribution to the broad patterns of our history; or
>
> Criterion B: (Person) Properties that are associated with the lives of persons significant in our past; or
>
> Criterion C: (Design/Construction) Properties that embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; or
>
> Criterion D: (Information Potential) Properties that have yielded, or may be likely to yield, information important in prehistory or history (*NPS Bulletin 15*, referencing 36 CFR 60).

A property is not eligible if it cannot be related to a particular time period or cultural group and thereby lacks any historic context with which to evaluate the importance of the cultural resource. The cultural property (e.g., historic structure or landscape) must also retain the historic integrity of those features necessary to convey its significance. Seven aspects or qualities of integrity recognized by the National Register are location, design, setting, materials, workmanship, feeling, and association. Actual determinations of eligibility for the S./NRHPs are made by the NYS OPRHP.

Historical Overview

Early Development of Town of Amherst. European-American settlement of the Niagara Frontier dates from the end of the American Revolution in 1783. During the next decade large grants of land in western New York would be sold to private investors who attempted to open the land to settlement. The land's initial purchasers, a syndicate of speculators headed by Oliver Phelps and Nathaniel Gorham, forfeited their obligations, and the rights to the unsurveyed portion of the area were sold to Robert Morris in 1791. Reserving a portion of the land for his own purposes, Morris sold the remainder, including all of present Erie County, to a consortium of Dutch investors, called the Holland Land Company, in 1792-1793 (Turner 1974 [1850]; Silsby 1961).

Joseph Ellicott was contracted in July 1797 to survey the company's land in western New York and divide it into townships. The process began in the spring of the following year. The current path of Main Street (NY Route 5), completed in 1803, was known as the Buffalo-Batavia Road to the early settlers. This road and the future City of Buffalo were laid out by Ellicott (White 1898). Once townships had been surveyed and roads in the area cut, settlement and growth followed quickly. The first land sales in Amherst were made in the autumn of 1803 to Samuel Kelsey, Henry Lake, Benjamin Gardner, and William Lewis, among others. The earliest settlers arrived the following year and included Timothy and Orlando Hopkins, John Hershey, Samuel McConnell, Alexander Logan, Caleb Rogers, Stephen Colvin, John King, and Joel Chamberlain. By 1808 Ellicott Creek (then known as Eleven Mile Creek) had been dammed and a grist mill was operating in what was then called Williams Mill. Erected by Jonas Williams, the mill was joined by a sawmill and later a tannery (Glover 1972:2). Niagara County (consisting of what are now Erie and Niagara counties) was formed from Genesee County in 1808.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

The War of 1812 stunted growth in Western New York which served as one of the primary theaters of that conflict, and areas near the border with Upper Canada (the current province of Ontario) were ravaged by attacks and counterattacks. After the war, Eleven Mile Creek (Ellicott Creek) offered a prime power source for nascent industrial growth, which in turn attracted settlers to the area. With increased population, new political divisions were made. The Town of Amherst was separated from the Town of Buffalo in April 1818 and named for Sir Jeffrey (or Geoffrey) Amherst, Commander of British forces in America in 1759 and 1760 and an early advocate of biological warfare (i.e., blankets infected with small-pox) against the Indians (White 1898:I:493-494; Fenn 2000:1573-1579). Erie County was created when all the land south of Tonawanda Creek was removed from Niagara County in 1821. The Town of Amherst achieved its present size in 1839 when the Town of Cheektowaga was created (White 1898:I:493-494).

The area received a tremendous economic boost when one terminus of the Erie Canal was located at the village of Buffalo. Begun in 1817, the Erie Canal linked Buffalo and Lake Erie with New York City when it opened on October 26, 1825. The completion of the canal attracted additional settlers to the region, including many German-speaking Alsatians, who began to populate the largely agricultural and unoccupied northern portions of the Town of Amherst in the early 1830s (Young 1965:260). Progress was slow since Ellicott Creek flooded regularly, and the nearby land had to be drained before it could be cultivated (Smith 1884:I:400). Despite these endeavors, the center of settlement in the Town of Amherst remained at Williamsville near the creek. Homesteaders focused on growing grain, notably wheat, and grazing cattle. The town's numerous creeks supported a variety of rural industries, including grist mills, a carding mill, sawmills, a tannery, a shoe-and-boot factory, a broom factory, a slaughterhouse, and two furnaces for processing iron needed by area blacksmiths (Glover 1972:2-3; League of Women Voters 1985:6; Amherst Museum 1997). The Fogelsonger limestone quarry was located between Snyder and Williamsville near what is now the entrance to the New York State Thruway. The population of the town increased during the middle decades of the nineteenth century from 4,153 in 1850 to 4,807 in 1875 (Beers 1880:18-19).

First completed to Buffalo in the 1840s, railroads played an important part in the development of western New York as an economic power during the nineteenth and twentieth centuries. As part of the effort "to connect the Hudson River and Lake Erie with a 'ribbon of rails'" the Batavia branch of the New York Central Railroad passed through the central part of the Town of Amherst (Eberle and Grande 1987:52; Stone and Stewart 1866; Beers 1880). This line was abandoned in the twentieth century, and the tracks were pulled up. The New York West Shore & Buffalo Railroad ran passenger service along this route, stopping at Transit Station and Getzville beginning in 1884 (White 1898:I:539; USGS 1905). By 1896, a branch of the Lehigh Valley Railroad ran diagonally through the town, west and south of the project area (Young 1965:264; USGS 1905, 1948).

During the late nineteenth century, the Town of Amherst underwent a period of infrastructure improvements, including the widening and paving of streets and roadways, and the erection of bridges. The first telephone was installed in 1879 (although dial service did not begin until 1949) and the first water system was created in 1895. After the turn of the nineteenth century, other public services began to improve living conditions in the town: water power generated by Niagara Falls was used to provide the town's electricity as electric lights were erected along Main Street in 1901; a natural-gas franchise was granted in 1902; the first water meters were installed in 1919 (League of Women Voters 1985:7; Young 1965:264-265).

Industry in the town at that time centered on processing grain. Large and active flour mills ground wheat grown in the town as well as grain brought to Williamsville from the docks of Buffalo. By the 1890s, however, "electric power from Niagara Falls became available in unlimited quantities. [As a result,] except for the Chalmers gelatine factory [in Williamsville], founded in the 1872, industry disappeared, and Amherst turned toward developing itself as a residential area" (Glover 1972:6-7; see also Young 1965:116-117). Improvements and developments in transportation networks during the 1890s into the twentieth

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

century, as well as the prosperity of the cities of Buffalo and Tonawanda facilitated the trend toward creating residential communities. In 1892, an electric trolley system connected Williamsville to Buffalo, which operated until 1930, when gasoline buses and cars proved more popular with commuters (Glover 1972:6; Young 1965:263). These transportation improvements offered suburban living opportunities for urban workers.

Agriculture remained prominent in the town well into the twentieth century although the trend of subdividing former farms or unproductive areas into residential developments accelerated after World War I (Dunn 1972:212; Eberle and Grande 1987:202).

Synderville. To the west of William's Mill, a small community formed in the future Snyder area when in 1804 Timothy Hopkins purchased a large farm on Main Street which extended west from Washington Highway (approximately three blocks west of Harlem Road) to Amherstdale Road (Fiddler-Woite 1998:11). Settlement progressed slowly in the Snyder area during the early nineteenth century. The Schenck family moved to the area from Pennsylvania in 1821. Two years later, Abraham Snyder and his family also moved from Pennsylvania and settled near their cousins, the Schencks.

Other early families include Schenck, Freuhauf, Helfer, LeBrun, Miller, Fisher, Schuler, Cable, Witmer, Beck, Crout, Harrison, Kern, Frick, and Fogelsanger (Fiddler-Woite 2009:63,65). In 1830, the Hopkins sold their property to the Schenk family (Fiddler-Woite 2009:14). Abraham Snyder, his wife Veronica, and their two sons (Michael and Jacob) lived in a log cabin on Main Street near Harlem Road. In 1832, Mr. Snyder mysteriously disappeared leaving the burden of supporting the family on young Michael (Fiddler-Woite 2009:20). Within 5 years, Michael Snyder moved the family into a plank house on the northeast corner of Main Street and Harlem Road. He opened a mercantile with John Schenk in the front room of the house. He later expanded the house and opened Snyder's Inn to cater to travelers on the Buffalo Road. He established a U.S. Post Office, according to Snyder family records, as early as the late 1840s (Fiddler-Woite 2009:23). The first post office stood on the northwest corner of Main Street and Harlem Road. However, Michael Snyder was not formally listed as the postmaster of the Snyderville Post Office until 1882 (Fiddler-Woite 2009:24).

An unnamed crossroads community centered on Main Street and Harlem Road is depicted on the 1855 atlas map of Erie County (Geil 1855). The area near Chateau Terrace along Main Street was lined with structures, one of which was a school house. One map-documented structure was a property owned by Mrs. Snyder, which would later be adjacent to the side of Chateau Terrace. A log and brick school house (District #18) was also located near the future site of the Chateau Terrace development (Grande 2000:51). In 1860, Michael Snyder acquired additional property to the east on Main Street near present Chateau Terrace. Snyderville is first identified on the 1866 map of Erie County (Stone & Stewart 1866). M. Snyder's Store and Post Office are depicted on the northeast corner of the intersection on Lot 13.

Tobias Witmer, surveyor, carried out the original survey of Farm Lot 13, the future location of Chateau Terrace, in 1852 (Holland Company Land Title & Abstract Company 2017). Mid-to late nineteenth-century land owners of the Chateau Terrace section of Lot 3 (east section) included Michael Shenk, Michael Shenk Jr., and Philip J. Ferkel. By 1880, Lot 13 had been further subdivided, and G. Demerest owned the largest tract with 61 acres on the east side of Lot 13. (Beers 1880; Figure 6). John and Jacob Snyder owned adjacent parcels on Lot 12, to the east. In 1896, a branch of Lehigh Valley Railroad was constructed through Amherst (Young 1965:264) to the north and east of Snyder. An 1898 map depicts the Lehigh Valley Railroad and the Buffalo & Williamsville Electric Railroad on Main Street extending through Snyder (The Matthews-Northrup Co. 1898). Lot 13, the future location of 22 Chateau Terrace, remained undeveloped. The first residential development in the Snyder vicinity was laid out along Getzville Road and Main Street by this time.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

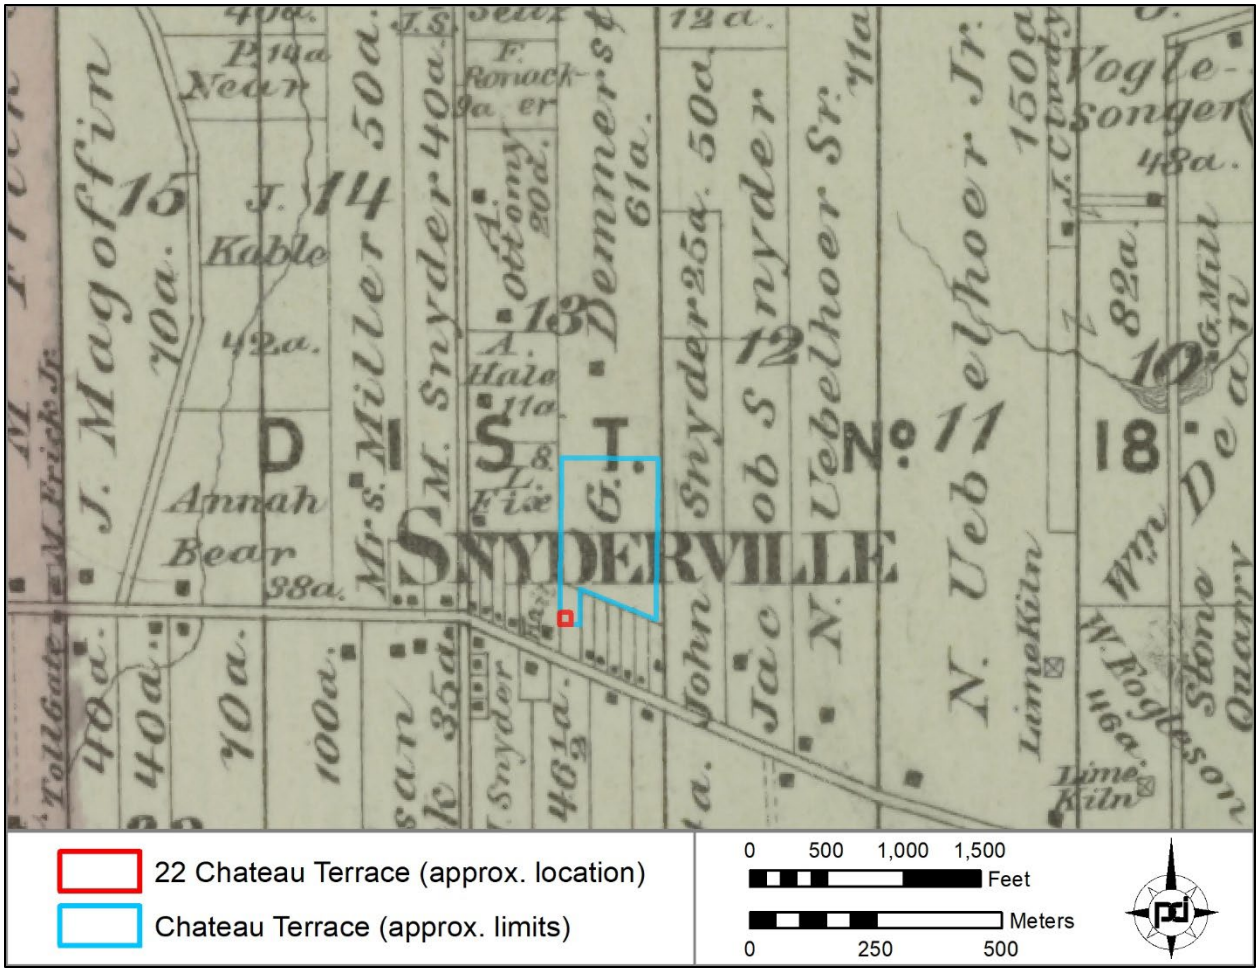

Figure 6. The general location of 22 Chateau Terrace on the 1880 map of the Town of Amherst (*Century Map Co. 1915).*

Twentieth-Century Development in Snyder. Early twentieth-century growth of the Snyder area has been attributed to the opening of Buffalo & Williamsville Electronic Railway (aka Toonerville Trolley in 1893 and the advent of the automobile (Grande 200:145; Fiddler-Woite 2009:38). Running along the north side of Main Street, the trolley line connected Buffalo and Williamsville. Efficient and dependable transportation attracted the interest of future homebuyers in new housing developments (Fiddler-Woite 2009:93). In operation until 1930, the trolley provided access for middle class families to purchase a home in Snyder.

In 1911, brothers William Charles Taylor Suor (1873-1959) and Arthur M. Suor (1874-1936) purchased 99 acres of the Kabel family's farm for the College Hill neighborhood development, which they first called "Amherst Heights" (Grande 2000:149). Formed in 1894, Suor & Suor were initially engaged in real estate business development projects near the Central Park and Parkside neighborhoods of Buffalo (White 1898:439). The brothers developed a few one-block streets near some of the main thoroughfares of Central Park, including Starin and Vorhees Avenues (Moriarty 2017). Their developments on Revere Place, Taft Place, and Sagamore Terrace were speculatively built homes erected on modest lots (Moriarty 2017). Suor & Suor offered affordable single-family homes with modern amenities which appealed to middle class consumers (Moriarty 2017).

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

Suor & Suor had been previously involved in more traditional real estate interests of acquiring and selling farm houses (Grande 2000:149). Within a few years the firm would further expand development in Snyder with the College Hill - Chateau Terrace subdivision. A third brother, John Russell Suor (1882-1959), was also involved in the development of Snyder (Buffalo Evening News [BEN] 1953:25). He started his real estate career in Buffalo and later moved to Snyder. For roughly 25 years, John Suor was associated with the Erie County Real Estate Department and the county attorney's office as an appraiser (BEN 1953:25).

In Snyder, the Suors envisioned a new type of residential development on the south side of Main Street between Getzville and Harlem roads. Washington Highway formed the central point of what became known as the College Hill (Fiddler-Woite 2009:93). Suor & Suor's College Hill Office was erected on the southwest corner of Main Street (#4363) and Washington Highway (Fiddler-Woite 2009:94). The company built middle-class-sized homes which typically consisted of a two-story building with four bedrooms, a den, and a bathroom on each floor (Fiddler-Woite 2009:95). In February 1917, there were 40 homes in College Hill (BEN 1917). Suor & Suor advertised their new modern homes in local Buffalo newspapers to attract potential buyers to relocate to Snyder (Figures 7 and 8).

The brothers continued to acquire more tracts of land for their development in Snyder. Suor & Suor purchased an additional 65-acres of the Tobias Witmer farm south of College Hill by 1919 (Fiddler-Woite 2009:95). Named College Hill Terrace, the new 331-lot development extended toward Kensington Avenue. It was laid out with large lots for more upscale homes with landscaping and street furniture (Fiddler-Woite 2009:95). The Suors also endeavored in commercial development. In 1920, the Town of Amherst's population had increased by 36 percent from 4,629 in 1910 to 6,286 with much of the increase in the Snyder-Eggertsville area (Grande 2000:145). This rise in population included both new owners of large estates as well as an increased migration of middle-class commuters who purchased homes in the new subdivisions (Grande 2000:146).

By early 1920s, new residential neighborhoods were established west of Williamsville along Main Street which included the following: Rosedale Park, College Hill, Chateau Terrace, Audubon Terrace, and Amherst Estates. From 1923 to 1930, a town committee on building construction approved 73 major subdivisions (Grande 2000:189). The 1920s building boom in Amherst contributed to a 110 percent increase in population from 6,286 in 1920 to 13,181 in 1920 (Grande 2000:183). This growth is evident on a 1927 aerial photograph of the Snyder area (see Figure 14). The 1938 map of Snyder shows extensive residential subdivisions on the north and east sides of Main Street west of Harlem Road and on the south side of Main Street west of Harlem Road (Niagara Frontier Planning Board 1938a, 1938b).

Chateau Terrace Area. In 1909, G. Demert is identified with the east portion of Lot 13, which would become the future site of Chateau Terrace subdivision (Century Map Co.1909 [Figures 9 and 10]). The southern portion of Lot 13 consisted of a residential-width parcel consistent with the other lots along Main Street. It would later become the entrance road to Chateau Terrace. J. Freuhaut [sic] owned the adjacent properties on the west side of the southern portion of Lot 13. The south end of the street that became Fruehauf Avenue is shown between the two Frauhaut parcels fronting Main Street in 1909. A parcel owned by A. Snyder is adjacent to the east side of the south section of Lot 13, which became the Chateau Terrace entrance. Five other parcels on Main Street bordered the south boundary of Lot 13, one of which included the 1900 two-story brick school house (District 18). The rectangular-shaped north section of Lot 13 was bound to the west by residences on Harlem Road.

The 1915 Century Atlas map contains a discrepancy in property ownership of Lot 13. Chauncey Hamlin was identified on the Snyder sub plan as the owner of the G. Demert property on Lot 13, while the 1915 map of the Town of Amherst documents G. Demert as the owner of the 61-acre parcel (Century Map Co. 1915a, 1915b [Figures 11 and 12]). Hamlin's country estate stood on a separate parcel that fronted Harlem Road. Adjacent to the west side of the property was "J.C. Fruehaups Sub Div.," which consisted of 23 home sites with eleven frame buildings. Other subdivisions documented in Snyder at this time included Meadow Crest on the west side of Harlem Avenue north of Main Street and College Hill south side of Main Street along Washington Highway. According to the results of the title search, Chauncey Hamlin had the parcel surveyed in November 1917 (Holland Company Land Title & Abstract Company 2017: Table 1).

In 1920, The Park School of Buffalo purchased 100 acres on the east side of Harlem Road from the Hamlin Estate for the location of their new school campus which bordered the north boundary of the new Chateau Terrace subdivision (The Park School of Buffalo 2022; Fiddler-Woite 2009:126). In 1922, the Burkhardt Company purchased the Tobias Witmer farm on the east side of Chateau Terrace for the Audubon Terrace subdivision (Fiddler-Woite 2009:148).

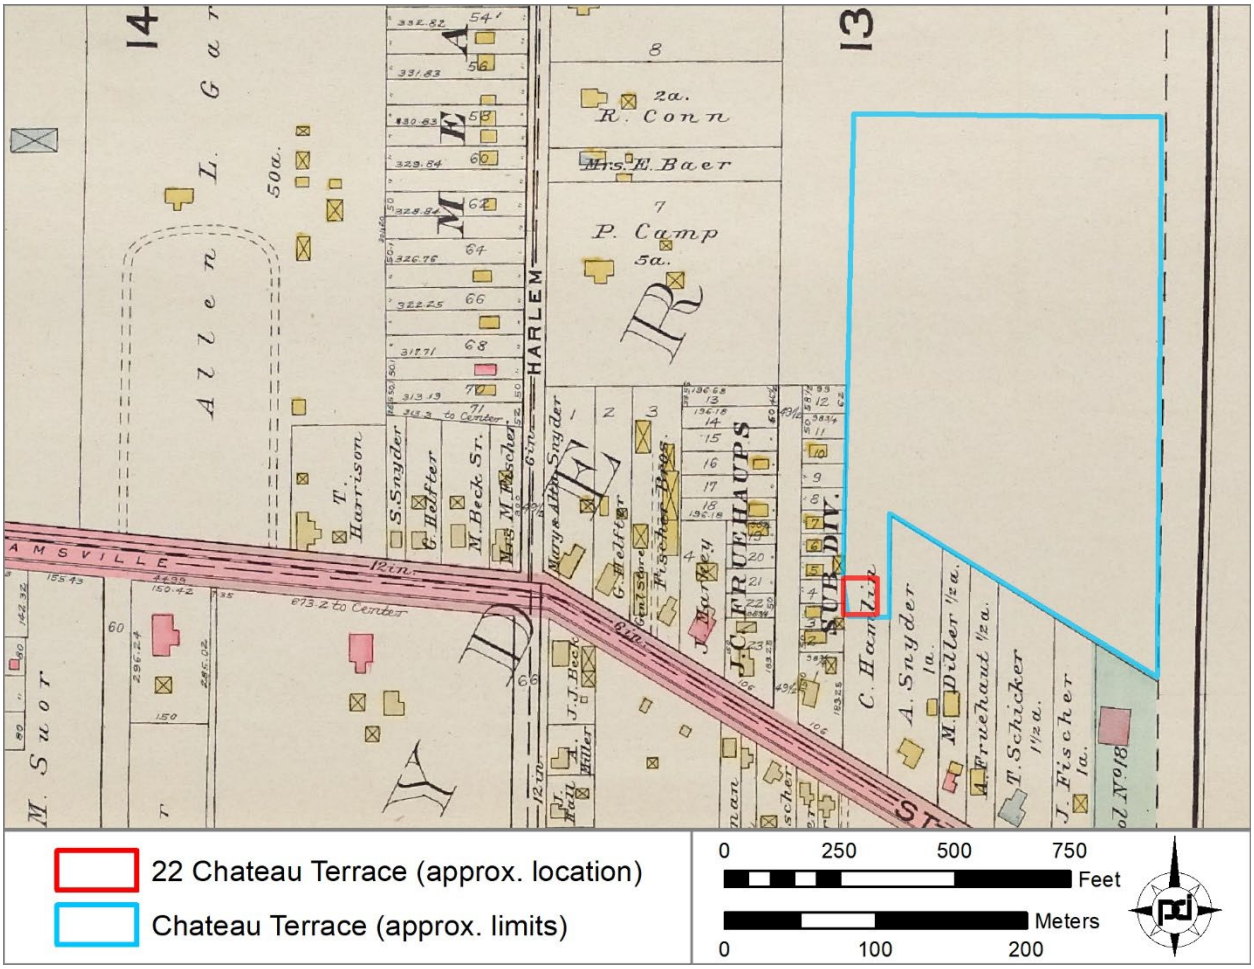

Figure 12. The general location of 22 Chateau Terrace on the 1915 sub-plan of Snyder *(Century 1915b).*

In July 1919, William C.T. Suor and Arthur M. Suor purchased land from Chauncey J. and Emily G. Hamlin for their new College Hill-Chateau Terrace development (Liber 1423 of Deeds, page 240). Louis W. & Josephine E. Ball purchased the parcel at 22 Chateau Terrace on September 1, 1920 (Liber 1555 of Deeds, page 138). The lot was subject to building restriction for a period of 25 years from July 1, 1919. By March 1921, Suor & Suor were listing new homes in the Chateau Terrace development (Buffalo Courier 1921). The house at 30 Chateau Terrace, on the adjacent lot to the north of 22 Chateau Terrace, was advertised with four bedrooms on an 80-foot-wide lot at a list price of $9,000. At 65 Chateau Terrace, the company built a three-bedroom house on a 50-ft by 132-ft lot which listed for $9,500.

By 1923, Chateau Terrace subdivision was platted and sparsely developed with only 13 residences, three of which were on the west side of Chateau Terrace just north of Main Street (Sanborn 1923 [Figure 13]). Individual lot numbers in Chateau Terrace do not appear on the 1923 map. Nos. 22, 30, and 38 Chateau Terrace along the south entrance to the subdivision had been constructed by this time. The Craftsman-style detached garage at 22 Chateau Terrace had yet to be constructed. Roads within the subdivision were 50 ft wide. The Park School campus is documented on the north side of Chateau Terrace for the first time in 1923. By this time, Freuhauf subdivision had acquired additional land extending north to the school property. The properties south of Chateau Terrace South included four dwellings with detached garages and School House No. 18. In 1924, District #18 School moved from the two-story brick schoolhouse to a new location on Harlem Road (Fiddler-Woite 2009:110).

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

Charles S. Burkhardt Co., developer of the adjacent Audubon Subdivision, also built homes in Chateau Terrace. In April 1923, Burkhardt advertised two new homes in Chateau Terrace featuring all modern conveniences, garages, and large lots. Ranging in price between $14,000 and $14,500, each house included three bedrooms and tile baths (Buffalo Courier 1923a).

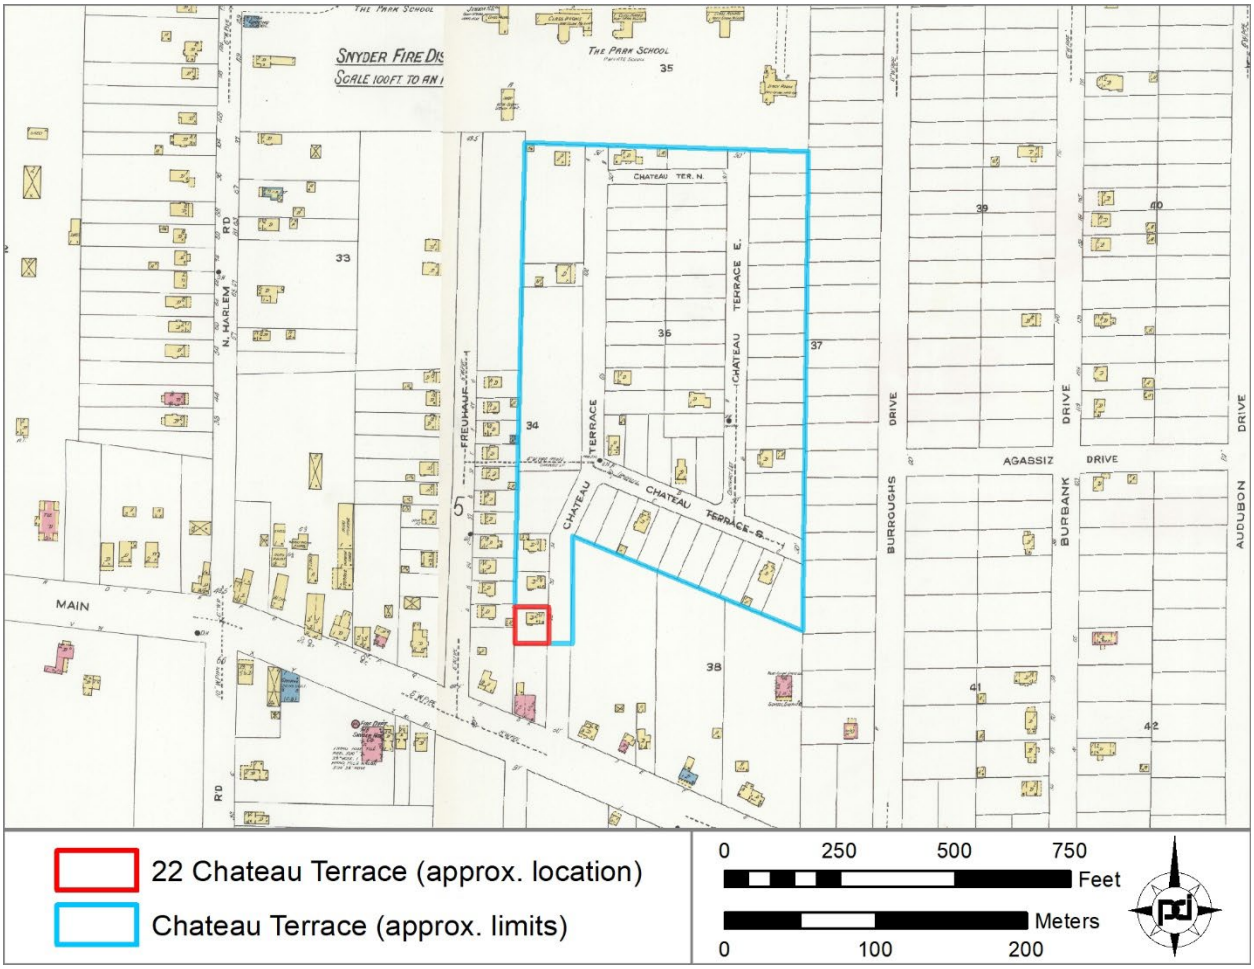

Figure 13. The location and footprint of the house at 22 Chateau Terrace as documented on the 1923 Sanborn Fire Insurance Map *(Sanborn 1923).*

Chateau Terrace was laid out off Main Street serving as the only entrance road to the subdivision. In 1927, Chateau Terrace remained a partially developed subdivision (ECDPW 1927 [Figure 14]). The three residences depicted on the 1923 map on west side of Chateau Terrace, south of the where the road bends, are visible in the aerial photograph. The southernmost of which is 22 Chateau Terrace. By 1932, homes were erected on Chateau Terrace South and Chateau Terrace East along with some construction on Chateau Terrace (KTA 2011: Area 6-9).

On the 1938 map of Snyder, Chateau Terrace consisted of 74 numbered lots. The west side of Chateau Terrace was divided into 20 lots with the lots 1 through 4 located between Main Street and the bend south of Chateau Terrace South (Figure 15). The residence at 22 Chateau Terrace was constructed on Lot #2. The three houses noted on the 1927 aerial had 80 frontages on Chateau Terrace. The other parcels were laid out with 50-ft frontages along Chateau Terrace to the north, the south side Chateau Terrace East, and the south side of Chateau Terrace South. A 1951 aerial view shows additional development in Snyder (Figure 16).

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

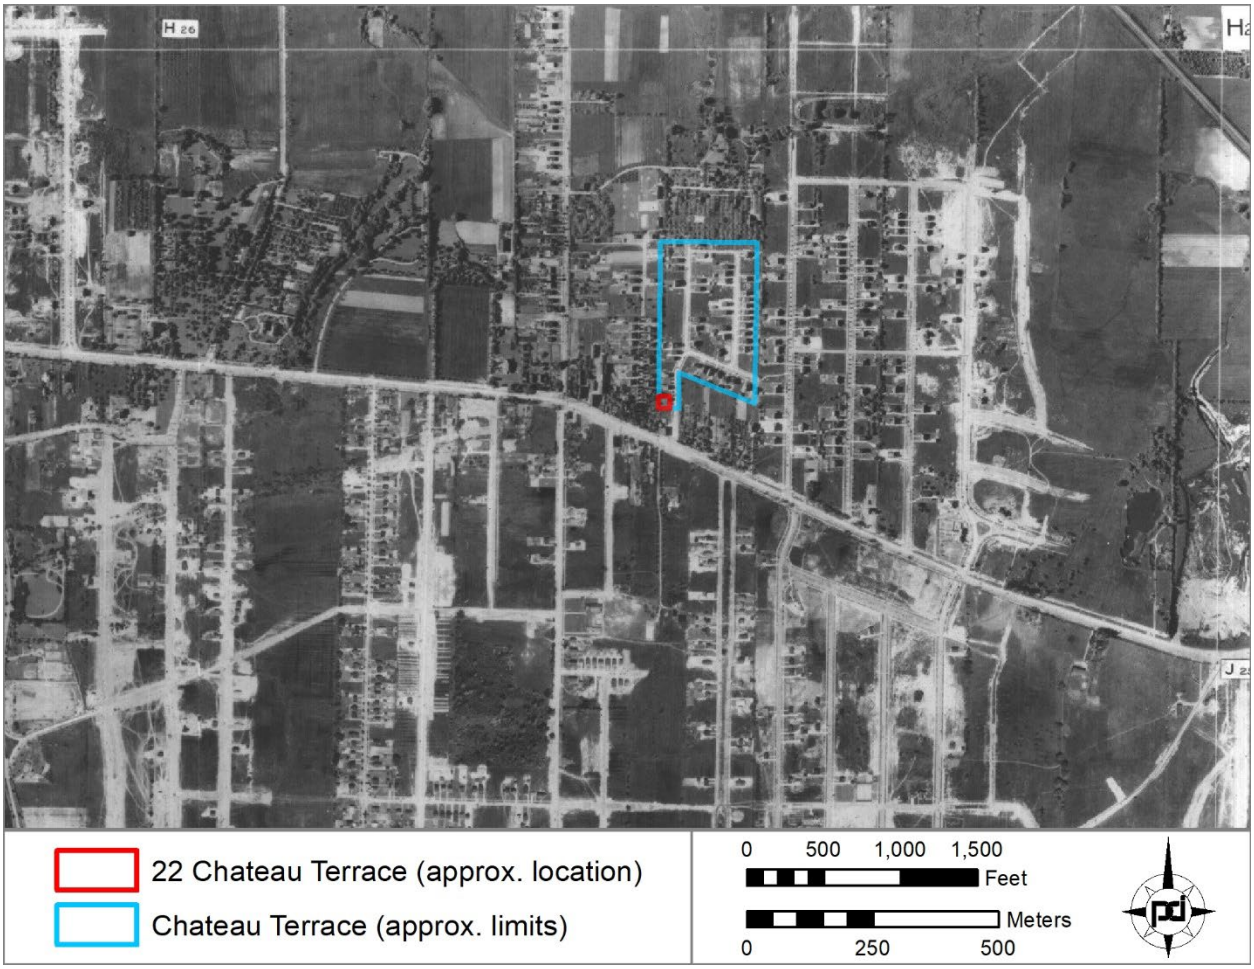

Figure 14. A 1927 aerial view of Chateau Terrace showing residential development in the subdivision and the surrounding area of Snyder *(Erie County Department of Public Works [ECDPW] 1927).*

The former Abram L. Snyder house on the northeast corner of Main Street and Chateau Terrace was demolished in 1957 (Fiddler-Woite 2009:148). A new U.S. Post Office branch (now occupied by the Bornhava school) was erected across the street from 22 Chateau Terrace on the site of the old homestead tract. Willliam C.T. Suor died at 85 years old in January 1959. An editorial on his passing credited the Suor brothers for beginning the trek to the North Buffalo suburbs with their Central Park development and continuing with the suburban development in Snyder (BEN 1959).

Lewis Ball died on August 20, 1968. His widow, Josephine E. Ball, sold the property in July 1971 to Edmund Karnofsky (Liber 7812 of Deeds, page 1). In 1975, the former school building on Main Street was demolished, and the adjacent property to the south of Chateau Terrace was subdivided into parcels (Snyder-Eggertsville Library and Ascension Lutheran Church [Fiddler-Woite 2009:110]). Karnofsky owned the property for 15 years, later selling it to E/K Realty Group LLC in September 2008. The subsequent owner 570 DAB 3 LLC purchased the property in March 2018. Table 1 presents a summary of deed information for Subdivision Lot 2 (22 Chateau Terrace/Parcel B).

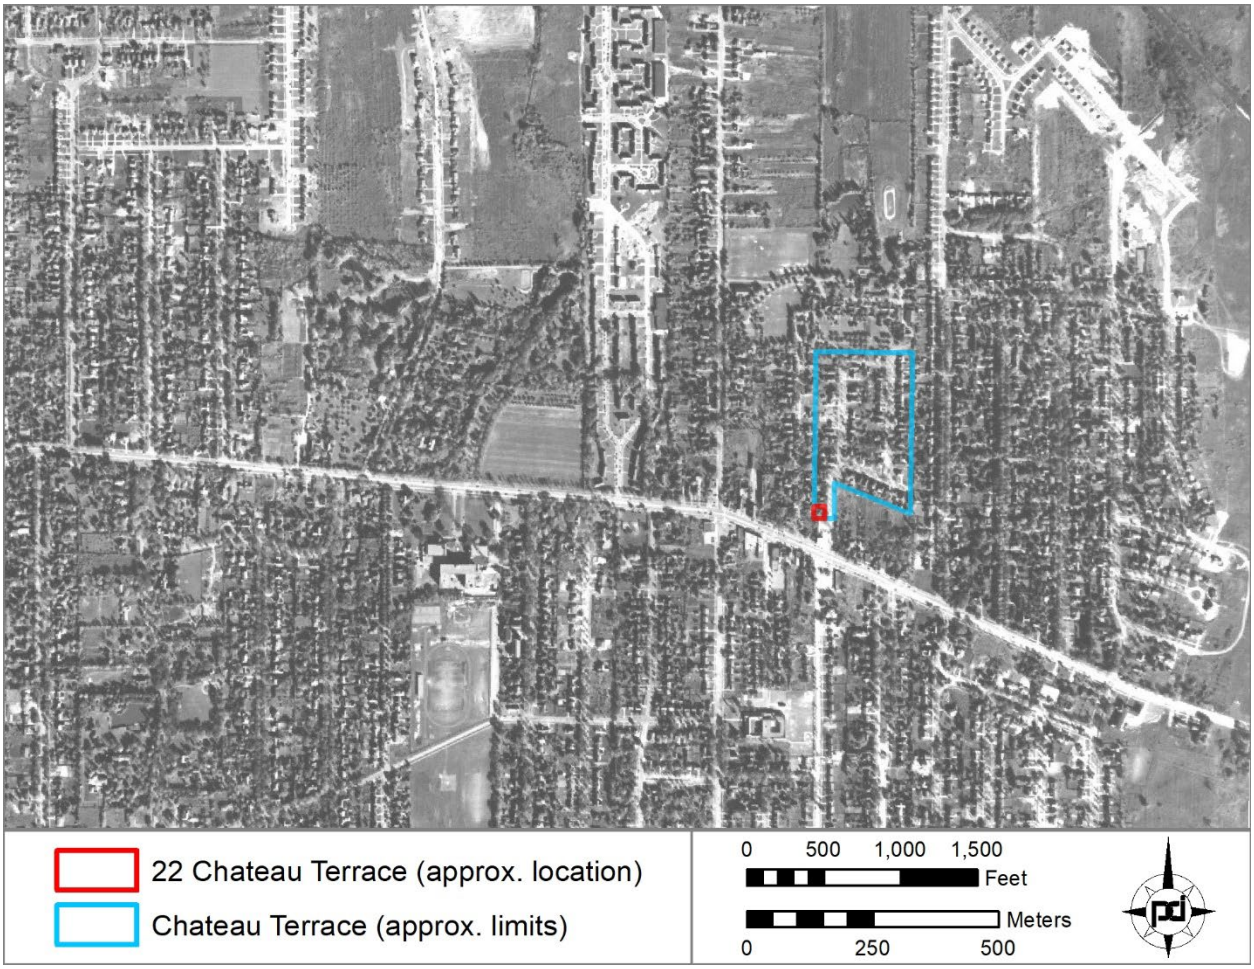

Figure 16. A 1951 aerial view of Chateau Terrace showing residential development in the subdivision and the surrounding area of Snyder *(ECDPW 1951).*

William Charles Taylor Suor and Arthur M. Suor. The Suor brothers were the sons of Charles and Anna (Taylor) Suor (White 1898:439). Their grandfather Joseph Suor was a native of Germany (White 1898:439). Charles Suor operated a wood turning establishment on the corner of Clinton and Oak streets in Buffalo and served as supervisor of the old Eleventh ward (White 1898:439). He died in 1887 when the boys were teenagers.

Arthur M. Suor was educated in public schools and the College of Commerce in Buffalo. He was first employed for three years with the T. C. Tanke's jewelry store and later in the Western Transit Company for a short time. In 1890, he accepted a position with the real estate firm of Thorne & Angell. He was associated with the firm until 1894, when he formed a partnership with his brother, William C. T. Suor (White 1898:439). In 1896, he married Ida Clare Heeb of Buffalo. They had one son, Arthur M., Jr. He was a member of Parish Lodge No. 292, F. & A. M., and of Trinity Lodge, I. O. O. F.

Architectural Summary

Setting. Chateau Terrace on the north side of Main Street east of Harlem Road is nestled between two early-to-mid-twentieth-century residential subdivisions, Freuhauf to the west and Audubon Terrace to the east. Chateau Terrace was laid out to serve as the entrance road for the development. The subdivision was designed with four roads that form a near rectangular-shaped central plan. These include two north-south roads (Chateau Terrace & Chateau Terrace East), one northwest-southeast road (Chateau Terrace South), and one east-west road (Chateau Terrace North). The south end of Chateau Terrace has a bend to the northeast just south of Chateau Terrace South. Street trees were planted throughout Chateau Terrace. Trees lining the entrance road, and the road's winding alignment were designed to provide screening as well as privacy. Chateau Terrace was originally designed with three dead end roads. The north end of Chateau Terrace East is open for access to the Park School of Buffalo Campus. Commercial properties, a school, medical offices, and a public library border the south boundary of the subdivision.

Site. Located on the west side of the street, the single-family residence and detached garage at 22 Chateau Terrace is the first residential property in the subdivision north of Main Street. The parcel measures 80 ft wide by 73.34 ft deep. The house has a narrow 9.77-ft setback and a small, enclosed backyard measuring roughly 22 ft wide by 20 ft deep. A mature 24-inch green ash tree is centered in front of the house on the road verge. Other mature trees include are on the south side of the driveway and along west edge of the parcel. Concrete walkways (2.5 ft-2.6 ft) are on the north and west sides of the house. A low concrete retaining wall stretches across the south property line. Parking lots associated with commercial properties fronting Main Street (Nos. 4558-4560 & 4548) border the south, southwest, and west perimeters of the parcel. Residential properties are adjacent to the north (20 Chateau Terrace) and northwest (23 Fruehauf).

Description of Exterior. The residence at 22 Chateau Terrace is a frame, two-story Craftsman-style building with a front-gabled roof with asphalt shingles, stucco exterior, wood belt course, and stone foundation. It has a rectangular plan and measures approximately 24.20 ft wide by 40.66 ft deep. Window openings are single, paired, and triple groupings. These openings feature simple molded wood surrounds and wood double-hung sash (1/1 and 9/1). Original basement windows have two lights.

The east façade has an enclosed entry porch with a wood stoop in the north bay, a one-story sunroom with a low-pitched gabled roof, and a triple window grouping with bracketed pent. The entrance door features six lights over two lights and two panels. It is flanked by sidelights of four over one, a wood panel, and a single corner pilaster. Six lights over one light windows are on the north side of the entry porch. Stylistic details include wide overhanging eaves with single triangular knee brackets, beveled windows, and paneled and glazed doors.

Exterior alterations include a few replacement windows, a replacement wood rail on the front stoop, and asphalt roofing shingles.

Description of Interior. The open first-floor layout consists of a sunroom, dining room, living room, kitchen, and basement/side entrance hall. Three bedrooms, a bathroom, and a hall closet are on the second floor. It has an unfinished basement. The interior has painted plaster walls. Floor finishes include carpeting, hardwood, linoleum, and tile. Hardwood floors are covered on the first floor and primary bedroom. Interior windows are accented with simple wood trim. Extant interior doors are wood with six panels.

The living room has a central brick fireplace with a wood mantel supported by three brick corbels, built-in wood shelving, and Craftsman-style staircase (quarter turn stairs) with corner pier along the north wall. The Craftsman-type living room entrance door has a single panel and four lights. An original push button switch panel is on right side of front door. A Craftsman-type beveled glass window is in the north wall of the living room and west wall of the dining room. Original wooden baseboards and metal baseboard registers are

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

intact. The kitchen has built-in cabinets. Original cabinet doors have been removed from the upper cabinet shelves on the west wall and a new sink with cabinets has been installed on the east wall. The side entrance/ basement hall is on the north side of the house.

The primary bedroom on the second floor is in the upper front (east) of the house. It features two closets and window seat. The other two bedrooms have a single window and closet. The bathroom retains its white hexagonal floor tile, built-in closet, and built-in medicine cabinet.

The basement retains its original door and wood stairs. It has exposed stone walls and a row of built-in cabinets along the west wall. The chimney has a basement clean.

Interior alterations include the following: removal of portions of built-in kitchen cabinets and sink; removal of original light fixtures; drop ceiling in the dining room; new kitchen flooring; removal of a few original doors; and removal of original bathroom sink and tub.

Garage. A detached, frame, two-bay Craftsman-style garage is on the southwest side of the house. The 3.66.5 sq ft garage (18.35 ft wide by 20.15 ft deep) has a hipped roof with overhanging eaves, and asphalt roof shingles, and wood exterior siding. Garage doors feature multiple pane fixed windows and wood panels. The garage is presently structurally unstable. A section of the roof has partially collapsed on the south slope (Photograph 14 in Appendix A).

Conclusions

The ca. 1920 residence with garage at 22 Chateau Terrace does not appear to meet the State/National Register of Historic Places (S/NRHP) criteria for individual eligibility. Though the building retains much of its original materials and stylistic elements, it is a representative example of a modest single-family home type constructed in the first quarter of the twentieth century in Buffalo and suburban neighborhoods. Previous historic resources surveys have also identified the building at 22 Chateau Terrace as not individually eligible for listing on the S/NRHP (Bero 1997; KTA 2011), but instead they recommended the property as a contributing resource to a Chateau Terrace Historic District (Chateau Terrace Study Area in CRIS). Note, Chateau Terrace was not included in the NRHP Multiple Documentation Form for Multiple Resources Associated with the Suburban Development of Buffalo.

As previously recognized in the historic resources survey, Chateau Terrace Study Area is historically significant at the local level for its association with the suburban development of the Town of Amherst during the early to mid-twentieth century. A S/NRHP eligibility assessment for the entire Chateau Terrace Study Area is beyond the scope of this documentation report. Further survey work and documentation of the neighborhood, as well as additional research, would be required to provide an informed S/NRHP recommendation for Chateau Terrace Study Area. The NRHP Multiple Documentation Form for *Multiple Resources Associated with the Suburban Development of Buffalo, New York* (2015) and guidance provided in *Historic Residential Suburbs Guidelines For Evaluation And Documentation For The National Register Of Historic Places* (Ames and Flint 2002) would also need to be applied for an NRHP eligibility recommendation.

RE: Proposed Mixed-Use Project, 4548-4564 Main Street, Town of Amherst, NY
Traffic Engineering Assessment Letter

Dear Mr. Oates:

The purpose of this technical letter is to provide a traffic engineering assessment related to the proposed mixed-use project located at 4548-4564 Main Street in the Town of Amherst, NY for informational purposes and to understand the possible traffic impacts resulting from the proposed project. The concept site plan, figures, and supporting data are included in the attachments. This letter evaluates:

- Projected trip generation estimates and discusses the thresholds for completing a Traffic Impact Study (TIS).
- Southbound queuing on Fruehauf Avenue during the AM and PM peak periods.
- Sight line evaluation at the Main Street/Fruehauf Avenue intersesction.

PROJECT DESCRIPTION

The proposed project consists of developing 57 units of one and two-bedroom apartment units, a ±3,628 square foot (SF) quality restaurant, and a ±3,137 SF fast casual restaurant in a three-story building. Access is provided via two full access driveways: one along Chateau Terrace which accesses a parking lot with 50 spaces and one along Fruehauf Avenue which accesses a parking lot with 20 spaces. Chateau Terrace is posted as a "No Outlet" street while Fruehauf Avenue is posted as a "Dead End" street. On-street parking is available along Main Street. Sidewalks are present throughout the adjacent neighborhood.

TRIP GENERATION

Data contained in the Institute of Transportation Engineers (ITE) Trip Generation Manual (10th Edition) was used to project the volume of the traffic generated by the proposed project. Data published by the ITE is the nationally accepted standard for generating trips for new uses. Given the functional characteristics of the corridors and the land uses proposed for the site, the peak hours selected for analysis are the weekday morning (AM) and weekday evening (PM) peak periods. The combination of site traffic and adjacent street traffic produces the greatest demand during these peak periods.

The proposed project as depicted on the site plan consists of two different land uses (residential and restaurant) and is considered mixed-use (multi-use). According to the Institute of Transportation Engineers Trip Generation Handbook (3rd Edition), "...a multi-use development is typically a single real-estate project that consists of two or more ITE land use classifications between which trips can be made without using the off-site road system. Because of the nature of these land uses, the trip-making

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

characteristics are interrelated, and some trips are made among the on-site uses. This capture of trips internal to the site has the net effect of reducing vehicle trip generation between the overall development site and the external street system (compared to the total number of trips generated by comparable, standalone sites)." "In some multi-use developments, these internal trips can be made by walking or by vehicles entirely on internal pathways or internal roadways without using streets external to the site."

The Handbook indicates internal capture rates for trips within a multi-use development to vary between residential, office, retail, restaurant, and entertainment and recreational uses during the AM and PM peak hours. Given the proposed land use components and interconnection between these components, multi-use total volume trips will likely occur.

Methodology contained in National Cooperative Highway Research Program (NCHRP) Report 684: Enhancing Internal Trip Capture Estimation for Mixed-Use Development was consulted to perform the mixed-use adjustment. The NCHRP 684 model reported an internal baseline capture percentage of 0% during the AM peak hour and 10% during the PM peak hour.

These multi-use trip projection adjustments were applied to the respective site generated trips and subtracted from the traffic entering and exiting the site during the PM peak period. The internal capture calculation considers baseline mode shares and vehicle occupancy factors for the proposed land uses, as described in the Handbook.

For certain types of developments, the total number of trips generated is different from the amount of new traffic added to the adjacent highway network by the generator. Service/retail-oriented developments (i.e., shopping centers, gas stations, coffee/donut shops, and restaurants) often locate adjacent to busy streets to attract the motorists already passing the site on the adjacent street. These sites attract a portion of their trips from traffic passing the site. The "pass-by" traffic refers to the amount of existing traffic already on the roadway adjacent to the site that, as it "passes by" the site, will enter the site driveways to patronize the project site. The quantifying of "pass-by" trips has the net result of reducing the volume of new traffic that is added to the site driveways and/or adjacent roadways.

This site is likely to exhibit some level of pass-by traffic. The ITE Trip Generation Handbook (3rd Edition) was used as a reference to determine pass-by rates. For quality restaurants, the ITE data reports a range of rates during the PM peak period from 26% to 82% with an average pass-by rate of 44%. No data is available for the AM peak period. To remain conservative, this study used a 20% pass-by rate during the PM peak period.

The ITE does not have data for fast casual restaurants. Therefore, fast food restaurants with drive-thru was considered a comparable use. The ITE data reports a range of rates during the PM peak period from 25% to 71% with an average pass-by rate of 50%. To remain conservative, this study used a 20% pass-by rate during the PM peak period.

Table 1 shows the total site generated trips for the peak hours of study with the pass-by trip adjustment.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

TABLE 1: SITE GENERATED TRIPS AND ADJUSTMENTS

DESCRIPTION	ITE LUC	SIZE	AM PEAK HOUR		PM PEAK HOUR	
			ENTER	EXIT	ENTER	EXIT
Multi-family Residential	220	57 units	6	22	23	13
Quality Restaurant	931	±3,628 SF	1	1	19	9
Fast Casual Restaurant	930	±3,137 SF	4	2	24	20
Sub-Total Trips			**11**	**25**	**66**	**42**
Mixed-Use Adjustment			*0*	*0*	*-5*	*-5*
Sub-Total Driveway Trips			**11**	**25**	**61**	**37**
Pass-by Adjustment			*0*	*0*	*-9*	*-6*
Total Primary (New) Vehicle Trips			**11**	**25**	**52**	**31**

Note:
1. ITE LUC = ITE Land Use Code.

Prior to considering mixed-use and pass-by adjustments, the proposed project is expected to generate 11 entering/25 exiting vehicle trips during the AM peak hour and 66 entering/42 exiting vehicle trips during the PM peak hour. When considering ITE published mixed-use and pass-by trip rates and our professional judgement, the proposed project is expected to generate the following new vehicle trips: 11 entering/25 exiting vehicle trips during the AM peak hour and 52 entering/31 exiting vehicle trips during the PM peak hour.

TRIP DISTRIBUTION

The cumulative effect of site-generated traffic on the transportation network is dependent on the origins and destinations of that traffic and the location of the driveways serving the site. The proposed arrival/departure distribution of traffic generated by the proposed project is considered a function of several parameters, including:

- Commercial/employment and residential centers in the area using US Census Data (e.g., OnTheMap).
- Site access locations.
- Hourly traffic patterns using most recent available Annual Average Daily Traffic (AADT) data obtained from the New York State Department of Transportation (NYSDOT) along Main Street.
- Turning movement counts using the most recent available data obtained from the Greater Buffalo-Niagara Regional Transportation Council (GBNRTC) at the intersections of Main Street/Chateau Terrace/Bernhardt Drive and Main Street/Lamarck Drive/Livingston Parkway.
- Existing traffic controls.

Figure 1 shows the anticipated trip distribution pattern percentages for the traffic from the proposed project for the residential program while Figure 2 illustrates the trip distribution for the restaurant program. Figure 3 illustrates the residential peak hour site generated traffic based on the percentages in Figure 1. Figures 4-5 illustrate the restaurant peak hour site generated traffic based on the percentages in Figure 2 for the project's primary and pass-by trips, respectively. Figure 6 illustrates the total site generated trips. The roads anticipated to be used by the additional trips generated by the proposed project are listed in Table 2.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

To remain conservative, all site generated traffic was assumed to enter and exit the site via the proposed driveways along Fruehauf Avenue and Chateau Terrace. A portion of site visitors may use available on-street parking along Main Street (notably the restaurant patrons); thus, reducing the projected number of vehicle trips entering and exiting Fruehauf Avenue and Chateau Terrace.

TABLE 2: EXISTING HIGHWAY SYSTEM

ROADWAY[1]	CLASS[2]	AGENCY[3]	SPEED LIMIT[4]	# OF TRAVEL LANES[5]	TRAVEL PATTERN	EST. AADT[6] & SOURCE[7]
Main Street (NY-5)	14	NYSDOT	40	4	Two-way/ East-West	21,436 NYSDOT (2019)
Chateau Terrace	19	Town	30	2	Two-way/ North-South	No Data Available
Fruehauf Avenue	19	Town	30	2	Two-way/ North-South	No Data Available

Notes:
1. Route Name and Number.
2. State Functional Classification of Roadway: 14 = Urban Principal Arterial, 19 = Local.
3. Jurisdictional Agency of Roadway.
4. Posted or Statewide Limit in Miles per Hour (mph).
5. Excludes turning/auxiliary lanes developed at intersections.
6. Estimated AADT in Vehicles per Day (vpd).
7. AADT Source (Year).

THRESHOLDS FOR THE REQUIREMENT OF A TRAFFIC IMPACT STUDY

Many reviewing agencies, including the NYSDOT and Erie County Department of Public Works (ECDPW), use a guideline in determining whether a project warrants the preparation of a Traffic Impact Study (TIS). The applicable guideline is that if a proposed project is projected to add 100 or more site generated vehicles per hour (vph) to an adjacent intersection during either peak study period, then that intersection should be studied for potential traffic impacts.

Based upon the ITE trip generation projections and the resulting traffic assignment estimates shown in Figure 6, the projected new vehicle trips are added to the following intersections during the AM and PM peak hours:

- Main Street/Chateau Terrace/Bernhardt Drive: 29 (58)
- Main Street/Fruehauf Drive: 23 (83)
- Fruehauf Drive/Proposed Driveway: 14 (80)
- Chateau Terrace/Proposed Driveway: 22 (33)

Given that fewer than 85 peak hour trips are added to a single intersection during the peak hours studied, a TIS is not warranted.

PEAK HOUR QUEUING ASSESSMENT

A peak hour queuing assessment was performed along Fruehauf Avenue during the AM and PM peak hours to measure the frequency of southbound vehicles that block the proposed driveway. The centerline of the proposed driveway is located approximately 38 feet from the stop bar. Given this distance, the driveway is located approximately 1.7 vehicle lengths from the stop bar.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

Our firm documented southbound queues at the intersection of Main Street/Fruehauf Avenue on Thursday, July 22, 2021, from 7:00-9:00 AM and 4:00-6:00 PM. The peak hours generally occurred from 8:00-9:00 AM and 4:30-5:30 PM. Based on this field investigation during the peak hours of study, the proposed driveway location was blocked once during the AM peak hour for a duration of five seconds and was blocked once during the PM peak hour for a duration of three seconds.

SIGHT LINE EVALUATION

Based upon a review of the attached site plan, the proposed building is projected to be built in approximately the same footprint as the existing structures fronting Main Street. There is a marked stop bar for traffic exiting Fruehauf Avenue.

In this case, the primary concern is with the proposed building at the existing Main Street/Fruehauf Avenue intersection. The attached figure illustrates the sight line evaluation performed at the intersection to the east of the intersection.

Sight distance is provided at intersections to allow drivers to perceive the presence of potentially conflicting vehicles. This should occur in sufficient time for a motorist to stop or adjust their speed, as appropriate, to avoid a collision at the intersection. Sight distance is also provided at intersections to allow the drivers of stopped vehicles a sufficient view of the intersecting highway to anticipate and avoid potential incidents. If the available sight distance for an entering or crossing vehicle is at least equal to the appropriate stopping sight distance for the major road, then drivers have sufficient sight distance to anticipate and avoid collisions.

A Policy on Geometric Design of Highways and Streets (2011) published by the American Association of State Highway and Transportation Officials (AASHTO), was used as a reference to establish the required Stopping Sight Distance (SSD) and desirable Intersection Sight Distance (ISD) for the adjacent driveway location. Table 3 depicts the results of the sight distance evaluation at the Main Street/Fruehauf Avenue intersection.

TABLE 3: SIGHT LINE EVALUATION

DESCRIPTION		VALUE
POSTED SPEED		40 MPH
DESIGN SPEED[1]		45 MPH
REQUIRED SSD		360 feet
DESIRABLE ISD		500 feet
AVAILABLE SIGHT DISTANCE TO THE EAST	*SSD*	>360 feet
	ISD	385 feet (no vehicles) 145 feet (parked vehicles)

Note:
1. Design speed equals posted speed plus 5 MPH.

The required SSD is satisfied to the east of the study intersection. However, the desirable ISD is not satisfied. The existing and proposed ISD sight distance will be the same and the proposed building will not impact the existing sight distance.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

It is noted that the intersection is in an urbanized area with numerous side roads where drivers expect traffic to be entering and exiting. Further, the intersection is located downstream of the signalized intersection of Main Street/Chateau Terrace/Bernhardt Drive and motorists turning out of Fruehauf Avenue will be afforded gap opportunities when the Main Street approaches are in the red phase. As this distance is not satisfied, potential relief consists of installing intersection warning signage for westbound traffic.

CONCLUSIONS AND RECOMMENDATIONS

The following sets forth the findings and recommendations of this assessment:

1. When considering ITE published mixed-use and pass-by trip rates and our professional judgement, the proposed project is expected to generate the following new vehicle trips: 11 entering/25 exiting vehicle trips during the AM peak hour and 52 entering/31 exiting vehicle trips during the PM peak hour.

2. Given the projected site traffic distribution, it is our firm's professional opinion that the adjacent intersections and surrounding roadway network will not experience significant adverse traffic impacts. Given these conditions, no further study is warranted nor recommended at this time.

3. Based upon documentation of southbound queues at the intersection of Main Street/Fruehauf Avenue during the peak hours of study, the proposed driveway location was blocked once during the AM peak hour for a duration of five seconds and was blocked once during the PM peak hour for a duration of three seconds.

4. Based upon a sight line evaluation at the Main Street/Fruehauf Avenue intersection, the required SSD is satisfied to the east. However, the desirable ISD is not satisfied. The existing and proposed ISD sight distance will be the same and the proposed building will not impact the existing sight distance. As this distance is not satisfied, potential relief consists of installing intersection warning signage for westbound traffic.

If you have any questions or require additional information, please do not hesitate to contact our office.

Sincerely,
SRF Associates, D.P.C.

5. CONTRACTOR SHALL BE RESPONSIBLE FOR PROTECTION OF ANY EXISTING STRUCTURES TO REMAIN AND ANY FINISH MATERIAL INSTALLED WHILE WORKING ON OTHER COMPONENTS.
6. CONTRACTOR SHALL KEEP JOB FREE OF DEBRIS AND MAKE FINAL CLEANUP TO THE SATISFACTION OF OWNER.
7. CONTRACTOR SHALL ASCERTAIN THE LOCATION OF ALL UTILITIES PRIOR TO CONSTRUCTION SO THAT THIS WORK WILL NOT DISTURB EXISTING LINES AND/OR INSTALLATIONS EXCEPT AS DETAILED ON THE PLANS. COORDINATE ALL WORK WITH THE APPLICABLE UTILITY COMPANIES.
8. CONTRACTOR SHALL OBTAIN AND PAY FOR ALL REQUIRED PERMITS NECESSARY TO PERFORM THE WORK.
9. BUILDING DIMENSIONS ARE APPROXIMATE. REFER TO ARCHITECTURAL DRAWINGS FOR LAYOUT DIMENSIONS.
10. SIDEWALK DIMENSIONS ARE APPROXIMATE. REFER TO ARCHITECTURAL DRAWINGS FOR THE SIDEWALK PLAN .
11. CONCRETE SIDEWALK SEALERS: (REFER TO ARCHITECTURAL PLANS FOR LOCATION OF CONCRETE TYPES.)
    11.1. GREY CONCRETE SIDEWALKS SHALL HAVE CHEMMASTERS - SILENCURE WITHIN 2HRS AFTER FINAL FINISHING OF CONCRETE AND ALL BLEED WATER HAS DISSIPATED.
    11.2. EXPOSED AGGREGATE/STAMPED CONCRETE SIDEWALKS SHALL HAVE ONE (x1) COAT CHEMMASTERS - SILENCURE AS SOON AS CONCRETE HAS DRIED AFTER PRESSURE-WASHING THE RELEASE AGENT OFF. APRX 30 DAYS AFTER THIS (IF WEATHER PERMITS) APPLY ONE (x1) COAT OF CHEMMASTERS - POLYSEAL EZ.
12. LIGHTING FIXTURE ARROW SYMBOLS REFER TO THE DIRECTION THAT THE FIXTURES ARE REQUIRED TO FACE. SPECIFIC MOUNT BRACKETS WILL BE REQUIRED DEPENDING ON ORIENTATION AND FIXTURE COUNT.
13. CURB ISLAND DIMENSIONS ARE FROM INSIDE OF CURB TO INSIDE OF CURB.

SITE LEGEND:

- Property line
- 6" Curb (typ).
- Proposed sign & pole
- Proposed landscape
- Proposed Concrete Pavement
- Proposed Heavy Duty Pavement

* All curb radii are 3ft unless noted.
* Refer to General Notes, Concstruction Details and Architectural Plans for Concrete Sealer information.

RE: Proposed Snyder Mixed Use Building – Design Exception Request
4548 & 4564 Main Street, 17 Fruehauf Ave, and 22 Chateau Terrace
Amherst, NY 14226
BDC Property No. 5202

Dear Chairman Gilmour and Members of the Planning Board:

Benderson Development Company, LLC is requesting four (4) design exceptions from Town Code section 203-5A-2-4 B and 203-5A-2-4 D as it relates to the code requirement that the building length along a road frontage be a minimum lot frontage length of 90% and a maximum street-facing building length of 200 feet. The requested design exceptions are as follows:

1) Minimum required lot frontage along Chateau Terrace – 90% required and 88.5% provided.
2) Maximum allowed street facing building length along Chateau Terrace – 200 foot maximum required and 239 foot maximum proposed.
3) Minimum required lot frontage along Fruehauf Ave – 90% required and 84.7% provided.
4) No tree grates provided on Fruehauf and Chateau Terrace

In support of these four (4) designs exception requests, we offer the following:

- The Amherst Town Code is conflicting with request to the Code sections noted above. The Amherst Town Code requires both 200 feet of maximum building frontage and 90% minimum lot frontage along a Village Frontage Street. The Code required minimum 90% street facing frontage does not consider the amount of frontage length as a result once the 90% is calculated it is direct conflict with the street frontage maximum requirement. In order to resolve this conflict, a design wavier is required as the code does distinguish as to which Code section should prevail.

  In this case, the building frontage length along Chateau Terrace was designed to a length that provided the best architectural design for the property along this street frontage and as such requires a design exception for both the minimum required street facing frontage and the maximum allowable street facing frontage because the length falls between both requirements while satisfying neither. If one design exception is eliminated, then the other design exception request would be increased. This proposed length with two (2) design exceptions requires provides for the best overall design.

  For the Fruehauf Ave frontage length, along with the angle of Fruehauf Ave with Main Street, the only way to meet the required frontage would be to provide an angle point along the Main Street frontage and extend the façade on Fruehauf Ave closer to the adjacent residential property. The angle point along Main Street would impact the required build to percentage for that street frontage and may create an

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

BENDERSON DEVELOPMENT
570 DELAWARE AVENUE
BUFFALO, NEW YORK 14202
716.886.0211.P : : 716.886.1026.F

additional design exception and would reduce the buffer to the adjacent residential property. This reduced frontage percentage still meets the intent of the Code by having a large percentage of the building along the street while still provide a buffer to the adjacent property. In addition, if the building length is met we will be unable to meet the 20' buffer requirement.

New York Courts have held that local zoning regulations are in derogation of the common law and must be strictly construed against the municipality which has enacted them and seeks to enforce them, and any ambiguity in the language must be resolved in favor of the property owner. See, Matter of Hess Realty Corp v. Planning Commn. Of Town of Rotterdam, 198 A.D.2d 588 (3d Dept. 1993). New York Courts have further stated that a Town must apply the definition which is in its code and cannot ignore a defined term when there is no ambiguity. See Rivendell Winery, LLC v. Donovan, 74 AD3d 1594 (3d Dept., 2010). As noted above, even if there was some ambiguity (which there is not here), Courts have held "any ambiguities in a zoning ordinance must be resolved in favor of the property owner." BRANCATO v. Zoning Board of appeals, 30 AD2d 515 (2nd Dept. 2006). Further, in interpreting a zoning law, a Town "may not insert conditions or criteria into a zoning ordinance … that are not contained in the statutory language adopted" See, Winterton Properties, LLC v. Town of Mamakating Zoning Board of Appeals, 132 A.D.2d 1141 (3d Dept., 2015).

- Based upon the site grades for Chateau Terrace as it relates to Main Street and Fruehauf Ave., the driveway needs to be pushed as far south along Chateau Terrace to allow access to the basement parking field. If the building façade was reduced along Chateau Terrace to meet the maximum allowable building lot frontage, this would open up the view corridor into the underground parking garage rather than providing additional screening of the parking from the public R.O.W. Further it would increase the design exception request for the minimum amount of street facing building frontage that is required.

- The site design has been updated to provide additional buffer from the adjacent residential property on Chateau Terrace to the entrance lane for the parking garage, increasing the buffer space to 20 feet. This allows the required landscape buffer to be extended the full length of this residential property along with adding a 6 foot tall vinyl fence.

- Instead of providing concrete and tree grates, the project proposed to maintain a green landscaping strip in which the trees will be planted along Fruehauf and Chateau Terrace. The greenspace is attractive and will soften the pedestrian amenities around the building.

It is our opinion, based upon the above that the site, as designed, meets the intent of the Town of Amherst code and that the three design exceptions should be granted. If you have any questions or further comments, please do not hesitate to contact me at 716-878-9626 or via email at jamesboglioli@benderson.com.

RE: Proposed Snyder Mixed Use Building
4548 & 4564 Main Street, 17 Fruehauf Ave, and 22 Chateau Terrace
Amherst, NY 14226
BDC Property No. 5202

Dear Mr. Howard:

Benderson Development Company, LLC is pleased to be submitting this response letter in regards to the February 2, 2023 Traffic Safety Board comment letter. Regarding the comments that were issued, we offer the following:

1. The issue of visibility on Main Street from Fruehauf is an existing condition, which is not impacted by the proposed project. As demonstrated by information submitted, the proposed building does not impact visibility and is outside the sight triangle. Benderson is willing to make the request to the NYSDOT for the installation of the additional requested bulb-outs along Main Street and will install them, if approved. Any such condition is limited to making the request and not the installation. Neither the project approval nor the construction and occupancy of the building can be tied to the installation of the bulb-outs because the bulb-outs are not required as mitigation for this project and can only be installed at the discretion of the NYSDOT. Further, Benderson will support the Town requesting from the NYSDOT that the parking spaces in front of the building on Main Street be restricted to loading and unloading and/or be reduced by one space to improve the existing visibility.

2. The TIS indicates that 25% of the residential traffic will use the Fruehauf entrance which is 6 total (enter and exit) trips during the PM peak and 10% of the commercial traffic will use Chateau which is also 6 total (enter and exit) trips. If the trips were redistributed they would cancel each other out and not change the total vehicles going through either intersection so the traffic analysis wouldn't change.

If you have any questions or further comments, please do not hesitate to contact me at 716-878-9626 or via email at jamesboglioli@benderson.com.

Thank you,

Amherst, NY 14226
BDC Property No. 5202

Dear Mr. Howard:

In connection with the above-referenced project, a concern was by the resident at 23 Fruehauf Ave. that the proposed project would shade the solar panels installed on their roof and which face the project site. To address this concern, enclosed please find the following:

- An aerial photograph which shows the location of that property in relation to the project site (**Exhibit A**);
- A photograph of the residential dwelling (**Exhibit B**); and
- A Sun Study prepared utilizing modeling software (**Exhibit C**).

The Sun Study was run on December 21st (the shortest day in the year and when the angle of the sun is the lowest) and June 21st (the longest day in the year and when the angle of the sun is the highest). The model clearly shows that the proposed project will not shade the rooftop solar panels or the dwelling. Please include this material in the record of this project.

If you have any questions or further comments, please do not hesitate to contact me at 716-878-9626 or via email at jamesboglioli@benderson.com.

Williamsville, NY 14221

RE: Application for Site Plan Approval
Proposed Site Redevelopment
4548-4564 Main St, Amherst, NY (BDP # 5202)

Dear Chairman Gilmour and Members of the Planning Board:

In response to the zoning law interpretation issued by Daniel J. Ulatowski, AICP, Assistant Planning Director/ZEO please find a revised set of civil engineering plan documents for the project reducing the size of the building and increasing the buffer to the residential properties to the south.

The Proposed Site Modifications

With respect to the changes made to the site plan, we note the following:

- The length of the apartment building on Chateau Terrace has been reduced from 239' long to 200' long which resulted in the reducing the project from 48 units to 44 units.

- The front wall of the parking garage on Chateau Terrace has been shifted away from the R.O.W. by over 30'so that the front wall aligns with the rear wall of the apartment building.

- The proposed driveway on Chateau Terrace has been relocated +/- 10' to the south (away from the adjacent residential property), the result of which is to provide 30' of greenspace/buffer between the proposed building/driveway and the residential neighbors. This exceeds the required 20' buffer by 10'. In addition, the bike racks in this greenspace have been relocated to the side of the building, such that there will only be grass, landscaping and the retention area in that 30' of buffer.

Remaining Waiver – To Allow for the Provision of Additional Greenspace

As a result of these modifications, only a single waiver is now being requested – to not provide tree grates on Fruehauf and Chateau Terrace. Tree grates are to be provided when trees are being planted within a concrete area. Rather than remove the existing greenspace between the curb line and the existing sidewalk, the project proposes to maintain this area as well as to maintain the existing trees and provide new trees. The greenspace is attractive and will soften the pedestrian amenities around the building and into the adjoining neighborhood.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

BENDERSON DEVELOPMENT
570 DELAWARE AVENUE
BUFFALO, NEW YORK 14202
716.886.0211.P : : 716.886.1026.F

Conclusion

But for the single waiver, which allows the project to provide more greenspace then is required by Code, this project is entirely code complaint and consistent with the requirements of the TI-2.5 zoning.

As part of this project, the Planning Board was provided several studies which included:

- A Traffic Impact Study which included a line-of-sight analysis, which demonstrates that (1) the project will not have a significant negative impact on the adjacent roadway system and (2) the proposed building does not impact the line of sight on Fruehauf Ave. Further, the applicant has agreed to support the Town seeking to have an existing on-street parking spot in front of the building closest to Fruehauf Ave removed as well as the remainder signed of time-limited loading/unloading which will improve the existing line-of-sight.

- A report prepared by Commonwealth Heritage Group on 22 Chateau Terrace which concludes "the ca. 1920 residence with garage at 22 Chateau Terrace does not appear to meet the State/National Register Places (S/NRHP) criteria for individual eligibility."

- An analysis of sun shading which demonstrates that the proposed building will not impact access to sunlight for the property located at 23 Fruehauf Ave.

- A Storm Water Pollution Prevention Plan (SWPPP) which demonstrates that the project will not have any impact on any abutting properties and all stormwater will be retained on-site which has been approved by the Town Engineer.

In addition, with respect to the PowerPoint presentation presented by the neighbors at the Town's Disability Committee's meeting we note:

- Sidewalk Concern – The model is a rendition of the overall project and is not a direct reflection of the proposed design as it relates to the sidewalk and wingwalls coming off the building. The proposed sidewalks are continuous, without obstructions and are ADA compliant.

- Driveway Concerns – As previously addressed, due to the geometry of the existing roadway, the Fruehauf Ave entrance cannot be moved further down the road as it would lower the clearance requirements for the basement parking field. The entrance ramps up to the first-floor parking level, which if entrance is lowered will conflict with the basement parking significantly. It should further be noted, that as demonstrated by the submitted Traffic Impact Study, Fruehauf Ave has a combined 30 total AM Peak Hour trips and 35 total PM Peak hour trips (entering and exiting) this roadway during the 2024 background conditions. This averages one car either turning onto Fruehauf or turning off Fruehauf once every 2 minutes during the peak hour, which provides more than sufficient gaps to allow cars to exit the upper level of the parking garage.

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

BENDERSON DEVELOPMENT
570 DELAWARE AVENUE
BUFFALO, NEW YORK 14202
716.886.0211.P : : 716.886.1026.F

- Bio-Retention Pond – By definition, a bio-retention pond does not retain any standing water. Stormwater infiltrates the pond bed to a series of underdrains that discharge in a closed storm sewer system. The "pond" is also fenced along the South Property line and along Fruehauf Ave.

- Fire Concerns - All comments from the Town of Amherst Fire Marshall have been addressed and the Town Fire Marshall has signed off on design. We have also met with the Snyder Fire Department and have addressed all their concerns including proposing additional fire hydrants, relocating the required electric vehicle charging stations and increasing the size of entrances. It should also be noted that this is a fully sprinklered building.

- Parking Concerns - Project meets exceeds the Town of Amherst parking requirements for proposed uses per Town Zoning code adopted in 2019 (72 spaces required and 73 spaces provided).

- Garbage Concerns – We anticipate approximately 10 totes for the residential component of the project. The site allows totes to be placed within the green space along Chateau Terrace and will not obstruct the sidewalks.

In conclusion, Benderson has addressed all comments issued to date, including having received clean comment letters from the Fire Marshall, the Amherst Traffic Safety Board, and the Town Engineer. Further, the Design Advisory Board made no design recommendations and unanimously found the proposed site and building design are consistent with the Design Guidelines for Mixed Use Districts. Further, the proposed project now exceeds the required parking.

We respectfully request that the Planning Board grant site plan approval at its April 20th meeting. As part of the record, I enclose a copy of the PowerPoint presentation that we presented at the February public hearing. Benderson has worked hard to design a project which meets the requirements of the TI-2.5 zoning and has reduced the size of the project providing more than what is required as a buffer to the adjacent residential properties. Despite the neighbors which have appeared, submitted e-mails, and spread disinformation to their neighbors – all the studies, outside agency reviews, town departmental reviews, and town advisory board recommendations support granting this code-complaint project.

Thank you,

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

BENDERSON
DEVELOPMENT

Project Description:

- Demolition of existing buildings located on the Project Site (13K removed)
- Construct 2.5-story high, multi-story building
- Provide 48 apartments
  - 22 units: 1 bedroom
  - 24 units: 2 bedroom
  - 2 units: 3 bedroom

- Provide 6,624 s.f of commercial space in two tenant spaces (4,111 s.f. and 2,513 s.f.)

- Provide a two-level parking garage to provide 76 parking spaces
  - Town Code requires 76 parking spaces for the development
    - 23 parking spaces accessible from Fruehauf – 1st Floor
    - 53 parking spaces accessible from Chateau Terrace - gate arm controlled

- Provide outdoor amenity space in accordance with the Mixed-Use District Town code
- Provide new curb cut access drives from Fruehauf Ave and Chateau Terrace
- Provide new site drainage infrastructures and utilities
- Refuse contained in trash storage room in basement level and bike racks provided on the basement & first floor level

Attachment: SP-2022-11_application_042023 (26951 : Sp-2022-11)

BENDERSON
DEVELOPMENT

Project Modifications:

- Relocated driveway Chateau Terrace to provided 20' required buffer (no waiver required now)
  - 6' vinyl fence
  - Mix of Colorado Spruce, Honey Locust, Armstrong Maple, Emerald Arborvitae
- Removed dumpster & dumpster enclosure previously behind building – trash room
- Reduced building width on Chateau Terrace by +/- 10' in width
  - Provide additional sidewalk
  - Provide area for fire equipment
- Met with fire department – building fully sprinklered
  - Provide 2 new hydrants - 1 Fruehauf and 1 on Chateau Terrace
  - Relocated electric charging stations to 2nd level of the parking area – above ground
  - Increase height of garage opening so equipment can enter on Fruehauf
  - Clean fire letter from the Fire Marshall
- Reduced building units from 58 to 48 from original concept

BENDERSON DEVELOPMENT

Design Waivers - 4

2 Conflicting provisions:

- Minimum required lot frontage along Chateau Terrace – 90% required and 88.5% provided.
- Maximum allowed street facing building length along Chateau Terrace – 200’ maximum required and 239’ maximum proposed.

Minimum required lot frontage along Fruehauf Ave – 90% required and 84.7% provided – meets the 200’ requirement

No tree grates provided on Fruehauf and Chateau Terrace – providing greenspace instead

Design Advisory Board Review

- Made no design recommendation and finds the proposed site and building design are consistent with the Design Guidelines for Mixed Use Districts

UTILITIES

The underground utilities shown have been located from field survey information & existing drawings. The surveyor makes no guarantee that the underground utilities shown comprise all such utilities in the area, either in service or abandoned. The surveyor further does not warrant that the underground utilities shown are in the exact location indicated although he does certify that they are located as accurately as possible from the information available. This surveyor has not physically located the underground utilities.

Note: Underground Utility information has been ordered from the respective utility companies. As the information is received, this map will be amended to reflect said information.

SCHEDULE "A"

HOLLAND LAND TITLE & ABSTRACT COMPANY, INC.
SEARCH NO. 2010-54388
DATED: NOVEMBER 17, 2017

PARCEL A:

ALL THAT TRACT OR PARCEL OF LAND, situate in the Town of Amherst, County of Erie, and State of New York, being part of Farm Lot No. 13, Township 12, Range 7 of the Holland Land Company's Survey, and being Subdivision Lot No. 1 as shown on a certain subdivision map made by Busch & Percival, Engineers, entitled "College Hill Terraces" and recorded in Erie County Clerk's Office in Liber 1416 of Deeds, page 349, and more particularly bounded and described as follows:

BEGINNING at the point of intersection of the northeasterly line of Main Street with the west line of Chateau Terrace; running thence northerly along the westerly line of Chateau Terrace; running thence northerly along the westerly line of Chateau Terrace, 189.63 feet to the southerly line of Subdivision Lot No. 2, as shown on said subdivision map; thence westerly at right angles with the westerly line of Chateau Terrace and along the southerly line of Subdivision Lot No. 2, 73.34 feet to the westerly bounds of the lands of Suor & Suor Store Properties, Inc.; thence southerly and at right angles with the said southerly line of Subdivision Lot No. 2, and along the westerly bounds of the lands of the Suor & Suor Store Properties, Inc., 160 feet to the northeasterly line of Main Street; thence southeasterly along the said line of Main Street, 79.09 feet to the point of beginning.

PARCEL B:

ALL THAT TRACT OR PARCEL OF LAND, situate in the Town of Amherst, County of Erie, and State of New York, being part of Farm Lot No. 13, Township 12, Range 7 of the Holland Land Company's Survey and which up on a certain subdivision map of a part of said Farm Lot No. 13, made by Busch & Percival, Engineers, called a subdivision map of College Hill Terraces (which said map is recorded in Erie County Clerk's Office in Liber 1416 of Deeds, page 349) is known as Subdivision Lot No 2, being 80 feet front and rear by 73.34 feet deep situate on the west side of Chateau Terrace, beginning 189.63 feet north of the north line of Main Street.

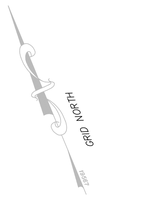
PARCEL C:

ALL THAT TRACT OR PARCEL OF LAND, situate in the Town of Amherst, County of Erie, and State of New York, being part of Farm Lot No. 13, Township 12, Range 7 of the Holland Land Company's Survey, and being designated as Subdivision Lot No. 1 as shown on subdivision map made for Jacob C. Fruehauf by C.F. Witmer, Surveyor, in 1898 of part of said Lot No. 18 filed in Erie County Clerk's Office under Map Cover 864 and also being designated as Subdivision Lot No. 1 on a map filed in Erie County Clerk's Office under Cover No. 936, and bounded and described as follow:

BEGINNING at the southeasterly corner of premises conveyed to said Jacob C. Fruehauf by Fanny Holl, by Committee, by deed dated February 7, 1898, recorded in Erie County Clerk's Office in Liber 844 of Deeds, page 262, February 7, 1898, being in the northerly line of Main Street (Buffalo and Williamsville Road); running thence northerly along the easterly line of the premises conveyed by said deed, 189.25 feet; thence westerly 98.75 feet to the easterly lien of Fruehauf Street (formerly known as Chestnut Street) as shown on said map; thence southerly along the easterly line of Fruehauf Street (formerly known as Chestnut Street) 150 feet to the said northerly line of Main Street (Buffalo and Williamsville Road); and thence easterly along said line of Main Street (Buffalo and Williamsville Road) 106 feet to the place of beginning.

PARCEL D:

ALL THAT TRACT OR PARCEL OF LAND, situate in the Town of Amherst, County of Erie, and State of New York, being part of Farm Lot No. 13, Township 12, Range 7 of the Holland Land Company's Survey and being further known and distinguished as Subdivision Lot No. 2 as shown and laid down on map and survey made made by C.F. Witmer, Surveyor in 1898, which map is filed in Erie County Clerk's Office under Cover No. 864, said lot being bounded and described as follows:



BEGINNING in the easterly line of Fruehauf Avenue at a point distant 150 feet from the point of intersection of said line of Fruehauf Avenue with the northerly line of Main Street; thence easterly along the southerly line of said Subdivision Lot No. 2, 98.75 feet to the east line of land conveyed to Jacob C Fruehauf by deed recorded in Erie County Clerk's Office in Liber 844 of Deeds, page 262; thence northerly along the said easterly lien of said land so conveyed, 50 feet; thence westerly along the northerly line of said Subdivision Lot No. 2, 98.75 feet; and thence southerly along the easterly line of Fruehauf Avenue 50 feet to the place of beginning.

SURVEYOR'S DESCRIPTION:

ALL THAT TRACT OR PARCEL OF LAND, situate in the Town of Amherst, County of Erie, and State of New York, being part of Farm Lot No. 13, Township 12, Range 7 of the Holland Land Company's Survey, bounded and described as follows:

BEGINNING at the point of intersection of the northerly line of Main Street with the west line of Chateau Terrace; running thence northerly along the westerly line of Chateau Terrace; running thence northerly along the westerly line of Chateau Terrace, 269.63 feet to a point; thence westerly at right angles with the westerly line of Chateau Terrace, 172.09 feet to the easterly line of Fruehauf Avenue; thence southerly along the easterly line of Fruehauf Avenue, 200.00 feet to the said northerly line of Main Street; and thence easterly along said line of Main Street 185.64 feet to the place of beginning.

Parcel containing 0.93 acres of land, more or less.

Attachment: SP-2022-11 drawings_042023 (2665 : Sp-2022-11)

GENERAL NOTES:

1. INSTALL ALL MATERIALS TO MANUFACTURER'S RECOMMENDATIONS AND BEST STANDARDS OF TRADE INVOLVED.
2. SUBSTITUTIONS SHALL BE MADE ONLY WITH OWNER'S APPROVAL AND BE OF EQUIVALENT QUALITY TO WHAT IS SPECIFIED.
3. WORK SHALL BE COMPLETED IN STRICT ACCORDANCE WITH ALL LOCAL CODES AND OSHA SAFETY RULES AND REGULATIONS.
4. CONTRACTOR SHALL VERIFY ALL EXISTING CONDITIONS AND DIMENSIONS AT THE SITE. NOTIFY OWNER & ENGINEER OF DISCREPANCIES IN CONDITIONS SHOWN ON DRAWINGS PRIOR TO PROCEEDING WITH THE WORK.
5. CONTRACTOR SHALL BE RESPONSIBLE FOR PROTECTION OF ANY EXISTING STRUCTURES TO REMAIN AND ANY FINISH MATERIAL INSTALLED WHILE WORKING ON OTHER COMPONENTS.
6. CONTRACTOR SHALL KEEP JOB FREE OF DEBRIS AND MAKE FINAL CLEANUP TO THE SATISFACTION OF OWNER.
7. CONTRACTOR SHALL ASCERTAIN THE LOCATION OF ALL UTILITIES PRIOR TO CONSTRUCTION SO THAT THIS WORK WILL NOT DISTURB EXISTING LINES AND/OR INSTALLATIONS EXCEPT AS DETAILED ON THE PLANS. COORDINATE ALL WORK WITH THE APPLICABLE UTILITY COMPANIES.
8. CONTRACTOR SHALL OBTAIN AND PAY FOR ALL REQUIRED PERMITS NECESSARY TO PERFORM THE WORK.
9. BUILDING DIMENSIONS ARE APPROXIMATE. REFER TO ARCHITECTURAL DRAWINGS FOR LAYOUT DIMENSIONS.
10. SIDEWALK DIMENSIONS ARE APPROXIMATE. REFER TO ARCHITECTURAL DRAWINGS FOR THE SIDEWALK PLAN .
11. CONCRETE SIDEWALK SEALERS: (REFER TO ARCHITECTURAL PLANS FOR LOCATION OF CONCRETE TYPES.)
    - 11.1. GREY CONCRETE SIDEWALKS SHALL HAVE CHEMMASTERS - SILENCURE WITHIN 2HRS AFTER FINAL FINISHING OF CONCRETE AND ALL BLEED WATER HAS DISSIPATED.
    - 11.2. EXPOSED AGGREGATE/STAMPED CONCRETE SIDEWALKS SHALL HAVE ONE (x1) COAT CHEMMASTERS - SILENCURE AS SOON AS CONCRETE HAS DRIED AFTER PRESSURE-WASHING THE RELEASE AGENT OFF. APRX 30 DAYS AFTER THIS (IF WEATHER PERMITS) APPLY ONE (x1) COAT OF CHEMMASTERS - POLYSEAL EZ.
12. LIGHTING FIXTURE ARROW SYMBOLS REFER TO THE DIRECTION THAT THE FIXTURES ARE REQUIRED TO FACE. SPECIFIC MOUNT BRACKETS WILL BE REQUIRED DEPENDING ON ORIENTATION AND FIXTURE COUNT.
13. CURB ISLAND DIMENSIONS ARE FROM INSIDE OF CURB TO INSIDE OF CURB.

DEMOLITION & EROSION NOTES:

1. USE ENTRANCE FROM FRUEHAUF AVE. FOR CONSTRUCTION ENTRANCE
2. INSTALL TEMPORARY EROSION CONTROL DEVICES AS DIRECTED WITHIN THE WORKING AREA TO PREVENT SEDIMENT MIGRATION. ALL EROSION CONTROL DEVICES SHALL BE INSTALLED IN ACCORDANCE WITH THE DETAILS PROVIDED.
3. ALL EROSION CONTROL DEVICES SHALL BE REPLACED WHEREVER THEY BECOME INOPERABLE.
4. THE CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTENANCE AND REMOVAL OF TEMPORARY SEDIMENTATION CONTROLS.
5. THE CONTRACTOR MUST CONTROL DUST DURING CONSTRUCTION, DURING EARTHWORK OPERATIONS, WATER-SPREADING EQUIPMENT SHALL BE PROVIDED BY THE CONTRACTOR, AND WATER SPREAD AS NECESSARY AND AS DIRECTED IN ORDER TO CONTROL DUST.
6. DIRT OR DEBRIS LEFT ON LOCAL PUBLIC ROADS AS A RESULT OF THIS CONSTRUCTION PROJECT SHALL BE REMOVED AND ROAD SURFACES CLEANED BY THE CONTRACTORS ON A DAILY BASIS, OR MORE FREQUENTLY IF DEEMED NECESSARY.
7. ALL DISTURBED AREAS (EXCEPT AREAS TO BE PAVED OR BUILT UPON) SHALL BE TOPSOILED TO A MINIMUM OF 4" DEPTH AND SEEDED IMMEDIATELY AFTER FINE GRADING TAKES PLACE AND AS SOON AS PHYSICALLY POSSIBLE.
8. THE CONTRACTOR IS RESPONSIBLY FOR THE MAINTENANCE OF DOWNSTREAM STORM SEWERS, DITCHES AND CULVERTS. SILT BUILDUP FOUND TO BE A RESULT OF THIS SITE CONSTRUCTION WORK SHALL BE REMOVED FROM DOWNSTREAM CULVERTS, DETENTION PONDS, BY THE CONTRACTOR AT NO ADDITIONAL EXPENSE TO THE OWNER OR CITY.
9. ALL SOIL EROSION AND SEDIMENT CONTROL DEVICES AND MATERIALS SHALL BE IN PLACE PRIOR TO BEGINNING EARTHWORK OPERATIONS AND SHALL BE MAINTAINED UNTIL THE ALL GRADING WORKS ARE COMPLETE.

TITLE:

DEMO & EROSION CONTROL PLAN

SCALE: 1:20
DRAWN BY: DMZ
CHECKED BY: JAR
DATE: 05.05.2022
DRAWING NO. C3.0

Attachment: SP-2022-11_drawings_042023 (26951 : Sp-2022-11)

GENERAL NOTES:

1. INSTALL ALL MATERIALS TO MANUFACTURER'S RECOMMENDATIONS AND BEST STANDARDS OF TRADE INVOLVED.
2. SUBSTITUTIONS SHALL BE MADE ONLY WITH OWNER'S APPROVAL AND BE OF EQUIVALENT QUALITY TO WHAT IS SPECIFIED.
3. WORK SHALL BE COMPLETED IN STRICT ACCORDANCE WITH ALL LOCAL CODES AND OSHA SAFETY RULES AND REGULATIONS.
4. CONTRACTOR SHALL VERIFY ALL EXISTING CONDITIONS AND DIMENSIONS AT THE SITE. NOTIFY OWNER & ENGINEER OF DISCREPANCIES IN CONDITIONS SHOWN ON DRAWINGS PRIOR TO PROCEEDING WITH THE WORK.
5. CONTRACTOR SHALL BE RESPONSIBLE FOR PROTECTION OF ANY EXISTING STRUCTURES TO REMAIN AND ANY FINISH MATERIAL INSTALLED WHILE WORKING ON OTHER COMPONENTS.
6. CONTRACTOR SHALL KEEP JOB FREE OF DEBRIS AND MAKE FINAL CLEANUP TO THE SATISFACTION OF OWNER.
7. CONTRACTOR SHALL ASCERTAIN THE LOCATION OF ALL UTILITIES PRIOR TO CONSTRUCTION SO THAT THIS WORK WILL NOT DISTURB EXISTING LINES AND/OR INSTALLATIONS EXCEPT AS DETAILED ON THE PLANS. COORDINATE ALL WORK WITH THE APPLICABLE UTILITY COMPANIES.
8. CONTRACTOR SHALL OBTAIN AND PAY FOR ALL REQUIRED PERMITS NECESSARY TO PERFORM THE WORK.
9. BUILDING DIMENSIONS ARE APPROXIMATE. REFER TO ARCHITECTURAL DRAWINGS FOR LAYOUT DIMENSIONS.
10. SIDEWALK DIMENSIONS ARE APPROXIMATE. REFER TO ARCHITECTURAL DRAWINGS FOR THE SIDEWALK PLAN.
11. CONCRETE SIDEWALK SEALERS: (REFER TO ARCHITECTURAL PLANS FOR LOCATION OF CONCRETE TYPES.)
    - 11.1. GREY CONCRETE SIDEWALKS SHALL HAVE CHEMMASTERS - SILENCURE WITHIN 2HRS AFTER FINAL FINISHING OF CONCRETE AND ALL BLEED WATER HAS DISSIPATED.
    - 11.2. EXPOSED AGGREGATE/STAMPED CONCRETE SIDEWALKS SHALL HAVE ONE (x1) COAT CHEMMASTERS - SILENCURE AS SOON AS CONCRETE HAS DRIED AFTER PRESSURE-WASHING THE RELEASE AGENT OFF. APRX 30 DAYS AFTER THIS (IF WEATHER PERMITS) APPLY ONE (x1) COAT OF CHEMMASTERS - POLYSEAL EZ.
12. LIGHTING FIXTURE ARROW SYMBOLS REFER TO THE DIRECTION THAT THE FIXTURES ARE REQUIRED TO FACE. SPECIFIC MOUNT BRACKETS WILL BE REQUIRED DEPENDING ON ORIENTATION AND FIXTURE COUNT.
13. CURB ISLAND DIMENSIONS ARE FROM INSIDE OF CURB TO INSIDE OF CURB.

BOREHOLE TEST NOTES:

BOREHOLE LOCATIONS ARE APPROXIMATE. REFER TO GEOTECHNICAL ENGINEERING REPORT FOR LOCATIONS AND INFORMATION.

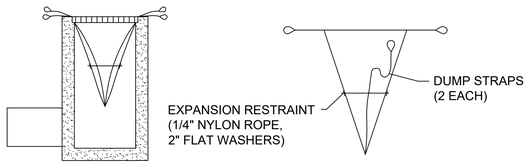
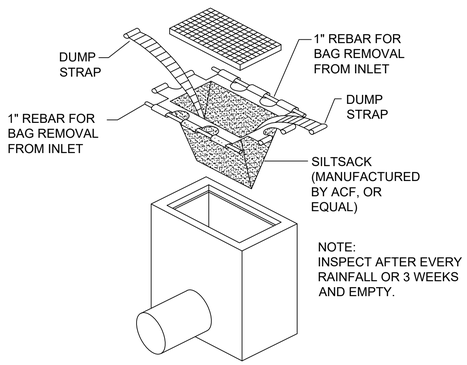
DRAWING NO. C3.1



Attachment: SP-2022-11_drawings_042023 (26951 : Sp-2022-11)

STABILIZED CONSTRUCTION ENTRANCE DETAIL



NOT TO SCALE

1. STONE SIZE - USE 2" STONE, OR RECLAIMED OR RECYCLED CONCRETE EQUIVALENT.
2. LENGTH - NOT LESS THAN 50 FEET (EXCEPT ON A SINGLE RESIDENCE LOT WHERE A 30 FOOT MINIMUM LENGTH WOULD APPLY).
3. THICKNESS - NOT LESS THAN SIX (6) INCHES.
4. WIDTH - TWELVE (12) FOOT MINIMUM, BUT NOT LESS THAN THE FULL WIDTH AT POINTS WHERE INGRESS OR EGRESS OCCURS. TWENTY-FOUR (24) FOOT IF SINGLE ENTRANCE TO SITE.
5. FILTER CLOTH - WILL BE PLACED OVER THE ENTIRE AREA PRIOR TO PLACING OF STONE.
6. SURFACE WATER - ALL SURFACE WATER FLOWING OR DIVERTED TOWARD CONSTRUCTION ENTRANCES SHALL BE PIPED ACROSS THE ENTRANCE. IF PIPING IS IMPRACTICAL, A MOUNTABLE BERM WITH 5:1 SLOPES WILL BE PERMITTED.
7. MAINTENANCE - THE ENTRANCE SHALL BE MAINTAINED IN A CONDITION WHICH WILL PREVENT TRACKING OR FLOWING OF SEDIMENT ONTO PUBLIC RIGHTS-OF-WAY, ALL SEDIMENT SPILLED, DROPPED, WASHED OR TRACTED ONTO PUBLIC RIGHTS-OF-WAY MUST BE REMOVED IMMEDIATELY.
8. WHEN WASHING IS REQUIRED, IT SHALL BE DONE ON A AREA STABILIZED WITH STONE AND WHICH DRAINS INTO AN APPROVED SEDIMENT TRAPPING DEVICE.
9. PERIODIC INSPECTION AND NEEDED MAINTENANCE SHALL BE PROVIDED AFTER EACH RAIN.

SD SILT SOCK DETAIL

SD Silt Sock: Standard Duty Fabric

TYPICAL CONCRETE WASH OUT DETAIL

NOTES:
1. CONSTRUCT TO 2016 NYSDEC BLUE BOOK DESIGN CRITERIA

Notes:

1 - Do not use sock below the normal watermark or perpendicular to flow in river and where the maximum incline is greater than 50%.
2 - Contractors should be aware of federal, state and local laws, rules regulations or permit requirements for the use of Silt Socks on site.
3 - Sock should be positioned on the outline of the area to be protected, but must be installed between 45° to 90° from directions of flow.
4 - Sock may be required to be entrenched a minimum of 2" on disturbed ground to ensure constant ground contact.
5 - All gaps and ruts must be backfilled with soil or sock material.
6 - Sock overlap should be in the direction of the flow. Overlap amount will be between 12" and 24". Contractor to check with local town for requirements.
7 - If sediment collects to 1/2 the height of the sock, then a second sock may be stacked immediately up slope of the original instead of removing the sediment.
8 - Sock joint is where two sock sections meet on a level grade, overlap and adjoining ends, tightening the ends together, and anchoring through each end. Where two sections meet on un-level ground, j-hook higher elevated end, anchor, and begin new section just below. Back fill any gaps.
9 - Sock should be inspected and repaired as needed.
10 - If ruts begin under the sock they should be backfilled with soil and compacted so that the ground and sock have continuous contact.
11 - If sock rolls out of place, the sock should be repositioned and secured with additional anchors.
12 - Tears in the Sock fabric may be repaired by wrapping a new piece of fabric over the sock and securing, or by place a second sock immediately up slope with the required overlap beyond deformation.
13 - A section of sock should be replaced whenever it has weakened to such an extent that the efficiency is reduced or diminished. Weakening can occur because the natural mesh fabric breaks down over time of from being moved/dragged on site.
14 - Sock should be replaced when sediment has built up and has been removed three times.
15 - All sediment in disturbed area next to sock must be removed and correctly disposed of before the sock can be removed.
16 - When removing, cut sock open and spread the filler material around. The netting should be removed from site.
17 - Sock should be installed before works commence on site.

FIRST FLOOR PLAN

GENERAL NOTES:
1. INSTALL ALL MATERIALS TO MANUFACTURER'S RECOMMENDATIONS AND BEST STANDARDS OF TRADE INVOLVED.
2. SUBSTITUTIONS SHALL BE MADE ONLY WITH OWNER'S APPROVAL AND BE OF EQUIVALENT QUALITY TO WHAT IS SPECIFIED.
3. WORK SHALL BE COMPLETED IN STRICT ACCORDANCE WITH ALL LOCAL CODES AND OSHA SAFETY RULES AND REGULATIONS.
4. CONTRACTOR SHALL VERIFY ALL EXISTING CONDITIONS AND DIMENSIONS AT THE SITE. NOTIFY OWNER & ENGINEER OF DISCREPANCIES IN CONDITIONS SHOWN ON DRAWINGS PRIOR TO PROCEEDING WITH THE WORK.
5. CONTRACTOR SHALL BE RESPONSIBLE FOR PROTECTION OF ANY EXISTING STRUCTURES TO REMAIN AND ANY FINISH MATERIAL INSTALLED WHILE WORKING ON OTHER COMPONENTS.
6. CONTRACTOR SHALL KEEP JOB FREE OF DEBRIS AND MAKE FINAL CLEANUP TO THE SATISFACTION OF OWNER.
7. CONTRACTOR SHALL ASCERTAIN THE LOCATION OF ALL UTILITIES PRIOR TO CONSTRUCTION SO THAT THIS WORK WILL NOT DISTURB EXISTING LINES AND/OR INSTALLATIONS EXCEPT AS DETAILED ON THE PLANS. COORDINATE ALL WORK WITH THE APPLICABLE UTILITY COMPANIES.
8. CONTRACTOR SHALL OBTAIN AND PAY FOR ALL REQUIRED PERMITS NECESSARY TO PERFORM THE WORK.
9. BUILDING DIMENSIONS ARE APPROXIMATE. REFER TO ARCHITECTURAL DRAWINGS FOR LAYOUT DIMENSIONS.
10. SIDEWALK DIMENSIONS ARE APPROXIMATE. REFER TO ARCHITECTURAL DRAWINGS FOR THE SIDEWALK PLAN .
11. CONCRETE SIDEWALK SEALERS: (REFER TO ARCHITECTURAL PLANS FOR LOCATION OF CONCRETE TYPES.)
11.1. GREY CONCRETE SIDEWALKS SHALL HAVE CHEMMASTERS - SILENCURE WITHIN 2HRS AFTER FINAL FINISHING OF CONCRETE AND ALL BLEED WATER HAS DISSIPATED.
11.2. EXPOSED AGGREGATE/STAMPED CONCRETE SIDEWALKS SHALL HAVE ONE (x1) COAT CHEMMASTERS - SILENCURE AS SOON AS CONCRETE HAS DRIED AFTER PRESSURE-WASHING THE RELEASE AGENT OFF. APRX 30 DAYS AFTER THIS (IF WEATHER PERMITS) APPLY ONE (x1) COAT OF CHEMMASTERS - POLYSEAL EZ.
12. LIGHTING FIXTURE ARROW SYMBOLS REFER TO THE DIRECTION THAT THE FIXTURES ARE REQUIRED TO FACE. SPECIFIC MOUNT BRACKETS WILL BE REQUIRED DEPENDING ON ORIENTATION AND FIXTURE COUNT.
13. CURB ISLAND DIMENSIONS ARE FROM INSIDE OF CURB TO INSIDE OF CURB.

13. CURB ISLAND DIMENSIONS ARE FROM INSIDE OF CURB TO INSIDE OF CURB.

SANITARY SEWER NOTES:
1. THE CONTRACTOR IS ADVISED THAT A TRENCH SHIELD AND/OR SHORING DESIGNED IN ACCORDANCE WITH OSHA STANDARDS SHALL BE USED IN ALL OPEN TRENCH EXCAVATIONS.
2. ANY CONTRACTOR AND/OR PLUMBER PERFORMING WORKING IN A CONFINED SPACE (ie MANHOLES, WETWELLS, CHAMBERS) OWNED BY THE TOWN MUST CERTIFY TO THE TOWN THAT THEY HAVE THEIR OWN CONFINED SPACE ENTRY PROGRAM THAT MEETS OR EXCEEDS OSHA'S REGULATIONS. CERTIFICATION MUST BE NOTARIZED BY A NOTARY PUBLIC.
3. CONSTRUCTION SHALL CONFORM TO THE RULES AND REGULATIONS OF THE TOWN AND NEW YORK STATE CODES.
4. IF ANY PROPOSED SEWER LATERAL RUNS UNDER PAVED AREA AND HAS LESS THAN 4' COVER, CONCRETE ENCASEMENT IS REQUIRED. IF MORE THAN 4' COVER IS PROVIDED IN PAVED AREAS SELECT FILL IS REQUIRED.
5. THE CONTRACTOR MUST NOTIFY THE TOWN ENGINEER OFFICE AND THE PLUMBING INSPECTOR 24 HOURS IN ADVANCE OF CONSTRUCTION.
6. CLEANOUTS ARE REQUIRED EVERY 100' AND AT CHANGE IN DIRECTION.
7. ABANDONED SANITARY SEWER CONNECTIONS FROM THE SITE, IF ANY, REQUIRE PROOF OF A DISTRICT PERMIT FOR DISCONNECTION PRIOR TO THE NEW CONNECTION BEING MADE.

UTILITY NOTES:
1. PROVIDE FITTINGS AND BLOCKING AS NECESSARY AT ALL BENDS IN WATER LINES.
2. WHERE UTILITIES ARE INSTALLED IN EXISTING PAVEMENT, LANDSCAPED AREA ETC. ANY ITEMS REMOVED/DAMAGED SHALL BE REPLACED IN KIND.
3. IT IS THE RESPONSIBILITY OF THE CONTRACTOR TO OBTAIN ALL PERMITS NECESSARY: STATE, COUNTY, AND TOWN.
4. WATER MAINS TO HAVE MINIMUM 5FT COVER,

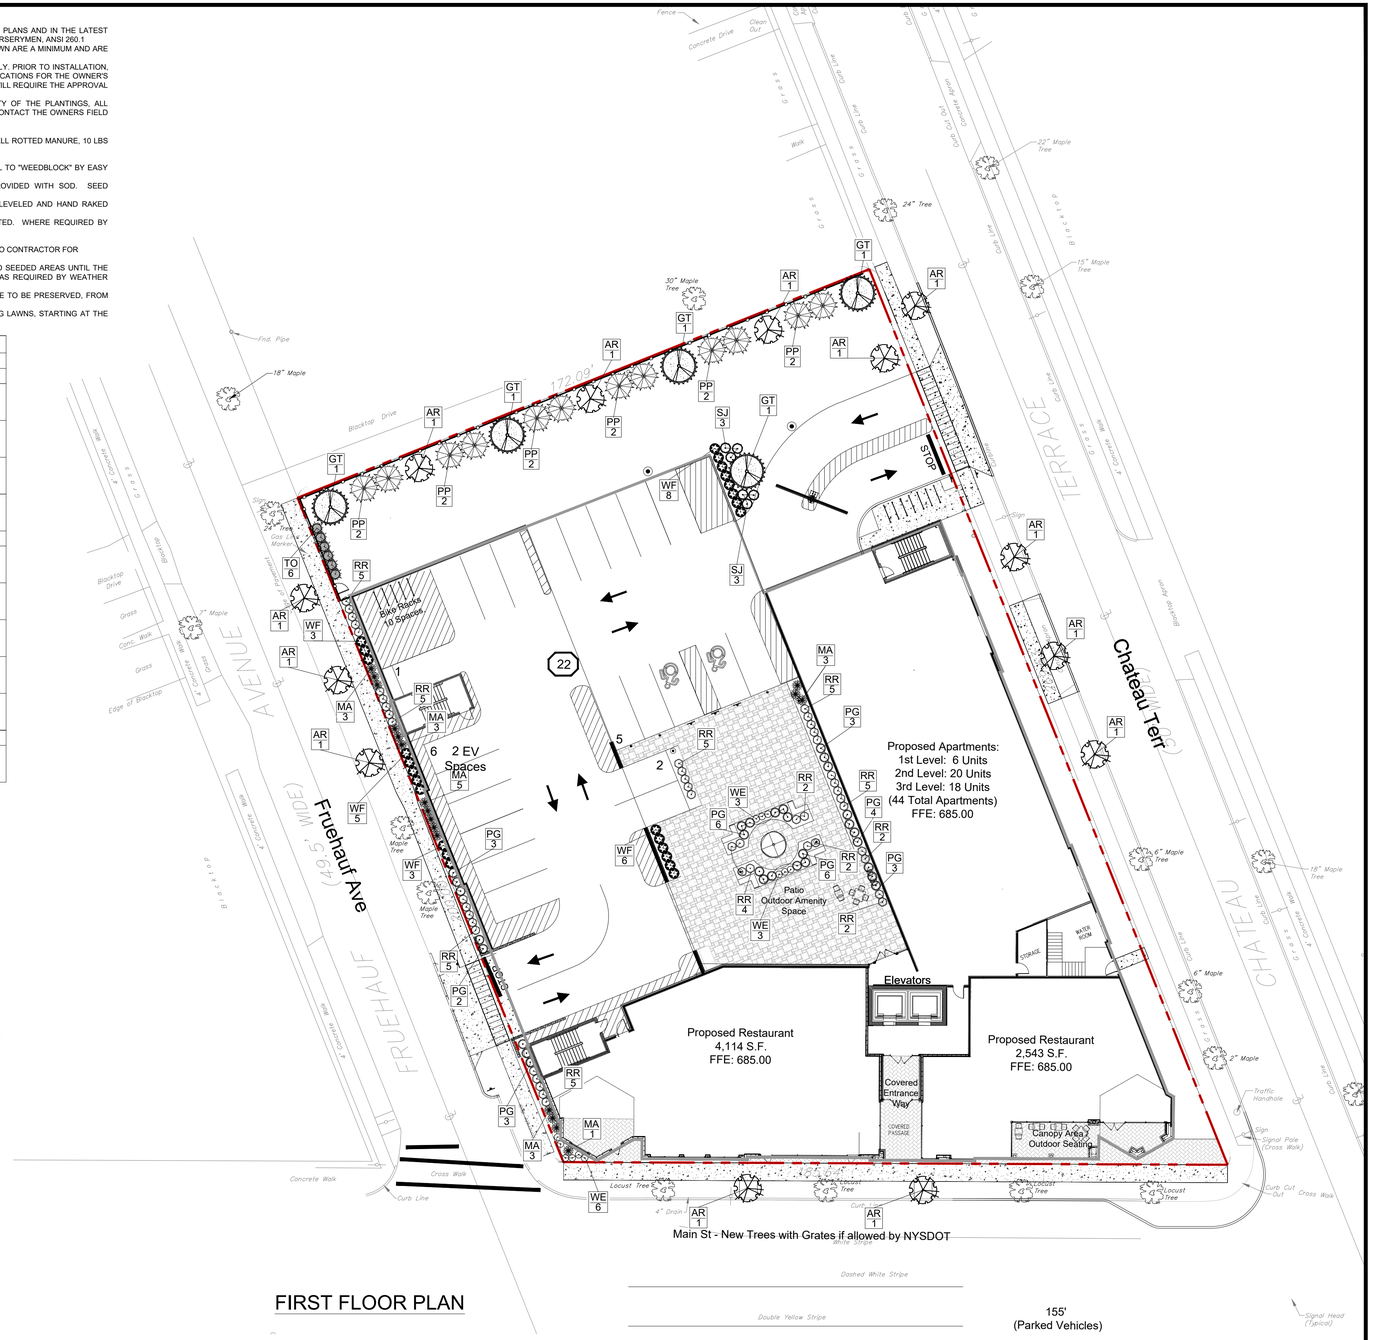
9. BUILDING DIMENSIONS ARE APPROXIMATE. REFER TO ARCHITECTURAL DRAWINGS FOR LAYOUT DIMENSIONS.
10. SIDEWALK DIMENSIONS ARE APPROXIMATE. REFER TO ARCHITECTURAL DRAWINGS FOR THE SIDEWALK PLAN.
11. CONCRETE SIDEWALK SEALERS: (REFER TO ARCHITECTURAL PLANS FOR LOCATION OF CONCRETE TYPES.)
    11.1. GREY CONCRETE SIDEWALKS SHALL HAVE CHEMMASTERS - SILENCURE WITHIN 2HRS AFTER FINAL FINISHING OF CONCRETE AND ALL BLEED WATER HAS DISSIPATED.
    11.2. EXPOSED AGGREGATE/STAMPED CONCRETE SIDEWALKS SHALL HAVE ONE (x1) COAT CHEMMASTERS - SILENCURE AS SOON AS CONCRETE HAS DRIED AFTER PRESSURE-WASHING THE RELEASE AGENT OFF. APRX 30 DAYS AFTER THIS (IF WEATHER PERMITS) APPLY ONE (x1) COAT OF CHEMMASTERS - POLYSEAL EZ.
12. LIGHTING FIXTURE ARROW SYMBOLS REFER TO THE DIRECTION THAT THE FIXTURES ARE REQUIRED TO FACE. SPECIFIC MOUNT BRACKETS WILL BE REQUIRED DEPENDING ON ORIENTATION AND FIXTURE COUNT.
13. CURB ISLAND DIMENSIONS ARE FROM INSIDE OF CURB TO INSIDE OF CURB.



LANDSCAPE NOTES:
1. ALL PLANTS INSTALLED SHALL MEET OR EXCEED THE MINIMUM REQUIREMENTS AS NOTED ON THE PLANS AND IN THE LATEST EDITION ON THE AMERICAN STANDARD FOR NURSERY STOCK, BY THE AMERICAN ASSOCIATION OF NURSERYMEN, ANSI Z60.1
2. THE CONTRACTOR SHALL BE RESPONSIBLE FOR HIS OWN QUANTITY TAKEOFF. THE QUANTITIES SHOWN ARE A MINIMUM AND ARE FOR REFERENCE ONLY.
3. PROPOSED PLANTING MATERIAL LOCATIONS IDENTIFIED ON THE PLANS CONVEY DESIGN INTENT ONLY. PRIOR TO INSTALLATION, THE CONTRACTOR SHALL COMPLETE A FIELD STAKEOUT OF ALL PROPOSED PLANTING MATERIAL LOCATIONS FOR THE OWNER'S REPRESENTATIVE'S INITIAL REVIEW. THE FINAL LOCATION OF ALL PROPOSED PLANTING MATERIALS WILL REQUIRE THE APPROVAL OF THE OWNER'S REPRESENTATIVE AT THE TIME OF INSTALLATION.
4. THE CONTRACTOR IS HEREBY NOTIFIED THAT IF UNDERGROUND UTILITIES EXIST IN THE VICINITY OF THE PLANTINGS, ALL PROPOSED PLANTINGS SHALL BE INSTALLED A MINIMUM OF 5' FROM ANY UNDERGROUND UTILITY, CONTACT THE OWNERS FIELD REPRESENTATIVE IF PLANTINGS SHOWN ON THE PLANS VIOLATE THIS SITUATION.
5. ALL TREES SHALL BE INSTALLED A MINIMUM OF 20' FROM ANY OVERHEAD ELECTRIC LINES.
6. PLANTING BACKFILL MIXTURE SHALL CONSIST OF 4 PARTS TOPSOIL, 1 PART PEAT MOSS, ½ PART WELL ROTTED MANURE, 10 LBS 5-10-5 PLANTING FERTILIZER THOROUGHLY MIXED PER CUBIC YARD.
7. STAKE AND WRAP TREES IMMEDIATELY FOLLOWING INSTALLATION.
8. ALL PLANTED AREAS SHALL RECEIVE A MAX. 2" LAYER OF COCOA BROWN MULCH. WEED MAT EQUAL TO "WEEDBLOCK" BY EASY GARDENER OR DEWITT WEED BARRIER.
9. ALL DISTURBED AREAS NOT RECEIVING PLANTINGS (INCLUDING RIGHT-OF-WAYS) SHALL BE PROVIDED WITH SOD. SEED PERMITTED AT RETENTION POND IF PLANTED EARLY ENOUGH TO ESTABLISH.
10. THE AREAS ON THE PLAN TO BE SEEDED SHALL HAVE 4" MINIMUM OF TOPSOIL, DISK PLOWED, LEVELED AND HAND RAKED SMOOTH. SURFACE SHALL BE ROLLED TO REMOVE LUMPS.
11. ALL SEEDED AREAS SHALL BE HYDROSEEDED IN ACCORDANCE WITH THE SPECIFICATION INDICATED. WHERE REQUIRED BY CLIMATIC CONDITIONS, SLOPE OR SEASON OF PLANTING.
    HYDROSEED SPEC: 20% RYE, 20% BLUE GRASS, 60% TURF TYPE FESCUE.
    SOD MAY BE SUBSTITUTED FOR SEEDING IN ORDER TO ACHIEVE THE REQUIRED COVERAGE (REFER TO CONTRACTOR FOR SOD/SEED COVERAGE).
12. THE CONTRACTOR SHALL BE RESPONSIBLE FOR WATERING, MOWING AND OTHER MAINTENANCE TO SEEDED AREAS UNTIL THE PROJECT IS ACCEPTED BY THE OWNER. THIS SHALL INCLUDE WATERING DAILY FOR 15 DAYS OR AS REQUIRED BY WEATHER CONDITIONS AND RE-SEEDING OF THIN SPOTS FOLLOWING THE GERMINATION OF THE SEEDS.
13. CONTRACTOR IS RESPONSIBLE TO PROTECT ALL EXISTING TREES ONSITE AND OFFSITE, WHICH ARE TO BE PRESERVED, FROM ALL POSSIBLE TYPES OF ROOT, TRUNK, AND LIMB DAMAGE.
14. CONTRACTOR TO PROVIDE A ONE YEAR GUARANTEE ON ALL NEW PLANTING MATERIALS, INCLUDING LAWNS, STARTING AT THE DATE OF FINAL ACCEPTANCE.

OSQ Series

OSQ™ LED Area/Flood Luminaire featuring Cree TrueWhite® Technology – Medium & Large

Rev. Date: V5 09/14/2021

Product Description

The OSQ™ Area/Flood luminaire blends extreme optical control, advanced thermal management and modern, clean aesthetics. Built to last, the housing is rugged cast aluminum with an integral, weathertight LED driver compartment. Versatile mounting configurations offer simple installation. Its slim, low-profile design minimizes wind load requirements and blends seamlessly into the site providing even, quality illumination. The 4L lumen package is a suitable upgrade for HID applications up to 250 Watt, and the 11L lumen package is a suitable upgrade for HID applications up to 400 Watt. The 22L lumen package is a suitable upgrade for HID applications up to 750 Watts, and the 30L lumen package is a suitable upgrade for HID applications up to 1000 Watts.
Applications: Parking lots, walkways, campuses, car dealerships, office complexes, tunnels, underpasses, and internal roadways

Performance Summary

Utilizes Cree TrueWhite® Technology on 5000K Luminaires

NanoOptic® Precision Delivery Grid™ optic

Assembled in the U.S.A. of U.S. and imported parts

Initial Delivered Lumens: 4,000 - 30,000

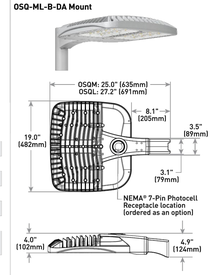
Efficacy: Up to 173 LPW

CRI: Minimum 70 CRI (3000K, 4000K & 5700K); 90 CRI (5000K)

CCT: 3000K, 4000K, 5000K, 5700K

Limited Warranty*: 10 years on luminaire; 13 years on Colorfast DeltaGuard® finish; up to 5 years for Synapse® accessories; 1 year on luminaire accessories

*See http://creelighting.com/warranty for warranty terms. For Synapse accessories, consult Synapse spec sheets for details on warranty terms.



Ordering Information

Fully assembled luminaire is composed of two components that must be ordered separately:
Example: **Mount:** OSQ-ML-B-AA-BK + **Luminaire:** OSQM-B-4L-30K7-2M-UL-NM-BK

Mount (Luminaire must be ordered separately)*

CREE LIGHTING

CPY Series - Version C

CPY250® LED Canopy/Soffit Luminaire

Rev. Date: V3 02/01/2022

Product Description

The CPY250® LED Canopy/Soffit Luminaire has an extremely thin profile constructed of rugged cast aluminum. It can be surface mounted easily from below the canopy deck and can be pendant mounted. Direct imaging of the LEDs is eliminated with a highly efficient patterned flat or 0.91" (23mm) drop glass lens.
Applications: Petroleum canopies, CNG fueling stations, soffits

Performance Summary

Assembled in the USA by Cree Lighting from US and imported parts

Initial Delivered Lumens: Up to 21,000

Efficacy: Up to 165 LPW

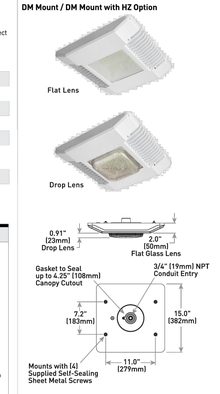
CRI: Minimum 70 CRI (40K, 50K, 57K); 80 CRI (30K); 90 CRI (40K, 50K)

CCT: 3000K, 4000K, 5000K, 5700K

Limited Warranty*: 10 years on luminaire/10 years on Colorfast DeltaGuard® finish/5 years on PML sensor/1 year on field-installed accessories

IP66 Rated (select models only)

Class I, Division 2 Hazardous Location for select models



*See http://creelighting.com/warranty for warranty terms

CREE LIGHTING

IG Series

LED Parking Garage Luminaire

Rev. Date: V6 09/17/2020

Product Description

Cree Lighting innovates again to reset the performance benchmark in parking garage applications with the IG Series featuring WaveMax® Technology, our innovative optical waveguide platform. Available in 33 watt and 60 watt, two lumen packages are offered to satisfy IES RP-8-18 and IES Security Zone 0-1-03 requirements for environments seeking higher light levels for improved safety and security. The streamlined design breaks away from dated traditional designs, blending form and function, to deliver superior low-glare illumination.

For enhanced performance and versatility, a range of optional integrated lighting controllers bring advanced capabilities and energy savings to the IG Series. From the stand-alone multi-level (PML) option to the full-featured Limelight by Lutron or Synapse® wireless control options, the IG Series provides the features and flexibility designed to meet the needs of today's most demanding parking garage applications.

Applications: Parking garages

Performance Summary

Utilizes WaveMax® Technology

Initial Delivered Lumens: 3,860 or 7,550 lumens

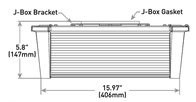
Input Power: 33 or 60 watts

Efficacy: Up to 126 LPW

Optic: Type V Short Distribution

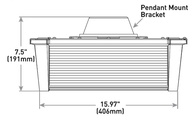
Assembled in the USA of U.S. and imported parts

CCT: 3000K, 3500K, 4000K, 5700K



CRI: Minimum 80 CRI

Limited Warranty*: 10 years on luminaire; 5 years on PML and Limelight options; up to 5 years for Synapse® accessories; 1 year on luminaire accessories



*See http://creelighting.com/warranty for warranty terms. For Synapse accessories, consult Synapse spec sheets for details on warranty terms.

THE EDGE® Series

LED Area Luminaire – Round

Rev. Date: V10 12/10/2021

Product Description

THE EDGE® Series has a slim, low profile design. Its rugged cast aluminum housing minimizes wind load requirements and features an integral, weathertight LED driver compartment, spun vented cover, high performance aluminum heat sinks and leaf/debris guard.
Applications: Auto Dealerships, parking lots, campuses, facade lighting and general site lighting applications

Performance Summary

Patented NanoOptic® Product Technology

Assembled in the USA by Cree Lighting from US and imported parts

Initial Delivered Lumens: Up to 25,065

Amherst

Town of Amherst Planning Department *Erie County, New York*

Brian J. Kulpa
Supervisor

Daniel C. Howard,
Planning Direct

Daniel J. Ulatowski,
Assistant Planning D

April 27, 2023

James A. Boglioli, Esq.
Benderson Development Company, LLC
570 Delaware Avenue
Buffalo, New York 14202

SUBJECT: MAJOR SITE PLAN REVIEW, **SP-2022-11**; PROPOSED SNYDER MIXED USE BUILDING; PROPERTY LOCATED AT **4548 & 4564 MAIN STREET, 17 FRUEHAUF AVENUE, AND 22 CHATEAU TERRACE.**

Dear Mr. Boglioli:

At its meeting of April 20, 2023 the Planning Board voted to **adjourn** the subject site plan because a (SEQR) State Environmental Quality Review Act determination of significance cannot be made by the Planning Board at this time for the following reasons:

1. The Planning Department must coordinate with the NYS Office of Parks Recreation & Historic Preservation (SHPO) pursuant to section 617.6(b)(4)(ii) of the SEQR regulations. Based on their resource evaluation report created March 23, 2023, SHPO has now determined that the building at 4548 Main Street is eligible for inclusion on the State and National Register of Historic Places.
2. The Town of Amherst Historic Preservation Committee (HPC) has received a local landmark designation application for 4548 Main Street. Accordingly, the Planning Board requests a determination from the HPC regarding the designation of 4548 Main Street.
3. The property at 22 Chateau Terrace is identified in the 2011 Reconnaissance Level Survey of Historic Resources for the Town of Amherst as part of a potential local historic district. The HPC has received a landmark designation application for 22 Chateau Terrace. Accordingly, the Planning Board requests a determination from the HPC regarding the designation of 22 Chateau Terrace.

Should you have any questions regarding the Planning Board's decision, please do not hesitate to call us.

Very truly yours,

SUBJECT: REQUEST FOR EXTENSION OF SITE PLAN APPROVAL, **SP-2016-04_B & SP-2016-04_C**; PROPOSED GURDWARA CULTURAL CENTER; PROPERTY LOCATED AT **6569 MAIN STREET**.

Dear Mr. Sheedy:

At its meeting of April 20, 2023 the Planning Board voted to adjourn the subject site plan until such time as an application is acted upon for the variances necessary to implement the site plan as presented.

Should you have any questions regarding the Planning Board's decision, please do not hesitate to call us.

Very truly yours,

for Daniel C. Howard, AICP
