XII. COUNCILMEMBER RESOLUTIONS

A. SUPERVISOR KULPA:

B. DEPUTY SUPERVISOR BERGER:

1. Resolution 2022-348

Zoning Board of Appeals Appointment

WHEREAS, the Town of Amherst maintains a Zoning Board of Appeals (ZBA) authorized to grant relief from any provision of the Town of Amherst Zoning Ordinance or any decision of an administrative official charged with the enforcement of that ordinance; and

WHEREAS, the ZBA is empowered to grant special use permits in certain instances as spelled out in the Zoning Ordinance. Town Law specifies the grounds and criteria that the ZBA must use to grant a variance; and

WHEREAS, the ZBA consisting of five (5) members appointed by the Town Board, each for a term of five (5) years on a staggered basis; and

WHEREAS, the ZBA currently has a vacancy that Ellen Parker has expressed interest in filling.

NOW, THEREFORE, BE IT RESOLVED that the Amherst Town Board appoints Ellen Parker to her first term to conclude December 31, 2022.

4/11/2022
Consent

RESULT:	**ADOPTED [UNANIMOUS]**
MOVER:	Jacqualine Berger, Deputy Supervisor
SECONDER:	Brian J. Kulpa, Supervisor
AYES:	Kulpa, Berger, Bucki, Lavin, Szukala

C. COUNCILMEMBER BUCKI:

1. Resolution 2022-349

Amherst Community Diversity Commission Appointments

WHEREAS, the purpose of the Amherst Community Diversity Commission (ACDC) is to enhance and increase cooperation, understanding, and dialogue among residents of diverse cultural, religious, socio-economic and racial backgrounds, and to promote inclusion throughout the town; and

WHEREAS, the Commission will study the demographics of Amherst, promote town-wide events that foster cultural awareness, increase minority participation on governmental boards, committees and in the town's workplace, and to facilitate meetings designed to promote a better understanding of who Amherst is as a community; and

WHEREAS, the Amherst Community Diversity Commission generally meets on the second Tuesday of the month, with the exception of July, August and December; and

WHEREAS, the ACDC has a maximum roster of 15 members, with the Supervisor and each Councilmember personally appointing up to three individual members who shall serve a two year term; and

WHEREAS, the ACDC currently has a Board of nine members, who shall continue to serve until their term of appointment expires, as personal appointments reflected in the following list:

Dr. Mohan Devgun, Vice-Chair, with term that expires 12-31-2023; Councilmember Berger
Gul A. Rahman, Secretary, with a term that expires 12-31-2023; Supervisor Kulpa
Pam Kefi, Member, with a term that expires 12-31-2023; Councilmember Szukala
Dr. Mohammed Khan, Member, with a term that expires 12-31-2023; Supervisor Kulpa
Heidi Nicklaus Lefebvre, Member, with a term that expires 12-31-2023; Councilmember Lavin
Thomas Lucia, Member, with a term that expires 12-31-2023; Councilmember Szukala
Anne Rohrer, Member, with a term that expires 12-31-2023; Councilmember Berger
Dr. Joseph Sankoh, Member, with a term that expires 12-31-2023; Councilmember Bucki

Maria Rosario Cala, Member, with a term that expires 12-31-2023; Councilmember Lavin; and

WHEREAS, the Members of the Commission shall, by majority vote, elect a Chairperson from among the members and such officers as may be deemed necessary from time to time; and

WHEREAS, Zhen Liu and Prachee Samant have expressed interest in serving on the ACDC.

NOW, THEREFORE, BE IT FURTHER RESOLVED that the Councilmember Bucki appoints Zhen Liu and Prachee Samant to the Amherst Community Diversity Commission, for their first term, each to conclude on December 31, 2023.

D. COUNCILMEMBER LAVIN:

E. COUNCILMEMBER SZUKALA:

1. Resolution 2022-350

Creation of the Merged Amherst Government Financial Advisory Board and the Appointments of Resident Volunteers

WHEREAS, the Town of Amherst has over 30 Boards and Committees; and

WHEREAS, in evaluating the Boards and Committees some of the duties responsibilities have been expired or now duplicated; and

WHEREAS, volunteers are limited when requesting residents to step into Board and Committee memberships; and

WHEREAS, the Government Study Committee and the Citizens' Financial Advisory Committee are two committees that could be merged to continue to serve the community's needs; and

WHEREAS, the conjoined committee name would now be the Amherst Government Financial Advisory Board; and

WHEREAS, the Amherst Government Financial Advisory Board would consist of five (5) members appointed by the Amherst Town Board majority to serve a two year term; and

WHEREAS, the Amherst Government Financial Advisory Board will meet once a quarter, or more, as needed; and

WHEREAS, the purpose and mission of the Board would be to review management letters from the Town auditors and to continue with each of the future management letter responses; and

WHEREAS, to investigate where the Comptroller's Department is not in compliance with the management letter and make recommendations to help ensure the compliance process; and

WHEREAS, to suggest improvements of the effectiveness or modification of the Town of Amherst government activities; and

WHEREAS, Jason Zaklikowski, John DiPasquale, Alexander Wyse, Kenneth Smith, and Gregory M. Dionne have expressed interest in serving on the Amherst Government Financial Advisory Board; and

WHEREAS, these volunteers have served on the Amherst Government Study Committee and/or Amherst Citizens' Financial Advisory Board and would like to continue serving on the newly merged Amherst Government Financial Advisory Board and the Town of Amherst.

NOW, THEREFORE, BE IT RESOLVED that the Amherst Town Board approves the merge of the Citizens Financial Advisory Committee and the Amherst Government Study Committee to be now named the Amherst Government Financial Advisory Board; and

BE IT FURTHER RESOLVED that the Amherst Town Board appoints Jason Zaklikowski, John DiPasquale, Alexander Wyse, Kenneth Smith, and Gregory M. Dionne to the Amherst Government Financial Board for a term to expire December 31, 2023.

4/11/2022
Consent

AYES:	Kulpa, Berger, Bucki, Lavin, Szukala

XIII. DEPARTMENT HEAD RESOLUTIONS AND REPORTS

A. TOWN ATTORNEY:

1. Resolution 2022-351

Townwide Centralized Security (Bond Resolution - $100,000)

AGENDA ITEM : APRIL 11TH, 2022

TO: **Town Board**

FROM: **Stanley J. Sliwa, Esq., Town Attorney**

DATE: April 6, 2022

RE: Townwide Centralized Security Improvements
2022-2027 C.I.P. - Project No. PO-05
Bond Resolution - $100,000

Kindly take the following action with respect to the above bond request:

(1) Adopt the attached SEQR determination for the above project as determined by the Town of Amherst Planning Department; and

(2) Adopt the attached bond resolution authorizing the issuance of $100,000 in serial bonds for the above-referenced Town improvement.

The adoption of the bond resolution does ***not*** require a public hearing to be held because the improvement is a Town improvement not involving a special district.

Also attached is the Map Plan and Report which provides further detail on the scope of the project.

Thank you.

PILOT Agreement - Amherst Senior Housing LLC (CRS# 3270)

AGENDA ITEM : APRIL 11TH, 2022

TO: **Town Board**

FROM: **Samuel A. Alba, Esq., Senior Deputy Town Attorney**

DATE: **April 6, 2022**

RE: **PILOT Agreement:**
Amherst Senior Housing LLC and the Town of Amherst, et al.
(CRS# 3270)

Kindly adopt the following resolution with respect to the above matter:

WHEREAS, Amherst Senior Housing LLC has requested that the Town Board approve a PILOT Agreement with a term of fifteen (15) years for the Property; and

WHEREAS, the content and form of the proposed PILOT Agreement have been reviewed and approved by the Town Assessor's Office and the Town Attorney's Office and a copy of the approved form of the proposed PILOT Agreement is attached hereto; and

WHEREAS, the PILOT Agreement must be approved by Erie County and the Williamsville Central School District;

NOW, THEREFORE, BE IT RESOLVED, that the Town Board approves the requested PILOT Agreement for the Project subject to the three (3) conditions set forth below and the Supervisor of the Town of Amherst is hereby authorized to sign the PILOT Agreement between Amherst Senior Housing LLC and the Town of Amherst, Erie County, and the Williamsville Central School District upon satisfaction of the following three (3) conditions:

1. The PILOT Agreement is subject to review and approval by Erie County;

2. The PILOT Agreement is subject to review and approval by the Williamsville Central School District; and

3. Approval of the PILOT Agreement is subject to successful completion of the Town's contract routing system (CRS).

Please note that the Schedule A that is separately attached will replace the Schedule A that is a part of the originally submitted PILOT.

License Agreement - 117 Canalview Terrace (Crance) (CRS# 3260)

AGENDA ITEM : APRIL 11TH, 2022

TO: **Town Board**

FROM: **Nicole M. Burroughs, Senior Paralegal**

DATE: **April 6, 2022**

RE: **Request for License Agreement (CRS #3260)**
Construction and Installation of Fence
Property Located At:
117 Canalview Terrace, Amherst, New York 14228

Kindly adopt a resolution authorizing the Supervisor to execute the attached License Agreement pending successful completion of the CRS.

The owners of the above-referenced property are seeking permission to construct and install a fence on their property that will encroach into an existing Town-owned easement, the details and stipulations of which are more fully described in the License Agreement.

This request was reviewed and approved by the Highway Department.

Thank you for your consideration.

I. ECONOMIC DEVELOPMENT:

J. EMERGENCY SERVICES:

1. Resolution 2022-375

Authorization to Adopt the 2022 Erie County, NY Hazard Mitigation Plan

WHEREAS, all jurisdictions within Erie County have exposure to hazards that increase the risk to life, property, environment, and the County and local economy; and

WHEREAS, pro-active mitigation of known hazards before a disaster event can reduce or eliminate long-term risk to life and property; and

WHEREAS, The Disaster Mitigation Act of 2000 (Public Law 106-390) established new requirements for pre- and post-disaster hazard mitigation programs; and

WHEREAS, a coalition of Erie County municipalities with like planning objectives has been formed to pool resources and create consistent mitigation strategies within Erie County; and

WHEREAS, the coalition has completed a planning process that engages the public, assesses the risk and vulnerability to the impacts of hazards, develops a mitigation strategy consistent with a set of uniform goals and objectives, and creates a plan for implementing, evaluating and revising this strategy;

NOW, THEREFORE, BE IT RESOLVED that the Town of Amherst:

1) Adopts in its entirety, the 2022 Erie County Hazard Mitigation Plan (the "Plan") as the jurisdiction's Hazard Mitigation Plan, and resolves to execute the actions identified in the Plan that pertain to this jurisdiction.

2) Will use the adopted and approved portions of the Plan to guide pre- and post-disaster mitigation of the hazards identified.

3) Will coordinate the strategies identified in the Plan with other planning programs and mechanisms under its jurisdictional authority.

4) Will continue its support of the Planning Partnership as described within the Plan.

5) Will help to promote and support the mitigation successes of all participants in this Plan.

6) Will incorporate mitigation planning as an integral component of government and partner operations.

7) Will provide an update of the Plan in conjunction with the County no less than every five years.

2. Resolution 2022-377

Emergency Purchase Authorization - National Water Main CRS# 3271

The Engineering Department is requesting that the Town Board approve an emergency purchase made with National Water Main Cleaning for the rehabilitation of two (2) manholes at the Campbell Boulevard Sanitary Sewer collapse site. The manholes closest to the site were evaluated and the concrete within the manholes was found to be deteriorated, exposing rebar in multiple locations and compromising the integrity of the structures. The quote for this work is attached.

This request is pending successful completion of the contract review process.

The total amount quoted for this work is $18,000.00 and the funding source for this request is to-be-determined.

Thank you for considering this request.

3. Resolution 2022-378

Award of Bid Alternatives - Gateway Park 2022-2027 CIP Project YR-1B

On February 17, 2022, bids were received for the above referenced project. At the March 14, 2022 Town Board meeting, Nova Site Co., 6 Lena Court, West Seneca, NY 14224, was awarded the Base Bid and Alternate Bid Item No. 4. in the amount of $327,200.

At this time and after further review of the project budget, we would like to recommend awarding Alternative No. 1, 2, and 5 for the negotiated amount of $196,352.00. Alternates 1, 2, and 5 include the shade canopy, concrete benches, and a new fence respectively. The total contract award for this project will be $523,552.00.

Funding for this contract shall be from project account KP2104.4972.

Thank you for considering this request.

O. INFORMATION TECHNOLOGY:

P. PLANNING:

1. Resolution 2022-301

To Authorize a Substantial Amendment to the FY 2020 Annual Action Plan for Community Development to Establish the Northwest Amherst Community Center

WHEREAS, the Town has adopted the FY 2020 Annual Action Plan on behalf of the Towns of Amherst, Cheektowaga and Tonawanda (ACT) HOME Consortium which programs the expenditure of funds for the Community Development Block Grant (CDBG) and HOME Investment Partnership (HOME) Funding; and

WHEREAS, the Town is seeking to amend the FY 2020 Action Plan to reallocate $380,000 in Supplemental CDBG-COVID funds awarded by the CARES Act according to the following program/budget lines; and

Decrease/Remove:

Senior Foundation Community Center	$	300,000

Medical Director Position	$	24,000
Small Business Assistance - Amherst Chamber	$	20,000
CDBG Community Vaccine Logistics	$	30,000
YWCA of WNY, Inc.	$	6,000
Create/Increase:		
Northwest Amherst Community Center	$	380,000

WHEREAS, this amendment provides funds for the establishment of the Northwest Amherst Community Center, which meets the use criteria of the Supplemental CDBG-COVID funds awarded by the CARES Act to "prevent, prepare for, and respond to COVID" by providing critical community space to serve the Creekwoods Neighborhood with social and other supportive programming; now therefore

BE IT RESOLVED, the Town of Amherst Town Board hereby authorizes the above Substantial Amendment to the FY 2020 Annual Action Plan.

LOCAL LAW NO.___ -2022

TOWN OF AMHERST

COUNTY OF ERIE, STATE OF NEW YORK

A Local Law Amending Chapter 184 of the Code of the Town of Amherst, Vehicles Abandoned

Be it enacted by the Town Board of the Town of Amherst as follows:

Section 1. Title.

This Local Law shall be referred to as, "A Local Law Amending Chapter 184 of The Code of The Town of Amherst, Vehicles Abandoned."

Section 2. Purpose

The purpose of this Local Law shall be to amend Section 184-5 of Chapter 184 of the Code of the Town of Amherst.

Section 3.

Section 184-5 of the Code of the Town of Amherst is amended as follows:

§ 184-5 **Removal of abandoned vehicles authorized.**

~~Any vehicle abandoned in violation of this chapter may be removed and stored by the Police Department or other agency authorized by the Town Board.~~ Any vehicle abandoned in violation of this chapter may be removed and stored by the police department, or all other agencies authorized by the Town of Amherst Code upon first having obtained a search warrant pursuant to Article 690 of the Criminal Procedure Law, which shall permit the seizure of any vehicle abandoned in violation of this chapter as authorized by CPL § 169.10. Application for search warrants should be made by the Building Commissioner, and/or his/her designee/employee and/or a member of the Amherst Police Department.

Section 4. Effective Date

This Local Law shall take effect immediately and be filed in the Office of the Secretary of State in accordance with Section 27 of the Municipal Home Rule Law and published pursuant to Sections 130 and 133 of the Town Law and Chapter 28 of the Code of the Town of Amherst.

LOCAL LAW NO.___ -2022

TOWN OF AMHERST

COUNTY OF ERIE, STATE OF NEW YORK

A Local Law Amending Chapter 151 of the Code of the Town of Amherst, Property Maintenance

Be it enacted by the Town Board of the Town of Amherst as follows:

Section 1. Title.

This Local Law shall be referred to as, "A Local Law Amending Chapter 151 of The Code of The Town of Amherst, Property Maintenance."

Section 2. Purpose

The purpose of this Local Law shall be to amend various sections of Chapter 151 of the Code of the Town of Amherst.

Section 3.

Chapter 151-15 of the Code of the Town of Amherst is amended as follows:

§ 151-15 **Failure to comply.**

~~In the event that the order is not complied with within 10 days following personal service or 14 days following mailing of the order, the Building Commissioner shall cause the work therein required to be done or completed.~~ In the event that the order is not complied with within ten (10) days following personal service or fourteen (14) days following mailing of the order, the Building Commissioner shall request that a search warrant be sought pursuant to Article 690 of the Criminal Procedure Law upon application of an Amherst Police Officer which shall permit the Building Commissioner, or his/her designated delegate, to cause any work required to be done and completed and to enter upon the premises for purposes of doing so.

Section 4.

Chapter 151-50 of the Code of the Town of Amherst is amended by adding a new subparagraph, I, as follows:

~~Strikethrough~~ = Deleted language; Underline = Added language

Attachment: LL - ch. 151 (RES-2022-266 : Local Law Amending Chapter 151 - Property Maintenance)

§ 151-50 **Code official; powers and duties.**

I. The code enforcement officer shall have the ability to request, upon approval of the Building Commissioner and/or the Police Department to make an application for a search warrant under Article 690 of the Criminal Procedure Law and to authorize the seizure of materials or other property which constitutes evidence or tends to demonstrate that an offense or violation of the Code was committed, or there is a particular person participating in the commission of an offense.

Section 5.

Chapter 151-53 of the Code of the Town of Amherst is amended by adding a new subparagraph, F, as follows:

§ 151-53 **Notices and orders.**

F. Whenever a code enforcement officer determines that there has been a violation of this Article, or grounds to believe a violation has occurred, he/she shall have the ability to request the Police Department to make an application to Town Court for a search warrant pursuant to Article 690 of the Criminal Procedure Law, including requesting permission to seize materials in compliance with CPL § 690.10.

Section 6.

Chapter 151 of the Code of the Town of Amherst is amended by adding a new section, §151-57, as follows:

§ 151-57 ~~(Reserved)~~ The Building Commissioner and/or his/her designated representative shall have the ability to apply for a search warrant under Article 690 of the Criminal Procedure Law seeking to search the premises to determine if the violation of the code is in existence and to seize any property as permitted under CPL § 690.10.

Section 7.

Chapter 151-61(C) of the Code of the Town of Amherst is amended by adding a new subparagraph, C, as follows:

§ 151-61 **Exterior structure.**

C. ~~(Reserved)~~ The Building Commissioner and/or his/her designated representative shall the ability of applying for a search warrant under Article 690 of the Criminal Procedure Law seeking to search the premises to determine if the violation of the code is in existence and to seize any property as permitted under CPL § 690.10.

Section 8.

Chapter 151-62 of the Code of the Town of Amherst is amended by adding a new subparagraph, H, as follows:

~~Strikethrough~~ = Deleted language; Underline = Added language

Attachment: LL - ch. 151 (RES-2022-266 : Local Law Amending Chapter 151 - Property Maintenance)

§ 151-62 **Interior structure.**

H. The Building Commissioner and/or his/her designated representative shall the ability of applying for a search warrant under Article 690 of the Criminal Procedure Law seeking to search the premises to determine if the violation of the code is in existence and to seize any property as permitted under CPL § 690.10.

Section 9.

Chapter 151-84 of the Code of the Town of Amherst is amended by adding a new subparagraph, K, as follows:

§ 151-84 **Means of egress.**

K. ~~(Reserved)~~ The Building Commissioner and/or his/her designated representative shall the ability of applying for a search warrant under Article 690 of the Criminal Procedure Law seeking to search the premises to determine if the violation of the code is in existence and to seize any property as permitted under CPL § 690.10.

Section 10.

Chapter 151-85 of the Code of the Town of Amherst is amended by adding a new subparagraph, C, as follows:

§ 151-85 **Accumulations and storage**.

C. The Building Commissioner and/or his/her designated representative shall the ability of applying for a search warrant under Article 690 of the Criminal Procedure Law seeking to search the premises to determine if the violation of the code is in existence and to seize any property as permitted under CPL § 690.10.

Section 11.

Chapter 151 of the Code of the Town of Amherst is amended by adding a new section, §151-88, as follows

§ 151-88 **Reasonable Cause/Application For Search Warrant**.

Whenever the Building Commissioner and/or his/her designee has reasonable cause to believe a violation of the Building Code, the State Uniform Building and Fire Code or any other provision of Town Law is violated, he/she shall have the ability to make an application for a search warrant in compliance with the provisions of Article 690 of the Criminal Procedure Law.

RE: SEQR Determination – Evergreen Landing Subdivision – Street Lighting
2022-2027 C.I.P Project H-16, TOA Project # 2016.054A

The Planning Department has reviewed the Map, Plan & Report for the subject project and has determined it to be an Unlisted action under the provisions of SEQR according to Part 617.6(a). A Negative Declaration is required to be issued by the Town Board prior to taking an affirmative vote on the bond for this project. Attached is a draft Negative Declaration for the Town Board's review and consideration.

Please contact our office if you have any questions.

SEQR

NEGATIVE DECLARATION

NOTICE OF DETERMINATION OF NON-SIGNIFICANCE

Lead Agency: Town of Amherst
Town Board

Project: Evergreen Landing
Subdivision
Street Lighting
2022 - 2027 C.I.P.
Project H-16

Address: 5583 Main Street
Williamsville, NY 14221
(716) 631-7051

Date:

This notice is issued pursuant to Part 617 and Local Law #3-82, as amended, of the implementing regulations pertaining to Article 8 (State Environmental Quality Review) of the Environmental Conservation Law.

The Lead Agency has determined that the proposed action described below will not have a significant adverse effect on the environment.

Title of Action: Evergreen Landing Subdivision Street Lighting

SEQR Status: Unlisted action

Description of Action:

The project includes the installation of 173 light poles and LED luminaires on both sides of six (6) existing residential roadways, staggered, at an approximate spacing of 100 – 150 feet. The light system will consist of aluminum poles, post top luminaire heads, hand holes, electrical wiring, and electrical connections to existing pad-mount transformers. Additionally, each luminaire will be fitted with an Asset Management Control node.Restoration of the disturbed areas are also included within the project.

Location: Evergreen Landing Subdivision, Town of Amherst, Erie County, New York

Petitioner: Amherst Engineering Department

Reasons Supporting This Determination

Based on information submitted by the applicant, including a Map, Plan and Report, a preliminary staff analysis was undertaken. Compared to the criteria listed in Section 617.7, all indications are that the proposed project will not have a significant impact on the environment, as follows:

1. The project is not expected to cause a substantial adverse change in existing air quality, ground or surface water quality or quantity, or noise levels; a substantial increase in solid waste production; or a substantial increase in the potential for erosion, flooding, leaching or drainage problems. The project area does contain floodplain and contains protected wetland areas.

2. The project will not result in the removal or destruction of vegetation or fauna; or in significant adverse impacts to fish or wildlife species, habitats or other natural resources. All disturbances will occur within the developed street right of ways.

3. The project is not expected to create any material conflict with the Town Comprehensive Plan or the regulations of the Town Zoning Ordinance. The project is consistent with Section 9.0 Community Facilities and Services in the Comprehensive Plan which promotes an ongoing system to identify and prioritize community facility and service needs throughout the Town.

4. The project is within an area identified by the State as potentially containing significant cultural or archeological resources, however the project will occur within previously disturbed areas currently improved with roadways. The action will not impair the character or quality of important cultural resources.

5. The project will not impair the character or quality of important aesthetic resources or of existing community or neighborhood character. The improvements will provide street lighting for an existing developed residential subdivision.

6. The proposed project will cause a change in the use of electrical energy, since the current subdivision is not served with street lighting, however, the proposed lighting will be new LED energy efficient technology.

7. The proposed project will not create any hazard to human health.

8. The proposed project will not cause a change in land use.

9. The project will not increase the number of people using this site over its current level of use as a residential subdivision.

Attachment: SEQR.NEGDECEvergreenSubStreetlighting-04052022125120 (RES-2022-345 : Evergreen Landing Subdivision Streetlighting (Bond

10. The project will not create a material demand for other actions resulting in a negative impact or consequence.

EXTRACT OF MINUTES

Meeting of the Town Board of the

Town of Amherst, in the County of Erie, New York

April 11, 2022

A regular meeting of the Town Board of the Town of Amherst, in the County of Erie, New York, was held at the Town Hall, 5583 Main Street, Williamsville, New York, on April 11, 2022.

There were present: Hon. Brian J. Kulpa, Supervisor; and

Board Members:

There were absent:

Also present: Francina J. Spoth, Town Clerk

* * *

The Supervisor stated that a public hearing had been called for this meeting at the Town Hall, 5583 Main Street, Williamsville, New York, at 7 o'clock P.M. (Prevailing Time) to consider the extension of the Town's Consolidated Lighting District (the "District") to include the Evergreen Landing Subdivision (the "Extension") and to make improvements to the District in connection therewith, consisting of acquisition and installation of street lighting for Extension, at the estimated maximum cost of $1,350,000 (CIP Project No. H0-16), as described in the map, plan and report dated February, 2022 prepared by the Town Engineering Department; and to hear all persons interested in the subject thereof concerning the same and for such other action on the part of the Town Board with relation thereto as may be required by law. The Town Clerk presented affidavits showing that the Notice of said public hearing had been duly published and posted pursuant to the provisions of Article 12 of the Town Law.

Attachment: PubIntOrderCertExMins (RES-2022-345 : Evergreen Landing Subdivision Streetlighting (Bond Resolution - $1.35M))

The Supervisor stated that the hearing in the said matter was now open and asked if there were any interested persons present who desired to be heard. The following persons appeared in favor of such extension of said District and the improvements in connection therewith:

The following persons appeared in opposition to such extension and improvement:

The Supervisor inquired as to whether there were any other persons present who wished to be heard. No one appeared, whereupon the Supervisor declared the public hearing closed.

PUBLIC INTEREST ORDER

WHEREAS, the Town Board of the Town of Amherst (herein called the "Town"), in the County of Erie, New York, on behalf of Consolidated Lighting District (herein referred to as the "District"), has caused the Town Engineering Department, engineers duly licensed by the State of New York (the "Engineer"), to prepare a map, plan and report dated February, 2022, to consider the extension of the Town's Consolidated Lighting District (the "District") to include the Evergreen Landing Subdivision and to make improvements to the District in connection therewith, consisting of the acquisition and installation of street lighting for the extension, at the estimated

Attachment: CertPubIntOrder (RES-2022-345 : Evergreen Landing Subdivision Streetlighting (Bond Resolution - $1.35M))

maximum cost of $1,350,000 (CIP Project No. H0-16) required in connection therewith as described in said report (the "Extension"); and

WHEREAS, the Engineer has estimated that the cost of such Extension shall be $1,350,000 and said map, plan and report have been filed with the Town Board; and

WHEREAS, the Town Board adopted an Order Calling for a Public Hearing describing in general terms the proposed Extension, specifying the estimated cost thereof, and stating the Town Board would meet to hear all persons interested in said Extension on April 11, 2022 at 7 o'clock P.M. (Prevailing Time) at the Town Hall, 5583 Main Street, Williamsville, New York; and

WHEREAS, a Notice of such public hearing was duly published and posted pursuant to the provisions of Article 12-A of the Town Law, and a copy of which was sent to the Office of the State Comptroller; and

WHEREAS, such public hearing was duly held by the Town Board on the 11th day of April, 2022 at 7 o'clock P.M. (Prevailing Time) at the Town Hall, 5583 Main Street, Williamsville, New York, with considerable discussion on the matter having been had and all persons desiring to be heard having been heard, including those in favor of and those in opposition to said Extension; and

WHEREAS, the Town Board, as lead agency, has reviewed the Short Form Environmental Assessment Form and has determined that the project is an "unlisted action", will not have a significant effect on the environment and has issued a negative declaration in connection therewith pursuant to the State Environmental Quality Review Act (SEQRA), constituting Article 8 of the Environmental Conservation Law, and 6 N.Y.C.R.R., Regulations Part 617;

Now, therefore, be it

Attachment: CertPubIntOrder (RES-2022-345 : Evergreen Landing Subdivision Streetlighting (Bond Resolution - $1.35M))

DETERMINED, that it is in the public interest to extend the District and make improvements in connection therewith as hereinabove described, at the estimated total cost of $1,350,000; and it is hereby

ORDERED, that the Extension shall be approved and that the Engineer shall prepare plans and specifications of the Extension and, with the assistance of the Town Attorney, shall prepare a proposed contract for the Extension, which plans and specifications and proposed contract shall be presented to the Town Board as soon as possible; and it is hereby

FURTHER ORDERED, that the expense of the Extension shall be financed by the issuance of $1,350,000 bonds of the Town, and the cost of the Extension, including payment of principal of and interest on said bonds, shall be paid by the assessment, levy and collection of assessments upon the several lots and parcels of land within the District, in the matter provided by law, but if not paid from such source, all the taxable real property in the Town shall be subject to the levy of ad valorem taxes, subject to certain applicable statutory limitations, sufficient to pay the principal of and interest on said bonds as the same shall become due; and it is hereby

FURTHER ORDERED, that this Public Interest Order is subject to permissive referendum; and it is hereby

FURTHER ORDERED, that the Town Clerk is directed to publish at least once in The Amherst Bee, a newspaper having a general circulation in the Town and hereby designated as the official newspaper of the Town for such publication, post on the Town's website at www.amherst.ny.us, on the front entrance door and rear doors of Town Hall, and post on the sign board of the Town maintained pursuant to subdivision 6 of section 30 of the Town Law, a copy of this Public Interest Order, certified by said Town Clerk, the first publication thereof and said posting to be not more than ten (10) days after the date of adoption of this Public Interest Order, and it is hereby

Attachment: CertPubIntOrder (RES-2022-345 : Evergreen Landing Subdivision Streetlighting (Bond Resolution - $1.35M))

FURTHER ORDERED, that the Town Clerk send a certified copy of this Public Interest Order to the Office of the State Comptroller along with an application for approval for the Extension as required under Section 209-f of the Town Law within ten (10) days after adoption thereof.

DATED: April 11, 2022

Engineering Department
Evergreen Landing Subdivision Street Lighting

BACKGROUND:

Evergreen Landing Subdivision is a residential neighborhood consisting of 195 lots and six (6) local roadways. Residents are requesting that street lighting be installed throughout the subdivision.

LOCATION:

This project is located in Evergreen Landing Subdivision located in Amherst, New York. Evergreen Landing is located between Tonawanda Creek Road and Tonawanda Creek, just east of Niagara Falls Boulevard. The Subdivision Plat Map is found in Appendix A.

PROJECT DESCRIPTION:

In 2019, the Town of Amherst entered into a contract with an energy consultant to conduct a Comprehensive Energy Audit of the Town's existing street lighting systems. This Energy Audit identified that the Town would benefit from the procurement of the utility-owned/maintained street light system and an LED conversion project. During this time, new subdivision street lighting installations by the utility company were put on hold until the energy audit was complete. These utility-owned street lights would have had to be purchased at a higher cost if installed by the utility company in new subdivisions. After acquisition, a new non-LED luminaire would have been replaced with an LED luminaire. As such, there are subdivisions constructed in the Town of Amherst during the period of the energy audit that are in need of street lighting.

The residents of Evergreen Landing Subdivision have emphatically requested that the street lights be installed throughout its neighborhood. Evergreen Landing Subdivision was made a priority by the Amherst Town Board and the Town is moving forward with a design-bid-build project. The project includes the installation of 73+/- light poles and LED luminaires on both sides of roadways, staggered, at an approximate spacing of 100 – 150 feet. The light system will consist of aluminum poles, post-top luminaire heads, hand holes, electrical wiring, and electrical connections to existing pad-mount transformers. Additionally, each luminaire will be fitted with an Asset Management Control node. Restoration of the disturbed areas are also included within the project. Preliminary design plans are attached as Appendix 'B'.

PROJECT PURPOSE:

The purpose of residential street lighting has a number of benefits. Street lights have been found to deter crime while increasing quality of life. Street lighting has also been shown to improve safety for drivers, bicyclists, and pedestrians.

Attachment: MPR H-16 Evergreen Landing Subdivision Street Lighting - Final - Reduced (RES-2022-345 : Evergreen Landing Subdivision

Town of Amherst
Engineering Department
Evergreen Landing Subdivision Street Lighting

STREET LIGHT DISTRICT EXTENSION:

The consolidated street light district must be extended to include the Evergreen Landing Subdivision as filed in the Erie County Clerk's Office under map cover number 3533, dated 11/30/12 in its entirety. A subdivision plat map is located in Appendix 'A' which is representative of the boundary for the lighting district extension.

OTHER LIGHTING:

Any remaining funds may be used to design and/or install other new lighting in the existing Lighting District, or within areas where the Town of Amherst extends the lighting district.

ANTICIPATED PROJECT SCHEDULE:

- Call for Public Hearing: March 14, 2022
- Public Hearing April 11, 2022
- Bond Action: April 11, 2022
- Design Completion: June 2022
- Construction: August – December 2022

FINANCIAL SUMMARY:

At the February 7, 2022 Town Board meeting, the 2022-2027 Capital Improvement Program was amended by Resolution 2022-156 allocating additional funding towards H-16, "Adding LED streetlights in various neighborhoods in Town and along Sweet Home Road" to account for the Evergreen Landing street lighting project.

The funding is identified as a Lighting District Bond. This project has a minimum useful life of 30 years.

PROJECT COST ESTIMATE:

○ Design & Construction Administration	$ 43,000
○ Construction	$ 1,215,000
○ Contingency	$ 85,000
○ Legal / Administrative / Interest	$ 7,000
Total Amount to be bonded	**$ 1,350,000**

TAXATION SUMMARY:

- ○ Current Bond Request: $ 1,350,000
- ○ Bond Term: 20 years (Lighting District Bond)
- ○ Annual Tax Impacts:
  - ▪ Lighting District: $0.0183 per year, per $1,000 AV
- ○ Typical Property Taxation Impacts:
  - ▪ Lighting District: $3.65 per year, per $200,000 property

RE: SEQR Determination – Evergreen Landing Subdivision – Street Lighting
2022-2027 C.I.P Project H-16, TOA Project # 2016.054A

The Planning Department has reviewed the Map, Plan & Report for the subject project and has determined it to be an Unlisted action under the provisions of SEQR according to Part 617.6(a). A Negative Declaration is required to be issued by the Town Board prior to taking an affirmative vote on the bond for this project. Attached is a draft Negative Declaration for the Town Board's review and consideration.

Please contact our office if you have any questions.

SEQR

NEGATIVE DECLARATION

NOTICE OF DETERMINATION OF NON-SIGNIFICANCE

Lead Agency: Town of Amherst
Town Board

Project: Evergreen Landing
Subdivision
Street Lighting
2022 - 2027 C.I.P.
Project H-16

Address: 5583 Main Street
Williamsville, NY 14221
(716) 631-7051

Date:

This notice is issued pursuant to Part 617 and Local Law #3-82, as amended, of the implementing regulations pertaining to Article 8 (State Environmental Quality Review) of the Environmental Conservation Law.

The Lead Agency has determined that the proposed action described below will not have a significant adverse effect on the environment.

Title of Action: Evergreen Landing Subdivision Street Lighting

SEQR Status: Unlisted action

Description of Action:

The project includes the installation of 173 light poles and LED luminaires on both sides of six (6) existing residential roadways, staggered, at an approximate spacing of 100 – 150 feet. The light system will consist of aluminum poles, post top luminaire heads, hand holes, electrical wiring, and electrical connections to existing pad-mount transformers. Additionally, each luminaire will be fitted with an Asset Management Control node.Restoration of the disturbed areas are also included within the project.

Location: Evergreen Landing Subdivision, Town of Amherst, Erie County, New York

Petitioner: Amherst Engineering Department

Reasons Supporting This Determination

Based on information submitted by the applicant, including a Map, Plan and Report, a preliminary staff analysis was undertaken. Compared to the criteria listed in Section 617.7, all indications are that the proposed project will not have a significant impact on the environment, as follows:

1. The project is not expected to cause a substantial adverse change in existing air quality, ground or surface water quality or quantity, or noise levels; a substantial increase in solid waste production; or a substantial increase in the potential for erosion, flooding, leaching or drainage problems. The project area does contain floodplain and contains protected wetland areas.

2. The project will not result in the removal or destruction of vegetation or fauna; or in significant adverse impacts to fish or wildlife species, habitats or other natural resources. All disturbances will occur within the developed street right of ways.

3. The project is not expected to create any material conflict with the Town Comprehensive Plan or the regulations of the Town Zoning Ordinance. The project is consistent with Section 9.0 Community Facilities and Services in the Comprehensive Plan which promotes an ongoing system to identify and prioritize community facility and service needs throughout the Town.

4. The project is within an area identified by the State as potentially containing significant cultural or archeological resources, however the project will occur within previously disturbed areas currently improved with roadways. The action will not impair the character or quality of important cultural resources.

5. The project will not impair the character or quality of important aesthetic resources or of existing community or neighborhood character. The improvements will provide street lighting for an existing developed residential subdivision.

6. The proposed project will cause a change in the use of electrical energy, since the current subdivision is not served with street lighting, however, the proposed lighting will be new LED energy efficient technology.

7. The proposed project will not create any hazard to human health.

8. The proposed project will not cause a change in land use.

9. The project will not increase the number of people using this site over its current level of use as a residential subdivision.

Attachment: MPR H-16 Evergreen Landing Subdivision Street Lighting - Final - Reduced (RES-2022-345 : Evergreen Landing Subdivision

10. The project will not create a material demand for other actions resulting in a negative impact or consequence.

CERTIFICATE AS TO USEFUL LIFE OF PROJECT

I, the undersigned, HEREBY CERTIFY as follows:

That I am the Town Engineer [Engineer] and I am familiar with the Town of Amherst Street Light Acquisition & Upgrades project, as described in the map, plan and report dated January 2022, prepared by the Town Engineering Department (2022-2027 CIP Project H-15)(Project #2016.054).

That said project is classified as a capital asset under generally accepted accounting principles for municipalities and that the useful life thereof is at least thirty (30) years.

That this certification is being delivered pursuant to the Local Finance Law Section 11.00 a. 35, constituting Chapter 33-a of the Consolidated Laws of the State of New York, in connection with the issuance of bonds or notes of the Town to finance such project, for the purpose of determining the maximum maturity of such bonds or notes.

IN WITNESS WHEREOF, I have hereunto set my hand this 10th day of January, 2022.

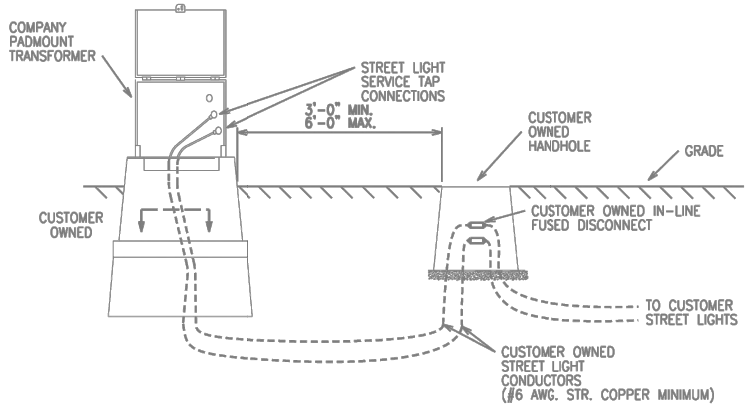

Figure 67 – Connection of Underground Supplied Street Light to National Grid Padmount Transformer

1. Install customer owned handhole as shown in Figure 67. Customer owned handhole shall house the in-line fused disconnect. See page 46-817 for details on the in-line fused disconnect.
2. Underground supply conductors shall be #6 AWG 7-strand copper (minimum) with RHH/RHW/USE-2 insulation. Conductors shall be color coded BLACK = Hot lead, WHITE = Neutral.
3. In cases where a new customer conduit is to be installed into a National Grid padmount transformer, National Grid shall determine the conduit entrance location at the padmount transformer foundation. The customer shall install the conduit to just outside this location. National Grid shall then create the opening in the padmount foundation and extend the customer conduit into the padmount foundation.
4. All electrical connections or disconnections to the secondary supply shall be performed by National Grid personnel and/or their designee.
5. In all cases where customer access to National Grid equipment is necessary, National Grid personnel shall be present to provide safety supervision and to unlock and relock the padmount transformer.

1 UNDERGROUND STREET LIGHITNG WIRING CONNECTION

SCALE: NO SCALE

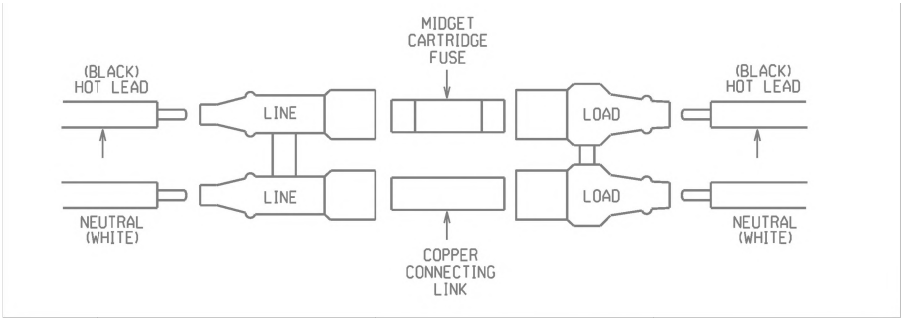

Figure 12 – In-Line Fused Disconnect Details

1. All customer owned outdoor lighting equipment shall be fused using a dual pole, watertight, in-line fuse holder and cartridge style fuse. This fuse, in addition to providing electrical protection, shall serve as a disconnection point for the customer owned outdoor lighting equipment.
2. Fuse Holder
   The fuse holder shall be a watertight device suitable for use in an outdoor environment.

   The fuse holder shall be totally insulated, thus having no exposed energized parts.

   The fuse holder shall accept #14 AWG - #6 AWG stranded copper conductors on both ends.

   The fuse holder shall be a dual pole device allowing simultaneous disconnection of both the 120 VAC hot lead (black wire) and the neutral conductor (white wire).

   The fuse holder shall be designed such that, when separated, the midget cartridge fuse and copper connecting link shall be held captive in the load end of the fuse holder.

   The fuse holder shall be polarized to prevent accidental reversal of the live leg and neutral connections.
3. Cartridge Fuse
   The fuse shall be a non-glass type, midget style cartridge fuse. Fuse dimensions shall be 13/32" diameter x 1½" length.
4. Neutral Connection
   The neutral conductor shall not be fused. Install a 13/32" diameter x 1½" length copper connecting link in place of a cartridge fuse.
5. Always provide sufficient slack in wiring to facilitate fuse replacement.

In the Matter

of the

Extension of the Town of Amherst Consolidated Lighting District to Evergreen Landing Subdivision and improvements in connection therewith

PART 85 APPLICATION

Sirs/Madams:

The following is a petition of the Town Board of the Town of Amherst, New York (the "Town"), for permission for the extension of the Town's Consolidated Lighting District (the "District") to include the Evergreen Landing Subdivision (the "Extension") and to make improvements to the District in connection therewith.

Pursuant to Article 12 of the Town Law of the State of New York, NYCRR, title 2, Part 85 respectfully shows:

85.3(b)(1) a. This petition is made pursuant to the resolution of the Town Board of the Town of Amherst (the "Board"), adopted at a meeting thereof held in said Town on April 11, 2022, a certified copy of which is hereto annexed as Exhibit A and made part hereof, wherein your petitioner was duly authorized and directed to make this application for permission to extend said District in compliance with the statues in such cases made and provided.

b. The Board believes the contents of this application to be accurate.

c. The Board has determined in the attached resolution adopted at a regular meeting thereof held in said Town on April 11, 2022, a certified copy of which is hereto annexed as Exhibit B and made a part hereof, that:

1.) The Extension, for which the permission is sought, is in the public interest and will not constitute an undue burden on the property which will bear the cost thereof.

2.) The cost of the proposed improvements is to be assessed in whole or in part against the benefited area, that all real property to be so assessed will be benefited by the proposed improvements, and that no benefited property has been excluded.

85.3(b)(2) The legal opinion in accordance with Section 85.5 is attached hereto as Exhibit C.

85.4(a) The documents and information required by the provisions of the Town Law pursuant to which this application is being made are as follows:

DRAFT

Attachment: Part 85 Application - Draft for TB Agenda (RES-2022-345 : Evergreen Landing Subdivision Streetlighting (Bond Resolution -

Exhibit D. Map, Plan and Report, dated February, 2022.

Exhibit E. Order of the Town Board Calling a Public Hearing dated March 14, 2022.

Exhibit F. Affidavit of Publication from the Amherst Bee verifying the publication of the Order Calling a Public Hearing in that official newspaper of the Town of Amherst.

Exhibit G. Affidavit of Posting of the said Order of the Town Board Calling a Public Hearing.

Exhibit H. Minutes of the Public Hearing held on the April 11, 2022, pursuant to said Order.

Exhibit I. Resolution of the Town Board following the Public Hearing on the April 11, 2022, for the extension of the Consolidated Lighting District and improvements in connection therewith.

Exhibit J. Resolution, dated April 11, 2022, of the Town Board declaring itself as Lead Agency to conduct proceedings pursuant to the State Environmental Quality Review Act (Article 8 of the Environmental Conservation Law) and finding no significant environmental impact and issuing a Negative Declaration; with a copy of the Short Environmental Assessment Form with Determination of Significance.

Exhibit K. Resolution of Town Board pursuant to NYCRR Part 85 Section 85.3(b)(1) dated April 11, 2022.

85.4(b) The proposed improvements consists of:

The installation of 73 light poles and LED luminaires on both sides of six (6) existing residential roadways, staggered, at an approximate spacing of 100-150 feet. The lighting system will consist of aluminum poles, post top luminaire heads, hand holes, electrical wiring, and electrical connections to existing pad-mount transformers. Additionally, each luminaire will be fitted with an Asset Management Control note. Restoration of disturbed areas is also included within the project.

85.4(c) The total estimated maximum cost is One Million Three Hundred Fifty-Thousand Dollars ($1,350,000).

85.4(d) The Town Board, as the governing board of the applicant, considered the following factors in making its determination that the proposed improvements are in the public interest: 1) That the extension of the Consolidated Lighting District into the Evergreen Subdivision would in likelihood maintain, if not improve, the value of the real property owned by the residents. 2) All non-exempt vacant parcels will be assessed a portion of the debt service.

85.4(e) The proposed manner of financing the cost of the improvements will be through the issuance of bonds and/or bond anticipation notes issued on behalf of the Town through a competitive or private sale.

DRAFT

Attachment: Part 85 Application - Draft for TB Agenda (RES-2022-345 : Evergreen Landing Subdivision Streetlighting (Bond Resolution -

85.4(f) The estimated cost of operating and maintaining the proposed improvements is $3,005.41 annually. The estimate is based on an annual cost of $19.17 per street light for energy (cost from National Grid), and $22.00 per street light for maintenance (cost from NY Power Authority maintenance contract);

85.4(g) The town will raise the costs of debt service, operation and maintenance by raising taxes based on the assessed value of each property within the Consolidated Lighting District.

85.4(h) The aggregated assessed valuation of all taxable real property in the Consolidated Lighting District is estimated to be $5,436,561,064. This is based on the existing Consolidated Lighting District assessed valuation of $5,367,369,978, plus an estimated value of $69,191,086 for the Evergreen Landing subdivision once all homes are built. It is anticipated that the subdivision will be fully built out prior to additional taxes being raised for the purpose of the project.

85.4(i) This is not an application under section 54 or 209-q of the Town Law or to increase the maximum amount to be expended.

85.4(j) This is not an application pursuant to the County Law.

85.4(k) The average full valuation of the taxable real property in the Town of Amherst computed pursuant to subdivision 7-a of section 2.00 of the Local Finance Law is $11,193,197,428.

85.4(l) The outstanding indebtedness as of the date hereof of the Town of Amherst is $127,986,023, as per the Schedule of Indebtedness. (See Exhibit L). The Town has $36,771,700 in authorized, but unissued debt. This includes $31,000,000 authorized for the purchase of the town-wide streetlight asset from National Grid, and its conversion to LED.

85.4(m)

1) A total of $11,556,345.85 is appropriated in the 2022 Town budget for repayment of debt principal. This includes $8,121,500.00 for bond principal and $3,434,845.85 for BANs principal

2) There is no State or Federal aid available for the payment of debt principal on any debt.

3) The amount of debt excludable for computing the Town's debt limit under Article VIII of the New York State Constitution is $27,571,655, bringing the Town's Net Indebtedness to $100,414,368.

85.4(n) Not applicable.

85.4(o) The current tax rates and assessments application to the taxable real property which will bear the cost of the proposed improvement per $1,000 assessment are as follows:

County	N/A
Town, including highway	$0.641759 per $1000 AV; total AV $5,367,369,978_____
School,	N/A

DRAFT

Attachment: Part 85 Application - Draft for TB Agenda (RES-2022-345 : Evergreen Landing Subdivision Streetlighting (Bond Resolution -

Fire	N/A
Other	N/A

85.4(p) The assessed value of a typical residential property in the Town of Amherst is $220,000 and in the extended Consolidated Lighting District is $235,000.

85.4(q) It is estimated that the owner of a typical property in the Consolidated Lighting District will be required to pay an additional $4.4238 in the first year following approval of the application, if granted. This includes $4.2939 for bond payments related to the improvements, $0.0605 for the annual street light energy charge, and $0.0694 for the estimated annual maintenance charge. The estimated cost for the energy charge was obtained from National Grid, and the estimated cost for the maintenance was obtained from the New York Power Authority.

85.4(r) The maximum amount any real property owner will be required to pay in the first year following approval of an application, if granted, for debt service, operation and maintenance and other charges related to the proposed improvements, is anticipated to be $4.4238, as outlined in 85.4(q) above.

85.4(s) No state lands are included in the area which will bear the cost of the improvements.

85.4(t) a statement whether the area which will bear the cost of the proposed improvements is wholly or partially within an existing or proposed agricultural district, and if so, how the assessment base for the proposed improvement will be affected thereby;

85.4(u) a statement of the population of the area which will bear the cost of the improvements, the number of one- and two-family homes located in the area, the assessed value of the typical one- or two-family home, and a description of any nonresidential areas, including the total assessed value thereof; (v) if the proposed;

85.4(v) The proposed extension and improvement will not benefit vacant land. The only potential vacant land being affected are lots that are currently vacant, but in the process of development. Once the development is fully built out, no vacant land will be affected.

85.4(w) None.

85.4(x) There is no order of any court or agency, State or Federal relating to the proposed District and no pending or threatened judicial or administrative proceedings which relate to the improvements.

85.4(y) The Town has published notice of a public hearing, to be held on April 11, 2022, in the official newspaper of record (the Amherst Bee). All public hearing notices are published in the same location.

85.4(z) No written objection expressing opposition to the undertaking of the improvements has been received by the Town from any of the owners of real property that will bear the burden of the costs of the proposed improvement.

Attachment: Z-2021-11 TB letter packet 041122 (RES-2022-346 : 6621 Main Street & 20 Oakwood Drive Rezoning)

Town Board Agenda of April 11, 2022

March 29, 2022

The Honorable Town Board
Town of Amherst
5583 Main Street
Williamsville, NY 14221

Subject: Request to rezone 0.85 ± acres of land from GB and R-3 to OB, Z-2021-11; property located at 6621 Main Street and 20 Oakwood Drive, Valdemar Blaszak, Petitioner.

Honorable Members:

The subject properties total 0.85 ± acres and are comprised of 2 separate parcels located at the southeast corner of Main Street and Oakwood Drive approximately 0.5 ± miles west of the intersection of Transit Road.

The Main Street site is currently occupied by a vacant restaurant and associated parking lot. At the site located on Oakwood Drive there is a sand volleyball court surrounded by grass and existing vegetation.

Main Street is a New York State highway designated as a major arterial and Oakwood Drive is a local street in the Town of Amherst Bicentennial Comprehensive Plan.

For information on the surrounding zoning and land use, please refer to the attached sketch.

The purpose of this request is to allow for the future development of a dental office/laboratory. The concept plan illustrates the construction of a two-story building and has a footprint of approximately 4,900 square feet. The concept plan also shows parking that fronts on Main Street as well as parking located adjacent to the single-family home to the south of the subject site. Landscaping is included at the east, west, and south property lines and a masonry wall is shown at the corner of Main Street and Oakwood Drive.

On May 15, 2000, the Town Board approved a rezoning request (Z-2000-06) for the property at 6621 Main Street from R-3 to GB to bring the zoning into conformance with the existing land use. There are no previous rezoning applications for the parcel located at 20 Oakwood Drive.

Honorable Town Board

Rezone land from R-3 and GB to OB;
property located at 6621 Main Street
and 20 Oakwood Drive
Agenda of April 11, 2022

The Planning Board offers the following findings consistent with Section 8-3 of the Zoning Ordinance.

INTENT AND OBJECTIVES OF THE COMPREHENSIVE PLAN

Figure 6 of the Bicentennial Comprehensive Plan depicts the subject properties as a 'Commercial-Office' land use. As described in the Comprehensive Plan this land use designation is used for complimentary and appropriately scaled professional offices. Individual office developments like the subject request are separate from traditional business parks and do not require large plots of land, which in turn makes them a good fit as a component of a larger mixed-use corridor. Commercial offices, according to the Comprehensive Plan, should meet certain principles. The concept plan provided seeks to meet the principles such as: location on a corner lot along an existing commercial arterial (Main Street) in close proximity to similar land uses; and access to the site proposed in the concept plan includes a curbcut on both Main Street and Oakwood Drive which will provide circulation through the site without creating conflict with the adjacent properties. The concept plan also includes a vegetative buffer on the east, west, and south property boundaries in an attempt to limit the impact to adjacent properties. The concept plan is consistent with the 'Commercial-Office' land use designation as described in §3.3.4 of the Bicentennial Comprehensive Plan.

INTENT AND OBJECTIVES OF THE ZONING ORDINANCE

The proposed rezoning is consistent with Section 1-2-2K of the Zoning Ordinance which seeks to guide future development of the Town to bring about the gradual conformity of land and building uses in accordance with the objectives of the Comprehensive Plan. A full technical review for compliance with the Zoning Ordinance will take place at site plan review.

CONSISTENCY/COMPATIBILITY WITH SURROUNDING DEVELOPMENT/ZONING

The properties to the north, east and west of the subject rezoning are zoned Office Business (OB) and the properties to the south of the subject site are zoned Residential District 3 (R-3). A rezoning of the subject parcels to OB would further advance a goal of the Zoning Ordinance to bring gradual conformity of land uses to be consistent with the Bicentennial Comprehensive Plan. With adequate buffering and screening to adjacent single-family homes, the proposed land use will be compatible and consistent with the surrounding development.

ADEQUATE SERVICES AND UTILITIES

All services and utilities necessary for the proposed rezoning are available and adequate at the subject location. This is an Unlisted Action, and an environmental assessment consistent with SEQR has been prepared for the subject proposal. Pursuant to Local Law #3-82, as amended, the requirements of SEQR are complete and the proposal is not expected to have a significant adverse effect on the environment.

RECOMMENDATION

The Planning Board at their meeting of February 17, 2022 recommended that the Town Board find that the requirements of SEQR are complete and that the subject request will not have a significant adverse effect on the environment. The Planning Board also recommended that the subject rezoning request be approved.

Attachment: Z-2021-11 TB letter packet 041122 (RES-2022-346 : 6621 Main Street & 20 Oakwood Drive Rezoning)

Honorable Town Board

Rezone land from R-3 and GB to OB;
property located at 6621 Main Street
and 20 Oakwood Drive
Agenda of April 11, 2022

The Planning Department requests that if the Town Board desires to act on the rezoning request, that a decision date be established after the public hearing so that the Planning Department can prepare a determination of environmental significance pursuant to SEQR, and prepare a resolution for the Town Board's consideration.

Very truly yours,

DANIEL C. HOWARD, AICP
Planning Director

TOWN OF AMHERST
PLANNING BOARD
ZONING RESOLUTION
Z-2021-11

FEB24'22 PM 4:51 RCVD

PETITIONER

Valdemar Blaszak
c/o Jeff Palumbo, Esq.
Barclay Damon LLP
9276 Main Street, Suite 3
Clarence, NY 14031

PROPERTY LOCATION

6621 Main Street & 20 Oakwood Drive

WHEREAS the Town of Amherst Planning Board on Thursday, February 17, 2022 held a public hearing on the proposed rezoning of land from General Business District (GB) and Residential District Three (R-3) to Office Building District (OB), and

WHEREAS the Planning Board has reviewed plans and other materials regarding the rezoning proposal, and

WHEREAS the materials and plans have been referred to the Town's various review agencies, and

WHEREAS in accordance with Section 8-3-5 of the Zoning Ordinance the Planning Board finds that:

A. The proposed zoning and development plan is generally consistent with the policies of the Comprehensive Plan and the Zoning Ordinance.

B. There are adequate services and utilities available or proposed to be made available in the construction of the development.

C. The proposal is compatible with the present zoning and conforming uses of nearby property and with the character of the neighborhood.

D. The subject property is suitable for uses permitted by the current versus the proposed district.

E. The proposed change does tend to improve the balance of uses, and does not meet a specific demand in the Town.

F. Review by the US Army Corps of Engineers under Section 404 of the Clean Water Act may be waived because the parcel is developed.

WHEREAS pursuant to Local Law #3-82, as amended, the Planning Board recommends that the Town Board determine that the requirements of SEQR are complete and that the subject proposal is not expected to have a significant adverse effect on the environment.

Re: 6621 Main Street and 20 Oakwood Drive
Petition for Rezoning – First Revised Submission

Dear Honorable Members of the Town Board:

Barclay Damon LLP represents Valdemar Blaszak and VBW Properties LLC ("Petitioner"), owner of 6621 Main Street, SBL 81.08-4-1 and 20 Oakwood Drive, SBL 81.08-4-2.1 ("Properties") in the Town. Petitioner, through an affiliated company, owns the adjacent property at 6599 Main Street where he operates a dental lab. The Properties contain a former vacant bar, volleyball court associated with the bar operation, and unpaved parking. Petitioner is proposing a redevelopment of the Properties into an 8,000 – 9,000 SF, two-story dental office with associated parking to complement the existing dental lab at 6599 Main Street. Petitioner will separately file its site plan application subsequent to this petition.

Petitioner first submitted its Petition on November 15, 2021, seeking to solely rezone 20 Oakwood. After further discussion with the Town Planning Department, Petitioner has revised its request, and Petitioner respectfully requests a Local Law amending Chapter 203 of the Town of Amherst Code to rezone the 6621 Main Street from GB to OB and 20 Oakwood from R-3 to OB and to Amend the Zoning Map, Map D12, accordingly.

Enclosed, please find the following:

1. Petition for Rezoning/Town Application Form
2. Town Zoning Code and Comprehensive Plan Analysis
3. Infill Redevelopment Concept Plan
4. Existing Boundary Survey
5. Legal Description of Proposed Rezone Area
6. Legal Description in the Form of Draft Local Law

9. Attach Survey and Legal description of land to be rezoned. The Survey must be prepared by a New York State Licensed Land Surveyor.

10. Said property has the following deed restrictions or covenants: (attach copy)

Liber _____ Page _____

11. Information on proposed project:

A. Description of the character of the proposed development:
Rezone 20 Oakwood Drive from R-3 to OB and 6621 Main Street from GB to OB in anticipation of dental office redevelopment on parcel to the north.

B. Rationale for rezoning request:

1. Why was this site chosen?
Proximity to related dental lab and opportunity to reactivate vacant property.

2. Why cannot land be used with the existing zoning?
GB Zoning and R3 zoning do not alight with adjacent OB zoned parcel.

3. How will this rezoning impact surrounding properties?
None. Low-impact medical office use conforming to other office uses nearby. Development will have substantial landscape buffer and dark sky compatible, downward facing lighting.

4. How will this rezoning impact the school system?
Increased tax revenue; no students.

Attachment: Z-2021-11 TB letter packet 041122 (RES-2022-346 : 6621 Main Street & 20 Oakwood Drive Rezoning)

12. Quantitative Data:

A. Total # of dwelling units n/a

B. Distribution of dwelling units by type n/a

C. Gross Residential Density per acre n/a

D. Total amount of Open Space approximately 1/4 to 1/3 of property acreage

E. Proposed Non-Residential Floor Area 8,000 - 9,000 SF

13. Development Schedule:

Start upon receipt of building permit

Finish 9-12 months

Stages (# of) 1

14. If any portion of the proposed development is planned to be sold or leased, please describe:

Petitioner is contract purchaser of 20 Oakwood and 6621 Main Street.

15. Open Space ownership and maintenance provisions (if applicable):

Reciprocal Easement or property merger.

16. Basis for Findings (Sec. 8-3-5 of the Town Zoning Code) (Attach sheets and supplemental materials as necessary.)

A. The proposed zoning and development plan must be generally consistent with the policies of the Comprehensive Plan and the Town Zoning Ordinance.

1. State in detail why the proposed zoning is consistent with the adopted Town of Amherst Bicentennial Comprehensive Plan. Cite specific sections, maps, and/or figures in the Plan that support the proposed zoning at this location (The Comprehensive Plan document is available at the Planning Department, Town Clerk's Office, Amherst libraries, or at www.amherst.ny.us). Add sheets as needed.

see attached analysis.

Attachment: Z-2021-11 TB letter packet 041122 (RES-2022-346 : 6621 Main Street & 20 Oakwood Drive Rezoning)

2. Pursuant to NYS Town Law Section 272a(11), "All Town land use regulations must be in accordance with a comprehensive plan adopted pursuant to this Section." The Amherst Town Board adopted the Bicentennial Comprehensive Plan pursuant to NYS Town Law 272 on January 2, 2007. If the rezoning is approved, the Town Board may require the Plan to be amended, as applicable.

   Cite all text, maps, or figures that must be amended to support the proposed zoning at this location (attach pages as necessary) and provide detailed suggested amendments.
   see attached analysis.

3. State why the proposed zoning is consistent with intent and objectives (Sec. 1-2-2) of the Zoning Ordinance:
   see attached analysis.

B. Adequate Services and Utilities are available or are proposed to be made available with the construction of the development:

1. Sanitary Sewer existing Town Sanitary Sewer District
2. Storm Sewer/Drainage Amherst Sewer District # 16
3. Water Erie County Water Authority Lease Managed Area
4. Other n/a

C. Compatibility with the present zoning and conforming uses of nearby property and with the character of the neighborhood:
see attached analysis.

D. Suitability of the subject property for uses permitted by the current versus the proposed district:
see attached analysis.

E. Whether the proposed change tends to improve the balance of uses, or meets a specific demand in the Town:
see attached analysis

Attachment: Z-2021-11 TB letter packet 041122 (RES-2022-346 : 6621 Main Street & 20 Oakwood Drive Rezoning)

17. The petitioner encloses herewith the sum of $1265 to pay the fee, and consents to the placement of a sign(s) at the described location identifying this request for a period of time to be determined by the Town Clerk. Paid with initial application submission made November 15, 2021

18. The undersigned certifies that all information required to be disclosed pursuant to Section 809 of the General Municipal Law (see below) is as follows:

The undersigned swears or affirms that all statements made herein are true, that all drawings submitted correctly show the situation involved in this petition.

Attachment: Z-2021-11 TB letter packet 041122 (RES-2022-346 : 6621 Main Street & 20 Oakwood Drive Rezoning)

Town Zoning Code and Comprehensive Plan Analysis

Town Zoning Code and Comprehensive Plan Analysis
6621 Main Street and 20 Oakwood Drive

Pursuant to § 203-8-3-5 of the Town of Amherst Zoning Code, Petitioner submits the following in support of its Application to rezone 6621 Main Street (SBL 81.08-4.1) from General Business (GB) to Office Building (OB) and 20 Oakwood Drive (SBL 81.08-4-2.1) from Residential District Three (R-3) to Office Building (OB) (collectively "Properties").

A. The proposed zoning and development plan is generally consistent with the policies of the Comprehensive Plan and this Ordinance.

1. State in detail why the proposed zoning is consistent with the adopted Town of Amherst Bicentennial Comprehensive Plan.

The requested rezoning is one step towards a comprehensive infill redevelopment of Properties located along the well-trafficked Main Street Corridor that is characterized by infill office development. Comprehensive Plan at 3.3.4. And, the Comprehensive Plan actively promotes infill development. Comprehensive Plan at 11.2, Priority Action Program #2 – "Provide expanded incentives for reinvestment and revitalization."

However, Comprehensive Plan also sets forth specific sets of considerations for infill office development along the Main Street Corridor and in Southeast Amherst given the close proximity of office uses to residential uses. Comprehensive Plan at 3.3.4 and 3.3.9. Consequently, "close attention must be paid to site/design criteria pertaining to buffering and access management to avoid conflicts with established neighborhoods and commercial corridors," as well as "transitions and buffers/landscaping between residential and nonresidential uses." Comprehensive Plan at 3.3.4 and 3.3.9. Petitioner's rezoning request and subsequent infill redevelopment strikes a balance between the Comprehensive Plan's goals to both actively promote infill development *and* balance the transition between infill office development and established residential neighborhoods.

Petitioner has strategically conceived of the resulting infill redevelopment to avoid impact to the neighboring parcels south of the Properties. A dental office will front along Main Street with the accessory parking lot in the rear. The dental office will match the existing dental lab immediately to the west and other offices and medical offices uses in close proximity. The Petitioner will also include a substantial vegetative buffer and dark sky compatible, downward facing lighting, all to minimize intrusion into the neighboring residential parcels to the south. The result is a balanced infill redevelopment consistent with the Comprehensive Plan.

2. Pursuant to New York State Town Law § 272a(11) . . . . cite all text, map, and/or figures that must be amended to support the proposed zoning at this location.

Attachment: Z-2021-11 TB letter packet 041122 (RES-2022-346 : 6621 Main Street & 20 Oakwood Drive Rezoning)

The proposed zoning will require a Local Law amending Chapter 203 of the Town of Amherst Code to rezone the Properties to OB and to amend the Zoning Map accordingly.

3. **State why the proposed zoning is consistent with intent and objections of § 203-1-2-2 of the Zoning Code.**

   The rezoning request is the catalyst to reactivate a vacant former bar with an infill redevelopment that "protects the character and values of residential [and] commercial uses and to insure their orderly and beneficial development." Town Zoning Code § 1-2-2.A. The dental office is a low impact commercial use that holds regular business hours and results in minimal traffic. Petitioner's infill redevelopment will further mitigate these low impacts with a substantial vegetative buffer between the employee and patient parking lot and neighboring residential parcel to the south. Moreover, the resulting dental office will match the neighboring dental lab and other medical and office uses along the Main Street Corridor. Town Zoning Code § 1-2-2.D. Additionally, as mentioned above, the rezoning request and subsequent infill redevelopment is consistent with the Comprehensive Plan. Town Zoning Code § 1-2-2.E, K.

B. Adequate services and utilities available or proposed to be made available in the construction of the development.

The rezoning will not result in any change to structures or utility consumption currently servicing the Property, which includes:

1. **Sanitary Sewer** – existing Town Sanitary Sewer District
2. **Storm Sewer/Drainage** – Amherst Sewer District # 16
3. **Water** – Erie County Water Authority Lease Managed area.

C. Compatibility with the present zoning and conforming uses of nearby property and with the character of the neighborhood.

Rezoning of Properties will eliminate GB zone in the area and match existing OB zone to the west. Rezoning promotes infill development per Comprehensive Plan goals. Further, the resulting infill redevelopment offer low-impact and office use with substantial buffering to residential parcel to the south.

D. Suitability of the subject property for uses permitted by the current versus the proposed district.

OB is a more restrictive non-residential zone with less permitted uses than GB. Consequently, the OB zone is less impactful to adjoining residential areas.

Attachment: Z-2021-11 TB letter packet 041122 (RES-2022-346 : 6621 Main Street & 20 Oakwood Drive Rezoning)

E. Whether the proposed change tends to improve the balance of uses, or meets a specific demand in the Town.

The rezoning actively promotes infill development, meeting a specific demand of the Comprehensive Plan. The rezoning jumpstarts an infill redevelopment that replaces a vacant use with a productive use, improving the balance of uses. Lastly, the rezoning and resulting infill redevelopment improves the balance and meets a demand for uses that both activate development in a way that balances and respects neighboring residential parcels.

Draft Local Law

[word version sent electronically]

LOCAL LAW NO. _____-2022_

TOWN OF AMHERST
COUNTY OF ERIE, STATE OF NEW YORK

A LOCAL LAW AMENDING CHAPTER 203 OF THE TOWN OF AMHERST CODE, KNOWN AS THE ZONING ORDINANCE, TO REZONE 6621 MAIN STREET FROM GB TO OB AND 20 OAKWOOD DRIVE FROM R-3 TO OB AND TO AMEND THE ZONING MAP ACCORDINGLY

Be it enacted by the Town Board of the Town of Amherst as follows:

Section 1. Title.

This Local Law shall be referred to as, "A Local Law Amending the Zoning of 6621 Main Street and 20 Oakwood Drive."

Section 2. Legislative Findings and Intent.

The Town Board of the Town of Amherst finds that an application to rezone 6621 Main Street from GB General Business to OB Office Building and 20 Oakwood Drive from R-3 Residential District Three to OB Office Building zoning has been filed and is in proper order. The Town Board further finds that the rezoning is consistent with the Comprehensive Plan.

Section 3. Amherst Zoning Map.

The Town Board hereby amends its zoning map which is incorporated by reference in the Town zoning code by amending from GB General Business to OB Office Building the zoning of 6621 Main Street, **subject to any conditions imposed by the authorizing resolution**; legally described as follows:

> ALL THAT TRACT OR PARCEL OF LAND, situate in the Town of Amherst, County of Erie and State of New York, being part of Lot No. 104, Township 12, Range 7 of the Holland Land

Attachment: Z-2021-11 TB letter packet 041122 (RES-2022-346 : 6621 Main Street & 20 Oakwood Drive Rezoning)

Company's Survey and according to map filed in Erie County Clerk's Office under Cover No. 1276 is known as subdivision lots number four (4), five (5) and six (6), situate on the south side of Main Street, east corner of Oakwood Drive; and

The Town Board hereby amends its zoning map which is incorporated by reference in the Town zoning code by amending from R-3 Residential District Three to GB General Business the zoning of 20 Oakwood Drive, **subject to any conditions imposed by the authorizing resolution**; legally described as follows:

ALL THAT TRACT OR PARCEL OF LAND, situate in the Town of Amherst, County of Erie and State of New York, being part of Lot Number 104, Township 12, Range 7 of the Holland Land Company's Survey and further distinguished as Subdivision Lots Number 125 and 126 as shown on map filed in the Erie County Clerk's Office under Cover No. 1276.

Section 4. Validity.

This Local Law is adopted under the authority granted to the Town Board of the Town of Amherst pursuant to §§10(1)(ii)(a)(12), 20 and 27 of the Municipal Home Rule Law and §265 of the Town Law of the State of New York.

The invalidity of any provision of this Local Law shall not affect the validity of any other provision of this Local Law that can be given effect without such invalid provision.

Section 5. Effective Date.

This Local Law shall take effect immediately when it is filed in the Office of the Secretary of State in accordance with Section 27 of the Municipal Home Rule Law and published pursuant to Sections 130 & 133 of the Town Law and Chapter 28 of the Code of the Town of Amherst.

Environmental Assessment Form

Short Environmental Assessment Form
Part 1 - Project Information

Instructions for Completing

Part 1 – Project Information. The applicant or project sponsor is responsible for the completion of Part 1. Responses become part of the application for approval or funding, are subject to public review, and may be subject to further verification. Complete Part 1 based on information currently available. If additional research or investigation would be needed to fully respond to any item, please answer as thoroughly as possible based on current information.

Complete all items in Part 1. You may also provide any additional information which you believe will be needed by or useful to the lead agency; attach additional pages as necessary to supplement any item.

Part 1 – Project and Sponsor Information

Name of Action or Project:
6621 Main Street and 20 Oakwood Rezoning

Project Location (describe, and attach a location map):
20 Oakwood Drive, SBL 81.08-4-2.1

Brief Description of Proposed Action:
Rezone 6621 Main Street from GB to OB and 20 Oakwood Drive from R-3 to OB in anticipation of dental office redevelopment on percels.

Name of Applicant or Sponsor:	Telephone: (716) 858-3728
Valdemar Blazak/VBW Properties LLC by Barclay Damon LLP, Jeff Palumbo, as agent/attorney	E-Mail: jpalumbo@barclaydamon.com

Address:
9276 Main Street, Suite 3

City/PO:	State:	Zip Code:
Clarence	NY	14031

	NO	YES
1. Does the proposed action only involve the legislative adoption of a plan, local law, ordinance, administrative rule, or regulation? If Yes, attach a narrative description of the intent of the proposed action and the environmental resources that may be affected in the municipality and proceed to Part 2. If no, continue to question 2.	☑	☐
2. Does the proposed action require a permit, approval or funding from any other government Agency? If Yes, list agency(s) name and permit or approval: Site Plan approval - Town Planning Board	☐	☑

3. a. Total acreage of the site of the proposed action? +/- 0.85 acres
   b. Total acreage to be physically disturbed? +/- 0.00 acres
   c. Total acreage (project site and any contiguous properties) owned or controlled by the applicant or project sponsor? +/- 0.85 acres

4. Check all land uses that occur on, are adjoining or near the proposed action:

5. ☐ Urban ☐ Rural (non-agriculture) ☐ Industrial ☑ Commercial ☑ Residential (suburban)
   ☐ Forest ☐ Agriculture ☐ Aquatic ☑ Other(Specify): religious
   ☐ Parkland

Attachment: Z-2021-11 TB letter packet 041122 (RES-2022-346 : 6621 Main Street & 20 Oakwood Drive Rezoning)

	NO	YES	N/A
5. Is the proposed action,			
a. A permitted use under the zoning regulations?	☑	☐	☐
b. Consistent with the adopted comprehensive plan?	☐	☑	☐

	NO	YES
6. Is the proposed action consistent with the predominant character of the existing built or natural landscape?	☐	☑

	NO	YES
7. Is the site of the proposed action located in, or does it adjoin, a state listed Critical Environmental Area?		
If Yes, identify: _____	☑	☐

	NO	YES
8. a. Will the proposed action result in a substantial increase in traffic above present levels?	☑	☐
b. Are public transportation services available at or near the site of the proposed action?	☐	☑
c. Are any pedestrian accommodations or bicycle routes available on or near the site of the proposed action?	☐	☑

	NO	YES
9. Does the proposed action meet or exceed the state energy code requirements?		
If the proposed action will exceed requirements, describe design features and technologies: _____	☐	☑

	NO	YES
10. Will the proposed action connect to an existing public/private water supply?		
If No, describe method for providing potable water: _____	☐	☑

	NO	YES
11. Will the proposed action connect to existing wastewater utilities?		
If No, describe method for providing wastewater treatment: _____	☐	☑

	NO	YES
12. a. Does the project site contain, or is it substantially contiguous to, a building, archaeological site, or district which is listed on the National or State Register of Historic Places, or that has been determined by the Commissioner of the NYS Office of Parks, Recreation and Historic Preservation to be eligible for listing on the State Register of Historic Places?	☑	☐
b. Is the project site, or any portion of it, located in or adjacent to an area designated as sensitive for archaeological sites on the NY State Historic Preservation Office (SHPO) archaeological site inventory? * see note below	☐	☑

	NO	YES
13. a. Does any portion of the site of the proposed action, or lands adjoining the proposed action, contain wetlands or other waterbodies regulated by a federal, state or local agency?	☑	☐
b. Would the proposed action physically alter, or encroach into, any existing wetland or waterbody?	☐	☐
If Yes, identify the wetland or waterbody and extent of alterations in square feet or acres: _____		

* If the proposed action is within an area designated as containing "sensitive archaeological resources," the EAF Mapper will automatically check "yes" on the PDF of the EAI Sensitivity for archaeological sites usually covers large areas. Proposed action is within the "Intensive Level Historic Resources Survey of Selected [Building] Resources in th of Amherst," Survey No. 17SR0080, which surveyed the entire Town of Amherst and Village of Williamsville, approximately 35,000 acres.

Attachment: Z-2021-11 TB letter packet 041122 (RES-2022-346 : 6621 Main Street & 20 Oakwood Drive Rezoning)

14. Identify the typical habitat types that occur on, or are likely to be found on the project site. Check all that apply:

☐ Shoreline ☐ Forest ☐ Agricultural/grasslands ☐ Early mid-successional
☐ Wetland ☐ Urban ☑ Suburban

	NO	YES
15. Does the site of the proposed action contain any species of animal, or associated habitats, listed by the State or Federal government as threatened or endangered?	☑	☐
16. Is the project site located in the 100-year flood plan?	☑	☐
17. Will the proposed action create storm water discharge, either from point or non-point sources?	☐	☑
If Yes,		
a. Will storm water discharges flow to adjacent properties?	☑	☐
b. Will storm water discharges be directed to established conveyance systems (runoff and storm drains)?	☐	☑
If Yes, briefly describe: Subsequent site development will include design features to tie-in to existing discharge system along public roadways.		
18. Does the proposed action include construction or other activities that would result in the impoundment of water or other liquids (e.g., retention pond, waste lagoon, dam)?	☑	☐
If Yes, explain the purpose and size of the impoundment:		
19. Has the site of the proposed action or an adjoining property been the location of an active or closed solid waste management facility?	☑	☐
If Yes, describe:		
20.Has the site of the proposed action or an adjoining property been the subject of remediation (ongoing or completed) for hazardous waste?	☑	☐
If Yes, describe:		

I CERTIFY THAT THE INFORMATION PROVIDED ABOVE IS TRUE AND ACCURATE TO THE BEST OF MY KNOWLEDGE

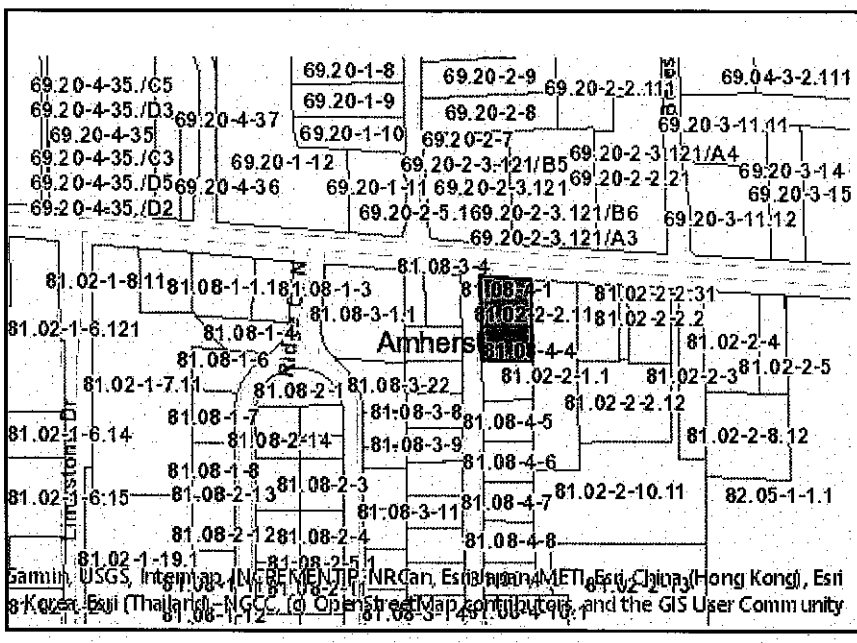
EAF Mapper Summary Report

Thursday, January 27, 2022 5:05 PM



Disclaimer: The EAF Mapper is a screening tool intended to assist project sponsors and reviewing agencies in preparing an environmental assessment form (EAF). Not all questions asked in the EAF are answered by the EAF Mapper. Additional information on any EAF question can be obtained by consulting the EAF Workbooks. Although the EAF Mapper provides the most up-to-date digital data available to DEC, you may also need to contact local or other data sources in order to obtain data not provided by the Mapper. Digital data is not a substitute for agency determinations.

Part 1 / Question 7 [Critical Environmental Area]	No
Part 1 / Question 12a [National or State Register of Historic Places or State Eligible Sites]	No
Part 1 / Question 12b [Archeological Sites]	Yes
Part 1 / Question 13a [Wetlands or Other Regulated Waterbodies]	No
Part 1 / Question 15 [Threatened or Endangered Animal]	No
Part 1 / Question 16 [100 Year Flood Plain]	No
Part 1 / Question 20 [Remediation Site]	No

Attachment: Z-2021-11 TB letter packet 041122 (RES-2022-346 : 6621 Main Street & 20 Oakwood Drive Rezoning)

Town Environmental Assessment Form Addendum

TOWN OF AMHERST
State Environmental Quality Review
ENVIRONMENTAL ASSESSMENT FORM
-- ADDENDUM --

1. For each applicable category of proposed <u>new</u> structures, including additions to existing structures, provide the following information for all soil types on the project site (*according to Soil Survey of Erie County, NY; Table 11, Building Site Development, pp 294-305):*

Soil Name	Shallow excavations	Dwellings without basements	Dwellings with basements	Small commercial buildings	Local roads and streets
Wassaic Silt Loam, 0-3% slopes	very limited	somewhat limited	very limited	somewhat limited	somewhat limited

2. If the Soil survey indicates either "severe" or "moderate" suitability for the proposed types of construction, a geotechnical and hydrological analysis based on one test per 3.5 acres of project area must be provided (per Town Board resolution, 3/17/03, amended 6/16/03).

   _____ Geotechnical report attached X Not applicable

3. Is your property located: On Youngs Road between Dodge and Klein Roads? ☐ Yes ☑ No
   On Wehrle Dr. between Spindrift Dr. and Oakwood Rd? ☐ Yes ☑ No

   If so, the property may be within an area of the Town that is affected by a moratorium on connections to the sanitary sewer system.

4. Are there alternative locations on the site for this project? ☐ Yes ☑ No

5. Location and size of real property owned by petitioner within one (1) mile of subject proposal:
   6599 Main Street, 0.396 acres; 6621 Main Street, 0.499 acres

6. Are you aware of current or future plans or intentions by others in the Town of Amherst to develop property within 1000± ft. of the present project request: ☐ Yes ☑ No

   Describe_____

   (Potential environmental impacts from adjacent or nearby projects undergoing the approval process will receive a coordinated environmental review to determine cumulative effects on common receivers (e.g. traffic and drainage corridors) and other relevant environmental concerns.)

7. Maximum number of vehicular trips to be generated per peak hour upon completion of project_____
   Source: _____

   Cannot estimate this stag of desig

8. Will blasting occur during construction? ☐ Yes ☑ No

9. Does the project propose to connect and be tributary to the public sanitary sewer system? ☑ Yes ☐ No

10. Proposed net additional gallons per day (gpd) of sanitary sewer discharge upon completion of project:
    _____ average flow _____ peak flow.

    Cannot estimate at this stage of design

    (Average flows of 2,500 gpd or greater will require an Engineer's Report that includes a detailed downstream sewer capacity analysis and the identification of and commitment to required I/I offset work during peak wastewater flow conditions.)

11. Based on the Town's *2011 Reconnaissance Level Survey of Historic Resources,* is your property 'blue-rated' for historic significance? ☐ Yes ☑ No

Jeffrey D. Palumbo, Esq.
Barclay Damon, LLC
9276 Main Street, Suite 3
Clarence, New York 14031

SUBJECT:	Rezoning Application Review	**Z-2021-11**
	Proposed:	Rezoning from R-3 & GB to OB
	Property located at:	**6621 Main Street & 20 Oakwood Drive**
	Amended Application received:	February 1, 2022
	Representative:	Barclay Damon LLP

Dear Mr. Palumbo,

Please consider the following comments:

1. The following items on the Environmental Assessment Form should be corrected or completed:
   - Part 1, #1 Correct response is yes
   - Part 1, #13b Check the appropriate box.

2. The following items on the Town of Amherst Environmental Assessment Form Addendum need to be corrected or completed:
   - #1. Correctly answer the question with responses found in Table 11 from the *Soil Survey of Erie County NY.*
   - #2 Geotechnical report is required. Will need to be provided prior to the Town making a SEQR determination on the subject request.
   - #7 Provide an answer, suggest using ITE rates based upon the concept plan.
   - #10 Provide an answer, base sewer loading upon the concept plan

3. Please note that any other SEQR-related issues raised during the review process for this rezoning must be addressed prior to action by the Planning Board. The subject action is an unlisted action, not an exempt action as stated in your submittal.

4. The subject site is located within an archaeologically sensitive area. An archaeological assessment will be required prior to the Planning Board making a SEQR determination.

This is a review only and does not constitute approval of the Rezoning Request. Should you have questions regarding this correspondence, please contact Scott A. Marshall, Principal Planner at smarshall@amherst.ny.us

Very truly yours,

Daniel C. Howard, AICP
Planning Director

Please do not click links or open attachments unless you recognize the sender and know the content is safe.

Dan,

New York State Department of Transportation (NYSDOT) Reviewed the site plan information submitted for the subject project and has the following comments:

- The proposed project will not have a significant impact to traffic on the State Highway System.
- The two (2) existing Main Street driveways on the site plan should be reduced to one(1).
    - Remove and do not replace the east-most existing access point, elevate curb.
- A NYSDOT Highway Work Permit will be required for the work that is located within the State Highway Right-of-Way. More detailed plans will be required for the Highway Work Permit application. Additional site engineering review will be performed as part of the Highway Work Permit process. This correspondence does not constitute approval for the purpose of a Highway Work Permit. The applicant should direct the Highway Work Permit application and/or questions to:

Nickolas Kinderman, North Erie Resident Engineer
New York State Department of Transportation
111 Indian Road, Depew, New York 14043
(716) 683-3476

If you have any questions, Please do not hesitate to contact me either by email or phone.

Sincerely,

Ron

SITE PLAN OR ZONING REFERRAL TO COUNTY OF ERIE, NY AND REPLY TO MUNICIPALITY

Note: Please complete in triplicate. Send original and one copy (with attachments) to Erie County Division of Planning, Room 1053, 95 Franklin Street, Buffalo, N.Y. 14202. Retain last copy for your files.

DO NOT WRITE IN THIS SPACE
Case No.: ZR-21-698
Received: 11/18/21

The proposed action described herein is referred in accordance with the provisions of the General Municipal Law, which provides that if no reply is received in 30 days after receipt of full information including a SEQR EAF if applicable, the municipal agency may take final action without considering such reply. If, however, reply is received at any time prior to municipal Action, such reply must be considered.

Description of Proposed Action

1. Name of Municipality: Town of Amherst

2. Hearing Schedule: Date 1/20/22 Time 6:30pm Location 5583 Main Street, Williamsville

3. Action is before: ☐ Legislative Body ☐ Board of Appeals ☒ Planning Board

4. Action consists of: ☐ New Ordinance ☒ Rezone/Map Change ☐ Ordinance Amendment

☐ Site Plan ☐ Variance ☐ Special Use Permit ☐ Other

5. Location of Property: ☐ Entire Municipality ☒ Specific as follows 20 Oakwood Drive

6. Referral required as Site is within 500' of: ☐ State or County Property/Institution ☐ Municipal Boundary ☐ Farm Operation located in an Agricultural District

☐ Expressway ☐ County Road ☒ State Highway ☐ Proposed State or County Road, Property, Building/ Institution, Drainageway

7. Proposed change or use: (be specific) Request to rezone 0.34± acres from R-3 to GB

8. Other remarks: (ID#, SBL#, etc.) Z-2021-11

9. Submitted by: Thomas Voigt, Assistant Planner November 15, 2021

Town of Amherst, 5583 Main St., Williamsville, NY 14221

Reply to Municipality by Erie County Division of Planning

Receipt of the above-described proposed action is acknowledged on 11/18/21. The Division herewith submits its review and reply under the provisions of applicable state and local law, based on the information submitted with this referral.

1. ☐ **The proposed action is not subject to review under the law.**
2. ☐ **Form ZR-3, Comment on Proposed Action is attached hereto.**
3. ☐ **The proposed action is subject to review; the Division makes the recommendation shown on Form ZR-4, Recommendation on Proposed Action, which is attached hereto.**
4. ☒ **No recommendation; proposed action has been reviewed and determined to be of local concern**

Town Board Agenda of April 11, 2022

March 29, 2022

The Honorable Town Board
Town of Amherst
5583 Main Street
Williamsville, NY 14221

Subject: Request to rezone 1.5± acres of land from GB to DC-5, Z-2022-01; property located at 7740 Transit Road, 7740 Transit Road, Inc., Petitioner.

Honorable Members:

The subject property is a 1.5± acre L-shaped parcel located on the northwest corner of the intersection of Transit Road and Sheridan Drive. The site has 101± ft. of frontage on Transit Road and a maximum depth of 375± ft. and abuts the Sheridan Drive access ramp from Transit Road.

The property is presently occupied by an existing vacant 1-story brick structure (former restaurant) with associated parking.

Transit Road and Sheridan Drive are New York State highways designated as major arterials on Figure 9 in the Town of Amherst Bicentennial Comprehensive Plan.

For information on the surrounding zoning and land use, please refer to the attached sketch.

The purpose of this request is to revise the zoning for this property to permit the future development of a 40-unit multi-family dwelling. The concept plan shows a four-story and five-story building with associated parking and landscaping.

The property was zoned General Business (GB) with adoption of the Town-wide zoning maps and ordinance on January 19, 1976.

There are five previous site plan applications for the subject parcel as follows:

SP-1983-41 Original site plan for restaurant addition (to 3,665 s.f. total and 48 parking spaces) was approved November 17, 1983 with conditions related to:
- signage not included.
- lighting controlled as not to create nuisance to nearby properties.
- recommendations of Fire Chiefs Association be given consideration.
- a plan projecting future improvements to abandoned golf course be provided.

Attachment: Z-2022-01 TB letter packet 041122 (RES-2022-347 : 7740 Transit Road Rezoning)

SP-1983-41_B Site plan amendment for restaurant and banquet facility addition was approved by the Planning Board on September 24, 1997.
SP-1983-41_C Minor modification to a site plan for relocation of banquet hall from a stand-alone to an attached structure was approved on August 17, 1999.
SP-1983-41_D Minor modification to a site plan for addition of canopies to banquet hall was approved April 26, 2000.
SP-1983-41_E Minor site plan for removal of sidewalk & landscaping at the northeast corner of the building to install an outdoor patio was approved August 13, 2010.

The Planning Board offers the following findings consistent with Section 8-3 of the Zoning Ordinance.

INTENT AND OBJECTIVES OF THE COMPREHENSIVE PLAN

The Town of Amherst Bicentennial Comprehensive Plan's Figure 6 - Conceptual Land Use Plan calls for Commercial Mixed-Use in the subject area. Figure 6-A - Commercial and Mixed-Use Designations, adopted in December 2020, further designates that future development should follow the Mixed-Use standards, making the proposed Deep Corridor-5 District (DC-5) zoning request consistent with the Comprehensive Plan.

INTENT AND OBJECTIVES OF THE ZONING ORDINANCE

The proposed rezoning is consistent with Section 1-2-2.K of the Zoning Ordinance which seeks to guide future development of the Town to bring about the gradual conformity of land and building uses in accordance with the objectives of the Comprehensive Plan. The rezoning is also consistent with Section 1-2-2.L of the Zoning Ordinance that seeks to accomplish the specific intent and goal set forth in its respective sections. The stated intent of the DC-5 District is for deep corridor parcels (over 200' deep) that are appropriate for 5-story buildings. Shared access drives connect to a continuous high-quality internal active and walkable streetscape fronting buildings and help eliminate curb cuts. This streetscape establishes the framework for a future internal "main street." Excessively long blocks are broken up by new streets connecting within the district.

CONSISTENCY/COMPATIBILITY WITH SURROUNDING DEVELOPMENT/ZONING

The proposed rezoning of the subject parcel from General Business District (GB) to Deep-Corridor-5 District (DC-3) is consistent and compatible with the surrounding zoning classifications in terms of land use as there are multi-family residential districts in the vicinity to the north and west. In terms of form and structure, there are multi-story office structures to the west.

ADEQUATE SERVICES AND UTILITIES

All services and utilities necessary for the proposed project may be available and may be adequate. Further analysis of downstream sanitary sewer capacity must be analyzed and affirmed by the Town Engineer. This is a SEQR Unlisted Action, and an environmental assessment consistent with SEQR has been prepared for the subject proposal. The Town Board has been established as Lead Agency. Pursuant to Local Law #3-82, as amended, the requirements of SEQR must still be completed if the Town Board desires to approve the proposed rezoning request. A draft SEQR determination will be prepared by the Planning Department if directed.

Attachment: Z-2022-01 TB letter packet 041122 (RES-2022-347 : 7740 Transit Road Rezoning)

Honorable Town Board

Rezone land from GB to DC-5;
property located at 7740 Transit Road
Agenda of April 11, 2022

RECOMMENDATION

The Planning Board at their meeting of February 17, 2022 recommended that the Town Board find that the requirements of SEQR are complete and that the subject request will not have a significant adverse effect on the environment. The Planning Board also recommended that the subject rezoning request be approved.

The Planning Department requests that if the Town Board desires to act on the rezoning request, that a decision date be established after the public hearing so that the Planning Department can prepare a determination of environmental significance pursuant to SEQR, and prepare a resolution for the Town Board's consideration.

Very truly yours,

Daniel C. Howard, AICP
Planning Director

Williamsville, NY 14221

PROPERTY LOCATION

7740 Transit Road

WHEREAS the Town of Amherst Planning Board on Thursday, February 17, 2022 held a public hearing on the proposed rezoning of land from General Business District (GB) to Deep Corridor-5 District (DC-5), and

WHEREAS the Planning Board has reviewed plans and other materials regarding the rezoning proposal, and

WHEREAS the materials and plans have been referred to the Town's various review agencies, and

WHEREAS in accordance with Section 8-3-5 of the Zoning Ordinance the Planning Board finds that:

A. The proposed zoning and development plan is generally consistent with the policies of the Comprehensive Plan and the Zoning Ordinance.

B. The proposed zoning is consistent with the Conceptual Land Use Plan which shows Commercial-Mixed-Use in this area of the Town to be developed under Suburban Corridor design standards.

C. The proposed zoning is consistent with the requirements in Section 5A-3-5 of the zoning ordinance, "Deep Corridor 5 (DC-5)" because it does not immediately abut single family lots and is therefore appropriate for a 4- and 5-story structure with a major arterial frontage.

D. There are adequate services and utilities available or proposed to be made available in the construction of the development.

E. The proposal is compatible with the present zoning and conforming uses of nearby property and with the character of the neighborhood.

F. The subject property is suitable for uses permitted by the current versus the proposed district.

G. The proposed change does tend to improve the balance of uses, or meets a specific demand in the Town.

TOWN OF AMHERST
PLANNING BOARD
ZONING RESOLUTION
Z-2022-01

FEB24'22 PM 4:52 RCVD

PETITIONER

7740 Transit Road Inc.

PROPERTY LOCATION

7740 Transit Road

H. Review by the US Army Corps of Engineers under Section 404 of the Clean Water Act may be waived because the parcel is developed.

WHEREAS pursuant to Local Law #3-82, as amended, the Planning Board recommends that the Town Board determine that the requirements of SEQR are complete and that the subject proposal is not expected to have a significant adverse effect on the environment.

NOW THEREFORE BE IT RESOLVED that the Planning Board recommends to the Town Board in accordance with Section 8-3-4 of the Zoning Ordinance, that the rezoning request be approved subject to the following conditions:

1. The petitioner shall include ADA accessible parking during the site plan review process.

2. The petitioner shall address the requirements or concerns raised in the February 11, 2021 correspondence from the New York State Department of Transportation, during the site plan review process.

The foregoing resolution was adopted by the Town of Amherst Planning Board, February 17, 2022; moved by - Giuliani; seconded by - Chmiel; ayes 6, noes 0; absent 1 (Gill).

Re: 7740 Transit Road Inc. – Re-zone Application

Mr. Palumbo,
In response to the pre-planning meeting on December 3, 2021, a formal submission is being provided per the requirements in the Re-zoning application.

The project is occurring where the existing Restaurant has been abandoned. It is proposed to remove the existing buildings and parking areas to construct the new multi-family structure. The impervious coverage will be less after the proposed construction by approximately 0.1-acres. The intended use of the site appears to align with the Bi-centennial Comprehensive plan and fits with the Adopted Zoning for DC-5 (Deep Corridor 5). This will allow the mixed-use type buildings and multi-family structures.

Because the impervious coverage will be reduced stormwater is planned to be collected and treated using hydrodynamic separators as outlined in the NYSDEC design manual for re-development sites. A full Stormwater Pollution Prevention Plan will be prepared for the project construction.

The entrance is aligned with the existing DOT access point with minor improvements within the NYSDOT ROW. A pedestrian connection is provided to the existing sidewalks along Transit Road and the ramp to Sheridan Drive. Parking is accomplished with site parking as well as a parking garage under a portion of the proposed structure.

Per the re-zoning application the attachments below are provided to assist in the review.

Attachment: Z-2022-01 TB letter packet 041122 (RES-2022-347 : 7740 Transit Road Rezoning)

TO BE COMPLETED BY APPLICANT

1. **Petitioner:**

Name: 7740 Transit Road Inc.

Address: 4110 Thornwood Lane

Williamsville | NY | 14221

City | State | Zip Code

Phone: 716. Fax

E Mail:

2. **The undersigned hereby petitions the Honorable Town Board to rezone the following described property:**

From: GB - General Business District

To: DC-5 - Deep Corridor 5 District

3. **Street address of land to be rezoned:** (must be verified by Town Assessor's Office)

7740 Transit Road

SBL #: 70.09-1-13

4. **Area of land to be rezoned** (in acres): 1.53-Acres

5. **Owner of Land:**

Name: 7740 Transit Road Inc.

Address:

City | State | Zip Code

Phone: 716.553.1031

6. **Representative** (Architect, Engineer, Landscape Architect, Surveyor or Attorney):

Name: MBL Engineering, PLLC - Michael Lasell / Joshua Best, AIA

Address: 16510 Balch Place

Mannsville | NY | 13661

City | State | Zip Code

Phone: 315.486.0501 Fax

E Mail: mike.lasell@mblengineering.com Josh@bestbrothersdevelopment.com

Attachment: Z-2022-01 TB letter packet 041122 (RES-2022-347 : 7740 Transit Road Rezoning)

7. Petitioner's interest in property

_____Option to purchase
__X__Owner
_____Other (explain) _____

8. The following are all others having an interest in this application and join herein with the petitioner named above: (describe extent of interest; attach sheets as needed)

9. Attach Survey and Legal description of land to be rezoned. The Survey must be prepared by a New York State Licensed Land Surveyor.

10. Said property has the following deed restrictions or covenants: (attach copy)

Liber 10930 Page 7057

11. Information on proposed project:

A. Description of the character of the proposed development:
The existing abandoned restaurant and associated parking will be demolished and a proposed 40 unit multi-family dwelling is planned to be constructed.

B. Rationale for rezoning request:

1. Why was this site chosen? The proximity to amenities and the workplace made this site very attractive for the multi-family/ mixed use type development. Also, it fits into the Section 5A adopted by the Town On september 3, 2019

2. Why cannot land be used with the existing zoning?
The existing zoning is General Business, which the current area is in need of more connection with multi-family and pedestrian friendly development.

3. How will this rezoning impact surrounding properties?
No Impact is suspected, the current site is a vacant building with multi-family in the surrounding areas.

4. How will this rezoning impact the school system?
The focus market for the multi-family buildings will be young professionals which would typically not add students to the school system. This development should only add additional tax dollars without burdening the district with additional students.

Attachment: Z-2022-01 TB letter packet 041122 (RES-2022-347 : 7740 Transit Road Rezoning)

12. Quantitative Data:

A. Total # of dwelling units: 40-units

B. Distribution of dwelling units by type: (24) 2 Bedrooms, (10) 1 Bedrooms, and (6) Studio Lofts

C. Gross Residential Density per acre: 26 Units/Acre

D. Total amount of Open Space: Park Area Space - 5,000-SF

E. Proposed Non-Residential Floor Area: Amenity space - 5,000-SF and Rooftop Space of 5,000-SF

13. Development Schedule:

Start: Spring 2022

Finish: Spring 2023

Stages (# of): 1

14. If any portion of the proposed development is planned to be sold or leased, please describe:

N/A

15. Open Space ownership and maintenance provisions (if applicable):

N/A

16. Basis for Findings (Sec. 8-3-5 of the Town Zoning Code) (Attach sheets and supplemental materials as necessary.)

A. <u>The proposed zoning and development plan must be generally consistent with the policies of the Comprehensive Plan and the Town Zoning Ordinance.</u>

1. State in detail why the proposed zoning is consistent with the adopted <u>Town of Amherst Bicentennial Comprehensive Plan</u>. Cite specific sections, maps, and/or figures in the Plan that support the proposed zoning at this location (The Comprehensive Plan document is available at the Planning Department, Town Clerk's Office, Amherst libraries, or at <u>www.amherst.ny.us</u>). Add sheets as needed.

Section 5A-3-5 DC-5 (Deep Corridor 5) aligns with the proposed use for lots over 200-feet and does not abut residential lots. The Bicentennial Comp Plan outlines the existing areas as commercial office and non-office. on Figure 3. A goal of the comprehensive plan is to revitalize the commercial corridors with more pedestrian frie connections and more green space. As shown on figure 6 of the plan this area is a suburban corridor.

Attachment: Z-2022-01 TB letter packet 041122 (RES-2022-347 : 7740 Transit Road Rezoning)

2. Pursuant to NYS Town Law Section 272a(11), "All Town land use regulations must be i accordance with a comprehensive plan adopted pursuant to this Section." The Amhers Town Board adopted the Bicentennial Comprehensive Plan pursuant to NYS Town Lav 272 on January 2, 2007. If the rezoning is approved, the Town Board may require the Plan to be amended, as applicable.

   Cite all text, maps, or figures that must be amended to support the proposed zoning at this location (attach pages as necessary) and provide detailed suggested amendments

   The existing GB district would need to be changed on the Zonining Map F-13. Since the proposed zoning is already described in the newly adopted mixed use code this could be incorporated into the map for DC-5.

3. State why the proposed zoning is consistent with intent and objectives (Sec. 1-2-2) of the Zoning Ordinance:

   See notes above aligning with the comprehensive objective and the adopted mixed use code.

B. Adequate Services and Utilities are available or are proposed to be made available with the construction of the development:

1. Sanitary Sewer X
2. Storm Sewer/Drainage X
3. Water X
4. Other

C. Compatibility with the present zoning and conforming uses of nearby property and with the character of the neighborhood:

Existing multifamily exists nearby.

D. Suitability of the subject property for uses permitted by the current versus the proposed district: The current GB zoning allows for upper story Dwelling but does not fit into the comp plan of mixed use with open space .

E. Whether the proposed change tends to improve the balance of uses, or meets a specific demand in the Town:

The proposed use will add a balance to the Town to meet the Comprehensive plan.

Attachment: Z-2022-01 TB letter packet 041122 (RES-2022-347 : 7740 Transit Road Rezoning)

17. The petitioner encloses herewith the sum of $_____ to pay the fee, and consents to the placement of a sign(s) at the described location identifying this request for a period of time to be determined by the Town Clerk.

18. The undersigned certifies that all information required to be disclosed pursuant to Section 809 of the General Municipal Law (see below) is as follows:

The undersigned swears or affirms that all statements made herein are true, that all drawings submitted correctly show the situation involved in this petition.

N.Y.S. General Municipal Law - Section 809 Disclosure in certain applications.

1. Every application, petition or request submitted for a variance, amendment, change of zoning, approval of a plat, exemption from a plat or official map, license or permit, pursuant to the provision of any ordinance, local law, rule or regulation constituting the zoning and planning regulations of a municipality shall state the name, residence and the nature and extent of the interest of any state office or any office or employee of such municipality or of a municipality of which such municipality is a part, in the person, partnership or association making such application, petition or request (hereinafter called the applicant) to the extent known to such applicant.

2. For the purpose of this section an officer or employee shall be deemed to have an interest in the applicant when he, his spouse, or their brothers, sisters, parents, children, grandchildren, or the spouse of any of them

(a) is the applicant, or
(b) is an officer, director, partner or employee of the applicant, or
(c) legally or beneficially owns or controls stock of a corporate applicant or is a member of a partnership or association applicant, or
(d) is a party to an agreement with such an applicant, express or implied, whereby he may receive any payment or other benefit, whether or not for services rendered, dependent or contingent upon the favorable approval of such applicant, petition or request.

3. In the county of Nassau the provisions of subdivisions one and two of this section shall also apply to a party officer. "Party Officer" shall mean any person holding any position or office, whether by election, appointment or otherwise, in any party as defined by subdivision four or section two of the election law.

4. Ownership of less than five per cent of the stock of a corporation whose stock is listed on the New York or American Stock Exchanges shall not constitute an interest for the purposes of this section.

5. A person who knowingly and intentionally violates this section shall be guilty of a misdemeanor.

Rezoning Application Requirements and Checklist

The following checklist outlines the information required by the Town of Amherst to accept a Rezoning application. ***It is strongly recommended that you make an appointment with Planning Staff to discuss what information will be needed to address the items shown on the checklist.***

Item No.	Item	Submitted	Official use
I Application Information			
1.0	**Town of Amherst Rezoning / Comprehensive Plan Amendment Application Form (available from Planning Department)**	X	
1.1	Name, address, and contact information of the petitioner	X	
1.2	Name and address of property owners(s) – if different than petitioner	X	
1.3	If petitioner is different than property owner, provide statement describing interest in property and a letter from the property owner authorizing the application		
1.4	Identify existing and proposed zoning and acreage of area proposed to be rezoned	X	
1.5	Parcel addresses and Section, Block, and Lot (SBL) numbers of all properties proposed to be rezoned. Indicate if a portion of any parcel is involved, if applicable	X	
1.6	Statement of planning objectives to be achieved by the proposed rezoning, including the following: • How the proposed zoning and development plan meets the objectives of the Comprehensive Plan • A description of the character of the proposed development • The rationale behind the assumptions that are presented	X	
1.7	Cite specific maps and / or figures in the Comprehensive Plan that must be amended to support the proposed zoning and provide suggested amendments.	X	
1.8	A general statement about how any proposed open space will be maintained (if applicable)	X	
1.9	A development schedule indicating the approximate date when construction is expected to begin and be completed. Identify schedule of any proposed phasing of the development (attach pages as necessary)	X	
1.10	A statement of the petitioner's intentions regarding future sale or leasing of all or portions of the proposed development	X	
II Survey and Legal Description			
1.0	**Complete boundary survey that includes all existing structures, acreage, legal description, and easements plotted to scale by a NYS licensed land surveyor**	X	
1.1	Raised/wet seal and signature of licensed surveyor	X	
1.2	Clear delineation and acreage of area to be rezoned if different than property boundary	N/A	
2.0	**Legal Description of the total area proposed to be rezoned. (must be consistent with area shown to be rezoned on boundary survey)**	X	

Attachment: Z-2022-01 TB letter packet 041122 (RES-2022-347 : 7740 Transit Road Rezoning)

Item No.	Item	Submitted	Official use
III Concept Plan (if required by the Planning Board)			
1.0	**Conceptual development plan drawn to scale (no larger than 24" x36" format and folded into 8 ½" x 11" size)**	X	
1.1	North arrow	X	
1.2	Scale of drawing	X	
1.3	Property lines (existing and proposed)	X	
1.4	Unique natural features and tree cover	X	
1.5	Information on land controlled by the applicant located within 500 feet of the perimeter of the area proposed to be rezoned	X	
1.6	Location of all proposed structures and other improvements	X	
1.7	Number and type of dwelling units (if applicable)	X	
1.8	Gross square feet of commercial space (if applicable)		
1.9	Maximum structure heights	X	
1.10	Architectural sketches	X	
1.11	Existing and proposed contours	X	
1.12	Existing utility systems (sanitary sewers, water, storm drainage)	X	
1.13	Location of proposed storm water detention or retention facilities	X	
1.14	Proposed land use arrangement	N/A	
1.15	Location of all parking, loading, stacking and interior circulation drives	X	
1.16	Location of proposed curb cuts	X	
1.17	Location of cross access drives to adjacent parcels		
1.18	Pedestrian circulation system	X	
1.19	Location of NYSDEC wetlands (including buffer area) and/or federal wetlands; indicate jurisdictional status	N/A	
1.20	Location of floodway and 100-year floodplain (if applicable)	N/A	
1.21	Location and purpose of any proposed easements	N/A	
1.22	Location and proposed development of all open spaces, including parks, playgrounds, conservation areas, and dedicated open space; indicate intended ownership of such areas	X	
1.23	Additional data as required by the Planning Board		
V Other Required Information			
1.0	**Completed and signed Environmental Assessment Form**	X	
11	Soil boring report and geotechnical report prepared by a qualified Professional Engineer (if applicable)	N/A	
1.2	Traffic impact study (if applicable)	N/A	
1.3	Archaeological assessment (if applicable)	N/A	
1,4	Wetland Delineation report (if applicable)	N/A	
2.0	**8 1/2" X 11" reduction of concept plan drawing (see appendix B)**	X	
3.0	**A CD containing a PDF of the complete submittal package, including all drawings.**	EMAIL

Agency Use Only [If applicable]

Project: Z-2022-01

Date: February 8, 2021

Short Environmental Assessment Form
Part 2 - Impact Assessment

Part 2 is to be completed by the Lead Agency.
Answer all of the following questions in Part 2 using the information contained in Part 1 and other materials submitted by the project sponsor or otherwise available to the reviewer. When answering the questions the reviewer should be guided by the concept "Have my responses been reasonable considering the scale and context of the proposed action?"

	No, or small impact may occur	Moderate to large impact may occur
1. Will the proposed action create a material conflict with an adopted land use plan or zoning regulations?	☑	☐
2. Will the proposed action result in a change in the use or intensity of use of land?	☑	☐
3. Will the proposed action impair the character or quality of the existing community?	☑	☐
4. Will the proposed action have an impact on the environmental characteristics that caused the establishment of a Critical Environmental Area (CEA)?	☑	☐
5. Will the proposed action result in an adverse change in the existing level of traffic or affect existing infrastructure for mass transit, biking or walkway?	☑	☐
6. Will the proposed action cause an increase in the use of energy and it fails to incorporate reasonably available energy conservation or renewable energy opportunities?	☑	☐
7. Will the proposed action impact existing: a. public / private water supplies?	☑	☐
b. public / private wastewater treatment utilities?	☑	☐
8. Will the proposed action impair the character or quality of important historic, archaeological, architectural or aesthetic resources?	☑	☐
9. Will the proposed action result in an adverse change to natural resources (e.g., wetlands, waterbodies, groundwater, air quality, flora and fauna)?	☑	☐
10. Will the proposed action result in an increase in the potential for erosion, flooding or drainage problems?	☑	☐
11. Will the proposed action create a hazard to environmental resources or human health?	☑	☐

Short Environmental Assessment Form
Part 3 Determination of Significance

For every question in Part 2 that was answered "moderate to large impact may occur", or if there is a need to explain why a particular element of the proposed action may or will not result in a significant adverse environmental impact, please complete Part 3. Part 3 should, in sufficient detail, identify the impact, including any measures or design elements that have been included by the project sponsor to avoid or reduce impacts. Part 3 should also explain how the lead agency determined that the impact may or will not be significant. Each potential impact should be assessed considering its setting, probability of occurring, duration, irreversibility, geographic scope and magnitude. Also consider the potential for short-term, long-term and cumulative impacts.

Subject: 2022-SP297 T. Amherst 7740 Transit Rd Rezoning Request

CAUTION: This email originated from outside of the organization.
Please do not click links or open attachments unless you recognize the sender and know the content is safe.

Dan,

New York State Department of Transportation (NYSDOT) reviewed the site plan information submitted for the subject project rezoning and has the following comments:

- NYSDOT requests an opportunity to review the project's Engineering Report and Hydraulic Analysis.
- With the proposed project driveway proximity to the intersection, NYSDOT will require signs, markings, etc. prohibiting left turns out of the site. Specifically, the installation of a no left turn sign, pavement markings showing a straight arrow in the entrance lane and a right-turn arrow in the exit lane.
- A NYSDOT Highway Work Permit will be required for utility access.
- A NYSDOT Highway Work Permit will be required for the work that is located within the State Highway Right-of-Way.
    - More detailed plans will be required for the Highway Work Permit application. Additional site engineering review will be performed as part of the Highway Work Permit process. This correspondence does not constitute approval for the purpose of a Highway Work Permit. The applicant should direct the Highway Work Permit application and/or questions to:

      Nickolas Kinderman, North Erie Resident Engineer
      New York State Department of Transportation
      111 Indian Road, Depew, New York 14043
      (716) 683-3476

If you have any questions, Please do not hesitate to contact me either by email or phone.

Sincerely,

Ron

Williamsville, New York 14221

SUBJECT:	Rezoning Application Review	**Z-2022-01**
	Proposed:	Rezone 1.5± acres of land from GB to DC-5
	Property located at:	**7740 Transit Road**
	Application received:	January 3, 2022
	Representative:	MBL Engineering, PLLC

Dear Sir/Madam,

Please consider the following comments:

1. The site plan provided with the application is being considered as conceptual only as review for compliance with the §203 of Town Code (Zoning Ordinance) will be done at site plan review.
2. The request will require submission of the SEQR Full Environmental Assessment Form as the action will require the adoption of a local law to implement a zoning change and the information necessary for the Town to complete Part 2 of the form is not provided on the Short EAF.
3. The responses to The Town of Amherst Addendum to the EAF need to be corrected or modified as follows:
   - Item 1. Responses are incorrect or not answered per Table 11 of the Soil Survey of Erie County NY for the soil types listed.
   - Item 2. Based upon our review of the Soil Survey of Erie County NY the project will require the submittal of a geotechnical report.
4. Please note that any other SEQR-related issues raised during the review process for this rezoning must be addressed prior to action by the Planning Board.
5. Revise the Draft Local Law as follows and provide it in digital format (MS word).
   - Section 1: note rezoning is from General Business District (GB) to Deep Corridor 5 District (DC-5).
   - Section 3: Incorporate the legal description of the requested rezoning are into this section.
6. Please provide an 8½ " x 11" reduction of any revised concept plan **and an electronic version** of any revised plans or information submitted for review.

This is a review only and does not constitute approval of the Rezoning Request. Should you have questions regarding this correspondence, please contact Scott A. Marshall, Principal Planner at smarshall@amherst.ny.us

Very truly yours,

Daniel C. Howard, AICP
Planning Director

Amherst Community Diversity Commission Appointments

WHEREAS, the purpose of the Amherst Community Diversity Commission (ACDC) is to enhance and increase cooperation, understanding, and dialogue among residents of diverse cultural, religious, socio-economic and racial backgrounds, and to promote inclusion throughout the town; and

WHEREAS, the Commission will study the demographics of Amherst, promote town-wide events that foster cultural awareness, increase minority participation on governmental boards, committees and in the town's workplace, and to facilitate meetings designed to promote a better understanding of who Amherst is as a community; and

WHEREAS, the Amherst Community Diversity Commission generally meets on the second Tuesday of the month, with the exception of July, August and December; and

WHEREAS, the ACDC has a maximum roster of 15 members, with the Supervisor and each Councilmember personally appointing up to three individual members who shall serve a two year term; and

WHEREAS, the ACDC currently has a Board of nine members, who shall continue to serve until their term of appointment expires, as personal appointments reflected in the following list:

Dr. Mohan Devgun, Vice-Chair, with term that expires 12-31-2023; Councilmember Berger
Gul A. Rahman, Secretary, with a term that expires 12-31-2023; Supervisor Kulpa
Pam Kefi, Member, with a term that expires 12-31-2023; Councilmember Szukala
Dr. Mohammed Khan, Member, with a term that expires 12-31-2023; Supervisor Kulpa
Heidi Nicklaus Lefebvre, Member, with a term that expires 12-31-2023; Councilmember Lavin
Thomas Lucia, Member, with a term that expires 12-31-2023; Councilmember Szukala

Creation of the Merged Amherst Government Financial Advisory Board and the Appointments of Resident Volunteers

WHEREAS, the Town of Amherst has over 30 Boards and Committees; and

WHEREAS, in evaluating the Boards and Committees some of the duties responsibilities have been expired or now duplicated; and

WHEREAS, volunteers are limited when requesting residents to step into Board and Committee memberships; and

WHEREAS, the Government Study Committee and the Citizens' Financial Advisory Committee are two committees that could be merged to continue to serve the community's needs; and

WHEREAS, the conjoined committee name would now be the Amherst Government Financial Advisory Board; and

WHEREAS, the Amherst Government Financial Advisory Board would consist of five (5) members appointed by the Amherst Town Board majority to serve a two year term; and

WHEREAS, the Amherst Government Financial Advisory Board will meet once a quarter, or more, as needed; and

WHEREAS, the purpose and mission of the Board would be to review management letters from the Town auditors and to continue with each of the future management letter responses; and

WHEREAS, to investigate where the Comptroller's Department is not in compliance with the management letter and make recommendations to help ensure the compliance process; and

WHEREAS, to suggest improvements of the effectiveness or modification of the Town of Amherst government activities; and

WHEREAS, Jason Zaklikowski, John DiPasquale, Alexander Wyse, Kenneth Smith, and Gregory M. Dionne have expressed interest in serving on the Amherst Government Financial Advisory Board; and

WHEREAS, these volunteers have served on the Amherst Government Study Committee and/or Amherst Citizens' Financial Advisory Board and would like to continue serving on the newly merged Amherst Government Financial Advisory Board and the Town of Amherst.

NOW, THEREFORE, BE IT RESOLVED that the Amherst Town Board approves the merge of the Citizens Financial Advisory Committee and the Amherst Government Study Committee to be now named the Amherst Government Financial Advisory Board; and

BE IT FURTHER RESOLVED that the Amherst Town Board appoints Jason Zaklikowski, John DiPasquale, Alexander Wyse, Kenneth Smith, and Gregory M. Dionne to the Amherst Government Financial Board for a term to expire December 31, 2023.

RE: **Townwide Centralized Security Improvements**
2022-2027 C.I.P. - Project No. PO-05
Bond Resolution - $100,000

Kindly take the following action with respect to the above bond request:

(1) Adopt the attached SEQR determination for the above project as determined by the Town of Amherst Planning Department; and

(2) Adopt the attached bond resolution authorizing the issuance of $100,000 in serial bonds for the above-referenced Town improvement.

The adoption of the bond resolution does ***not*** require a public hearing to be held because the improvement is a Town improvement not involving a special district.

Also attached is the Map Plan and Report which provides further detail on the scope of the project.

Thank you.

_____ offered the following resolution and moved its adoption:

Attachment: CertBondReso (RES-2022-351 : Townwide Centralized Security (Bond Resolution - $100,000))

BOND RESOLUTION OF THE TOWN OF AMHERST, NEW YORK, ADOPTED APRIL 11, 2022, AUTHORIZING TOWN-WIDE CENTRALIZED SECURITY IMPROVEMENTS, STATING THE ESTIMATED MAXIMUM COST THEREOF IS $100,000, APPROPRIATING SAID AMOUNT FOR SUCH PURPOSE, AND AUTHORIZING THE ISSUANCE OF BONDS IN THE PRINCIPAL AMOUNT OF $100,000 TO FINANCE SAID APPROPRIATION

THE TOWN BOARD OF THE TOWN OF AMHERST, IN THE COUNTY OF ERIE, NEW YORK, HEREBY RESOLVES (by the favorable vote of not less than two-thirds of all the members of said Town Board) AS FOLLOWS:

Section 1. The Town of Amherst, in the County of Erie, New York (herein called the "Town"), is hereby authorized to undertake Town-wide centralized security improvements, as described in the map, plan and report dated February 2022 and prepared by the Town Police Department (2022-2027 Capital Improvement Program Project P0-5). The estimated maximum cost thereof, including preliminary costs and costs incidental thereto and the financing thereof, is $100,000 and said amount is hereby appropriated for such purpose. The plan of financing includes the issuance of bonds in the principal amount of $100,000 to finance said appropriation, and the levy and collection of taxes on all the taxable real property in the Town to pay the principal of said bonds and the interest thereon as the same shall become due and payable.

Section 2. Bonds of the Town in the principal amount of $100,000 are hereby authorized to be issued pursuant to the provisions of the Local Finance Law, constituting Chapter 33-a of the Consolidated Laws of the State of New York (herein called the "Law"), to finance said appropriation.

Attachment: CertBondReso (RES-2022-351 : Townwide Centralized Security (Bond Resolution - $100,000))

Section 3. The following additional matters are hereby determined and declared:

(a) The period of probable usefulness applicable to the class of objects or purposes for which said bonds are authorized to be issued, within the limitations of Section 11.00 a. 35 of the Law, is five (5) years.

(b) The proceeds of the bonds herein authorized and any bond anticipation notes issued in anticipation of said bonds may be applied to reimburse the Town for expenditures made after the effective date of this resolution for the purpose for which said bonds are authorized. The foregoing statement of intent with respect to reimbursement is made in conformity with Treasury Regulation Section 1.150-2 of the United States Treasury Department.

(c) The proposed maturity of the bonds authorized by this resolution will not exceed five (5) years.

Section 4. Each of the bonds authorized by this resolution, and any bond anticipation notes issued in anticipation of the sale of said bonds, shall contain the recital of validity as prescribed by Section 52.00 of the Law and said bonds, and any notes issued in anticipation of said bonds, shall be general obligations of the Town, payable as to both principal and interest by general tax upon all the taxable real property within the Town. The faith and credit of the Town are hereby irrevocably pledged to the punctual payment of the principal of and interest on said bonds, and any notes issued in anticipation of the sale of said bonds, and provision shall be made annually in the budget of the Town by appropriation for (a) the amortization and redemption of the bonds, and any notes in anticipation thereof to mature in such year, and (b) the payment of interest to be due and payable in such year.

Attachment: CertBondReso (RES-2022-351 : Townwide Centralized Security (Bond Resolution - $100,000))

Section 5. Subject to the provisions of this resolution and of the Law and pursuant to the provisions of Section 21.00 of the Law relative to the authorization of the issuance of bonds with substantially level or declining annual debt service, Section 30.00 relative to the authorization of the issuance of bond anticipation notes and Section 50.00 and Sections 56.00 to 60.00 and 168.00 of the Law, the powers and duties of the Town Board relative to authorizing bond anticipation notes and prescribing the terms, form and contents and as to the sale and issuance of the bonds herein authorized, and of any bond anticipation notes issued in anticipation of said bonds, and the renewals of said bond anticipation notes, and as to the execution of agreements for credit enhancements, are hereby delegated to the Supervisor, the chief fiscal officer of the Town.

Section 6. The validity of the bonds authorized by this resolution, and of any notes issued in anticipation of the sale of said bonds, may be contested only if:

(a) such obligations are authorized for an object or purpose for which the Town is not authorized to expend money, or

(b) the provisions of law which should be complied with at the date of the publication of such resolution, or a summary thereof, are not substantially complied with,

and an action, suit or proceeding contesting such validity is commenced within twenty days after the date of such publication, or

(c) such obligations are authorized in violation of the provisions of the constitution.

Section 7. This bond resolution shall take effect immediately, and the Town Clerk is hereby authorized and directed to publish the foregoing resolution, in summary, together with a Notice attached in substantially the form prescribed by Section 81.00 of the Law in the

TOWN OF AMHERST POLICE DEPARTMENT
Town-wide Centralized Security Improvements

PROPOSED SCOPE OF IMPROVEMENTS:

The Town of Amherst Police Department is chiefly responsible for providing adequate safety and security for the residential tax base as well as town employees while town-related business and activities are conducted at town-owned facilities. The scope of this project contains funding for additional safety and security measures as outlined by the Police department. These measures are anticipated to include the following measures and improvements.

Security Camera System Upgrades:

To date, the Police Department has developed a robust security camera system network made up of controls, communication facilities and the cameras themselves. To date, the system network is fully complete and functional but consists of only a small number of cameras. With intent to serve and protect more town-owned facilities, the fully scalable system needs to be expanded. In an effort to address the required expansion of the existing camera system, a number of improvements will be completed. A thorough analysis of each town-owned facility will be conducted in an effort to determine a priority list of needs based on exposure and threat-level. Based on that priority, the existing system will be expanded with new cameras being installed at several town-owned facilities. As needed and in order to accommodate the new cameras, the cameras system network may also require improvements and/or upgrades. Ancillary building improvements will also be made as needed in an effort to accommodate these new cameras and/or network improvements.

The project will include the ability to maintain the installed infrastructure thru regular troubleshooting and repair contracts.

Access Control System Improvements:

The existing access control system employed by the Town of Amherst Police Department is currently in use within the Police Headquarters and Court Facilities. That system was designed as a scalable centralized system which could be expanded in an effort to provide safe, secure and reliable access control on a town-wide basis for numerous town-owned facilities. The system is largely key-fob based and provides for computer-controlled security of doors and barriers within town-owned facilities. That system will be expanded as-needed in an effort to broaden the scope of security over other town-owned facilities as dictated by a needs assessment to be conducted by the Police Department.

The project will include the ability to maintain the installed infrastructure thru regular troubleshooting and repair contracts.

Attachment: MPR PO-5 Town Wide Centralized Security Improvements (RES-2022-351 : Townwide Centralized Security (Bond Resolution -

TOWN OF AMHERST POLICE DEPARTMENT
Town-wide Centralized Security Improvements

Physical Security Barriers / Fencing and Fixture Improvements:

Based on a Police Department needs assessment, all town-owned facilities will be prioritized based on their need for additional physical barriers and/or fencing and/or fixture improvements. These barriers typically include fencing but may also include motorized gates and/or physical impediments. As needed and in most cases, these additional security measures will provide benefit by providing an additional layer of perimeter control over town-owned facilities.

The project will include the ability to maintain the installed infrastructure thru regular troubleshooting and repair contracts.

As per the above, the scope of this project will include a mix of equipment, hardware and software control replacements and improvements. The project scope described above will be designed, bid and constructed during 2022. If any other security-related projects become prioritized during this period, these funds will be available for use for those projects as well. The above project will be bonded against the Town of Amherst General Fund at a total project cost of $100,000.00, financed entirely with serial bonds. The above project is characterized as a replacement-in-kind project. The improvements provided within the scope of this project will have a minimum life cycle of five (5) years.

INTRODUCTION / EXISTING CONDITIONS:

The Town of Amherst owns and operates numerous facilities within the Town of Amherst. Many of those facilities incorporate the use of a parking lot. These typically asphalt parking lots must be maintained on a consistent basis in order to avoid costly, complete replacement of these lots. In 2004, the Town removed parking lot maintenance from the annual budget process from each Department and directed that all maintenance of off-street parking serving Town of Amherst buildings and facilities be funded through the Town's annual Capital Improvements Program.

In 2005, a condition survey of all town facility off-street parking lots was conducted and based on the response from all department heads, 28 lots totaling over 2,000,000 sq. ft. were identified for improvement. The following represents an analysis of the improvements that have been made in recent years:

PROPOSED SCOPE OF IMPROVEMENTS:

In order to address the ongoing deterioration of town facility parking lots, sidewalks and aprons, numerous improvement activities are planned. Asphalt excavation repairs, milling and paving will be provided at numerous locations. Some locations will be improved through replacement of concrete curbs, sidewalks and/or parking lot aprons. Further, some facilities will also have their drainage receivers and/or parking stops improved or replaced. A breakdown of proposed improvement activities and associated costs per facility are provided within this report. The planned improvements at these facilities will address the current highest priority (worst condition) required improvements. All of the improvements described herein will have a minimum useful life of 10-years.

The improvements outlined herein will begin in 2022 and be completed within the 2023 construction season. The above project will be bonded against the Town of Amherst General Fund at a *total project cost* of $110,000, financed entirely with serial bonds. The above project is characterized as a replacement-in-kind project.

_____ offered the following resolution and moved its adoption:

Attachment: CertBondReso (RES-2022-352 : Town Facility Parking Lot Maintenance (Bond Resolution - $110,000))

BOND RESOLUTION OF THE TOWN OF AMHERST, NEW YORK, ADOPTED APRIL 11, 2022, AUTHORIZING TOWN-WIDE PARKING LOT PAVING IMPROVEMENTS, STATING THE ESTIMATED TOTAL MAXIMUM COST THEREOF IS $110,000, APPROPRIATING SAID AMOUNT FOR SUCH PURPOSE, AND AUTHORIZING THE ISSUANCE OF BONDS IN THE PRINCIPAL AMOUNT OF $110,000 TO FINANCE SAID APPROPRIATION

THE TOWN BOARD OF THE TOWN OF AMHERST, IN THE COUNTY OF ERIE, NEW YORK, HEREBY RESOLVES (by the favorable vote of not less than two-thirds of all the members of said Town Board) AS FOLLOWS:

Section 1. The Town of Amherst, in the County of Erie, New York (herein called the "Town"), is hereby authorized to undertake Town-wide parking lot paving improvements, as described in the map, plan and report dated March 2022, prepared by the Town Engineering Department (2022-2027 Capital Improvement Program Project B-2). The estimated total maximum cost thereof, including preliminary costs and costs incidental thereto and the financing thereof, is $110,000 and said amount is hereby appropriated for such purpose. The plan of financing includes the issuance of bonds in the aggregate principal amount of $110,000 to finance said appropriation, and the levy and collection of taxes on all the taxable real property in the Town to pay the principal of said bonds and the interest thereon as the same shall become due and payable.

Section 2. Bonds of the Town in the principal amount of $110,000 are hereby authorized to be issued pursuant to the provisions of the Local Finance Law, constituting Chapter 33-a of the Consolidated Laws of the State of New York (herein called the "Law"), to finance said objects or purposes as set forth in section 1 hereof.

Attachment: CertBondReso (RES-2022-352 : Town Facility Parking Lot Maintenance (Bond Resolution - $110,000))

Section 3. The following additional matters are hereby determined and declared:

(a) The period of probable usefulness applicable to the class of objects or purposes for which said $110,000 bonds are authorized to be issued, within the limitations of Section 11.00 a. 20(f) of the Law, is ten (10) years.

(b) The proceeds of the bonds herein authorized and any bond anticipation notes issued in anticipation of said bonds may be applied to reimburse the Town for expenditures made after the effective date of this resolution for the purpose for which said bonds are authorized. The foregoing statement of intent with respect to reimbursement is made in conformity with Treasury Regulation Section 1.150-2 of the United States Treasury Department.

(c) The proposed maturity of the bonds authorized by this resolution will exceed five (5) years.

Section 4. Each of the bonds authorized by this resolution, and any bond anticipation notes issued in anticipation of the sale of said bonds, shall contain the recital of validity as prescribed by Section 52.00 of the Law and said bonds, and any notes issued in anticipation of said bonds, shall be general obligations of the Town, payable as to both principal and interest by general tax upon all the taxable real property within the Town. The faith and credit of the Town are hereby irrevocably pledged to the punctual payment of the principal of and interest on said bonds, and any notes issued in anticipation of the sale of said bonds, and provision shall be made annually in the budget of the Town by appropriation for (a) the amortization and redemption of the bonds, and any notes in anticipation thereof to mature in such year, and (b) the payment of interest to be due and payable in such year.

Attachment: CertBondReso (RES-2022-352 : Town Facility Parking Lot Maintenance (Bond Resolution - $110,000))

Section 5. Subject to the provisions of this resolution and of the Law and pursuant to the provisions of Section 21.00 of the Law relative to the authorization of the issuance of bonds with substantially level or declining annual debt service, Section 30.00 relative to the authorization of the issuance of bond anticipation notes and Section 50.00 and Sections 56.00 to 60.00 and 168.00 of the Law, the powers and duties of the Town Board relative to authorizing bond anticipation notes and prescribing the terms, form and contents and as to the sale and issuance of the bonds herein authorized, and of any bond anticipation notes issued in anticipation of said bonds, and the renewals of said bond anticipation notes, and as to the execution of agreements for credit enhancements, are hereby delegated to the Supervisor, the chief fiscal officer of the Town.

Section 6. The validity of the bonds authorized by this resolution, and of any notes issued in anticipation of the sale of said bonds, may be contested only if:

(a) such obligations are authorized for an object or purpose for which the Town is not authorized to expend money, or

(b) the provisions of law which should be complied with at the date of the publication of such resolution, or a summary thereof, are not substantially complied with,

and an action, suit or proceeding contesting such validity is commenced within twenty days after the date of such publication, or

(c) such obligations are authorized in violation of the provisions of the constitution.

Attachment: CertBondReso (RES-2022-352 : Town Facility Parking Lot Maintenance (Bond Resolution - $110,000))

Section 7. This bond resolution is subject to a permissive referendum and the Town Clerk is hereby authorized and directed, within fifteen (15) days after the adoption of this resolution, to cause to be published, in full, in "The Amherst Bee," a newspaper having a general circulation within said Town and hereby designated the official newspaper of the Town for such publication and posted on the sign board of the Town maintained pursuant to the Town Law, a Notice in substantially the following form:

Attachment: CertBondReso (RES-2022-352 : Town Facility Parking Lot Maintenance (Bond Resolution - $110,000))

TOWN OF AMHERST. NEW YORK

PLEASE TAKE NOTICE that on April 11, 2022, the Town Board of the Town of Amherst, in the County of Erie, New York, adopted a bond resolution entitled:

> "BOND RESOLUTION OF THE TOWN OF AMHERST, NEW YORK, ADOPTED APRIL 11, 2022, AUTHORIZING TOWN-WIDE PARKING LOT PAVING IMPROVEMENTS, STATING THE ESTIMATED TOTAL MAXIMUM COST THEREOF IS $110,000, APPROPRIATING SAID AMOUNT FOR SUCH PURPOSE, AND AUTHORIZING THE ISSUANCE OF BONDS IN THE PRINCIPAL AMOUNT OF $110,000 TO FINANCE SAID APPROPRIATION,"

an abstract of which bond resolution concisely stating the purpose and effect thereof, being as follows:

FIRST: AUTHORIZING said Town is authorized to undertake Town-wide parking lot paving improvements, as described in the map, plan and report dated March 2022, prepared by the Town Engineering Department (2022-2027 Capital Improvement Program Project B-2); STATING the estimated total maximum cost thereof, including preliminary costs, and costs incidental thereto and the financing thereof, is $110,000; APPROPRIATING said amount for such purpose; and STATING the plan of financing includes the issuance of bonds in the principal amount of $110,000 to finance said appropriation, and the levy and collection of taxes on all the taxable real property in the Town to pay the principal of said bonds and the interest thereon;

SECOND: AUTHORIZING the issuance of bonds in the principal amount of $110,000 pursuant to the Local Finance Law of the State of New York (the "Law") to finance said appropriation;

THIRD: DETERMINING and STATING the period of probable usefulness applicable to the purpose for which said bonds are authorized to be issued is ten (10) years; the proceeds of said bonds and any bond anticipation notes issued in anticipation thereof may be applied to reimburse the Town for expenditures made after the effective date of this bond resolution for the purpose for which said bonds are authorized; and the proposed maturity of said bonds will exceed five (5) years;

FOURTH: DETERMINING that said bonds, and any bond anticipation notes issued in anticipation of said bonds, and the renewals of said bond anticipation notes shall be general obligations of the Town; and PLEDGING to their payment the faith and credit of the Town;

FIFTH: DELEGATING to the Supervisor the powers and duties as to the issuance of said bonds, and any bond anticipation notes issued in anticipation of said bonds, or the renewals thereof; and

Attachment: CertBondReso (RES-2022-352 : Town Facility Parking Lot Maintenance (Bond Resolution - $110,000))

SIXTH: DETERMINING that the bond resolution is subject to a permissive referendum.

DATED: April 11, 2022

FRANCINA J. SPOTH,
Town Clerk

Section 8. The Town Clerk is hereby authorized and directed to cause said bond resolution to be published, in summary, after said bond resolution shall take effect, in the newspaper referred to in Section 7 hereof, and hereby designated the official newspaper for said publication, together with a Notice in substantially the form as provided by Section 81.00 of the Local Finance Law, constituting Chapter 33-a of the Consolidated Laws of the State of New York.

INTRODUCTION / EXISTING CONDITIONS:

The Town of Amherst owns and operates numerous facilities within the Town of Amherst. Many of those facilities incorporate the use of a parking lot. These typically asphalt parking lots must be maintained on a consistent basis in order to avoid costly, complete replacement of these lots. In 2004, the Town removed parking lot maintenance from the annual budget process from each Department and directed that all maintenance of off-street parking serving Town of Amherst buildings and facilities be funded through the Town's annual Capital Improvements Program.

In 2005, a condition survey of all town facility off-street parking lots was conducted and based on the response from all department heads, 28 lots totaling over 2,000,000 sq. ft. were identified for improvement. The following represents an analysis of the improvements that have been made in recent years:

TO: **Town Board**

FROM: **Stanley J. Sliwa, Esq., Town Attorney**

DATE: **April 6, 2022**

RE: **Town Facility Asphalt Sealing and Striping**
2022-2027 C.I.P. - Project No. B-3
Bond Resolution - $100,000

Kindly take the following action with respect to the above bond request:

(1) Adopt the attached SEQR determination for the above project as determined by the Town of Amherst Planning Department; and

(2) Adopt the attached bond resolution authorizing the issuance of $100,000 in serial bonds for the above-referenced Town improvement.

The adoption of the bond resolution does ***not*** require a public hearing to be held because the improvement is a Town improvement not involving a special district.

Also attached is the Map Plan and Report which provides further detail on the scope of the project.

Thank you.

INTRODUCTION / EXISTING CONDITIONS:

The Town of Amherst owns and operates numerous facilities within the Town of Amherst. Many of those facilities incorporate the use of a parking lot. These typically asphalt parking lots must be maintained on a consistent basis in order to avoid costly, complete replacement of these lots. In 2004, the Town removed parking lot maintenance from the annual budget process from each Department and directed that all maintenance of off-street parking serving Town of Amherst buildings and facilities be funded through the Town's annual Capital Improvements Program.

In 2005, a condition survey of all town facility off-street parking lots was conducted and based on the response from all department heads, 28 lots totaling over 2,000,000 sq. ft. were identified for improvement. The following represents an analysis of the improvements that have been made in recent years:

PROPOSED SCOPE OF IMPROVEMENTS:

In order to address the ongoing deterioration of town facility parking lots and walkways, numerous improvement activities are planned. Asphalt areas will be cleaned and have crack-filler applied as required. The subject asphalt areas will then be sealed and striped as required. These improvements may be completed at any town-owned facility depending on condition, but are anticipated to be completed at the following locations:

- Highway Department (Front Lot)
- Northtown Ice Center
- Audubon Par 3 GC
- Town Hall
- Plant No. 16 Wastewater Treatment Facility
- Bedford Park
- Amherst Museum
- Amherst Senior Center
- Clearfield Library
- Audubon Library
- Eggertsville Library
- Audubon Golf Course and Driving Range
- Clearfield Recreation Center
- Eggertsville Youth & Community Center
- Veteran's Park
- Parks Department
- North Forest Park
- Central Amherst Little League
- Amherst Community Policing and Training Center
- Williamsville Youth & Family Center

Attachment: March 2022_Town Facility Asphalt Sealing & Striping -CIP_B-3 (RES-2022-353 : Town Facility Asphalt Sealing and Striping (Bond

The planned improvements at these facilities will address the current highest priority (worst condition) required improvements. All of the improvements described herein will have a minimum useful life of 5-years.

The improvements outlined herein will begin in 2022 and be completed within the 2023 construction season. The above project will be bonded against the Town of Amherst General Fund at a *total project cost* of $100,000, financed entirely with serial bonds. The above project is characterized as a replacement-in-kind project.

FINANCIAL SUMMARY:

Estimated Construction Costs	$ 99,500
Legal / Administrative	500
Project Total	**$ 100,000**

TAXATION SUMMARY:

Total Bond Amount:	$ 100,000
Bond Term:	5 Years
Annual Tax Impacts:	$0.0021 per $1,000 AV (General Fund)
Typical Property Taxation Impact:	$0.42 per $200,000 property

_____ offered the following resolution and moved its adoption:

Attachment: CertBondReso (RES-2022-353 : Town Facility Asphalt Sealing and Striping (Bond Resolution - $100,000))

BOND RESOLUTION OF THE TOWN OF AMHERST, NEW YORK, ADOPTED APRIL 11, 2022, AUTHORIZING TOWN-WIDE PARKING LOT ASPHALT SEALING AND STRIPING, STATING THE ESTIMATED TOTAL MAXIMUM COST THEREOF IS $100,000, APPROPRIATING SAID AMOUNT FOR SUCH PURPOSE, AND AUTHORIZING THE ISSUANCE OF BONDS IN THE PRINCIPAL AMOUNT OF $100,000 TO FINANCE SAID APPROPRIATION

THE TOWN BOARD OF THE TOWN OF AMHERST, IN THE COUNTY OF ERIE, NEW YORK, HEREBY RESOLVES (by the favorable vote of not less than two-thirds of all the members of said Town Board) AS FOLLOWS:

Section 1. The Town of Amherst, in the County of Erie, New York (herein called the "Town"), is hereby authorized to undertake Town-wide parking lot asphalt sealing and striping, as described in the map, plan and report dated March 2022, prepared by the Town Engineering Department (2022-2027 Capital Improvement Program Project B-3). The estimated total maximum cost thereof, including preliminary costs and costs incidental thereto and the financing thereof, is $100,000 and said amount is hereby appropriated for such purpose. The plan of financing includes the issuance of bonds in the aggregate principal amount of $100,000 to finance said appropriation, and the levy and collection of taxes on all the taxable real property in the Town to pay the principal of said bonds and the interest thereon as the same shall become due and payable.

Section 2. Bonds of the Town in the principal amount of $100,000 are hereby authorized to be issued pursuant to the provisions of the Local Finance Law, constituting Chapter 33-a of the Consolidated Laws of the State of New York (herein called the "Law"), to finance said objects or purposes as set forth in section 1 hereof.

Attachment: CertBondReso (RES-2022-353 : Town Facility Asphalt Sealing and Striping (Bond Resolution - $100,000))

Section 3. The following additional matters are hereby determined and declared:

(a) The period of probable usefulness applicable to the class of objects or purposes for which said $100,000 bonds are authorized to be issued, within the limitations of Section 11.00 a. 20(f) of the Law, is ten (10) years.

(b) The proceeds of the bonds herein authorized and any bond anticipation notes issued in anticipation of said bonds may be applied to reimburse the Town for expenditures made after the effective date of this resolution for the purpose for which said bonds are authorized. The foregoing statement of intent with respect to reimbursement is made in conformity with Treasury Regulation Section 1.150-2 of the United States Treasury Department.

(c) The proposed maturity of the bonds authorized by this resolution will exceed five (5) years.

Section 4. Each of the bonds authorized by this resolution, and any bond anticipation notes issued in anticipation of the sale of said bonds, shall contain the recital of validity as prescribed by Section 52.00 of the Law and said bonds, and any notes issued in anticipation of said bonds, shall be general obligations of the Town, payable as to both principal and interest by general tax upon all the taxable real property within the Town. The faith and credit of the Town are hereby irrevocably pledged to the punctual payment of the principal of and interest on said bonds, and any notes issued in anticipation of the sale of said bonds, and provision shall be made annually in the budget of the Town by appropriation for (a) the amortization and redemption of the bonds, and any notes in anticipation thereof to mature in such year, and (b) the payment of interest to be due and payable in such year.

Attachment: CertBondReso (RES-2022-353 : Town Facility Asphalt Sealing and Striping (Bond Resolution - $100,000))

Section 5. Subject to the provisions of this resolution and of the Law and pursuant to the provisions of Section 21.00 of the Law relative to the authorization of the issuance of bonds with substantially level or declining annual debt service, Section 30.00 relative to the authorization of the issuance of bond anticipation notes and Section 50.00 and Sections 56.00 to 60.00 and 168.00 of the Law, the powers and duties of the Town Board relative to authorizing bond anticipation notes and prescribing the terms, form and contents and as to the sale and issuance of the bonds herein authorized, and of any bond anticipation notes issued in anticipation of said bonds, and the renewals of said bond anticipation notes, and as to the execution of agreements for credit enhancements, are hereby delegated to the Supervisor, the chief fiscal officer of the Town.

Section 6. The validity of the bonds authorized by this resolution, and of any notes issued in anticipation of the sale of said bonds, may be contested only if:

(a) such obligations are authorized for an object or purpose for which the Town is not authorized to expend money, or

(b) the provisions of law which should be complied with at the date of the publication of such resolution, or a summary thereof, are not substantially complied with,

and an action, suit or proceeding contesting such validity is commenced within twenty days after the date of such publication, or

(c) such obligations are authorized in violation of the provisions of the constitution.

Attachment: CertBondReso (RES-2022-353 : Town Facility Asphalt Sealing and Striping (Bond Resolution - $100,000))

Section 7. This bond resolution is subject to a permissive referendum and the Town Clerk is hereby authorized and directed, within fifteen (15) days after the adoption of this resolution, to cause to be published, in full, in "The Amherst Bee," a newspaper having a general circulation within said Town and hereby designated the official newspaper of the Town for such publication and posted on the sign board of the Town maintained pursuant to the Town Law, a Notice in substantially the following form:

Attachment: CertBondReso (RES-2022-353 : Town Facility Asphalt Sealing and Striping (Bond Resolution - $100,000))

TOWN OF AMHERST. NEW YORK

PLEASE TAKE NOTICE that on April 11, 2022, the Town Board of the Town of Amherst, in the County of Erie, New York, adopted a bond resolution entitled:

> "BOND RESOLUTION OF THE TOWN OF AMHERST, NEW YORK, ADOPTED APRIL 11, 2022, AUTHORIZING TOWN-WIDE PARKING LOT ASPHALT SEALING AND STRIPING, STATING THE ESTIMATED TOTAL MAXIMUM COST THEREOF IS $100,000, APPROPRIATING SAID AMOUNT FOR SUCH PURPOSE, AND AUTHORIZING THE ISSUANCE OF BONDS IN THE PRINCIPAL AMOUNT OF $100,000 TO FINANCE SAID APPROPRIATION,"

an abstract of which bond resolution concisely stating the purpose and effect thereof, being as follows:

FIRST: AUTHORIZING said Town is authorized to undertake Town-wide parking lot asphalt sealing and striping, as described in the map, plan and report dated March 2022, prepared by the Town Engineering Department (2022-2027 Capital Improvement Program Project B-3); STATING the estimated total maximum cost thereof, including preliminary costs, and costs incidental thereto and the financing thereof, is $100,000; APPROPRIATING said amount for such purpose; and STATING the plan of financing includes the issuance of bonds in the principal amount of $100,000 to finance said appropriation, and the levy and collection of taxes on all the taxable real property in the Town to pay the principal of said bonds and the interest thereon;

SECOND: AUTHORIZING the issuance of bonds in the principal amount of $100,000 pursuant to the Local Finance Law of the State of New York (the "Law") to finance said appropriation;

THIRD: DETERMINING and STATING the period of probable usefulness applicable to the purpose for which said bonds are authorized to be issued is ten (10) years; the proceeds of said bonds and any bond anticipation notes issued in anticipation thereof may be applied to reimburse the Town for expenditures made after the effective date of this bond resolution for the purpose for which said bonds are authorized; and the proposed maturity of said bonds will exceed five (5) years;

FOURTH: DETERMINING that said bonds, and any bond anticipation notes issued in anticipation of said bonds, and the renewals of said bond anticipation notes shall be general obligations of the Town; and PLEDGING to their payment the faith and credit of the Town;

FIFTH: DELEGATING to the Supervisor the powers and duties as to the issuance of said bonds, and any bond anticipation notes issued in anticipation of said bonds, or the renewals thereof; and

Attachment: CertBondReso (RES-2022-353 : Town Facility Asphalt Sealing and Striping (Bond Resolution - $100,000))

SIXTH: DETERMINING that the bond resolution is subject to a permissive referendum.

DATED: April 11, 2022

FRANCINA J. SPOTH,
Town Clerk

Section 8. The Town Clerk is hereby authorized and directed to cause said bond resolution to be published, in summary, after said bond resolution shall take effect, in the newspaper referred to in Section 7 hereof, and hereby designated the official newspaper for said publication, together with a Notice in substantially the form as provided by Section 81.00 of the Local Finance Law, constituting Chapter 33-a of the Consolidated Laws of the State of New York.

Attachment: MPR B-3 Town Parking Lot Sealing & Striping (RES-2022-353 : Town Facility Asphalt Sealing and Striping (Bond Resolution -

The planned improvements at these facilities will address the current highest priority (worst condition) required improvements. All of the improvements described herein will have a minimum useful life of 5-years.

The improvements outlined herein will begin in 2022 and be completed within the 2023 construction season. The above project will be bonded against the Town of Amherst General Fund at a *total project cost* of $100,000, financed entirely with serial bonds. The above project is characterized as a replacement-in-kind project.

FINANCIAL SUMMARY:

Estimated Construction Costs	$ 99,500
Legal / Administrative	500
Project Total	**$ 100,000**

TAXATION SUMMARY:

Total Bond Amount:	$ 100,000
Bond Term:	5 Years
Annual Tax Impacts:	$0.0021 per $1,000 AV (General Fund)
Typical Property Taxation Impact:	$0.42 per $200,000 property

PILOT Agreement - Amherst Senior Housing LLC (CRS# 3270)

AGENDA ITEM : APRIL 11TH, 2022

TO: **Town Board**

FROM: **Samuel A. Alba, Esq., Senior Deputy Town Attorney**

DATE: **April 6, 2022**

RE: **PILOT Agreement:**
Amherst Senior Housing LLC and the Town of Amherst, et al.
(CRS# 3270)

Kindly adopt the following resolution with respect to the above matter:

WHEREAS, Amherst Senior Housing LLC has requested that the Town Board approve a PILOT Agreement with a term of fifteen (15) years for the Property; and

WHEREAS, the content and form of the proposed PILOT Agreement have been reviewed and approved by the Town Assessor's Office and the Town Attorney's Office and a copy of the approved form of the proposed PILOT Agreement is attached hereto; and

WHEREAS, the PILOT Agreement must be approved by Erie County and the Williamsville Central School District;

NOW, THEREFORE, BE IT RESOLVED, that the Town Board approves the requested PILOT Agreement for the Project subject to the three (3) conditions set forth below and the Supervisor of the Town of Amherst is hereby authorized to sign the PILOT Agreement between Amherst Senior Housing LLC and the Town of Amherst, Erie County, and the Williamsville Central School District upon satisfaction of the following three (3) conditions:

1. The PILOT Agreement is subject to review and approval by Erie County;

2. The PILOT Agreement is subject to review and approval by the Williamsville Central School District; and

3. Approval of the PILOT Agreement is subject to successful completion of the Town's contract routing system (CRS).

Please note that the Schedule A that is separately attached will replace the Schedule A that is a part of the originally submitted PILOT.

AGREEMENT FOR PAYMENT IN LIEU OF TAXES FOR JEWISH FEDERATION AFFORDABLE SENIOR HOUSING PROJECT AT 275 ESSJAY ROAD

Between AMHERST SENIOR HOUSING LLC

and

THE TOWN OF AMHERST, ERIE COUNTY & THE WILLIAMSVILLE CENTRAL SCHOOL DISTRICT

Attachment: Amherst Senior Housing PILOT - FINAL with Exhibits (RES-2022-354 : PILOT Agreement - Amherst Senior Housing LLC (CRS#

AGREEMENT FOR PAYMENT IN LIEU OF TAXES FOR AFFORDABLE SENIOR HOUSING PROJECT AT 275 ESSJAY ROAD

THIS AGREEMENT FOR PAYMENT IN LIEU OF TAXES made as of the ____ day of _____ 2022 ("the PILOT agreement") FOR REAL PROPERTY by and among the **TOWN OF AMHERST**, a municipal corporation organized and existing under the laws of the State of New York, having its principal office at 5583 Main Street, Williamsville, New York 14221 (the "Town"), the **COUNTY OF ERIE,** a municipal corporation organized and existing under the laws of the State of New York, having its principal office c/o Erie County Department of Finance, 95 Franklin Street, Buffalo, New York 14202 (the "County"), the **WILLIAMSVILLE CENTRAL SCHOOL DISTRICT**, a school district formed pursuant to Article 37 of the Education Law of the State of New York, having its principal office at 105 Casey Road, East Amherst, NY 14051 ("School District"), is made and entered into as of _____ ___, 2022,by **AMHERST SENIOR HOUSING LLC**, a New York limited liability company with an address of 86 Route 59, Spring Valley, New York 10977, with offices at 680 Fifth Avenue, 17th Floor, New York, New York 10019, (the "Taxpayer") and the **TOWN OF AMHERST**, a municipal corporation duly authorized with an address of 5583 Main Street, Williamsville, New York 14221 (the "***Town***"), Erie County ("***Erie County***") and the Williamsville Central School District ("***School District***").

WHEREAS, the Project Sponsor is the owner and operator of an affordable senior housing project located at 275 Essjay Road in the Town of Amherst consisting of 150 affordable senior apartments and related improvements which it purchased in 2019 from the prior owner and operator, Jewish Federation Housing, Inc. (the "***Project***") as further described within the attached legal description at Exhibit "1", in the Town of Amherst, County of Erie and State of New York ("Land"; collectively, the "Project"), and

WHEREAS, the proposed project provides affordable senior apartments to tenants pursuant to a Housing Assistance Payments Multi-Year Contract entered into between Amherst Senior Housing LLC and the U.S. Department of Housing and Urban Development ("***HUD***") dated August 31, 2019("***HUD Contract***") which succeeded the Housing Assistance Payments Multi-Year Contract for the Project entered into between Jewish Federation Housing, Inc. and HUD dated May 31, 2015; and,

WHEREAS, the monthly rents paid by tenants of the affordable senior apartments at the Project are subject to HUD approval to ensure the monthly rents are affordable and as of May 31, 2019 the HUD authorized monthly rents for the apartments at the Project are as follows:

Number of Units	Number of Bedrooms	Contract Rent	Utility Allowance Allowance	Gross Rent
130	1 bedroom	$623.00	$80.00	$703.00
13	1 bedroom	$623.00	$92.00	$715.00
5	2 bedroom	$764.00	$82.00	$846.00
2	2 bedroom	$807.00	$83.00	$890.00

WHEREAS, the development of the Project is of vital public interest to the Town, County and School District; and

WHEREAS, the development of the Project is intended to be **affordable to low** income households, and **affordability** of the property for residential use by low income persons shall remain consistent throughout the duration of the PILOT Agreement; and

WHEREAS, at the time of the Project Sponsor's purchase of the Project HUD, Jewish Federation Housing, Inc. and the Project Sponsor entered into an Assignment, Assumption and Amendment of Section 8 Housing Assistance Payments Contract by which the Project Sponsor has been approved by HUD to provide affordable senior housing at the Project which resulted in the HUD Contract; and

WHEREAS, subsequent to its purchase of the Project, the Project Sponsor made substantial improvements to the Project including upgrades to the affordable senior apartments, and upgrades to common areas; and

WHEREAS, the Project Sponsor's partner, as defined in PHFL Section 16, and management qualifies for those certain tax exemptions pursuant to Article 11 of the PHFL

WHEREAS, the Project Sponsor is the beneficial fee owner of the Project; and

WHEREAS, the Town, County and School District wish to grant the Taxpayer and the Company and its partners such relief as permitted under Section 577 of the PHFL.

WHEREAS, it is the intention of the Parties that Project Sponsor make annual payments to the Town of Amherst, Erie County and the School District for the term of this Agreement in lieu of real property taxes that would otherwise be assessed on the Project; and

WHEREAS, because both Project Sponsor and the Town need an accurate projection of their respective expenses and revenues with respect to the real property and improvements comprising the Project that are taxable under law, the Parties believe that it is in their mutual best interests to enter into this Agreement establishing the payments that will be made with respect to the Project for the term of this Agreement; and

WHEREAS, the Town, by resolution of the Town Board, adopted Resolution No. 2022-____ on March , 2022 approved this Agreement and authorized this Agreement to be executed on behalf of the Town by the Supervisor; and

WHEREAS, Erie County, by resolution of the Erie County Legislature, adopted a resolution on _____ __, 2022 approved this Agreement and its execution on behalf of the County; and

WHEREAS, the School District, by resolution of the Board of Education, adopted a resolution on _____ ___, 2022 approved this Agreement and its execution on behalf of the School

Attachment: Amherst Senior Housing PILOT - FINAL with Exhibits (RES-2022-354 : PILOT Agreement - Amherst Senior Housing LLC (CRS#

District; and

NOW, THEREFORE, in consideration of the covenants and agreements contained in this PILOT Agreement, and for other good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged, the parties covenant and agree as follows:

1. **Tax Exemption**. The parties agree that Project Sponsor qualifies for real property tax exemption for the Project in accordance with the provisions of Article XI of the PHFL and the Town hereby exempts from local and municipal taxes, including school taxes, other than assessments for local improvements, one hundred percent (100%) of the value of the Project and the Property, including both land and improvements. "***Local and Municipal Taxes***" shall mean any and all real estate taxes levied by the County, the Town, the School District (collectively, the "***Taxing Jurisdictions***"). The Parties understand that the exemption extended pursuant to section 577 of the PHFL and this Agreement does not include exemption from special assessments, special ad valorem levies, improvement district charges or similar tax equivalents. This Agreement shall not limit or restrict the Project Sponsor's right to apply for or obtain any other tax exemption to which it might be entitled upon the expiration of this Agreement.

2. **Obligation of the Project Sponsor to Make Payments in Lieu of Taxes**. So long as the aforementioned exemption remains in place, the Project Sponsor will make annual payments in lieu of taxes ("***PILOT Payments***") to the Taxing Jurisdictions in the amounts set forth in ***Schedule "A"***, as attached hereto and made a part hereof, in satisfaction of all real property taxes. The PILOT Payments shall be required to be made to the Taxing Jurisdictions following the March 1, 2022 tax status date commencing with the 2023 tax fiscal year of the Town, the 2023 tax fiscal year of the County, and the 2022-2023 tax fiscal year of the School District. The Parties agree that no refund of any real property taxes levied upon the Property prior to the 2023 tax fiscal year of the Town, the 2023 tax fiscal year of the County, and the 2022-2023 tax fiscal year of the School District shall be sought or claimed on account of the exemption made effective pursuant to this Agreement.

3. **PILOT Term**. The fiscal years with respect to which payments shall be due under this Agreement (the "***PILOT Term***") shall be fifteen (15) years beginning as of July 1, 2022 and shall continue until December 31, 2037. The PILOT term may be extended if at the time of such future extension the Project Sponsor continues to provide affordable senior housing at the Project as evidenced by a contract with HUD and such written extension is approved by the Town of Amherst, Erie County and the School District.

4. **Requirements of the Project Sponsor**

a. The tax exemption provided by this Agreement will continue for a term of fifteen (15) years, unless sooner terminated by law or mutual agreement upon prior written consent of the Parties, provided that the Project Sponsor continues to operate the Project and the Property for persons of low income in conformance with law, the HUD Contract, and Article XI of the PHFL..

b. The Project Sponsor will provide the Town such information concerning its operations and the operations of the Project in form and substance as may from time to time be reasonably requested. Such information shall include, but shall not be

Attachment: Amherst Senior Housing PILOT - FINAL with Exhibits (RES-2022-354 : PILOT Agreement - Amherst Senior Housing LLC (CRS#

limited to, general certificates of the Project Sponsor and the annual financial statements of the Project Sponsor from the calendar year immediately preceding the fiscal year in which payments are due.

c. The Project Sponsor will permit the Comptroller of the Town to audit its books and records within fourteen (14) days after receiving a written request from the Town.

5. Taxing Authorities and Amounts.

a. Upon commencement of the Town's March 1, 2022 taxable status date (the "Commencement Date"), the Project Sponsor shall make annual payments in lieu of local and municipal real estate taxes, including school taxes but not including assessments for local improvements and special assessments on the Land and improvements constituting the Project as follows.

i. A fixed annual PILOT Payment to the Town in the amounts as stated in ***Schedule "A"***, as attached hereto and made a part hereof, in satisfaction of all real property taxes.

ii. In addition to the payments set forth in ***Schedule "A"***, the Project Sponsor will be responsible for paying all special district assessments and other assessments for local improvements permitted by law;

iii. At the expiration of the PILOT Term, this PILOT Agreement will cease to have any effect on the taxes due with respect to the property and the property will be taxed in accordance with applicable law unless otherwise extended or modified pursuant to a separate Agreement.

b. The PILOT Payments shall be payable annually. Each annual PILOT Payment to the Town shall be made on or before January 31st of each year and shall be delivered to the Town Clerk's Office, 5583 Main Street, Williamsville, New York 14221 or such other place as may be designated from time to time by the Town. Each such PILOT Payment to the County shall be made on or before January 31 of that year, or such payment shall be considered delinquent, and such PILOT Payment shall be delivered to County of Erie, c/o Director of Real Property Tax Services, The Edward A. Rath County Office Building, Room 100, 95 Franklin Street, Buffalo, New York 14202, or such other place as may be designated from time to time by the County. Each such PILOT Payment to the School District shall be made on or before September 30 of that year, or such payment shall be considered delinquent, and such PILOT Payment shall be delivered to the Williamsville Central School District, 105 Casey Road, East Amherst, New York 14051.

6. No Other Reductions or Increases Based on Tax Rate Changes. Except to the extent this Agreement explicitly provides otherwise, Developer agrees that the

Attachment: Amherst Senior Housing PILOT - FINAL with Exhibits (RES-2022-354 : PILOT Agreement - Amherst Senior Housing LLC (CRS#

Payments in Lieu of Taxes to be made pursuant to the PILOT Payment Schedule attached as Schedule "A" of this Agreement shall not be reduced or increased based on an increase or reduction of tax rate of Taxing Jurisdictions.

7. **Improvements or Modifications to Project**. To the extent the Project Sponsor, at its sole option, makes any capital improvements or modifications to the Project, such improvements or modifications shall not result in any changes to the Payments in Lieu of Taxes unless such improvements or modifications increases or decreases the number of affordable senior housing apartments at the Project, in which case the Payments in Lieu of Taxes as set forth in PILOT Payment Schedule attached as Schedule "A" shall be adjusted to reflect the number of affordable senior housing apartments at the Project. By way of example for illustrative purposes only, if the number of affordable senior housing apartments at the Project increases from 150 to 155 units during fifth year of the PILOT Term, the Payment in Lieu of Taxes payable by the Project to the Taxing Jurisdictions for the sixth year of the PILOT Term shall increase from $130,418.33 based on 150 units ($869.45 per unit) to $134,764.75 ($869.45 per unit x 155 units) and each successive annual Payment in Lieu of Taxes shall be also adjusted accordingly.

8. **Defaults in Payment in Lieu of Taxes**. In the event the Project Sponsor fails to make any payment in lieu of real property taxes when due, the amount or amounts not so paid shall be a lien on the Project in the same manner that delinquent real property taxes would be and continue as an obligation of the Project Sponsor until fully paid. In addition, the Project Sponsor shall pay the appropriate taxing authority's or authorities' interest and penalties on the unpaid amount or amounts accruing at the same times and at the interest rates as if such amounts were delinquent real property taxes. In addition to any other remedies available to them for the collection of delinquent real property taxes, including, without limitation, in rem proceedings, the Town, County and School District may exercise any other remedies available, and such remedies shall be cumulative and the exercise of any remedy shall not be an action of remedies under law.

9. **Effect of Fulfillment of the Requirement**. Once having paid the amounts required by this PILOT Agreement when due, the Property Sponsor shall not be required to pay any real property taxes for which such payments in lieu of taxes have been made, except special district assessments and other special assessments for local improvements permitted by law.

10. **Events of Default and Termination of Tax Exemption**.

    a. An event of default ("Event of Default") shall be defined as (l) failure of the Project Sponsor to make any payment required under the PILOT Agreement when due, (2) the Project Sponsor's failure to provide any notice as required by this PILOT Agreement to the Town, County or School District, (3) Taxpayer's failure to qualify, or continue to qualify, for a real property tax exemption for the Project in accordance with Article XI of the PHFL, (4) failure of Taxpayer to provide any of the information required by Section 3(c) of this PILOT Agreement, or (5) the

Attachment: Amherst Senior Housing PILOT - FINAL with Exhibits (RES-2022-354 : PILOT Agreement - Amherst Senior Housing LLC (CRS#

transfer of title or beneficial ownership of any portion of the Project or the Land without the prior written consent of the Town, County and School District.

b. Upon the occurrence of an Event of Default as defined pursuant to Section 7(a) above, the Project Sponsor shall have ten (10) days after the receipt of Notice from the Town, County or School District regarding such default to cure such default.

c. In the event the Project Sponsor has not cured such default or defaults within the time period set forth in this PILOT Agreement, then the exemption from real property taxes described herein shall be deemed to have been terminated as of the taxable status date of the Town's immediately preceding fiscal year.

d. Upon a termination of the exemption from real property taxes set forth in Section 7(c) above, the Project Sponsor shall be liable for real property taxes on a pro-rata basis from and after the Town's taxable status date immediately preceding the Event of Default and the statutory lien applicable to such real property taxes shall be deemed in effect as of the lien date normally applicable to such year's real property taxes, unless a separate basis for a real property tax exemption then exists for the benefit of Project Sponsor.

e. Any such termination of the real property tax exemption applicable to the Project shall not void the liability of the Project Sponsor for any unpaid payments in lieu of taxes required by this PILOT Agreement prior to such termination.

11. Payment Collection. The terms and conditions of this Agreement shall govern the collection of Payments in Lieu of Taxes provided for in this Agreement.

12. Tax Status. The Taxing Jurisdictions agree that, during the term of this Agreement, that this Agreement will exclusively govern the payments of all ad valorem real property taxes that the Project Sponsor shall be obligated to make to the Taxing Jurisdictions with respect to the Project, provided, however, that this Agreement is not intended to affect, and shall not affect other assessments of general applicability by the Town for Town services provided by the Town to the Project, including but not limited to, fire protection, water, drainage, sanitary sewer, etc. (collectively "***Special District Taxes***"). The Project Sponsor acknowledges that it shall be responsible to make annual payments to the Town for Special District Taxes during the PILOT Term.

13. Agreement not to challenge the assessed value. Applicant agrees not to challenge the assessed value of the Project during the term of this PILOT agreement.

14. Successors and Assigns. This Agreement will be binding upon, and shall be assigned to, the successors and assigns of Project Sponsor, provided that such successor or assign is an eligible party for the purpose of providing affordable senior housing at the Project as evidenced by an assignment of the HUD Contract. In the event that Project Sponsor sells, transfers, leases or assigns all or substantially all of its interest in the Project, this Agreement shall thereafter

Attachment: Amherst Senior Housing PILOT - FINAL with Exhibits (RES-2022-354 : PILOT Agreement - Amherst Senior Housing LLC (CRS#

be assigned to and shall be binding on the purchaser, transferee or assignee.

15. Statement of Good Faith. The Parties agree that the payment obligations established by this Agreement were negotiated in good faith. The Project Sponsor and the Town were represented by counsel in negotiation and preparation of this Agreement and have entered into this Agreement after full and due consideration and with the advice of its counsel. The Parties further acknowledge that this Agreement is fair and mutually beneficial to them because it reduces the likelihood of potential future disputes over real property taxes for the Project, establishes mutually acceptable and reasonable payments in lieu of taxes for the Project that are appropriate and serve their respective interests. The Town acknowledges that this Agreement is beneficial to it because it ensures the Project Sponsor will be able to continue to provide affordable senior housing at the Project in accordance with the applicable standards of HUD that govern the Project.

16. Additional Documentation and Actions. Each party will, from time to time hereafter, execute and deliver or cause to be executed and delivered, such additional documents, and take all such actions, as the parties reasonably request for the purpose of implementing or effectuating the provisions of this Agreement.

17. Invalidity. If, for any reason, it is ever determined by a court of competent jurisdiction that any material provision of this Agreement is unlawful, invalid or unenforceable then the parties shall (i) undertake best efforts to amend and or reauthorize this Agreement so as to render all material provisions lawful, valid and enforceable, and (ii) if such efforts are unsuccessful, undertake reasonable efforts, including without limitation, seeking all necessary approvals, to replicate the benefits and burdens of this Agreement in the form of an Amended PILOT Agreement.

18. Waiver. No waiver or modification of this Agreement shall be valid unless in writing and duly executed by the Parties, and no evidence of any waiver or modification shall be offered or received in evidence in any proceeding, arbitration, or litigation arising out of or affecting this Agreement, or the rights or obligations of any Party hereunder, unless such waiver or modification is in writing, duly executed as aforesaid. No failure or delay on the part of the Town to exercise any right, power or remedy hereunder shall operate as a waiver thereof, nor shall any single or partial exercise of such right, power or remedy preclude any other or further exercise thereof or the exercise of any other right, power or remedy.

19. Modification. Neither this Agreement nor any provision hereof may be amended, modified, waived, discharged or terminated, except by an instrument in writing duly executed and agreed to by the parties hereto.

20. Counterparts. This Agreement may be executed in several counterparts, each of which shall be an original and all of which shall constitute but one and the same instrument. The exchange of copies of this Agreement and of signature pages by facsimile or portable document format (PDF) transmission shall constitute effective execution and delivery of this Agreement as to the parties hereto and may be used in lieu of the original Agreement and signature pages for all purposes.

21. Pay Equity. The Project Sponsor, with respect to its own employees only, if any,

Attachment: Amherst Senior Housing PILOT - FINAL with Exhibits (RES-2022-354 : PILOT Agreement - Amherst Senior Housing LLC (CRS#

shall comply with Erie County Executive Order 13 (2014) and agrees to complete the Certificate collectively attached hereto as Exhibit "2" and made a part hereof. The Project Sponsor shall make such records available, upon request, to the County's Division of Equal Employment Opportunity for review. The County shall have the right, upon reasonable notice and at reasonable times, to inspect the books and records of the Project Sponsor, its offices and facilities, for the purpose of verifying information supplied in the Erie County Equal Pay Certification and for any other purpose reasonably related to conforming the Agency's compliance with Erie County Executive Order 13 (2014). Notwithstanding the termination provisions contained herein, violation of the provisions of Executive Order 13 (2014), may constitute grounds for the immediate termination of this Agreement and may constitute grounds for determining that the Taxpayer is not qualified to participate in future County contracts.

22. **Notices**. All notices, consents, requests, or other communications provided for or permitted to be given hereunder by a Party must be in writing and will be deemed to have been properly given or served upon the personal delivery thereof, via courier delivery service or otherwise. Such notices shall be addressed or delivered to the Parties at their respective addresses shown below.

Any such addresses for the giving of notices may be changed by a party by giving written notice as provided above to the other parties. Notice given by counsel to a party shall be effective as notice from such party.

23. **Applicable Law**. This Agreement will be made and interpreted in accordance with the laws of the State of New York. Developer, the Town, Erie County and the School District each consent to the jurisdiction of New York State courts regarding any and all matters, including interpretation or enforcement of this Agreement or any of its provisions.

24. **Covenants of the Project Sponsor**. During the term of the Agreement, the Project shall not voluntarily do any of the following:

a. Seek to invalidate this Agreement except as expressly provided herein;

b. Convey by sale, lease or otherwise any interest in the Project to any entity or organization that does not quality to provide affordable senior housing at the Project pursuant to a contract with HUD;

c. Abandon or discontinue to provide affordable senior housing apartments at the Project pursuant to HUD Contract; or

d. Fail to pay the Taxing Jurisdictions all amounts due hereunder when due in accordance with the terms and conditions of this Agreement.

25. **Covenants of the Town of Amherst**. During the term of this Agreement, the Town will not do any of the following:

a. Seek to invalidate this Agreement;

b. Seek to collect from Project Sponsor any property tax upon the Property (Special District taxes are not governed by this Agreement) or the improvements thereon in addition to the amounts established herein.

26. **Representations of Town.** The Town represents and warrants to the Project Sponsor that (i) it has secured the approval of the Town Board to duly authorize the execution, delivery and performance of this Agreement and its obligations hereunder, and (ii) it is not prohibited from entering into this Agreement and discharging and performing all covenants and

EXHIBIT 2
Erie County Equal Pay Certification

In order to comply with Executive Order 13 dated November 6, 2014, we hereby certify that we are in compliance with federal law, including the Equal Pay Act of 1963, Title VII of the Civil Rights Act of 1964, Federal Executive Order 11246 of September 24, 1965 and New York State Labor Law Section 194 (together "Equal Pay Law"). The average compensation for female employees is not consistently below the average compensation for male employees, taking into account mitigating factors. We understand that this certification is a material component of this contract. Violation of the provisions of Executive Order 13, which is attached hereto and made a part hereof, can constitute grounds for the immediate termination of this contract and may constitute grounds for determining that a bidder is not qualified to participate in future county contracts.

We have evaluated wages and benefits to ensure compliance with the Federal Equal Pay Law.

COUNTY OF ERIE

MARK C. POLONCARZ
COUNTY EXECUTIVE

Executive Order #13
Pay Equity Certification on County Contracts

WHEREAS, federal law, including the Equal Pay Act of 1963, Title VII of the Civil Rights Act of 1964 and Federal Executive Order 11246 of September 24, 1965 (Equal Employment Opportunity) (together "Federal Equal Pay Law"), requires that men and women in the same workplace be given equal pay for equal work; and

WHEREAS, Section 194 of New York State Labor Law ("NYS Equal Pay Law") prohibits compensating men and women differently for the same work; and

WHEREAS, on average, a full-time working woman in New York State earns just 85 cents for every dollar that a man earns and the pay gap is even greater for African-American and Latina women; and

WHEREAS, females make up nearly fifty-two percent of Erie County's population; and

WHEREAS, women make up nearly half of the U.S. labor force and are a growing number of breadwinners in their families; and

WHEREAS, this pay differential shortchanges women and their families by thousands of dollars a year, and potentially hundreds of thousands of dollars over a lifetime, presenting a lifelong threat to those families' economic security and reducing their earnings through Social Security and other post retirement plans; and

WHEREAS, poverty is recognized as a leading cause of or contributing factor to many social problems, including but not limited to substance abuse, domestic violence, child abuse, improper nutrition, obesity, improper health care and criminal conduct; and

WHEREAS, the impact of pay differentials is exacerbated as workers age, causing underpaid workers to disproportionally rely upon various forms of public support in their retirement years; and

WHEREAS, pay inequity can significantly impact the County, necessitating the provision of various public subsidies for low income residents and leading to the lack of receipt of income by women residents which would be spent in our local economy; and

RATH BUILDING • 95 FRANKLIN STREET • BUFFALO, N.Y. • 14202 • (716) 858-6000 • WWW.ERIE.GOV

WHEREAS, through the enforcement of current state and federal laws that ban unequal pay for equal work, Erie County can help ameliorate the many negative consequences of pay inequality, thereby improving the lives of those who might otherwise be underpaid, strengthening families and protecting children, and reducing the demand for public services, all positively impacting county, state and federal budgets.

NOW, THEREFORE, I MARK C. POLONCARZ, Erie County Executive, by virtue of the authority vested in me by the Erie County Charter § 302, do hereby order as follows:

1. It is ordered that on and after January 1, 2015, all Erie County offices, departments and administrative units, including but not limited to the Division of Purchase, fully implement a requirement in all bids, requests for proposals and other contract solicitations that the contractor submit an Erie County Equal Pay Certification which certifies the contractor's compliance with Federal Equal Pay Law and New York State Equal Pay Law (together, the "Equal Pay Laws"). Such certification shall be required prior to execution of the contract; and it is,

2. Further ordered that such certification shall include a representation by the contractor that it has not been the subject of an adverse finding under the Equal Pay Laws within the previous five years and shall include disclosure of any currently pending claims against the contractor; and it is,

3. Further ordered that violation of any provision of the Equal Pay Laws during the effective period of such a contract or the filing of a false or misleading Erie County Equal Pay Certificate may constitute grounds for immediate termination of such a contract; and it is,

4. Further ordered that violation of any provision of the Equal Pay Laws during the effective period of such a contract or the filing of a false or misleading Erie County Equal Pay Certificate may constitute grounds for determining a bidder or responder is not qualified to participate in future County contracts; and it is,

5. Further ordered that the Law Department prepare an Erie County Equal Pay Certification for use by Erie County offices, departments and administrative units and assure compliance with this Executive Order in the contract approval process; and it is,

6. Further ordered that the County Division of Equal Employment Opportunity ("EEO") establish a procedure for compliance monitoring and periodic auditing of certification records; and it is,

GIVEN, under my hand and the Privy Seal of the County of Erie in the City of Buffalo this 6th day of November, in the year two thousand fourteen.

Attachment: PILOT - Sutton Place FINAL 4-1-22 (RES-2022-355 : Sutton Place PILOT Agreement (CRS #3258))

AGREEMENT FOR PAYMENT IN LIEU OF TAXES

THIS AGREEMENT for payment in lieu of taxes is made as of the____day of _____2022 (the "PILOT Agreement"), by and among the **TOWN OF AMHERST**, a municipal corporation organized and existing under the laws of the State of New York, having its principal office at 5583 Main Street, Williamsville, New York 14221 (the "Town"), the **COUNTYOF ERIE,** a municipal corporation organized and existing under the laws of the State of New York, having its principal office c/o Erie County Department of Finance, 95 Franklin Street, Buffalo, New York 14202 (the "County"), the **SWEET HOME CENTRAL SCHOOL DISTRICT**, a school district formed pursuant to Article 37 of the Education Law of the State of New York, having its principal office at 1901 Sweet Home Road, Amherst, NY 14228 ("School District"), **SUTTON PLACE HOUSING DEVELOPMENT FUND COMPANY, INC.**, a New York not-for-profit corporation organized pursuant to Article XI of the New York State Private Housing Finance Law (the "PHFL") with offices at 401 Wilshire Blvd, Suite 1070, Santa Monica, California 90401, (the "Taxpayer") and **SUTTON PLACE PRESERVATION LIMITED PARTNERSHIP**, a New York limited partnership with offices at 401 Wilshire Blvd, , Suite 1070, Santa Monica, California 90401 (the "Company", and together with the Taxpayer, the "Owner"). All being collectively referred to as the "parties" and individually as a "party."

WHEREAS, the proposed project involves the ownership, improvement and rehabilitationof two hundred forty-six (246) apartment units located at 113 Travers Boulevard in Erie Countyas further described within the attached legal description at Exhibit "1", in the Town of Amherst, County of Erie and State of New York ("Land" or "Property" collectively, the "Project"), and

WHEREAS, the development of the Project is of vital public interest to the Town, Countyand School District; and

WHEREAS, the development of the Project is intended to be affordable to low income households, and affordability of the property for residential use by low income persons shall remain consistent throughout the duration of the PILOT Agreement; and

WHEREAS, the Owner qualifies for those certain tax exemptions pursuant to Article 11 of the PHFL; and

WHEREAS, the Taxpayer is the nominal fee owner of the Project for and on behalf of theCompany, which is the beneficial owner thereof; and

WHEREAS, the Town, County and School District wish to grant the Taxpayer and the Company such relief as permitted under Section 577 of the PHFL.

WHEREAS, the Town, by Resolution Number of the Town Board, adopted on _____, 2022 approved such an exemption and authorized this Agreement to be executed on behalf of the Town by the Town Supervisor; and

WHEREAS, the County, by Resolution Numberof the Erie County Legislature,adopted on_____, 2022 approved such an exemption and authorized this Agreement to beexecuted on behalf of the County; and

WHEREAS, the School District, by Resolution Number of the School Board,adopted on_____, 2022 approved such an exemption and authorized this Agreement to beexecuted on behalf of the School District; and

NOW, THEREFORE, in consideration of the covenants and agreements contained in thisPILOT Agreement, and for other good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged, the parties covenant and agree as follows:

1. **Tax Exemption**. The parties agree that Owner qualifies for real property tax exemption for the Project in accordance with the provisions of Article XI of the PHFL and the Town hereby exempts from local and municipal taxes, including school taxes, other than assessments for local improvements, one hundred percent (100%) of the value of the Project, including both Land and improvements. "***Local and Municipal Taxes***" shall mean any and all real estate taxes levied by the County, the Town, the School District (collectively, the "***Taxing Jurisdictions***"). The parties understand that the exemption extended pursuant to section 577 of the PHFL and this Agreement does not include exemption from special assessments, specialad valorem levies, improvement district charges or similar tax equivalents. This Agreement shall not limit or restrict the Owner's right to apply for or obtain any other tax exemption to which it might be entitled upon the expiration of this Agreement.

2. **Obligation of the Owner to Make Payments in Lieu of Taxes**. So long as the aforementioned exemption remains in place, the owner will make annual payments in lieu of taxes("***PILOT Payments***") to the Taxing Jurisdictions in the amounts set forth in ***Schedule "A"***, as attached hereto and made a part hereof, in satisfaction of all real property taxes. The PILOT Payments shall be required to be made to the Taxing Jurisdictions following the March 1, 2022 tax status date commencing with the 2023 tax fiscal year of the Town,

fiscal year of the County, and the 2022-2023 tax fiscal year of the School District. The Parties agree that no refund of any real property taxes levied upon the Property prior to the 2023 tax fiscal year of the Town, the 2023 tax fiscal year of the County, and the 2022-2023 tax fiscal year of the School District shall be sought or claimed on account of the exemption made effective pursuant to this Agreement.

3. **Requirements of the Owner.**

a. The tax exemption provided by this Agreement will continue for a term of fifteen (15) years, unless sooner terminated by law or mutual agreement upon prior writtenconsent of the parties, provided that the Owner continues to operate the Project and the Land for persons of low income in conformance with Article XI of the PHFL.

b. The Owner will provide the Town such information concerning its operations and the operations of the Project in form and substance as may from time to time be reasonably requested. Such information shall include, but shall not be limited to, general certificates of the Owner and the annual financial statements of the Owner from the calendar year immediately preceding the fiscal year in which payments are due.

c. The Owner will permit the Comptroller of the Town to audit its books and records within fourteen (14) days after receiving a written request from the Town.

4. **Taxing Authorities and Amounts**.

a. Upon commencement of the Town's next taxable status date (the "Commencement Date"), the Owner shall make annual payments in lieu of local and municipal real estate taxes, including school taxes but not including assessments for local improvements and special assessments on the Land and improvements constituting the Project as follows.

i. A fixed annual PILOT Payments to the Town, County, and School District in the amounts as stated in ***Schedule "A"***, as attached hereto and made a part hereof, in satisfaction of all real property taxes.

ii. In addition to the payments set forth in ***Schedule "A"***, the Owner will be responsible for paying all special district assessments and other assessmentsfor local improvements permitted by law;

iii. In furtherance of this PILOT Agreement, the Owner hereby agrees to abide by the terms of the Regulatory Agreement in favor of the New York State Division of Housing and Community Renewal ("HCR") for an Agreement, to wit June 30, 2036 (the "Extended Regulatory Term") which would encompass the September 2036 Williamsville Central School District Property Tax Bill and the January 2037 Town of Amherst and County of Erie Property Tax Bill; and

iv. The Owner agrees it will provide a fully executed copy of the HCR to the Town on December 31, 2022 or within fourteen (14) days of the same being signed by all parties, whichever is sooner. The Owner further agrees that a failure to timely provide the HCR to the Town will provide the Town, in its sole discretion, the right but not the obligation to terminate this agreement in its entirety. In the event of such termination the Town will not be held liable for any damages whatsoever whether monetary or equitable and if the Town is named as a party in any action the Town will be entitled to recover its attorneys' fees for the defense of the same.

v. At the expiration of the Extended Regulatory Term, this PILOT Agreement will cease to have any effect on the taxes due with respect to the property and the property will be taxed in accordance with applicable law unless otherwise extended or modified pursuant to a separate Agreement.

b. The PILOT Payments shall be payable annually. Each annual PILOT Payment to the Town shall be made on or before January 31st of each year and shall be delivered to theTown Clerk's Office, 5583 Main Street, Williamsville, New York 14221, or such other place as may be designated from time to time by the Town. Each such PILOT Payment to the County shall be made on or before January 31 of that year, or such payment shall be considered delinquent, and such PILOT Payment shall be delivered to County of Erie, c/o Director of Real Property Tax Services, The Edward A. Rath County Office Building,

Attachment: PILOT - Sutton Place FINAL 4-1-22 (RES-2022-355 : Sutton Place PILOT Agreement (CRS #3258))

Room 100, 95 Franklin Street, Buffalo, New York 14202, or such other place as may be designated from time to time by the County. Each such PILOT Payment to the School District shall be made on or before September 30 of that year, or such payment shall be considered delinquent, and such PILOT Payment shall be delivered to the Sweet Home Central School District, Attention Director of Finance, 1901 Sweet Home Road, Amherst, NY 14228 ("School District"), or such other place as may be designated from time to time by the School District..

c. In addition the parties agree that the Owner will pay a one-time community benefit payment of $500,000.00 at the real estate closing of this agreement. This provision is a material term of this agreement and non-payment will void the entire agreement. The community benefit payment is a one-time payment independent of the Owner's payment obligation listed in Schedule A. The one-time community benefit payment is payable to the Town of Amherst.

5. **Defaults in Payment in Lieu of Taxes**. In the event the Owner fails to make any payment in lieu of real property taxes when due, the amount or amounts not so paid shall be a lienon the Project in the same manner that delinquent real property taxes would be and continue as an obligation of the Owner until fully paid. In addition, the Owner shall pay the appropriate taxing authority's or authorities' interest and penalties on the unpaid amount or amounts accruing at the same times and at the interest rates as if such amounts were delinquent real property taxes. In addition to any other remedies available to them for the collection of delinquent real property taxes,including, without limitation, in rem proceedings, the Town, County and School District may exercise any other remedies available, and such remedies shall be cumulative and the exercise of any remedy shall not be an action of remedies under law.

6. **Effect of Fulfillment of the Requirement**. Once having paid the amounts requiredby this PILOT Agreement when due, the Owner shall not be required to pay any real property taxes for which such payments in lieu of taxes have been made, except special district assessmentsand other special assessments for local improvements permitted by law.

7. **Events of Default and Termination of Tax Exemption**.

a. An event of default ("Event of Default") shall be defined as (l) failure of the Owner to make any payment required under the PILOT Agreement when due, (2) the Owner's failure to provide any notice as required by this PILOT Agreement tothe Town, County or School District, (3) Taxpayer's failure to qualify, or continue to qualify, for a real property tax exemption for the Project in accordance with Article XI of the PHFL, (4) failure of Taxpayer to provide any of the information required by Section 3(c) of this PILOT Agreement, or (5) the transfer of title or beneficial ownership of any portion of the Project or the Land without the prior written consent of the Town, County and School District except as otherwise set forth in Section 15 below.

b. Upon the occurrence of an Event of Default as defined pursuant to Section 7(a) above, the Owner shall have ten (10) days after the receipt of Notice from the Town, County or School District regarding such default to cure such default.

c. In the event the Owner has not cured such default or defaults withinthe time period set forth in this PILOT Agreement, then the exemption from real property taxes described herein shall be deemed to have been terminated as of the taxable status dateof the Town's immediately preceding fiscal year.

d. Upon a termination of the exemption from real property taxes set forth in Section 7(c) above, the Owner shall be liable for real property taxes on a pro-rata basis from and after the Town's taxable status date immediately preceding the Event of Default and the statutory lien applicable to such real property taxes shall be deemed in effect as of the lien date normally applicable to such year's real property taxes, unless a separate basis for a real property tax exemption then exists for the benefit of Owner.

Any such termination of the real property tax exemption applicable to the Project shall not void the liability of the Owner for any unpaid payments in lieu of taxes required by this PILOT Agreement prior to such termination.

e. Upon an Event of Default, so long as Harper Capital and/or Dwight Capital and or their successors and/or assigns (the "Lender") holds a HUD-insured mortgage on the Project, the Town agrees to deliver a copy of the written notice set forth in paragraph (b) above to the Lender and Lender shall have the right, but not the obligation, to cure such violation in the same timeframe given to the Owner.

f. The Town agrees that any cure of any Event of Default hereunder made or tendered by Key Community Development Corporation, its successors and/or assigns, as the investor limited partner of the Company's (the "Investor Limited Partner") shall be deemed to be cured by the Company, and shall be accepted or rejected by the Town on the same basis as if made or tendered by the Company. The Investor Limited Partner shall not be obligated to cure any Event of Default.

8. **Waiver**. No waiver or modification of this Agreement shall be valid unless in writing and duly executed by the parties, and no evidence of any waiver or modification shall be offered or received in evidence in any proceeding, arbitration, or litigation arising out of or affecting this Agreement, or the rights or obligations of any party hereunder, unless such waiveror modification is in writing, duly executed as aforesaid. No failure or delay on the part of the Town to exercise any right, power or remedy hereunder shall operate as a waiver thereof, nor shallany single or partial exercise of such right, power or remedy preclude any other or further exercisethereof or the exercise of any other right, power or remedy.

Attachment: PILOT - Sutton Place FINAL 4-1-22 (RES-2022-355 : Sutton Place PILOT Agreement (CRS #3258))

9. **Modification**. Neither this Agreement nor any provision hereof may be amended, modified, waived, discharged or terminated, except by an instrument in writing duly executed andagreed to by the parties hereto.

10. **Counterparts**. This Agreement may be executed in several counterparts, each of which shall be an original and all of which shall constitute but one and the same instrument. The exchange of copies of this Agreement and of signature pages by facsimile or portable document format (PDF) transmission shall constitute effective execution and delivery of this Agreement asto the parties hereto and may be used in lieu of the original Agreement and signature pages for all purposes.

11. **Pay Equity.** The Owner, with respect to its own employees only, if any, shall comply with Erie County Executive Order 13 (2014) and agrees to complete the Certificate collectively attached hereto as Exhibit "2" and made a part hereof. The Owner shall make such records available, upon request, to the County's Division of Equal Employment Opportunity for review. The County shall have the right, upon reasonable notice and at reasonable times, to inspectthe books and records of the Owner, its offices and facilities, for the purpose of verifying information supplied in the Erie County Equal Pay Certification and for any other purpose reasonably related to conforming the Agency's compliance with Erie County Executive Order 13 (2014). Notwithstanding the termination provisions contained herein, violation of the provisions of Executive Order 13 (2014), may constitute grounds for the immediate termination of this Agreement and may constitute grounds for determining that the Taxpayer is not qualified toparticipate in future County contracts.

12. **Notices.** All notices, demands, requests, consents or other communications required or permitted to be given or made under the PILOT shall be in writing and addressed to the following:

If to the Town:
Town Attorney's Office
Town of Amherst
5583 Main Street
Williamsville, NY 14221

Town Supervisor
Town of Amherst
5583 Main Street
Williamsville, NY 14221

Town Assessor
Town of Amherst
5583 Main Street
Williamsville, NY 14221

If to the Owner:
Sutton Place Preservation Limited Partnership, 401 Wilshire BLVD, Suite 1070, Santa Monica, CA90401

If to Erie County:
Erie County Attorney's Office
95 Franklin Street Buffalo,
New York 14202

If to the School District:
Sweet Home Central School District
1901 Sweet Home Road
Amherst, NY 14228

13. **Binding Effect.** This Agreement shall inure to the benefit of and shall be binding upon the parties. Each of the parties represents and warrants that the execution, delivery and performance of this Agreement has been duly authorized and does not require any other consentor approval, does not violate any article, by-law or organizational document or any law, rule, regulation, order, writ, judgment or decree by which it is bound, and will not result in or constitutea default under any indenture, credit agreement, or any other agreement or instrument to which

Attachment: PILOT - Sutton Place FINAL 4-1-22 (RES-2022-355 : Sutton Place PILOT Agreement (CRS #3258))

any of them is a party. Each party represents that this Agreement shall constitute the legal, validand binding agreement of the parties enforceable in accordance with its terms.

14. **Amendments.** This Agreement may not be amended, changed, modified, alteredor terminated without the prior written consent of each of the parties hereto.

15. **Assignments.**

a. This Agreement may not be assigned in whole or in part without the prior written consent of the Town upon application made at least forty-five (45) days prior to a regularly scheduled meeting of the Town Board. A transfer in excess of fifty percent (50%) of the equity voting interests of the Owner (including all parent and subsidiary companies and including the ultimate taxpayer(s) owning or controlling the Project and the Property) shall be deemed an assignment and require the prior written consent of the Town; provided, however, that (a) any transfer between existingholders of ownership interests in the Owner will not require prior written consentof the Town even if such transfer would be in excess of fifty percent (50%) of the equity voting interests in the Owner, and (b) the Investor Limited Partner may transfer its interests in the Company so long as control of the Company's day-to-day operations does not change. Any assignment, if and once approved, shall be on the following conditions, as of the time of such assignment: (i) no assignmentshall relieve the Owner from primary liability for any of its obligations hereunder; (ii) the assignee shall assume the obligations of the Owner hereunder to the extent of the interest so assigned; (iii) the Owner will, within ten (10) days after the delivery thereof, furnish or cause to be furnished to the Town a true and complete copy of such assignment and the instrument of assumption and related documents associated with Approved Assignment; (iv) the Project shall continue to be operatedin compliance with Article XI of the PHFL; and (v) if the Town shall so request, asof the purported effective date of any such assignment, Owner at its sole cost shall furnish to the Town an opinion, in form and substance satisfactory to the Town as to any or all of the items (i), (ii) and (iv) above. Any such assignment shall be subject to the review and approval by the Town and approval as to form by the Town Attorney with any such cost to be paid by the Owner, including reasonable attorneys' fees, and shall contain such terms and conditions as reasonably required by the Town and its counsel.

b. Notwithstanding anything to the contrary contained in this Section 15 or elsewherein this agreement, the prohibition on Transfer described above shall not be construed to prohibit the transfer of title to the Project or any portion thereof to the Lender or its successors or assigns (collectively, "Lender Party") as a result of a foreclosure or the acceptance of a deed in lieu of foreclosure or comparable conversion of the loan held by Lender. During any period of time that a Lender Party owns the Project or if any subsequent owner acquires theProject from Lender Party, neither Lender, nor such Lender Party, nor such subsequent owner will be liable or obligated for the breach or default of any obligation of any prior owner under this Agreement, including, but not limited to, any payment or indemnification obligation, in which case the owner of the Project at the time the default occurred shall remain liable for any and all damages occasioned thereby even after such entity ceases to be the owner (and, in such event, any party seekingto collect such damages shall have no recourse and shall have no right to levy against, or otherwise collect on, any judgment from the Project), provided that suchdefaulting owner shall bear no liability under this Agreement for any damages occasioned by any subsequent default under this Agreement occurring after such entity ceases to be the owner of the Project.

16. **Applicable Law.** This Agreement shall be governed, construed and enforced in accordance with the laws of the State of New York for contracts to be wholly performed therein.

17. **Section Headings Not Controlling.** The headings of the several sections in this Agreement have been prepared for convenience of reference only and shall not control, affect the meaning of or be taken as an interpretation of any provision of this Agreement.

18. **Severability.** If any provision of this Agreement or its application is held invalidor unenforceable to any extent, the remainder of this Agreement shall remain in full force and effect and the application of that provision to other persons or circumstances shall be enforced to the greatest extent permitted by law.

19. **Entire Agreement.** This Agreement constitutes the entire agreement of the Partiesrelating to PILOT Payments with respect to the Project and the Property and supersedes all prior contracts and/or agreements, whether oral or written, with respect thereto.

20. **Authority To Execute.** Any individual executing this Agreement on behalf of a party represents and warrants that he or she is duly authorized to execute and deliver this Agreement on behalf of such party, and this Agreement is binding upon such party in accordance with its terms.

EXHIBIT 2
Erie County Equal Pay Certification

In order to comply with Executive Order 13 dated November 6, 2014, we hereby certify that we are in compliance with federal law, including the Equal Pay Act of 1963, Title VII of the Civil Rights Act of 1964, Federal Executive Order 11246 of September 24, 1965 and New York State Labor Law Section 194 (together "Equal Pay Law"). The average compensation for female employees is not consistently below the average compensation for male employees, taking into account mitigating factors. We understand that this certification is a material component of this contract. Violation of the provisions of Executive Order 13, which is attached hereto and made a part hereof, can constitute grounds for the immediate termination of this contract and mayconstitute grounds for determining that a bidder is not qualified to participate in future county contracts.

We have evaluated wages and benefits to ensure compliance with the Federal Equal Pay Law.

COUNTY OF ERIE

MARK C. POLONCARZ
COUNTY EXECUTIVE

Executive Order #13
Pay Equity Certification on County Contracts

WHEREAS, federal law, including the Equal Pay Act of 1963, Title VII of the Civil Rights Act of 1964 and Federal Executive Order 11246 of September 24, 1965 (Equal Employment Opportunity) (together "Federal Equal Pay Law"), requires that men and women in the same workplace be given equal pay for equal work; and

WHEREAS, Section 194 of New York State Labor Law ("NYS Equal Pay Law") prohibits compensating men and women differently for the same work; and

WHEREAS, on average, a full-time working woman in New York State earns just 85 cents for every dollar that a man earns and the pay gap is even greater for African-American and Latina women; and

WHEREAS, females make up nearly fifty-two percent of Erie County's population; and

WHEREAS, women make up nearly half of the U.S. labor force and are a growing number of breadwinners in their families; and

WHEREAS, this pay differential shortchanges women and their families by thousands of dollars a year, and potentially hundreds of thousands of dollars over a lifetime, presenting a lifelong threat to those families' economic security and reducing their earnings through Social Security and other post retirement plans; and

WHEREAS, poverty is recognized as a leading cause of or contributing factor to many social problems, including but not limited to substance abuse, domestic violence, child abuse, improper nutrition, obesity, improper health care and criminal conduct; and

WHEREAS, the impact of pay differentials is exacerbated as workers age, causing underpaid workers to disproportionally rely upon various forms of public support in their retirement years; and

WHEREAS, pay inequity can significantly impact the County, necessitating the provision of various public subsidies for low income residents and leading to the lack of receipt of income by women residents which would be spent in our local economy; and

Attachment: PILOT - Sutton Place FINAL 4-1-22 (RES-2022-355 : Sutton Place PILOT Agreement (CRS #3258))

WHEREAS, through the enforcement of current state and federal laws that ban unequal pay for equal work, Erie County can help ameliorate the many negative consequences of pay inequality, thereby improving the lives of those who might otherwise be underpaid, strengthening families and protecting children, and reducing the demand for public services, all positively impacting county, state and federal budgets.

NOW, THEREFORE, I MARK C. POLONCARZ, Erie County Executive, by virtue of the authority vested in me by the Erie County Charter § 302, do hereby order as follows:

1. It is ordered that on and after January 1, 2015, all Erie County offices, departments and administrative units, including but not limited to the Division of Purchase, fully implement a requirement in all bids, requests for proposals and other contract solicitations that the contractor submit an Erie County Equal Pay Certification which certifies the contractor's compliance with Federal Equal Pay Law and New York State Equal Pay Law (together, the "Equal Pay Laws"). Such certification shall be required prior to execution of the contract; and it is,

2. Further ordered that such certification shall include a representation by the contractor that it has not been the subject of an adverse finding under the Equal Pay Laws within the previous five years and shall include disclosure of any currently pending claims against the contractor; and it is,

3. Further ordered that violation of any provision of the Equal Pay Laws during the effective period of such a contract or the filing of a false or misleading Erie County Equal Pay Certificate may constitute grounds for immediate termination of such a contract; and it is,

4. Further ordered that violation of any provision of the Equal Pay Laws during the effective period of such a contract or the filing of a false or misleading Erie County Equal Pay Certificate may constitute grounds for determining a bidder or responder is not qualified to participate in future County contracts; and it is,

5. Further ordered that the Law Department prepare an Erie County Equal Pay Certification for use by Erie County offices, departments and administrative units and assure compliance with this Executive Order in the contract approval process; and it is,

6. Further ordered that the County Division of Equal Employment Opportunity ("EEO") establish a procedure for compliance monitoring and periodic auditing of certification records; and it is,

GIVEN, under my hand and the Privy Seal of the County of Erie in the City of Buffalo this 6th day of November, in the year two thousand fourteen.

INTER-MUNICIPAL AGREEMENT

THIS AGREEMENT, made this ___day of _____, 2022, by and between the TOWN OF AMHERST, a municipal corporation having an office located at 5583 Main Street, Williamsville, New York 14221 (hereinafter "Amherst"), the SWEET HOME CENTRAL SCHOOL DISTRICT, a municipal corporation having an office located at 1901 Sweet Home Road, Amherst, New York 14228 (hereinafter "Sweet Home").

WITNESSETH:

WHEREAS, Sweet Home wishes to participate in an inter-municipal Agreement pursuant to Article 50G of the New York State General Municipal Law for the purchase of fuel from Amherst.

NOW, THEREFORE, in consideration of the covenants and agreements hereinafter contained, the parties do hereby mutually agree as follows:

1. TERM

The term of this Agreement shall be for four (4) months commencing on the 14th day of May, 2022 and shall continue through and including the 14th day of September 2022. Additionally, Sweet Home will have the option to extend the term of this Agreement, upon the same terms and conditions set forth herein, for three (3) successive periods of four (4) months each, so long as such option is exercised in writing by Sweet Home no later than sixty (60) days prior to the expiration of the original term or any option period. The option may be rejected by the Town in its sole discretion no later than thirty (30) days prior to the expiration of the original term or any option period.

2. MATERIALS AND COST

Sweet Home agrees to purchase fuel from Amherst at a cost of the market rate with a 3% administrative fee. The market rate is subject to change on a daily basis based on the price of fuel. All invoices for fuel must be paid within thirty (30) days of receipt.

Sweet Home will pick up/refuel at the Town of Amherst Highway Department, 1042 N. Forest Road, Williamsville, New York 14221.

3. PRIORITY

Amherst will have priority in fuel use and reserves the right to cancel this agreement on seven (7) business days' notice in the event of a fuel short age resulting inadequate fuel reserves or availability to comply with this agreement.

4. INDEMNIFICATION

To the fullest extent permitted by law, Sweet Home covenants and agrees to indemnify and hold harmless Amherst, its departments, boards, officers, agents and employees from any and all loss,

Attachment: TownofAmherstFuel_Signed (RES-2022-356 : IMA - Sweet Home CSD & Town of Amherst (CRS #3263))

costs, and expense, claims or demands, actions or causes of action, suits, proceedings, damages, liabilities, losses, costs and expenses, including third party claims or actions and attorneys' fees arising directly or indirectly from any negligent acts or omissions of Sweet Home, its officers, agents and employees in carrying out the provisions of this Agreement.

5. **CANCELLATION OF AGREEMENT**

Any party hereto shall have the right upon thirty (30) days prior written notice to cancel this Agreement or any extension thereof.

6. **WAIVER**

No waiver of any breach of any condition of the Agreement shall be binding unless in writing and signed by the party waiving said breach. No such waiver shall in any way affect any other term or condition of this Agreement or constitute a cause or excuse for a repetition of such or any other breach unless the waiver shall expressly include the same.

7. **CHOICE OF LAW/VENUE**

This Agreement shall be governed by, and interpreted according to the laws of the State of New York. Any and all legal action necessary to enforce the agreement will be held in Erie County, New York.

8. **SEVERABILITY**

Each and every provision of law and clause required by law to be inserted in this contract shall be deemed to have been inserted herein. If any such provision is not inserted through mistake or otherwise, then upon the application of either party, this contract shall be physically amended forthwith and executed by the parties to make such insertion.

IN WITNESS WHEREOF, the parties hereto have caused their hands and seals to be hereunto affixed and these presents to be signed the day and year first above written.

GRANT OF EASEMENT

TOWN OF AMHERST, a municipal corporation organized pursuant to the laws of the State of New York, having a mailing address of 5583 Main Street, Williamsville, New York 14221, (hereinafter referred to as "Grantor"), for consideration of One Dollar ($1.00), and/or other valuable consideration paid, the receipt and sufficiency of which are hereby acknowledged under seal, hereby grants to **NIAGARA MOHAWK POWER CORPORATION**, a New York corporation, having an address at 144 Kensington Avenue, Buffalo, New York, 14214 (hereinafter referred to as "Grantee"), for Grantee and its lessees, licensees, successors, and assigns, the perpetual right and easement as described in Section 1 below (the "Easement") in, under, through, over, across, and upon the Grantor's land, as described in Section 2 below (the "Grantor's Land").

Section 1 – Description of the Easement. The "Easement" granted by the Grantor to the Grantee consists of a perpetual easement and right-of-way, with the right, privilege, and authority to:

a. Construct, reconstruct, relocate, extend, repair, maintain, operate, inspect, patrol, and, at its pleasure, remove any poles or lines of poles, supporting structures, cables, crossarms, overhead and underground wires, guys, guy stubs, insulators, transformers, braces, fittings, foundations, anchors, lateral service lines, communications facilities, and other fixtures and appurtenances (collectively, the "Facilities"), which the Grantee shall require now and from time to time, for the transmission and distribution of high and low voltage electric current and for the transmission of intelligence and communication purposes, by any means, whether now existing or hereafter devised, for public or private use, in, upon, over, under, and across that portion of the Grantor's Land described in Section 3 below (the "Easement Area"), and the highways abutting or running through the Grantor's Land, and to renew, replace, add to, and otherwise change the Facilities and each and every part thereof and the location thereof within the Easement Area, and utilize the Facilities within the Easement Area for the purpose of providing service to the Grantor and others;

b. From time to time, without further payment therefor, clear and keep cleared, that portion of Grantor's Land described in Section 3 below (the "Trimming Easement Area") of any and all trees, limbs, branches, roots or vegetation and trim and remove danger trees adjacent to the Easement Area that, in the opinion of the Grantee may jeopardize the integrity of the Grantee's electric distribution facilities; Grantee shall follow accepted arboricultural standards which may require Grantor to make pruning cuts closer to the tree stems, outside the 10-foot easement area.

c. Excavate or change the grade of the Grantor's Land as is reasonable, necessary, and proper for any and all purposes described in this Section 1; provided, however, that the Grantee will, upon completion of its work, backfill and restore any excavated areas to reasonably the same condition as existed prior to such excavation; and

d. Pass and repass along the Easement Area to and from the adjoining lands and pass and repass over, across, and upon the Grantor's Land to and from the Easement Area, and construct, reconstruct, relocate, use, and maintain such footbridges, causeways, and ways of access, if any, thereon, as is reasonable and necessary in order to exercise to the fullest extent of the Easement.

Section 2 – Description of Grantor's Land. The "Grantor's Land" is described in a certain Deed recorded in the Erie County Clerk's Office on March 5, 1990 in Liber 10145 of Deeds at Page 673 and consists of land described as being part of Tax Parcel No. **16.00-4-20.1** of the Town of Amherst, County of Erie, State of New York, and part of Lot No. 55, Township 13, Range 7, of the Holland Land Company's Survey commonly known as **550 Smith Road**.

Section 3 – Location of the Easement Area. The "Easement Area" shall consist of a portion of the Grantor's Land twenty feet (20') in width throughout its extent, the centerline of the Easement Area being the centerline of the Facilities. The general location of the Easement Area is shown on the sketch entitled Exhibit A, which sketch is attached hereto and recorded herewith, copies of which are in the possession of the Grantor and the Grantees. The final and definitive location(s) of the Easement Area shall become established by and upon the final installation and erection of the Facilities by the Grantees in substantial compliance with Exhibit A hereto. The "Trimming Easement Area" shall be a strip of land measured ten (10) feet from the outermost electric conductor on each side of the line.

Section 4 – Facilities Ownership. It is agreed that the Facilities shall remain the property of the Grantee, its successors and assigns.

Section 5 – General Provisions. The Grantor, for itself, its heirs, legal representatives, successors, and assigns, hereby covenants and agrees with the Grantee that no act will be permitted within the Easement Area which is inconsistent with the Easement hereby granted; no buildings or structures, or replacements thereof or additions thereto, swimming pools, or obstructions will be erected or constructed above or below grade within the Easement Area; no trees shall be grown, cultivated,

Attachment: 28863-processed-merged (RES-2022-357 : Grant of Easement - Niagara Mohawk (National Grid) to Town of Amherst (550 Smith

or harvested, and no excavating, mining, or blasting shall be undertaken within the Easement Area without the prior written consent of the Grantee; the Easement shall not be modified nor the Easement Area relocated by the Grantor without the Grantee's prior written consent; the present grade or ground level of the Easement Area will not be changed by excavation or filling.

The Grantee, its successors and assigns, are hereby expressly given and granted the right to assign this Easement, or any part thereof, or interest therein, and the same shall be divisible between or among two or more owners, as to any right or rights created hereunder, so that each assignee or owner shall have the full right, privilege, and authority herein granted, to be owned and enjoyed either in common or severally. This Grant of Easement shall at all times be deemed to be and shall be a continuing covenant running with the Grantor's Land and shall inure to and be binding upon the successors, heirs, legal representatives, and assigns of the parties named in this Grant of Easement.

IN WITNESS WHEREOF, the Grantor has duly executed this Grant of Easement under seal this _____ day of _____, 2022.

Return to: Town of Amherst
Attorney's Office
5583 Main Street
Williamsville, New York 14221

TOWN OF AMHERST
LICENSE AGREEMENT

THIS AGREEMENT, made as of this 11th day of April, 2022, between the Town of Amherst, a municipal corporation existing under and by virtue of the laws of the State of New York, having its principal office at 5583 Main Street, Williamsville, New York 14221, Party of the First Part hereinafter referred to as the "Town" and

Jason E. Crance and Gina A. Crance
117 Canalview Terrace
Amherst, New York 14228
SBL: 26.06-6-36

Parties of the Second Part hereinafter referred to as the "Owners."

WITNESSETH:

WHEREAS, the Owners are presently the owners of following described premises:

All of that tract or parcel of land situate in the Town of Amherst, County of Erie, and State of New York, being part of Lot No. 47, Township 13, Range 7 of the Holland Land Company's Survey as shown on map filed in the Erie County Clerk's Office under Cover No. 3533 and is known as Subdivision Lot No. 183.

It is more commonly known as:

117 Canalview Terrace
Amherst, New York 14228
SBL: 26.06-6-36

WHEREAS, the Town became the holder of a 20' Wide Public Drainage Easement and a Varying Width Public Drainage Easement as shown on the Subdivision Map filed in the Erie County Clerk's Office under Cover No. 3533. Said public drainage easements are shown on the survey attached hereto as Exhibit "A;"

WHEREAS, the Owners are desirous of utilizing a portion of the aforementioned easement area:

To construct and place a fence 5' off of the property line (easement side) of the existing home to allow for a gate access, said encroachment being no more than 2' into the existing 20' wide public drainage easement;

as shown on a sketch labeled Exhibit "A," attached hereto and made part hereof. Said fence and gate access are to be constructed in accordance with the guidelines above and as more fully detailed on Exhibit "A" attached hereto and made a part hereof.

WHEREAS, the intended use as hereinafter provided does not interfere with the municipal purpose of which said Public Drainage Easements were acquired.

NOW, THEREFORE, in consideration of the premises and the sum of One Dollar ($1.00) paid to the Town, the receipt whereof is hereby acknowledged, and the covenants and promises hereinafter set forth the parties agree as follows:

The Town does hereby grant to the Owners, his/her successors, distributees and assigns a license and/or privilege to install, maintain, and use a portion of the Public Drainage Easement areas as shown on Exhibit "A," subject to the following conditions:

a. There shall not be installed or placed devices, equipment or structures within the said easement area without prior approval of the Town;

b. The use of said license in the Public Drainage Easement area shall not interfere or restrict the operation, maintenance, repair and/or reconstruction of the Public Drainage Facilities;

c. If it becomes necessary to remove said encroachment(s) for the purpose of repair and/or reconstruction of the Public Drainage facility, the cost of the removal and reinstallation of said improvements shall be at the expense of the Owners, his/her successors, distributees and assigns.

d. If at any time the Public Drainage facilities are exposed, unearthed or damaged, the Town shall be promptly notified and allowed inspection of the easement areas.

e. Owners acknowledge and accept all consequences, including, but not limited to, damage to any and all structures/fixtures/assemblies that encroach into the easement area as a result of a high water event.

Attachment: LicAgr.117CanalviewTerrCrance-04042022130910 (RES-2022-359 : License Agreement - 117 Canalview Terrace (Crance) (CRS

The Owners shall defend, indemnify and hold harmless the Town from any and all claims or causes of action arising out of the use and exercise of this agreement.

This Agreement shall commence on the 11th day of April, 2022 and shall terminate one (1) year thereafter.

This Agreement, however, shall automatically extend for one (1) year periods unless the same is cancelled as herein provided.

Either party may cancel this Agreement by giving sixty (60) days written notice to the other of such cancellation and during said sixty (60) days cancellation shall remove said generator and fence and shall restore the area to the same condition that existed prior.

This Agreement shall ensure to the benefit of the parties, hereto, their successors, distributees, and assigns.

IN WITNESS WHEREOF, the parties to this Agreement have executed the same, the day and year first above written.

ASSESSMENT OF CERTAIN REAL PROPERTY IN
THE SAID TOWN OF AMHERST, NEW YORK

The above entitled proceedings involving tax assessment review for the premises known as 115 Lawrence Bell Drive, Amherst, New York, bearing S.B.L. No. 81.02-3-46, for the assessment year 2021-2022 having progressed for trial, and negotiations for settlement having been conducted and said settlement having been approved and recommended by the Town Attorney for the Town of Amherst, the Attorney for the Petitioner, and the Attorney for the Williamsville Central School District, and it further appearing that the assessment of premises in

Attachment: Uniland Partnership of Delaware - 115 Lawrence Bell - Consent Order (RES-2022-361 : Settlement of Article 7 Matter - Uniland

the Town of Amherst provides the basis for imposition of taxes assessed by the County of Erie, Town of Amherst, it is hereby

ORDERED, STIPULATED AND AGREED, that the above-entitled proceedings for the tax assessment review for the tax year 2021-2022 be and hereby are withdrawn and discontinued; and it is further

ORDERED, STIPULATED AND AGREED, that assessed value for the parcel known as 115 Lawrence Bell Drive, Amherst, New York, bearing S.B.L. No. 81.02-3-46, shall be reduced from $3,500,000 to $2,700,000 for the tax year 2022-2023, and from $3,500,000 to $3,100,000 for the tax years 2023-2024, and 2024-2025 and 2025-2026; and it is further

ORDERED, STIPULATED AND AGREED, that the Assessor for the Town of Amherst shall apply such adjusted assessments to the 2022-2023, 2023-2024, 2024-2025, and 2025-2026 Final Assessment Rolls; and it is further

ORDERED, STIPULATED AND AGREED, that said Petitioner in any instrument or agreement transferring all of the subject property therein shall covenant with any grantee, transferee, and mortgagee and their respective distributees, successors and/or assigns that they shall be bound by the terms of this Stipulation and that such covenant shall be deemed to run with the land for the tax periods embraced by the terms thereof; and be it further

ORDERD, STIPULATED AND AGREED, that the provisions of Section 727 of the Real Property Tax Law shall apply to this Order, with the exception of 727 (2a) and 727 (2b); and it is further

ORDERED, STIPULATED AND AGREED, that prior to taxable status date (March 1) 2023, 2024, and 2025, Petitioner shall provide Respondent Assessor with a current rent roll depicting the occupancy of said property. In the event that said rent roll indicates an

Attachment: Uniland Partnership of Delaware - 115 Lawrence Bell - Consent Order (RES-2022-361 : Settlement of Article 7 Matter - Uniland

increase in occupancy of 25% or greater from the previous year, Respondent may adjust the assessment accordingly notwithstanding any other provision of this agreement; conversely, if said rent roll indicates a decrease in occupancy of greater than 25% over the previous year, Petitioner may apply for a reduction in assessment.

ORDERED, STIPULATED AND AGREED, that this Court shall retain jurisdiction over this proceeding pending the expiration of this annexed Stipulation, and that all applications to enforce any or all of the terms of the Stipulation shall be brought before this Court; and be it further

ORDERED, STIPULATED AND AGREED, that these proceedings are discontinued with prejudice, without costs or disbursements against either party.

At an IAS Term of the Supreme Court of the State of New York, held for the County of Erie, Buffalo, New York on the __ day of _____ ____, 2022.

PRESENT: HON. EMILIO COLAIACOVO

SUPREME COURT OF THE STATE OF NEW YORK
COUNTY OF ERIE

IN THE MATTER OF THE APPLICATION FOR REVIEW UNDER ARTICLE 7 OF THE REAL PROPERTY TAX LAW OF A TAX ASSESSMENT BY TWENTY FLINT ROAD LLC

Petitioner,

-vs.-

THE BOARD OF ASSESSMENT REVIEW FOR THE TOWN OF AMHERST; THE ASSESSOR OF THE TOWN OF AMHERST; and THE TOWN OF AMHERST, NEW YORK

Respondents.

For Review of the Assessment of Certain Real Property known as 20 Flint Rd in the said Town of Amherst for the 2020-21 and 2021-22 Tax Years.

CONSENT ORDER AND JUDGMENT

Index Nos.:

807791/2020
809809/2021

WHEREAS Petitioner has heretofore commenced the within proceedings under Article 7 of the Real Property Tax Law to review the assessment of a certain parcel of real property located at and known as 20 Flint (SBL #54.04-2-31.1) in the Town of Amherst, County of Erie and State of New York for the tax years 2020-21 and 2021-22, and

WHEREAS these proceedings have duly come before an IAS Term of this Court, and Kavinoky Cook LLP, Scott C. Becker, Esq., of counsel, having appeared for the Petitioner, Samuel A. Alba, Esq., Town of Amherst Counsel, having appeared for the Respondent Town of Amherst, Gross Shuman P.C., John K. Rottaris, Esq., of Counsel, having appeared for the Intervener-Respondents Sweet Home Central School District of Amherst and Tonawanda, and Lippes, Mathias, Wexler, Friedman, LLP, Margaret A. Hurley, Esq., of Counsel, having appeared for the Intervener-

Attachment: Twenty Flint - Consent Order Unsinged (RES-2022-362 : Settlement of Article 7 Matter - Twenty Flint Road LLC)

Respondents Erie County, and the parties having agreed to a settlement of these proceedings, it is hereby

STIPULATED, ORDERED and ADJUDGED, that the assessment on the property designated as SBL #54.04-2-31.1 on the tax assessment roll of the Town of Amherst for the following tax years, have been as follows:

SBL #54.04-2-31.1 (20 Flint Rd)

Assessment Year	Assessment
2020-21	$3,131,200
2021-22	$3,131,200

and it is further

STIPULATED, ORDERED and ADJUDGED, that the assessment on the property designated as SBL #54.04-2-31.1 on the tax assessment roll of the Town of Amherst for the following tax years, shall be adjusted as follows:

SBL #54.04-2-31.1 (20 Flint Rd)

Assessment Year	Assessment
2020-21	$2,000,000
2021-22	$2,000,000

and it is further

STIPULATED, ORDERED and ADJUDGED, that the assessment on the property designated as SBL #54.04-2-31.1 on the tax assessment roll of the Town of Amherst for the following tax years, shall be as follows:

SBL #54.04-2-31.1 (20 Flint Rd)

Assessment Year	Assessment
2022-23	$1,368,800
2023-24	$1,368,800
2024-25	$2,500,000

Attachment: Twenty Flint - Consent Order Unsinged (RES-2022-362 : Settlement of Article 7 Matter - Twenty Flint Road LLC)

and it is further

STIPULATED, ORDERED and ADJUDGED, that the assessments as reduced, corrected and adjusted herein are fair, equitable and proper for the purposed of this settlement, and it is further

STIPULATED, ORDERED and ADJUDGED, that the officer or officers having custody of the aforesaid assessment rolls and the tax rolls of the Town of Amherst shall make or cause to be made upon the proper books and records of said Town the entries, changes and corrections necessary to conform said combined assessments to such corrected and reduced valuations that the appropriate financial officers are hereby directed and authorized to calculate and disburse any resulting refunds of taxes, and it is further

STIPULATED, ORDERED and ADJUDGED, that Petitioner hereby waives its right to receive any refunds with respect to any tax bills relating to the 2020-21 tax assessment roll, and it is further

STIPULATED, ORDERED and ADJUDGED, that Petitioner hereby waives its right to receive any refunds with respect to any tax bills relating to the 2021-22 tax assessment roll, and it is further

STIPULATED, ORDERED and ADJUDGED, that the provisions of Section 727 of the Real Property Tax Law shall apply to this settlement, and it is further

STIPULATED, ORDERED and ADJUDGED, that in the event that the Assessor for the Town of Amherst assesses SBL #54.04-2-31.1 for any stated year at a level higher than provided for herein, Petitioner hereby reserves the right to reinstate and reinstitute its Article 7 proceedings herein settled, and the Respondents hereby agree to waive any objection based upon Statute of Limitations Grounds, and it is further

STIPULATED, ORDERED and ADJUDGED, that Petitioner shall have the right to seek specific enforcement of this Stipulation, Order and Judgment by whatever means provided by law, and it is further

STIPULATED, ORDERED and ADJUDGED, that this Stipulation, Order and Judgment

Attachment: Twenty Flint - Consent Order Unsinged (RES-2022-362 : Settlement of Article 7 Matter - Twenty Flint Road LLC)

hereby constitutes and represents the entire understanding and agreement among the parties and the full settlement of the assessment review proceeding herein, that there are no costs or disbursements awarded to, by, or against any party and that upon compliance with the terms of this Stipulation, Order and Judgment, the above proceeding shall be, and the same hereby is, settled and discontinued with prejudice, and it is further

STIPULATED, ORDERED and ADJUDGED, that this Stipulation, Order and Judgment may be executed in multiple counterparts, each of which shall be deemed an original but all of which shall constitute one and the same instrument.

Signing and Entry of the within Order and Judgment is hereby

PRESENT: HON. HENRY J. NOWAK, J.S.C.
Presiding

STATE OF NEW YORK
SUPREME COURT : COUNTY OF ERIE

IN THE MATTER OF THE APPLICATION UNDER ARTICLE 7 OF THE REAL PROPERTY TAX LAW

BY

FLINT ROAD, LLC,

Petitioner,

v.

CONSENT ORDER

TOWN OF AMHERST,

Index No.: 809563/2021

Respondent,

AND

SWEET HOME CENTRAL SCHOOL DISTRICT,

Intervenor.

FOR REVIEW OF THE 2021-2022 TAX ASSESSMENT OF CERTAIN REAL PROPERTY IN THE SAID TOWN OF AMHERST, NEW YORK

The above-entitled special proceedings involving real property tax certiorari for the premises owned by Petitioner in the Town of Amherst, New York, known as 100-120 Flint Road in Amherst, New York, S.B.L. #55.17-10-6.2 for the tax year 2021-2022 having progressed for

Attachment: Consent Crder Flint Road LLC.100-120 Flint (RES-2022-363 : Settlement of Article 7 Matter - Flint Road LLC – 100-120 Flint)

trial, and negotiations for settlement having been conducted, and said settlement having been approved and recommended by the Attorney for the Town of Amherst, the Attorney for the Sweet Home Central School District, and the Attorney for Petitioner, and it further appearing that the assessment of premises in the Town of Amherst provides the basis for the imposition of ad valorem taxes assessed by the Town of Amherst, the Sweet Home School District, and the County of Erie, it is hereby

ORDERED, STIPULATED, AND ADJUDGED that the property tax certiorari for the tax year 2021-2022 for the premises at 100-120 Flint Road be discontinued and withdrawn without costs and allowances to either party as against the other, and it is further

ORDERED, STIPULATED, AND ADJUDGED that the real property tax assessment for the tax years 2022-2023, 2023-2024, 2024-2025 and 2025-2026 for the premises at 100-120 Flint Road be set at $1,600,000 assessed value, and it is further

ORDERED, STIPULATED, AND ADJUDGED that the provisions of Section 727 of the Real Property Tax Law shall apply to the aforementioned tax years without regard to revaluation or update in the interval, and it is further

ORDERED, STIPULATED, AND ADJUDGED that said Petitioner in any instrument or agreement transferring any part or all of the subject property or any interest therein shall

Attachment: Consent Crder Flint Road LLC.100-120 Flint (RES-2022-363 : Settlement of Article 7 Matter - Flint Road LLC – 100-120 Flint)

covenant with any grantee, transferee, and mortgagee and their respective distributees, successors and/or assigns that they shall be bound by the terms of this Consent Order and that such covenant shall be deemed to run with the land for the tax periods embraced by the terms thereof, and it is further

ORDERED, STIPULATED, AND ADJUDGED that in the event that the assessment is increased for any stated year at a level higher than provided herein when there has been no assessable addition or improvement to the property, Petitioner retains the right to reinstate and reinstitute its Article 7 proceedings herein settled with respect to that parcel only, and Respondents waive any objection based upon statute of limitations grounds, and it is further

ORDERED, STIPULATED, AND ADJUDGED that the fiscal officers of the Town of Amherst, the Sweet Home Central School District, the County of Erie, and any other taxing unit affected by the above assessment reductions shall apply such adjusted assessment and determine any overpayment of taxes, and in the event of overpayment, refund the overpayment with statutory interest within 45 days by official check payable to the order of Wolfgang & Weinmann, as attorneys and agents for Petitioner, accompanied by a calculation sheet, such attorneys to hold the proceeds as trust funds for appropriate distribution, and are to remain subject to the further jurisdiction of this Court relative to their attorney's lien pursuant to Judiciary Law Section 475, or in the event that any such tax payment has not been paid, issue corrected tax bills which reflect the proper reduced assessment for the property, with a copy of

Attachment: Consent Crder Flint Road LLC.100-120 Flint (RES-2022-363 : Settlement of Article 7 Matter - Flint Road LLC – 100-120 Flint)

corrected tax bills sent to the attorneys for Petitioner, said corrected tax bills to be paid without interest or penalty if paid within 45 days of receipt of said corrected bills, with interest and/or penalties beginning to accrue on the new corrected balance after 45 days, and it is further

ORDERED, STIPULATED, AND ADJUDGED that this Court shall retain jurisdiction over this proceeding pending the expiration of the periods herein recited, and that all applications to enforce any or all of the terms of this Consent Order shall be brought by motion before this Court, and it is further

ORDERED, STIPULATED, AND ADJUDGED that Petitioner shall have the right to seek specific enforcement of this Order, Stipulation and Judgment by all means provided by law, and it is further

ORDERED, STIPULATED, AND ADJUDGED that this Order, Stipulation and Judgment hereby constitutes and represents the entire understanding and agreement amongst the parties, and the full settlement of the tax certiorari herein; there are no costs or disbursements awarded to, by or against any party, and upon compliance with the terms of this Order, Stipulation and Judgment, the proceedings herein shall be, and the same hereby are, settled and discontinued with prejudice.

WHEREAS Petitioner has heretofore commenced the within proceeding under Article 7 of the Real Property Tax Law to review the assessment of a certain parcel of real property located at and known as 11520 Transit Rd (SBL #4.00-3-6) in the Town of Amherst, County of Erie and State of New York for the tax year 2021-22, and

WHEREAS this proceeding has duly come before an IAS Term of this Court, and Kavinoky Cook LLP, Scott C. Becker, Esq., of counsel, having appeared for the Petitioner, Samuel A. Alba, Esq., Town of Amherst Counsel, having appeared for the Respondent Town of Amherst and Hodgson Russ LLP, Michael B. Risman, Esq., of Counsel, having appeared for the Intervenor-Respondent Williamsville Central School District, and the parties having agreed to a settlement of this proceeding, it is hereby

Attachment: TIM HORTONS - TRANSIT - CONSENT ORDER (RES-2022-365 : Settlement of Article 7 Matter - Tim Donut US Limited Inc. – 11520

STIPULATED, ORDERED and ADJUDGED, that the assessment on the property designated as SBL #4.00-3-6 on the tax assessment roll of the Town of Amherst for the following tax year, has been and shall remain as follows:

SBL #4.00-3-6 (11520 Transit Rd)

Assessment Year	Assessment
2021-22	$710,000

and it is further

STIPULATED, ORDERED and ADJUDGED, that the assessment on the property designated as SBL #4.00-3-6 on the tax assessment roll of the Town of Amherst for the following tax years, shall be as follows:

SBL #4.00-3-6 (11520 Transit Rd)

Assessment Year	Assessment
2022-23	$650,000
2023-24	$650,000
2024-25	$650,000

And it is further

STIPULATED, ORDERED and ADJUDGED, that the assessments as reduced, corrected and adjusted herein are fair, equitable and proper for the purposed of this settlement, and it is further

STIPULATED, ORDERED and ADJUDGED, that the officer or officers having custody of the aforesaid assessment rolls and the tax rolls of the Town of Amherst shall make or cause to be made upon the proper books and records of said Town the entries, changes and corrections necessary to conform said combined assessments to such corrected and reduced valuations that the appropriate financial officers are hereby directed and authorized to calculate and disburse any resulting refunds of taxes, and it is further

STIPULATED, ORDERED and ADJUDGED, that the provisions of Section 727 of the

Attachment: TIM HORTONS - TRANSIT - CONSENT ORDER (RES-2022-365 : Settlement of Article 7 Matter - Tim Donut US Limited Inc. – 11520

Real Property Tax Law shall apply to this settlement, and it is further

STIPULATED, ORDERED and ADJUDGED, that in the event that the Assessor for the Town of Amherst assesses SBL #4.00-3-6 for any stated year at a level higher than provided for herein, Petitioner hereby reserves the right to reinstate and reinstitute its Article 7 proceedings herein settled, and the Respondents hereby agree to waive any objection based upon Statute of Limitations Grounds, and it is further

STIPULATED, ORDERED and ADJUDGED, that Petitioner shall have the right to seek specific enforcement of this Stipulation, Order and Judgment by whatever means provided by law, and it is further

STIPULATED, ORDERED and ADJUDGED, that this Stipulation, Order and Judgment hereby constitutes and represents the entire understanding and agreement among the parties and the full settlement of the assessment review proceeding herein, that there are no costs or disbursements awarded to, by, or against any party and that upon compliance with the terms of this Stipulation, Order and Judgment, the above proceeding shall be, and the same hereby is, settled and discontinued with prejudice, and it is further

STIPULATED, ORDERED and ADJUDGED, that this Stipulation, Order and Judgment may be executed in multiple counterparts, each of which shall be deemed an original but all of which shall constitute one and the same instrument.

Signing and Entry of the within Order and Judgment is hereby
Consented to:

Award Bid #2022006 - Police Vehicles - CRS #3262

WHEREAS, the Contract Compliance and Administration Department received bids on March 3, 2022 for Bid #2022006 Police Vehicles; and

WHEREAS, the bid process resulted in responses from two (2) vendors, as per the attached bid tabulation form;

NOW, THEREFORE, BE IT RESOLVED, the Town Board authorizes the Contract Compliance and Administration Department to award the bid to Van Bortel Ford; and

BE IT FURTHER RESOLVED, the Town Board authorizes a waiver of insurance as Van Bortel employees will not be on Town property; and

BE IT FURTHER RESOLVED, that the Town Board authorizes the transfer of $23,400 from A 3120.2200 into KP2209.2200. These funds will cover the remaining cost of one of the police cars purchased under the 2022 Police Vehicle bond; and

BE IT FURTHER RESOLVED, the Supervisor is authorized to sign the contract with Van Bortel Ford, pending successful completion of the contract routing process; and

BE IT FURTHER RESOLVED, the Police Department is requesting approval to trade in the following vehicles;

Authorization to Adopt the 2022 Erie County, NY Hazard Mitigation Plan

WHEREAS, all jurisdictions within Erie County have exposure to hazards that increase the risk to life, property, environment, and the County and local economy; and

WHEREAS, pro-active mitigation of known hazards before a disaster event can reduce or eliminate long-term risk to life and property; and

WHEREAS, The Disaster Mitigation Act of 2000 (Public Law 106-390) established new requirements for pre- and post-disaster hazard mitigation programs; and

WHEREAS, a coalition of Erie County municipalities with like planning objectives has been formed to pool resources and create consistent mitigation strategies within Erie County; and

WHEREAS, the coalition has completed a planning process that engages the public, assesses the risk and vulnerability to the impacts of hazards, develops a mitigation strategy consistent with a set of uniform goals and objectives, and creates a plan for implementing, evaluating and revising this strategy;

NOW, THEREFORE, BE IT RESOLVED that the Town of Amherst:

1) Adopts in its entirety, the 2022 Erie County Hazard Mitigation Plan (the "Plan") as the jurisdiction's Hazard Mitigation Plan, and resolves to execute the actions identified in the Plan that pertain to this jurisdiction.

2) Will use the adopted and approved portions of the Plan to guide pre- and post-disaster mitigation of the hazards identified.

3) Will coordinate the strategies identified in the Plan with other planning programs and mechanisms under its jurisdictional authority.

4) Will continue its support of the Planning Partnership as described within the Plan.

5) Will help to promote and support the mitigation successes of all participants in this Plan.

6) Will incorporate mitigation planning as an integral component of government and partner operations.

7) Will provide an update of the Plan in conjunction with the County no less than every five years.

Hazard Mitigation Plan

Erie County, New York

September 2021

Volume I

Prepared by:
Tetra Tech, Inc.
2000 Linglestown Road, Suite 203 | Harrisburg, PA 17110

Attachment: 01-Volume-I-Cover-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

EXECUTIVE SUMMARY

Hazard mitigation is an action to help reduce long-term risks caused by hazards or disasters, such as flooding, earthquakes, or wildfires. The purpose of hazard mitigation is to protect people and structures, and minimize the costs of disaster response and recovery. Hazard mitigation can take many forms: capital projects, policies, education, and environmental protection. A hazard mitigation plan (HMP) documents a local government's evaluation of hazards and the strategies to mitigate those hazards.

Hazard Mitigation is any sustained action taken to reduce or eliminate the long-term risk and effects that can result from specific hazards.

FEMA defines a ***Hazard Mitigation Plan*** as the documentation of a state or local government evaluation of natural hazards and the strategies to mitigate such hazards.

Erie County and 46 jurisdictions actively participated in the HMP update process. Table ES-1 lists the participating jurisdictions.

During the Erie County HMP planning process, the nation, the State of New York, and Erie County were facing the COVID-19 pandemic. The COVID-19 pandemic was declared a major disaster on March 20, 2020 (DR-

Attachment: 02-Executive-Summary-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

4480). The Governor issued a stay-at-home Executive Order beginning March 22, 2020, which has since been revoked.

The Erie County Office of Emergency Services, Department of Public Works, the Steering Committee members, and the planning partners were addressing the COVID-19 pandemic concurrent with completing the update to the HMP. Erie County and all planning partners made their best effort to work through this unprecedented time to complete the HMP update and meet FEMA and state requirements. Unfortunately, in-person public meetings were canceled for the safety of residents and planning partners. However, Steering Committee, Planning Partnership, jurisdiction-specific, and public meetings continued virtually. More targeted stakeholder and public involvement was initiated to ensure a broad audience was reached, described further below.

During this HMP update process, Erie County and the participating jurisdictions accomplished the following:

- Developed a Steering Committee and Planning Partnership
- Reviewed and updated the hazards of concern
- Profiled and prioritized these hazards
- Estimated inventory at risk and potential losses associated with these hazards
- Reviewed and updated hazard mitigation goals and objectives
- Reviewed and updated County and local mitigation strategies to address identified risks and vulnerabilities

ERIE COUNTY MULTI-JURISDICTIONAL PLANNING PROCESS

Erie County developed and adopted the original Erie County HMP in 2007 and updated the plan in 2015. The DMA 2000 regulations require that local plans be formally updated and adopted every five (5) years, reassessing risk and updating local strategies to manage and mitigate those risks. To comply, Erie County and its inclusive jurisdictions actively participated in the 2022 update of the HMP. Extensive outreach efforts by the Erie County Department of Homeland Security and Emergency Services resulted in participation from all 46 jurisdictions. Upon completion and approval of the HMP, participating jurisdictions will continue to address and implement the findings and recommendations of this HMP.

As required by the DMA 2000, the participating jurisdictions and Erie County have informed the public about HMP update efforts and have provided opportunities for public comment and input regarding the planning process. In addition, numerous agencies and stakeholders have participated as core or support members to provide input and expertise to the planning process. This HMP documents the process and outcomes of the jurisdictions' mitigation planning efforts.

Erie County and the participating jurisdictions incorporate mitigation planning as an integral component of daily government operations through existing processes and programs. A public outreach campaign was initiated to commence the HMP update. A citizen survey to gauge hazard preparedness was developed. The survey asked quantifiable questions about citizen perception of risk, knowledge of mitigation, and support of community programs. Stakeholder surveys across multiple sectors was distributed to obtain input. The citizen survey was posted on the County's mitigation plan website (https://www.eriecountynyhmp.com/). The stakeholder surveys were sent by the Erie County Department of Homeland Security and Emergency Services to applicable stakeholder groups. Updates to the HMP will be announced on the County website and via municipal outreach after annual plan reviews and 5-year updates. The County HMP Coordinator and local planning partnership representatives will be responsible for receiving, tracking, and filing public comments regarding this HMP when posted for draft public review and throughout the plan's period of performance.

Attachment: 02-Executive-Summary-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

ERIE COUNTY HAZARD MITIGATION PLAN ADOPTION

Following formal Federal Emergency Management Agency (FEMA) approval of this HMP update, Erie County and all participating jurisdictions will be required to formally adopt the updated HMP. A sample of an adoption resolution is included in Appendix A (Adoption Resolutions). Of the 46 participating planning partners listed in Table ES-1, all fully met the participation requirements specified by the Steering Committee.

ERIE COUNTY PROFILE

Development increases population and structures and therefore can increase the impact of hazards on a community.
For example, heavy development planned for a flood-prone area would likely increase the impact of the flood events as time progresses.

According to the 2018 American Community Survey (ACS) Census data, Erie County had a population of 919,355. Erie County is located in southwest New York State, north of the Commonwealth of Pennsylvania. The County is bordered by Chautauqua County to the west, Erie and Wyoming Counties to the north, Allegany County to the east, and the Commonwealth of Pennsylvania to the south.

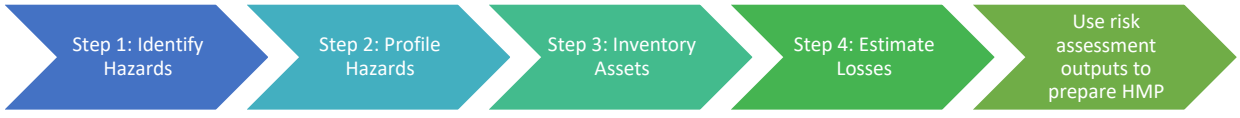
Erie County is located in the northwest portion of the Allegheny Plateau region of New York State. The northern part of the County is generally flat, while steeper slopes are found in the central and southern parts of the County. The southern region of the County – characterized by hills and valleys – is the only unglaciated portion of western New York State. Cuba Lake, Lime Lake, Crystal Lake, Quaker Lake, Rainbow Lake, Red House Lake, Science Lake, and Timber Lake are within the County.

Land use in Erie County is influenced by natural resources, topographic constraints, water lines, sewers, and roads. The county has a relatively compact development pattern and is made up of rural, suburban, and urban areas. Agriculture remains a large land use. Although the number of farms is decreasing slightly, the size of farms is increasing. This trend toward fewer but larger farm operations parallels statewide trends (Erie County Department of Economic Development, Planning & Tourism 2015).

The Erie County HMP provides a general overview of current and anticipated population and land use within the study area. This information provides a basis for making decisions regarding the type of mitigation approaches to consider and the locations in which these approaches should be applied. This information can also be used to support decisions regarding future development in vulnerable areas. For potential increases in vulnerability, the County and jurisdictions can then plan ahead to mitigate those vulnerabilities early in the development process or can direct development to areas of lower risk. The Planning Partnership will revisit the HMP regularly to ensure that mitigation actions support sustainability to minimize increased risk, and to also ensure implementation and targeting of specific mitigation actions will address the potential impacts of development over time.

RISK ASSESSMENT

A key component of an HMP is accurate identification of risks posed by hazards and corresponding impacts on the community. The process of identifying hazards of concern, profiling hazard events, and conducting a vulnerability assessment is known as a risk assessment. The risk assessment portion of the mitigation planning process included the steps shown and summarized below.



Attachment: 02-Executive-Summary-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Step 1: Identify hazards of concern. Erie County considered the full range of natural and non-natural hazards that could impact the County and then identified and ranked hazards of greatest concern. The following list of 13 hazards of concern was selected for further evaluation in the HMP:

- Coastal Erosion
- Cyber Security
- Earthquake
- Expansive Soils
- Extreme Temperature
- Flood
- Hazardous Materials
- Landslide
- Pandemic
- Severe Storm
- Severe Winter Storm
- Utility Failure
- Wildfire

Step 2: Prepare a profile for each hazard of concern. These profiles assist jurisdictions in evaluating and comparing hazards that can impact their areas. Each type of hazard has unique characteristics that differ from event to event. That is, impacts associated with a specific hazard can vary depending on the magnitude and location of each event (a hazard event is a specific, uninterrupted occurrence of a particular type of hazard). Further, probability of occurrence of a hazard at a given location affects the priority assigned to that hazard. Finally, each hazard impacts different communities in different ways, depending on geography, local development, population distribution, age of buildings, and mitigation measures already implemented.

Steps 3 and 4: Evaluate assets of jurisdictions and identify assets exposed or vulnerable to the hazards of concern. Hazard profile information, combined with data regarding population, demographics, general building stock, and critical facilities at risk, prepares the community to develop risk scenarios and estimate potential damages and losses from each hazard.

Once the risk assessment was completed, the County and participating jurisdictions evaluated the risk and vulnerability to each hazard for their community. This served as a starting point in identifying and prioritizing mitigation strategies.

ERIE COUNTY MITIGATION STRATEGY

Outcomes of the risk assessment, supplemented by community input, provided a basis for reviewing past mitigation actions, future goals, and appropriate local mitigation actions.

Goals and Objectives

The 2015 HMP specified overarching mitigation goals with corresponding objectives that summarized hazard reduction outcomes the County and participating jurisdictions want to achieve. During the 2022 plan update process, the Steering Committee reviewed the goals and objectives established in the 2015 HMP. These goals and objectives were reviewed in consideration of the hazard events and losses since the 2015 plan; the updated hazard profiles and vulnerability assessment; the goals and objectives established in the 2019 NYS HMP, county and local risk management plans; and direct input from the County and jurisdictions for how to meet their needs to advance and best manage their hazard risk. Amendments include additions/edits to goals and objectives to

Attachment: 02-Executive-Summary-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

express the planning partnership's interests in integrating this plan with other planning mechanisms/programs and to support mitigation through the protection and preservation of natural systems (refer to Section 6 – Mitigation Strategies). The following summarizes the three (3) updated goals for the 2022 HMP.

1. Protect life, property, and critical infrastructure from hazard impacts.
2. Educate the public, officials, and other stakeholders about the hazards they face and what can be done to mitigate hazard impacts.
3. Reduce the risk of hazards on life, property, and the environment.

Capability Assessment

The Capability Assessment section of Section 6 (Mitigation Strategy) provides a summary and description of the existing plans, programs and regulatory mechanisms at all levels of government (federal state, county, and local) that support hazard mitigation within the county. Within each jurisdictional annex in Section 9 (Jurisdictional Annexes), the county and each participating jurisdiction identified how they have integrated hazard risk management into their existing planning, regulatory and operational/administrative framework ("existing integration"), and how they intend to promote this integration ("opportunities for future integration").

By completing these assessments, Erie County and participating jurisdictions learned how or whether they would be able to implement certain mitigation actions by determining the following:

- Types of mitigation actions that may be prohibited by law
- Limitations that may hinder mitigation actions
- The range of local and state administrative, programmatic, regulatory, financial, and technical resources available to assist in implementing their mitigation actions

Identification, Prioritization, Analysis, and Implementation of Mitigation Actions

As part of the planning process for this HMP update, all participating jurisdictions evaluated their risks and known or anticipated losses to the hazards of concern, assessed their capabilities to manage hazard risk, reviewed progress on past mitigation efforts, and identified a comprehensive range of mitigation alternatives and actions they endeavor to implement as resources are identified and available. The HMP identifies all proposed mitigation actions relevant to achievement of the goals and objectives presented above. The county and participating jurisdictions have identified appropriate local mitigation actions, along with hazards mitigated, goals and objectives met, lead agencies, estimated costs, potential funding sources, and proposed timeline. These actions are identified in Volume II, Section 9, which consists of annexes for the County and each participating jurisdiction.

PLAN MAINTENANCE PROCEDURES

Hazard mitigation planning is an ongoing process. Section 7 (Plan Maintenance) of this plan presents procedures for how the County will monitor, integrate, evaluate, and update the HMP over the next five years. The Planning Partnership will continue ongoing mitigation efforts to implement the HMP and revise and update the HMP, as necessary.

To monitor implementation of the HMP, Planning Partnership members will meet annually to discuss the status of HMP implementation and will prepare a report summarizing the status of the HMP and any needed updates. The mitigation evaluation will address changes as new hazard events occur, as the area develops, and as more is learned about hazards and their impacts. The evaluation will include an assessment of whether the planning process and actions have been effective, whether development or other issues warrant changes to the HMP or its

Attachment: 02-Executive-Summary-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

priorities, progress toward achievement of the communities' goals, and whether changes are warranted. The HMP will be updated, at a minimum, within the 5-year cycle specified by the DMA 2000.

SECTION 1. INTRODUCTION

1.1 PURPOSE

Erie County and its jurisdictions have prepared this multi-hazard mitigation plan to better protect the residents and property throughout the County from the effects of hazard events. This plan demonstrates the County's and each jurisdiction's commitment to reducing risk from hazards, increasing resilience overall, and provide a tool to help decision makers integrate mitigation in their day-to-day processes. This plan was also developed to position Erie County and its participating jurisdictions for eligibility of pre- and post-disaster Federal Emergency Management Agency (FEMA) grants, including: Hazard Mitigation Assistance grant programs (HMA), which include Hazard Mitigation Grant Program (HMGP), Building Resilient Infrastructure and Communities (BRIC), and Flood Mitigation Assistance (FMA). This plan also aligns with the planning elements of the National Flood Insurance Program's Community Rating System (CRS) which provides for lower flood insurance premiums in CRS communities.

1.2 BACKGROUND

A Hazard Mitigation Plan (HMP) is a living document that communities use to reduce their vulnerability to hazards. It forms the foundation for a community's long-term strategy to reduce disaster losses and creates a framework for decision making to reduce damages to lives, property, and the economy from future disasters. Examples of mitigation projects include home acquisitions or elevations to remove structures from high-risk areas, upgrades to critical public facilities, and infrastructure improvements. Ultimately, these actions reduce vulnerability, and communities are able to recover more quickly from disasters. Erie County has demonstrated its commitment to reducing disaster losses by initially developing its multi-jurisdictional HMP in 2005 and updating information upon which to base a successful mitigation strategy to reduce the impacts of natural disasters and to increase the resiliency of its communities.

Hazard Mitigation is any sustained action taken to reduce or eliminate the long-term risk and effects that can result from specific hazards.

FEMA defines a *Hazard Mitigation Plan* as the documentation of a state or local government evaluation of natural hazards and the strategies to mitigate such hazards.

In response to the requirements of the Disaster Mitigation Act of 2000 (DMA 2000), Erie County and the jurisdictions located therein have developed this hazard mitigation plan, which represents a regulatory update to the *2015 Erie County Multi-Jurisdictional All-Hazards Mitigation Plan* (HMP; also referred herein as the *Hazard Mitigation Plan* or *the plan*). The DMA 2000 amends the Robert T. Stafford Disaster Relief and Emergency Assistance Act (Stafford Act) and is designed to improve planning for, response to, and recovery from disasters by requiring state and local entities to implement pre-disaster mitigation planning and develop HMPs. The Federal Emergency Management Agency (FEMA) has issued guidelines for HMPs. The New York State Division of Homeland Security and Emergency Services (NYS DHSES), formerly the New York State Office of Emergency Management (NYSOEM), also supports plan development for jurisdictions in New York and issued the NYS DHSES Hazard Mitigation Planning Standards for HMPs developed with NYS DHSES-administered funds.

Specifically, the DMA 2000 requires that states, with support from local governmental agencies, develop and update HMPs on a five-year basis to prepare for and reduce the potential impacts of natural hazards. The DMA 2000 is intended to facilitate cooperation between state and local authorities, prompting them to work together. This enhanced planning better enables local and state governments to articulate accurate needs for mitigation, resulting in faster allocation of funding and more effective risk reduction projects.

Attachment: 04-Section-1-Introduction-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

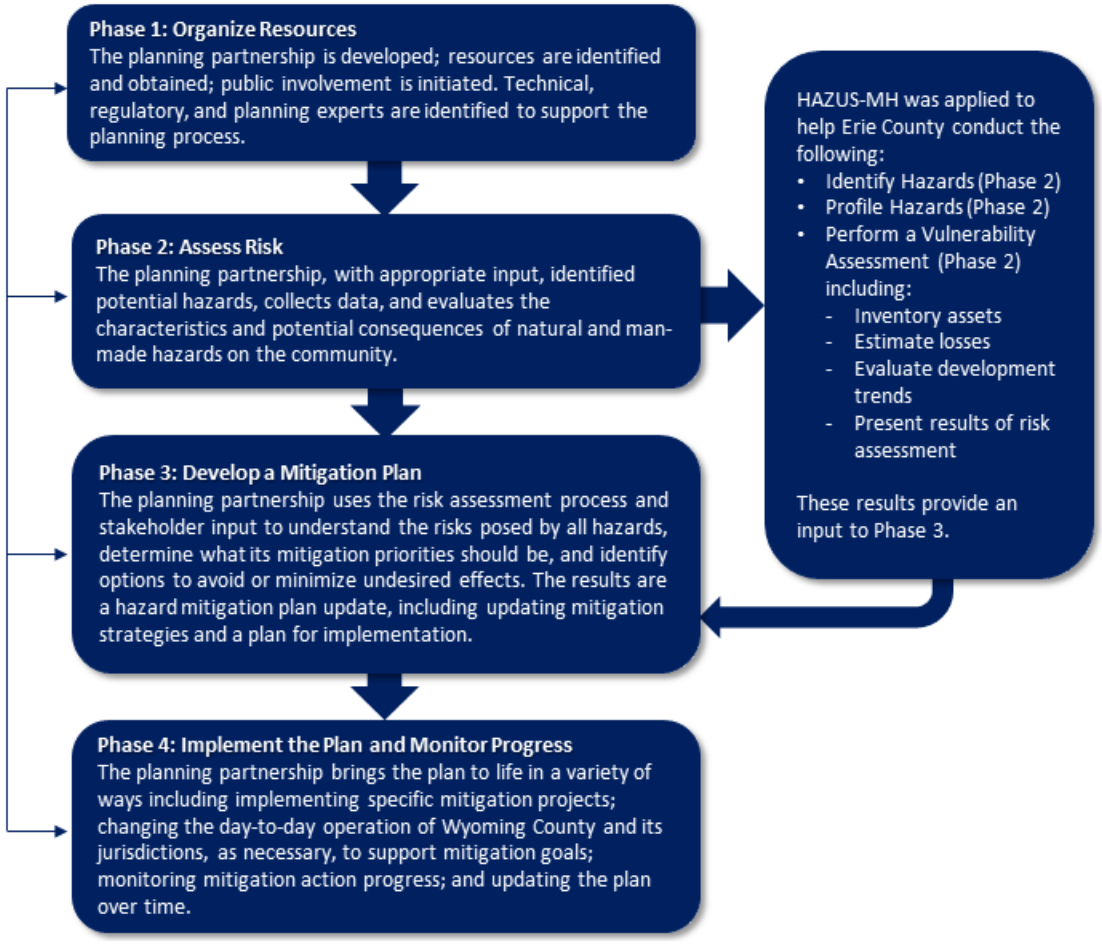
1.3 PLAN ORGANIZATION

The Erie County Hazard Mitigation Plan 2022 Update is organized as a two-volume plan and is in alignment with the DMA planning requirements, the 2013 FEMA *Local Mitigation Planning Handbook,* and the FEMA *Local Mitigation Plan Review Tool*.

Volume I provides information on the overall planning process and hazard profiling and vulnerability assessments, which serves as a basis for understanding risk and identifying mitigation actions. As such, Volume I is intended for use as a resource for on-going mitigation analysis.

Volume II provides an annex dedicated to each participating jurisdiction. Each annex summarizes the jurisdiction's legal, regulatory, and fiscal capabilities; identifies vulnerabilities to hazards; documents mitigation plan integration with other planning efforts; records status of past mitigation actions; and presents an individualized mitigation strategy. The annexes are intended to provide a useful resource for each jurisdiction for implementation of mitigation projects and future grant opportunities, as well as a place for each jurisdiction to record and maintain their local aspect of the countywide plan.

Figure 1-1. Erie County Hazard Mitigation Planning Process



The HMP is organized into two volumes: Volume I includes all information that applies to the entire planning area (Erie County) and Volume II includes participating jurisdiction-specific information.

Volume I of this plan includes the following sections:

Attachment: 04-Section-1-Introduction-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Section 1: Introduction: Overview of participants and planning process.

Section 2: Plan Adoption: Information regarding the adoption of the HMP by Erie County and each participating jurisdiction.

Section 3: Planning Process: Description of the HMP methodology and development process; Steering Committee, Planning Committee, and stakeholder involvement efforts; and a description of how this HMP will be incorporated into existing programs.

Section 4: County Profile: Overview of Erie County, including: (1) general information, (2) economy, (3) land use trends, (4) population and demographics, (5) general building stock inventory, and (6) critical facilities.

Section 5: Risk Assessment: Documentation of the hazard identification and hazard risk ranking process, hazard profiles, and findings of the vulnerability assessment (estimates of the impact of hazard events on life, safety, health, general building stock, critical facilities, the economy); description of the status of local data; and planned steps to improve local data to support mitigation planning.

Section 6: Mitigation Strategies: Information regarding the mitigation goals and objectives identified by the Steering Committee in response to priority hazards of concern and the process by which Erie County and local mitigation strategies have been developed or updated.

Section 7: Plan Maintenance Procedures: System established by the Steering Committee to continue to monitor, evaluate, maintain, and update the HMP.

Volume II of this plan includes the following sections:

Section 8: Planning Partnership: Description of the planning partnership, their responsibilities, and description of jurisdictional annexes.

Section 9: Jurisdictional Annexes: Jurisdiction-specific annex for Erie County and each participating jurisdiction containing their hazards of concern, hazard risk ranking, capability assessments, mitigation actions, action prioritization specific only to Erie County or that jurisdiction, progress on prior mitigation activities (as applicable), and a discussion of prior local HMP integration into local planning processes.

Appendices include the following:

Appendix A: Resolution of Plan Adoption: Resolutions from the county and each jurisdiction included as each formally adopts the HMP update.

Appendix B: Participation Matrix: Matrix to give a broad overview of who attended meetings and when input was provided to the HMP update, as well as Letters of Intent to Participate as described in Section 3.

Appendix C: Meeting Documentation: Agendas, attendance sheets, minutes, and other documentation (as available and applicable) of planning meetings convened during the development of the plan.

Appendix D: Public and Stakeholder Outreach Documentation: Documentation of the public and stakeholder outreach effort including webpages, informational materials, public and stakeholder meetings

Attachment: 04-Section-1-Introduction-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

and presentations, surveys, and other methods used to receive and incorporate public and stakeholder comment and input to the plan process.

Appendix E: Risk Assessment Supplementary Data: Expanded explanation of community lifelines; and the previous hazard events from the 2015 HMP.

Appendix F: Critical Facilities: Critical facilities included in the risk assessment.

Appendix G: Coastal Hazard Area maps

Appendix H: FEMA Plan Review Tools: Examples of plan review templates available to support annual plan review.

Appendix I: Plan Review Matrix: Summary of plans reviewed, including documentation of content relevant to the mitigation planning process.

1.4 THE UPDATED PLAN – WHAT IS DIFFERENT?

Due to the success of the 2015 plan, no major changes were made to the format or function of the 2022 update. The 2022 update has been enhanced using best available data and technology, especially in the risk assessment portion of the plan in Section 5 (Risk Assessment). The updated plan differs from the initial plan in a variety of ways:

- Updated NYS DHSES guidance existed at the time of its development. The 2017 New York State Hazard Mitigation Planning Standards and Guide were used to develop the 2022 update.
- Newly available data provided for a more detailed and accurate risk assessment. The updated plan is based on new data including FEMA's countywide Digital Flood Insurance Rate Maps (DFIRMs).
- User-friendly tone to cater to the strong desire for this plan to be understandable to the general public and not overly technical.
- Actions are identified, rather than strategies. Strategies provide direction, but actions are fundable under grant programs. The identified actions meet multiple measurable objectives so that each planning partner can measure the effectiveness of their mitigation actions.
- Identification and priority for numerous actions to be implemented by the planning partnership. The status of these actions will be monitored over the plan performance period by a plan maintenance strategy identified in Section 7 (Plan Maintenance) that included annual progress reporting.

Table 1-3 indicates the major changes between the two plans as they relate to 44 CFR planning requirements.

Table 1-1. Plan Changes Crosswalk

44 CFR Requirement	2015 Plan	2022Updated Plan
Requirement §201.6(b): In order to develop a more comprehensive approach to reducing the effects of natural disasters, the planning process shall include: *(1) An opportunity for the public to comment on the plan during the drafting stage and prior to plan approval;* *(2) An opportunity for neighboring communities, local and regional agencies involved in hazard mitigation activities, and agencies that have the authority to regulate*	The 2015 plan followed an outreach strategy utilizing multiple media developed and approved by the Steering Committee. This strategy involved the following: • Public participation on an oversight Steering Committee. • Establishment of a plan informational website. • Press releases. Use of a public information survey.	Building upon the success of the 2015 plan, the 2022 planning effort deployed the same public engagement methodology. The plan included the following enhancements: • Using social media. • HMP project website. • Web-deployed survey. • Informational brochure. As with the 2015 plan, the 2022 planning process identified key stakeholders and coordinated with

Attachment: 04-Section-1-Introduction-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

44 CFR Requirement	2015 Plan	2022Updated Plan
development, as well as businesses, academia and other private and non-profit interests to be involved in the planning process; and *(3) Review and incorporation, if appropriate, of existing plans, studies, reports and technical information.*	Stakeholders were identified and coordinated with throughout the process. A comprehensive review of relevant plans and programs was performed by the planning team.	them throughout the process. The planning team performed a comprehensive review of relevant plans and programs.
§201.6(c)(2): The plan shall include a risk assessment that provides the factual basis for activities proposed in the strategy to reduce losses from identified hazards. Local risk assessments must provide sufficient information to enable the jurisdiction to identify and prioritize appropriate mitigation actions to reduce losses from identified hazards.	The 2015 plan included a comprehensive risk assessment of hazards of concern. Risk was defined as (probability x impact), where impact is the impact on people, property, and economy of the planning area. All planning partners ranked risk as it pertains to their jurisdiction. The potential impacts of climate change are discussed for each hazard.	The same methodology, using new, updated data, was deployed for the 2022 plan update.
§201.6(c)(2)(i): [The risk assessment] shall include a] description of the … location and extent of all-natural hazards that can affect the jurisdiction. The plan shall include information on previous occurrences of hazard events and on the probability of future hazard events.	The 2015 plan presented a risk assessment of each hazard of concern. Each section included the following: • Hazard profile, including maps of extent and location, previous occurrences, and probability of future events. • Climate change impacts on future probability. • Impact and vulnerability on life, health, safety, general building stock, critical facilities, and economy. • Impact on people, property, critical facilities, and environment. • Future growth and development. • Additional data and next steps. • Overall vulnerability assessment.	The same format, using new and updated data, was used for the 2022 plan update. Each section of the risk assessment includes the following: • Hazard profile, including maps of extent and location, previous occurrences, and probability of future events. • Climate change impacts on future probability using the best available data for New York State. • Vulnerability assessment includes: impact on life, safety, and health, general building stock, critical facilities, and the economy, as well as future changes that could impact vulnerability. • The vulnerability assessment also includes changes in vulnerability since the 2022 plan. • Identified issues have been documented in each hazard profile.
§201.6(c)(2)(ii): [The risk assessment] shall include a] description of the jurisdiction's vulnerability to the hazards described in paragraph (c)(2)(i). This description shall include an overall summary of each hazard and its impact on the community.	Vulnerability was assessed for all hazards of concern. The HAZUS-MH-MH computer model was used for the severe storm, earthquake, and flood hazards. These were Level 2 analyses using county data. Site-specific data on county-identified critical facilities were entered into the HAZUS-MH model. HAZUS-MH outputs were generated for other hazards by applying an estimated damage function to an asset inventory extracted from HAZUS-MH-MH.	The same methodology was deployed for the 2022 plan update, using new and updated data. Additional hazards of concern include the following: • Cybersecurity (distinct from Terrorism hazard) • Hazardous Materials • Pandemic • Utility Failure
§201.6(c)(2)(ii): [The risk assessment] must also address National Flood Insurance Program insured structures that have been repetitively damaged floods.	A summary of NFIP insured properties including an analysis of repetitive loss property locations was included in the plan.	The same methodology was deployed for the 2022 plan update using new and updated data.

Attachment: 04-Section-1-Introduction-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

44 CFR Requirement	2015 Plan	2022Updated Plan
Requirement §201.6(c)(2)(ii)(A): The plan should describe vulnerability in terms of the types and numbers of existing and future buildings, infrastructure and critical facilities located in the identified hazard area.	A complete inventory of the numbers and types of buildings exposed was generated for each hazard of concern. The Steering Committee defined "critical facilities" for the planning area, and these were inventoried by exposure. Each hazard chapter provides a discussion on future development trends.	The same methodology was deployed for the 2022 plan update using new and updated data.
Requirement §201.6(c)(2)(ii)(B): [The plan should describe vulnerability in terms of an] estimate of the potential dollar losses to vulnerable structures identified in paragraph (c)(2)(i)(A) and a description of the methodology used to prepare the estimate.	Loss estimates were generated for all hazards of concern. These were generated by HAZUS-MH-MH for the severe storm, earthquake, and flood hazards. For the other hazards, loss estimates were generated by applying a regionally relevant damage function to the exposed inventory. In all cases, a damage function was applied to an asset inventory. The asset inventory was the same for all hazards and was generated in HAZUS-MH.	The same methodology was deployed for the 2022 plan update using new and updated data.
Requirement §201.6(c)(2)(ii)(C): [The plan should describe vulnerability in terms of] providing a general description of land uses and development trends within the community so that mitigation options can be considered in future land use decisions.	There is a summary of anticipated development in the county profile, as well as in each individual annex.	The same methodology was deployed for the 2022 plan update using new and updated data.
§201.6(c)(3):[The plan shall include a mitigation strategy that provides the jurisdiction's blueprint for reducing the potential losses identified in the risk assessment, based on existing authorities, policies, programs and resources, and its ability to expand on and improve these existing tools.]	The 2015 plan contained a mission statement, goals, objectives and actions. The guiding principal, goals and objectives were regional and covered all planning partners. Each planning partner identified actions that could be implemented within their capabilities. The actions were jurisdiction-specific and strove to meet multiple objectives. All objectives met multiple goals and stand alone as components of the plan. Each planning partner completed an assessment of its regulatory, technical, and financial capabilities.	The same methodology for setting goals, objectives, and actions was applied to the 2022 plan update. The Steering Committee reviewed and reconfirmed the mission statement, goals, and objectives for the plan. Each planning partner used the progress reporting from the plan maintenance and evaluated the status of actions identified in the 2015 plan. Actions that were completed or no longer considered to be feasible were removed. The balance of the actions was carried over to the 2022 plan, and in some cases, new actions were added to the action plan.
Requirement §201.6(c)(3)(i): [The hazard mitigation strategy shall include a] description of mitigation goals to reduce or avoid long-term vulnerabilities to the identified hazards.	The Steering Committee identified a mission statement, goals, and objectives targeted specifically for this HMP. These planning components supported the actions identified in the plan.	The same methodology for setting goals, objectives, and actions was applied to the 2022 plan update. The Steering Committee reviewed and updated the mission statement, goals, and objectives for the plan to include a focus on increased resiliency. This resulted in the finalization of six goals and 30 objectives to frame the plan.
Requirement §201.6(c)(3)(ii): [The mitigation strategy shall include a] section that identifies and analyzes a comprehensive range of specific mitigation actions and projects being considered to reduce the effects of each hazard, with particular emphasis on new and existing buildings and infrastructure.	The 2015 plan includes a hazard mitigation catalog that was developed through a facilitated process. This catalog identifies actions that manipulate the hazard, reduce exposure to the hazard, reduce vulnerability, or increase mitigation capability. The catalog further	The mitigation catalog was reviewed and updated by the Steering Committee for the 2022 update. As with the 2015 plan, the catalog has been included in the 2022 plan to represent the comprehensive range of alternatives considered by each planning partner. The table with the

Attachment: 04-Section-1-Introduction-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

44 CFR Requirement	2015 Plan	2022Updated Plan
	segregates actions by scale of implementation. A table in the action plan section analyzes each action by mitigation type to illustrate the range of actions selected.	analysis of mitigation actions was used in jurisdictional annexes to the plan.
Requirement: §201.6(c)(3)(ii): [The mitigation strategy] must also address the jurisdiction's participation in the National Flood Insurance Program, and continued compliance with the program's requirements, as appropriate.	All municipal planning partners that participate in the National Flood Insurance Program identified an action stating their commitment to maintain compliance and good standing under the program.	The same methodology was deployed for the 2022 plan update, using new and updated data.
Requirement: §201.6(c)(3)(iii): [The mitigation strategy shall describe] how the actions identified in section (c)(3)(ii) will be prioritized, implemented and administered by the local jurisdiction. Prioritization shall include a special emphasis on the extent to which benefits are maximized according to a cost benefit review of the proposed projects and their associated costs.	Each recommended action was prioritized using a qualitative methodology based on the objectives the project will meet, the timeline for completion, how the project will be funded, the impact of the project, the benefits of the project, and the costs of the project.	A revised methodology based on the STAPLEE criteria and using new and updated data was used for the 2022 plan update.
Requirement §201.6(c)(4)(i): [The plan maintenance process shall include a] section describing the method and schedule of monitoring, evaluating, and updating the mitigation plan within a five-year cycle.	The 2015 plan outlined a detailed maintenance strategy.	The 2022 plan details a plan maintenance strategy similar to that of the initial plan.
Requirement §201.6(c)(4)(ii): [The plan shall include a] process by which local governments incorporate the requirements of the mitigation plan into other planning mechanisms such as comprehensive or capital improvement plans, when appropriate.	The 2015 plan details recommendations for incorporating the plan into other planning mechanisms.	The 2022 plan details recommendations for incorporating the plan into other planning mechanisms such as the following: • Comprehensive Plan • Emergency Response Plan • Capital Improvement Programs • Municipal Code
Requirement §201.6(c)(4)(iii): [The plan maintenance process shall include a] discussion on how the community will continue public participation in the plan maintenance process.	The 2015 plan details a strategy for continuing public involvement.	The 2015 plan maintenance strategy was carried over to the 2022 plan. In addition, the county will use a proprietary online tool to support the annual progress reporting of mitigation actions.
Requirement §201.6(c)(5): [The local hazard mitigation plan shall include] documentation that the plan has been formally adopted by the governing body of the jurisdiction requesting approval of the plan (e.g., City Council, County Commissioner, Tribal Council).	46 planning partners participated in the 2015 planning process.	The 2022 plan achieves DMA compliance for 46 planning partners. Resolutions for each partner adopting the plan can be found in Appendix A of this volume.

Attachment: 04-Section-1-Introduction-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

SECTION 2. PLAN ADOPTION

2.1 OVERVIEW

This section contains information regarding adoption of the plan by Erie County and each participating jurisdiction.

2.1.1 Plan Adoption by Local Governing Bodies

Adoption by the local governing bodies such as the County Legislature, City Council, or Town/Village Board demonstrates the commitment of Erie County and each participating jurisdiction to fulfill the mitigation goals and strategies outlined in the plan. Adoption of the plan via a municipal resolution legitimizes the Hazard Mitigation Plan (HMP) and authorizes responsible agencies to execute their responsibilities.

The County and all participating jurisdictions will proceed with formal adoption proceedings when the Federal Emergency Management Agency (FEMA) has completed review of the plan and provides conditional approval of this HMP update, known as Approval Pending Adoption (APA).

Following adoption or formal action on the plan, the jurisdiction must submit a copy of the resolution or other legal instrument showing formal adoption (acceptance) of the plan to the Erie County Hazard Mitigation Coordinator in the Erie County Department of Homeland Security and Emergency Services. Erie County will forward the executed resolutions to the New York State Division of Homeland Security & Emergency Services (NYS DHSES), after which they will be forwarded to FEMA for the record. The jurisdictions understand that FEMA will transmit acknowledgement of verification of formal plan adoption and the official approval of the plan to the Erie County Hazard Mitigation Plan Coordinator.

The resolutions issued by each jurisdiction to support adoption of the plan will be included in Appendix A.

In addition to being required by DMA 2000, adoption of the plan is necessary because:

- It lends authority to the plan to serve as a guiding document for all local and state government officials.
- It gives legal status to the plan in the event it is challenged in court.
- It certifies to the program and grant administrators that the plan's recommendations have been properly considered and approved by the governing authority and jurisdictions' citizens.
- It helps to ensure the continuity of mitigation programs and policies over time because elected officials, staff, and other community decision-makers can refer to the official document when making decisions about the community's future.

Source: FEMA. 2003. H*ow to Series: Bringing the Plan to Life* (FEMA 386-4).

Attachment: 05-Section-2-Plan-Adoption-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

SECTION 3. PLANNING PROCESS

3.1 INTRODUCTION

This section includes a description of the planning process used to update the 2015 Erie County Hazard Mitigation Plan (HMP), including how it was prepared, who was involved in the process, and how the public was included. To ensure that the plan meets requirements of the Disaster Mitigation Act (DMA) of 2000 and that the planning process would have the broad and effective support of the participating jurisdictions, regional and local stakeholders, and the public, an approach to the planning process and plan documentation was developed to achieve the following:

- The plan will be multi-jurisdictional, with the intention of including all municipalities in the county. Erie County invited all the towns and villages, and a variety of stakeholders, to join them in the planning process. The county, Erie County Water Authority, and all 44 local municipal governments in the county participated in the 2022 planning process, as indicated in Table 3-1. The plan considers ten natural hazards and three non-natural hazards of concern facing the county, thereby satisfying the natural hazard mitigation planning requirements specified in DMA 2000.
- The plan was developed following the process outlined by DMA 2000, Federal Emergency Management Agency (FEMA) regulations, prevailing FEMA guidance, and the 2017 New York State Division of Homeland Security and Emergency Services (NYS DHSES) hazard mitigation planning standard. Following this process ensured that all the requirements are met and support HMP review.

Note: T = Town; V = Village C = City

The Erie County HMP was updated using the best available information obtained from a wide variety of sources. Throughout the HMP update process, a concerted effort was made to gather information from municipal and regional agencies and staff as well as stakeholders, federal and state agencies, and the residents of the county. The HMP Steering Committee solicited information from local agencies and individuals with specific knowledge of certain hazards and past historical events. In addition, the Steering Committee and Planning Partnership took into consideration planning and zoning codes, ordinances, and recent land use planning decisions. The hazard mitigation strategies identified in this HMP were developed through an extensive planning process involving local; county; and regional agencies, residents, and stakeholders.

This section of the plan describes the mitigation planning process, including (1) Organization of the Planning Process; (2) Stakeholder Outreach and Involvement; (3) Integration of Existing Data, Plans, and Technical

Attachment: 06-Section-3-Planning-Process-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Information; (4) Integration with Existing Planning Mechanisms and Programs; and (5) Continued Public Involvement.

3.2 ORGANIZATION OF THE PLANNING PROCESS

This section of the plan identifies how the planning process was organized with the many planning partners involved and outlines the major activities conducted during the development of this HMP update.

3.2.1 Organization of Planning Partnership

Erie County applied for and was awarded a multi-jurisdictional planning grant under the FEMA Fiscal Year 2018 Pre-Disaster Mitigation Program, which supported the development of this multi-jurisdictional HMP update.

Project management and grant administration have been the responsibility of the Erie County Department of Planning and Development. A contract planning consultant (Tetra Tech, Inc., referred to herein as Tetra Tech) was selected to guide the county and participating jurisdictions through the HMP update process. A contract between Tetra Tech and Erie County was executed in November 2020. Specifically, Tetra Tech was tasked with the following:

- Assisting with the organization of a Steering Committee and the Planning Partnership
- Assisting with the development and implementation of a public and stakeholder outreach program
- Collecting data
- Facilitating and attending meetings (Steering Committee, Planning Partnership, municipal, stakeholder, public, and other)
- Reviewing and updating the hazards of concern, hazard profiling, and risk assessment
- Assisting with the review and update of mitigation planning goals and objectives
- Assisting with the review of past mitigation strategies progress
- Assisting with the screening of mitigation actions and the identification of appropriate actions
- Assisting with the prioritization of mitigation actions
- Authoring the draft and final plan documents

In February 2020, Erie County notified all municipalities within the county of the pending planning process and invited them to formally participate. Jurisdictions were asked to identify planning points of contact (POC) for facilitating municipal participation and representing the interests of their respective communities.

To facilitate plan development, Erie County developed a Steering Committee to provide guidance and direction to the HMP update effort and to ensure the resulting document will be embraced by the constituencies within the planning area (refer to Table 3-2). Specifically, the Steering Committee was charged with the following:

- Providing guidance and oversight of the planning process on behalf of the general Planning Partnership
- Attending and participating in Steering Committee meetings
- Assisting with the development and completion of certain planning elements, including:
  - Reviewing and updating the hazards of concern
  - Developing a public and stakeholder outreach program
  - Ensuring that the data and information used in the plan update process are the best available
  - Reviewing and updating the hazard mitigation goals
  - Identifying and screening of appropriate mitigation strategies and activities
- Reviewing and commenting on plan documents prior to submittal to NYS DHSES and FEMA

Attachment: 06-Section-3-Planning-Process-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

The Steering Committee provided guidance and leadership, oversight of the planning process, and acted as the point of contact for all participating jurisdictions and the various interest groups in the county.

Table 3-2. Erie County Hazard Mitigation Steering Committee Members

Affiliation	Name	Title
Erie County Department of Homeland Security and Emergency Services (DHSES)	Greg Butcher	Deputy Commissioner
	Melissa Calhoun	Special Assistant
	Daniel Neaverth	Commissioner
	Ryan Sheedy	Senior Medical Emergency Radio System (MERS) Coordinator
Erie County Department of Environment and Planning	Josh Wilson	Coordinator - Pollution Prevention Program
	Daniel Castle	Deputy Commissioner
Erie County Water Authority	Matthew W. Barrett	Security Officer
City of Buffalo	Don Poleto	Senior Operations Engineer
New York State Division of Homeland Security and Emergency Services (NYS/DHSES)	Kevin Clapp	Planning Manager, Mitigation Programs
Village of Depew	R.J. Nieman	Emergency Manager
Town of Hamburg	Sean Crotty	Emergency Manager Chair, Erie County Emergency Managers Association

Table 3-3 lists the current municipal members of the Planning Partnership at the time of this HMP update. It is noted that the Steering Committee members also are part of the overall project Planning Partnership, fulfilling these responsibilities on behalf of Erie County. This Planning Partnership was charged with the following:

- Representing their jurisdiction throughout the planning process
- Ensuring participation of all departments and functions within their jurisdiction that have a stake in mitigation (e.g., planning, engineering, code enforcement, police and emergency services, public works)
- Assisting in gathering information for inclusion in the HMP update, including the use of previously developed reports and data
- Supporting and promoting the public involvement process
- Reporting on progress of mitigation actions identified in prior or existing HMPs, as applicable
- Identifying, developing, and prioritizing appropriate mitigation initiatives
- Reporting on progress of integration of prior or existing HMPs into other planning processes and municipal operations
- Supporting and developing a jurisdictional annex
- Reviewing, amending, and approving all sections of the plan update
- Adopting, implementing, and maintaining the plan update

Williamsville (V)	James Zymanek	Director of Emergency Services and Safety	Dominic Creamer	Emergency Services and Safety

Notes: T = Town; V = Village C = City

The jurisdictions in Erie County have differing levels of capabilities and resources available to apply to the plan update process, and further, have differing exposure and vulnerability to the hazards being considered in this plan. Erie County's intent was to encourage participation by all jurisdictions and to accommodate their specific needs and limitations while still meeting the intents and purpose of plan update participation. Such accommodations have included the establishment of a Steering Committee, engaging a contract consultant to assume certain elements of the plan update process on behalf of the jurisdictions, and the provision of additional and alternative mechanisms to meet the purposes and intent of mitigation planning.

Ultimately, jurisdictional participation is evidenced by a completed municipal annex to the HMP (Section 9) wherein jurisdictions have individually identified their planning POCs; evaluated their risk to the hazards of concern; identified their capabilities to provide effective mitigation in their community; identified and prioritized an appropriate suite of mitigation initiatives, actions, and projects to mitigate their hazard risk; and eventually, adopted the updated plan via resolution.

Appendix B (Participation Matrix) identifies those individuals who represented the municipalities during this planning effort and indicates how they contributed to the planning process.

Neither the Town of North Collins nor the Village of North Collins participate in the National Flood Insurance Program (NFIP). As such, 42 of the county's 44 municipalities participate in the NFIP and have a designated NFIP Floodplain Administrator (FPA). All known FPAs were informed of the planning process, reviewed the plan documents, and provided direct input to the plan update. Local FPAs are identified in the Points of Contact and Administrative and Technical portions of Section 9 (Jurisdictional Annexes).

3.2.2 Planning Activities

Members of the Planning Partnership (individually and as a whole), as well as key stakeholders, convened and/or communicated regularly to share information and participate in workshops to identify hazards; assess risks; review existing inventories and identify new critical facilities; assist in updating and developing new mitigation goals and strategies; and provide continuity through the process to ensure that natural hazard vulnerability information and appropriate mitigation strategies were incorporated. All members of the Steering Committee and Planning Partnership had the opportunity to review the draft plan, to support interaction with other stakeholders, and to assist with public involvement efforts.

Attachment: 06-Section-3-Planning-Process-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

A summary of Steering Committee and Planning Partnership meetings held and key milestones met during the development of the HMP update is included in Table 3-4, which also identifies the DMA 2000 requirements satisfied. Documentation of meetings (e.g., agendas, sign-in sheets, minutes) are provided in Appendix C (Meeting Documentation). Table 3-4 identifies only the formal meetings held during plan development and does not reflect the planning activities conducted by individuals and groups throughout the planning process. In addition to these meetings, a great deal of communication was conducted between the county, committee members, and the contract consultant through individual local meetings, electronic mail (email), and by phone.

After completion of the HMP update, implementation and ongoing maintenance will become a function of the Planning Partnership, as described in Section 7 (Plan Maintenance). The Planning Partnership will be responsible for reviewing the HMP and soliciting and considering public comment as part of the 5-year mitigation plan update.

The table below summarizes a list of mitigation planning activities and meetings and their respective participants. A more detailed list of participants for each meeting is provided in Appendix B (Participation Matrix) and Appendix C (Meeting Documentation). DMA 2000 (Public Law 106-390) includes details on each of the planning requirements.

Table 3-4. Summary of Mitigation Planning Activities/Efforts

Date	DMA 2000 Requirement	Description of Activity	Participants
November 2, 2020	1b, 2	Steering Committee Kick-Off Meeting (Data Collection, Review of Mission Statement and Goals, Hazards of Concern Identification, Public Outreach Strategy)	Erie County Department of Homeland Security and Emergency Services (DHSES), Erie County Department of Environment and Planning, Erie County Water Authority, City of Buffalo, New York State Division of Homeland Security and Emergency Services (NYS/DHSES), Village of Depew, Town of Hamburg; Chair, Erie County Emergency Managers Association
November 18, 2020	1b, 2, 3a	Planning Partnership Kick-Off Meeting (Municipal Kick-Off Meeting and Planning Overview)	Erie County Department of Environment and Planning, Erie County Department of Homeland Security and Emergency Services, Erie County Department of Public Works Division of Highways, Board of Cooperative Extension Services, Erie County Emergency Managers Association, Holland Central School District, New York State Department of Environmental Conservation Albert Cheverie, Hospital Emergency Preparedness Representative, New York State Department of Health; Department of Geography, State University at Buffalo/Erie County Local Emergency Planning Association, Town of Akron, Town of Newstead, Village of Blasdell, Town of Clarence, Town of Collins, Town of Eden, City of Tonawanda, Town of West Seneca

Attachment: 06-Section-3-Planning-Process-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Date	DMA 2000 Requirement	Description of Activity	Participants
January and February 2021 (6 different meetings)	1b, 2, 3a, 4a, 4b, 4c	Municipal Support Meetings (Discuss information gathering worksheets, municipal problem areas, status of past mitigation actions)	Erie County Department of Homeland Security and Emergency Services, Buffalo Fire Department, Town of Cheektowaga, Town of Newstead, Village of North Collins, Village of North Collins, Town of Sardinia, City of Tonawanda, Town of Tonawanda, Erie County Water Authority, Town of Aurora, Village of Blasdell, Town of Boston, City of Buffalo Department of Public Works, Town of Concord, Village of East Aurora, Erie County Department of Public Works, Town of Aurora, Town of Amherst, Village of Williamsville, Village of Akron, Town of Aurora, Village of East Aurora, Town of Evans, Village of Farnham, Village of Hamburg, Town of Holland, Town of Lancaster, Village of Springville, Erie County Department of Environment and Planning, Town of Brant, Town of Collins, Town of Eden, Town of North Collins, Town of West Seneca, Village of Alden, Town of Colden, Village of Depew, Town of Hamburg, Village of Lancaster, Village of Orchard Park, Town Orchard Park, Village of Sloan, Town of West Seneca
January 25 and January 28, 2021	1b	Public Information Meetings (Offered to provide information on hazard mitigation, the planning process, and the Erie County HMP update)	Erie County Department of Homeland Security and Emergency Services, Erie County Department of Environment and Planning, WBFO, NYS Division of Homeland Security and Emergency Services
May 19, 2021	1b, 2, 3, 4am 4b, 2, 4a, 4b, 4c	Risk Assessment Review Meeting (Presentation of risk assessment overview, development of hazard problem statements by community) and Strengths, Weaknesses, Obstacles, and Opportunities (SWOO) Meeting	Erie County Department of Environment and Planning, Erie County Department of Homeland Security and Emergency Services, Erie County Water Authority, Village of Depew, Village of East Aurora, Village of Akron, Town of Newstead, Town of Orchard Park, Town Orchard Park, Village Orchard Park, Village of Springville, City of Tonawanda, Town of Tonawanda, Lake Erie Watershed Protection Alliance, National Fuel Gas, National Weather Service, Niagara Frontier Transportation Authority
June 9, 2021	1b, 2, 4a, 4b, 4c	Mitigation Strategy Workshops (Guidance on developing mitigation actions for inclusion in the HMP)	Erie County Department of Environment and Planning, Erie County Department of Homeland Security and Emergency Services, Erie County Department of Public Works, Erie County Water Authority, Village of Akron, Town of Amherst, Town of Aurora, Town of Cheektowaga, Town of Collins, Town of Concord, Village of East Aurora, Town of Eden, Town of Hamburg, Town of Holland, Town of Lancaster, Town of Newstead, Town of Orchard Park, Village of Springville, Town of Tonawanda, Town of West Seneca, Village of Williamsville
September 8, 2021	1b, 2, 3, 4, 5	Draft Plan Review Meeting (Receive comments from the public on the draft plan)	Erie County Department of Environment and Planning, Erie County Department of Homeland Security and Emergency Services, Town of Aurora, Town of Boston, Town of Cheektowaga, Town of Clarence, Town of Collins, Town of Concord, Village of East Aurora, Town of Grand Island, Town of Holland, City of Lackawanna, Town of Newstead, Town of North Collins, Town of Orchard Park, Village of Orchard Park, Town of Sardinia, City of Tonawanda, Town of Tonawanda, Town of West Seneca, National Fuel Gas, NYS DHSES
TBD	N/A	Submit draft to NYS DHSES for formal review	Erie County NYS DHSES

Attachment: 06-Section-3-Planning-Process-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Date	DMA 2000 Requirement	Description of Activity	Participants
TBD	1b, 2, 3, 4, 5	NYS DHSES Draft Plan Review	NYS DHSES
TBD	N/A	Revise draft and submit to FEMA Region II for formal review	Erie County FEMA Region II
TBD	1b, 2, 3, 4, 5	FEMA Review	FEMA Region II
TBD	1, 2, 3, 4, 5	Approvable Pending Adoption status granted	Erie County FEMA Region II

Note: TBD = to be determined.
Each number in column 2 identifies specific DMA 2000 requirements, as follows:
1a – Prerequisite – Adoption by the Local Governing Body
1b – Public Participation
2 – Planning Process – Documentation of the Planning Process
3a – Risk Assessment – Identifying Hazards
3b – Risk Assessment – Profiling Hazard Events
3c – Risk Assessment – Assessing Vulnerability: Identifying Assets
3d – Risk Assessment – Assessing Vulnerability: Estimating Potential Losses
3e – Risk Assessment – Assessing Vulnerability: Analyzing Development Trends
4a – Mitigation Strategy – Local Hazard Mitigation Goals
4b – Mitigation Strategy – Identification and Analysis of Mitigation Measures
4c – Mitigation Strategy – Implementation of Mitigation Measures
5a – Plan Maintenance Procedures – Monitoring, Evaluating, and Updating the Plan
5b – Plan Maintenance Procedures – Implementation through Existing Programs
5c – Plan Maintenance Procedures – Continued Public Involvement

3.3 STAKEHOLDER OUTREACH AND INVOLVEMENT

Stakeholders are the individuals, agencies, and jurisdictions with a vested interest in the recommendations of the HMP and include all planning partners.

Diligent efforts were made to ensure broad regional, county, and local representation in this planning process. To that end, a comprehensive list of stakeholders was developed with the support of the Steering Committee and Planning Partnership. Stakeholder outreach was performed early and throughout the planning process. This HMP includes information and input provided by these stakeholders, where appropriate, as identified in the references.

The following is a list of the various stakeholders that were invited to participate in the development of this plan, along with a summary of how t they participated and contributed. This summary listing does not represent every stakeholder that was aware of and contributed to this HMP update, as outreach efforts were being made, both formally and informally, throughout the process by the many planning partners involved in the effort, and documentation of all such efforts is impossible. Instead, this summary is intended to demonstrate the scope and breadth of the stakeholder outreach efforts made during the plan update process.

3.3.1 Federal Agencies

Cybersecurity and Infrastructure Security Agency: A representative of the Cybersecurity and Infrastructure Security Agency attended a Planning Partnership Kickoff Meeting.

FEMA Region II: Provided updated planning guidance, provided summary and detailed data from the NFIP (including repetitive loss information), and conducted plan review.

National Weather Service: Attended the Planning Partnership Kickoff Meeting.

Information regarding hazard identification and the risk assessment for this HMP update was requested and received or incorporated by reference from the following agencies and organizations:

Attachment: 06-Section-3-Planning-Process-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

- National Centers for Environmental Information (NCEI)
- National Hurricane Center (NHC)
- National Oceanic and Atmospheric Administration (NOAA)
- National Weather Service (NWS)
- Storm Prediction Center (SPC)
- U.S. Army Corps of Engineers (USACE)
- U.S. Census Bureau

3.3.2 State Agencies

NYS DHSES: Administered planning grant and facilitated FEMA review, provided updated planning guidance, attended meetings, and provided review of draft and final HMP.

New York State Department of Environmental Conservation (NYSDEC): Provided data and information, attended the Planning Partnership Kickoff Meetings. A representative of the Buffalo Regional Office Division of Water completed the stakeholder survey.

New York State Department of Health (NYS DOH): Attended the Planning Partnership Kickoff Meeting.

SUNY-Buffalo: Attended the Planning Partnership Kickoff Meeting.

SUNY-Erie: Provided information by completing the stakeholder survey.

3.3.3 Erie County Departments

Several county departments were represented on the Steering Committee and involved in the HMP update planning process. Appendix B (Participation Matrix) provides further details regarding regional and local stakeholder agencies.

Erie County Department of Homeland Security and Emergency Services: The Department's Deputy Commissioner served on the Steering Committee, attended all meetings, provided information and data, reviewed documents, and reached out to stakeholders. The Department assisted with distribution of project information via social media. Images of posts are included in Appendix D (Public and Stakeholder Outreach Documentation).

Erie County Department of Planning and Development: The Erie County Department of Environment and Planning was represented by its Deputy Director serving on the HMP Steering Committee and by other staff participating in the Planning Partnership meetings. Planning and Development provided critical data, assisted with the update of events and losses in the county, updated the previous mitigation strategy, facilitated outreach to jurisdictions and stakeholders, contributed to the county's capability assessment and updated mitigation strategy, and reviewed draft sections of the HMP.

Erie County Department of Public Health: Tracy Chalmers from the Department participated in the Planning Partnership.

Erie County Department of Public Works: A Senior Civil Engineer from the Department participated in the Planning Partnership.

Erie County Water Authority: The Water Authority's Security Officer participated in several meetings and provided important data about critical facilities.

Attachment: 06-Section-3-Planning-Process-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

3.3.4 Regional and Local Stakeholders

Appendix B (Participation Matrix) provides further details regarding regional and local stakeholder agencies. The stakeholders listed below were directly contacted by Erie County to provide information, identify specific mitigation strategies, and/or review the draft HMP. Results of information gathering surveys are provided in Appendix D (Public and Stakeholder Outreach Documentation). Feedback was reviewed by the Steering Committee and Planning Partnership and integrated, where appropriate, in the plan.

Academia

All school districts in the county were invited via email to provide input and attend meetings and were notified of the draft HMP review period. The Erie 1 BOCES and the Holland Central School were represented at the Planning Partnership Kickoff Meeting. The following academic organizations completed the stakeholder survey:

- Akron Central School District
- Alden Central School District
- Eden Central School District
- Iroquois Central School District
- Kenmore-Town of Tonawanda Union Free School District
- Lake Shore Central School District
- Springville-Griffith Institute Central School District
- Tonawanda City School District
- West Seneca Central School District

Business and Commercial Interests

Businesses and commercial industries in Erie County were invited to provide input on the draft HMP. National Fuel Gas attended the Planning Partnership Kickoff Meeting and the Risk Assessment Review Meeting. The following organizations completed the stakeholder survey:

- Akron Music Studios
- Alternative Care Services of WNY/ Alden's Meals on Wheels
- Boston Youth Soccer League
- DuPont
- Evonik
- Fiddlers Green Manor
- Greater Buffalo Niagara Regional Transportation Council
- Moog Incorporated
- Niagara Frontier Transportation Authority
- NOCO Energy Corporation
- Snap Fitness
- Sumitomo Rubber USA
- Unifrax

Emergency Services

All state, county, and local emergency service providers (police, fire, EMS) were notified of the planning process and invited to attend meetings and provide input on the draft HMP. Response organizations were contacted via email and telephone by the Erie County DHSES. The following organizations provided information through completing the stakeholder survey:

- Alden Fire Department
- City of Tonawanda Office of Emergency Management
- North Amherst Fire Company
- Swormville Fire

Attachment: 06-Section-3-Planning-Process-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

- AMR Walden Fire District (Cheektowaga)
- Brighton Fire Company
- Brighton Fire District No. 5
- Buffalo Police Department
- Chaffee-Sardinia Fire Company
- Cheektowaga Police Department
- Clarence Center Fire Company
- East Concord Fire Department
- Elma Fire Company
- Erie Community College, EMT Department
- Harris Hill Volunteer Fire Company
- Marilla Fire Company
- Orchard Park Fire Company
- Orchard Park Fire District
- Orchard Park Fire District EMS
- Rescue Hose #1
- Sheridan Park Fire
- Spring Brook Fire District
- Town of Lancaster OEM
- Town of Sardinia OEM
- Town of Tonawanda Paramedics
- Twin District Volunteer Fire Company
- Village of Hamburg Department of Emergency Services
- Windom Volunteer Fire Company

Highway and Public Works

All local highway and public works departments were invited to provide input on the draft HMP and attend all planning meetings. In addition, many of the participating municipalities had representatives from their highway and public works departments representing them on the Planning Partnership. The Town of Lancaster Highway Department, Town of Sardinia Highway Department, Town of Tonawanda Highway Department, and the Town of Tonawanda Water Plant completed the stakeholder survey.

Additional Stakeholders

Catholic Health, Chemical Distributors, Inc., the Erie County Medical Center, Kaleida Health, Mount Saint Mary's Hospital, the Sisters of Charity Hospital, the Niagara Frontier Transportation Authority, and the WNY Healthcare Association were represented at a Planning Partnership Kickoff Meeting.

3.3.5 Adjacent Counties

Erie County has tried to keep surrounding counties and municipalities apprised of the project and has given them the opportunity to provide input to this planning process. Specifically, the following adjoining and nearby county representatives were contacted via email in March 2020 to inform them about the availability of the project website, draft plan documents, and surveys, and to invite them to attend planning meetings or otherwise provide input to the planning process.

- Niagara County, New York
- Genesee County, New York
- Monroe County, New York

The neighboring counties of Niagara, Genesee, Wyoming, Cattaraugus, and Chautauqua were invited to all planning meetings. In addition, an electronic survey was distributed to officials in these counties in January 2021 to invite them to provide input into the planning process. No responses on this survey were received. Documentation of outreach to adjacent counties can be found in Appendix D.

Attachment: 06-Section-3-Planning-Process-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

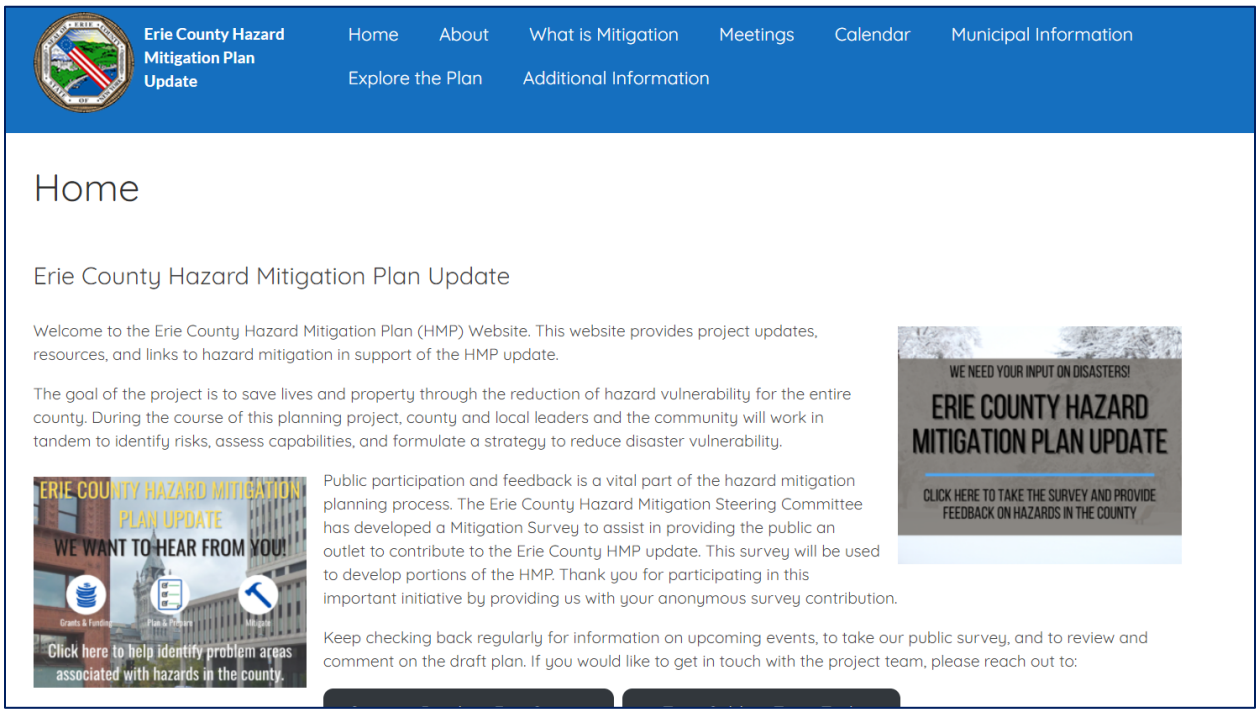
3.3.6 Public Outreach

The Steering Committee and Planning Partnership made the following efforts toward public participation in the development and review of the HMP:

- A public project website was developed and is being maintained to facilitate communication between the Steering Committee, Planning Partnership, public, and stakeholders. The public website provided a project overview, county and local contact information, access to the citizen's survey, and sections of the HMP for public review and comment. Figure 3-1 provides a screenshot of the current website homepage (https://www.eriecountynyhmp.com/). http://www.ongov.net/planning/haz.html
- A pair of public information webinars were conducted in January 2021. Two members of the general public, a reporter, and 17 representatives of other planning partners attended the webinars. Copies of meeting materials are provided in Appendix C.
- All hazard mitigation planning meetings open to the public were advertised on the Erie County Department of Homeland Security and Emergency Services website and the project website.
- A public online mapping tool to identify problem areas created by hazards was made available in January 2021. Fourteen people responded and identified problem areas. This information was incorporated into the jurisdictional annexes (in their lists of problem statements and mitigation actions developed to solve those problems) for the following municipalities:
    - City of Buffalo
    - Town of Hamburg
    - Town of Orchard Park
    - Village of Orchard Park
    - Village of Springville
    - Town of Tonawanda
- All participating municipalities were encouraged to post the links to the project webpage and citizen and stakeholder surveys. In addition, all participating municipalities were requested to advertise the availability of the project website via local homepage links, and other available public announcement methods (e.g., Facebook, Twitter, email blasts).
- Starting in April 2021, draft sections of the plan were posted on the project website for public review and comment. In addition, links were provided to the participating jurisdictions to post on their respective websites.
- Once approved by NYS DHSES/FEMA, the final HMP will be available on the county and municipal websites.

Attachment: 06-Section-3-Planning-Process-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Figure 3-1. Erie County HMP Website Homepage



3.4 INCORPORATION OF EXISTING PLANS, STUDIES, REPORTS, AND TECHNICAL INFORMATION

The Erie County HMP strives to use the best available technical information, plans, studies, and reports throughout the planning process to support hazard profiling; risk and vulnerability assessment; review and evaluation of mitigation capabilities; and the identification, development, and prioritization of county and local mitigation strategies.

The asset and inventory data used for the risk and vulnerability assessment are presented in the County Profile (Section 4). Details of the source of this data, along with technical information on how the data was used to develop the risk and vulnerability assessment, are presented in the Hazard Profiling and Risk Assessment Section (Section 5), specifically within Section 5.3 (Data and Methodology) as well as throughout Section 5.4 (Hazard Profiles). Further, the source of technical data and information used can be found within Volume I under *References*.

Plans, reports, and other technical information were identified and provided directly by the county, participating jurisdictions, and numerous stakeholders involved in the planning effort as well as through independent research by the planning consultant. The county and participating jurisdictions were tasked with updating the inventory of their planning and regulatory capabilities in Section 9 (Jurisdictional Annexes) and providing relevant planning and regulatory documents, as applicable. Relevant documents, including plans, reports, and ordinances, were reviewed to identify the following:

- Existing municipal capabilities
- Needs and opportunities to develop or enhance capabilities, which may be identified within the county or local mitigation strategies

Attachment: 06-Section-3-Planning-Process-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

- Mitigation-related goals or objectives considered in the review and update of the overall Goals and Objectives in Section 6 (Mitigation Strategy)
- Proposed, in-progress, or potential mitigation projects, actions, and initiatives to be incorporated into the updated county and local mitigation strategies

The following local regulations, codes, ordinances, and plans were reviewed during this process to develop mitigation planning goals, objectives, and strategies that are consistent across local and regional planning and regulatory mechanisms to accomplish complementary and mutually supportive strategies:

- New York State Standard Multi-Hazard Mitigation Plans of 2014 and 2019
- Erie County Comprehensive Emergency Management Plan (CEMP)
- Local plans and regulations (Appendix G includes a list and description of the local documents reviewed for each jurisdiction)
    - Comprehensive/Master Plans
    - Building Codes
    - Zoning and Subdivision Ordinances
    - NFIP Flood Damage Prevention Ordinances
    - Site Plan Requirements
    - Local Waterfront Revitalization Plans
    - Stormwater Management Plans
    - Emergency Management and Response Plans
    - Land Use and Open Space Plans
    - Capital Plans

3.5 INTEGRATION WITH EXISTING PLANNING MECHANISMS AND PROGRAMS

Effective mitigation is achieved when hazard awareness and risk management approaches and strategies become an integral part of public activities and decision-making. Within Erie County, many existing plans and programs support hazard risk management, and thus it is critical that this HMP integrates, coordinates with, and complements existing plans and programs.

The Capability Assessment portion of Section 6 (Mitigation Strategy) provides a summary and description of the existing plans, programs, and regulatory mechanisms at all levels of government (federal, state, county, and local) that support hazard mitigation within the county. Within each jurisdictional annex in Section 9 (Jurisdictional Annexes), the county and each participating jurisdiction identified how they integrated hazard risk management into their existing planning, regulatory, and operational/administrative framework (*integration capabilities*), and how they intend to promote this integration (*integration actions*).

A further summary of these continued efforts to develop and promote a comprehensive and holistic approach to hazard risk management and mitigation is presented in Section 7 (Plan Maintenance).

3.6 CONTINUED PUBLIC INVOLVEMENT

Erie County and participating jurisdictions are committed to the continued involvement of the public in the hazard mitigation process. This HMP update will be posted online at https://www2.erie.gov/disaster/index.php?q=The%20Plan and municipalities will be encouraged to maintain links to the plan website. The county will also make hard copies of the HMP available for review at public locations, as identified on the website.

Attachment: 06-Section-3-Planning-Process-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

A notice regarding updates of the plan and the location of plan copies will be publicized after the Planning Partnership's annual evaluation and posted on the public website at https://www2.erie.gov/disaster/index.php?q=The%20Plan.

Each jurisdiction's governing body will be responsible for receiving, tracking, and filing public comments regarding this plan.

The public will have an opportunity to comment on the plan as a part of the annual mitigation planning evaluation process and the next 5-year mitigation plan update. The HMP Coordinator is responsible for coordinating the plan evaluation portion of the meeting, soliciting feedback, collecting and reviewing the comments, and ensuring their incorporation in the 5-year plan update, as appropriate; however, members of the Planning Partnership will assist the HMP Coordinator. Additional meetings may be held as deemed necessary by the Planning Committee to provide the public an opportunity to express concerns, opinions, and ideas about the plan.

Further details regarding continued public involvement are provided in Section 7 (Plan Maintenance).

After completion of this plan, implementation and ongoing maintenance will continue to be a function of the Planning Partnership. The Planning Partnership will review the plan and accept public comments as part of an annual review and as part of 5-year mitigation plan updates.

A notice regarding updates of the plan and the location of plan copies will be publicized after the HMP Committee's annual evaluation and posted on the public website.

Mr. Gregory Butcher is identified as the Erie County HMP Coordinator in Section 7 (Plan Maintenance) and will be responsible for receiving, tracking, and filing public comments regarding this plan. Contact information is:

Greg Butcher, Deputy Commissioner
Erie County Department of Homeland Security and Emergency Services
716-858-2944
45 Elm Street
Buffalo, NY 14203
Email: Gregory.Butcher@erie.gov

Attachment: 06-Section-3-Planning-Process-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

SECTION 4 COUNTY PROFILE

This profile describes the general information of the county (physical setting, population and demographics, general building stock, and land use and population trends) as well as critical facilities located within Erie County. In Section 5 (Risk Assessment), specific profile information is presented and analyzed to develop an understanding of the study area, including the economic, structural, and population assets at risk and the particular concerns that may be present related to hazards analyzed (for example, a high percentage of vulnerable persons in an area).

4.1 GENERAL INFORMATION

Erie County is located in Western New York and is bordered by Niagara County on the north, Wyoming and Genesee counties to the east, Cattaraugus and Chautauqua county to the south and Lake Erie to the west. The county's area is 1,227 square miles. The County makes up part of the international border with Canada. Buffalo is the County seat.

Erie County is home to 44 incorporated municipalities (25 towns, 16 villages and three cities). They are the Towns of Alden, Amherst, Aurora, Boston, Brant, Cheektowaga, Clarence, Colden, Collins, Concord, Eden, Elma, Evans, Grand Island, Hamburg, Holland, Lancaster, Marilla, Newstead, North Collins, Orchard Park, Sardinia, Tonawanda, Wales and West Seneca; Villages of Akron, Alden, Angola, Blasdell, Depew, East Aurora, Farnham, Gowanda, Hamburg, Kenmore, Lancaster, North Collins, Orchard Park, Sloan, Springville and Williamsville; and Cities of Buffalo, Lackawanna, and Tonawanda.

The county is named after the early native group the Erie Indians. During French and then English colonial rule, Erie County was occupied by Iroquoian speaking peoples who succeeded the Erie. White settlers began to arrive in the area after the American Revolutionary War. Native peoples had been forced to cede most of their lands. Erie County was incorporated in 1821. The county included only two towns; Willink and Clarence, which, over time were split to form the current 42 towns, villages and cities within Erie County. The county also contains portions of the Cattaraugus and Tonawanda Indian Reservations. I-90 runs through the county and spur highways connect to urban centers. Four US Routes and 14 New York State Routes traverse the county. (Britannica online, accessed December 2020).

According to the U.S. Census, the 2010 population for Erie County was 919,040 The estimated 2019 population was 919,355, a nearly zero percent change from the 2010 Census. The total population of the county is projected to increase out to 2040 to 945,891 residents (Cornell University, 2017). Data from the 2019 U.S. Census American Community Survey indicate that 5.5 percent of the population is 5 years of age or younger and 17.6 percent is 65 years of age or older. Communities must deploy a support system that enables all populations to safely reach shelters or to quickly evacuate a hazard area.

According to the U.S. Census Bureau, Erie County is the seventh most populated county in New York State (U.S.

4.2 MAJOR PAST HAZARD EVENTS

Presidential disaster declarations are typically issued for hazard events that cause more damage than state and local governments can handle without assistance from the federal government, although no specific dollar loss threshold has been established for these declarations. A presidential disaster declaration puts federal recovery programs into motion to help disaster victims, businesses, and public entities. Some of the programs are matched by state programs. Review of presidential disaster declarations helps establish the probability of reoccurrence

Attachment: 07-Section-4-County-Profile-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

for each hazard and identify targets for risk reduction. Table 4-1 shows FEMA disaster declarations that included Erie County through 2020 (records date back to 1954).

4.3 PHYSICAL SETTING

This section presents topography and geology, hydrology and hydrography, and climate information for Erie County.

4.3.1 Topography and Geology

Erie County's northern half is relatively flat and rises gently up from Lake Erie. The Southtowns are much hillier, containing the northernmost foothills of the Appalachian Mountains. The county's highest point is at 1,940 feet above sea level in the Town of Sardinia. is located in two physiographic regions: the Allegany Plateau, characterized by the upland, sloping topography to the south and the Erie-Ontario Lowlands of lake plain to the north. Glaciers have covered this area several times leaving deposits of glacial till as they receded. (FEMA, Town of Orchard Park, 1982). Surface soils within the County are nonsorted rock materials; imbedded sand and gravel, as well as imbedded clay, silt and fine sand. They reflect the texture of the glacial till, outwash and lake deposits from which they come. Generally, soils are shallow and fairly well-drained (FEMA, Village of Depew, 1981). Soils for a thin mantle over the bedrock, which is generally found at depths greater than five feet. Heavy wooded areas can be found along steep hillsides and farming occurs on the gently rolling hilltop areas and n the broad valleys. Many farms are now overgrown, as a once agricultural area has rapidly become urbanized (FEMA, Town of West Seneca, 1992).

4.3.2 Hydrography and Hydrology

The county is bordered by large watercourses – the Cattaraugus and Tonawanda Creeks, the Erie Canal and the Niagara River. Large creeks that flow through the county include Ellicott, Cayuga, Buffalo, and Eighteenmile Creeks. The County contains Evangola, Beaver Island, and Buckhorn Island state parks.

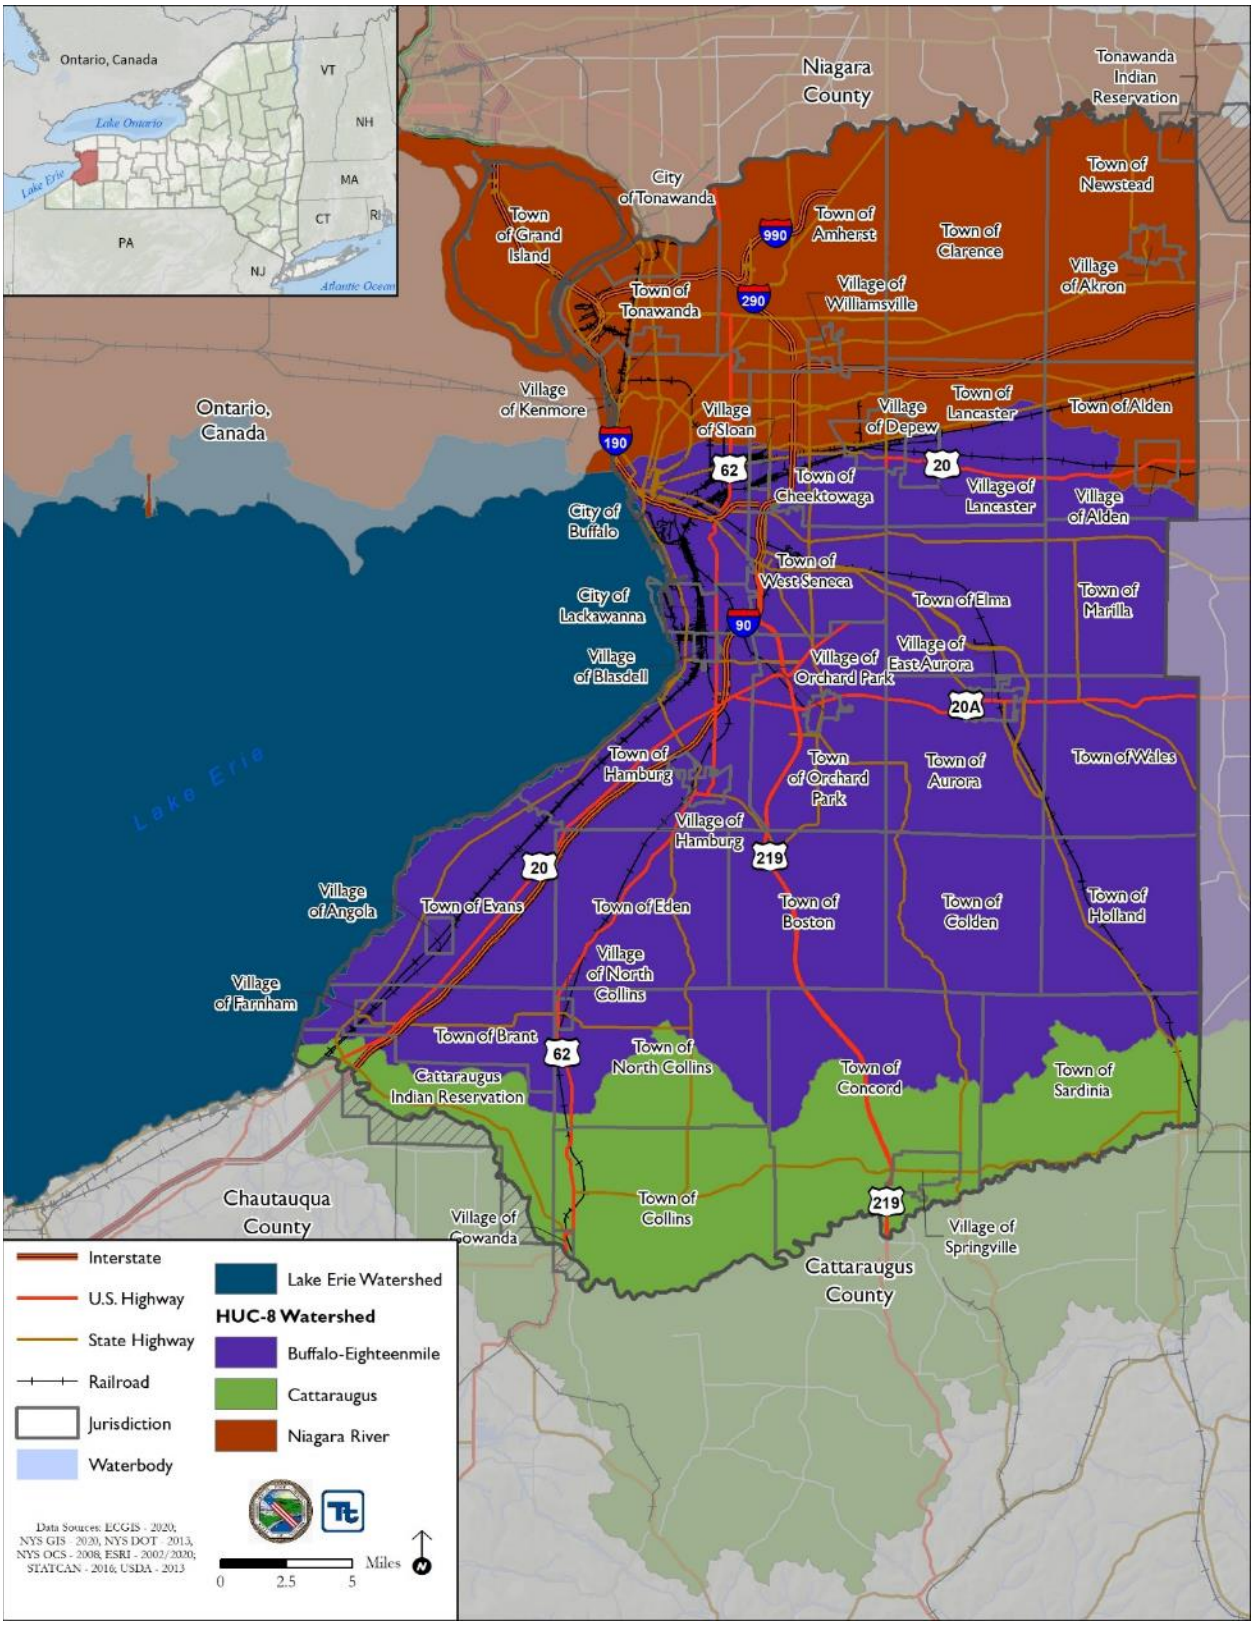
Flooding can occur in Erie County during any season of the year, but it most likely occurs in the late winter – early spring months when melting snow may combine with intense rainfall to produce increased runoff. Ice jams and debris have often increased flood heights by impeding water flow at bridges and culverts. Floods can result from collusion over the watershed of a large mass of warm moisture-laden air from the north; from sharp rises in temperature in the spring that melt the snow cover of the basin and are followed by rains; and from localized thunderstorms

Drainage Basins and Watersheds

A watershed is the area of land that drains into a body of water, such as a river, lake, stream, or bay. It is separated from other systems by high points in the area, such as hills or slopes. It includes not only the waterway itself but also the entire land area that drains to it. For example, the watershed of a lake would include not only the streams entering the lake but also the land area that drains into those streams and eventually the lake. Drainage basins generally refer to large watersheds that encompass the watersheds of many smaller rivers and streams. Erie County is part of three drainage basins: the Niagara River basin, the Buffalo-Eighteenmile Creek basin and the Niagara River Basin and the Cattaraugus Creek basin.

Attachment: 07-Section-4-County-Profile-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Figure 4-1. Watersheds Located Within Erie County



Attachment: 07-Section-4-County-Profile-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

4.3.3 Climate

The climate of New York State is very similar to most of the Northeast U.S. and is classified as Humid Continental. Differences in latitude, character of topography, and proximity to large bodies of water all have an effect on the climate across New York State. Precipitation during the warm, growing season (April through September) is characterized by convective storms that generally form in advance of an eastward-moving cold front or during periods of local atmospheric instability. Occasionally, tropical cyclones will move up from southern coastal areas and produce large quantities of rain. Both types of storms are typically characterized by relatively short periods of intense precipitation that produce large amounts of surface runoff and little recharge

The cool season (October through March) is characterized by large, low-pressure systems that move northeastward along the Atlantic coast or the western side of the Appalachian Mountains. Storms that form in these systems are characterized by long periods of steady precipitation in the form of rain, snow, or ice, and tend to produce less surface runoff and more recharge than the summer storms because they have a longer duration and occasionally result in snowmelt (NYS Hazard Mitigation Plan, 2019)

Erie County experiences a fairly humid, continental-type climate, but with a definite "maritime" flavor due to strong modification from the Great Lakes. Winters are generally cloudy, cold and snowy. The lake snow machine can start as early as mid-November. The average date of the last frost is near the end of April in the City of Buffalo and in midMay inland. Spring comes slowly to the Buffalo area; the ice pack on Lake Erie does not 14disappear until mid-April. Summers are pleasant, sunshine is plentiful, temperatures are warm and humidity levels are moderate. Autumn is pleasant, but rather brief. The first frost can be expected in late September inland and mid-October in the City of Buffalo (Erie County Flood Insurance Study, 2019).

4.4 POPULATION AND DEMOGRAPHICS

An understanding of the planning area population characteristics provides a foundation for deciphering the impacts of natural hazards in the county. As noted in Section 5 (Methodology) of this plan, modeling of the impacts of natural hazards on the population was performed using FEMA's Hazards U.S. Multi-Hazard (Hazus) including the available population information from the 2010 U.S. Decennial Census data indicating a county population 919,040. However, according to U.S. Census Bureau, 2015-2019 American Community Survey 5-Year Population Estimates, the county contains a population of approximately of 919,355, or a slight increase in population (American Community Survey, 2021). A detailed population table for the 2019 American Community Survey population statistics is shown below in Table 4-2. Figure 4-2. shows the distribution of the general population density (persons per square mile) in 2019 by Census block. For the purposes of this plan, the best available data was referenced to support the analysis, i.e., 2015-2019 American Community Survey 5-Year Population Estimates.

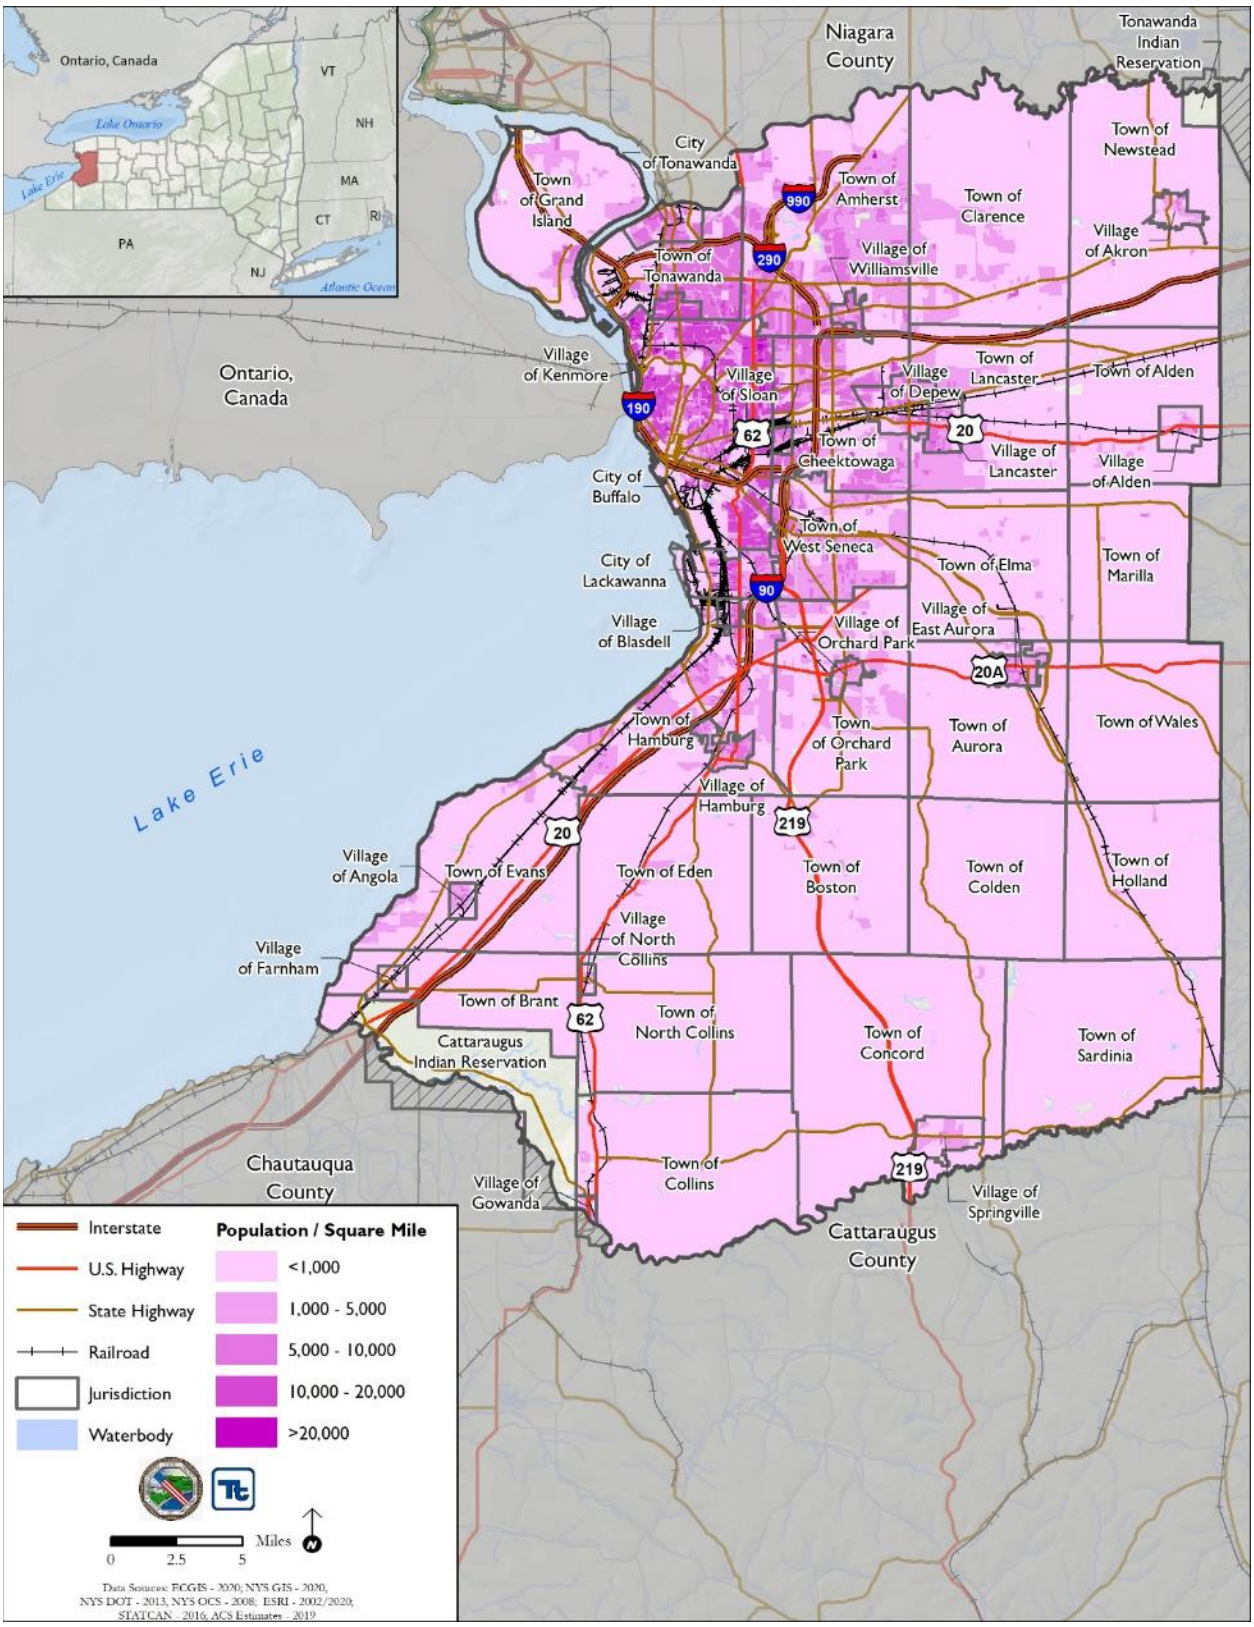
Figure 4-2. 2019 American Community Survey 5-Year Estimates Population Distribution and Density of General Population for Erie County, New York



Attachment: 07-Section-4-County-Profile-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

4.4.1 Vulnerable Populations

The DMA 2000 requires that HMPs consider socially vulnerable populations. These populations can be more susceptible to hazard events based on a number of factors, including their physical and financial ability to react or respond to a hazard and the location and construction quality of their housing. For the purposes of this study, vulnerable populations shall include (1) the elderly (persons aged 65 and over) and (2) those living in low-income households.

Identifying concentrations of vulnerable populations can assist communities in targeting preparedness, response, and mitigation actions. Populations with a higher level of vulnerability may be more seriously affected during the course of an emergency or disaster. Vulnerable populations have unique needs that should be taken into consideration by public officials to help ensure the safety of demographics with a higher level of risk. For the purposes of this planning process, vulnerable populations in Erie County include children, elderly, low-income, the physically or mentally disabled, and non-English speakers.

Age

Children are considered vulnerable to hazard events because they are dependent on others to safely access resources during emergencies and may experience increased health risks from hazard exposure. The elderly are more apt to lack the physical and economic resources necessary to respond to hazard events and are more likely to suffer health-related consequences. Those living on their own may have more difficulty evacuating their homes. The elderly are also more likely to live in senior care and living facilities (described in Section 4.6.1) where emergency preparedness occurs at the discretion of facility operators.

According to the 2015-2019 American Community Survey 5-Year Estimates, the median age in Erie County was 42 years. Hazus-MH reports 5.5 percent of the 2018 Erie County population is under the age of 5. Of the 2019 population, 17.6 percent of the county's population is age 65 and older. Figure 4-3. shows the distribution of persons over age 65 and the distribution of population under 5 in Erie County.

Income

The 2015-2019 American Community Survey 5-Year Estimates indicate that median household income in Erie County was $58,121 and the poverty rate is 14.2% The U.S. Census Bureau identifies households with two adults and two children with an annual household income below $24,339 per year as "low income" (U.S. Census 2018). Figure 4-3 below illustrates the low-income population density in Erie County.

Physically or Mentally Disabled

"Persons with a disability include those who have physical, sensory, or cognitive impairment that might limit a major life activity (Center for Disease Control, 2015)." These impairments may increase the level of difficulty that individuals may face during an emergency. Cognitive impairments may reduce an individual's capacity to receive, process, and respond to emergency information or warnings. Individuals with a physical or sensory disability may face issues of mobility, sight, hearing, or reliance on specialized medical equipment. According to the 2014-2018 American Community Survey, 13.1 percent residents of Erie County are living with a disability. Figure 4-3 shows the geographic distribution of disabled individuals throughout Erie County, including individuals with: hearing, vision, cognitive, ambulatory, self-care, and independent living difficulties.

Non-English Speakers

Individuals who are not fluent or do not possess a working proficiency in English are vulnerable because they may have difficulty understanding information being conveyed to them. Cultural differences can also add complexity to how information is being conveyed to populations with limited proficiency of English (Centers

Attachment: 07-Section-4-County-Profile-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

for Disease Control, 2015). According to the 2014-2018 American Community Survey, 11 percent of residents over the age of 5 primarily speak a language other than English at home; of those 95,713 individuals who reported to speak English less than "very well", 32,704 speak Spanish, 31,453 percent speak other Indo-European languages, 15,833 percent speak Asian and Pacific Island Languages, and 15,723 percent speak other languages. Figure 4-3 below shows the geographic distribution of individuals who speak English less than "very well."

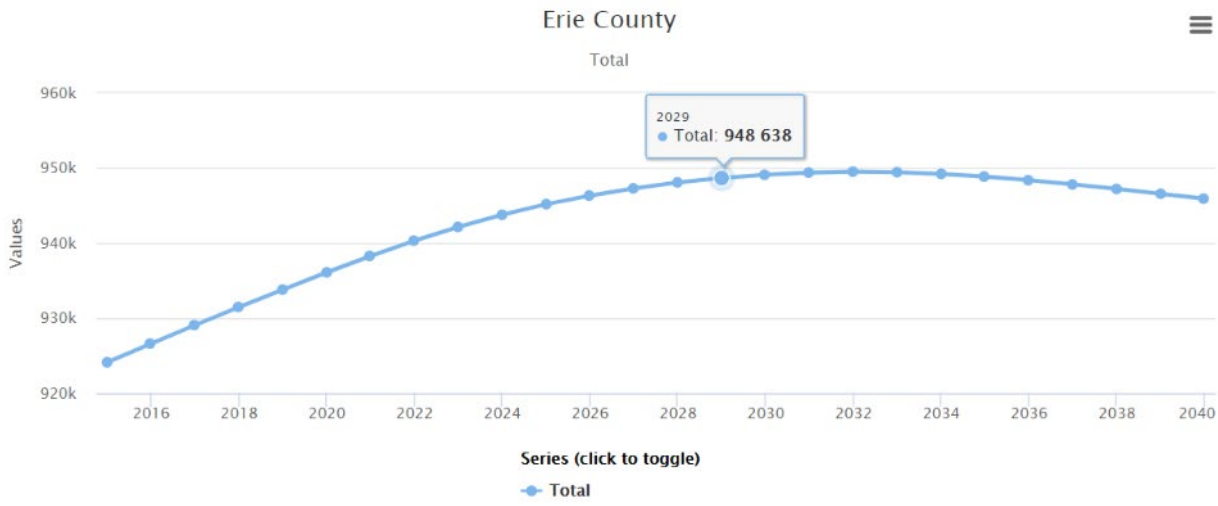
Population and Demographic Trends

This section discusses population trends to use as a basis for estimating future changes that could result from the seasonal character of the population and significantly change the character of the area. Population trends can provide a basis for making decisions on the type of mitigation approaches to consider and the locations in which these approaches should be applied. This information can also be used to support planning decisions regarding future development in vulnerable areas. Various Census Bureau products were used as sources for the population trends section. The Decennial Census is the official population count taken every 10 years. American Community Survey 5-Year Estimates are used to show annual population changes, but it is not an official population count. 5-Year Estimates are used because they are the most accurate form of American Community Survey with the largest sample size which allows for greater accuracy at smaller geographic areas. The American Community Survey 5-Year Estimate products were used to establish annual changes in population. The numbers provided are not official census counts, but are official estimates provided to communities so that they may have a greater understanding in population changes within their jurisdictions.

Cornell University's Program on Applied Demographics produced population projections by county and by age and sex for New York State. The projections were completed in 2011 and are in 5-year intervals up to the year 2040. The projections are based upon rates of change estimated from historic data. The projections have been combined with historical census information to illustrate population trends within Erie County over a longer study period. Erie County experienced population growth from 1940 until 1980. There has been a slight decrease in population each decade since 1980. This population decrease is projected to continue through the year 2040. Figure 4-4 shows the observed and projected population change in Erie County from 1940 through 2040.

Figure 4-4. Erie County Population Change, 2014 to 2040



Source: U.S. Census Bureau, 2020; Cornell 2017

Population changes at the municipal level are also important to capture to better understand changing populations within the county and where the concentration of population resides. Section 9 (Jurisdictional Annexes) discusses recent changes in population for each municipality.

The 2015-2019 American Community Survey 5-Year Estimates reported 430,732 housing units in Erie County The U.S. Census defines a household as all the persons who occupy a housing unit; and defines a housing unit as a house, an apartment, a mobile home, a group of rooms, or a single room that is occupied (or if vacant, is

Attachment: 07-Section-4-County-Profile-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

intended for occupancy) as separate living quarters. Therefore, you may have more than one household per housing unit. The median value of an owner-occupied housing unit in Erie County was estimated at $165,500 (U.S. Census 2019).

For this update, a custom-building inventory was created for Erie County. The general building stock was updated countywide with a custom-building inventory using the 2018 Microsoft building stock inventory data set. The building inventory attributes were updated using parcel tax assessor information provided by Erie County GIS. Attributes provided in the spatial files were used to further define each structure, such as year built, number of stories, basement type, occupancy class, and square footage. The centroid of each building footprint was used to estimate the building location. Structural and content replacement cost values (RCV) were calculated for each building using the available assessor data, the building footprint, and RS Means 2020 values. The updated building inventory (360,925 buildings with a total building replacement value [structure and content] of greater than $222.5 billion) was incorporated into Hazus at the structure and aggregate level. Approximately 92.7-percent of the buildings (334,595 buildings) and 57.6-percent of the building stock replacement value are associated with residential housing. Refer to Section 5.1 (Methodology and Tools) for a more detailed description of the general building stock inventory.

Generally, contents for residential structures are valued at about 50 percent of the building's value. For non-residential facilities, the value of the content is about equal to the building's structural value. Actual content value varies widely depending on the usage of the structure.

The 2014-2018 American Community Survey data identified that the majority of housing units (66.5 percent or 27,593 units) in Erie County are single-family detached units. The 2017 U.S. Census Bureau's County Business Patterns data identified 1,608 business establishments employing 21,775 people in Erie County. The retail trade industry has the highest number of establishments in the county, with 311 establishments. This is followed by the accommodation and food services industry with 209 establishments and the other services sector (except public administration) with 206 establishments (U.S. Census, 2017).

Figure 4-5, Figure 4-6, and Figure 4-7, show the distribution and exposure density of residential, commercial, and industrial buildings, respectively, in Erie County based on the aggregate custom-building stock values input into HAZUS-MH v4.2. Exposure density is the dollar value of structures per unit area, including building content value. The densities are shown in units of $1,000 ($K) per square mile.

Viewing exposure distribution maps, such as Figure 4-5, Figure 4-6 and Figure 4-7 can assist communities in visualizing areas of high exposure and in evaluating aspects of the study area in relation to the specific hazard risks.

4.5.1 Land Use and Development Trends

Land use in Erie County is influenced by natural resources, topographic constraints, water lines, sewers, and roads. The City of Buffalo is the center of a large urbanized area. Suburban development extends well beyond the city border. Areas on the county's easter Department of Economic Development, Planning & Tourism, 2015).

The County's urbanized area is centered in the City of Buffalo but in recent decades suburban development has expanded into all towns that border Buffalo and beyond. Suburban areas include villages and hamlets and are surrounded by farmland, wooded areas, parks, and protected open space. Retail and commercial uses are concentrated in central business districts and along heavily developed and travelled roadways and intersections. Agriculture remains a large land use. Although the number of farms is decreasing slightly, the size of farms is increasing. This trend toward fewer but larger farm operations parallels statewide trends (Erie County Department of Economic Development, Planning & Tourism, 2015).

Attachment: 07-Section-4-County-Profile-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

4.5.2 Development Trends and New Development

In New York State, land use regulatory authority is vested in towns, villages, and cities. However, many development and preservation issues transcend local political boundaries. In Erie County, each city, town and village are empowered by the Municipal Home Rule Law to plan and zone within its boundaries. DMA 2000 requires that communities consider land use trends, which can impact the need for, and priority of, mitigation options over time. Land use trends can also significantly impact exposure and vulnerability to various hazards. For example, significant development in a hazard area increases the building stock and population exposed to that hazard.

This plan provides a general overview of land use trends and types of development occurring within the study area. An understanding of these development trends can assist in planning for further development and ensuring that appropriate mitigation, planning, and preparedness measures are in place to protect human health and community infrastructure. Areas of recent and expected future development identified during this planning process are shown in the respective jurisdictional annexes (Section 9).

4.5.3 Potential Sites for Temporary Housing and Relocation

To identify potential sites for temporary housing and relocation, each municipality provided possible locations suitable for the placement of temporary housing for residents displaced by disaster, including sites to accommodate relocation of houses out of the floodplain or for the construction of new replacement developments. These locations are indicated in Table 4-3 and are located on the maps in the jurisdictional annexes (see Section 9).

Table 4-3. Potential Temporary Housing Locations in Erie County

Jurisdiction	Site Name	Address	Infrastructure/ Utilities Available	Capacity	Type

Shelters

HAZUS-MH v4.2 estimates displacement and long-term sheltering needs for flood, hurricane, and earthquake events. These results are presented under Impacts on Life, Health, and Safety in the Vulnerability Assessments for Section 5.4.1 (Flood) and Section 5.4.3 (Severe Storm). These results indicate that the need for sheltering large numbers of residents may be significant. However, these results should be used as a starting point for determining the sheltering needs for the county, as this will not include sheltering for populations in surrounding counties or residents that are displaced due to widespread power outages. Table 4-4 lists the shelters identified by municipal officials during the planning process. The Erie County Department of Homeland Security and Emergency Services and American Red Cross maintain a separate list of facilities that could potentially serve as shelters.

Evacuation Routes

Section 24 of the New York State Executive Law-2B allows first responders to take actions necessary to protect public safety in the absence of an emergency declaration. This authority is often applied when immediate action is necessary to evacuate citizens from a hazardous or potentially unsafe area.

Erie County has identified I-90, I-190, U.S. 20, U.S. 20A, U.S. 62, and several state routes as evacuation routes. The primary roads and highways can also serve as evacuation routes for the county. The route used depends on the location of the incident. The county is fortunate to have a variety of well-connected arterial roadways throughout all regions, offering a variety of routing options. Figure 4-10 illustrates the major roadways in Erie County that would be utilized as evacuation routes in and out of the county in the event of an emergency that results in an evacuation.

Other than evacuation plans based on the geographically specific risks, evacuations are conducted on an event-specific basis. Because of the variable nature of such events, the Erie County Department of Homeland Security and Emergency Services assists with the coordination and communication of evacuation routing for the county. County residents can enroll in NY-Alert, a program that allows residents to receive emergency-related information specific to their area. Alerts include severe weather warmings, significant highway closures, hazardous material spills, and other emergency conditions. Residents can receive alerts via text message, phone, email, or fax.

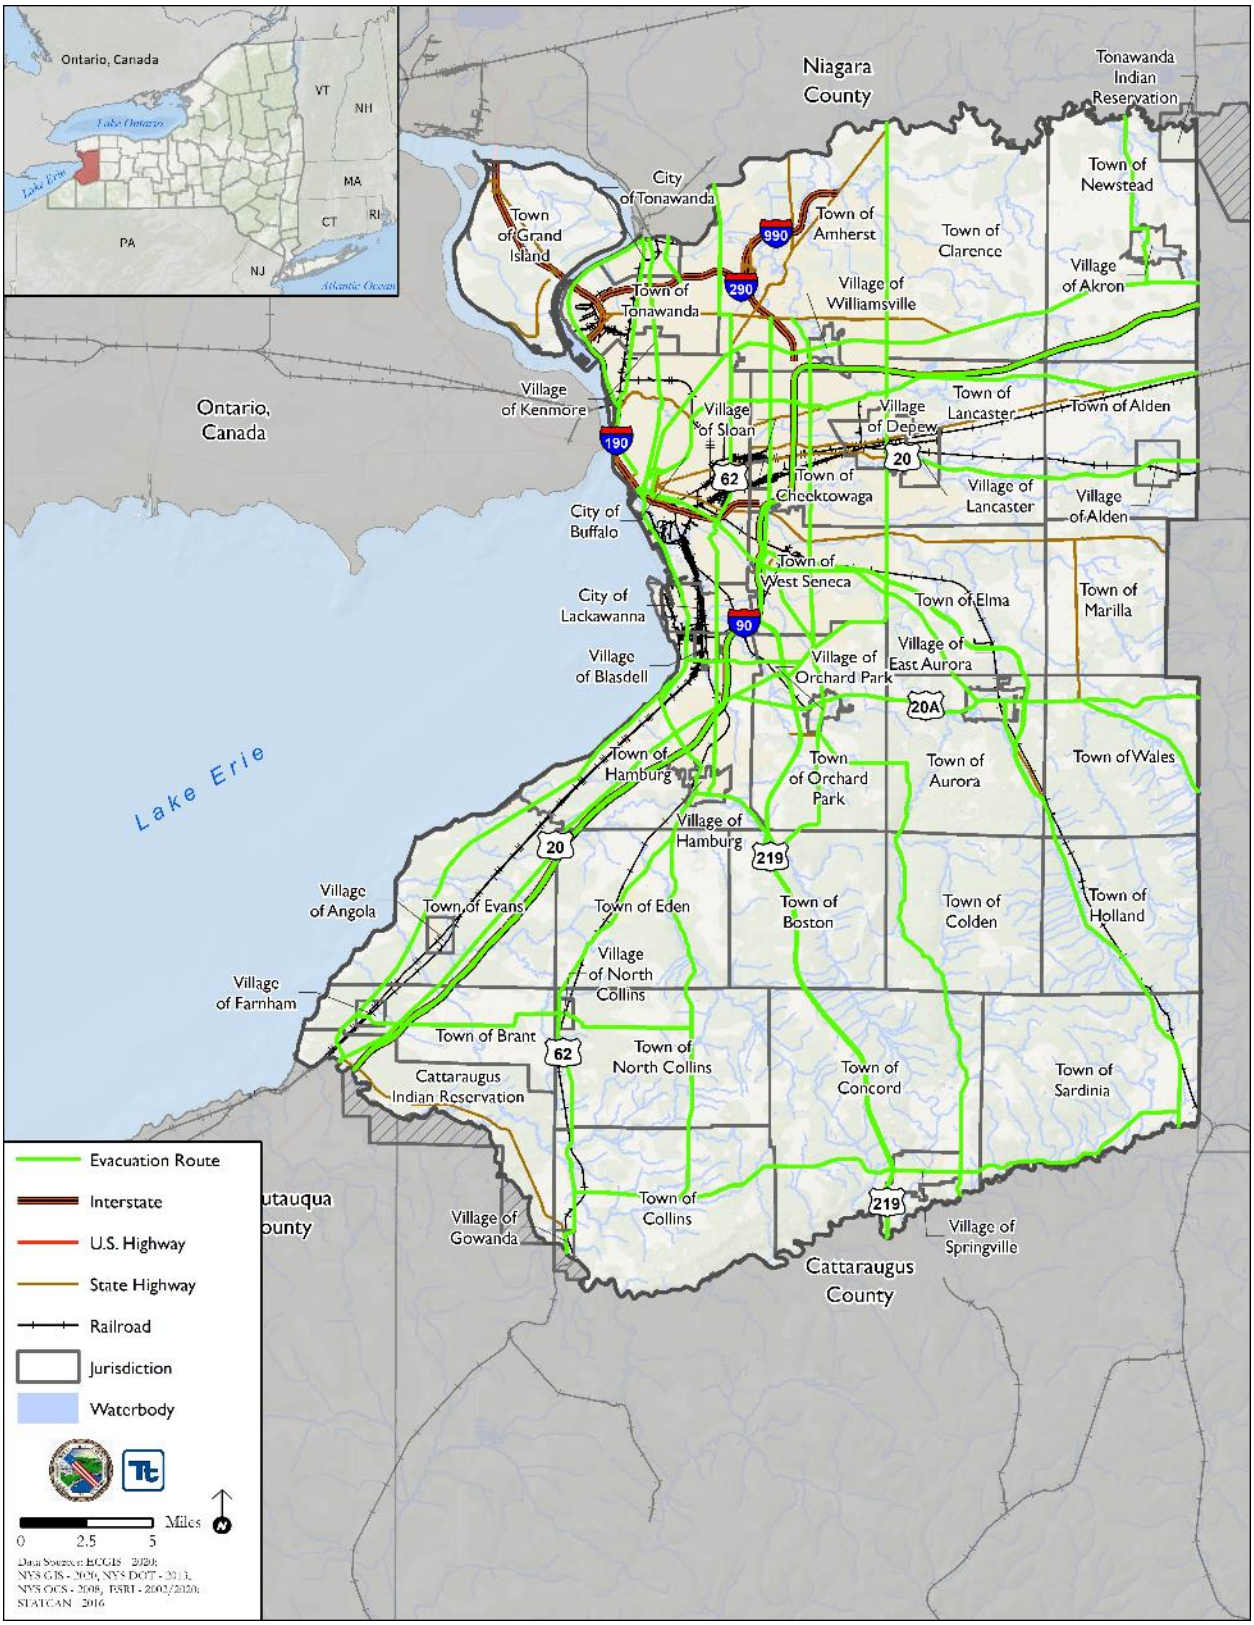
Responsibilities & Priorities

During evacuation, state and local personnel are responsible for clearing roadways of debris and making repairs. State responsibilities including clearing debris from impacted roadways and public property. Local responsibilities include removing debris to a storage/disposal site. Priorities for debris removal after an evacuation are as follows:

- First priority – clearing of transportation corridors to allow passage of emergency vehicles
- Second priority – clearing of transportation corridors and other property to allow utility crews access to damaged power lines and other utility infrastructure needing repair to allow for power restoration
- Third priority – other emergency-related needs, as identified by the affected local municipality or by state agencies, and as authorized by the State Coordinating Officer.

Attachment: 07-Section-4-County-Profile-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Figure 4-10. Evacuation Routes in Erie County



Attachment: 07-Section-4-County-Profile-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Long-Term Housing

A buildable parcel analysis was conducted to support identification of potential sites suitable for relocating houses out of hazard areas (i.e., the floodplain) or building new homes in the event structures are destroyed by a natural hazard event. The analysis identified potential areas for post-disaster development in accordance with the 2017 NYS DHSES Hazard Mitigation Planning Standards Guide requirement "*to identify long-term housing options for relocating displaced residents to maintain post-disaster social and economic stability"*. The analysis provides an indication of vacant land suitable for development. In this case, vacant land is defined as a parcel that is classified as vacant and is located outside the following hazard areas:

1) FEMA floodplain (1- and 0.2 percent annual chance flood).
2) Wetlands (National Wetlands Inventory; National Land Cover Database)
3) Steep Slopes (Greater than 25% Slope)

The jurisdictional annexes provide maps of potential long-term housing locations in Erie County's municipalities. Developable land displayed on the figures represents the portion of each identified vacant parcels with greater than 50 percent of their land area outside the two above hazard areas.

4.6 CRITICAL FACILITIES

Critical facilities and infrastructure are those that are essential to the health and welfare of the population. These become especially important after any hazard event. Critical facilities are typically defined as police and fire stations, schools, and emergency operations centers. Critical infrastructure can include the roads and bridges that provide ingress and egress and allow emergency vehicles access to those in need and the utilities that provide water, electricity, and communication services to the community. Also included are Tier II facilities (hazardous materials) and rail yards; rail lines hold or carry significant amounts of hazardous materials with a potential to impact public health and welfare in a hazard event.

Critical Facilities are those facilities considered critical to the health and welfare of the population and that are especially important following a hazard. As defined for this HMP, critical facilities include essential facilities, transportation systems, lifeline utility systems, high-potential loss facilities, and hazardous material facilities.

Essential facilities are a subset of critical facilities that include those facilities that are important to ensure a full recovery following the occurrence of a hazard event. For the county risk assessment, this category was defined to include police, fire, EMS, schools/colleges, shelters, senior facilities, and medical facilities.

A comprehensive inventory of critical facilities in Erie County was developed from various sources, including the Erie County Department of Homeland Security and Emergency Services and Department of Environment and Planning, and input from the Steering Committee and Planning Partnership. The inventory of critical facilities presented in this section represents the current state of this effort at the time of publication of the draft HMP and used for the risk assessment in Section 5 (Risk Assessment). The numbers and types of critical facilities and infrastructure identified for this plan are indicated in Appendix F.

4.6.1 Essential Facilities

This section provides information on emergency facilities, hospital and medical facilities, schools, shelters, and senior care and living facilities. For the purposes of this plan, emergency facilities include police, fire, emergency medical services (EMS), and emergency operations centers (EOC). Figure 4-11 shows the location of the facilities and a list of the critical facilities is provided in Appendix F (Critical Facilities).

Attachment: 07-Section-4-County-Profile-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Emergency Facilities

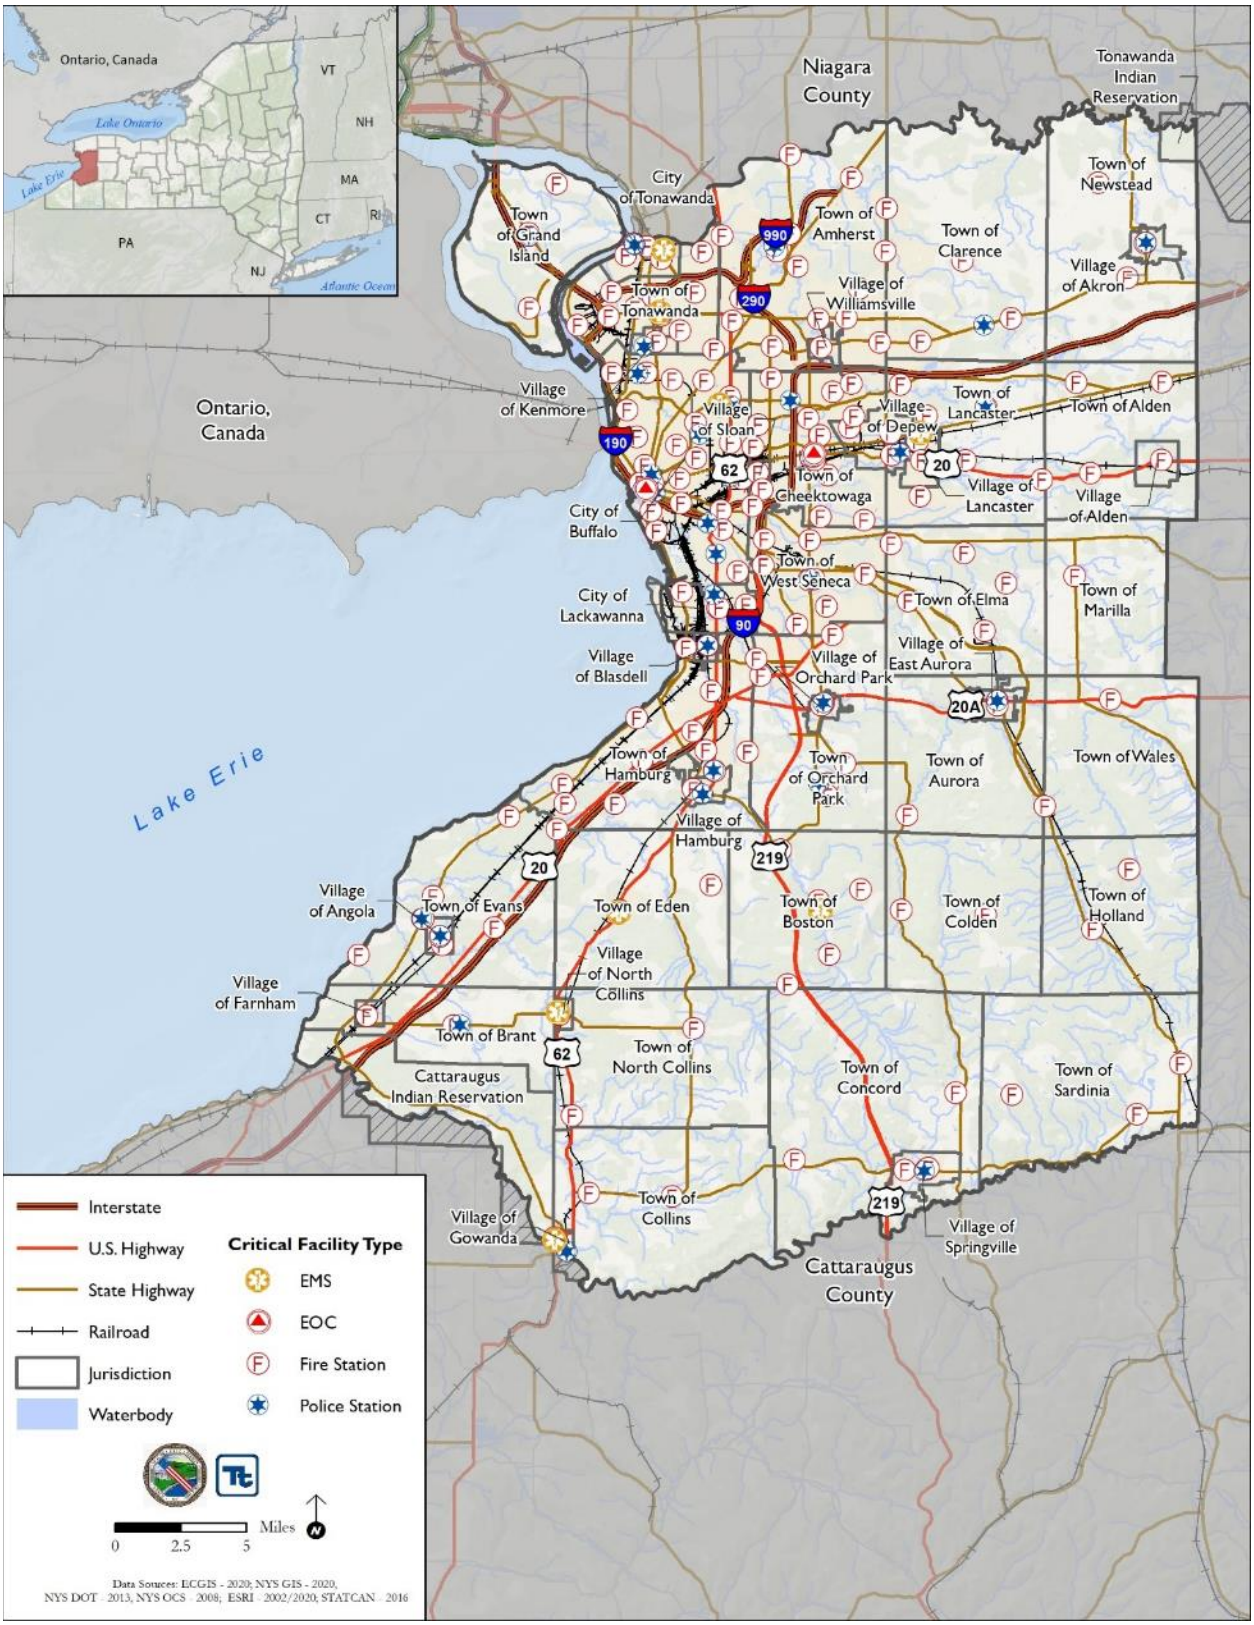
The Erie County Department of Homeland Security and Emergency Services is responsible for coordinating the county's emergency planning and management, including coordination of fire service and emergency medical services, training of first responders, and the creation and maintenance of Comprehensive Emergency Management Plans. The Department works with county departments and other local, state, and federal agencies during an emergency to help protect lives and property, assist those injured, and to provide the rapid restoration of normal services. The Department maintains a countywide radio system consisting of over 3,000 mobile and portable radios, 14 base stations and several radio towers. The Department's specific programs include Fire Safety, Emergency Medical Services, and Homeland Security/Emergency Management/Disaster Preparedness.

- Fire Safety The Fire Safety Division operates from the Emergency Services Training & Operations Center in Cheektowaga, NY. The Fire Safety Office coordinates the recruitment, training and mutual aid operations of our county's 97 fire departments to assist them in serving the needs of the residents, businesses and visitors to their communities.
- Emergency Management The Civil Defense/Disaster Preparedness Division executes the County plan for civil defense and disaster relief before, during and after any type of natural, man-made disaster or war time situation. The activities of this Division are mandated by State Law, with the County maintaining control over certain levels of services.
- Emergency medical services Under the direction of the EMS Division, Medical Emergency Radio System (MERS) Control serves as the County's emergency dispatch center, dispatching ambulances for the City of Buffalo, NYS Thruway and the Buffalo Niagara International Airport (B.N.I.A.). Additionally, MERS Control coordinates the countywide ambulance-to-hospital MERS. MERS Control also acts as the after-hours answering point for the Erie County Department of Emergency Services and the Erie County Department of Health (ECDOH).
- The Emergency Services Communications division COML supports Fire, EMS, Law Enforcement and other public safety related agencies with the design, configuration, repair, installation and programming of portable, mobile and base station radio systems and all of the associated hardware, software, towers, antennas and accessories. These systems encompass 400MHZ two-radio communications and our recent deployment of a new First Responder Alerting Network (www.iamresponding.com) as a secondary means of notification with more than 10,000 users in the county.

The Erie County Sheriff's Office in headquartered in downtown Buffalo , located in the Town of Little Valley, is the primary law enforcement agency in the county, and consists of several main operating Divisions, including the Administrative Civil Enforcement, Jail Management, Professional Standards, Special Services, Reserve and Policing divisions. In addition to the Sheriff's Department, several municipalities have their own police departments. The New York State Police also provide services within the county. There are seven Sheriff substations within the county.

Attachment: 07-Section-4-County-Profile-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Figure 4-11. Emergency Facilities in Erie County

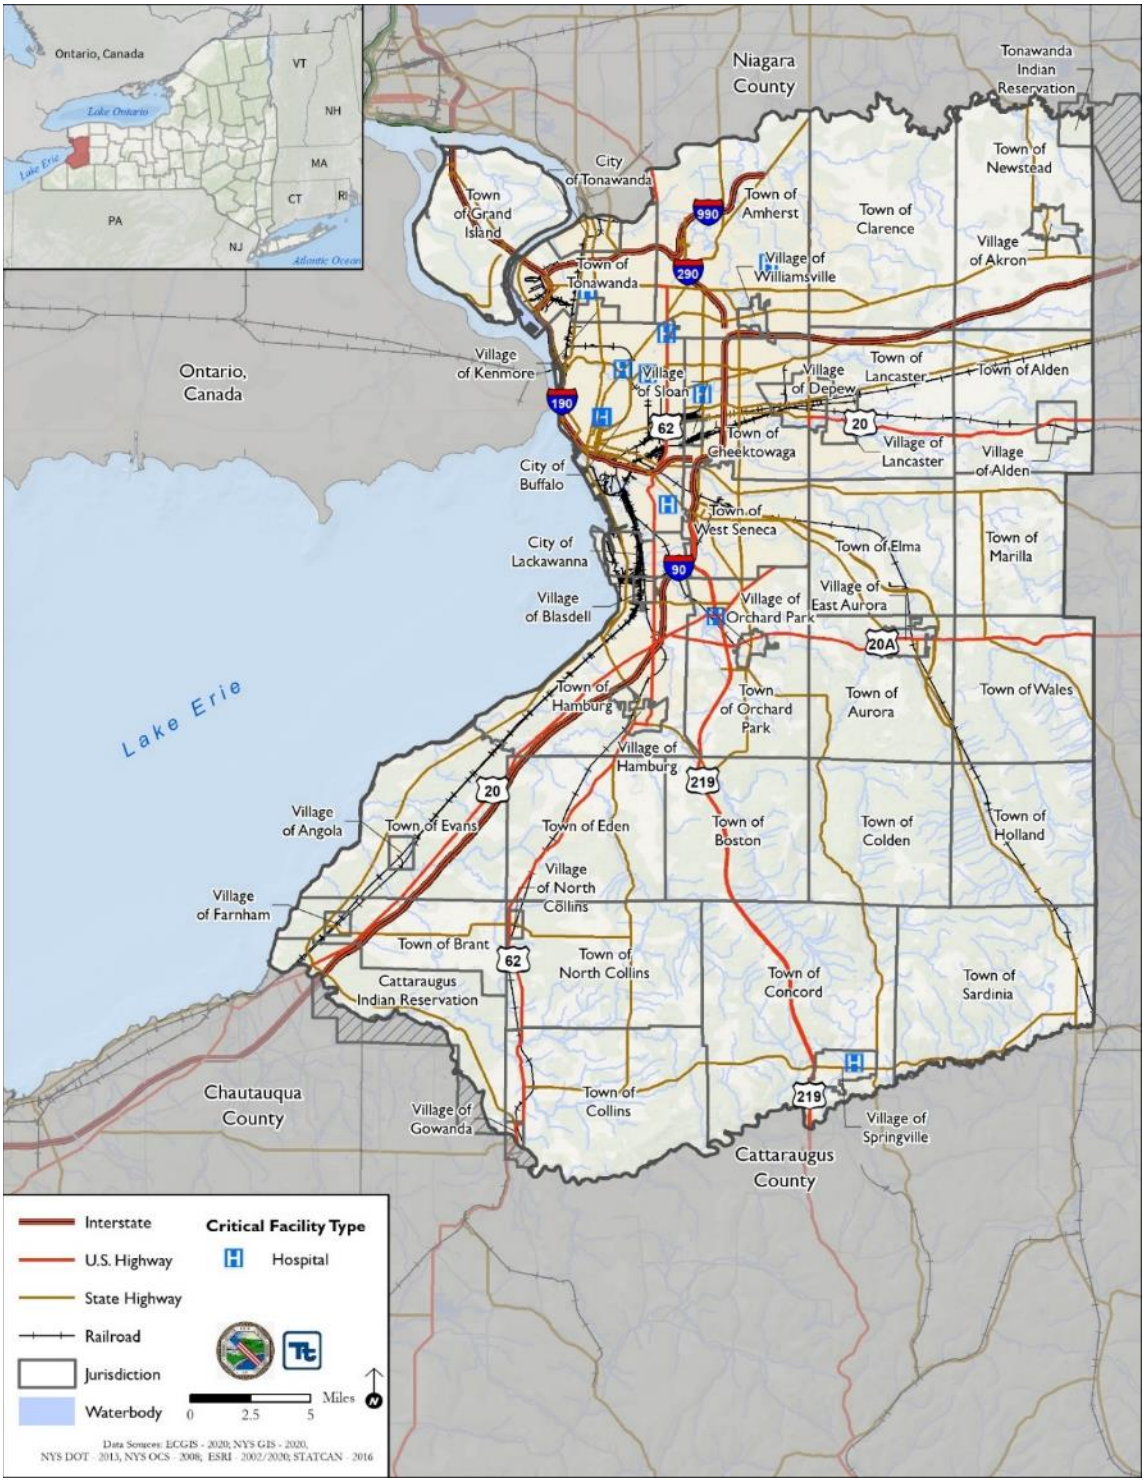


Attachment: 07-Section-4-County-Profile-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Hospitals and Medical Facilities

There are 11 major hospitals and medical facilities located within Erie County, six of which are located in the City of Buffalo. The other five are located in Amherst, Cheektowaga, Orchard Park, Springville and Tonawanda.

Figure 4-12. Hospitals in Erie County



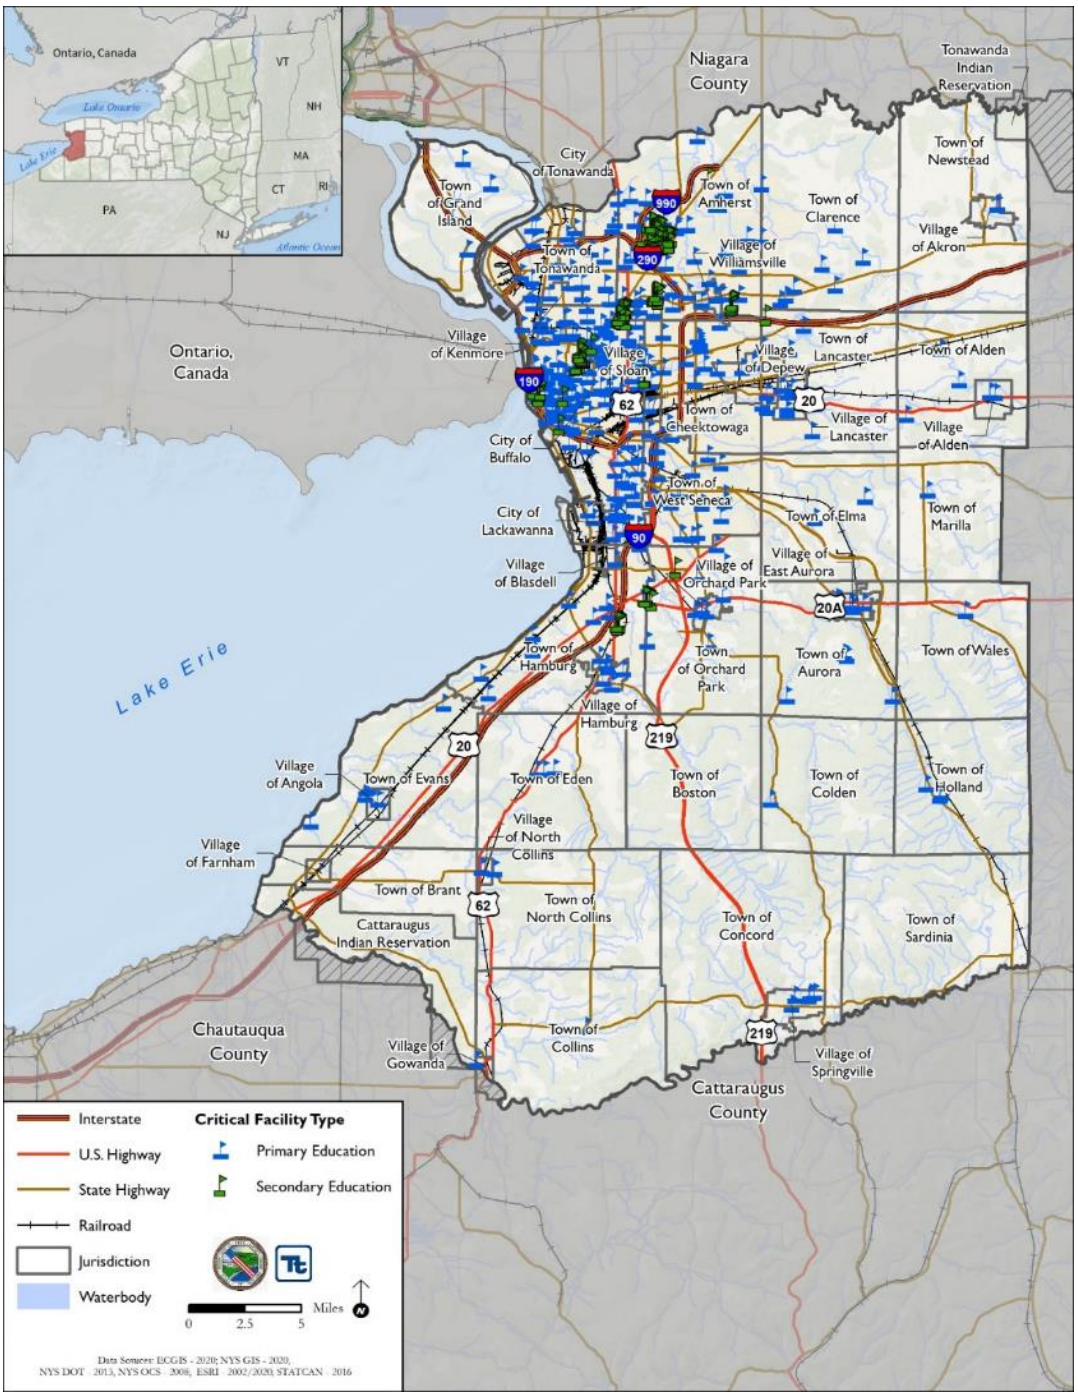
Attachment: 07-Section-4-County-Profile-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Schools

Erie County is home to 32 public school districts. Erie Community College, SUNY Buffalo, Buffalo State College, Canisius College and Daemon College are some of the institutions within the county.

In times of need, schools can function as shelters and are an important resource to the community. Figure 4-13 shows the location of schools within the county.

Figure 4-13. School Buildings within Erie County

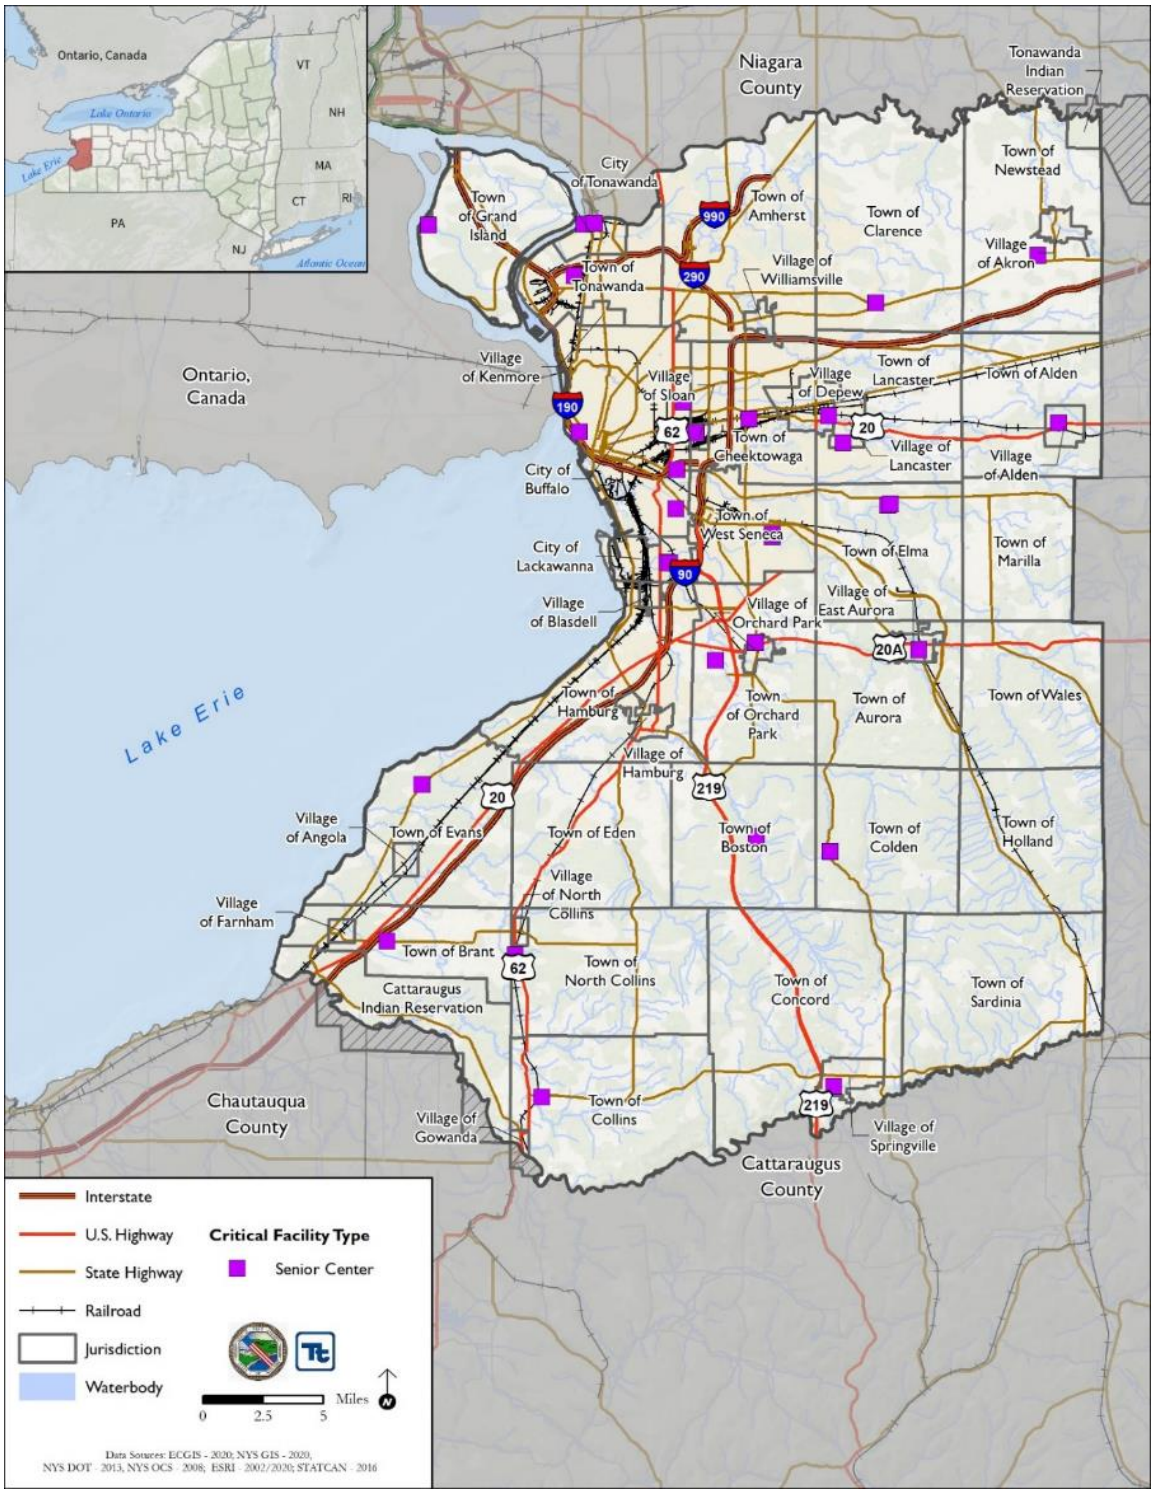


Attachment: 07-Section-4-County-Profile-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Senior Care and Living Facilities

Erie County has 37 senior care facilities. The 2015-2019 American Community Survey 5-Year Estimates identified 161,744 people over the age of 65 living within Erie County. Figure 4-14 shows the location of senior care facilities within the county.

Figure 4-14. Senior Facilities in Erie County



Attachment: 07-Section-4-County-Profile-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

4.6.2 Transportation Systems

Erie County's transportation network offers residents and employees various options for transportation throughout the county and the region. Three interstate highways traverse the county; Interstate 90, 190, 290 and 990.

Highway, Roadways and Associated Systems

There are 18 state routes that run through the county. The county's Highway Department maintains county roads within all towns. Nearly 3,000 miles of roadways in Erie County are owned by individual municipalities, with most of them identified as being local roadways. The county owns approximately 438 miles of the roads in the county. Transportation features are shown in Figure 4-15.

Airports and Heliports

Air passenger service is provided by the five airports in Erie County. The Greater Buffalo International Airport is by far the largest and best resourced. There are smaller airports in Cheektowaga, Hamburg, Lancater, Newstead and the Buffalo Airpark, which are paved or have grass runways and are most suitable for small private planes, gliders, turboprop, and jet air craft.

Bus and Other Transit Facilities

The Niagara Frontier Transportation Authority (NFTA) operates the public transit system serving Erie County and linking it to Niagara County. The system has over 60 bus routes covering cities and suburbs, and the Metro Rail runs six miles along Main Street in Buffalo. Most routes in the City of Buffalo offer frequent service during peak travel hours, but wait times are higher in outer suburbs where lower density and demand limits the financial feasibility of running buses frequently. NFTA also provides curb-to-curb paratransit services for passengers with disabilities. Other providers offer public transportation to and from rural areas and nearby counties, like the Seneca Transit System,

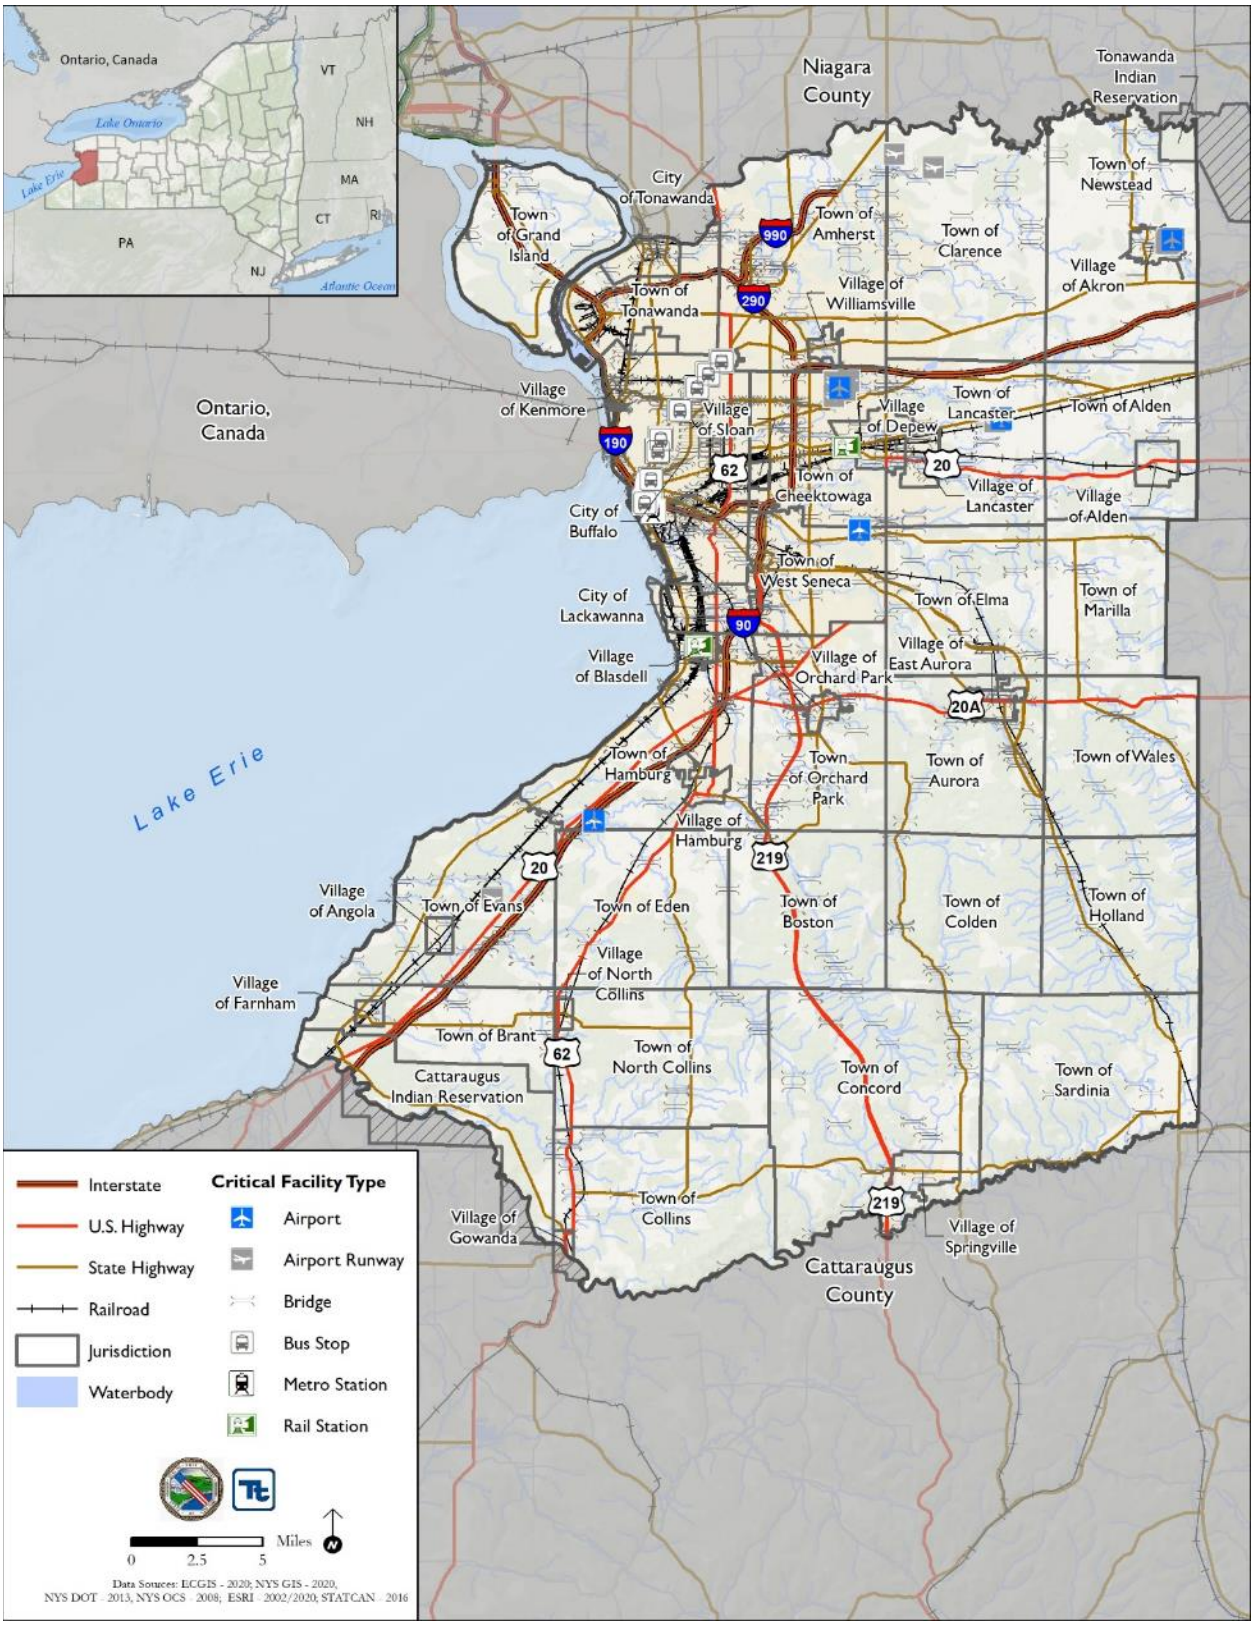
Rideshare services are also present in the county, including Uber and Lyft, although service will be dependent on driver location and availability.

Railroad Facilities

Erie County is served by Amtrak, the national passenger service. Three rail freight companies serve Erie County: the Norfolk Southern, the Buffalo Pittsburgh Railroad and the Buffalo Pittsburgh Railroad. (NYSDOT 2021)

Attachment: 07-Section-4-County-Profile-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Figure 4-15. Transportation Features in Erie County



Attachment: 07-Section-4-County-Profile-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

4.6.3 Lifeline Utility Systems

This section presents data and information on lifeline utility systems. Lifelines include utility services and infrastructure that provide water, power, and other necessary services to residents. Because of heightened security concerns, some location information for lifelines is not provided in this HMP, although the number of facilities and their general location are considered (as data are available). Additionally, because the majority of power supply lines are privately held, this information is generally difficult to obtain and is not for public release. However, consideration of the utilities in the area is presented below to support the risk assessment in Section 5 (Risk Assessment).

Potable Water

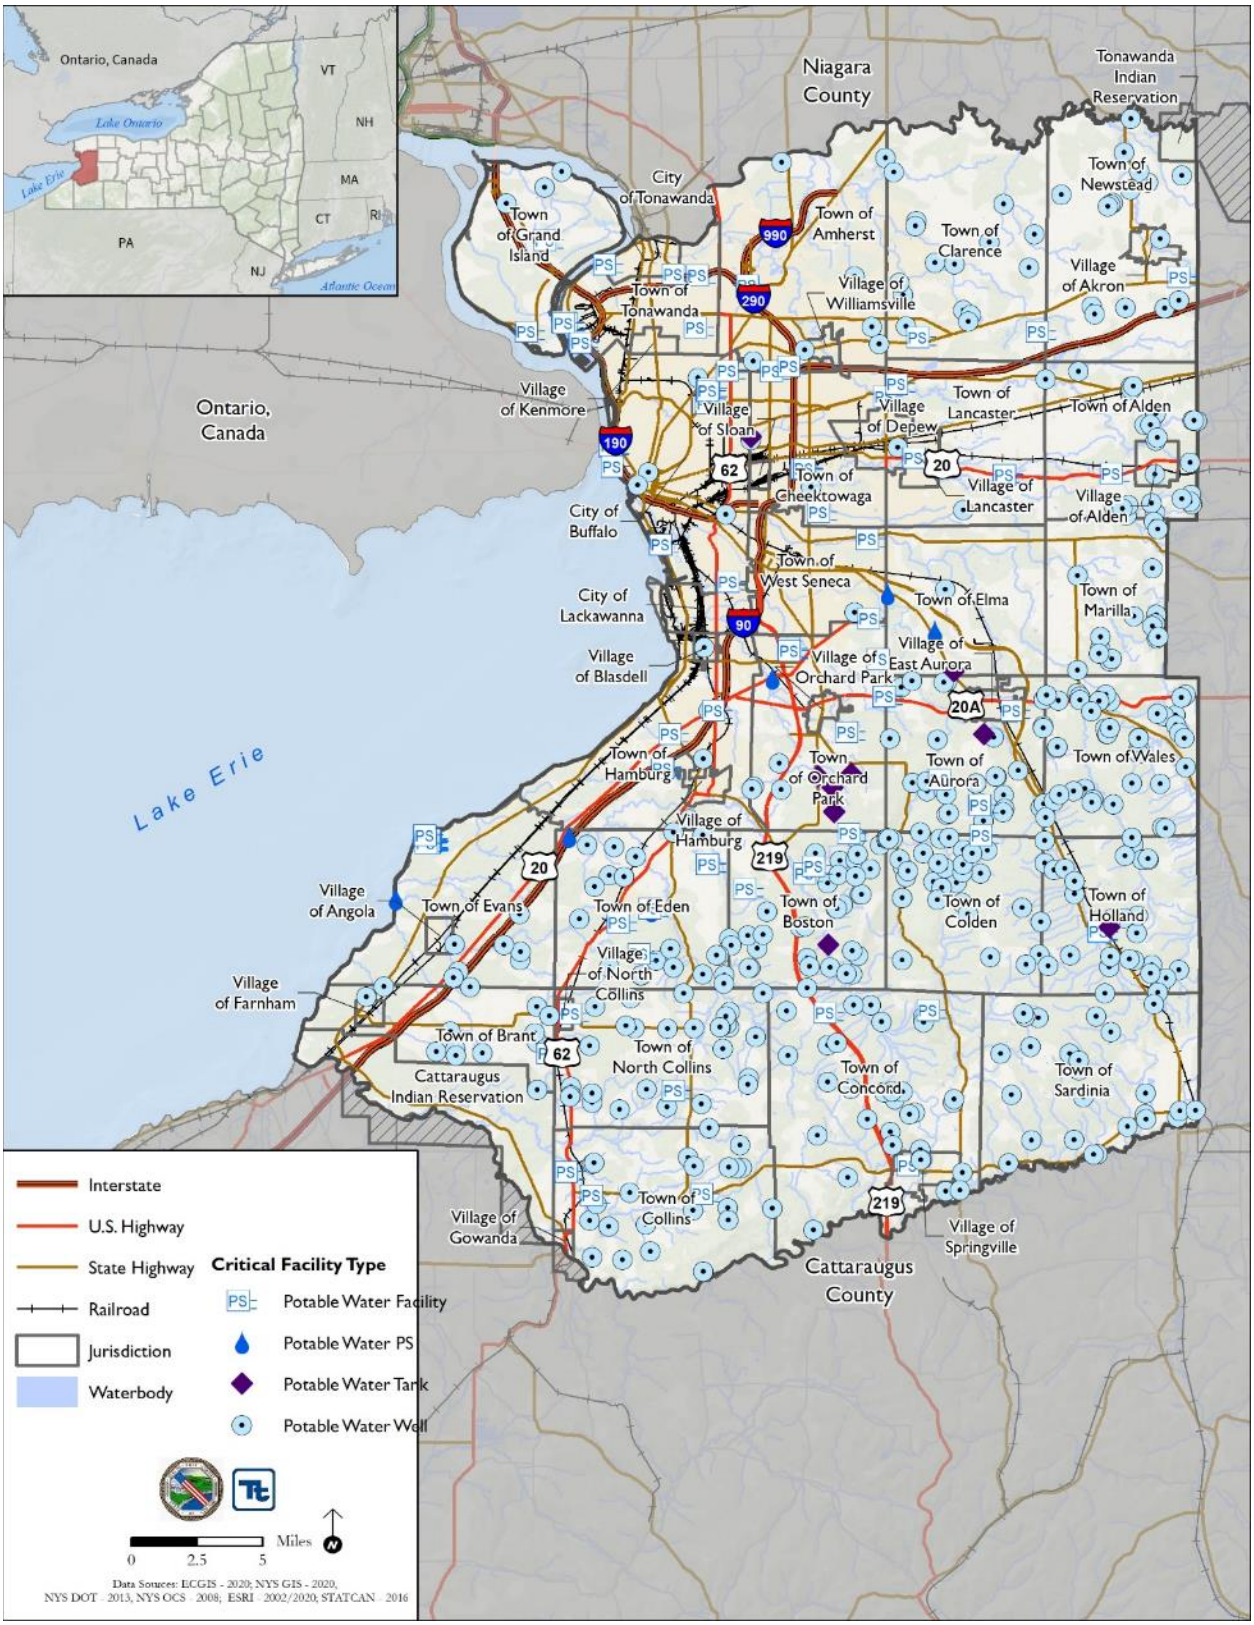
Because of the rural nature of the county, the most common sources of potable water within Erie County are municipal and private sources. Private sources of water include drilled wells, driven point wells, and springs. Municipal water supplies (provided by towns and cities) include community water systems, noncommunity water systems, non-transient noncommunity water systems, and water systems regulated as a condition of a "Permit to Operate" issued by the Department of Health. The Erie County Water Authority is responsible for ensuring compliance with treatment, reporting, and water quality standards for all public water systems.

The NYS DEC Water Well Information database began documenting potable water wells beginning in 2000, and currently reports 386 new wells drilled within the county since that date.

Figure 4-16 identifies potable water facilities in Erie County.

Attachment: 07-Section-4-County-Profile-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Figure 4-16. Potable Water Facilities in Erie County



Attachment: 07-Section-4-County-Profile-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

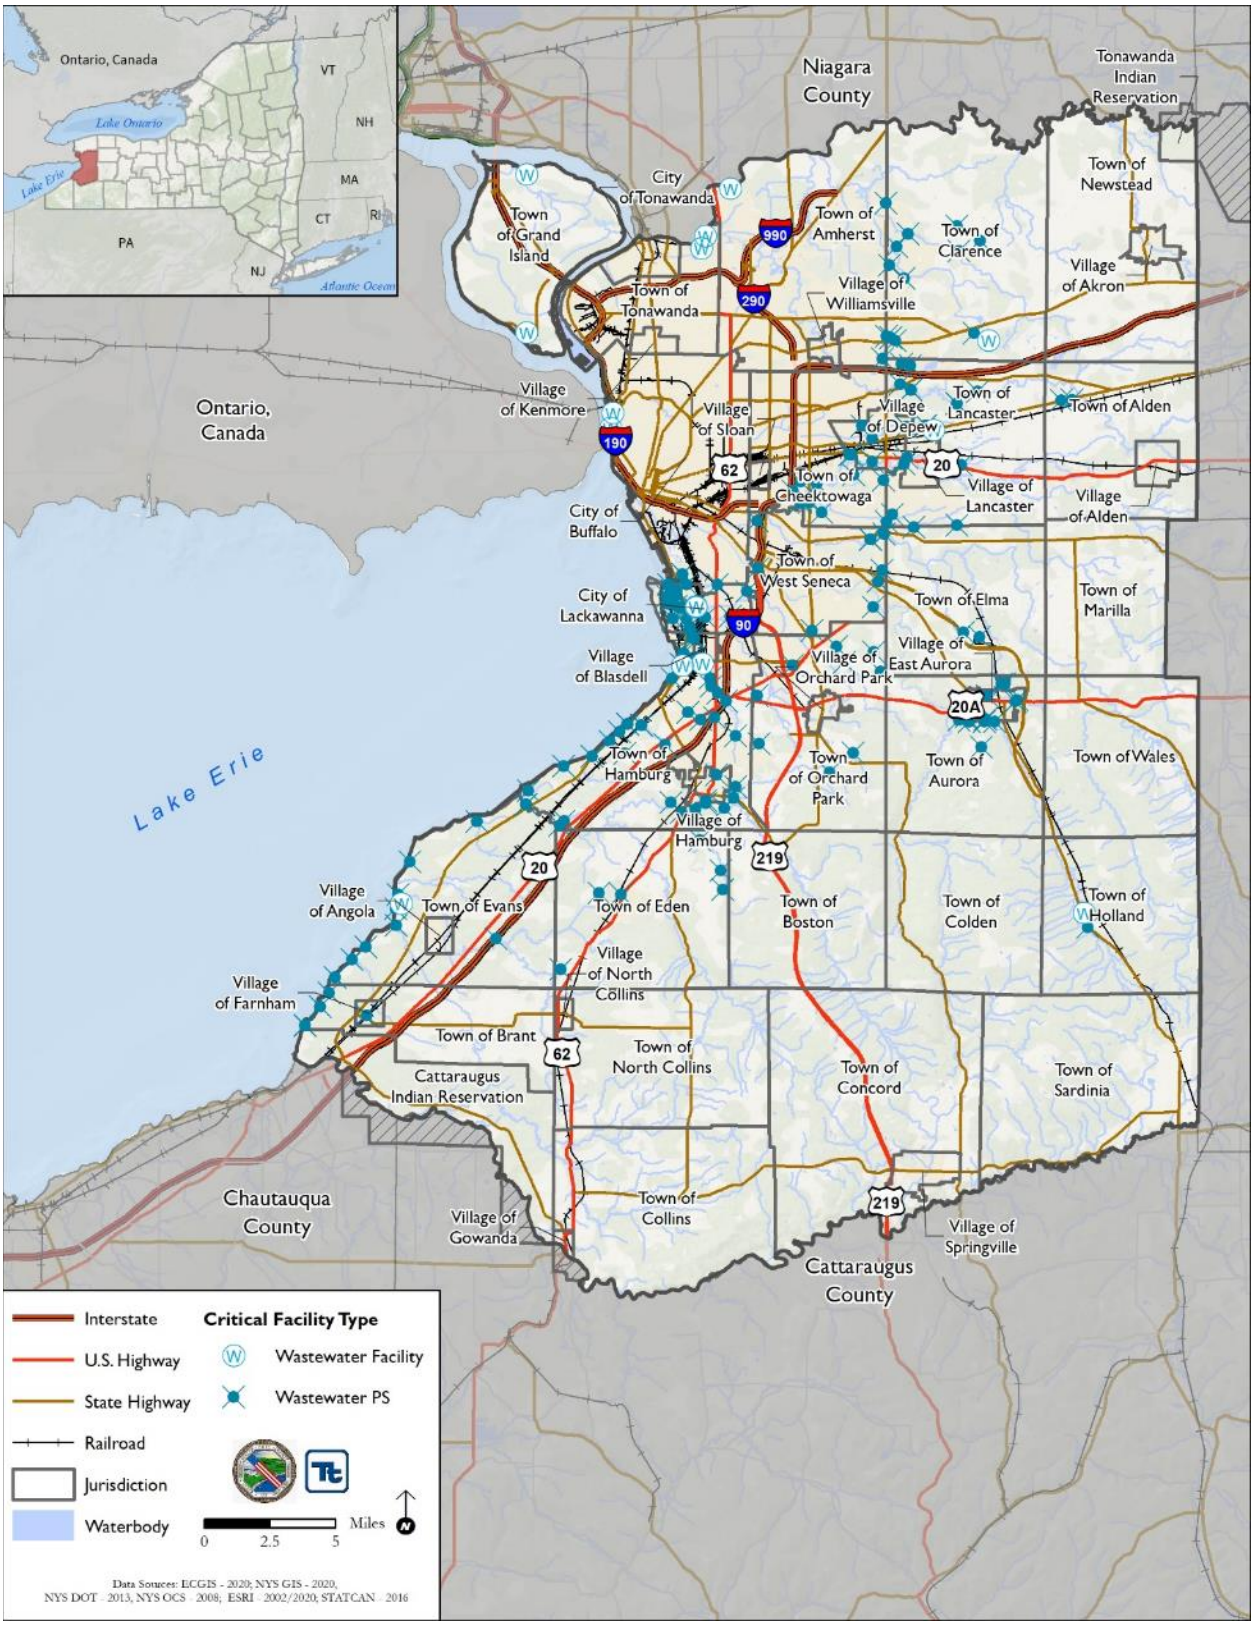
Wastewater Facilities

Municipal wastewater treatment services are provided by wastewater treatment plants, wastewater treatment facilities, and sewage treatment plants. Private wastewater treatment within Erie County includes septic systems and sand filters. Where municipal sewage treatment is not available, on-site septic systems are used. Soil quality in the county is variable, resulting in many parts of the county being unsuitable for on-site wastewater treatment. Undersized or unmaintained on-site septic systems can be an issue, particularly in the drinking watersheds, where exposure and runoff can impair water quality.

During the planning process, the Steering Committee and Planning Partnership identified 16 wastewater treatment facilities in Erie County. Additionally, 187 wastewater pump stations were identified. These facilities and pump stations are displayed in Figure 4-17.

Attachment: 07-Section-4-County-Profile-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Figure 4-17. Wastewater Facilities in Erie County

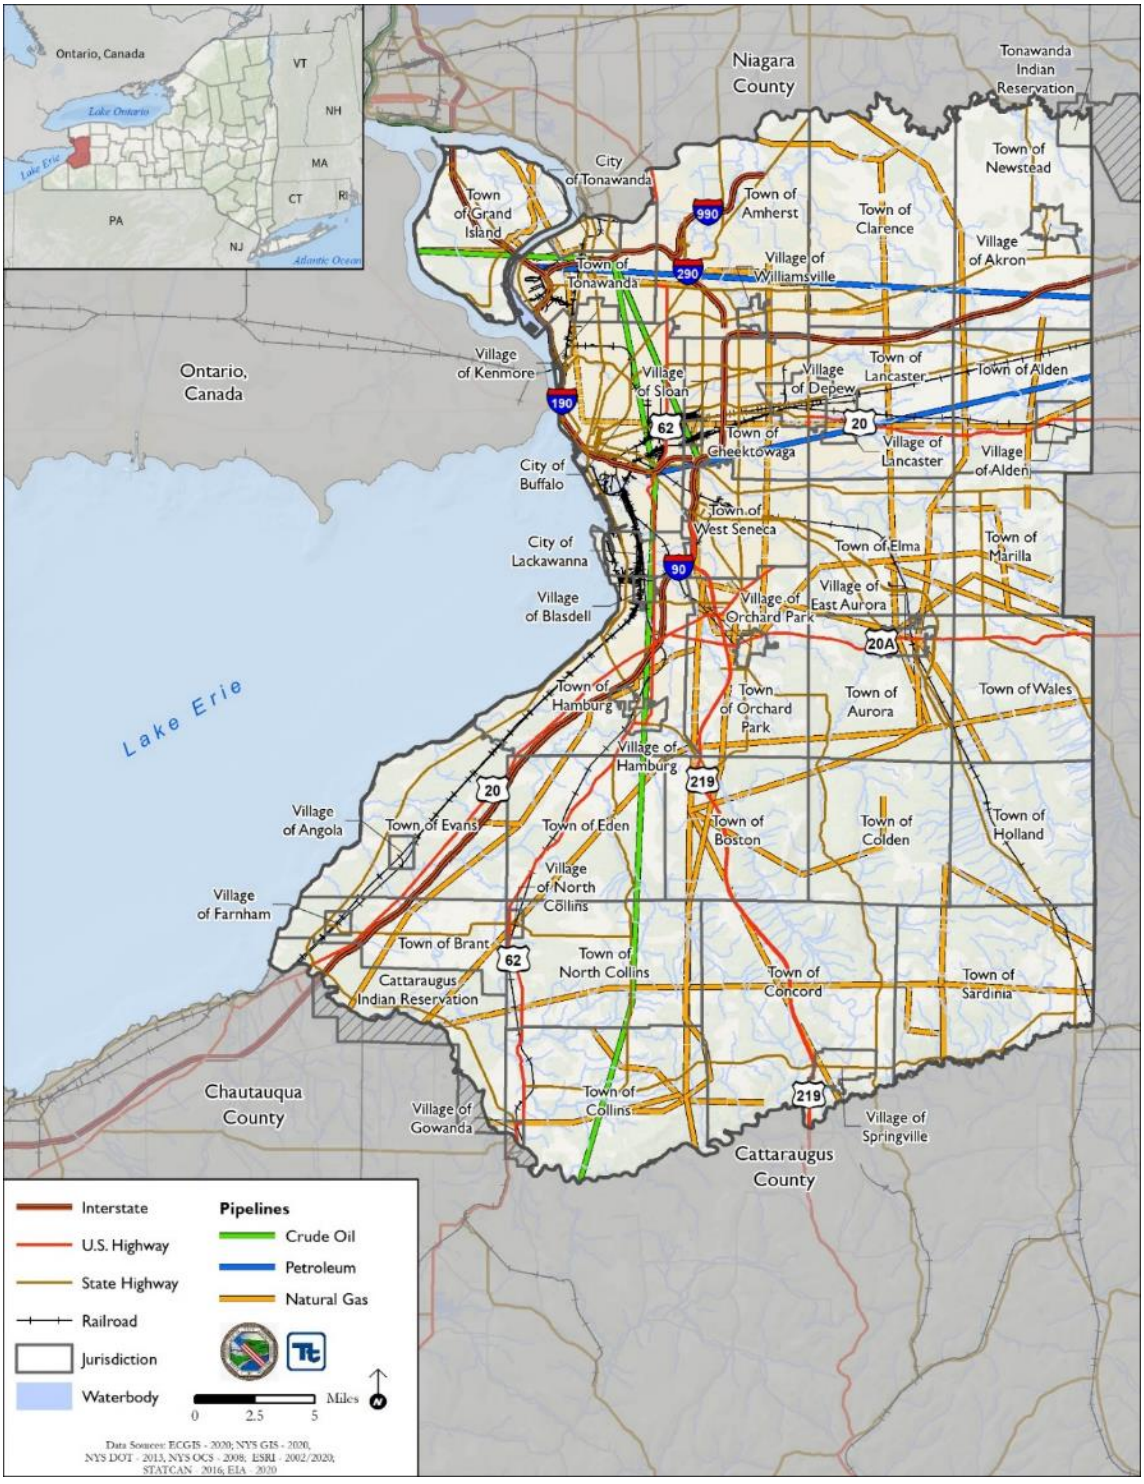


Attachment: 07-Section-4-County-Profile-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Energy Resources

Gas and oil are transmitted through the County primarily by National Fuel Gas Distribution Company, Tennessee Gas, and Empire Pipeline Company. Numerous natural gas, petroleum, and crude oil pipelines cross the county. Figure 4-18 shows the location of pipelines in Erie County.

Figure 4-18. Pipelines in Erie County

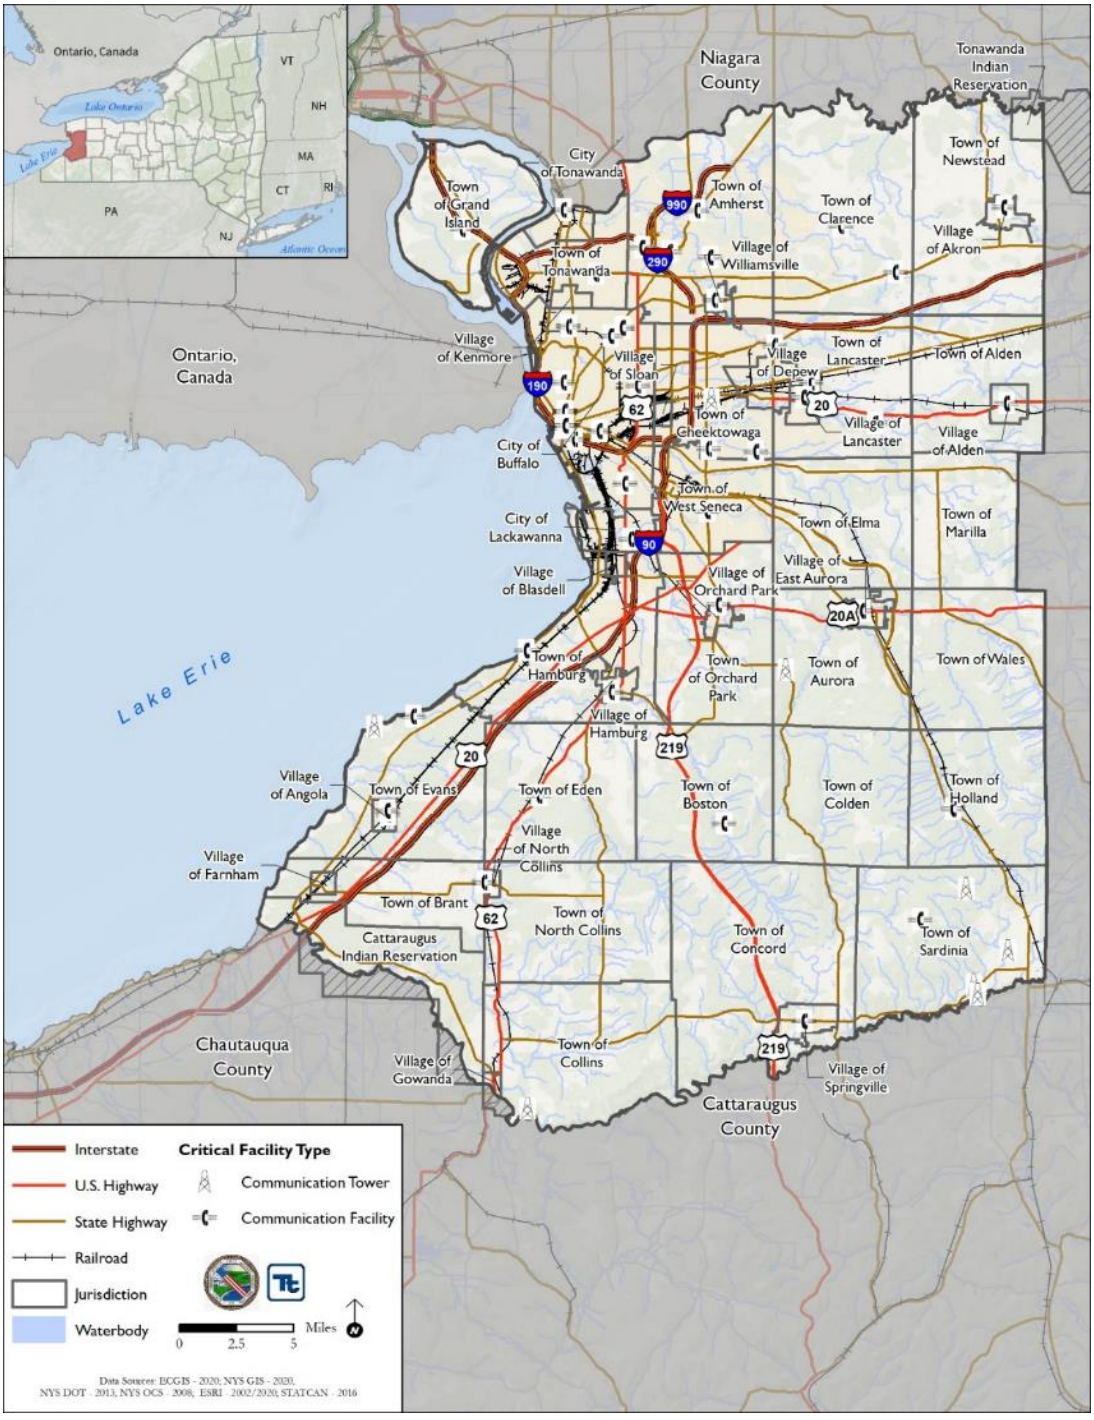


Attachment: 07-Section-4-County-Profile-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Communications

Erie County is served by a variety of communications systems, including traditional land line and cellular service provided by multiple companies, such as Verizon, AT&T, and Sprint. In addition to land line, fiber optic, and cellular communications systems, Erie County has an extensive radio communications network that is utilized by emergency services agencies, hospitals, law enforcement, public works, transportation, and other supporting organizations. Communication facilities within Erie County are shown in Figure 4-19.

Figure 4-19. Communication Facilities within Erie County



Attachment: 07-Section-4-County-Profile-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

4.6.4 High-Potential Loss Facilities

High-potential loss facilities include dams, levees, hazardous materials (HAZMAT) facilities, nuclear power plants, and military installations. Dams and levees are discussed below.

HAZMAT Facilities

A Superfund site consists of land in the United States that has been contaminated by hazardous waste and identified by the U.S. Environmental Protection Agency (EPA) as a candidate for cleanup because it poses a risk to human health and/or the environment. These sites are placed on the National Priorities List (NPL). The NPL contains the known releases or threatened releases of hazardous substances, pollutants, or contaminants throughout the United States and its territories. The NPL is intended primarily to guide the EPA in determining which sites warrant further investigation.

Abandoned hazardous waste sites placed on the federal NPL include those that the EPA has determined present "a significant risk to human health or the environment," with the sites being eligible for remediation under the Superfund Trust Fund Program. As of 2020, Erie County contains two hazardous sites in the Federal Superfund Program that are included on the NPL (CERCLIS 2020).

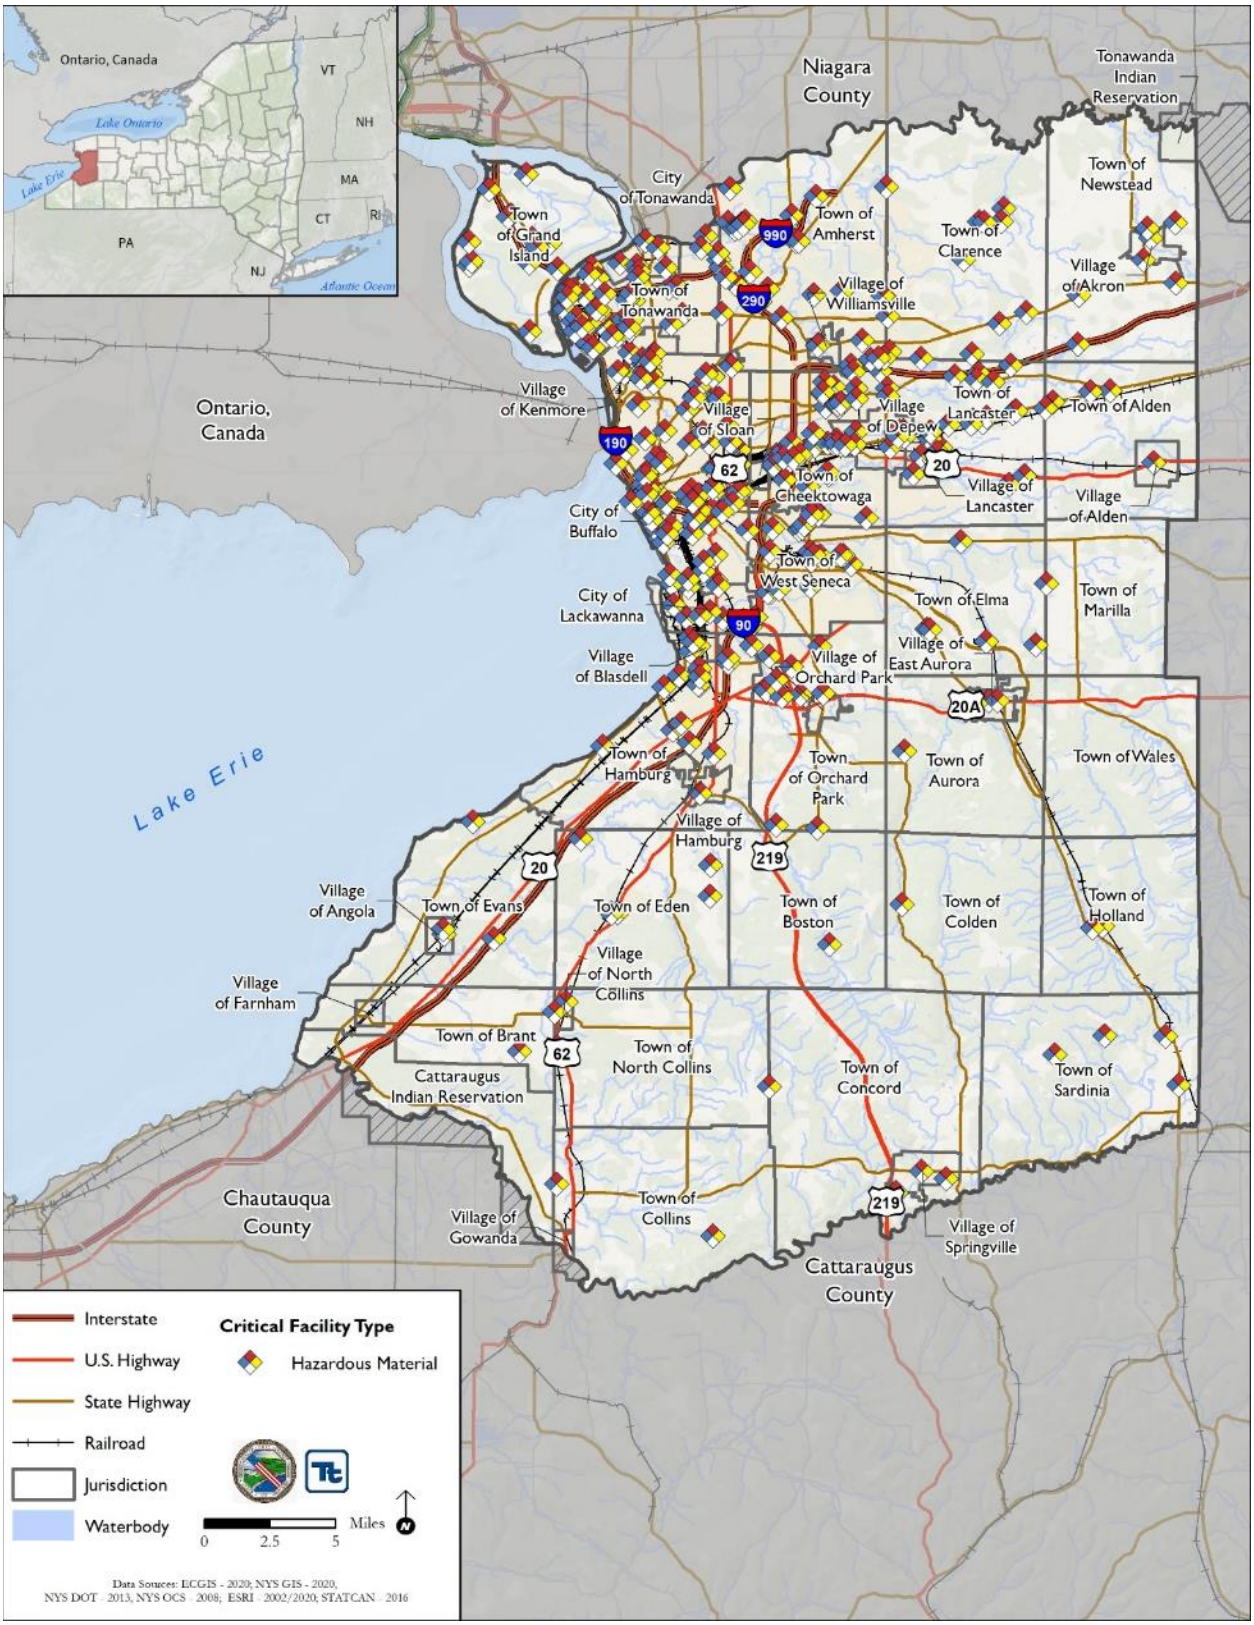
Superfund sites are contaminated locations, requiring a long-term response to clean up hazardous materials; NPL sites are included. The EPA Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) (Superfund) Public Access Database (CPAD) reports currently three archived Superfund site are located in Erie County (CERCLIS 2020). An archived Superfund site is a site with no further interest under the Federal Superfund Program based on available information and that is no longer part of the CERCLIS inventory.

In addition to the hazardous waste sites, there are numerous hazardous facilities in Erie County cataloged by the NYSDEC's Bulk Storage Program Database. The Bulk Storage Program includes three types of facilities; Petroleum Bulk Storage (PBS), Major Oil Storage Facilities (MOSF), and Chemical Bulk Storage (CBS). Registration with NYSDEC is mandatory for all PBS facilities with a total storage capacity of 1,100 gallons or more; all CBS underground tanks and all stationary aboveground tanks with a capacity of 185 gallons or more; and all MOSF sites storing more than 400,000 gallons of petroleum products. As of March 2021, 2,904 sites are listed in the NYSDEC's Bulk Storage Program Database in Erie County, New York (New York State Department of Environmental Conservation [NYSDEC] 2021).

Figure 4-20 identifies HAZMAT facilities identified by Erie County.

Attachment: 07-Section-4-County-Profile-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Figure 4-20. HAZMAT Facilities within Erie County



Attachment: 07-Section-4-County-Profile-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Dams and Levees

Dams

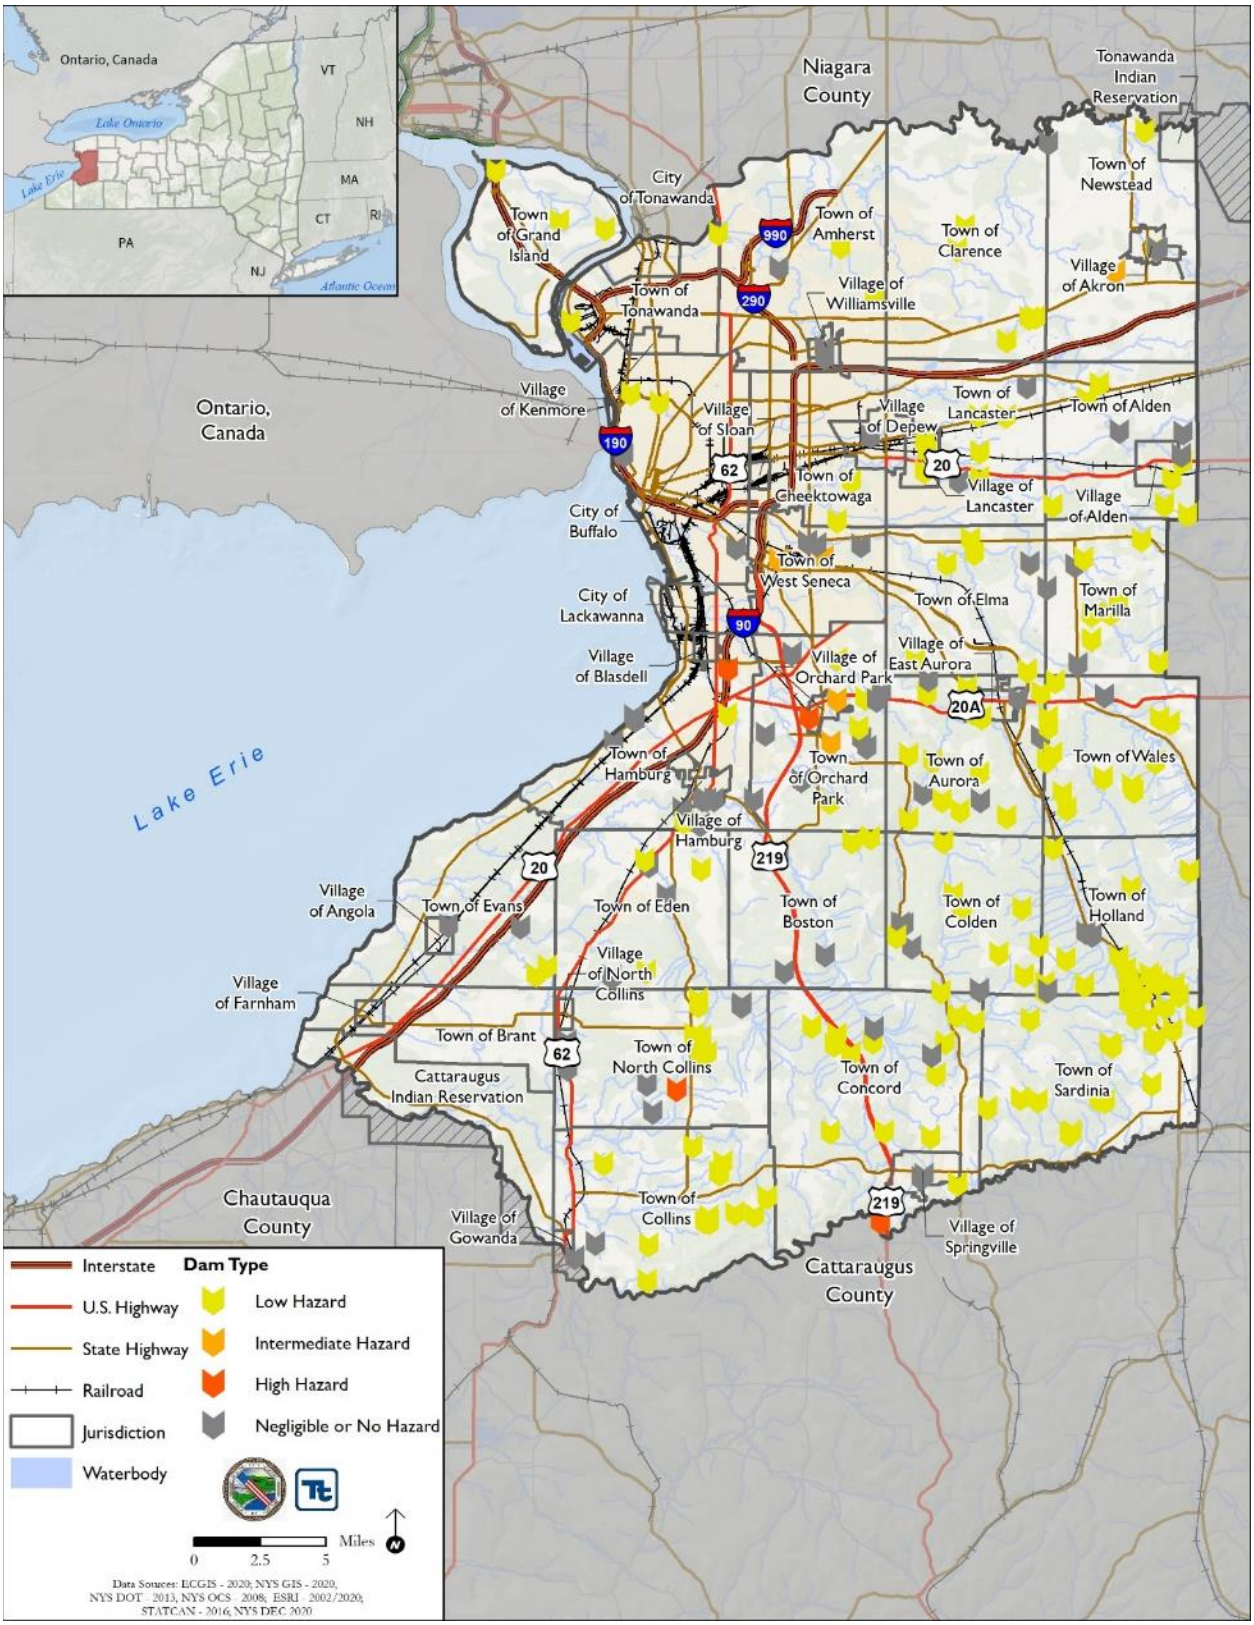
According to the NYSDEC Division of Water Bureau and Flood Protection and Dam Safety, there are three hazard classifications of dams in New York State. The dams are classified in terms of potential for downstream damage if the dam were to fail. The hazard classifications are as follows:

- *Low Hazard (Class A)* is a dam located in an area where failure will damage nothing more than isolated buildings, undeveloped lands, or township or county roads and/or will cause no significant economic loss or serious environmental damage. Failure or operation problems would result in no probable loss of human life. Losses are principally limited to the owner's property.
- *Intermediate Hazard (Class B)* is a dam located in an area where failure may damage isolated homes, main highways, and minor railroads; interrupt the use of relatively important public utilities; and will cause significant economic loss or serious environmental damage. Failure or operation problems would result in no probable loss of human life, but can cause economic loss, environmental damage, disruption of lifeline facilities, or impact other concerns. Class B dams are often located in predominantly rural or agricultural areas but may also be located in areas with population and significant infrastructure.
- *High Hazard (Class C)* is a dam located in an area where failure may cause loss of human life; serious damage to homes, industrial, or commercial buildings; important public utilities; main highways or railroads; and will cause extensive economic loss. This is a downstream hazard classification for dams in which excessive economic loss (urban area including extensive community, industry, agriculture, or outstanding natural resources) would occur as a direct result of dam failure.

The New York State Inventory of Dams, identifies 164 dams in Erie County: 164 low hazard, 5 intermediate hazard, 4 high hazard, 73 negligible or no hazard classification (NYSDEC, 2020). Figure 4-21 shows dam locations in Erie County.

Attachment: 07-Section-4-County-Profile-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Figure 4-21. Dam Locations in Erie County



Attachment: 07-Section-4-County-Profile-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Levees

Nine accredited levee systems are present within Erie County. These were constructed by the United State Army Corps of Engineers and area operated and maintained by the New York State Department of Environmental Conservation. The locations of these levee systems are displayed in Figure 4-22.

The Blasdell Creek Left Bank levee system protects a population of 192 people, 82 structures and an estimated property value of $30,310,075.74

The Cayuga Creek-Cheektowaga levee system is located on the right bank of Cayuga Creek in the Town of Cheektowaga, NY. It extends from the Union Road Bridge to 1,600 feet upstream of the bridge. The total levee length is 0.28 miles, with an average height of six feet and a protected Leveed Area of 35.2 acres. The levee system, including channel, has prevented greater than an estimated $7,153,000 of flood damages since completion.

The Cayuga Creek-Lancaster-Left Bank levee system is located on the left bank of Cayuga Creek in the Village of Lancaster, NY. It extends from to Lake Ave. to Penora St. in the Village of Depew, NY. The levee system total length is 1 mile, average height is 8 feet and the leveed area is 64 acres. A flood in the area behind the level could impact approximately 447 people, 207 commercial and residential structures, and could cause an estimated $ $75,987,510.00million in flood-related damage (USACE, 2020).

Cayuga Creek - Lancaster - Right Bank - Legion Field The levee system is located on the right bank (looking downstream) of Cayuga Creek in the Village of Lancaster, NY. It extends from Park Blvd. to the Broadway bridge in the Village of Lancaster. The levee system is 0.37 miles long, with an average height of eight feet and a leveed area of 23.7 acres. A flood in the area behind the level could impact approximately 184 people, 88 commercial and residential structures, and could cause an estimated $ $25,310,670.00 in flood-related damage (USACE, 2020).

Cayuga Creek - Lancaster - Right Bank - St. Mary's The levee system is located on the right bank (looking downstream) of Cayuga Creek in the Village of Lancaster, NY. It extends from St. Mary's St. at the water tower to St. Mary's St. west of the cemetery. The levee system is 0.42 miles long, with an average height of six feet and a leveed area of 30 acres. A flood in the area behind the level could impact approximately 56 people, 24 commercial and residential structures, and could cause an estimated $6,689,480.00 in flood-related damage (USACE, 2020).

Ellicott Creek-Amherst levee system. The levee system is located on the right bank (looking downstream) of Ellicott Creek in the Town of Amherst, NY. It extends from the Hidden Creek Ct. residential community to the Maple Rd. bridge. The levee system is 0.21 miles in length, with an average of three feet height and a leveed area of 11.5 acres. A flood in the area behind the level could impact approximately 55 people, 14 commercial and residential structures, and could cause an estimated $4,579,550.00 in flood-related damage (USACE, 2020).

Scajaquada Creek - Cheektowaga - Main Stem The levee system is located on the left bank of Scajaquada Creek in the Town of Cheektowaga, NY. It extends from downstream of Central Blvd. to upstream of Harlem Rd. The levee system is 0.44 miles long, with an average height of 3.5 feet and a leveed area of 70.4 acres. A flood in the area behind the level could impact approximately 427 people, 202 commercial and residential structures, and could cause an estimated $58,203,900.00 in flood-related damage (USACE, 2020).

Scajaquada Creek - Cheektowaga – Tributary T-3 The levee system is located on the right bank (looking downstream) of Tributary T-3 in the Town of Cheektowaga, NY. It extends from the downstream limit of Tributary T-2A to George Urban Blvd. The levee system total length is 0.36 miles, with an average height of 3.5 feet and a leveed area of 26.9 acres. A flood in the area behind the level could impact approximately 380 people, 132 commercial and residential structures, and could cause an estimated $12,940,760.00 in flood-related damage

Attachment: 07-Section-4-County-Profile-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

(USACE, 2020).

Scajaquada Creek - Cheektowaga – Tributary 3B The levee system is located on the right bank of Tributary T-3B in the Town of Cheektowaga, NY. It extends between Dick Rd. and Union Rd. The levee system is 0.18 miles long, with an average height of 2.5 feet and a leveed area of 22.4 acres. A flood in the area behind the level could impact approximately 122 people, 52 commercial and residential structures, and could cause an estimated $13,348,750.00 in flood-related damage (USACE, 2020).

Attachment: 07-Section-4-County-Profile-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

SECTION 5 . RISK ASSESSMENT

A risk assessment is the process of measuring the potential loss of life, personal injury, and economic and property damage resulting from identified hazards. Identifying potential hazards and vulnerable assets allows planning personnel to address and reduce hazard impacts, and allows emergency management personnel to establish early response priorities. Results of the risk assessment are used in subsequent mitigation planning processes, including determining and prioritizing mitigation actions that reduce each jurisdiction's risk to a specified hazard. Past, present, and future conditions must be evaluated to most accurately assess risk for the county and each jurisdiction. The process focuses on the following elements:

- **Hazard identification**—Use all available information to determine what types of hazards may affect a jurisdiction.
- **Profile each hazard**—Understand each hazard in terms of:
  - Extent—Severity of each hazard.
  - Location—Geographic area most affected by the hazard.
  - Previous occurrences and losses
  - Impacts of Climate Change
  - Probability of Future Hazard Events
- **Assess Vulnerability**
  - Exposure identification—Estimate the total number of assets in the jurisdiction that are likely to experience a hazard event if it occurs by overlaying hazard maps with the asset inventories.
  - Vulnerability identification and loss estimation—Assess the impact of hazard events on the people, property, economy, and lands of the region, including estimates of the cost of potential damage or cost that can be avoided by mitigation.
  - Future changes that may impact vulnerability—Analyze how demographic changes, projected development and climate change impacts can alter current exposure and vulnerability.

This section presents the Erie County risk assessment and is outlined as follows:

- Methodology and tools used to conduct the risk assessment
- Identification of hazards of concern that impact Erie County
- Hazards of concern profiles and vulnerability assessment
- Hazard ranking

5.1 METHODOLOGY AND TOOLS

The Erie County risk assessment was updated using the following best-available information:

- A new building stock inventory was generated using Microsoft's 2018 building footprints, 2020 RSMeans cost adjustment values, and 2020 tax assessor and parcel data.
- 2015-2019 American Community Survey 5-year Population Estimates were utilized.
- A critical facility was generated and reviewed by the Planning Partnership and county jurisdictions.
- Lifelines were identified in the critical facility inventory to align with Federal Emergency Management Agency's (FEMA) lifeline definition.
- Hazards-U.S. (Hazus) was used to estimate potential impacts to the flood, wind, and seismic hazards.
- Best-available hazard data were used, as described in this section.

The following sections summarize the asset inventories, methodology and tools used to support the risk assessment process.

Attachment: 08-Section-5.1-Methodology-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

5.1.1 Asset Inventories

Erie County assets were identified to assess potential exposure and loss associated with the hazards of concern. For the HMP update, Erie County assessed exposure and vulnerability of the following types of assets: population, buildings and critical facilities and infrastructure, new development, and the environment. Some assets may be more vulnerable because of their physical characteristics or socio-economic uses. To protect individual privacy and the security of critical facilities, information on properties assessed is presented in aggregate, without details about specific individual personal or public properties. Each asset type is described below.

The risk assessment included the collection and use of an expanded and enhanced asset inventory to estimate hazard exposure and vulnerability.

Population

Total population statistics from the 2015-2019 American Community Survey (ACS) 5-year estimate were used to estimate the exposure and potential impacts to the county's population in place of the 2010 U.S. Census block estimates. To determine population statistics for village and towns, village population totals were subtracted from the total town population. Where villages were split between towns and counties, the percentage of the geographic area of the village within each town and county was calculated and applied to the total population to estimate the population in the village within Erie County. Population counts at the jurisdictional level were averaged among the residential structures in the county to estimate the population at the structure level. This estimate provides a more precise distribution of population across the county compared to only using the Census block or Census tract boundaries. Limitations of these analyses are recognized, and thus the results are used only to provide a general estimate for planning purposes.

FEMA's Hazus program was used to model estimated potential losses to flood, seismic and wind hazards; as discussed further later in this section. Hazus still contains 2010 U.S. Census data and was used to estimate sheltering and injuries as part of the hazard analysis.

As discussed in Section 4, County Profile, research has shown that some populations are at greater risk from hazard events because of decreased resources or physical abilities. Vulnerable populations in Erie County included in the risk assessment are children, elderly, population below the poverty level, non-English speaking individuals, and persons institutionalized with a disability.

Buildings

A custom general building stock was created countywide. The general building stock was updated countywide with a custom-building inventory using the 2018 Microsoft building stock inventory data set. The building inventory attributes were updated using parcel tax assessor information provided by Erie County GIS. Attributes provided in the associated files were used to further define each structure, such as year built, number of stories, basement type, occupancy class, and square footage. The centroid of each building footprint was used to estimate the building location. Structural and content replacement cost values (RCV) were calculated for each building using the available assessor data, the building footprint, and RSMeans 2020 values. The analysis used a location factor associated by location zip-code, which produced location factors of 1.01 and 1.05 for residential and non-residential occupancy classes, respectively. RCV is the current cost of returning an asset to its pre-damaged condition using present-day cost of labor and materials. Total RCV consists of both the structural cost to replace

Attachment: 08-Section-5.1-Methodology-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

a building and the estimate value of contents of a building. The occupancy classes available in Hazus were condensed into the categories of residential, commercial, industrial, agricultural, religious, governmental, and educational to facilitate analysis and presentation of results. Residential loss estimates addressed both multi-family and single-family dwellings.

Critical Facilities and Lifelines

A critical facility inventory, which includes essential facilities, utilities, transportation features and user-defined facilities, was created by the Planning Partnership and county jurisdictions. The development involved a review for accuracy, additions or deletions of new or moved critical assets, identification of backup power for each asset (if known) and whether the critical facility is considered a lifeline in accordance with FEMA's definition (refer to Appendix F, Critical Facilities). To protect individual privacy and the security of assets, information is presented in aggregate, without details about specific individual properties or facilities.

*A **lifeline** provides indispensable service that enables the continuous operation of critical business and government functions, and is critical to human health and safety, or economic security (FEMA).*

Environment and Land Use Area

National land use land cover data created by the U.S. Geological Survey (USGS) in 2016 was used to assess land use characteristics of the county. This dataset was converted from a raster to a vector polygon, which informed spatial areas of residential, non-residential, and natural land use areas. Residential land-use types incorporated all classes listed as developed land use, except for those identified as vacant (i.e., Developed – Low Intensity, Developed – Medium Intensity, Developed – High Intensity). Non-residential land-use types included all other classes. Within non-residential land-use types, natural land areas were extracted into a new category, which includes barren land, forest, water, and wetlands. The natural land areas were referenced to calculate the total acres of natural land area exposed to hazard areas of concern.

New Development

In addition to assessing the vulnerability of the built environment, Erie County examined recent development over the last 5 years and anticipated new development in the next 5 years. Each jurisdiction was asked to provide a list by parcel ID or address of major development that has taken place within these timeframes.

New development was identified as (1) anticipated in the next 5 years and (2) recently developed over the last 5 years. An exposure analysis was conducted in geographic information system (GIS) to determine hazard exposure to these development sites. Projects built on multiple parcels were assessed as one unit. If one parcel identified within the project boundary intersected a spatial hazard layer, the entire project was considered "exposed" to the hazard area of concern.

Identifying these changes and integrating new development into the risk assessment provides communities information to consider when developing the mitigation strategy to reduce these vulnerabilities in the future (one tool in the Mitigation Toolbox discussed in Section 6, Mitigation Strategy. The new development is listed in Section 4, County Profile, and hazard exposure analysis results are presented in Section 9, Jurisdictional Annexes, as a table in each annex.

5.1.2 Methodology

To address the requirements of the DMA 2000 and to better understand potential vulnerability and losses associated with hazards of concern, Erie County used standardized tools, combined with local, state, and federal data and expertise to conduct the risk assessment. Three different levels of analysis were used depending upon

Attachment: 08-Section-5.1-Methodology-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

the data available for each hazard as described below. Table 5.1-1 summarizes the type of analysis conducted by hazard of concern.

1. **Historic Occurrences and Qualitative Analysis** – This analysis includes an examination of historic impacts to understand potential impacts of future events of similar size. In addition, potential impacts and losses are discussed qualitatively using best-available data and professional judgement.
2. **Exposure Assessment** – This analysis involves overlaying available spatial hazard layers, or hazards with defined extent and locations, with assets in GIS to determine which assets are located in the impact area of the hazard. The analysis highlights which assets are located in the hazard area and may incur future impacts.
3. **Loss Estimation** — The FEMA Hazus modeling software was used to estimate potential losses for the following hazards: flood, earthquake, and hurricane. In addition, an examination of historic impacts and an exposure assessment was conducted for these spatially-delineated hazards.

Table 5.1-1. Summary of Risk Assessment Analyses

Hazard	Population	General Building Stock	Critical Facilities	New Development
Coastal Erosion	E	E	E	E
Cyber Security	Q	Q	Q	Q
Earthquake	E, H	E, H	E, H	E
Expansive Soils	E	E	E	E

Severe Storm	H	H	H	Q
Severe Winter Storm	Q	Q	Q	Q
Utility Failure	Q	Q	Q	Q
Wildfire	E	E	E	E

Notes: E = Exposure analysis; H = Hazus analysis; Q = Qualitative analysis

Hazards U.S. – Multi-Hazard (Hazus-MH)

In 1997, FEMA developed a standardized model for estimating losses caused by earthquakes, known as Hazards U.S. or Hazus. Hazus was developed in response to the need for more effective national-, state-, and community-level planning and the need to identify areas that face the highest risk and potential for loss. Hazus was expanded into a multi-hazard methodology, Hazus with new models for estimating potential losses from wind (hurricanes) and flood (riverine) hazards. Hazus is a GIS-based software tool that applies engineering and scientific risk calculations, which have been developed by hazard and information technology experts, to provide defensible damage and loss estimates. These methodologies are accepted by FEMA and provide a consistent framework for assessing risk across a variety of hazards. The GIS framework also supports the evaluation of hazards and assessment of inventory and loss estimates for these hazards.

Hazus uses GIS technology to produce detailed maps and analytical reports that estimate a community's direct physical damage to building stock, critical facilities, transportation systems and utility systems. To generate this information, Hazus uses default data for inventory, vulnerability, and hazards; this default data can be supplemented with local data to provide a more refined analysis. Damage reports can include induced damage (inundation, fire, threats posed by hazardous materials and debris) and direct economic and social losses

Attachment: 08-Section-5.1-Methodology-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

(casualties, shelter requirements, and economic impact) depending on the hazard and available local data. Hazus' open data architecture can be used to manage community GIS data in a central location. The use of this software also promotes consistency of data output now and in the future and standardization of data collection and storage. More information on Hazus is available at http://www.fema.gov/hazus.

In general, modeled losses were estimated in the program using depth grids for the flood analysis and probabilistic analyses were performed to develop expected or estimated distribution of losses (mean return period losses) for hurricane wind and seismic hazards. The probabilistic model generates estimated damages and losses for specified return periods (e.g., 100- and 500-year). Table 5.1-2 displays the various levels of analyses that can be conducted using the Hazus software.

Table 5.1-2. Summary of Hazus Analysis Levels

Hazus Analysis Levels	
Level 1	Hazus provides hazard and inventory data with minimal outside data collection or mapping.
Level 2	Analysis involves augmenting the Hazus provided hazard and inventory data with more recent or detailed data for the study region, referred to as "local data"
Level 3	Analysis involves adjusting the built-in loss estimation models used for the hazard loss analyses. This Level is typical done in conjunction with the use of local data.

Coastal Erosion

Best-available data were used to assess Erie County's vulnerability to coastal erosion. The New York State Department of Environmental Conservation (NYS DEC) has paper maps from 1988 that show the Coastal Erosion Hazard Area (CEHA) of the Towns of Bryant, Evans, and Hamburg. Although dated, the NYS DEC commissioner is tasked to review the boundaries of these hazard areas every 10 years and after major coastal storms and to revise the maps if the CEHA boundary changed by 25 feet or more. These CEHA buffers were digitized for the available towns and exposure was analyzed. The City of Tonawanda, City of Lackawanna, City of Buffalo, Town of Grand Island, and Town of Tonawanda also sit along the shore of Lake Erie, but do not have CEHA maps available.

Cyber Security

All of Erie County is exposed to cyber security attack events. A qualitative assessment was conducted to assess Erie County's risk to cyber security attacks. Information from the U.S. Department of Homeland Security, FEMA, and NYS Department of Financial Services were referenced to review the county's overall risk.

Earthquake

A probabilistic assessment was conducted for Erie County for the 500-year mean return period (MRPs) through a Level 2 analysis in Hazus to analyze the earthquake hazard and provide a range of loss estimates. The probabilistic method uses information from historic earthquakes and inferred faults, locations and magnitudes, and computes the probable ground shaking levels that may be experienced during a recurrence period by Census tract.

As noted in the Hazus Earthquake User Manual, "*Although the software offers users the opportunity to prepare comprehensive loss estimates, it should be recognized that uncertainties are inherent in any estimation methodology, even with state-of-the-art techniques. Any region or city studied will have an enormous variety of buildings and facilities of different sizes, shapes, and structural systems that have been constructed over a range of years under diverse seismic design codes. There are a variety of components that contribute to transportation and utility system damage estimations. These components can have differing seismic resistance*" (FEMA 2020). However, Hazus' potential loss estimates are acceptable for the purposes of this HMP.

Attachment: 08-Section-5.1-Methodology-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Ground shaking is the primary cause of earthquake damage to man-made structures and soft soils amplify ground shaking. One contributor to the site amplification is the velocity at which the rock or soil transmits shear waves (S-waves). The National Earthquake Hazard Reductions Program (NEHRP) has developed five soil classifications defined by their shear-wave velocity that impact the severity of an earthquake. The soil classification system ranges from A to E, where A represents hard rock that reduces ground motions from an earthquake and E represents soft soils that amplify and magnify ground shaking and increase building damage and losses. Class D and E NEHRP soils are the two classes most susceptible to amplified ground motion during an earthquake.

An exposure analysis was conducted for the county's assets (population, building stock, critical facilities, and new development) using NEHRP soil data provided by New York State and the national landslide susceptibility data where landslide susceptibility was listed as high susceptibility. The exposure analysis focused on soil types that would experience amplified ground motion during an earthquake (i.e., Class D and E). Assets with their centroid in the hazard areas were totaled to estimate the numbers and values vulnerable to these soil types.

Data from New York State were used in Hazus to replace default NEHRP soils. Groundwater was set at a depth of 5 feet (default setting). The default assumption is a magnitude 7.0 earthquake for all return periods. Although damages are estimated at the census tract level, results were presented at the municipal level. Because there are multiple Census tracts that contain more than one jurisdiction, an area analysis was used to extract the percent of each tract that falls within individual jurisdictions. The percentage was multiplied against the results calculated for each tract and summed for each jurisdiction.

Damage estimates are calculated for losses to buildings (structural and non-structural) and contents; structural losses include load carrying components of the structure, and non-structural losses include those to architectural, mechanical, and electrical components of the structure, such as nonbearing walls, veneer and finishes, HVAC systems, boils, etc.

Expansive Soils

Soils data from the U.S. Department of Agriculture (USDA) and Natural Resources Conservation Service (NRCS) were used to determine the expansive soils hazard areas in Erie County. Soil classes that have a linear extensibility, or the shrink-swell potential, of greater than 3-percent were considered expansive soils. The NRCS Soil Report defines linear extensibility as, "the change in length of an unconfined clod as moisture content is decreased from a moist to a dry state." The report separates linear extensibility over a range (volume change) by depth (inches). The average of the median linear extensibility was calculated for each soil type. If the linear extensibility was greater than 3 and less than or equal to 6, it was considered to have moderate linear extensibility. There are 31 types of soils that are considered to have moderate linear extensibility, with no rating higher than 5.7. An exposure analysis was implemented by overlaying the asset inventory layers and the expansive soils hazard area. Assets with their centroid located in the hazard area were totaled to estimate the totals and values exposed to expansive soils.

Extreme Temperatures

All of Erie County is exposed to extreme temperature events. A qualitative assessment was conducted for the extreme temperatures hazard. Information from the Centers for Disease Control and Prevention, the National Weather Service, U.S. Environmental Protection Agency (EPA), and the Planning Partnership were used to assess the potential impacts to the county's assets.

Attachment: 08-Section-5.1-Methodology-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Flood

The 1- and 0.2-percent annual chance flood events were examined to evaluate the county's risk from the flood hazard. These flood events are generally those considered by planners and evaluated under federal programs such as NFIP.

The following data were used to evaluate exposure and determine potential future losses for this plan update:

- The Erie County FEMA Effective Digital Flood Insurance Rate Map (DFIRM) dated June 2019
- The Erie County FEMA Preliminary Digital Flood Insurance Rate Map (DFIRM) dated February 2019
- The depth grid developed by using data from the NYOIT 1-meter Resolution Digital Elevation Model (DEM), and the 2019 FEMA preliminary and effective DFIRM

The preliminary and effective Erie County FEMA DFIRM published in 2019 were used to evaluate exposure and determine potential future losses. In the cases where there was a new preliminary panel, the preliminary DFIRM was used. This was combined with the effective DFIRM for all other areas. The depth grid generated using the DFIRM and 1-meter DEM was integrated into the Hazus riverine flood model and used to estimate potential losses for the 1-percent annual chance flood event.

To estimate exposure to the 1-percent- and 0.2-percent annual chance flood events, the DFIRM flood boundaries were overlaid on the centroids of updated assets (population, building stock, critical facilities, and new development). Centroids that intersected the flood boundaries were totaled to estimate the building RCV and population vulnerable to the flood inundation areas. A Level 2 Hazus riverine flood analysis was performed. Both the critical facility and building inventories were formatted to be compatible with Hazus and its Comprehensive Data Management System (CDMS). Once updated with the inventories, the Hazus riverine flood model was run to estimate potential losses in Erie County for the 1-percent annual chance flood events. A user-defined analysis was also performed for the building stock. Buildings located within the floodplain were imported as user-defined facilities to estimate potential losses to the building stock at the structural level. Hazus calculated the estimated potential losses to the population (default 2010 U.S. Census data across dasymetric blocks), potential damages to the general building stock, and potential damages to critical facility inventories based on the depth grids generated and the default Hazus damage functions in the flood model.

Hazardous Materials

Overall, potential losses from hazardous materials (hazmat) incidents are difficult to quantify due to the many variables and human elements. Data regarding this hazard were obtained from Erie County and the Planning Partnership as well as appropriate state and federal resources.

The exposure analysis was conducted for the county's assets (population, building stock, critical facilities, and new development) using a radius around potential HazMat incident sites as follows: exposure within 0.5 mile of highways, exposure within 0.5 mile of railways, exposure within 0.5 mile of pipelines, and exposure within an individually unique area of hazmat facilities. Assets with their centroids in one or more of these hazard areas were considered vulnerable to a hazardous material incident.

Landslide

An exposure assessment was conducted using a steep slope layer to determine the county's risk to the landslide hazard. A steep slope layer was created using the 2019 NYOIT 1-meter DEM. The DEM was converted to percent slope and slopes greater than 25 percent were selected. The county's assets (population, buildings, critical facilities, and new development) were examined to determine if they are built in areas of steep slopes (greater than 25 percent).

Attachment: 08-Section-5.1-Methodology-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Pandemic

All of Erie County is considered exposed to disease outbreak events. A qualitative analysis was conducted using data from the county's Coronavirus Disease 2019 (COVID-19) resource website and research from the Centers for Disease Control and Prevention to review the county's risk to illnesses, including the most recent COVID-19 outbreak.

Severe Storm

A Hazus probabilistic analysis was performed to analyze the wind hazard losses for Erie County for the 100- and 500-year MRP events. The probabilistic Hazus hurricane model activates a database of thousands of potential storms that have tracks and intensities reflecting the full spectrum of Atlantic hurricanes observed since 1886 and identifies those with tracks associated with Erie County. Hazus contains data on historic hurricane events and wind speeds. It also includes surface roughness and vegetation (tree coverage) maps for the area. Surface roughness and vegetation data support the modeling of wind force across various types of land surfaces. Default demographic and updated building and critical facility inventories in Hazus were used for the analysis. Although damages are estimated at the census tract level, results were presented at the municipal level. Because there are multiple census tracts that contain more than one jurisdiction, a density analysis was used to extract the percent of building structures that fall within each tract and jurisdiction. The percentage was multiplied against the results calculated for each tract and summed for each jurisdiction.

Severe Winter Storm

All of Erie County is exposed and vulnerable to the winter storm hazard. In general, structural impacts include damage to roofs and building frames, rather than building content. Current modeling tools are not available to estimate specific losses for this hazard. A percentage of the custom-building stock structural replacement cost value was utilized to estimate damages that could result from winter storm conditions (i.e., 1-percent, 5-percent, and 10-percent of total replacement cost value). Given professional knowledge and currently-available information, the potential losses for this hazard are considered to be overestimated; hence, providing a conservative estimate for losses associated with winter storm events.

Utility Failure

To assess the county's vulnerability to the utility failure hazard and its associated impacts, a qualitative assessment was conducted. Information from the Erie County Water Authority, EPA, and FEMA were referenced to assess the potential impacts to the county's assets from utility failure.

Wildfire

The Wildland-Urban Interface (Interface and Intermix) obtained through the SILVIS Laboratory, Department of Forest Ecology and Management, University of Wisconsin – Madison, was referenced to delineate wildfire hazard areas. The University of Wisconsin – Madison wildland fire hazard areas are based on the 2010 Census and 2006 National Land Cover Dataset and the Protected Areas Database. For this risk assessment, the high-, medium-, and low-density interface areas were combined and used as the "Interface" hazard area, and the high-, medium-, and low-density intermix areas were combined and used as the "Intermix" hazard areas.

To determine what assets are exposed to wildfire, available and appropriate GIS data were overlaid with the hazard area. Assets with their centroid located in the hazard area were totaled to estimate the totals and values exposed to a wildfire event.

Attachment: 08-Section-5.1-Methodology-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Considerations for Mitigation and Next Steps

The following items are to be discussed for considerations for the next plan update to enhance the vulnerability assessment:

- All Hazards
  - Create an updated user-defined general building stock dataset using up-to-date parcels, footprints, and RSMeans values.
  - Utilize updated and current demographic data. If 2020 U.S. Census demographic data are available at the U.S. Census block level during the next plan update, use the Census block estimates and residential structures for a more precise distribution of population, or the current American Community Survey 5-Year Estimate populations counts at the Census tract level.
- Earthquake
  - Identify unreinforced masonry in critical facilities and privately-owned buildings (i.e., residences) by accessing local knowledge, tax assessor information, and/or pictometry/orthophotos. These buildings may not withstand earthquakes of certain magnitudes and plans to provide emergency response or recovery efforts at these properties can be developed.
- Extreme Temperatures
  - Track extreme temperature data for injuries, deaths, shelter needs, pipe freezing, agricultural losses, and other impacts to determine distributions of most at-risk areas.
- Flood
  - The general building stock inventory can be updated to include attributes regarding first floor elevation and foundation type (basement, slab on grade, etc.) to enhance loss estimates.
  - Conduct a Hazus loss analysis for more frequent flood events (e.g., 10- and 50-year flood events).
  - Conduct a repetitive loss area analysis.
  - Continue to expand and update urban flood areas to further inform mitigation.
  - As more current FEMA floodplain data become available (i.e., DFIRMs), update the exposure analysis and generate a more detailed flood depth grid that can be integrated into the current Hazus version.
- Landslide
  - A pilot study conducted in Schenectady County, NY (Landslide Susceptibility – A Pilot Study of Schenectady County, NY) provided a detailed methodology for delineating high-risk landslide areas. This study looked at a variety of environmental characteristics including slope and soil conditions to determine areas at risk to landslide. To coincide with the methodology of that study, the generated slopes were categorized into five classes: 0 to 2 percent; 3 to 7 percent; 8 to 15 percent; 16 to 25 percent; Greater than 25 percent. Should the county determine the need for a more detailed assessment of risk, it could determine steep slope by other percent categorizations. Additional environmental and soil characteristics used in the Schenectady County plan can be collected and used to follow the methodology used to further delineate the county's most at-risk areas.
- Pandemic
  - As more information has been collected about COVID-19, future assessments should consider adding an evaluation of how the county responded to the pandemic. It should identify critical facilities that have vulnerabilities/limitations to respond effectively, as well as major transit routes that connect the community to facilities that help treat or vaccinate patients impacted by the pandemic.

Attachment: 08-Section-5.1-Methodology-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

- Severe Storm
  - The general building stock inventory can be updated to include attributes regarding protection against strong winds, such as hurricane straps, to enhance loss estimates.
  - Integrate evacuation route data that are currently being developed.
- Wildfire
  - General building stock inventory can be updated to include attributes such as roofing material or fire detection equipment or integrate distance to fuels as another measure of vulnerability.

5.1.3 Data Source Summary

Table 5.1-3 summarizes the data sources used for the risk assessment for this plan.

Table 5.1-3. Risk Assessment Data Documentation

Data	Source	Date	Format
Population data	U.S. Census Bureau; American Community Survey 5-Year Estimates	2010; 2019	Digital (GIS) format
Building Inventory	Erie Parcel Data, Microsoft Building Footprints, Tetra Tech	2018/2020	Digital (GIS) format

Notes: DOT = Department of Transportation
FEMA = Federal Emergency Management Agency
NRCS = Natural Resources Conservation Service
USDA = U.S. Department of Agriculture

Limitations

Loss estimates, exposure assessments, and hazard-specific vulnerability evaluations rely on the best-available data and methodologies. Uncertainties are inherent in any loss estimation methodology and arise in part from incomplete scientific knowledge concerning natural hazards and their effects on the built environment. Uncertainties also result from the following:

1) Approximations and simplifications necessary to conduct such a study
2) Incomplete or dated inventory, demographic, or economic parameter data
3) The unique nature, geographic extent, and severity of each hazard
4) Mitigation measures already employed by the participating municipalities
5) The amount of advance notice residents have to prepare for a specific hazard event
6) Uncertainty of climate change projections

These factors can result in a range of uncertainty in loss estimates, possibly by a factor of two or more. Therefore, potential exposure and loss estimates are approximate. These results do not predict precise results and should be used to understand relative risk. Over the long term, Erie County will collect additional data and update and refine existing inventories to assist in estimating potential losses.

Attachment: 08-Section-5.1-Methodology-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Potential economic loss is based on the present value of the general building stock using best-available data. The county acknowledges significant impacts may occur to critical facilities and infrastructure as a result of these hazard events causing great economic loss. However, monetized damage estimates to critical facilities and infrastructure, and economic impacts were not quantified and require more detailed loss analyses. In addition, economic impacts to industry such as tourism and the real-estate market were not analyzed.

Attachment: 08-Section-5.1-Methodology-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

5.2 IDENTIFICATION OF HAZARDS OF CONCERN

To provide a strong foundation for mitigation actions considered in Section 6 (Mitigation Strategy) and Section 9 (Jurisdictional Annexes), Erie County focused on considering a full range of hazards that could impact the area and then identified and ranked those hazards that presented the greatest concern. The hazard of concern identification process incorporated input from the county and participating jurisdictions; review of the New York State Hazard Mitigation Plan (NYS HMP 2019); review of the 2015 Erie County HMP (2015 Erie County Multi-Jurisdictional Hazard Mitigation Plan); research and local, state, and federal information on the frequency, magnitude, and costs associated with the various hazards that have previously or could feasibly impact the region; and qualitative or anecdotal information regarding natural (not man-made) hazards and the perceived vulnerability of the study area's assets to them. Table 5.2-1 documents the process of identifying the natural hazards of concern for further profiling and evaluation. Specific hazards not identified as a hazard of concern for Erie County will not be further discussed in detail.

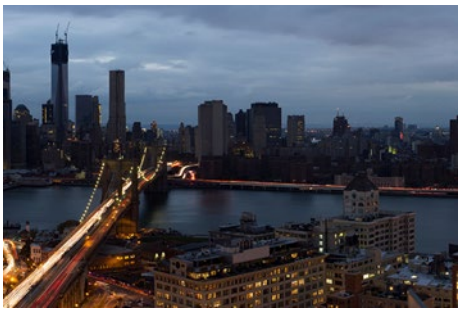
Hazards of Concern are those hazards that are considered most likely to impact a community. These are identified using available data and local knowledge.

Natural Hazards are those hazards that are a source of harm or difficultly created by a meteorological, environmental, or geological event.

5.2.1 Changes from 2015 Hazard Mitigation Plan

The 2015 Erie County Hazard Mitigation Plan did not identify Cyber Security, Hazardous Materials, Pandemic, or Utility Failure as hazards of concern. Members of the Steering Committee and Planning Partnership identified all four of these hazards as hazards of concern for the 2022 Hazard Mitigation Plan Update.

The 2022 Erie County Hazard Mitigation Plan includes best available data throughout the plan to present an updated understanding of Erie County's risk.



Source: NYIS (2019)

5.2.2 Hazard Groupings

The Steering Committee approved use of the following hazard event groupings which are the same as those provided by the Federal Emergency Management Agency (FEMA) guidance documents (*FEMA 386-2 Understanding Your Risks, Identifying Hazards and Estimating Losses*; *Multi-Hazard Identification and Risk Assessment – The Cornerstone of the National Mitigation Strategy*; *Local Mitigation Planning Handbook*), and with consideration of hazard grouping in the NYS HMP.

Coastal Erosion is one of the primary hazards leading to loss of lives or damage to property and infrastructure in coastal areas. Many natural factors affect erosion of the shoreline, including shore and near-shore morphology, shoreline orientation, and the response of these factors to storm frequency and sea-level rise.

A *Cyber Security* incident involves either the theft or modification of information on government agency computer systems or a system compromise with the potential to disrupt essential services.

Attachment: 09-Section-5.2-Hazard-of-Concern-ID-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

Attachment: 09-Section-5.2-Hazard-of-Concern-ID-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

An *Earthquake* is the sudden movement of the earth's surface caused by the release of stress accumulated within or along the edge of the earth's tectonic plates, a volcanic eruption, or a man-made explosion.

The *Expansive Soil* hazard involves soils and soft rock that tend to swell or shrink due to changes in moisture content are known as expansive soils. Expansive soils are often referred to as swelling clays because clay materials are most susceptible to swelling and shrinking. Changes in soil volume present a hazard primarily to structures built on expansive soils. The most extensive damage occurs to highways and streets.

The *Extreme Temperature* hazard includes both heat and cold events, which can have a significant impact to human health, commercial/agricultural businesses, and primary and secondary effects on infrastructure (e.g., burst pipes and power failure). What constitutes "extreme cold" or "extreme heat" can vary across different areas of the country based on what the population is accustomed to. The 2022 HMP considers the heat island effect that occurs within developed areas.

The *Flood* hazard includes riverine flooding, flash flooding, shallow flooding, ice jam flooding, urban drainage flooding, and dam failure flooding. Inclusion of the various forms of flooding under a general *Flood* hazard is consistent with that used in FEMA's *Multi-Hazard Identification and Risk Assessment* guidance and the NYS HMP.

The *Hazardous Materials* profile includes materials and wastes that are considered severely harmful to human health and the environment, as defined by the U.S. Environmental Protection Agency (EPA) Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) (also known as Superfund). Many hazardous materials are commonly used substances, which are harmless in their normal uses but are quite dangerous if released.

The *Landslide* hazard includes rock falls, rock topples, rotational slump, transitional slide, earth flows, creep, block slides, debris avalanche, and debris flows.

The *Pandemic* hazard exists when there are more cases of a particular disease than expected in a given area, or among a specific group of people, over a particular period of time. An aggregation of cases in a given area over a particular period, regardless of the number of cases, is called a cluster. In an outbreak or epidemic, it is presumed that the cases are related to one another or that they have a common cause.

The *Severe Storm* hazard includes windstorms that often entail a variety of other influencing weather conditions, including thunderstorms, hail, lightning, and tornadoes. Tropical disturbances (hurricanes, tropical storms, and tropical depressions) are often identified as a type of severe storm. For this HMP update, *Severe Storm* includes thunderstorms, hail, lightning, tornadoes, hurricanes, and tropical storms.

The *Severe Winter Storm* hazard includes blizzards, ice storms, snowstorms, sleet, and freezing rain.

The *Utility Failure* hazard is defined as any interruption or loss of electrical service caused by disruption of power transmission from accident, sabotage, natural hazards, or equipment failure (also referred to as a loss of power or power outage). A significant power failure is defined as any incident of a long duration, which would require the involvement of the local and/or state emergency management organizations to coordinate provision of food, water, heating, cooling, and shelter.

The *Wildfire* hazard can be defined as any non-structural fire that occurs in the wildland. Three distinct types of wildland fires have been defined and include naturally occurring wildfire, human-caused wildfire, and prescribed fire. They may be highly destructive and become difficult to control. Wildfires

result in the disturbance of forest and brush and destruction of real estate and personal property and have secondary impacts on other hazards, such as flooding, by removing vegetation and disturbing watersheds.

Other than the Utility Failure hazard profile, technological (e.g., hazardous material incidents) and man-made hazards (e.g., terrorism, man-made dam breaches/failures) are not being addressed in this planning process. The DMA 2000 regulations do not require consideration of such hazards, and due to limited funding, these were not chosen for inclusion in this plan by Erie County and planning participants. The county can expand the scope of this HMP to include other less frequent natural, technological, and man-made hazards as resources permit.

Attachment: 09-Section-5.2-Hazard-of-Concern-ID-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

Table 5.2-1. Identification of Natural Hazards of Concern for Erie County

Hazard	Is this a hazard that may occur in Erie County?	If yes, does this hazard pose a significant threat to Erie County?	Why was this determination made?	Source(s)
Avalanche	No	No	• The New York State Hazard Mitigation Plan (NYS HMP) identifies avalanche as a hazard of concern. • Avalanches can occur in any situation where snow, slope, and weather conditions combine to create proper conditions. About 90 percent of all avalanches start on slopes of 30 to 45 degrees, and about 98 percent of all avalanches occur on slopes of 25 to 50 degrees. The topography of Erie County does not support the occurrence of an avalanche. • New York State, in general, has a very low occurrence of avalanche events based on statistics provided by National Avalanche Center – American Avalanche Association (NAC-AAA) between 1998 and 2018. • Avalanche was identified as a hazard in the NYS HMP, and there have been occurrences in the state; however, there were no occurrences in Erie County. The Steering Committee and Planning Partnership do not consider the hazard to be a significant concern.	• NYS DHSES • NAC-AAA
Coastal Erosion	Yes	Yes	• The NYS HMP identifies coastal erosion as a hazard of concern for New York State. Erosion can impact all of the state's coastal counties along Lake Erie and the Niagara River, Lake Ontario and the St. Lawrence River, Atlantic Ocean and Long Island Sound, Hudson River south of the federal dam in Troy, the East River, the Harlem River, the Kill van Kull and Arthur Kill, and all connecting waterbodies, bays, harbors, shallows, and wetlands. • Erie County is a coastal county, and the Steering Committee and Planning Partnership consider the hazard to be a significant concern.	• NYS DHSES • Input from Steering Committee and Planning Partnership
Dam Failure	Yes	No	• The 2019 NYS HMP does not identify dam failure as a hazard of concern for New York State, though it is included in the Flood hazard profile. • According to the NYS DEC, there are 248 dams within Erie County, as shown in Section 4. Of these 248 dams in Erie County: 164 low hazard, 6 intermediate hazard, 3 high hazard, 63 negligible or no hazard classification, and 12 with no classification code (NYSDEC 2020). • Dam failure is included in the flood profile.	• NYS DHSES • Input from Steering Committee and Planning Partnership • NYSDEC • NYS GIS
Pandemic	Yes	Yes	• The 2019 NYS HMP does not identify disease outbreak as a hazard of concern for New York State. • The county has been impacted by various diseases (influenza, Lyme disease, COVID-19). The Steering Committee and Planning Partnership has identified disease outbreak as a hazard of concern for Erie County.	• NYS DHSES • NYS DEC • Input from Steering Committee and

Attachment: 09-Section-5.2-Hazard-of-Concern-ID-093021 (RES-2022-375 : Authorizing Adoption of the

Table 5.2-1. Identification of Natural Hazards of Concern for Erie County

Hazard	Is this a hazard that may occur in Erie County?	If yes, does this hazard pose a significant threat to Erie County?	Why was this determination made?	Source(s)
				Planning Partnership
Drought	Yes	No	• The NYS HMP identifies drought as a hazard of concern for the state. Erie County has been impacted by several drought events that have occurred in New York State. • Drought conditions can cause shortages in water for human consumption, impact agricultural production, and lead to reduced local firefighting capabilities. A majority of Erie County relies on groundwater for their potable water, and droughts can impact groundwater resources significantly, limiting the availability of drinking water to county residents. • New York State was included in one FEMA drought-related disaster declaration, which did not include Erie County. • Erie County was included in five recent drought-related U.S. Department of Agriculture (USDA) disaster declarations: o S3441 – Drought – 2012 o S3427 – Drought / Excessive Heat – 2012 o S4023 – Drought / Excessive Heat – 2016 o S4031 – Drought / Excessive Heat – 2016 o S4037 – Drought / Excessive Heat – 2016 • According to the Northeast Regional Climate Center (NRCC), Erie County is in the Western Plateau Climate Division. This division has been impacted by periods of severe and extreme drought, including the following events: o October – November 1985 o November 1908 – January 1909 o October 1930 – June 1931 o November – December 2001 • Despite the occurrence of certain drought events in the county, the Steering Committee and Planning Partnership did not identify drought as a hazard of concern for Erie County.	• NYS DHSES • FEMA • USDA • Input from Steering Committee and Planning Partnership • NOAA-NCEI • NRCC

Attachment: 09-Section-5.2-Hazard-of-Concern-ID-093021 (RES-2022-375 : Authorizing Adoption of the

Table 5.2-1. Identification of Natural Hazards of Concern for Erie County

Hazard	Is this a hazard that may occur in Erie County?	If yes, does this hazard pose a significant threat to Erie County?	Why was this determination made?	Source(s)
Earthquake	Yes	Yes	• The NYS HMP identified earthquake as a hazard of concern for the state. • Erie County has a peak ground acceleration (PGA) below 3%g. According to the FEMA document "Understanding Your Risks: Identifying Hazards and Estimating Losses", areas with 3%g should conduct a risk assessment for earthquakes. • New York State was included in one FEMA earthquake-related disaster declaration (DR-1415); Erie County was not included in this declaration. • According to the NYS HMP, between 1737 and 2016, there were 550 earthquakes epicentered in the state and numerous earthquakes outside of the state that were felt within the state. From 1996 to 2017, there have been no significant earthquakes epicentered in Erie County. • Based on input from the Steering Committee and Planning Partnership, earthquake has been identified as a hazard of concern for Erie County.	• NYS DHSES • Input from Steering Committee and Planning Partnership • U.S. Geological Survey (USGS) – Earthquake Hazards Program, Review of USGS Seismic Maps
Expansive Soils	Yes	Yes	• The NYS HMP does not identify expansive soils as a hazard of concern for New York State. While a majority of Erie County is underlain by soils with little to no swelling potential, and less than 50% of the area is underlain by soils with abundant clays of slight to moderate swelling potential. The Town of Amherst and certain other areas, however, are potentially significantly by this hazard. • The Steering Committee and Planning Partnership identified expansive soils as a hazard of concern for Erie County.	• NYS DHSES • Input from Steering Committee and Planning Partnership • Review of USGS 1989 Swelling Clays Map of the Conterminous United States
Extreme Temperature	Yes	Yes	• The NYS HMP identifies Coldwaves and Heatwaves as hazards of concern for New York State. • Erie County was included in four recent USDA disaster declarations related to extreme temperature events: ○ S3249 – March 2012 – Frosts and Freezes	• NYS DHSES • Input from Steering Committee and Planning Partnership

Attachment: 09-Section-5.2-Hazard-of-Concern-ID-093021 (RES-2022-375 : Authorizing Adoption of the

Table 5.2-1. Identification of Natural Hazards of Concern for Erie County

			○ S3250 – March 2012 – Frosts and Freezes, Unseasonably Warm Temperatures, and Excessive Heat ○ S3427 – June 2012 – Excessive Heat (also included Drought) ○ S3886 – January 2015 – Frosts and Freezes • The Steering Committee and Planning Partnership identified extreme temperature as a hazard of concern for Erie County.	• NOAA-NCEI • USDA
Flood (riverine, ice jam, dam failure, urban flooding, and flash flooding)	Yes	Yes	• The NYS HMP identifies flooding as a hazard of concern for New York State. • Between 1956 and 2020, Erie County was included in 7 FEMA flood-related declarations. ○ FEMA DR 494 March 19, 1976 Severe Ice Storm ○ FEMA DR 1233 June 25, 1998 - July 10, 1998 Severe Storm(s) ○ FEMA DR 1335 May 3, 2000 - August 12, 2000 Severe Storm(s) ○ FEMA DR 1534 May 13, 2004 - June 17, 2004 Severe Storm(s) ○ FEMA DR 1665 October 12, 2006 - October 25, 2006 Severe Storm(s) ○ FEMA DR 1857 August 8, 2009 - August 10, 2009 ○ FEMA DR 4472 October 31, 2019 - November 1, 2019 Severe Storm(s) Based on the history of flooding and its impacts on Erie County and input from the Steering Committee and Planning Partnership, flooding has been identified as a hazard of concern for the county.	• NYS DHSES • Input from Steering Committee and Planning Partnership • FEMA • NOAA-NCEI • USACE CRREL Ice Jam Database
Hailstorm	Yes	Yes	Please see Severe Storm Profile	
Hurricane	Yes	Yes	Please see Severe Storm Profile	
Ice Jams	Yes	Yes	Please see Flood Profile	
Ice Storm	Yes	Yes	Please see Severe Winter Storm Profile	
Invasive Species/Infestation	Yes	No	• The 2019 NYS HMP does not identify invasive species as a hazard of concern for New York State. • New York State has been affected by various instances of invasive ticks and mosquitos. • The NYS DEC has identified Erie County to be located within the emerald ash borer restricted zone and identified several known locations of the emerald ash borer within the county. • The Erie County Steering Committee and Planning Partnership did not identify invasive species or infestation as a hazard of concern within Erie County.	• NYS DEC • Input from Steering Committee and Planning Partnership

Attachment: 09-Section-5.2-Hazard-of-Concern-ID-093021 (RES-2022-375 : Authorizing Adoption of the

Table 5.2-1. Identification of Natural Hazards of Concern for Erie County

Hazard	Is this a hazard that may occur in Erie County?	If yes, does this hazard pose a significant threat to Erie County?	Why was this determination made?	Source(s)
Land Subsidence	Yes	No	• NYS HMP indicates New York State is vulnerable to land subsidence; however, this hazard is "extremely localized" and poses a "very low risk to population and property", according to the 2019 NYS HMP. • The Steering Committee and Planning Partnership did not identify land subsidence as a hazard of concern for Erie County.	• NYS DHSES • Input from Steering Committee and Planning Partnership • USGS
Landslide	Yes	Yes	• The 2019 NYS HMP includes landslide as a hazard of concern for New York State. • Between 1954 and 2020, New York State has included in one landslide-related disaster declaration, which included Erie County. • Based on previous occurrences and input from the Steering Committee and Planning Partnership, the landslide hazard was identified as a hazard of concern for Erie County.	• NYS DHSES • Input from Steering Committee and Planning Partnership • FEMA
Nor'Easters	No	No	• The Steering Committee and Planning Partnership do not consider Nor'Easters to be a hazard of concern for Erie County.	• NYS DHSES • FEMA • NOAA-NCEI
Severe Storm (windstorms, thunderstorms, hurricanes / tropical storms, hail, and tornadoes)	Yes	Yes	The NYS HMP identifies severe storm as a hazard of concern for New York State; however, for the state HMP, the hazards were profiled in individual sections lightning, hail, tornadoes, high winds, and hurricanes/tropical storms. For the Erie County HMP, the hazards were combined into one profile. Between 1954 and 2020, Erie County was included in seven FEMA severe storm-related declarations. ○ FEMA DR 4472 2019-10-31 Severe Storm(s) ○ FEMA DR 1857 2009-08-08 Severe Storm(s) ○ FEMA DR 1665 2006-10-12 Severe Storm(s) ○ FEMA DR 1534 2004-05-13 Severe Storm(s) ○ FEMA DR 1335 2000-05-03 Severe Storm(s) ○ FEMA DR 1233 1998-06-25 Severe Storm(s) ○ FEMA DR 494 1976-03-19 Severe Ice Storm • Erie County was included in two severe storm-related U.S. Department of Agriculture (USDA) disaster declarations: ○ S3593 – 2013 Excessive rain and related flooding, high winds, and hail	• NYS DHSES • FEMA • NOAA-NCEI • SPC • Input from Steering Committee and Planning Partnership

Hazard	Is this a hazard that may occur in Erie County?	If yes, does this hazard pose a significant threat to Erie County?	Why was this determination made?	Source(s)
			○ S3885 – 2015 Excessive Rain, High Winds, Hail, Lightning, and Tornado According to the National Environmental Information Center, storm events database indicates that Erie County was impacted by approximately 22 tornado events between 1950 and 2020, causing a total of 6 injuries and approximately $4.7 million in property damage. • Based on previous occurrences and input from the Steering Committee and Planning Partnership, severe storms are identified as a hazard of concern for Erie County.	
Severe Winter Storm (heavy snow, blizzards, ice storms)	Yes	Yes	• The NYS HMP identifies ice storms and snow storms as hazards of concern for New York State. According to the 2019 NYS HMP, Erie County has an annualized count of 6 Severe Winter Storm events, and their annualized winter storm losses are $8 million. • FEMA included Erie County in 22 winter storm-related disaster declarations: ○ DR-494 March 19, 1976 Severe Ice Storm ○ DR-527 February 5, 1977 Snow ○ EM-3027 January 29, 1977 Snow ○ EM-3107 March 13-17, 1993 Snow ○ EM-3136 January 1-15, 1999 Snow ○ EM-3157 November 19-21, 2000 Snow ○ DR-1404/EM-3170 December 24-29, 2001 Snow ○ EM-3268 October 12-25, 2006 Snow ○ DR-4204 November 17-26, 2014 Snow • Based on previous occurrences and input from the Steering Committee and Planning Partnership, severe winter storms are identified as a hazard of concern for Erie County.	• NYS DHSES • FEMA • NOAA-NCEI • Input from Steering Committee and Planning Partnership
Tornado	Yes	Yes	Please see Severe Storm	
Tsunami	No	No	• Tsunami is identified as a hazard of concern in the NYS HMP. • The Steering Committee and Planning Partnership do not consider tsunami to be a hazard of concern for Erie County.	• NYS DHSES • Input from Steering Committee and Planning Partnership
Volcano	No	No	• The NYS HMP identifies volcano as a hazard of concern for New York State. However, the the Steering Committee and Planning Partnership do not consider volcano to be a hazard of concern for Erie County.	• NYS DHSES • Input from Steering

5.2.3 Summary of Hazards of Concern

In summary, a total of 13 hazards of concern were identified as significant hazards affecting the entire county, to be addressed at the county level in this plan (shown here in alphabetical order):

- Coastal Erosion
- Cyber Security
- Earthquake
- Expansive Soils
- Extreme Temperature
- Flood
- Hazardous Materials
- Landslide
- Pandemic
- Severe Storm
- Severe Winter Storm
- Utility Failure
- Wildfire

Other hazards of concern that might have occurred in Erie County but have a low potential to occur or result in significant impacts can be considered in future updates to this plan.

Attachment: 09-Section-5.2-Hazard-of-Concern-ID-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

Attachment: 10-Section-5.3-Hazards-Ranking-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

5.3 HAZARD RANKING

As discussed in Section 5.2, Identification of Hazards of Concern, a comprehensive range of natural hazards that pose a significant risk to Erie County was selected and considered during the development of this plan. However, each community in Erie County has differing levels of exposure and vulnerability to each of these hazards. It is important for each community participating in this plan to recognize those hazards that pose the greatest risk to their community and direct their attention and resources accordingly to most effectively and efficiently manage risk and reduce losses. The hazard ranking for the county and each participating jurisdiction can be found in their jurisdictional annexes in Volume II, Section 9 of this plan.

To this end, a hazard risk ranking process was conducted for Erie County and its municipalities using the method described below. This method includes four risk assessment categories—probability of occurrence, impact (population, property, and economy), adaptive capacity, and changing future conditions (i.e., climate change). Each was assigned a weighting factor to calculate an overall ranking value for each hazard of concern. Depending on the calculation, each hazard was assigned a high, medium, or low ranking. Details regarding each of these categories are described in the sections below.

5.3.1 Hazard Ranking Methodology

The methodology used to rank the hazards of concern for Erie County is described below. Estimates of risk for the county were developed using methodologies promoted by the Federal Emergency Management Agency's (FEMA) hazard mitigation planning guidance, generated by FEMA's HAZUS-MH risk assessment tool and input from Erie County and participating jurisdictions. The ranking includes a factor to evaluate capacity of the participating jurisdiction to address each hazard through plans, policies, and mitigation strategies. For example, a community participating in the Community Rating System (CRS) Program has a high capacity to address and mitigate flooding issues, which will be reflected in the ranking benchmark. In addition, a factor addressing the degree of climate change impact is included in the methodology to adjust rankings for hazards expected to be significantly impacted by climate change. Table 5.3-1 shows the values for the four risk assessment categories assigned to Erie County's hazards. Details for each category are further described below.

Table 5.3-1. Summary of Hazard Ranking Approach

Category		Level / Category	Degree of Risk / Benchmark Value	Numeric Value	Weighted Value
Probability of Occurrence		Unlikely	A hazard event is not likely to occur or is unlikely to occur with less than a 1 percent annual chance probability.	0	30%
		Rare	Between 1 and 10 percent annual probability of a hazard event occurring.	1	
		Occasional	Between 10 and 100 percent annual probability of a hazard event occurring.	2	
		Frequent	100 percent annual probability; a hazard event may occur multiple times per year.	3	
Impact (Sum of all 3)	Population (Numeric Value x 3)	Low	14 percent or less of population is exposed to a hazard with potential for measurable life-safety impact due to its extent and location.	1	30%
		Medium	15 to 29 percent of population is exposed to a hazard with potential for measurable life-safety impact due to its extent and location.	2	
		High	30 percent or more of population is exposed to a hazard with potential for measurable life-safety impact, due to its extent and location.	3	
	Property (Numeric Value x 2)	Low	Property exposure is 14 percent or less of the total number of structures for your community.	1	
		Medium	Property exposure is 15 to 29 percent of the total number of structures for the community.	2	

Category		Level / Category	Degree of Risk / Benchmark Value	Numeric Value	Weighted Value
		High	Property exposure is 30 percent or more of the total number of structures for the community.	3	
	Economy (Numeric Value x 1)	Low	Loss estimate is 9 percent or less of the total replacement cost for the community.	1	
		Medium	Loss estimate is 10 to 19 percent of the total replacement cost for the community.	2	
		High	Loss estimate is 20 percent or more of the total replacement cost for the community.	3	
Adaptive Capacity		Low	Weak/outdated/inconsistent plans, policies, codes/ordinances in place; no redundancies; limited to no deployable resources; limited capabilities to respond; long recovery.	3	30%
		Medium	Plans, policies, codes/ordinances in place and meet minimum requirements; mitigation strategies identified but not implemented on a widespread scale; county/jurisdiction can recover but needs outside resources; moderate county/jurisdiction capabilities.	2	
		High	Plans, policies, codes/ordinances in place and exceed minimum requirements; mitigation/protective measures in place; county/jurisdiction has ability to recover quickly because resources are readily available, and capabilities are high.	1	
Climate Change		Low	No local data are available; modeling projects are uncertain on whether there is increased future risk; confidence level is low (inconclusive evidence).	1	10%
		Medium	Studies and modeling projections indicate a potential for exacerbated conditions due to climate change; confidence level is medium to high (suggestive to moderate evidence).	2	
		High	Studies and modeling projections indicate exacerbated conditions/increased future risk due to climate change; very high confidence level (strong evidence, well documented, and acceptable methods).	3	

Probability of Occurrence

The probability of occurrence is the likelihood of a hazard event occurring in any given year. A review of historic events assists with this determination. Each hazard of concern is rated in accordance with the numerical ratings and definitions described in Table 5.3-2. The probability of occurrence is given a weighted value of 30 percent.

Table 5.3-2. Probability of Occurrence Ranking Factors

Numeric Value	Probability Category	Definition
0	Unlikely	A hazard event is not likely to occur or is unlikely to occur with less than a 1 percent annual chance probability.
1	Rare	Between 1 and 10 percent annual probability of a hazard event occurring.
2	Occasional	Between 10 and 100 percent annual probability of a hazard event occurring.
3	Frequent	100 percent annual probability; a hazard event may occur multiple times per year.

Hazard Impacts

The impact of each hazard is considered in three categories: impact on population, impact on property (general building stock including critical facilities), and impact on the economy. Based on documented historic losses and individual assessments by each participating municipality, an impact rating of high, medium, or low is assigned with a corresponding numeric value for each hazard of concern. In addition, a weighting factor is assigned to each impact category: 3 for population, 2 for property, and 1 for economy. This gives the impact on population the greatest weight in evaluating the impact of a hazard. The total of each category is assigned a

Attachment: 10-Section-5.3-Hazards-Ranking-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

weighted value of 30 percent. Table 5.3-3 presents the numerical rating, weighted factor, and description for each impact category.

Table 5.3-3. Numerical Values and Definitions for Impacts on Population, Property, and Economy

Category	Weighted Value	Low Impact* (1)	Medium Impact (2)	High Impact (3)
Population	3	14% or less of population is exposed to a hazard with potential for measurable life-safety impact, due to its extent and location.	15% to 29% of population is exposed to a hazard with potential for measurable life-safety impact, due to its extent and location.	30% or more of population is exposed to a hazard with potential for measurable life-safety impact, due to its extent and location.
Property	2	Property exposure is 14% or less of the total number of structures for community.	Property exposure is 15% to 29% of the total number of structures for community.	Property exposure is 30% or more of the total number of structures for community.
Economy	1	Loss estimate is 9% or less of the total replacement cost for community.	Loss estimate is 10% to 19% of the total replacement cost for community.	Loss estimate is 20% or more of the total replacement cost for community.

Note: A numerical value of zero is assigned if there is no impact.

** For the purposes of this exercise, "impacted" means exposed for population and property and loss for economy.*

Additional Impacts

Along with impacts on population, property, and economy, the overall risk ranking considers two additional impacts that affect the county's vulnerability: Capability and Climate Change. Table 5.3-4 presents the numerical rating and description for each category.

Adaptive Capacity

Capability refers to a jurisdiction's ability to protect the community from or withstand a hazard event. Mitigation measures are already in place, including codes and ordinances, plans, and procedures to withstand hazards due to design or location, deployable resources, or plans and procedures in place to respond to an event. The capability category has a weighted factor of 30 percent.

Climate Change or Changing Future Conditions

Climate change refers to the impact that climate change projections have on increasing or decreasing the severity and frequency of a hazard. The Climate Change category has a weighted factor of 10 percent.

Table 5.3-4. Numerical Values and Definitions for Changing Future Conditions and Adaptive Capacity

Category	Low Impact	Medium Impact	High Impact
Capability	Weak/outdated/inconsistent plans, policies, codes/ordinances in place; no redundancies; limited to no deployable resources; limited capabilities to respond; long recovery.	Plans, policies, codes/ordinances in place and meet minimum requirements; mitigation strategies identified but not implemented on a widespread scale; county/jurisdiction can recover but needs outside resources; moderate county/jurisdiction capabilities.	Plans, policies, codes/ordinances in place and exceed minimum requirements; mitigation/protective measures in place; county/jurisdiction has ability to recover quickly because resources are readily available and capabilities are high.
Climate Change	No local data are available; modeling projects are uncertain on whether there is increased future risk; confidence level is low (inconclusive evidence).	Studies and modeling projections indicate a potential for exacerbated conditions due to climate change; confidence level is medium to high (suggestive to moderate evidence).	Studies and modeling projections indicate exacerbated conditions and increased future risk due to climate change; very high confidence level (strong evidence, well documented and acceptable methods).

Attachment: 10-Section-5.3-Hazards-Ranking-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

Note: "Low impact" for adaptive capacity means the jurisdiction does not have the capability to effectively respond, which increases vulnerability; whereas high impact for adaptive capacity means the jurisdiction does have the capability to effectively respond, which decreases vulnerability.

Risk Ranking Value

Each impact was then weighted and the risk ranking for each hazard is then calculated using the following formula:

Example Risk Ranking Equation

Risk Ranking = [(Impact on Population x 3) + (Impact on Property x 2) + (Impact on Economy x 1) x 0.3] + [Capability x 0.3] + [Climate Impact x 0.1] + [Probability of Occurrence x 0.3]

Based on the total for each hazard, a priority ranking is assigned to each hazard of concern (high, medium, or low). The rankings were categorized as follows: Low = values less than 3.9; Medium = values between 3.9 and 4.9; High = values greater than 4.9.

5.3.2 Hazard Ranking Results

Using the process described above, the risk ranking for the identified hazards of concern was determined for Erie County. The hazard ranking for Erie County is detailed in the subsequent tables that present the step-wise process for the ranking. The countywide risk ranking includes the entire planning area and may not reflect the highest risk indicated for any of the participating jurisdictions. The resulting ranks of each municipality indicate the differing degrees of risk exposure and vulnerability. The results support the appropriate selection and prioritization of initiatives to reduce the highest levels of risk for each municipality. Both the county and the participating jurisdictions have applied the same methodology to develop the countywide risk and local rankings to ensure consistency in the overall ranking of risk; jurisdictions had the ability to alter rankings based on local knowledge and experience in handling each hazard.

This hazard ranking exercise serves four purposes: (1) to describe the probability of occurrence for each hazard; (2) to describe the impact each would have on the people, property, and economy; (3) to evaluate the capabilities a community has with regards to natural hazards; and (4) to consider changing future conditions (i.e., climate change) in Erie County. Estimates of risk for Erie County were developed using methodologies promoted by FEMA's hazard mitigation planning guidance, generated by FEMA's HAZUS-MH risk assessment tool and input from the county and participating municipalities.

Table 5.3-5 shows the probability ranking assigned for the likelihood of occurrence for each hazard.

Table 5.3-5. Probability of Occurrence Ranking for Hazards of Concern for Erie County

Hazard of Concern	Probability	Numeric Value
Coastal Erosion	Unlikely	0
Cyber Attack	Frequent	3
Earthquake	Rare	1
Expansive Soils	Rare	1
Extreme Temperature	Rare	1
Flood	Frequent	3
Hazardous Materials	Frequent	3
Landslide	Unlikely	0

Attachment: 10-Section-5.3-Hazards-Ranking-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

Pandemic	Unlikely	0
Severe Storm	Frequent	3
Severe Winter Storm	Frequent	3
Utility Interruption	Frequent	3
Wildfire	Occasional	2

Table 5.3-6 shows the impact evaluation results for each hazard of concern, including impact on property, structures, and the economy on the county level. The weighting factor results and a total impact for each hazard also are summarized. It is noted that several hazards that have a high impact on the local jurisdictional level can have a lower impact when analyzed countywide.

Table 5.3-6. Impact Ranking for Hazards of Concern for Erie County

Hazard of Concern	Population			Property			Economy			Total Impact Rating (Population + Property + Economy)
	Impact	Numeric Value	Multiplied by Weighing Factor (3)	Impact	Numeric Value	Multiplied by Weighing Factor (2)	Impact	Numeric Value	Multiplied by Weighing Factor (1)	
Coastal Erosion	Low	1	3	Low	1	2	Low	1	1	6

Utility Interruption	High	1	Medium	2
Wildfire	High	1	High	3

Table 5.3-8 presents the total calculations for each hazard ranking value for the hazards of concern. The rankings were categorized and assigned a color as follows: Low = values less than or equal to 3.8 (green); Medium = values between 3.9 and 4.9 (yellow); High = values greater than or equal to 5.0 (red).

Table 5.3-8. Total Hazard Ranking Values for the Hazards of Concern for Erie County

Hazard of Concern	Probability x 30%	Total Impact x 30%	Adaptive Capacity x 30%	Changing Future Conditions x 10%	Total Risk Ranking Value
Coastal Erosion	0	3	2	1	Low
Cyber Attack	0.9	3	2	3	Medium
Earthquake	0.3	9	6	1	High
Expansive Soils	0.3	3	2	2	Low
Extreme Temperature	0.3	9	2	1	Medium
Flood	0.9	3	2	1	Low
Hazardous Materials	0.9	3	2	2	Low
Landslide	0	3	2	1	Low
Pandemic	0	9	2	3	Medium
Severe Storm	0.9	9	2	1	High
Severe Winter Storm	0.9	9	2	1	High
Utility Interruption	0.9	6	4	2	High
Wildfire	0.6	6	4	2	Medium

Notes: Low = Values less than 3.9; Medium = Values between 3.9 and 4.9; High = Values greater than 4.9

Table 5.3-9 presents the jurisdictional hazard ranking for each hazard. An evaluation of the total risk ranking score determined ranking categories that were grouped into three categories: low, medium, and high. It also includes input by the municipalities.

These rankings have been used as one of the bases for identifying the jurisdictional hazard mitigation strategies included in this plan in Section 9, Jurisdictional Annexes. The summary rankings for the county reflect the results of the vulnerability analysis for each hazard of concern and vary from the specific results of each jurisdiction. For example, the severe storm hazard may be ranked low in one jurisdiction, but due to the exposure and impact countywide, it is ranked as a high hazard and is addressed in the county mitigation strategy accordingly. Jurisdictional ranking results are presented in each local annex in this plan in Section 9, Jurisdictional Annexes.

5.4.1 Coastal Erosion

This section provides a profile and vulnerability assessment of the coastal erosion hazard for Erie County.

5.4.1.1 Hazard Profile

This section presents the coastal erosion description, extent, location, previous occurrences and losses, and probability of future occurrences.

Hazard Description

Along with flooding, coastal erosion is one of the primary hazards leading to loss of lives or damage to property and infrastructure in coastal areas. Many natural factors affect erosion of the shoreline, including shore and near-shore morphology, shoreline orientation, and the response of these factors to storm frequency and sea level rise. Coastal shorelines change constantly in response to wind, waves, tides, water level fluctuation, seasonal and climatic variations, human alteration, and other factors that influence the movement of sand and material within a shoreline system.

Coastal erosion is a natural phenomenon consisting of an endless sediment redistribution process that continually changes beaches, dunes, and bluffs. Waves, currents, wind-driven water, ice, rainwater runoff, and groundwater seepage all move sand, sediment, and water along the coastline. Other contributing factors can increase coastal erosion of a natural protective feature and these include length of fetch; wind direction and speed; wavelength, height, and period; nearshore water depth; tidal influence; and overall strength of a storm (NYS DEC 2020).

Coastal erosion can result in significant economic loss through the destruction of buildings, roads, infrastructure, natural resources, and wildlife habitats. Damage often results from an episodic event, such as the combination of severe storm waves and dune or bluff erosion.

Erosion results in the transfer of sediment from one location to another. The addition of sediment to a location is referred to as accretion. Accretion can be beneficial if it strengthens a shoreline, leading to wider beaches and more material for dune building. However, accretion can also result in the narrowing and shoaling of channels and inlets. This can ultimately lead to a potential increase of coastal flooding risk or lack of safe water access for emergency response boats.

Coastal erosion is usually a sporadic event and most typically associated with another hazard event, such as a strong storm. Additionally, erosion rates are influenced by local geographic features and man-made structures. Although coastal erosion is most typically associated with flooding, it can also be caused by windstorm events, which can blow beach and dune sand overland into adjacent low-lying marshes, upland habitats, inland bays, and communities. If related to a flood event, erosion is typically seen when extreme rainfall scours and erodes dunes and when inland floodwaters return through the dunes and beach face into the ocean (FEMA 1996). Within Erie County, erosion and fluctuations of water levels along Lake Erie are the most serious and present coastal hazard threat.

Human activities can also lead to coastal erosion and intensify the effects of natural processes and speed up the coastal erosion process. This includes construction, shipping, boating, and recreation, which can all increase erosion of sandy beaches, dunes, and bluffs (NYS DEC 2020). Humans contribute to the coastal erosion in several ways:

- By removing vegetation, exposing bare soil to be easily eroded by wind, waves, and precipitation;

- Directing run-off from streets, parking lots, roofs, and other locations over a bluff edge causing it to erode; or
- By construction of 'hardened' structures along the shore that block that movement of sand along the coast, reflect wave energy onto adjacent shorelines, or cause deepening of the nearshore area (NYS DEC 2020).

Historically, some of the methods used by municipalities and property owners to stop or slow down coastal erosion or shoreline change have actually exacerbated the problem. Attempting to halt the natural process of erosion with shore parallel or perpendicular structures, such as seawalls (groins and jetties) and other hard structures, typically worsens the erosion in front of the structure (i.e., walls), prevents or starves any sediment behind the structure (groins) from supplying down-drift properties with sediment, and subjects down-drift beaches to increased erosion. Since most sediment transport associated with erosion and longshore drift has been reduced, some of the state's greatest coastal assets and attractions—beaches, dunes, barrier beaches, salt marshes, and estuaries—are threatened and will slowly disappear as the sediment sources that feed and sustain them are eliminated.

Bluff coastlines along Lake Erie are constantly changing as the result of wind, currents, storms, and changing lake levels. Because of this, developed sandy shorelines are often stabilized with hardened structures (seawalls, bulkheads, revetments, rip-rap, gabions, and groins) to protect coastal properties from erosion. While hardened structures typically prove to be beneficial in reducing property damage, the rate of coastal erosion typically increases near stabilization structures. Shore protection structures, such as seawalls and revetments, usually eliminate natural wave run-up and sand deposition processes and can increase reflected wave action and currents at the waterline. Increased wave action can cause localized scour in front of structures and prevent settlement of suspended sediment (FEMA 1996). This increased erosion impacts natural habitats, spawning grounds, recreational activity areas, and public access (Frizzera 2011).

A variety of natural- and human-induced factors influence the erosion process. For example, shoreline orientation and exposure to prevailing winds, seiches, and waves all influence erosion rates. Beach composition influences erosion rates as well. For example, a beach composed of a finer sand and silt is easily eroded compared to beaches primarily consisting of course sand, boulders, gravel or large rocks, which are more resistant to erosion. Common contributing factors to coastal erosion include, but are not limited to, the following and further discussed below:

- Impacts from storms;
- Decreased sediment supplies;
- Storm-induced high water or seiches;
- Elevated lake levels; and
- Wave action.

Impacts from Storms

Beaches, dunes, and bluffs are a natural barrier between Lake Erie and inland communities, ecosystems, and resources. During a strong storm, changes to beaches, dunes, and bluffs can be significant and the results are sometimes catastrophic. The U.S. Geological Service (USGS) provides scientific support for mitigation planning through observations of beach, dune, and bluff change, as well as models of waves and storm surge to identify areas vulnerable to extreme coastal changes. By identifying areas of coastline in New York State likely to experience extreme and devastating erosion during a coastal storm, it is possible to determine risk levels associated with development in areas where the land shifts and moves with each land-falling storm (NYS DHSES 2013).

Attachment: 11-Section-5.4.1-Coastal-Erosion-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

Decreased Sediment Supplies

Coastal landforms, such as bluffs, are essential in maintaining a supply of sediment to beaches and dunes. If engineered structures are used to stabilize shorelines, the natural process of erosion is disturbed and decreases the amount of sediment supply. With reduced sediment, the ability of natural protective features (dunes and beaches) to provide prevention from storms and flood control benefits is reduced (NYS DHSES 2013).

Storm-Induced High Water or Seiches

Great Lakes storms can occur any time of the year and at varying levels of severity. Natural protective features within coastal erosion hazard areas provide buffering and protection to shorelines from erosion. Dunes and bluffs are effective against storm-induced high water and related wave action (NYS DHSES 2013).

Wind and weather conditions on the Great Lakes may create a seiche, an oscillating wave which can be several feet high. In many of the Great Lakes, the time period between the "high" and "low" of a seiche may be between 4 and 7 hours. As this is similar to the 6-hour time period of the tides on the ocean, it is frequently mistaken for a tide.

Elevated Lake Levels

Elevated lake levels contribute to higher rates of coastal erosion. Higher lake levels will magnify the reach of currents and wave action. Unlike oceans which have tides, the Great Lakes are considered to be non-tidal and experience change in water levels primarily because of meteorological effects. Water levels in the Great Lakes have long-term, annual, and short-term variations. Long-term variations depend on precipitation and water storage over many years. Annual variations occur with the changing seasons with an annual high in the late spring and a low in the winter. These changes occur at a rate that can be measured in feet per month (NOAA 2020).

Wave Action

As waves approach a shoreline, they crest and break, losing some initial energy. The remaining wave runs up the beach before pulling back down. Depending on the size of the wave, angle of wave "attack," and the wave period, waves can cause erosion or accretion of sediment. Seasonal high temperatures and seiches contribute to elevated lake levels allowing larger waves to reach the shoreline. Greater water depths near shore also result in less loss of wave energy from shoaling.

Bluff Erosion

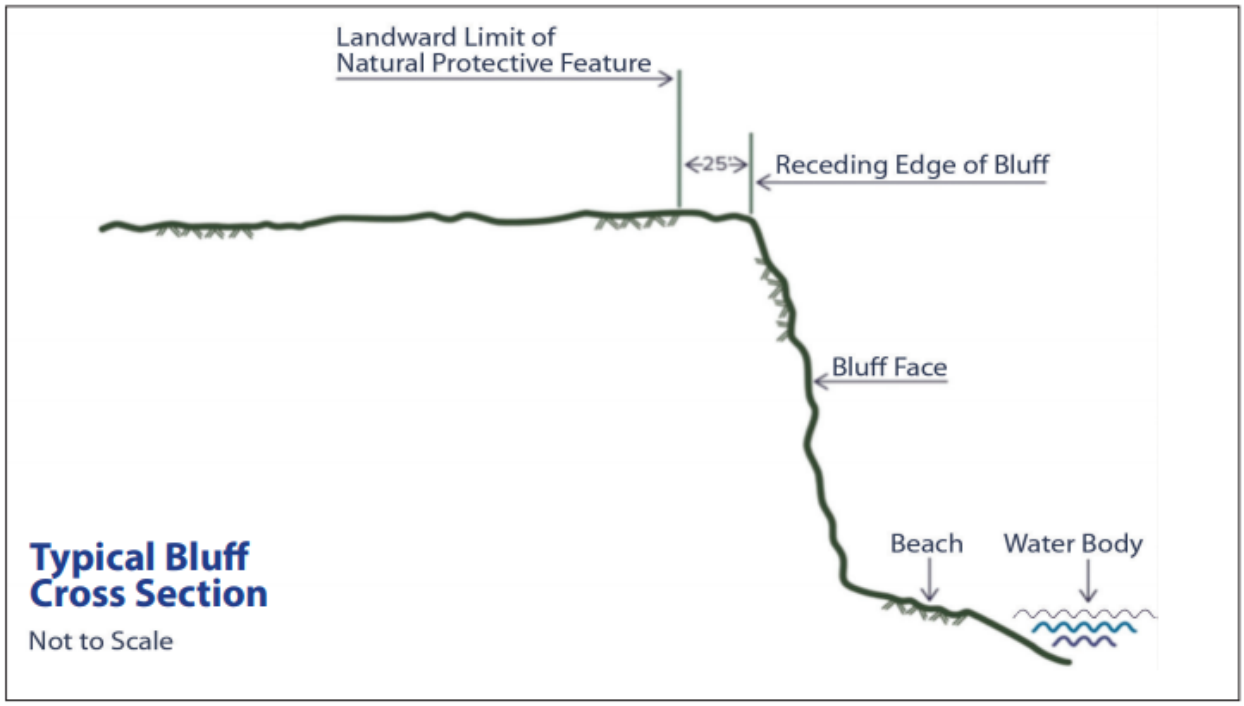
The stability of coastal bluffs along New York's Great Lakes depends on the action of the surface water over the face of the bluff as much as it does on the material of the bluff, steepness of the slope and wave action at the toe of the slope. Human disturbances on the bluff may also affect stability (NY Sea Grant 2019). During heavy rainfall, sediment can be washed down the face of the bluff if it is not vegetated, similar to the beach and dune erosion processes just discussed. Storm-related increases in water height can also be detrimental to coastal bluffs. When waves begin to attack the base of the bluff, which is normally protected by a beach, sediment will be removed from the base (i.e., toe) resulting in undercutting and leaving a vertical scarp. This will make the entire bluff unstable because of the continual slumping of bluff material from above the eroded toe, which in turn removes the vegetation that provides stability and protective cover, furthering erosion (NYS Sea Grant 2018). This slumping can also result in small landslides on the face of the bluff.

Groundwater can also increase erosional rates in coastal bluffs. As the groundwater moves, it loosens and picks up material; erosion will result when the water flows out of the bluff removing sediment with it. The coarser the bluff material, the more easily this can occur. Gullies, which form as a result of surface water flowing down or

Attachment: 11-Section-5.4.1-Coastal-Erosion-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

through the bluff face, indicate groundwater-related problems. In freezing temperatures, the groundwater will become trapped in the bluff and expand as cracks. This separates larger chunks of sediment, which slide down the face (NYS Sea Grant 2018).

Figure 5.4.1-1. Cross Section of Typical Great Lakes Bluff



Source: NYS Sea Grant 2019

Extent

Coastal erosion is measured as the rate of change in the position or horizontal displacement of a shoreline over a period of time. Geologists measure the severity of erosion in two ways, as a rate of linear retreat (feet of shoreline recession per year) and volumetric loss (cubic yards of eroded sediment per linear foot of shoreline frontage per year) (NYC Emergency Management 2019).

Coastal erosion can occur rapidly or gradually. However, measuring erosion is often difficult, because the extent of natural erosion in a specific shoreline varies significantly from year to year. If choices are made to dredge or nourish beaches along particular parts of the coast, it can be difficult to determine how much beach is being lost or gained through natural processes and how much is being affected by human activities (NYC Emergency Management 2019). Coastal erosion may also be exacerbated by human activities, such as boat wakes, shoreline hardening, and dredging (FEMA 1996).

Several factors determine whether a community exhibits greater long-term erosion or accretion:

- Exposure to high-energy storm waves,
- Sediment size and composition of eroding coastal landforms feeding adjacent beaches,
- Near-shore bathymetric variations that direct wave approach,
- Along-shore variations in wave energy and sediment transport rates,
- Relative lake elevations,
- Frequency and severity of storm events, and

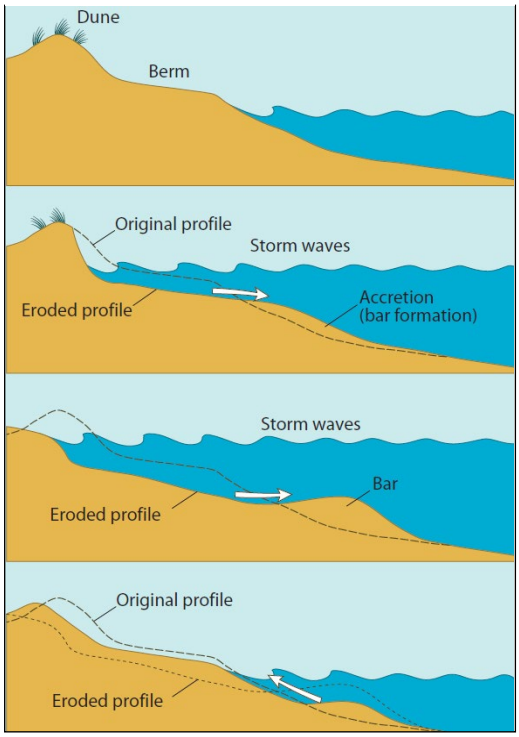
Attachment: 11-Section-5.4.1-Coastal-Erosion-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

- Human interference with sediment supply (e.g. revetments, seawalls, jetties) (Woods Hole Sea Grant 2003).

Beaches constantly change daily, weekly, monthly, and yearly, primarily in response to waves. The size and presence of any part of a beach at a given time is influenced by a number of factors: size and direction of the waves, size and shape of sand grains on the beach, the level of water at the time waves strike, and the initial shape of the beach.

Waves play a major role in controlling the form, position, and size of the beach. Waves are responsible for picking up and moving sand along the coast. The beach responds quickly to changes in wave energy. Very large, choppy waves tend to pick up and remove sand from the beach berm, which lowers the elevation, flattening the beach profile and causing the berm and shoreline to move landward. The material picked up from the waves can move in many directions depending on numerous factors. Most frequent, material is moved offshore and is deposited in a bar during storms. As the bar grows, it causes larger waves to break and dissipate their energy before they reach the landward berm, which adds protection to the beaches. In calmer weather, long, gentle waves can pick up much of the sand and bring it back onshore, building up the berm, raising the height of the backshore and moving the beach berm and shoreline back seaward. This creates a cycle where the beach erodes and builds back up in response to wave action. Over the course of a year, beaches can move back and forth by as much as 270 feet (Tanski 2012). Figure 5.4.1-2 illustrates the beach response to waves.

Figure 5.4.1-2. Beach Response to Waves



Source: Tanski 2012

Location

Much of New York's Great Lakes shorelines are naturally subject to erosion, which becomes a concern particularly where there are homes, businesses, or other structures nearby. Since the last glaciers retreated more than 10,000 years ago, Great Lakes water levels have varied dramatically, as have the flows of water between these five massive lakes and their combined outflow to the Atlantic Ocean. (NY Sea Grant 2019). Changes in water level move the shoreline and areas likely to experience erosion.

Erie County has extensive shoreline that can be impacted by coastal erosion, including the coastline along Lake Erie and along the Niagara River. Erie County borders the upper 12 miles of the East Branch of the Niagara River in the Town of Grand Island, The Town of Tonawanda, and the City of Tonawanda. Grand Island is one of the world's largest freshwater islands and has a shoreline edge of about 23.5 miles (USACE 1971). The City of Buffalo, the City of Lackawanna, the Town of Hamburg, the Town of Evans, the Town of Brant, and the Cattaraugus Reservation are directly located on the shoreline of Lake Erie.

The average height of the shore bluffs is 40 to 50 feet and up to 100 feet in short reaches. The lower part of the bluffs consists of shale, generally well above the limit of wave uprush. In some places, shale extends the full height of the bluff, but more generally the top half is earth. For some distance on either side of river mouths, the bluffs are lower and may be entirely granular material or silt and clay. Narrow gravel and shingle beaches, 40 to 50 feet wide at average lake levels, extend along some of the shale bluff reaches. Several wider sand beaches

Attachment: 11-Section-5.4.1-Coastal-Erosion-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

occur mainly between Silver Creek and Cattaraugus Creek and in the Town of Evans. Except for these beaches and occasional pockets of sand trapped by natural headlands or shore structures, little sand is present in this entire reach, and if present, is likely a thin layer over the shale bottom (USACE 1971).

Because of the relative stability of the high shale bluffs, severe erosion and flooding problems in Erie County are relatively few. Erosion of the bluffs and deterioration from weathering and frost action do occur, and improvements close to the top of the bluffs become threatened (USACE 1971).

In the City of Buffalo, most of the shoreline along Niagara River and Lake Erie is protected by breakwaters. The outer harbor breakwater protects Buffalo Harbor by alleviating the severity of flooding on Lake Erie. The other breakwater, which is further north and parallels the lake's eastern shore, separates Black Rock Canal from the Niagara River (FEMA FIS 2019). New York uses other protection measures for coastal erosion in the Great Lakes, such as sea walls, revetments, bulkheads, groins, jetties, and nature-based solutions (reestablishing natural shorelines and vegetation) (NYS Sea Grant 2019).

Coastal Erosion Hazard Area

The coastline of Lake Erie is designated by NYS DEC as an area at risk to coastal erosion from natural and human activities and is therefore regulated. NYS DEC has two programs focused on the protection of coastal erosion: Coastal Erosion Hazard Area (CEHA) permit program and the United States Army Corps of Engineers (USACE) Civil Works Program. The CEHA program regulates and issues permits for activities within a coastal erosion hazard area. NYS DEC works with USACE to study coastal erosion problems along coastlines and to develop coastal erosion solutions. These are usually large-scale projects that impact entire communities (NYS DEC 2020).

NYS prevents and reduces coastal erosion by:

- Promoting and preserving the natural protective features, such as dunes and bluffs, beaches, and near-shore areas of coastal regions;
- Restricting or prohibiting activities or development in natural protective feature areas;
- Ensuring new construction or structures are built a safe distance from areas of active coastal erosion and the impact of coastal storms;
- Regulating the placement and construction of coastal erosion protection structures, when justified, to minimize damage to property, natural protective features, and other natural resources;
- Restricting development involving public investment in services, facilities, or activities (for example, extending public water supply and sewer services) which are likely to encourage new permanent development in coastal erosion hazard areas;
- Requiring publicly financed coastal erosion protection structures (intended to minimize coastal erosion damage) to be used only where necessary to protect human life or where the public benefits of such structures clearly outweigh the public expenditures; and
- Encouraging administration of coastal erosion management programs by coastal municipalities and establishing procedural standards for local program implementation and establishing standards for the issuance of coastal erosion management permits (NYS DEC 2020).

Because of the consistent coastal erosion problems along the New York State coastline, the State Legislature passed the CEHA Act (Article 34 of the Environmental Conservation Law [ECL]), establishing the state's coastal policy in August 1981. Under this act:

- Areas prone to coastal erosion are identified.

Attachment: 11-Section-5.4.1-Coastal-Erosion-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

- Activities in areas subject to coastal erosion are undertaken in such a way that damage to property is minimized, increases in coastal erosion are prevented, and natural features are protected. Public actions likely to encourage new development in CEHA should not be undertaken unless the areas are protected by structural or other erosion control projects, which could prevent erosion damage during the life of the proposed action.
- Erosion control projects are publicly financed only where needed to protect human life for existing or new development, which absolutely requires a location within a given hazard area.
- Public and private erosion control projects should minimize damage to other human-made property, natural protective features, and other natural resources.

As of April 23, 2021, Erie County contains no certified CEHA communities; however, the Town of Brant and the Town of Evans are NYS DEC-regulated CEHA communities. Regulated CEHA communities have various actions that are restricted, prohibited, or require a permit (NYS DEC 2020a, b).

As a part of the CEHA Act, NYS DEC has developed minimum standards and criteria, 6 NYCRR Part 505 – Coastal Erosion Management, for the statewide regulation of development and other activities within these areas. Part 505 defines a regulatory program to be administered by DEC within identified CEHA and establishes standards for the issuance of coastal erosion management permits by the DEC. Procedural requirements have also been established for local governments that wish to implement a local program, although local implementation is not required until after the NYS DEC has filed CEHA maps for a municipality (NYS DEC 1988). Part 505 establishes two categories of CEHA: (1) Structural Hazard Areas and (2) Natural Protective Features.

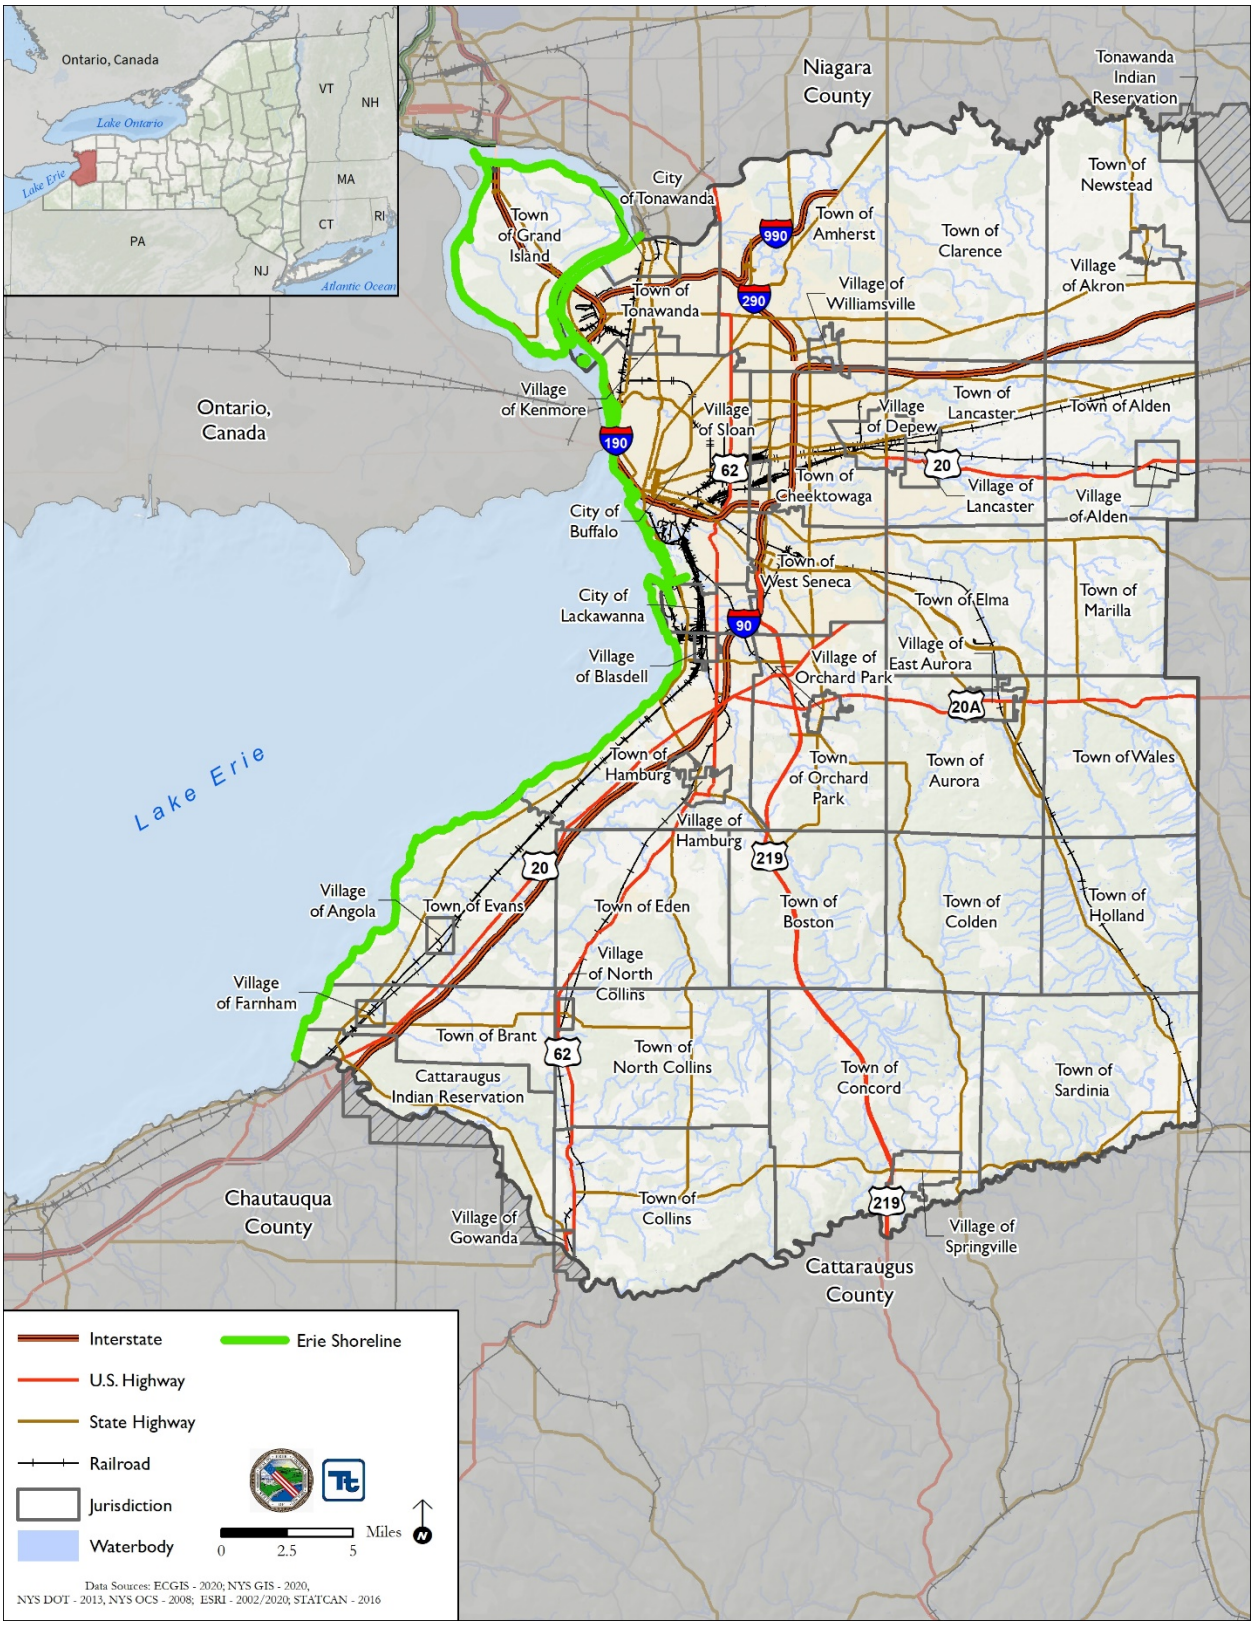
- *Structural Hazard Areas* are shorelands, located landward of natural protective features, and have shorelines receding at a long-term average annual recession rate of 1 foot or more per year. The inland boundary of a structural hazard area is calculated by starting at the landward limit of the fronting natural protective feature and measuring it along a line perpendicular to the shoreline a horizontal distance which is 40 times the long-term average annual recession rate (NYS DEC 1988).
- *Natural Protective Feature Area (NPFA)s* are a land and/or water area containing natural protective features, the alteration of which might reduce or destroy the protection afforded other lands against erosion or high water, or lower the reserves of sand or other natural materials available to replenish storm losses through natural processes. All NPFAs are delineated as such on CEHA maps (NYS DEC 1988). NYS DEC is in the process of updating these maps.

The NYS DEC 1988 CEHA paper maps depict CEHA along the Towns of Brant, Hamburg, and Evans. These maps show the landward limit of the natural protective features, but do not include the surface hazard areas. The NYS DEC commissioner is tasked to review the boundaries of these hazard areas every 10 years, and after major coastal storms, and revise the maps if the CEHA boundary changed by 25 feet or more (NYS DEC Article 34, Chapter 841).

Since the CEHA maps do not depict the complete hazard area, they are not illustrated as a part of this risk assessment. Instead, Figure 5.4.1-3 highlights the shoreline of Erie County. The entire shoreline is vulnerable to coastal erosion.

Attachment: 11-Section-5.4.1-Coastal-Erosion-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

Figure 5.4.1-3. Coastal Erosion Hazard Areas for Erie County



Attachment: 11-Section-5.4.1-Coastal-Erosion-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

NYS DEC is currently proposing a general permit (Great Lakes Erosion Control General Permit) for the purposes of shore protection to safeguard existing functional erosion control structures, roads, bridges, infrastructure, and property along the Lake Ontario shoreline, Lake Erie shoreline, Niagara River, and Saint Lawrence River, including affected portions of navigable bays and tributaries (NYS DEC 2020).

Previous Occurrences and Losses

Although many factors contribute to the natural coastal erosion of Erie County shorelines; historical storm events have significantly increased coastal erosion processes. Because Erie County is located along Lake Erie, strong Great Lakes storm events that commonly occur within the area have resulted in significant losses and temporary or permanent changes to the County's shorelines. Details regarding Severe Storm and Severe Winter Storm events that have impacted Erie County are presented earlier in Section 5.4.10 and Section 5.4.11, respectively.

Between 1954 and 2020, New York State and Erie County were not included in any FEMA declared coastal erosion specific disasters (DR) or emergency declarations (EM). However, Erie County has been included in numerous declarations that involved severe storms and severe winter storms. Section 5.4.6 (Flood), Section 5.4.10 (Severe Storm), and Section 5.4.11 (Severe Winter Storm) include more information on these declarations. For this 2022 Hazard Mitigation Plan (HMP), known coastal erosion events that have impacted Erie County between 2000 and 2020 are identified.

Attachment: 11-Section-5.4.1-Coastal-Erosion-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

Attachment: 11-Section-5.4.1-Coastal-Erosion-093021 (RES-2022-375 : Authorizing Adoption of the 2022

Table 5.4.1-1. Coastal Erosion Events in Erie County, 2000 to 2020

Dates of Event	Event Type	FEMA Declaration Number	Erie County Designated?	Location	Losses / Impacts
December 12, 2000	Flood, Coastal Erosion	N/A	N/A	Lake Erie	The high winds caused water levels at the eastern end of Lake Erie to rise over 5 feet in a few hours. The high water levels coupled with waves of 10 to 14 feet caused shoreline erosion and localized flooding. Evacuations took place at Hoover Beach in the Town of Hamburg.
November 6, 2005	Flood, Coastal Erosion	N/A	N/A	Lake Erie	High water levels and waves of 10 to 15 feet resulted in some erosion of the lake shore and limited property damage.
January 30, 2008	Flood, Coastal Erosion	N/A	N/A	Lake Erie	The high water levels and waves to 12 to 16 feet resulted in erosion of the lake shore and significant flooding at the extreme eastern end of the lake.
October 31, 2019	Coastal Erosion	N/A	N/A	Buffalo, Lake Erie	The North Breakwater in the Buffalo Harbor suffered severe storm damage resulting in gaps in the breakwater. Gaps in the structure could be seen from the east end of Erie Basin Marina and also from Ralph C. Wilson Jr. Centennial Park.
November 27, 2019	High Wind, Coastal Erosion	N/A	N/A	Buffalo, Lake Erie	Strong low pressure moved from the central Great Lakes to north of Lake Ontario. The trailing cold front entered western New York early in the afternoon of 11/27 and swept through later that evening. 50-60 knot winds blew for a 3-5 hour period in the cold advection behind the cold front. A seiche peaked at 9.56 feet above low water datum with the level above Lake Erie's flood stage for about 4 hours. This flooded Canalside in downtown Buffalo, flooded Route 5, and caused additional damage to breakwaters in Dunkirk in Buffalo. Selected peak wind speeds included 69 mph in Fredonia, 66 mph in Hamburg, 59 mph at Buffalo Airport, 58 mph in Batavia, and 58 mph in Warsaw.
January 12, 2020	Strong Wind, Coastal Erosion	N/A	N/A	Buffalo, Lake Erie	Post-frontal winds mixed well behind an early morning cold front brought wind gusts across much of western New York, especially along the Lake Erie shore, Buffalo, and Batavia area that exceeded 65 mph. Widespread non-thunderstorm wind damage was reported in all lakeshore counties from Monroe westward along Lake Ontario and all counties bordering Lake Erie, as well. High winds drove a seiche on Lake Erie, resulting in water flooding Route 5 in Hamburg, additional damage to the Dunkirk Pier and break wall, damage to the Buffalo break wall, and flooding in Canalside in downtown Buffalo. The seiche peaked the water level in Buffalo at 9.85 feet above low water datum.
January 18, 2020	Lakeshore Flood, Coastal Erosion	N/A	N/A	Buffalo, Lake Erie	A relatively deep, progressive mid-level trough crossed southern Ontario and the Lower Great Lakes Saturday night and early Sunday, January 18-19 resulting in snow. As the cold front passed that brought colder air in, a seiche on Lake Erie again brought lakeshore flooding to Chautauqua and Erie counties, doing further damage to the Dunkirk Pier, Buffalo break wall, and closing Route 5 in Hamburg. There were two distinct pulses of higher water on the east end of the lake, as well. The first corresponded with lake levels of 8.18 feet above low water datum, and the second of 7.3 feet above low water datum.

Source: NOAA-NCEI 2021; FEMA 2021

Probability of Future Occurrences

Coastal erosion is a frequent event and occurs because of both natural and human activities. All beaches are affected by coastal erosion, but the rate and severity of erosion vary in frequency. Chronic erosion is the gradual recession of a shoreline over a period of decades and will be impacted by wave heights, wave angles, climate changes, and human causes such as development, removal of vegetation, runoff from development, and impacts of hard structures in the coastal zone (NYS DEC 2020). Episodic erosion occurs in response to flood events or coastal storms and is characterized by a rapid recession of the shoreline. Because coastal erosion is tied closely to other activities, frequency rates and severity levels are best evaluated in conjunction with other related hazards' probabilities and by analyzing secondary impacts from storms, human actions, and other factors. Sections 5.4.10 (Severe Storm) and 5.4.11 (Severe Winter Storm) include information on the probability of severe storms and severe winter storms.

Section 5.3 ranks the identified hazards of concern for Erie County. The probability of occurrence, or likelihood of the event, is one parameter used for hazard rankings. Based on historical records and input from the Steering and Planning Committees, the probability of occurrence for coastal erosion in the County is considered 'unlikely' (not likely to occur or less than 1 percent annual chance of occurring).

Climate Change Impacts

Climate change is beginning to affect both people and resources in New York State, and these impacts are projected to continue growing. Impacts related to increasing temperatures and heavier precipitation are already being felt in the state. ClimAID: the Integrated Assessment for Effective Climate Change in New York State (ClimAID) was undertaken to provide decision makers with information on the state's vulnerability to climate change and to facilitate the development of adaptation strategies informed by both local experience and scientific knowledge (New York State Energy Research and Development Authority [NYSERDA] 2014).

Each region in New York State, as defined by ClimAID, has attributes that will be affected by climate change. Erie County is part of Region 1, Western New York and the Great Lakes Plain. In Region 1, it is estimated that temperatures will increase by 3.7 ºF to 7.3 ºF by the 2050s and 4.2 ºF to 12.0 ºF by the 2080s (baseline of 47.7 ºF). Precipitation totals will increase between 2 to 12 percent by the 2050s and 1 to 17 percent by the 2080s (baseline of 34.0 inches). Regional precipitation across New York State is projected to increase by approximately 1-8 percent by the 2020s, 3-12 percent by the 2050s, and 4-15 percent by the 2080s (NYSERDA 2014).

The projected increase in precipitation is expected to occur in heavy downpours and less in light rains. Downpours are very likely to increase in frequency and intensity (NYSERDA 2014). Heavy rainfall can contribute to greater amounts of sediment being carried off of bluffs and coastlines.

Overall regional precipitation is the primary driver of average Great Lakes water levels. Increases in annual precipitation will impact the elevation of lakes. Projected increases in precipitation totals are likely to increase the elevation of Lake Erie. Higher lake elevations lead to greater rates of erosion.

Temperatures are predicted to increase in Erie County, which may lead to an increase in intensity and frequency of severe storm events. This increase may lead to more weather patterns that cause coastal erosion events. Warmer temperatures are also likely to reduce the amount of time per winter that the Great Lakes are covered in ice (NYSERDA 2014). Ice typically dampens or eliminates wave action. A reduction in ice coverage and the length of the ice season is likely to result in more frequent wave events, which in turn may increase severe coastal erosion event frequency and overall erosional rates.

Attachment: 11-Section-5.4.1-Coastal-Erosion-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

5.4.1.2 Vulnerability Assessment

To understand the County's current risk to coastal erosion, the 1988 NYS DEC CEHA paper maps were digitized. These maps were only available for the Towns of Brant, Evans, and Hamburg. Section 5.2 includes additional details on the methodology used to assess coastal erosion risk. Other jurisdictions along the Lake Erie shore could potentially feel the effects of coastal erosion. The City of Tonawanda, City of Lackawanna, City of Buffalo, Town of Grand Island, and Town of Tonawanda also sit along the shore of Lake Erie, but do not have CEHA maps available. Figure 5.4.1-3 illustrates the entire shoreline of Erie County.

Impact on Life, Health and Safety

To estimate population exposed and vulnerable to the coastal erosion hazard areas, a spatial analysis was conducted. Table 5.4.1-2 lists the estimated population located in the digitized CEHA buffer. Overall, 214 people live within the coastal risk hazard area. The same analysis was performed using the CEHA boundary and buffer; an estimated 6,996 people live in this delineated area susceptible to erosion. The Town of Evans has the greatest number of persons living within the designated coastal risk hazard area.

Table 5.4.1-2. Approximate Population Residing in the CEHA Buffer

Jurisdiction	American Community Survey (2014-2018) Population	Estimated Population Exposed to the Coastal Erosion Hazard Area (CEHA)	
		Number of Persons Exposed	Percent of Total
Brant (T)	1,541	1	0.1%
Evans (T)	13,782	137	1.0%
Hamburg (T)	45,985	76	0.2%
Erie County Total	**917,296**	**214**	**<0.1%**

Source: NYS DEC 1988; American Community Survey 5-year Estimate 2019
Note: Only jurisdictions with CEHA data are include in totals
T = Town;, % = Percent

Research has also shown that some populations may experience exacerbated impacts and prolonged recovery if/when impacted because of many factors, including their physical and financial ability to react or respond during a hazard. Socially vulnerable populations (e.g., low-income populations, persons with disabilities, and the elderly) in Erie County may be at the greatest risk to coastal erosion. Within the County, there are 126,806 persons living in poverty and 120,246 persons with disabilities. The cost of interventions to protect properties from coastal erosion risk may financially stress lower- or middle-income residents. Relocating may be difficult because of the expenses and the availability of accessible housing or the time needed to make housing accessible. Structural improvements may not be possible because doing so could render the housing inaccessible (NYC Emergency Management 2019).

The population over the age of 65 is also more vulnerable and, physically, they may have more difficulty evacuating. They may require extra time or outside assistance during evacuations and are more likely to seek or need medical attention, which may not be available during a storm event. Population estimates for the County indicate that 161,744 persons over 65 currently live in Erie County.

The CDC 2016 Social Vulnerability Index (SVI) ranks U.S. Census tracts on socioeconomic status, household composition and disability, minority status and language, and housing and transportation. Erie County's overall score is 0.3986, indicating that in general its communities have low to moderate vulnerability (CDC 2016).

Attachment: 11-Section-5.4.1-Coastal-Erosion-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

As discussed above, the application of the CEHA data set for assessing vulnerability is limited. Communities along inland bays, such as the Towns of Grand Island and Tonawanda, may be vulnerable to the coastal erosion hazard but are not assessed based upon the limitation to the spatial hazard layer's extent.

Impact on General Building Stock

To understand buildings that may be at risk to coastal erosion, an exposure analysis was conducted to determine buildings located in the digitized CEHA buffer. There are an estimated 122 structures located in the CEHA buffer area with a replacement cost value of approximately $62.2 million (less than 1 percent of the total replacement cost value in the County).

It is important to note that these estimates are considered high because coastal erosion generally occurs in increments of inches to feet per year along the coastline, with the exception of large-scale events, and may not necessarily occur across the entire coastline at the same time.

Table 5.4.1-3. Building Exposure to the CEHA Buffer

Jurisdiction	Number of Buildings	Total Replacement Cost Value (RCV)	Estimated Building Stock Exposed to the Coastal Erosion Hazard Area (CEHA)			
			Number of Buildings Exposed	Percent of Total	Total Replacement Cost Value Exposed	Percent of Total
Brant (T)	1,325	$657,594,060	1	0.1%	$293,344	0.0%
Evans (T)	7,952	$3,335,060,692	86	1.1%	$33,546,029	1.0%
Hamburg (T)	19,130	$11,911,210,828	35	0.2%	$28,330,911	0.2%
Erie County Total	**360,925**	**$222,515,035,436**	**122**	**<0.1%**	**$62,170,285**	**<0.1%**

T = Town, % = Percent

Impact on Critical Facilities

It is important to determine the critical facilities and infrastructure that may be at risk to coastal erosion impacts, and to identify persons who may be impacted if damage occurs. Coastal erosion can degrade the surrounding infrastructure and utility lines, depending on their location on the property. Critical services may be interrupted because of direct damage or if transportation corridors that connect these facilities to the community are damaged. Roads that are damaged may isolate residents and prevent access to many service providers needing to reach vulnerable populations.

Critical facility and lifeline exposure to the coastal erosion hazard areas was examined. If the critical facility is located in the coastal erosion hazard area, it is considered exposed. Table 5.4.1-4 and Table 5.4.1-5 list the number of critical facilities and lifelines at risk of coastal erosion per jurisdiction, and are summarized by each FEMA lifeline category, respectively. The Town of Evans has the most critical facilities in the CEHA buffer (three) and a majority of them are wastewater pump stations.

Table 5.4.1-4. Critical Facilities Located in the CEHA Buffer

Jurisdiction	Critical Facilities Exposed to the Coastal Erosion Hazard Area (CEHA)		
	Dam	Potable Water Pumping Station	Wastewater Pump Station

Impact on Economy

Rapid coastal erosion has the potential for financial loss in the local and regional economy. Gradual coastal erosion may also pose financial risks such as damage to general building stock and associated tax loss, impacts to utilities and infrastructure, interruption to business, and impacts on tourism. In areas that are directly experiencing coastal erosion, renovations of commercial and industrial buildings may be necessary, disrupting associated services. If businesses and residents relocate from waterfront property, the low availability and high cost of housing in coastal areas may present a challenge. However, if residents with waterfront property remain, they may be required to make structural changes or construct bulkheads or riprap to protect their property. The cost of these interventions may financially stress lower- or middle-income residents (NYC Emergency Management 2019). The Impact on Buildings subsection discusses direct impacts to buildings in Erie County.

Coastal erosion can cause extensive damage to the County's local economy, such as tourism. In 2017, tourism was a $1.8 billion industry for the County (Visit Buffalo Niagara 2017). Therefore, destruction caused by coastal erosion in any of the parks and coastal communities relying on tourism may have negative economic consequences.

Impact on the Environment

Erosion is a natural or man-made process that can greatly impact the environment. Sediment transferred through streams, lakes, and rivers can erode soil and impact ecosystems. High sediment concentrations can benefit the environment by retaining dead plant production and capturing suspended sediment (USGS n.d.). Alternatively, upland erosion can degrade water quality and quantity, ultimately impacting aquatic life. Negative overall impacts to the environment occur when erosion eliminates or contaminates critical habitats. For instance, filter-feeding bivalves consume small particles, which, if contaminated from erosion runoff, could kill them (Kreeger et al. 2010).

Attachment: 11-Section-5.4.1-Coastal-Erosion-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

Cascading Impacts to Other Hazards

Coastal erosion can increase the risk of floods. Section 5.4.6 includes more information on the impact of floods.

Future Changes That May Impact Vulnerability

Understanding future changes that affect vulnerability can assist in planning for future development and ensure establishment of appropriate mitigation, planning, and preparedness measures. Changes in the natural environment and built environment and in how they interact can also provide insight to plan for the future.

Projected Development

Section 4 identifies areas targeted for future growth and development across the County. Any areas of growth located in the defined coastal risk areas could be potentially impacted by coastal erosion. Specific areas of recent and new development are indicated in tabular form and/or on the hazard maps included in Volume II, Section 9 (Jurisdictional Annexes) of this plan.

Projected Changes in Population

According to the U.S. Census Bureau, the population of Erie County has remained stable between 2010 and 2019 (917,173 persons in 2010 and 917,296 persons in 2019). Estimated population projections provided by the 2017 Cornell Program on Applied Demographics indicates that the County's population will decrease into 2040, decreasing the total population to approximately 769,396 persons (Cornell Program on Applied Demographics 2017). Changes in the density of population can impact the number of persons exposed to erosion. As forests continue to be cleared for new development and run-off persists, the population in the County will remain exposed to this hazard. Furthermore, County visitors and tourists will continue to drive potential growth in the coastal communities and their amenities, exposing more persons to coastal erosion hazard areas.

Climate Change

Climate is defined not simply as average temperature and precipitation but also by the type, frequency, and intensity of weather events. Both globally and at the local scale, climate change has the potential to alter the prevalence and severity of events that exacerbate coastal erosion. While predicting changes of coastal erosion under a changing climate is difficult, understanding vulnerabilities to potential changes is a critical part of estimating future climate change impacts on human health, society, and the environment (U.S. Environmental Protection Agency [EPA], 2006). Ultimately, warmer temperatures may lead to an increase in frequency of storms, thus leading to more weather events with potentially increased severity, that cause erosion.

Change of Vulnerability Since 2015 HMP

Erie County continues to be vulnerable to the coastal erosion hazard. However, there are several differences between the exposure estimates of this plan update and the results reported in the 2015 HMP. Updated building stock from RS Means 2020 was used in the current risk assessment. Further, exposure for both the population and critical facilities was analyzed. These updated datasets provide a more accurate exposure analysis to the coastal erosion hazard.

Attachment: 11-Section-5.4.1-Coastal-Erosion-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

Attachment: 12-Section-5.4.2-Cyber-Security-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

5.4.2 Cyber Security

This section provides a hazard profile (description, location, extent, previous occurrences and losses, probability of future occurrences, and impact of climate change) and vulnerability assessment of the cyber security hazard for the Erie County Hazard Mitigation Plan (HMP).

5.4.2.1 Hazard Profile

This section presents the cyber security description, extent, location, previous occurrences and losses, and probability of future occurrences.

Hazard Description

A cyber incident involves either the theft or modification of information on government agency computer systems, or a system compromise with the potential to disrupt essential services. A system compromise can impact one or more government agencies, a private utility, or specific Critical Infrastructure/Key Resources (CIKR) such as the power grid, public transportation systems, and wireless networks (NYC Emergency Management 2019).

Cyber incidents differ by motive, attack type and vector, and perpetrator profile. Motives for cyber incidents can vary, ranging from the pursuit of financial gain to political or social aims. Cyber threats are difficult to identify and comprehend. Types of threats include viruses erasing entire systems, intruders breaking into systems and altering files, intruders using someone's personal computer to attack others, or intruders stealing confidential information. The spectrum of cyber risks is limitless, with threats having a wide range of effects on the individual, community, organizational, and national sectors (NYC Emergency Management 2019). These risks include:

- Organized cyber-crime, state-sponsored hackers, and cyber espionage can pose national security risks to the United States
- Transportation, power, and other services may be disrupted by large-scale cyber incidents. The extent of the disruption is highly uncertain as it will be determined by many unknown factors, such as the target and size of the incident.
- Vulnerability to data breach and loss increases if an organization's network is compromised. Information about a company, its employees, and its customers can be at risk.
- Individually owned devices (such as computers, tablets, mobile phones, and gaming systems) that connect to the Internet are vulnerable to intrusion. Personal information may be at risk without proper security (NYC Emergency Management 2019).

A cyber-attack can affect a variety of sectors with potentially severe consequences, as described below.

- Android: Malicious software designed to exploit the Android operating systems (OS) running on smartphones, tablets, and other devices. Some variants of Android malware have the capability of disabling the device, allowing a malicious actor to remotely control the device, track the user's activity, lock the device, or encrypt or steal personal information transmitted from or stored on the device. As users are increasingly turning to mobile devices for both business and personal use, cyber threat actors are devoting their efforts to developing malware designed to compromise the device software.
- Botnets: A group of Internet-connected computers and devices that have been infected by malware that allows a malicious actor to control them remotely. The malicious actor then uses the botnet for nefarious purposes such as sending spam email, stealing data, spreading additional malware infections to other devices, generating illicit advertising revenue through click-fraud, mining cryptocurrencies, or conducting distributed denial-of-service (DDoS) attacks. In the cases where botnets are used to conduct DDoS attacks, these infected devices are used to generate an excessive amount of network traffic

designed to overwhelm a website, server, or online service to the point that legitimate users cannot access it.

- Exploit Kits (EKs): Toolkits that automate the exploitation of vulnerabilities in popular software applications to maximize successful infections and serve as a platform to deliver malicious payloads, such as Trojans, spyware, ransomware, and other malicious software. Most users will encounter EKs from visiting seemingly legitimate, high-traffic websites that either contain links to EKs embedded within malicious advertising (malvertising) or have malicious code hidden directly within the website itself. Malicious URLs linking to EKs are commonly distributed through spam email and spear-phishing campaigns.
- ICS: A collective term for several types of control systems and other equipment used to operate and/or automate industrial processes. ICS includes supervisory control and data acquisition (SCADA) systems – often incorrectly used interchangeably with ICS – and distributed control systems (DCS).
- iOS: Malicious software designed to exploit Apple's iOS operating system running on smartphones, tablets, and other devices. Some variants of iOS malware have the capability of disabling the device, allowing a malicious actor to remotely control the device, track the user's activity, lock the device, or encrypt or steal personal information transmitted from or stored on the device. As users are increasingly turning to mobile devices for both business and personal use, cyber threat actors are increasingly devoting their efforts to developing malware designed to compromise mobile devices, including operating systems (such as iOS) and applications (such as those available in the App Store). Android devices have historically seen more malware threats than iOS largely because of the open-source operating system; however, malware specifically targeting iOS has increased in the last 2 years.
- macOS: Though the majority of known malware targeting operating systems are made to exploit Microsoft Windows, devices running macOS are vulnerable as well. Furthermore, as macOS has become increasingly popular, more malware has been created to target macOS. More macOS malware was discovered in the second quarter of 2017 than in all of 2016.
- Point of Sale (PoS): Malicious software designed to steal credit and debit card data from payment processing systems, known as point-of-sale (PoS) terminals.
- Ransomware: Malicious software (malware) that attempts to extort money from victims by restricting access to a computer system or files. The most prevalent form of this profit-motivated malware is crypto-ransomware, which encrypts files into encoded messages that can only be decrypted (decoded) with a key held by the malicious actor.
- Trojans: A type of malware that, unlike viruses and worms, does not self-replicate. Named after the mythological wooden horse used to sneak Greek warriors through the gates of Troy, trojans are often disguised as legitimate software to avoid detection or trick users into installing the trojan onto their system. Users can be exposed to trojans through numerous vectors, such as clicking on links or opening attachments in phishing emails, other forms of social engineering, malicious advertising (malvertisting), or by visiting compromised websites, known as drive-by downloads. Once a trojan executes, it often downloads other malware onto the system or provides an attacker with a backdoor to gain access and conduct further malicious activity, such as stealing, deleting, or modifying data (New Jersey Cybersecurity and Communications Integration Cell 2019).

Cyber terrorism is the use of existing computers and information, particularly over the Internet, to cause physical or financial harm or a severe disruption of infrastructure service. Transportation, public safety, and utility services are all critical, and are highly dependent on information technology. The motive behind such disruptions can be driven by religious, political, or other objectives. Three kinds of attacks can be conducted on computers and these include attacks of physical means, attacks of electronic means, and attacks using malicious code (Waldron 2011). Specifically, these types of attacks include the following:

- Conventional kinetic weapons can be directed against computer equipment, a computer facility, or transmission lines to create a physical attack that disrupts the reliability of equipment.

Attachment: 12-Section-5.4.2-Cyber-Security-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

- The power of electromagnetic energy, most commonly in the form of an electromagnetic pulse (EMP), can be used to create an electronic attack (EA) directed against computer equipment or data transmissions. By overheating circuitry or jamming communications, an EA disrupts the reliability of equipment and the integrity of data.
- Malicious code can be used to create a cyber-attack, or computer network attack (CNA), directed against computer processing code, instruction logic, or data. The code can generate a stream of malicious network packets that can disrupt data or logic through exploiting vulnerability in computer software, or a weakness in the computer security practices of an organization. This type of cyber-attack can disrupt the reliability of equipment, the integrity of data, and the confidentiality of communications (Wilson and Clay 2007).

Cyber terrorists typically have two broad motivations to carry out an attack, as described below.

- Effects-based: Cyber terrorism exists when computer attacks result in effects that are disruptive enough to generate fear comparable to a traditional act of terrorism.
- Intent-based: Cyber terrorism exists when unlawful or politically motivated computer attacks are done to intimidate or coerce a government or people to further a political objective, or to cause grave harm or severe economic damage (Wilson and Clay 2007).

Table 5.4.2-1. Perpetrator Categories for Cyber-attacks

Category	Category Description	Description of Attack
External	Outside the victim organization	These attacks—which can be perpetrated by subgroups including organized crime, nation-state or state-affiliated entities, unaffiliated individuals, activists, former employees, acquaintances, competitors, or customers—can take any number of forms.
Internal	Inside the victim organization	These attacks have usually been malicious, for the purposes of financial gain, though some were the result of breaches because of careless or accidental data exposure. Internal actor subgroups include system admin, end-user, doctor or nurse, developer, manager, executive, cashier, finance, and human resources.
Partner	Third party sharing a business relationship with the victim	This attack is the least common of the three perpetrator categories and often unintentional. Example: a courier losing a device containing sensitive data

Source: Verizon Wireless DBIR 2018

In terms of specific attacks on computers, cyber terrorists have the ability to attack several types of computer systems in a variety of ways. The systems are summarized in Table 5.4.2-2.

Table 5.4.2-2. Computer Systems that can be Attacked

Computer System	Description
All system and network devices with BIND weaknesses	The Berkeley Internet Name Domain (BIND) package is the most widely used implementation of Domain Name Service (DNS) by which systems on the Internet are located by name, without having to know specific Internet protocol (IP) addresses. In a typical example of a BIND attack, intruders erase system logs and install tools to gain administrative access. They then compile and install Internet Relay Chat (IRC) utilities and network scanning tools, which are used to scan more than a dozen class-B networks in search of additional systems running vulnerable versions of BIND. In a matter of minutes, they can use the compromised system to attack hundreds of remote systems.
Vulnerable Common Gateway Interface (CGI) programs and application extensions (such as ColdFusion) installed on web servers (multiple UNIX and Linux systems)	Most web servers support CGI for data collection and verification. Intruders have exploited vulnerable CGI programs to vandalize web pages and steal credit cards.

Attachment: 12-Section-5.4.2-Cyber-Security-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Computer System	Description
RPC weaknesses (all Web servers)	Remote procedure calls (RPC) allow programs on one computer to execute programs on a second computer. They are widely used to access network services, such as shared files in the Network File System (NFS). There is compelling evidence that the vast majority of service attacks launched during 1999 and early 2000 were executed by systems that had been victimized because they had RPC vulnerabilities. In 1998, the broadly successful attack on U.S. military systems during the Solar Sunrise incident also exploited an RPC flaw found on hundreds of Department of Defense systems.
RDS security hole in Microsoft IIS (multiple UNIX and Linux systems)	Malicious users took advantage of programming flaws in Microsoft's Internet Information Server (IIS), which is used to host websites deployed on Microsoft Windows NT and Windows 2000, to run remote commands with administrator privileges. Experts who developed the "Top Ten" list of the most exploited Internet security flaws believe that exploiting other IIS flaws, such as .HTR files, are as common as exploits of Remote Desktop Services (RDS).
Sadmind (Solaris machines only)	Global file sharing and inappropriate information sharing via NetBIOS and Windows NT ports allow file sharing over networks. When improperly configured, they can expose critical system files or give full file system access to hostile parties.
User IDs, especially root/administrator with no or weak passwords (UNIX, Windows, and Macintosh systems)	Some systems come with "demo" or "guest" accounts with no passwords or with widely known default passwords. Service workers often leave maintenance accounts with no passwords, while some database management systems install administration accounts with default passwords. In addition, busy system administrators often select system passwords that are easily guessable ("love," "money," "wizard" are common) or use a blank password. Many attackers try default passwords and then try to guess passwords before resorting to more sophisticated methods.
IMAP and POP buffer overflow vulnerabilities or incorrect configuration (all systems)	Internet message access protocol (IMAP) and Post Office Protocol (POP) are popular remote access mail protocols, allowing users to access their e-mail accounts. The "open access" nature of these services makes them especially vulnerable to exploitation because openings are frequently left in firewalls to allow for external e-mail access. Attackers who exploit flaws in IMAP or POP often gain instant root- level control.
Default SNMP community strings set to "public" and "private" (multiple UNIX and Linux systems)	The Simple Network Management Protocol (SNMP) is widely used by network administrators to monitor and administer all types of network-connected devices, ranging from routers to printers to computers. SNMP uses an unencrypted "community string" as its only authentication mechanism. Lack of encryption creates one level of security vulnerability, but the default community string used by the vast majority of SNMP devices is "public," with a few clever network equipment vendors changing the string to "private," which presents a greater security risk. Attackers can use this vulnerability in SNMP to reconfigure or shut down devices remotely.

Source: New Jersey Office of Emergency Management 2019

In addition to the motivations for cyber-attack on vulnerable systems, cyber-attacks can be further divided by the complexity of the attack. The categories of attacks include:

- ***Simple-unstructured attacks*** are the most common. These are amateurish attacks with relatively minimal consequences.
- ***Advanced-structured attacks*** are more sophisticated and consequential and have a greater emphasis on targeting victims prior to an attack, resulting in a more debilitating effect.
- ***Complex-coordinated attacks*** are the most advanced and most troublesome type of attack where success could mean a network shutdown.

Because virtually all critical systems are reliant upon computer systems, the secondary hazards that could result from a cyber terrorism attack could be devastating. For example, many of New York's roadway systems rely on sophisticated traffic control systems that prevent gridlock and accidents daily. Without these systems, the risk of accidents increases, not only auto accidents but also hazardous materials in-transit incidents. Additionally, a cyber-attack on a nuclear power plant could have devastating consequences if the plant suffers an intentional catastrophic failure. A cyber-attack could also completely incapacitate the communications infrastructure, not only in New York but across the United States, leading to disturbing secondary consequences and hazards. Public Safety Answering Points (PSAPs) could be targeted by cyber-attacks, and if affected, significant impacts could occur to public safety response and dispatching of emergency services.

Attachment: 12-Section-5.4.2-Cyber-Security-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Because the power grid is also largely controlled by computer systems, a widespread power outage is a possibility. A failure of the power grid would severely impact the health and welfare of individuals reliant on power, such as those with medical needs requiring specialized equipment. The number of critical systems reliant on computer systems are numerous, thus disruption of one or more of the systems would cause severe secondary-cascading hazards. Secondary impacts could also affect private structures and systems within them, such as HVAC systems, life support systems, and security systems.

Since cyber security is a fairly new concept, limited regulations are in place. The United States Department of Homeland Security (DHS) recognizes the threat of a potential cyber-attack and has established the Cyber and Infrastructure Security Agency (CISA) Division to address cyber related threats. CISA is responsible for protecting the nation's critical infrastructure from physical and cyber threats. This mission requires effective coordination and collaboration among a broad spectrum of government and private-sector organizations (U.S. Department of Homeland Security N.D.).

Extent

The magnitude or extent of an incident will vary greatly based on the size, extent, and duration of the impact. Additionally, the extent will vary based upon which specific system is affected by an attack, the warning time, and ability to preempt an attack.

The extent, nature, and timing of cyber incidents are impossible to predict. There may or may not be any warning. Some cyber incidents take a long time (weeks, months or even years) to be discovered and identified (FEMA 2019).

The Multi-State Information Sharing and Analysis Center (MS-ISAC) created the Cyber Alert Level Indicator. It shows the current level of malicious cyber activity and reflects the potential for, or actual damage. The five cyber alert levels include low, guarded, elevated, high, and severe. Each level is indicated by a color. The following is additional information regarding these levels:

- **Low** – Indicates a low risk. No unusual activity exists beyond the normal concern for known hacking activities, known viruses, or other malicious activity.
- **Guarded** – Indicates a general risk of increased hacking, virus, or other malicious activity. The potential exists for malicious cyber activities, but no known exploits have been identified, or known exploits have been identified but no significant impact has occurred.
- **Elevated** – Indicates a significant risk because of increased hacking, virus, or other malicious activity that compromises systems or diminishes service. At this level, known vulnerabilities are being exploited with a moderate level of damage or disruption, or the potential for significant damage or disruption is high.
- **High** - Indicates a high risk of increased hacking, virus, or other malicious cyber activity that targets or compromises core infrastructure; causes multiple service outages; compromises multiple systems; or compromises critical infrastructure. At this level, vulnerabilities are being exploited with a high level of damage or disruption, or the potential for severe damage or disruption is high.
- **Severe** - Indicates a severe risk of hacking, virus, or other malicious activity resulting in wide-spread outages and/or significantly destructive compromises to systems with no known remedy; or debilitates one or more critical infrastructure sectors. At this level, vulnerabilities are being exploited with a severe level or widespread level of damage or disruption of Critical Infrastructure Assets.

The United States Federal Cybersecurity Centers, in coordination with departments and agencies with a cybersecurity or cyber operations mission, adopted a common schema for describing the severity of cyber incidents affecting the homeland, U.S. capabilities, or U.S. interests. The schema establishes a common

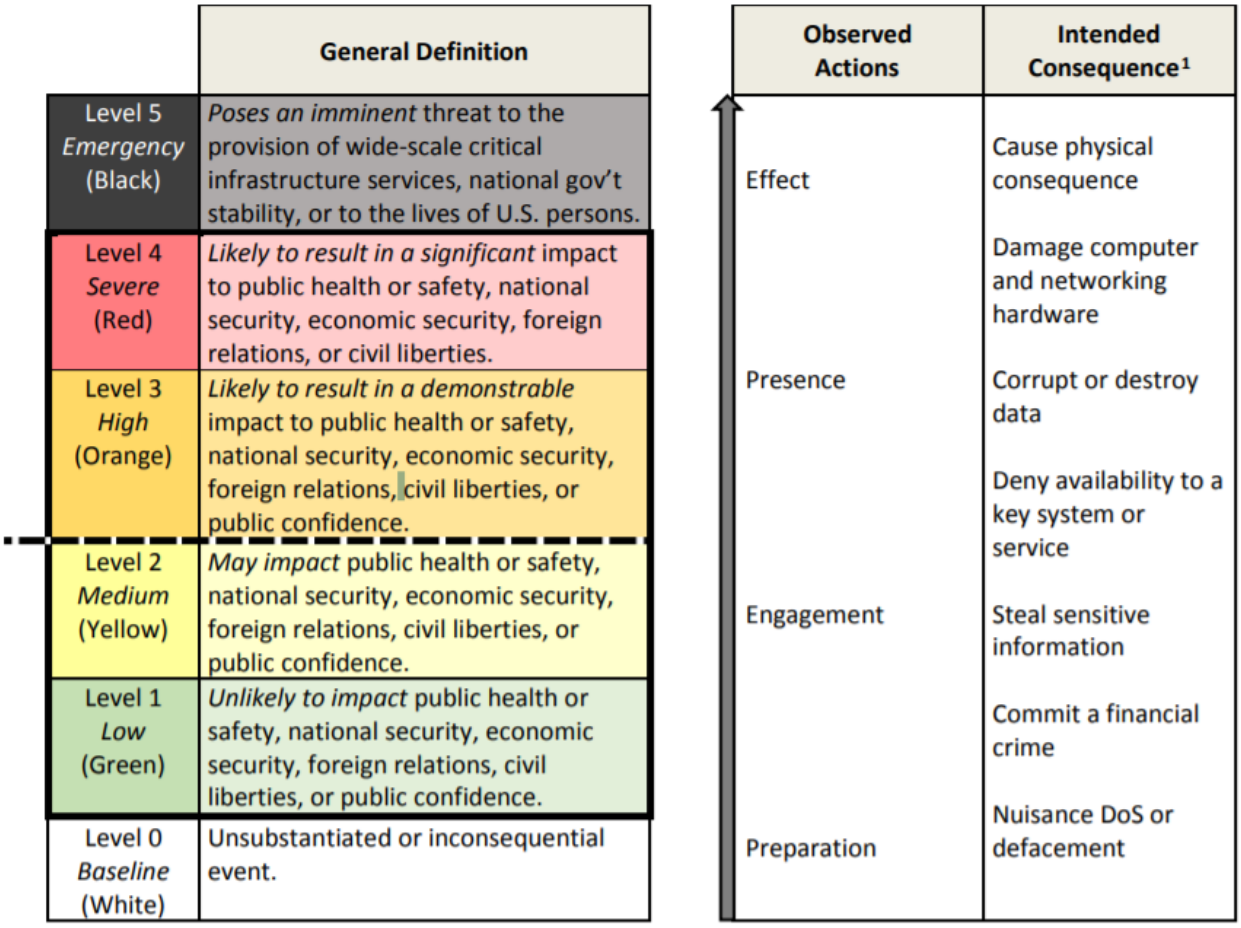
Attachment: 12-Section-5.4.2-Cyber-Security-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

framework for evaluating and assessing cyber incidents to ensure that all departments and agencies have a common view of the:

- The severity of a given incident;
- The urgency required for responding to a given incident;
- The seniority level necessary for coordinating response efforts; and
- The level of investment required of response efforts (United States Federal Cybersecurity Centers, N.D.).

The figure below depicts several key elements of the schema.

Figure 5.4.2-1. Cyber Incident Severity Schema



Source: United States Federal Cybersecurity Centers N.D.

Location

Cyber security incidents do not impact only a specific geographic location. Information systems are accessible all over the world. Potential threats can be foreign or domestic, internal or external, state-sponsored or a single rogue element. Terrorists, insiders, disgruntled employees, and hackers are included in this profile. Across New York State, countless systems rely on computers for day-to-day operations, including traffic signals, power

Attachment: 12-Section-5.4.2-Cyber-Security-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

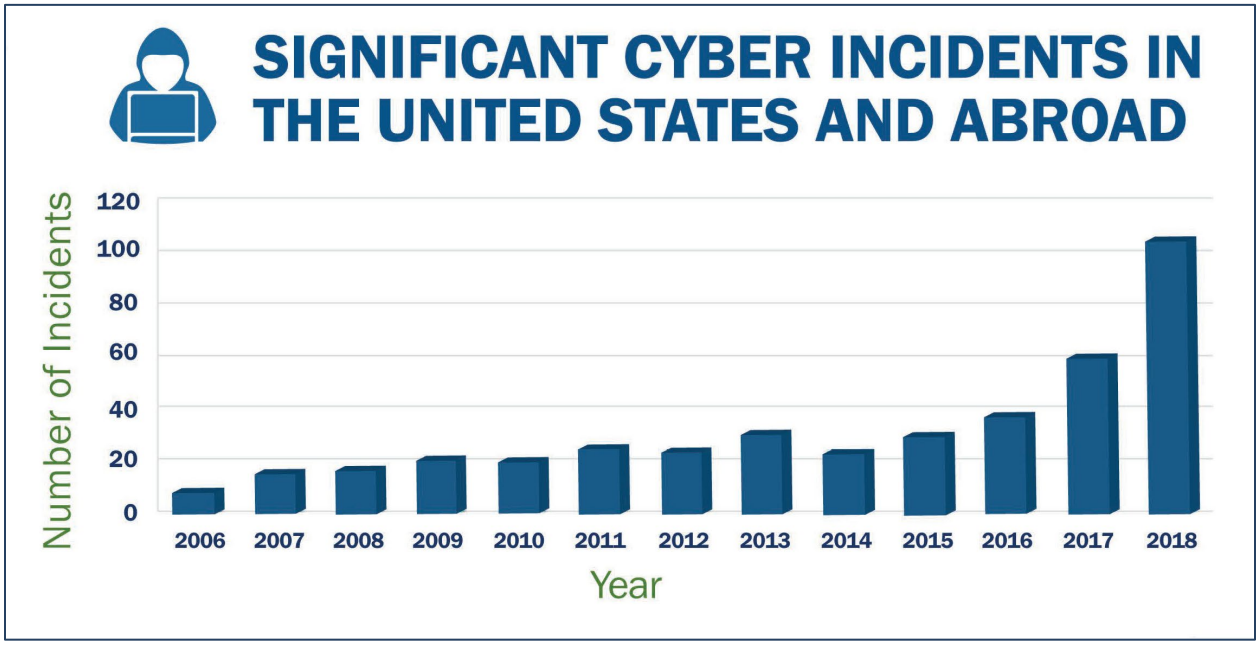
plants, and HVAC systems, as well as systems responsible for ensuring the state's government can operate. All of Erie County is at risk for cyber security incidents.

Previous Occurrences and Losses

While no major direct cyber-attacks have affected Erie County, cyber terrorism is an emerging hazard that can impact the state's computer infrastructure and the systems and services provided to the public. Across the United States and globally, concerns over cyber terrorism are growing (U.S. Department of Homeland Security 2019). Many smaller-scale attacks have occurred.

To date, no FEMA disaster declarations have been related to a cyber-attack. According to the U.S. Department of Homeland Security, significant cyber incidents have risen steadily in the last 5 years in the United States and abroad.

Figure 5.4.2-2. Significant Cyber Incidents in the United States and Abroad



Source: U.S. Department of Homeland Security 2019

Probability of Future Occurrences

The Department of Homeland Security has noted that cyber incidents are on the rise globally, as shown in the figure above (U.S. Department of Homeland Security 2019). The level of success of an attack and the subsequent damage it can create will vary greatly. With the growing popularity and use of computers, there has been a significant increase in investigations where computers are being utilized for the commission of fraud and identify theft. The probability of a cyber-attack that will affect Erie County is difficult to calculate; however, it is estimated that Erie County will continue to experience direct and indirect impacts of cyber-attacks.

In Section 5.3, the identified hazards of concern for Erie County were ranked. The probability of occurrence, or likelihood of the event, is one parameter used for hazard rankings. Based on historical records and input from the Planning Partnership, the probability of occurrence for cyber-attacks in the county is considered to be "frequent."

Attachment: 12-Section-5.4.2-Cyber-Security-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Climate Change Impacts

Because cyber-attacks are human-caused, no climate change impacts are associated with this hazard.

5.4.2.2 Vulnerability Assessment

To understand risk, a community must evaluate what assets are exposed and vulnerable to the identified hazard. The following discusses Erie County's vulnerability, in a qualitative nature, to the cyber security hazard. Table 5.4.2-3 summarizes potential impacts on population, facilities, economy, and the environment.

Table 5.4.2-3. Cyber-Attack Impact Summary

Consideration	Description
General Public	No direct loss of life is expected from an attack. Indirect injuries or deaths may result from secondary effects to critical life-sustaining resources, such as energy and water, as well as loss of medical devices.
Response Personnel	No direct effects to the health and safety of response personnel are expected; however, critical response systems may be affected.
Property, Facilities, and Infrastructure	Effects can range from annoyance to complete shutdown of critical infrastructures caused by infiltration of supervisory control and data acquisition (SCADA) systems. Secondary effects could disturb public welfare and property by denying services or providing false readings.
Economic	Because of the heavy reliance on the electronic transfer of economic and commercial information, the economy could be affected by communication difficulties.
Environment	Generally, cyber terrorism has no direct effect on the environment; however, the environment may be affected should a release of a hazardous material occur because of critical infrastructure failure.
Continuity of Operations	Severe effects to continuity of operations could result if a cyber-attack reached critical operational systems or systems needed to carry out the operation.
Reputation of the Entity	If exposed vulnerabilities were known and not reduced or eliminated before the attack, the entity would suffer major damage to their reputation for not taking action before the incident.
Delivery of Services	Cyber-attacks may affect delivery of services if the system was infiltrated and directed to malfunction by self-destructing or overloading.
Regulatory and Contractual Operations	Cyber-attacks would have no significant effect on regulatory or contractual obligations, other than the possible elimination of electronic records, which would affect both.

Source: NJOEM 2019

Impact on Life, Health and Safety

Although no direct loss of life is expected from a cyber-attack, all residents in Erie County are exposed to this hazard. Commonly stolen personal information includes name, social security number, and drivers' license information. Because it is difficult to predict the particular target of cyber terrorism, assessing vulnerability to the hazard is also difficult. Generally, all populations who directly use a computer or those receiving services from automated systems are vulnerable to cyber terrorism. Although all individuals in Erie County are vulnerable to an attack, certain types of attacks would impact specific segments of the population.

If the cyber-attack targeted the state's power or utility grid, vulnerable populations could be most impacted. For example, individuals with medical needs are vulnerable because many of the life-saving systems they rely on require power. Also, if an attack occurred during months of extreme hot or cold weather, the county's elderly population (those 65 years of age and older; i.e., 158,532 total persons in the county) would be vulnerable to the effects of the lack of climate control. These individuals may require shelter or admission to a hospital. Young children are also vulnerable to the secondary effects of cyber terrorism.

Furthermore, households located near vulnerable facilities could experience greater impacts of a cyber-attack. If a cyber-attack targeted a facility storing or manufacturing hazardous materials, individuals living adjacent to

Attachment: 12-Section-5.4.2-Cyber-Security-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

these facilities would be vulnerable to the secondary effects, should the attack successfully cause a critical failure at that facility. Individuals living within 10 miles of a nuclear power plant would be vulnerable if an attack occurred that caused a plant failure.

Impact on General Building Stock

Currently, about 360,925 buildings in Erie County are at risk of experiencing impacts from a cyber-attack. A cyber-attack can impact buildings ranging from annoyance to complete shutdown caused by infiltration of SCADA systems. Secondary effects could disturb public welfare and property by denying services or providing false readings (NJOEM 2019). If services are disrupted by a cyber-attack, damage may be incurred to physical assets. Should a cyber-attack target fire suppression systems, these structures are likely to be at higher risk for structural fire. In many cases, attacks on these systems are initially undetectable, and it may be some time before it is known that system impairment or failure is the result of a cyber event (NYC Emergency Management 2019).

Impact on Critical Facilities

Critical facilities and lifelines are vulnerable to cyber-attacks based on the significance of the facilities, and the potential to interrupt critical systems in the county. As previously mentioned, many critical facilities are reliant upon computer networks to monitor and control critical functions. This can include utilities, public safety facilities, medical facilities, or government buildings. A cyber-attack could result in catastrophic failure of one of these facilities. The power grid is reliant upon computer systems to distribute power to the county. An attack could disrupt power to all Erie County residents. This is just one example of how critical facilities are vulnerable to cyber-attacks. Given the importance of critical facilities to daily living activities, critical facilities are highly vulnerable to cyber-attacks.

Impact on the Economy

Cyber-attacks can have a damaging effect on public trust in systems that are traditionally considered stable and secure. Cyber-attacks can also have extensive economic impacts. Companies and government services can lose large sums of unrecoverable revenue from site down-time and possible compromise of sensitive confidential data. Further, the cost of malicious cyber activity involves more than the loss of financial assets or intellectual property. Cyber crimes can cause damage to a company's brand and reputation, consumer losses from fraud, the costs of service disruption and "cleaning up" after cyber incidents, and the cost of increased spending on cybersecurity (McAfee 2013).

Given the proliferation of electronic commerce and the reliance on electronics, virtually all elements of Erie County's economy are vulnerable to cyber-attacks. The secondary impacts of a significant attack would be devastating to the economy. For example, an attack that caused the loss of power to hundreds of thousands of businesses during peak holiday shopping months could potentially cost the state millions of dollars in tax revenue if these businesses were closed. Additionally, a disruption in New York's manufacturing, agricultural, or tourism sectors would have devastating impacts on the economy. While it is difficult to quantitatively measure the economic impact of a cyber terrorism attack, it is safe to say that the impact would be great, thus the economy is vulnerable to cyber- attacks and cyber terrorism.

According to FEMA, cyber-attack victims in the United States lost a collective $1.33 billion to cyber actors in 2016 (FEMA 2019). However, this estimate could be understated. In the United States, the costs of cyber terrorism are estimated somewhere between $24 billion and $120 billion annually. These costs represent approximately 0.2 percent to 0.8 percent of the total gross domestic product (GDP) in the United States (McAfee 2013).

Cyber crimes against banks and other financial institutions can cost many hundreds of millions of dollars every year. Cyber theft of intellectual property and business-confidential information can cost developed economies

Attachment: 12-Section-5.4.2-Cyber-Security-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

billions of dollars—how many billions is an open question. These losses could be considered simply as the cost of doing business, or they could be a major new risk for companies and nations as these illicit acquisitions damage global economic competitiveness and undermine technological advantage (McAfee 2013).

Impact on the Environment

The impacts from cyber-attack are limited to infrastructure and people, as highlighted in earlier sections. Therefore, there are no known primary impacts to the environment.

Cascading Impacts to Other Hazards

Cyber-attacks may have cascading impacts causing other hazards, including threats to the utilities reliant on power as well as the potable water supply.

Future Changes that May Impact Vulnerability

Understanding future changes that impact vulnerability in the county can assist in planning for future development and ensuring that appropriate mitigation, planning, and preparedness measures are in place. The county considered the following factors to examine potential conditions that may affect hazard vulnerability:

- Potential or projected development
- Projected changes in population
- Other identified conditions as relevant and appropriate, including the impacts of climate change

Projected Development

As discussed in Section 4, areas targeted for future growth and development have been identified across Erie County. Any areas of growth could be potentially impacted by the cyber-attack hazard because the entire county is exposed and vulnerable. Additional development of structures or infrastructure reliant on computer systems could increase the county's risk to cyber-attack. Development of more structures using public power grids could also be affected by cyber-attacks and ultimately experience power outage. Therefore, understanding state requirements and recommendations may minimize risk for new development projects. For example, the New York Department of Financial Services issued a new set of cyber security regulations in 2017 for banks, lenders, mortgage companies, insurance companies, and service providers (NYS Department of Financial Services 2017). This regulation requires active protection against customer information by implementing a robust set of cybersecurity protocols, including the installation and use of a cybersecurity program, monitoring and testing of the selected program, and encryption of nonpublic information.

Projected Changes in Population

The population of Erie County is growing and is expected to increase until 2033 when it is expected to slowly decrease (Cornell University 2020). It is important to note that the population is aging (U.S. Census ACS 2010, ACS 2018) A growing population means that the number of persons vulnerable to cyber-attacks may increase for the county.

Climate Change

Because cyber-attacks are human-caused, no climate change impacts are associated with the cyber security hazard.

Change of Vulnerability Since the 2015 HMP

Cyber Security is a new hazard of concern for the 2022 Erie County HMP.

Attachment: 12-Section-5.4.2-Cyber-Security-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Attachment: 13-Section-5.4.3-Earthquake-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

5.4.3 Earthquake

This section provides profile information, including description, location, extent, previous occurrences and losses, probability of future occurrences, and climate change impacts, as well as the vulnerability assessment for the earthquake hazard in Erie County.

5.4.3.1 Hazard Profile

Description

An earthquake is the sudden movement of the earth's surface caused by the release of stress accumulated within or along the edge of the earth's tectonic plates, a volcanic eruption, or a manmade explosion (Federal Emergency Management Agency [FEMA] 2013; Shedlock and Pakiser 1995). Most earthquakes occur at the boundaries where the earth's tectonic plates meet (faults); however, less than 10 percent of earthquakes occur within plate interiors. New York State is in an area where plate interior-related earthquakes occur. As plates continue to move and plate boundaries change over geologic time, weakened boundary regions become part of the interiors of the plates. These zones of weakness within the continents can cause earthquakes from stresses that originate at the edges of the plate or in the deeper crust (Shedlock and Pakiser 1995).

According to the U.S. Geological Society (USGS) Earthquake Hazards Program, an earthquake hazard is anything associated with an earthquake that may affect a resident's normal activities. This includes surface faulting, ground shaking, landslides, liquefaction, tectonic deformation, tsunamis, and seiches. A description of each earthquake-related activity is provided below:

- *Surface faulting*: Displacement that reaches the earth's surface during slip along a fault. This commonly occurs with shallow earthquakes, which are those with an epicenter less than 20 kilometers.
- *Ground motion (shaking):* The movement of the earth's surface from earthquakes or explosions. Ground motion or shaking is produced by waves generated by sudden slip on a fault or sudden pressure at the explosive source; waves then travel through the earth and along its surface.
- *Landslide*: A movement of surface material down a slope.
- *Liquefaction*: A process by which water-saturated sediment temporarily loses strength and acts as a fluid (like wiggling your toes in the wet sand near the water at the beach). This effect can be caused by earthquake shaking.
- *Tectonic Deformation*: A change in the original shape of a material due to stress and strain.
- *Tsunami*: A sea wave of local or distant origin that results from large-scale seafloor displacements associated with large earthquakes, major submarine slides, or exploding volcanic islands.
- *Seiche*: The sloshing of a closed body of water from earthquake shaking (USGS n.d.).

Extent

An earthquake's magnitude and intensity are used to describe the size and severity of the event. Magnitude describes the size at the focal point of an earthquake, and intensity describes the overall severity of shaking felt during the event. The earthquake's magnitude is a measure of the energy released at the source of the earthquake. Magnitude was formerly expressed by ratings on the Richter scale but is now most commonly expressed using the moment magnitude (Mw) scale. This scale is based on the total moment release of the earthquake (the product of the distance a fault moved and the force required to move it). The scale is as follows:

- Great Mw > 8
- Major Mw = 7.0 – 7.9
- Strong Mw = 6.0 – 6.9

- Moderate Mw = 5.0 – 5.9
- Light Mw = 4.0 – 4.9
- Minor Mw = 3.0 – 3.9
- Micro Mw = 3.0 – 3.9

The most commonly used intensity scale is the modified Mercalli intensity scale. Ratings of the scale, as well as the perceived shaking and damage potential for structures, are shown in Table 5.4.3-1. The modified Mercalli intensity scale is generally represented visually using shake maps, which show the expected ground shaking at any given location produced by an earthquake with a specified magnitude and epicenter. An earthquake has only one magnitude and one epicenter, but it produces a range of ground shaking at sites throughout the region, depending on the distance from the earthquake, the rock and soil conditions at sites, and variations in the propagation of seismic waves from the earthquake because of complexities in the structure of the earth's crust. Table 5.4.3-2 displays the Modified Mercalli Intensity (MMI) scale and its relationship to the areas peak ground acceleration.

Table 5.4.3-1. Modified Mercalli Intensity Scale

Mercalli Intensity	Shaking	Description
I	Not Felt	Not felt except by a very few under especially favorable conditions.
II	Weak	Felt only by a few persons at rest, especially on upper floors of buildings.
III	Weak	Felt quite noticeably by persons indoors, especially on upper floors of buildings. Many people do not recognize it as an earthquake. Standing motor cars may rock slightly. Vibrations are similar to the passing of a truck. Duration estimated.
IV	Light	Felt indoors by many, outdoors by few during the day. At night, some awakened. Dishes, windows, doors disturbed; walls make cracking sound. Sensation is similar to a heavy truck striking a building. Standing motor cars rocked noticeably.
V	Moderate	Felt by nearly everyone; many awakened. Some dishes, windows broken. Unstable objects overturned. Pendulum clocks may stop.
VI	Strong	Felt by all, many frightened. Some heavy furniture moved; a few instances of fallen plaster. Damage slight.
VII	Very Strong	Damage negligible in buildings of good design and construction; slight to moderate damage in well-built ordinary structures; considerable damage in poorly built or badly designed structures; some chimneys broken.
VIII	Severe	Damage slight in specially designed structures; considerable damage in ordinary substantial buildings with partial collapse. Damage great in poorly built structures. Fall of chimneys, factory stacks, columns, monuments, walls. Heavy furniture overturned.
IX	Violent	Damage considerable in specially designed structures; well-designed frame structures thrown out of plumb. Damage great in substantial buildings, with partial collapse. Buildings shifted off foundations.
X	Extreme	Some well-built wooden structures destroyed; most masonry and frame structures destroyed with foundations. Rails bent.

Source(s): USGS 2020

Table 5.4.3-2. Modified Mercalli Intensity (MMI) and PGA Equivalents

Modified Mercalli Intensity	Acceleration (%g) (PGA)	Perceived Shaking	Potential Damage
I	< .17	Not Felt	None
II	.17 – 1.4	Weak	None
III	.17 – 1.4	Weak	None
IV	1.4 – 3.9	Light	None
V	3.9 – 9.2	Moderate	Very Light
VI	9.2 – 18	Strong	Light
VII	18 – 34	Very Strong	Moderate
VIII	34 – 65	Severe	Moderate to Heavy
IX	65-124	Violent	Heavy

Attachment: 13-Section-5.4.3-Earthquake-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Modified Mercalli Intensity	Acceleration (%g) (PGA)	Perceived Shaking	Potential Damage
X	>124	Extreme	Very Heavy

Source: *Freeman et al. (Purdue University) 2004*
Note: *PGA* *Peak ground acceleration*

The ground experiences acceleration as it shakes during an earthquake. Peak ground acceleration (PGA) expresses the severity of an earthquake and is a measure of how hard the earth shakes, or accelerates, in each geographic area. PGA is expressed as a percent acceleration force of gravity (%g). For example, 1.0%g PGA in an earthquake (an extremely strong ground motion) means that objects accelerate sideways at the same rate as if they had been dropped from the ceiling. An earthquake with a 10%g PGA means that the ground acceleration is 10 percent that of gravity (Freeman, et al. 2004). Damage levels experienced in an earthquake vary with the intensity of ground shaking and with the seismic capacity of structures, as noted in Table 5.4.3-3.

Table 5.4.3-3. Damage Levels Experienced in Earthquakes

Ground Motion Percentage	Explanation of Damage
1-2%g	Motions are widely felt by people; hanging plants and lamps swing strongly, but damage levels, if any, are usually very low.
Below 10%g	Usually causes only slight damage, except in unusually vulnerable facilities.
10 - 20%g	May cause minor-to-moderate damage in well-designed buildings, with higher levels of damage in poorly designed buildings. At this level of ground shaking, only unusually poorly constructed buildings would be subject to potential collapse.
20 - 50%g	May cause significant damage in some modern buildings and very high levels of damage (including collapse) in poorly designed buildings.
≥50%g	May causes higher levels of damage in many buildings, even those designed to resist seismic forces.

Source: *Freeman et al. (Purdue University) 2004*
Note: *%g* *Percent acceleration force of gravity*

National maps of earthquake shaking hazards have been produced since 1948. They provide information essential to creating and updating the seismic design requirements for building codes, insurance rate structures, earthquake loss studies, retrofit priorities, and land use planning used in the United States. Scientists frequently revise these maps to reflect new information and knowledge. Buildings, bridges, highways, and utilities built to meet modern seismic design requirements are typically able to withstand earthquakes better, with less damage and disruption. After thorough review of the studies, professional organizations of engineers update the seismic-risk maps and seismic design requirements contained in building codes (USGS 2016).

A probabilistic assessment was conducted for the 500-year mean return period (MRP) in Hazards U.S.—Multi-Hazard (Hazus) v4.2 to analyze the earthquake hazard for Erie County. The Hazus analysis evaluates the statistical likelihood that a specific event will occur and what consequences will occur. Figure 5.4.3-1 illustrates geographic distributions of the Modified Mercalli Scale based on PGAs (%*g*) across Erie County for a 500-year MRP event at the census-tract level. A 500-year MRP is an earthquake with 0.2 percent chance that mapped PGAs will be exceeded in any given year.

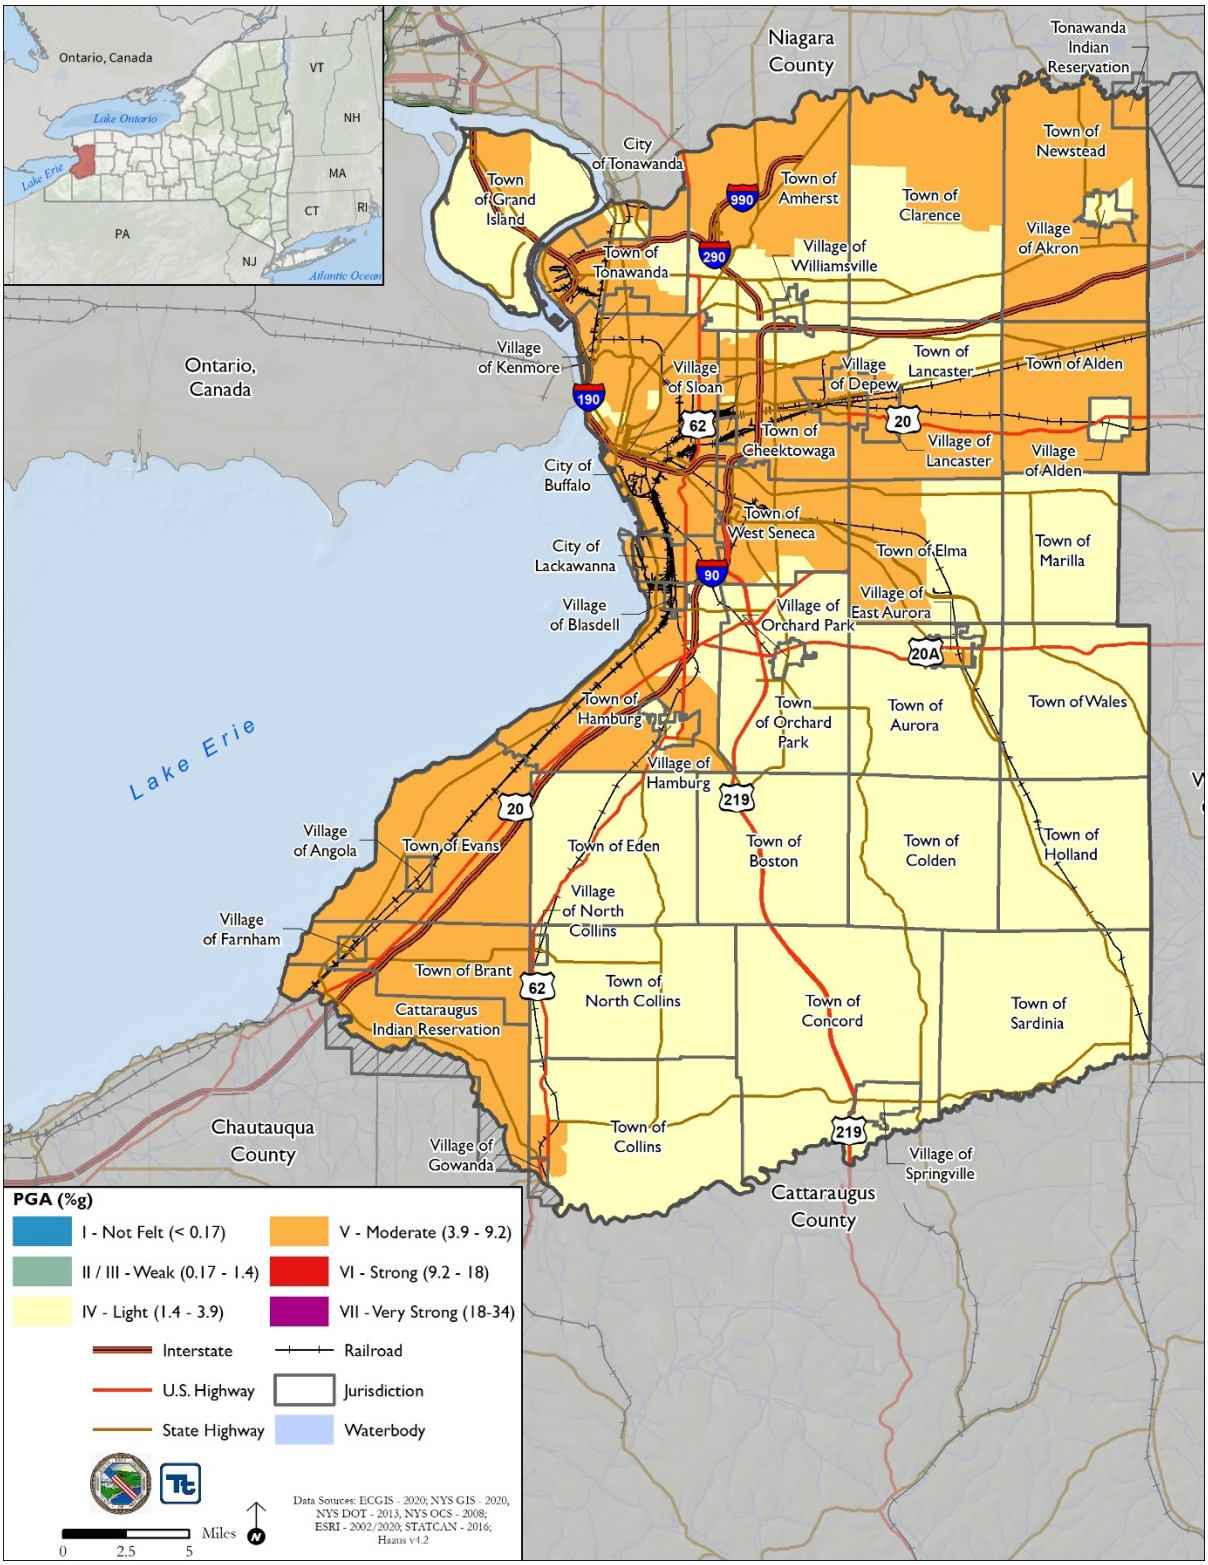
Figure 5.4.3-1. Peak Ground Acceleration Modified Mercalli Scale for a 500-Year MRP Earthquake Event



Attachment: 13-Section-5.4.3-Earthquake-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

The New York State Geological Survey conducted seismic shear-wave tests of the state's surficial geology. Based on these test results, the surficial geologic materials of New York State were categorized according to the National Earthquake Hazard Reduction Program's (NEHRP) Soil Site Classifications (Table 5.4.3-4). The NEHRP developed five soil classifications defined by their shear-wave velocity that impact the severity of an earthquake. The soil classification system ranges from A to E (as noted in Table 5.4.3-4), where A represents hard rock that reduces ground motions from an earthquake and E represents soft soils that amplify and magnify ground shaking and increase building damage and losses. Class E soils include water-saturated mud and artificial fill. The strongest amplification of shaking is expected for this soil type. Seismic waves travel faster through hard rock than through softer rock and sediments. As the waves pass from harder to softer rocks, the waves slow down and their amplitude increases. Shaking tends to be stronger at locations with softer surface layers where seismic waves move more slowly. Ground motion above an unconsolidated landfill or soft soils can be more than 10 times stronger than at neighboring locations on rock for small ground motions (NYS DHSES 2019).

Table 5.4.3-4. NEHRP Soil Classifications

Soil Classification	Description
A	Very hard rock (e.g., granite, gneisses; and most of the Adirondack Mountains)
B	Rock (sedimentary) or firm ground
C	Stiff clay
D	Soft to medium clays or sands
E	Soft soil, including fill, loose sand, waterfront, lakebed clays

Source: NYS DHSES 2019

Figure 5.4.3-2 illustrates the NEHRP soils located throughout Erie County, according to NYS DHSES data. The available NEHRP soils information is incorporated into the Hazus v4.2 earthquake model for the risk assessment (discussed in further detail later in this section). Figure 5.4.3-2 shows that Erie County contains both D and E soft soils, with Class E being the predominate soft soil.

Attachment: 13-Section-5.4.3-Earthquake-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

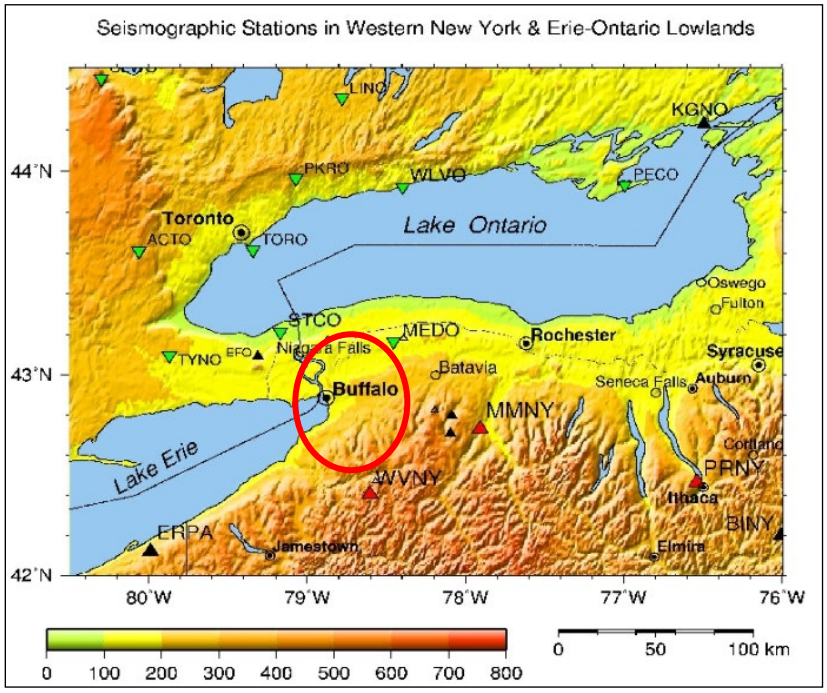
Location

The potential for earthquakes exists across all of New York State and four general regions would experience an amplification of ground motion during seismic activity. These regions are (1) Northwest NY – Northern Erie County, North Central; (2) Northeast NY – Jefferson, St. Laurence, and Northern Franklin Counties; (3) Upper Hudson River area of Eastern NY – Northern Saratoga, Washington, and Southern Warren Counties; and (4) Southeastern NY – Western Nassau County and New York City. Overall, these four regions are the most seismically active areas of the state. Erie County is located in Region 1 (NYS DHSES 2019).

The Lamont-Doherty Cooperative Seismographic Network (LCSN) monitors earthquakes that occur primarily in the northeastern United States. The goals of the monitoring project are to compile a complete earthquake catalog for this region, to assess the earthquake hazards, and to study the causes of the earthquakes in the region. The LCSN operates 40 seismographic stations in the following seven states: Connecticut, Delaware, Maryland, New Jersey, New York, Pennsylvania, and Vermont. No seismographic stations are present in Erie County; however, there are several within the vicinity of the county. Figure 5.4.3-3 shows the location of these stations in the western New York State area (LCSN 2014).

Figure 5.4.3-3. Lamont-Doherty Seismic Station Locations in the Western New York State Area



Source: *LCSN 2014*

Note: *The red oval indicates the approximate location of Erie County.*
The red triangles indicate secondary school, college, and university facility stations.
The black triangles indicate environmental research and education centers.
In addition to the Lamont-Doherty seismic stations, USGS operates a global network of seismic stations to monitor seismic activity. While no seismic stations are located in New York State, nearby stations are positioned
The green triangles indicate public places or state geological survey centers.

Figure 5.4.3-4 shows locations of USGS seismic stations near New York State, specifically in State College, Pennsylvania, and Oak Ridge, Massachusetts.

Previous Occurrences and Losses

Many sources provided historical information on previous occurrences and losses associated with earthquakes throughout New York State. Therefore, with so many sources reviewed for the purpose of this HMP update, loss and impact information for many events could vary depending on the source.

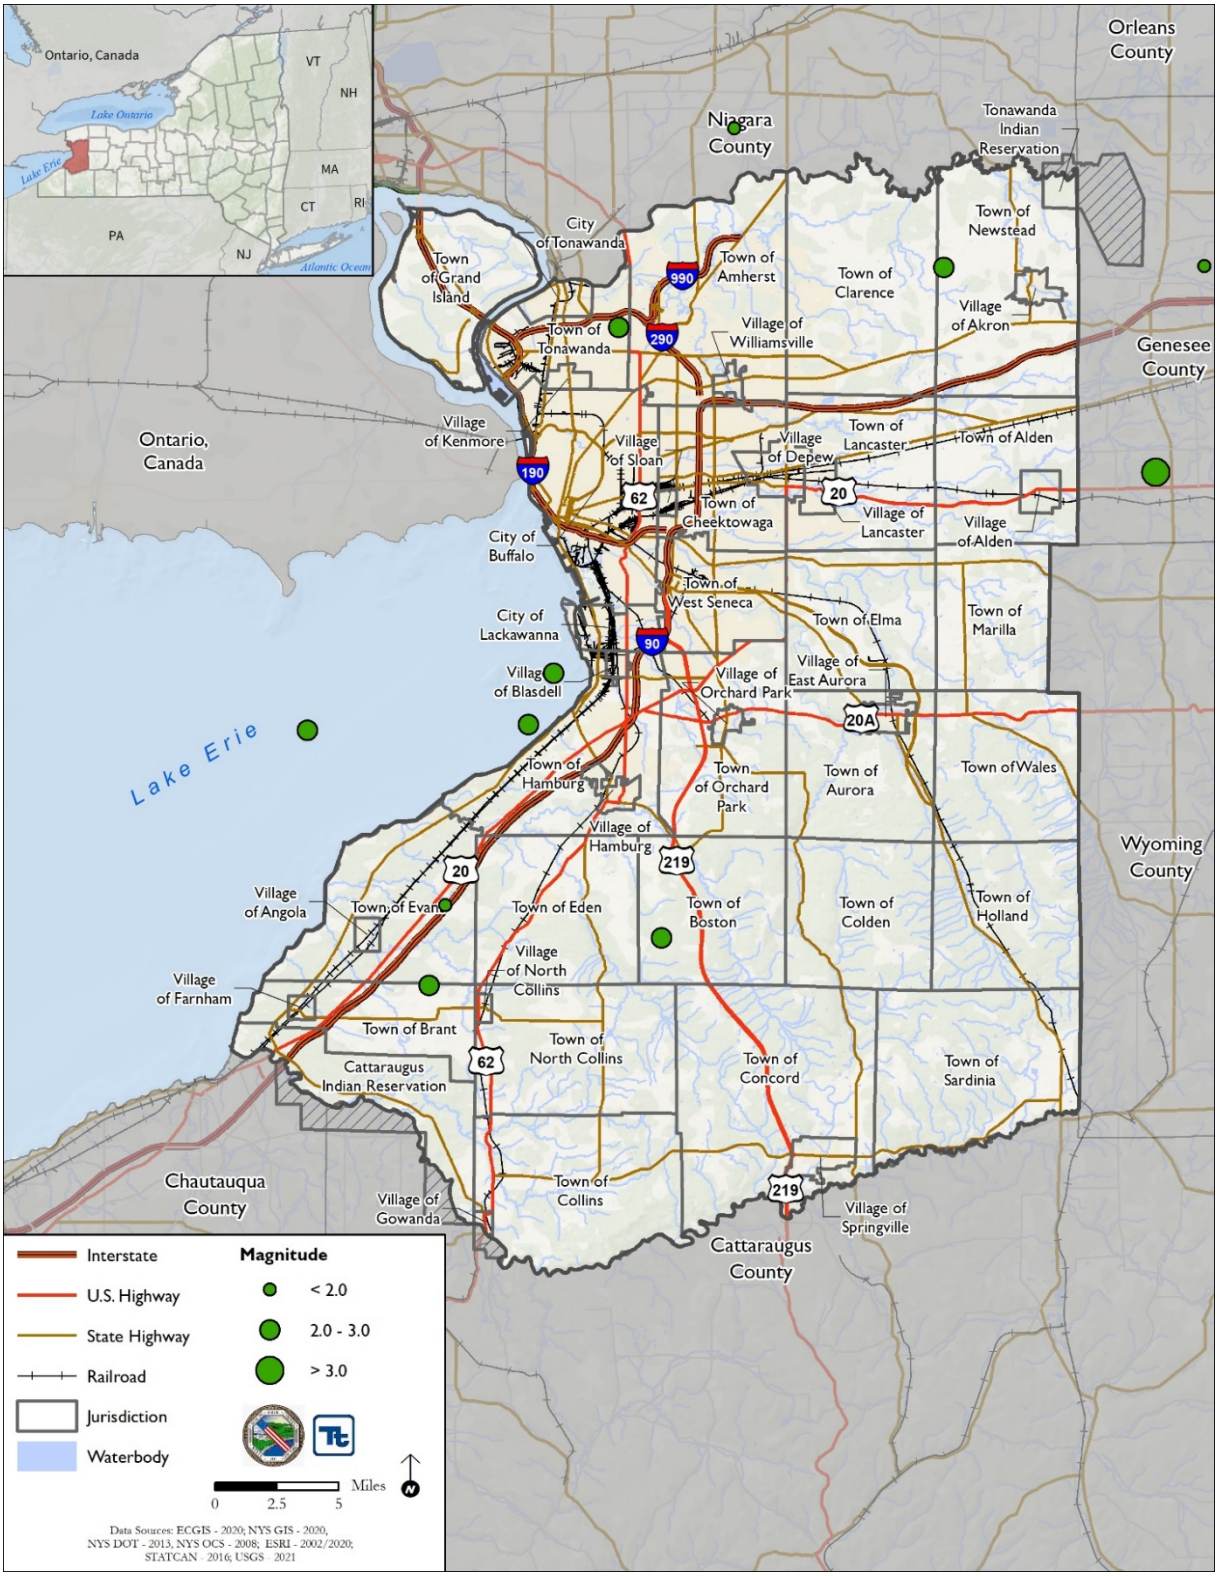
Between 1954 and 2019, New York State was included in one earthquake-related major disaster (DR) or emergency (EM) declaration; DR-1415: Earthquake. Generally, these disasters cover a wide region of the state; therefore, they may have impacted many counties. Erie County was not included in any earthquake-related DRs or EMs (FEMA 2020).

According to the NYS Geological Survey and the New York State 2019 HMP update, approximately 551 significant earthquakes affected New York State between 1737 and 2016 (NESEC 2020). as obtained from the New York State Hazard Mitigation Plan. There has been one significant seismic event in the vicinity of Erie County: an event of reported magnitude 5.2 to 5.8 (depending on the source) centered on Attica in Wyoming County in August 1929. Within Erie County, only one event is recorded in Buffalo in 1857, though this event is not deemed "significant" by nature of having a magnitude of 5.0 or above. A handful of minor earthquakes have been epicentered in and around Erie County since 1737, although details of these events were not readily available (NYS DHSES 2019).

Figure 5.4.3-5 illustrates historic earthquake epicenters in Erie County between 1950 and 2019. According to this figure, eight earthquakes with epicenters in Erie County (including epicenters in eastern Lake Erie) have occurred. In addition to these earthquakes in Erie County, numerous events have originated outside of the county that have been felt within the county. Table 5.4.3-5 includes details regarding these events.

Attachment: 13-Section-5.4.3-Earthquake-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Figure 5.4.3-5. Earthquake Epicenters in Erie County and the Surrounding Area, 1950 – 2019



Note: Smallest magnitude shown: M1.62
Largest magnitude shown: M4.7

Attachment: 13-Section-5.4.3-Earthquake-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

For this 2022 HMP update, known earthquake events that have impacted areas in and around Erie County between 1950 and 2020 are identified in Table 5.4.3-5. Loss and impact information could vary depending on the source. Therefore, the accuracy of monetary figures discussed is based only on the available information identified during research for this HMP update.

Probability of Future Events

Earthquake hazard maps illustrate the distribution of earthquake shaking levels that have a certain probability of occurring over a given time period. According to the USGS, in 2017 (the date of the most recent analysis), Erie County had a PGA of 6%g to 10%g for earthquakes with a 2-percent probability of an occurrence within 50 years.

The New York State Disaster Preparedness Commission (NYS DPC) indicates that the earthquake hazard in New York State is often understated because other natural hazards occur more frequently (e.g., hurricanes, tornadoes, and flooding) and are much more visible. However, the potential for earthquakes does exist across the entire northeastern United States, and New York State is no exception.

In Section 5.3, the identified hazards of concern for Erie County were ranked. NYS DHSES conducts a similar ranking process for hazards that affect the state. The probability of occurrence, or likelihood of the event, is one parameter used for ranking hazards. Based on historical records and input from the Planning Partnership, the probability of occurrence for earthquakes in the county is considered "rare" (not likely to occur within 25 years, as presented in Table 5.3-1). However, for the 500-year mean return period (MRP) earthquake modeled in the Vulnerability Assessment section (below), the probability of occurrence is considered "rare" (not likely to occur within 100 years). With few incidents having occurred within Erie County, and few incidents reportedly affecting Erie County, it is anticipated that the county will experience few direct and indirect impacts from earthquakes in the future.

Climate Change

The potential impacts of global climate change on earthquake probability are unknown. Some scientists feel that melting glaciers could induce tectonic activity. As ice melts and water runs off, tremendous amounts of weight are shifted on the earth's crust. As newly freed crust returns to its original, pre-glacier shape, it could cause seismic plates to slip and stimulate volcanic activity according to research into prehistoric earthquakes and volcanic activity. National Aeronautics and Space Administration (NASA) and USGS scientists found that retreating glaciers in southern Alaska might be opening the way for future earthquakes (NASA 2007).

Secondary impacts of earthquakes could be magnified by future climate change. Soils saturated by repetitive storms could experience liquefaction during seismic activity because of the increased saturation. Dams storing increased volumes of water according to a revised hydrograph could fail during seismic events. During the 1989 Loma Prieta, California, earthquake, liquefaction of the soils and debris used to fill a lagoon caused major

Attachment: 13-Section-5.4.3-Earthquake-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

subsidence, fracturing, and horizontal sliding of the ground surface (USGS n.d.). There are currently no models available to estimate these impacts.

5.4.3.2 Vulnerability Assessment

A probabilistic assessment was conducted for the 500-year MRPs through analysis in Hazus to analyze the earthquake hazard and provide a range of loss estimates. Figure 5.4.3-2 shows the geographic distribution of the NEHRP soil types in the county. Section 5.1 (Methodology and Tools) provides additional details on the methodology used to assess earthquake risk.

Impacts on Life, Health, and Safety

Overall, the entire population of Erie County is exposed to the earthquake hazard event. The impact of an earthquake on life, health, and safety is dependent upon the severity of the event. Risk to public safety and estimated loss of life from an earthquake in the county is minimal. However, populations inside or nearby unreinforced masonry construction are at higher risk due to greater potential for structural damage; people walking below building ornamentation and chimneys could be injured if those become loose and fall as a result of the earthquake.

Socially vulnerable populations, including the elderly (persons over age 65) and individuals living below the census poverty threshold, are most susceptible. Factors leading to this higher susceptibility include decreased mobility and financial ability to react or respond during a hazard, and the location and construction quality of their housing. There are 161,744 persons over the age of 65 and 126,806 persons living in poverty in Erie County (ACS 2019).

An exposure analysis was performed using the NEHRP soil data and the 2019 U.S. Census population data. As noted earlier, NEHRP Class D and E soils are soft soils that amplify and magnify ground shaking and increase building damage and losses; and thus, potentially increasing population at risk to the hazard event. The sum of the population (by Census block within the NEHRP Class D and E soil types) was calculated and summarized in Table 5.4.3-6 below. Overall, approximately 65.8-percent of the County's population is located on NEHRP Class D and E soils.

Table 5.4.3-6. Total Population Located in Class D and E NEHRP Soils

Residents may be displaced or require temporary to long-term sheltering after an earthquake event. The number of people requiring shelter is generally less than the number displaced, as some displaced persons use hotels or stay with family or friends following a disaster event. Table 5.4.3-7 estimates the number of households displaced, and population that may require short-term sheltering as a result of the 500-year MRP earthquake event. It is an aggregate value of the entire County and estimates that one household would be displaced, and one person would require short-term shelter.

Table 5.4.3-7. Summary of Estimated Sheltering Needs for Erie County

Scenario	Displaced Households	People Requiring Short-Term Shelter
500-Year Earthquake	66	39

Sources: NYS GIS n.d.; Hazus v4.2

According to the 1999-2003 NYCEM Summary Report (*Earthquake Risks and Mitigation in the New York / New Jersey / Connecticut Region*), a strong correlation exists between structural building damage and the number of injuries and casualties from an earthquake event. Further, the time of day also exposes different sectors of the community to the hazard. For example, HAZUS considers the residential occupancy at its maximum at 2:00 a.m., where the educational, commercial, and industrial sectors are at their maximum at 2:00 p.m., and peak commute time is at 5:00 p.m. Whether directly impacted or indirectly impacted, the entire population will be affected to some degree. Business interruption could keep people from working, road closures could isolate populations, and loss of utilities could impact populations that suffered no direct damage from an event itself. Table 5.4.3-8 summarizes Countywide injuries and casualties estimated for the 500-year MRP earthquake event.

Table 5.4.3-8. Estimated Number of Injuries and Casualties from the 500-Year MRP Earthquake Event

Level of Severity	Time of Day		
	2:00 AM	2:00 PM	5:00 PM
Injuries	30	62	30
Hospitalization	4	9	4
Casualties	1	1	1

Sources: NYS GIS n.d.; Hazus v.4.2

Impacts on General Building Stock

The entire County's general building stock is considered at risk and exposed to this hazard. As stated earlier, soft soils (NEHRP Soil Classes D and E) can amplify ground shaking to damaging levels even during a moderate earthquake (NYCEM 2003). Therefore, buildings located on NEHRP Classes D and E soils are at increased risk of damage from an earthquake. Table 5.4.3-9 summarizes the number and replacement cost value of buildings in Erie County located on NEHRP soil classes D and E.

Table 5.4.3-9. Number and Replacement Cost Value of Buildings Located on NEHRP Class D and E Soils

Jurisdiction	Total Number of Buildings	Total Replacement Cost Value (RCV)	Estimated Building Stock Exposed to Class D and E NEHRP Soil Hazard Area

There is a strong correlation between PGA and damage a building might undergo (NYCEM 2003). The Hazus model is based on best available earthquake science and aligns with these statements. The Hazus probabilistic earthquake model was applied to analyze effects from the earthquake hazard on general building stock in Erie County. Figure 5.4.3-1 in this profile illustrates the geographic distribution of PGA (g) across the County for 500-year MRP events at the Census-tract level.

Attachment: 13-Section-5.4.3-Earthquake-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

A building's construction determines how well it can withstand the force of an earthquake. The NYCEM report indicates that unreinforced masonry buildings are most at risk during an earthquake because the walls are prone to collapse outward, whereas steel and wood buildings absorb more of the earthquake's energy. Additional attributes that affect a building's capability to withstand an earthquake's force include its age, number of stories, and quality of construction. Hazus v4.2 considers building construction and age of building as part of the analysis. Because a custom general building stock was used for this analysis, the building ages and building types from the inventory were incorporated into the Hazus v4.2 model.

Potential building damage was evaluated by Hazus across the following damage categories (none, slight, moderate, extensive, and complete). Table 5.4.3-10 provides definitions of these five categories of damage for a light wood-framed building; definitions for other building types are included in Hazus technical manual documentation.

Table 5.4.3-10. Example of Structural Damage State Definitions for a Light Wood-Framed Building

Damage Category	Description
Slight	Small plaster or gypsum-board cracks at corners of door and window openings and wall-ceiling intersections; small cracks in masonry chimneys and masonry veneer.
Moderate	Large plaster or gypsum-board cracks at corners of door and window openings; small diagonal cracks across shear wall panels exhibited by small cracks in stucco and gypsum wall panels; large cracks in brick chimneys; toppling of tall masonry chimneys.
Extensive	Large diagonal cracks across shear wall panels or large cracks at plywood joints; permanent lateral movement of floors and roof; toppling of most brick chimneys; cracks in foundations; splitting of wood sill plates and/or slippage of structure over foundations; partial collapse of room-over-garage or other soft-story configurations.
Complete	Structure may have large permanent lateral displacement, may collapse, or be in imminent danger of collapse due to cripple wall failure or the failure of the lateral load-resisting system; some structures may slip and fall off the foundations; large foundation cracks occur.

Source: Hazus Technical Manual

Building damage as a result of the 500-year MRP earthquake events was estimated using Hazus. Damage loss estimates include structural and non-structural damage to the building and loss of contents. Table 5.4.3-11 summarizes the estimated damages for the County by building type for the 500-year MRP earthquake events. Hazus estimates that 165 structures in the County will be face extensive damaged because of a 500-year earthquake event. The majority of these structures are un-reinforced masonry buildings. Hazus estimates that 1,335 structures will be moderately damaged, and majority of the buildings are un-reinforced masonry (i.e., 904 total), followed by wood buildings (i.e., 274 total).

Table 5.4.3-11 Estimated Number of Buildings Damaged by Building Type for 500-year MRP Earthquake Event

	Expected Number of Buildings Within Damage State Categories by Building Type 500-Year MRP				
Building Category	None	Slight	Moderate	Extensive	Complete
Wood	305,990	3,179	274	15	0
Steel	6,207	125	36	1	0
Concrete	1,762	32	10	0	0
Precast	0	0	0	0	0
Reinforced Masonry	0	0	0	0	0
Un-reinforced Masonry	34,968	2,129	904	147	15
Manufactured housing	4,698	319	111	2	0

C – City; T – Town; V – Village; % - Percent

Hazus estimated approximately $149.5 million in damage as a result of the 500-year earthquake event. This includes structural damage, non-structural damage, and loss of contents, representing 1-percent of the total replacement value for general building stock in Erie County. Residential buildings account for most of the damage for earthquake event.

Impact on Critical Facilities

After considering the general building stock exposed to, and damaged by, 500-year MRP earthquake event, critical facilities were evaluated. More than 60-percent of the critical facilities in Erie County are considered exposed to the earthquake hazard. Table 5.4.3-14 shows that of the 4,184 critical facilities in the County, 2,539 are located on NEHRP Class D and E soils. A total of 2,462 of these critical facilities are considered lifelines for the County. Table 5.4.3-15 through Table 5.4.3-17 summarize the number of critical facilities by type per jurisdiction in Erie County located on NEHRP Soil Class D and E hazard areas. The City of Buffalo has the

Attachment: 13-Section-5.4.3-Earthquake-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

greatest number of critical facilities exposed to the earthquake hazard area, and majority of the exposed critical facilities are bridges.

Table 5.4.3-14. Number of Critical Facilities Located Exposed to NEHRP D & E Soils

Food, Water, Shelter	951	448
Hazardous Materials	398	276
Health and Medical	144	98
Safety and Security	1,047	615
Transportation	1,158	833
Erie County Total	**3,933**	**2,462**

Source: NYS GIS n.d.; Erie County GIS 2020; FEMA 2020

Hazus estimates the probability that critical facilities may sustain damage and the percent functionality as a result of 500-year MRP earthquake events (Table 5.4.3-18). As a result of a 500-Year MRP event, Hazus estimates that essential, utilities, and transportation facilities will be over 93-percent functional one day after the event. Furthermore, over 92-percent of these facilities will not sustain any damage.

Table 5.4.3-18. Estimated Damage and Loss of Functionality for Critical Facilities and Utilities for the 500-Year MRP Earthquake Event

Name	Percent Probability of Sustaining Damage					Percent Functionality

Impact on the Economy

Earthquakes also impact the economy, including loss of business function, damage to inventory (buildings, transportation, and utility systems), relocation costs, wage loss, and rental loss due to repair and replacement of buildings. Hazus estimates building-related economic losses, including income losses (wage, rental, relocation, and capital-related losses) and capital stock losses (structural, non-structural, content, and inventory losses). Economic losses estimated by Hazus are summarized in Table 5.4.3-19.

Table 5.4.3-19. Building-Related Economic Losses from 500-Year MRP Earthquake Events

Mean Return Period (MRP)	Inventory Loss	Relocation Loss	Building and Content Losses	Wages Losses	Rental Losses	Capital-Related Loss
500-year MRP	$1,569,100	$19,172,800	$149,540,900	$8,645,000	$7,714,700	$3,835,900

Source: NYS GIS n.d.; Hazus v4.2

Although the Hazus analysis did not compute damage estimates for individual roadway segments and railroad tracks, assumedly these features would undergo damage due to ground failure resulting in interruptions of regional transportation and of distribution of materials. Losses to the community that would result from damage to lifelines could exceed costs of repair (FEMA 2012). Earthquake events can significantly affect road bridges, many of which provide the only access to certain neighborhoods. Because softer soils generally follow floodplain boundaries, bridges that cross watercourses should be considered vulnerable. Another key factor in degree of vulnerability is age of facilities and infrastructure, which correlates with standards in place at time of construction.

Additionally, Hazus estimates volume of debris that may be generated as a result of an earthquake event to enable the study region to prepare for and rapidly and efficiently manage debris removal and disposal. Debris estimates were divided into two categories: (1) reinforced concrete and steel that require special equipment to break up before transport can occur, and (2) brick, wood, and other debris that can be loaded directly onto trucks by use of bulldozers (Hazus Earthquake User's Manual).

Hazus estimated the generation of over 68,611 tons of total debris during the 500-year MRP event (Table 5.4.3-20)

Impact on the Environment

According to USGS, earthquakes can cause damage to the surface of the Earth in various forms depending on the magnitude and distribution of the event (USGS 2020a). Surface faulting is one of the major seismic components to earthquakes that can create wide ruptures in the ground. Ruptures can have a direct impact on the landscape and natural environment because it can disconnect habitats for miles isolating animal species or tear apart plant roots.

Attachment: 13-Section-5.4.3-Earthquake-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Furthermore, ground failure as a result of soil liquefaction can have an impact on soil pores and retention of water resources (USGS 2020b). The greater the seismic activity and liquefaction properties of the soil, the more likely drainage of groundwater can occur which depletes groundwater resources. In areas where there is higher pressure of groundwater retention, the pores can build up more pressure and make soil behave more like a fluid rather than a solid increasing risk of localized flooding and deposition or accumulation of silt.

Cascading Impacts to Other Hazards

The Global Geoengineering Research Group in USGS has been investigating the relationship earthquakes have with ground failure, and coastal erosion (USGS n.d.). As mentioned in earlier sections, soft and loose soils are more susceptible to earthquake events. Ground failure can become exacerbated due to earthquake events, causing land sliding and coastal erosion. Areas of steep slopes are at greater risk of ground failure and potential erosion during earthquakes (USGS n.d.). Further, residual impacts from earthquakes could alter the floodplain extent for the County if ground failure and erosion occur. Damage could occur at coastal levees or canals may become breached as a result of an earthquake event, which could create flooding in the impacted areas. Refer to Sections 5.4.1, 5.4.6, and 5.4.8 for additional information.

Future Changes that May Impact Vulnerability

Understanding future changes that effect vulnerability in the County can assist in planning for future development and ensure establishment of appropriate mitigation, planning, and preparedness measures. The County considered the following factors to examine potential conditions that may affect hazard vulnerability:

- Potential or projected development
- Projected changes in population
- Other identified conditions as relevant and appropriate, including the impacts of climate change

Projected Changes in Population

According to the U.S. Census Bureau, the population in Erie County increased by a negligible amount between 2010 and 2019 (U.S. Census Bureau 2020). Estimated population projections provided by the Cornell Program on Applied Demographics indicates that the County's population will rise into 2040, increasing total population to approximately 945,891 persons (Cornell Program on Applied Demographics 2018). As population increases, persons that move into older structures in the County are at greater risk of being impacted by earthquake events because older structures are more vulnerable to ground shaking. Section 4 (County Profile) includes a more thorough discussion about population trends for the County.

Projected Development

As discussed and illustrated in Section 4 (County Profile), areas targeted for future growth and development have been identified across the County. Development built in areas with softer NEHRP soil classes, liquefaction, and landslide-susceptible areas may experience shifting or cracking in the foundation during earthquakes because of the loose soil characteristics of these soil classes. However, current building codes require seismic provisions that should render new construction less vulnerable to seismic impacts than older, existing construction that may have been built to lower construction standards. Refer to Section 4, and Volume II Section 9 for more information about the potential new development in Erie County.

Climate Change

Because the impacts of climate change on earthquakes are not well understood, a change in the County's vulnerability as the climate continues to change is difficult to determine. However, climate change has the

Attachment: 13-Section-5.4.3-Earthquake-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

potential to magnify secondary impacts of earthquakes. As a result of the climate change projections discussed above, the County's assets located on areas of saturated soils and on or at the base of steep slopes, are at a higher risk of landslides/mudslides because of seismic activity. Refer to Section 5.4.8 for additional discussion of the landslide hazard.

Change of Vulnerability

Since the 2015 HMP analysis, population statistics have been updated using the 5-Year 2015-2019 American Community Survey Population Estimates (American Community Survey 2019). The general building stock was also established using RS Means 2020 building valuations that estimated replacement cost value for each building in the inventory. Additionally, a critical facility dataset was provided from the County. Exposure to the earthquake hazard was determined by overlaying critical facilities and building centroids on New York State NEHRP soil layer. This layer was also imported into Hazus along with the building stock and critical facility data in order to determine the effects of a 500-year MRP event on both the County and individual jurisdictions.

Overall, this vulnerability assessment uses a more precise and thorough approach, which provides increased accuracy for estimated exposure and potential losses for Erie County.

Attachment: 13-Section-5.4.3-Earthquake-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Attachment: 14-Section-5.4.4-Expansive-Soil-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

5.4.4 Expansive Soils

This section provides a hazard profile and vulnerability assessment of the expansive soils hazard.

5.4.4.1 Hazard Profile

This section presents the expansive soils hazard description, extent, location, previous occurrences and losses, and probability of future occurrences.

Hazard Description

Soils and soft rock that tend to swell or shrink due to changes in moisture content are known as expansive soils. Expansive soils are often referred to as swelling clays because clay materials are most susceptible to swelling and shrinking. Changes in soil volume present a hazard primarily to structures built on expansive soils. The most extensive damage occurs to highways and streets (FEMA 1997).

In the U.S., two major groups of rocks serve as parent materials of expansive soils and these are most common in the western portion of the country. The first group consists of ash, glass, and rocks of volcanic origin. The aluminum silicate minerals in these volcanic materials often decompose to form expansive clay minerals, known as montmorillonite. The second group consists of sedimentary rocks containing clay minerals, for example, the shales of the semiarid west-central states (FEMA 1997).

The current New York State Hazard Mitigation Plan (HMP) does not profile expansive soils. However, according to the 2014 NYS HMP update, expansive soils are any soil that expands when wet and shrinks when dry. Soils are tested using an accepted standard of measurement to determine swell potential. Expansive soils can exert pressures up to 14,000 pounds per foot, causing the breakdown of building foundations and structural integrity. Roadbeds may also be affected and could lead to avalanche and collapse when cutting into mountains and hillsides (NYS DHSES 2014).

Expansive soils contain minerals, such as smectite clays, that are capable of absorbing water. As these clays absorb water, they increase in volume. The more water absorbed, the more their volume increases. Expansions of 10% or more are not uncommon. This change in volume can exert enough force on a building or other structure to cause damage. When dry, expansive soils shrink and can remove support from buildings or other structures and result in damaging subsidence. Fissures in the soil can also develop. Fissures can facilitate the deep penetration of water when moist conditions or runoff occurs. This produces a cycle of shrinkage and swelling that places repetitive stress on structures (NYS DHSES 2014).

Issues associated with expansive soils include:

- Foundation cracks
- Heaving and cracking on floor slabs and walls
- Jammed doors and windows
- Ruptured pipelines
- Heaving and cracking of sidewalks and roads
- Damage to the upper floors of the building (when motion in the structure is significant) (NYS DHSES 2014)

Extent

The extent to which soil expansion is present in an area or site can be measured using the Soil Expansion Potential standard (ASTM D-4829). The expansion index (EI) provides an indication of swelling potential of a compacted soil. The EI test is not used to duplicate any particular field conditions such as soil density, water content, loading, in-place soil structure, or soil water chemistry.

Table 5.4.4-1. Soil Expansion Index

Expansion Index	Potential Expansion
0-20	Very Low
21-50	Low
51-90	Medium
91-130	High
>130	Very High

Source: *ASTM 2013*
Note: *The Uniform Building Code (UBC) mandates that special foundation design consideration be employed if the EI is 20 or greater.*

Based on the expansion potential rating, mitigation may be required for building construction or repairs. The UBC mandates that special foundation design consideration be employed if the EI is 20 or greater. The New York Residential Building Code (Section R403.1.8) addresses consideration of expansive soils. Construction dangers are reduced when engineers incorporate cement or lime or other salts into expansive soils. These help to lessen the effects of expansion. Other methods of reducing expansive soil danger include replacing the top three to four feet of expansive soil with non-expansive soils or compacting existing expansive soil.

Linear extensibility is also used to determine the shrink-swell potential of soils. The shrink-swell potential is low if the soil has a linear extensibility of less than 3 percent; moderate if 3 to 6 percent; high if 6 to 9 percent; and very high if more than 9 percent (refer to Table 5.4.4-2.). If linear extensibility is more than 3, shrinking and swelling can cause damage to buildings, roads, and other structures and plant roots. As noted, special design is commonly needed; however, this data does not replace a geotechnical exploration and report used to determine expansive soil potential (USDA Natural Resource Conservation Services, 2020).

Table 5.4.4-2. Linear Extensibility Ratings

Percent Linear Extensibility	Shrink-Swell Potential
0-3	Low
3-6	Moderate
6-9	High
9-13	Very High

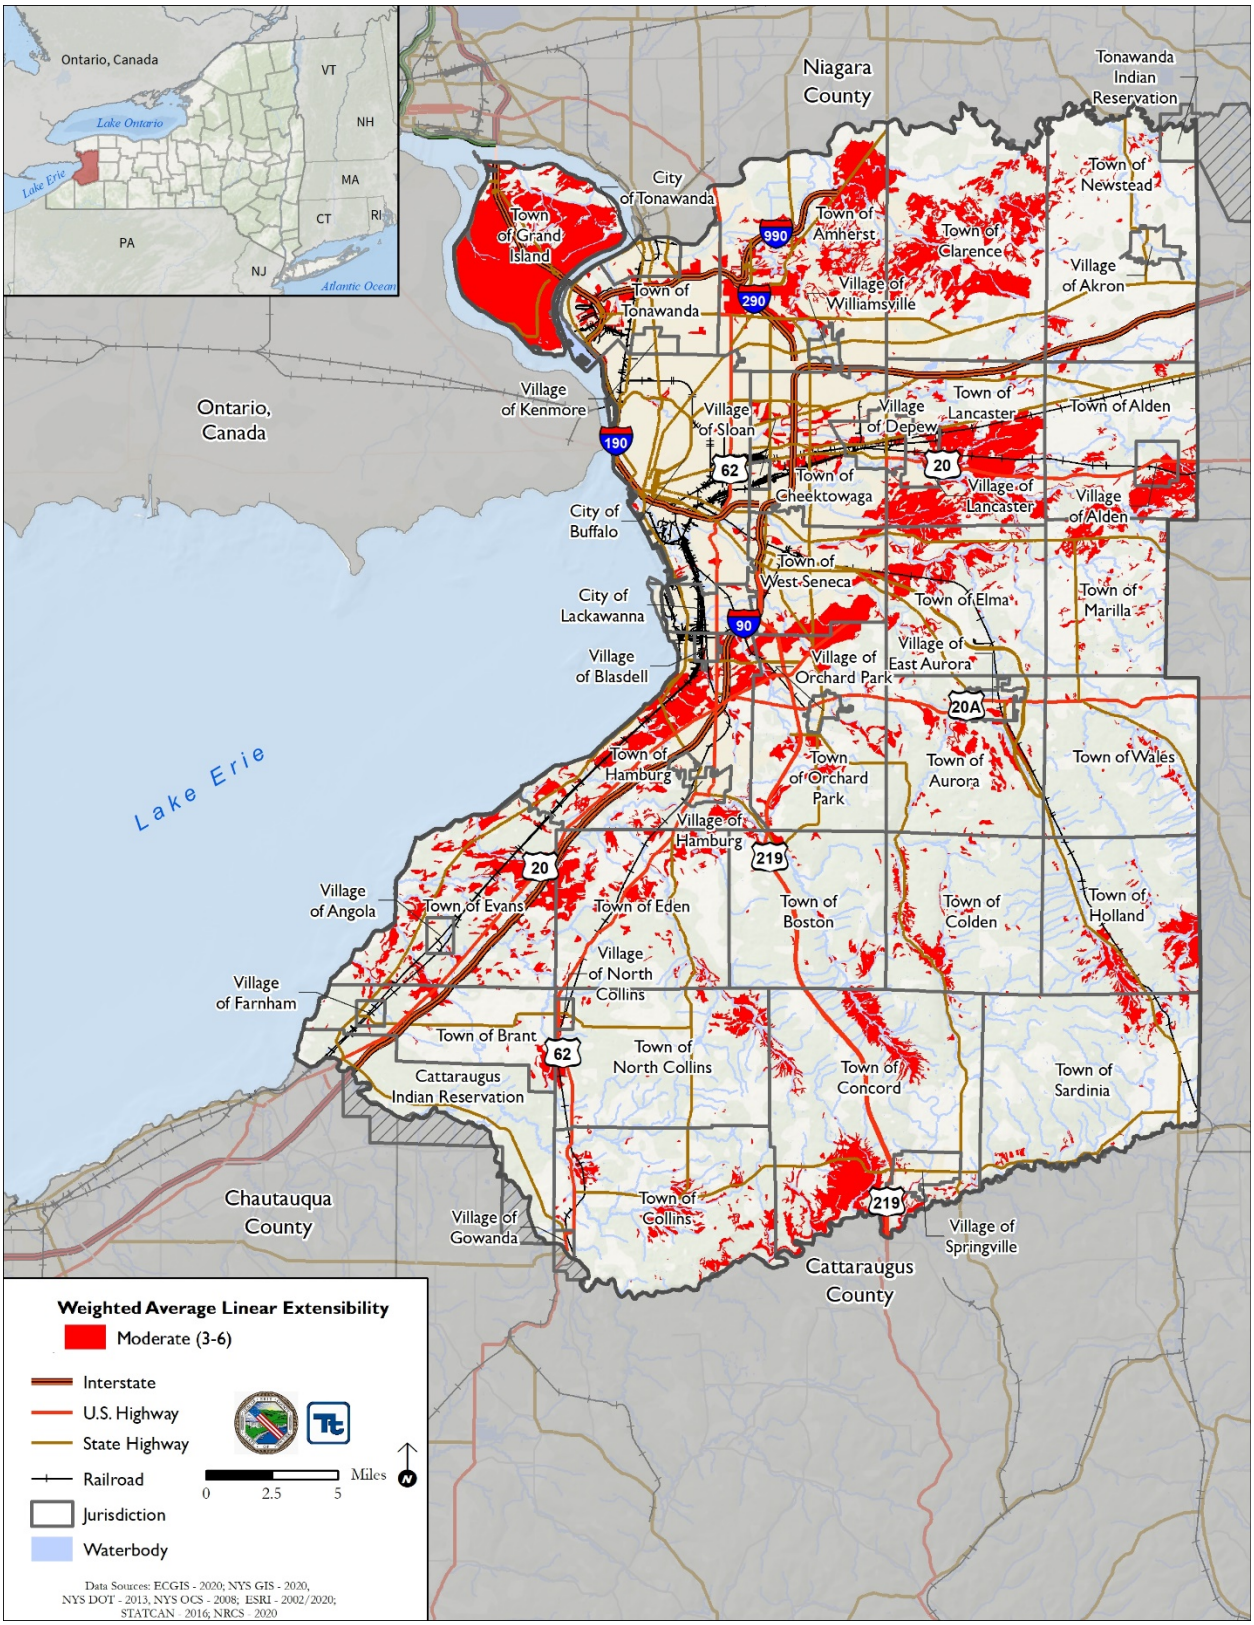
Source: *USDA NRCA 2020*

Location

A custom soil report was run for Erie County using USDA Natural Resources Conservation Area soils data. Out of the 211 types of soils in Erie County, 31 are considered to have moderate linear extensibility potential. These soils primarily occur in the northern half of the county and cover approximately 96,917 acres or 14.2 percent of the entire county. The highest-rated soils are Odessa Lakemont complex and Odessa silt loam soils, which have a median percent linear extensibility of 5.7 percent. This is considered to be moderate shrink-swell potential. Figure 5.4.4-1 illustrates the location of the linear extensibility potential in Erie County.

Attachment: 14-Section-5.4.4-Expansive-Soil-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Figure 5.4.4-1. Expansive Soils in Erie County



Attachment: 14-Section-5.4.4-Expansive-Soil-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Previous Occurrences and Losses

There have been no federally declared disasters for expansive soils in New York State. According to the New York State Geological Survey (NYSGS), historical records, including scientific study data for land subsidence in the state, is either sparse, not readily available, or does not exist in summary form. There may have been incidents of expansive soils causing damage, but these incidents have not been reported (NYS DHSES 2013).

Historic occurrences of damage caused by expansive soils are only known to be located in the Town of Amherst, generally in the area north of Main Street. In the 2015 Erie County HMP, the United States Armey Corps of Engineers (USACE) reported that between the years 1987 and 2005 – 3 to 4 percent of the total residential structures in the town reported slight to severe foundation-related damage and/or structural damage, in part due to building on expansive soils. New development generally has few reported problems. At that time, the USACE also determined that average total repair costs for damaged homes is about $7,900 but ranges from about $500 to $71,000.

Probability of Future Occurrences

In Section 5.3, the identified hazards of concern for Erie County were ranked. The probability of occurrence, or likelihood of the event, is one parameter used for hazard rankings. Based on historical records and input from the Planning Committee, the probability of occurrence for expansive soils in Erie County is considered "occasional".

Although no reported incidents have occurred within the county, it is anticipated that Erie County may experience indirect impacts from expansive soils that may affect the general building stock and the local economy and may induce secondary hazards, such as fires and utility failure.

Climate Change Impacts

Climate change is beginning to affect both people and resources of Erie County, and the impacts of climate change will continue. Impacts related to increasing temperatures are already being felt in the county. ClimAID: the Integrated Assessment for Effective Climate Change in New York State (ClimAID) was undertaken to provide decision-makers with information on the state's vulnerability to climate change and to facilitate the development of adaptation strategies informed by both local experience and scientific knowledge. Each region in New York State, as defined by ClimAID, contains attributes that will be affected by climate change. Erie County is part of Region 1, Western New York, Great Lakes Plain. In Region 1, it is estimated that temperatures will increase by 3.0 ºF to 5.5 ºF by the 2050s and 4.5 ºF to 8.5 ºF by the 2080s (baseline of 48.0 ºF, mid-range projection). Precipitation totals will increase between 0 and 10% by the 2050s and 0 to 15% by the 2080s (baseline of 37.0 inches, mid-range projection). w displays the projected seasonal precipitation change for ClimAID Region 1 (NYSERDA 2014).

Table 5.4.4-3. Projected Seasonal Precipitation Change in Region 1, 2050s (% change)

Winter	Spring	Summer	Fall
+5 to +15	0 to +10	-5 to +10	-5 to +10

Source: NYSERDA 2014

By the end of the century, the greatest increases in precipitation are projected to be in the northern parts of the state. Although seasonal projections are less certain than annual results, much of this additional precipitation is projected to occur during the winter months. During the late summer and early fall, in contrast, total precipitation is slightly reduced in many climate models. The projected increase in precipitation is expected to fall in heavy downpours and less in light rains. The increase in heavy downpours has the potential to affect drinking water;

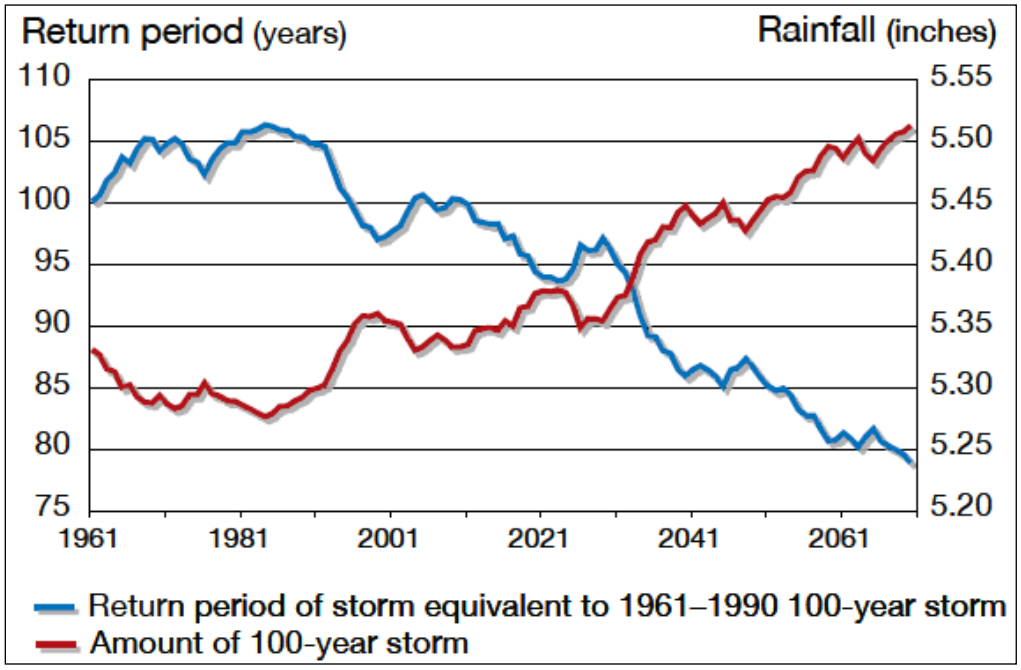
Attachment: 14-Section-5.4.4-Expansive-Soil-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

heighten the risk of riverine flooding; flood key rail lines, roadways, and transportation hubs; and increase delays and hazards related to extreme weather events (NYSERDA 2018).

Average annual temperatures are projected to increase across New York State by 2.0–3.4 ˚F by the 2020s, 4.1–6.8 ˚F by the 2050s, and 5.3–10.1 ˚F by the 2080s. By the end of the century, the greatest warming is projected to be in the northern parts of the state. The state's growing season could lengthen by about a month, with summers becoming more intense and winters milder (NYSERDA 2018).

Increasing air temperatures intensify the water cycle by increasing evaporation and precipitation. This can cause an increase in rain totals during events with longer dry periods in between those events. These changes can have a variety of effects on the state's water resources (NYSERDA 2011). Figure 5.4.4-2 displays the project rainfall and frequency of extreme storms in New York State. The amount of rainfall in a 100-year event is projected to increase, while the number of years between such storms (return period) is projected to decrease. Rainstorms will become more severe and more frequent (NYSERDA 2011).

Figure 5.4.4-2. Projected Rainfall and Frequency of Extreme Storms



Source: NYSERDA 2011

Total precipitation amounts have slightly increased in the Northeast U.S. by approximately 3.3 inches over the last 100 years. There has also been an increase in the number of two-inch rainfall events over a 48-hour period since the 1950s (a 67 percent increase). The number and intensity of extreme precipitation events are increasing in New York State as well. More rain heightens the danger of localized flash flooding, streambank erosion, and storm damage (Cornell University College of Agriculture and Life Sciences 2011).

Increased heavy precipitation events are expected in New York State due to climate change. As previously stated, as expansive soils absorb more water, they increase in volume, creating the potential to exert enough force on a building or other structure to cause damage. Temperatures are expected to increase throughout New York State. Increasing temperatures can increase the rate at which soils dry. When expansive soils are dry, they shrink and can remove support from buildings or other structures, resulting in damaging subsidence.

Attachment: 14-Section-5.4.4-Expansive-Soil-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

5.4.4.2 Vulnerability Assessment

To understand risk, a community must evaluate what assets are exposed and vulnerable in the identified hazard area. An exposure analysis was conducted in GIS for the expansive soils hazard area utilizing Canadice silt loam soils. Refer to Section 5.1 (Methodology and Tools) for additional details on the methodology used to assess expansive soil hazard area risk.

As indicated by earlier sections, there are 31 soils considered to have moderate shrink-swell potential. The soils with the greatest median linear extensibility are Odessa silt loam and Odessa Lakemont complex (0 to 3 percent slopes). There are no soils with a median extensibility greater than moderate in the county.

Impact on Life, Health and Safety

According to the 2019 ACS annual estimate, Erie County had a population of 919,355 people. The Town of Amherst has the greatest population at risk of events caused by expansive soils (24,209 people). The Town of Grand Island has the greatest percentage of population exposed to expansive soils (78.2 percent of the total population). Table 5.4.4-4 shows that an estimated 7 residents and 92 residents live on the expansive soils hazard area in the Town of Southampton and Town of Southold, respectively.

Table 5.4.4-4. Population Exposed to Expansive Soil Hazard Areas

Impact on General Building Stock

Because of differences in building construction, residential structures and one-story commercial structures are more susceptible to damage by expansive soils compared to multi-story buildings. Multi-story buildings are heavier and can generally counter the swelling pressures. The exception is when multi-story buildings are built on wet clay and may experience damage by shrinkage of the clay if moisture levels are substantially reduced (by evapotranspiration or by evaporation from under heated buildings) (FEMA 1997).

FEMA's Coastal Construction Manual recommends that any development along the coast should follow the 2012 IBC requirements (FEMA n.d.). The 2012 IBC requires that geotechnical investigations are conducted if expansive soils are likely to be present. Subsurface testing includes boring, creating test pits, soil sampling, and laboratory tests. If an expansive soil is present, it is recommended that development does not occur. Table 5.4.4-5. summarizes the estimated number of buildings currently built on expansive soil hazard areas. The Town of Amherst has the greatest number of buildings and associated replacement cost value within the expansive soil hazard area (7,726 buildings and $5.8 billion). The Town of Grand Island has the greatest percentage of its buildings exposed to expansive soils (77.8 percent).

Table 5.4.4-5. Estimated Building Exposure to the Expansive Soils Hazard Areas

Impact on Critical Facilities

Approximately 11.3 percent of the critical facilities in Erie County are considered exposed to the expansive soils hazard area. Of the 474 critical facilities in the county exposed to expansive soils, 441 are considered lifelines. Table 5.4.4-6. summarizes the number of critical facilities by type per jurisdiction in Erie County located on expansive soil hazard areas. Table 5.4.4-7 summarizes the number of critical facilities exposed to the expansive soil hazard area by FEMA's lifeline categories. Table 5.4.4-8. summarizes the type of critical facilities exposed to expansive soils. Bridges, hazardous material sites, and secondary education locations are the three types of critical facilities that are the most exposed.

Attachment: 14-Section-5.4.4-Expansive-Soil-093021 (RES-2022-375 : Authorizing Adoption of the 2022

Critical facilities will experience similar impacts from expansive soils as highlighted in the general building stock section. Smaller structures built on expansive soils may be more susceptible to damages caused by the shrinking and swelling properties of expansive soils. Furthermore, roadways built on expansive soils that are major transportation routes leading to critical facilities or connect essential services to the community could also be affected. Roadways that become damaged from expansive soils could create a disruption to critical services. There are 892.1 miles of roadway exposed to the expansive soil hazard area out of a total of 5,818 miles of evacuation routes in the county.

Impact on the Economy

Expansive soils may impact the economy where structures and roadways are damaged. Businesses built on the hazard area may need to shut down for repairs or move to a new, potentially less profitable, location if the building does not meet the 2012 IBC code (FEMA n.d.). As discussed earlier, expansive soils may also cause damage to highways and roads. Damages result from differential vertical movement that occurs as clay moisture content adjusts to the changed environment. For pavement, differential movement of 0.4 inches with a horizontal distance of 20 feet can pose an engineering problem for fast travel (FEMA 1997). Infrastructure damage is costly and can impact the local and regional economy.

Impact on the Environment

As discussed in earlier sections, expansive soils shrink and swell based on available water content. Absorbing available water could reduce water availability for surrounding ecosystems. Shrinking soils from a lack of water could create cracks in the ground, impacted rooted plants. The instability of this soil type may not be the most ideal habitat for species in the county.

Cascading Impacts to Other Hazards

There are no known cascading impacts expansive soils cause to other hazards of concern for the county.

Future Changes That May Impact Vulnerability

Understanding future changes that impact vulnerability in the county can assist in planning for future development and ensuring that appropriate mitigation, planning, and preparedness measures are in place. Any areas of growth in the three jurisdictions where expansive soils exist could potentially be impacted by this hazard.

Projected Development

As discussed in Section 4, areas targeted for future growth and development have been identified across Erie County. The county areas targeted for potential future growth and development in the next five years have been identified across the county at the municipal level.

New development projects within the county will be advised to follow the 2012 IBC requirements (FEMA n.d.). The 2012 IBC requires that geotechnical investigations are conducted if expansive soils are likely to be present. Subsurface testing includes boring, creating test pits, soil sampling, and laboratory tests. If an expansive soil is present, it is recommended that development does not occur.

Projected Changes in Population

According to the U.S. Census Bureau, the population in Erie County has remained stable between 2010 and 2019 (919,040 persons in 2010 and 919,355 persons in 2019). Estimated population projections provided by the Cornell Program on Applied Demographics indicate that the county's population will increase into 2040, bringing total population to approximately 945,891 persons (Cornell Program on Applied Demographics 2017).

Attachment: 14-Section-5.4.4-Expansive-Soil-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

More housing units in the jurisdictions most vulnerable to expansive soil impacts suggests that a greater number of persons will be at risk of being exposed to expansive soil hazard areas.

Climate Change

Most studies project that the State of New York will see an increase in average annual temperatures. Additionally, the state is projected to experience more frequent droughts, which may affect the availability of water supplies, primarily placing an increased stress on the population and their available potable water. A decrease in water supply or increase in water supply demand may increase the county's vulnerability to expansive soil impacts. Critical water-related service sectors may need to adjust management practices and actively manage resources to accommodate for future changes.

Vulnerability Change Since the 2015 HMP

Since the 2015 HMP analysis, population statistics have been updated using the 5-Year 2015–2019 American Community Survey Population Estimates (American Community Survey 2019). The general building stock was also established using RS Means 2020 building valuations that estimated RCV for each building in the inventory. Additionally, a critical facility dataset was provided from the county. The most significant change is that a quantitative analysis was complete for the county using soils data from USGS/NRCS.

Attachment: 14-Section-5.4.4-Expansive-Soil-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

5.4.5 Extreme Temperature

This section provides a hazard profile (description, location, extent, previous occurrences and losses, probability of future occurrences, and impact of climate change) and vulnerability assessment of the extreme temperature hazard for the Erie County Hazard Mitigation Plan (HMP).

5.4.5.1 Hazard Profile

This section presents information regarding the extreme temperature hazard (heat and cold) description, extent, location, previous occurrences and losses, and probability of future occurrences.

Hazard Description

Extreme temperature includes both heat and cold events, which can have a significant impact to human health, commercial/agricultural businesses, and primary and secondary effects on infrastructure (e.g., burst pipes and power failure). What constitutes "extreme cold" or "extreme heat" can vary across different areas of the country, based on what the population is accustomed to. Figure 5.4.5-1 and Figure 5.4.5-2 show the average low and high temperatures each month at the Buffalo Niagara International station and Dunkirk Chautauqua County Airport station located in Erie County.

Figure 5.4.5-1. Average Temperatures at Buffalo Niagara International

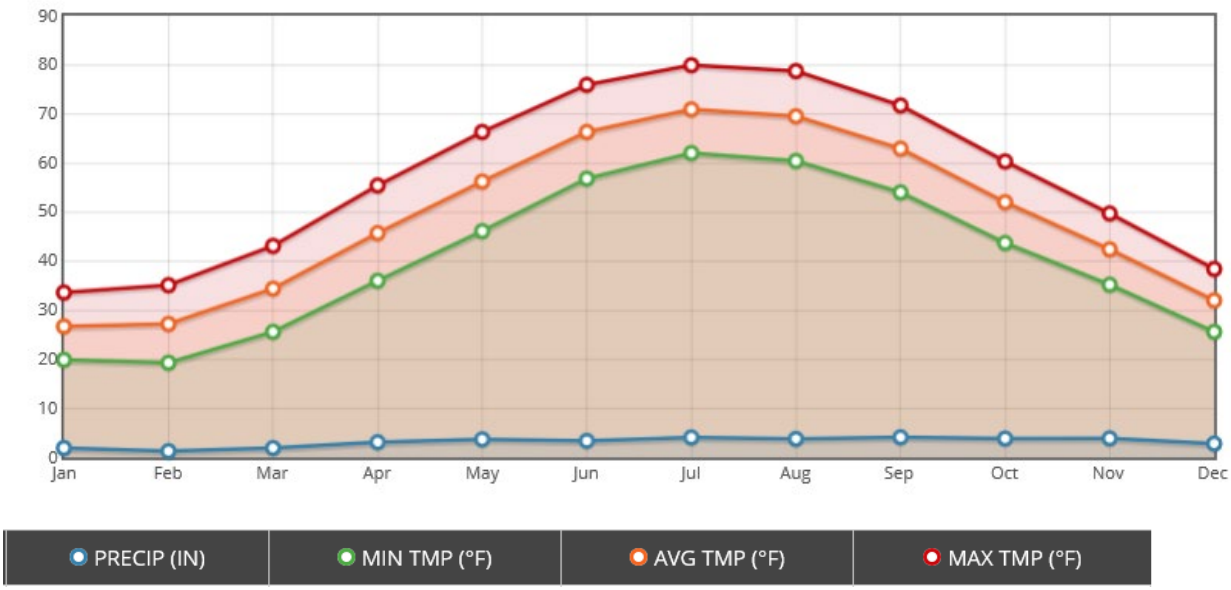
Attachment: 15-Section-5.4.5-Extreme-Temperature-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard

Figure 5.4.5-2. Average Temperatures at Dunkirk Chautauqua County Airport



Source: NOAA NCEI 2020

Extreme Cold

Extreme cold events are when temperatures drop well below normal in an area. In regions relatively unaccustomed to winter weather, near freezing temperatures are considered "extreme cold." Extreme cold temperatures are characterized by the ambient air temperature dropping to approximately 0 degrees Fahrenheit (ºF) or below (National Weather Service [NWS] 2015). Extensive exposure to extreme cold temperatures can cause frostbite or hypothermia and can become life-threatening. Infants and the elderly are most susceptible to the effects of extreme changes in temperatures. Extreme cold also can cause emergencies in susceptible populations, such as those without shelter, those who are stranded, or those who live in a home that is poorly insulated (such as a mobile home) or without heat. Infants and the elderly are particularly at risk, but anyone can be affected (Centers of Disease Control and Prevention [CDC] 2007). In New York State, extreme cold days are defined to reflect the state's regional climate variations. Extreme cold days in the state are defined as individual days with minimum temperatures at or below 32° F or 0° C (NYSERDA 2014).

Several health hazards are related to extreme cold temperatures and include wind chill, frostbite, and hypothermia.

- *Wind chill* is not the actual temperature but rather how wind and cold feel on exposed skin. As the wind increases, heat is carried away from the body at an accelerated rate, driving down the body temperature.
- *Frostbite* is damage to body tissue caused by extreme cold. A wind chill of -20°F will cause frostbite in just 30 minutes. Frostbite can cause a loss of feeling and a white or pale appearance in extremities.
- *Hypothermia* is a condition brought on when the body temperature drops to less than 95°F and it can be deadly. Warning signs of hypothermia include uncontrollable shivering, memory loss, disorientation, incoherence, slurred speech, drowsiness and apparent exhaustion.

Extreme Heat

Extreme heat is defined as temperatures that hover 10 degrees or more above the average high temperature for a region and that last for several weeks (CDC 2016). Humid or muggy conditions occur when a 'dome' of high

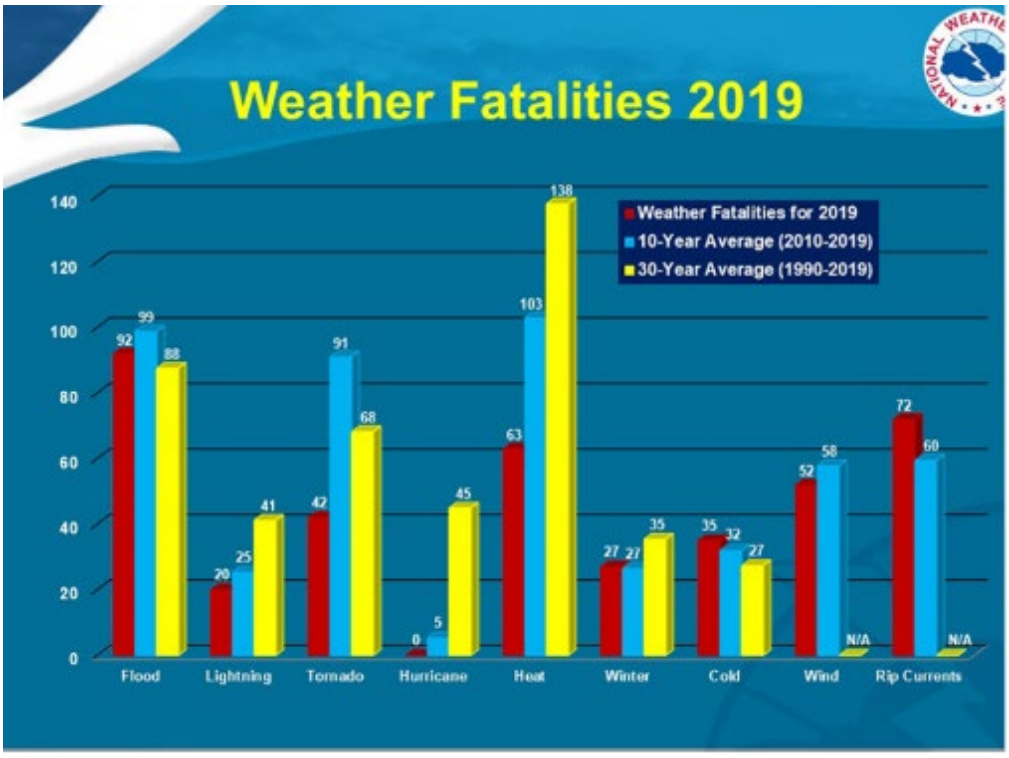
Attachment: 15-Section-5.4.5-Extreme-Temperature-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard

atmospheric pressure traps hazy, damp air near the ground. An extended period of extreme heat of three or more consecutive days is typically called a heat wave and is often accompanied by high humidity (NWS 2013). In New York State, high temperatures and heat waves are defined in several ways to reflect the diversity of conditions experienced across the state. Extreme hot days in New York State are defined as individual days with maximum temperatures at or above 90° F. Heat waves are defined as three consecutive days with maximum temperatures above 90° F (NYSERDA 2014).

Depending on severity, duration, and location; extreme heat events can create or provoke secondary hazards including, but not limited to, dust storms, droughts, wildfires, water shortages and power outages (CDC 2016). This could result in a broad and far-reaching set of impacts throughout a local area or entire region. Impacts could include significant loss of life and illness; economic costs in transportation, agriculture, production, energy, and infrastructure; and losses of ecosystems, wildlife habitats, and water resources (Adams n.d.; Meehl and Tebaldi 2004; CDC 2016; NYS DHSES 2014).

Extreme heat is one of the leading weather-related causes of death in the United States. On a 10-year average, 103 people die each year from excessive heat. Figure 5.4.5-3 shows the number of weather fatalities based on a 10-year average and 30-year average. Heat had the highest average of weather-related fatalities between 1990 and 2019.

Figure 5.4.5-3. Average Number of Weather Related Fatalities in the United States



Source: NWS 2019

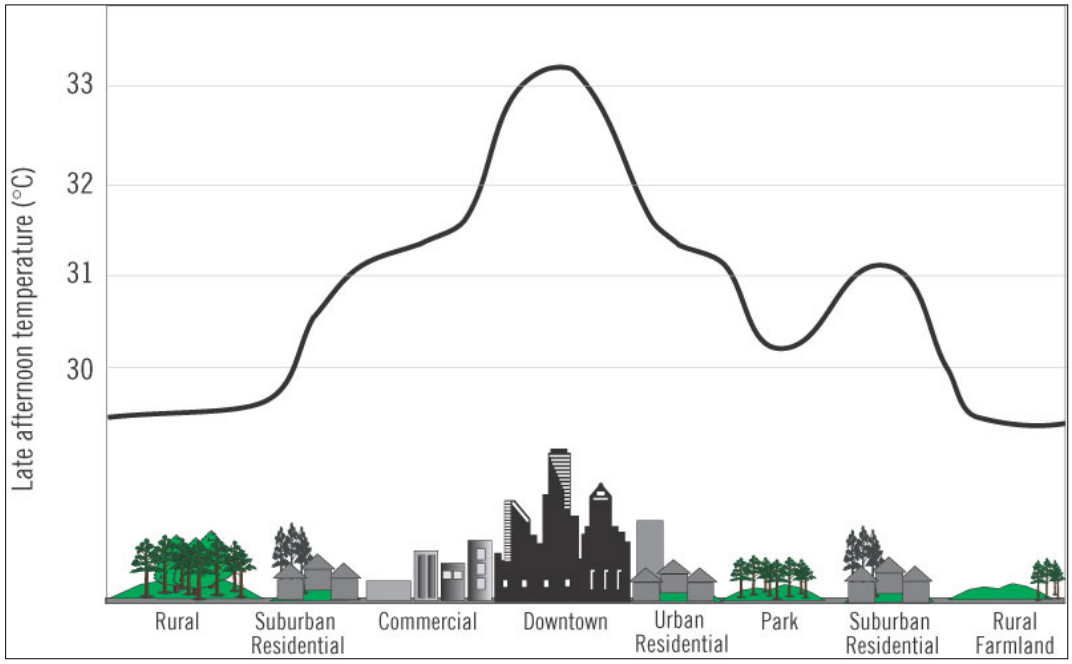
Urbanized areas and urbanization create an exacerbated type of risk during an extreme heat event, compared to rural and suburban areas. As these urban areas develop and change, so does the landscape. Buildings, roads, and other infrastructure replace open land and vegetation. Surfaces that were once permeable and moist are now impermeable and dry. These changes cause urban areas to become warmer than the surrounding areas. This forms an 'island' of higher temperatures (U.S. Environmental Protection Agency [EPA] 2019).

Attachment: 15-Section-5.4.5-Extreme-Temperature-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard

The term 'heat island' describes built-up areas that are hotter than nearby rural areas. The annual mean air temperature of a city with more than 1 million people can be between 1.8 ºF and 5.4ºF warmer than its surrounding areas. In the evening, the difference in air temperatures can be as high as 22ºF. Heat islands occur on the surface and in the atmosphere. On a hot, sunny day, the sun can heat dry, exposed urban surfaces to temperatures 50ºF to 90ºF hotter than the air. Heat islands can affect communities by increasing peak energy demand during the summer; thereby escalating air conditioning costs, air pollution and greenhouse gas emissions, heat-related illness and death, and water quality degradation (U.S. EPA 2019).

Figure 5.4.5-4 below illustrates an urban heat island profile. The graphic demonstrates that heat islands are typically most intense over dense urban areas. Further, vegetation and parks within a downtown area may help reduce heat islands (U.S. EPA 2019).

Figure 5.4.5-4. Urban Heat Island Profile



Source: EPA 2019
ºC degrees Celsius

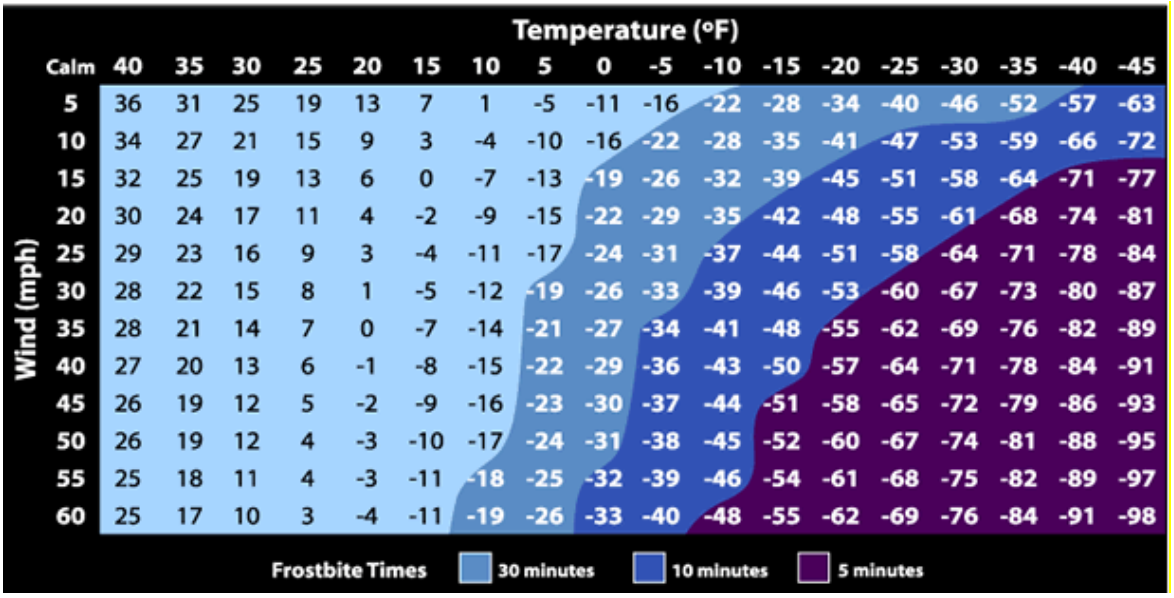
Extent

Extreme Cold

The extent (severity or magnitude) of extreme cold temperatures are generally measured through the Wind Chill Temperature (WCT) Index. The Index uses advances in science, technology, and computer modeling to provide an accurate, understandable, and useful formula for calculating the dangers from wind chill. For details regarding the WCT, refer to: https://www.weather.gov/safety/cold-wind-chill-chart. The WCT is presented in Figure 5.4.5-5.

Attachment: 15-Section-5.4.5-Extreme-Temperature-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard

Figure 5.4.5-5. NWS Wind Chill Index



Source: NWS 2016b

The National Weather Service (NWS) issues the nation's Wind Chill Warning, Watch, and Advisory:

- Wind Chill Warning: NWS issues a wind chill warning when dangerously cold wind chill values are expected or occurring.
- Wind Chill Watch: NWS issues a wind chill watch when dangerously cold wind chill values are possible.
- Wind Chill Advisory: NWS issues a wind chill advisory when seasonably cold wind chill values, but not extremely cold values, are expected or occurring (NYS DHSES 2019)

Cold weather can also impact the County's crops. In late spring or early fall, cold air outbreaks can damage or kill produce for farmers, as well as residential plants and flowers. A freeze occurs when the temperature drops below 32°F. Freezes and their effects are significant during the growing season. Frost develops on clear, calm nights and can occur when the air temperature is in the mid-30s. Each plant species has a different tolerance to cold temperatures (NYS DHSES 2019).

The NWS issues the nation's Freeze Watch, Warning, and Frost Advisory:

- Hard Freeze Warning: NWS issues a hard freeze warning when temperatures are expected to drop below 28°F for an extended period of time, killing most types of commercial crops and residential plants.
- Freeze Warning: When temperatures are forecasted to go below 32°F for a long period of time, NWS issues a freeze warning. This temperature threshold kills some types of commercial crops and residential plants.
- Freeze Watch: NWS issues a freeze watch when there is a potential for significant, widespread freezing temperatures within the next 24-36 hours. A freeze watch is issued in the autumn until the end of the growing season and in the spring at the start of the growing season.
- Frost Advisory: A frost advisory means areas of frost are expected or occurring, posing a threat to sensitive vegetation (NYS DHSES 2019).

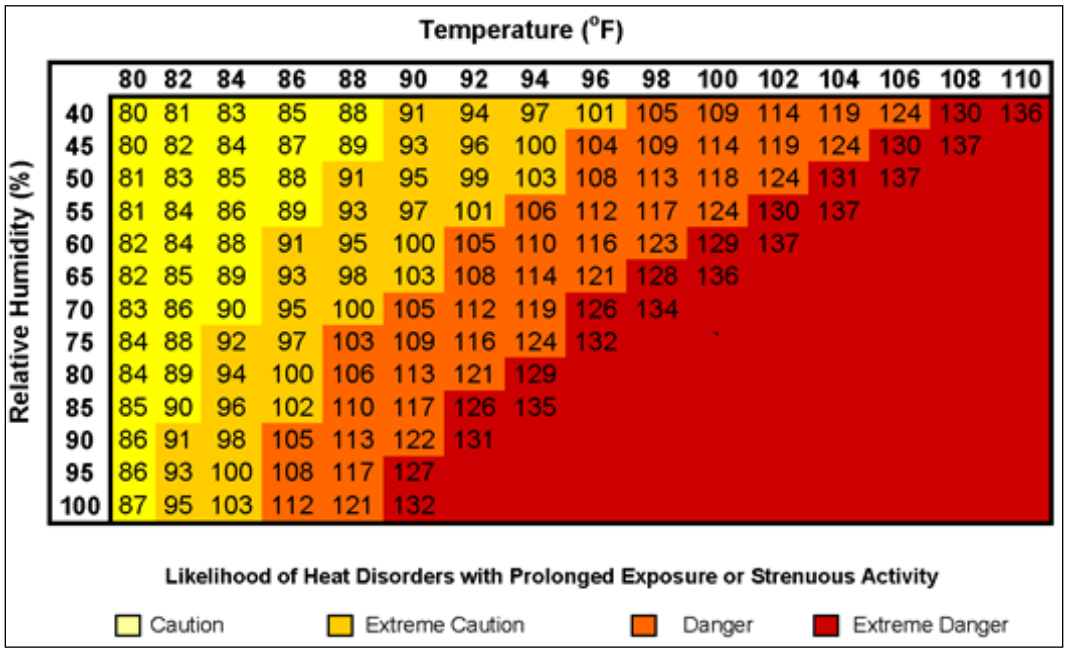
Extreme Heat

The extent of extreme heat temperatures is generally measured through the Heat Index, identified in Table 5.4.5-1. Created by the NWS, the Heat Index is a chart that accurately measures apparent temperature of the air

Attachment: 15-Section-5.4.5-Extreme-Temperature-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard

as it increases with the relative humidity. To determine the Heat Index, the temperature and relative humidity are needed. Once both values have been identified, the Heat Index is the corresponding number of both values (as seen in Table 5.4.5-1). This provides a measure of how temperatures actually feel; however, the values are devised for shady, light wind conditions. Exposure to full sun can increase the Index by up to 15 degrees (NYS DHSES 2014).

Table 5.4.5-1. Heat Index Chart



Source: NWS 2016c

Table 5.4.5-2 describes the adverse effects that prolonged exposure to heat and humidity can have on an individual.

Table 5.4.5-2. Adverse Effects of Prolonged Exposures to Heat on Individuals

Category	Heat Index	Health Hazards
Extreme Danger	130 °F – Higher	Heat Stroke / Sunstroke is likely with continued exposure.
Danger	105 °F – 129 °F	Sunstroke, muscle cramps, and/or heat exhaustion possible with prolonged exposure and/or physical activity.
Extreme Caution	90 °F – 105 °F	Sunstroke, muscle cramps, and/or heat exhaustion possible with prolonged exposure and/or physical activity.
Caution	80 °F – 90 °F	Fatigue possible with prolonged exposure and/or physical activity.

Source: NYS DHSES 2014

The National Weather Service (NWS) provides alerts when Heat Indices approach hazardous levels. Table 5.4.5-3 explains these alerts. In the event of an extreme heat advisory, the NWS:

- Includes Heat Index values and city forecasts
- Issues special weather statements including who is most at risk, safety rules for reducing risk, and the extent of the hazard and Heat Index values
- Provides assistance to state/local health officials in preparing Civil Emergency Messages during severe heat waves (NYS DHSES 2019).

Attachment: 15-Section-5.4.5-Extreme-Temperature-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard

Table 5.4.5-3. National Weather Service Alerts

Alert	Criteria
Heat Advisory	Issued 12-24 hours before the onset of the following conditions: heat index of at least 100°F but less than 105°F for at least 2 hours per day
Excessive Heat Watch	Issued by the NWS when heat indices of 105°F or greater are forecast in the next 24 to 72 hours
Excessive Heat Warning	Issued within 12 hours of the onset of the following criteria: heat index of at least 105°F for more than 3 hours per day for two consecutive days, or heat index more than 115°F for any period of time

Source: NYS DHSES 2014

Location

Varying land elevations, character of the landscape, and proximity to large bodies of water play a significant role in the state's temperatures. Erie County is susceptible to both extreme cold and extreme heat temperature events.

Extensive periods of extreme cold temperatures are a result from movement of great high-pressure systems into and through the eastern United States. Under higher than normal atmospheric pressures when arctic air masses are present, extreme winter temperatures hover over New York. New York State's location in the northeast makes it highly susceptible to extreme cold that can cause impact to human life and property (NYS DHSES 2019). Extreme cold temperatures occur throughout most of the winter season and generally accompany most winter storm events throughout the state. The NYSC Office of Cornell University indicates that cold temperatures prevail over the state whenever arctic air masses, under high barometric pressure, flow southward from central Canada or from Hudson Bay (Cornell University Date Unknown).

Excessive heat can occur anywhere, and occurrences of excessive heat are generally widespread and will cover an entire county. However, there can be spot locations that are somewhat cooler (e.g. a shady park near a stream) or hotter (e.g. urban areas because of their built environment holds the heat) (NYS DHSES 2019). Extreme heat temperatures of varying degrees exist throughout the state for most of the summer season, except for areas with high altitudes (Cornell University Date Unknown).

New York State is divided into 10 climate divisions: Western Plateau, Eastern Plateau (Catskill Mountains), Northern Plateau (Adirondack Mountains), Coastal, Hudson Valley, Mohawk Valley, Champlain Valley, St. Lawrence Valley, Great Lakes, and Central Lakes. According to NCDC, "Climatic divisions are regions within each state that have been determined to be reasonably climatically homogeneous" (CPC 2005). Erie County is located within the Great Lakes Division (Division 9); Figure 5.4.5-6 depicts the climate divisions in New York State.

Attachment: 15-Section-5.4.5-Extreme-Temperature-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard

Figure 5.4.5-6. New York State Climate Divisions

Notes: (1) Western Plateau; (2) Eastern Plateau (Catskill Mountains); (3) Northern Plateau (Adirondack Mountains); (4) Coastal; (5) Hudson Valley; (6) Mohawk Valley; (7) Champlain Valley; (8) St. Lawrence Valley; (9) Great Lakes; and (10) Central Lakes

Previous Occurrences and Losses

Between 1954 and 2020, New York State and Erie County did not experience any extreme temperature FEMA disaster (DR) or emergency (EM) classifications. The Secretary of Agriculture from the U.S. Department of Agriculture (USDA) is authorized to designate counties as disaster areas to make emergency loans available to producers suffering losses in those counties and in counties that are contiguous to a designated county. Between 2014 and 2020, Erie County has been included in three USDA disaster declarations in relation to extreme temperature in 2016: S4023, S4031, and S4037: Drought; Wind, high winds; Fire, wildfire; Heat, excessive heat, high temperature; and insects.

USDA tracks drought losses on agriculture that often accompany extreme heat events. In 2016, heat-related crop losses totaled $5,096. In 2017, heat-related crop losses totaled $6,867. In 2018, heat-related crop losses totaled $27,811. In 2020, heat-related crop losses totaled $47,778 (USDA 2021).

Table 5.4.5-4 summarizes the known extreme temperature events that have impacted Erie County from 1999 to 2020.

Attachment: 15-Section-5.4.5-Extreme-Temperature-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard

Table 5.4.5-4. Extreme Temperature Events in Erie County, 1999 to 2020

Dates of Event	Event Type	FEMA Declaration Number (if applicable)	Erie County Designated?	Location	Description
January 30, 2019	Extreme Cold/Wind Chill	N/A	N/A	Northern Erie, Southern Erie	Blowing and drifting snow across Northern Erie, temperatures dipped below zero. Wind gusts of 35-50 mph dropped winds chills substantially below zero. One homeless man died of exposure in Williamsville during the cold outbreak. Most schools and churches closed in the area.
January 5, 2018	Extreme Cold/Wind Chill	N/A	N/A	Southern Erie	A bitterly cold artic airmass entrenched across the region brought cold temperatures and dangerous wind chills across the southern tier and north country. Low temperatures dropped to -15 to -35 degrees Fahrenheit across the southern tier and as low as -50 degrees across the north country.
February 13, 2016	Extreme Cold/Wind Chill	N/A	N/A	Northern Erie, Southern Erie	Cold and brisk westerly winds produced wind chills of -25 to -30 degrees Fahrenheit. Warming shelters were opened and some outdoor activities were cancelled. Minimum wind chill temperatures reached -26 degrees.
July 13, 2005	Heat	N/A	N/A	Northern Erie	A 25-year old construction worker collapsed and died from heat stroke as he was walking home from his construction job.
February 1, 2003	Extreme Cold	N/A	N/A	Erie County	Extreme cold event reported to have caused $50,000 in crop damage.

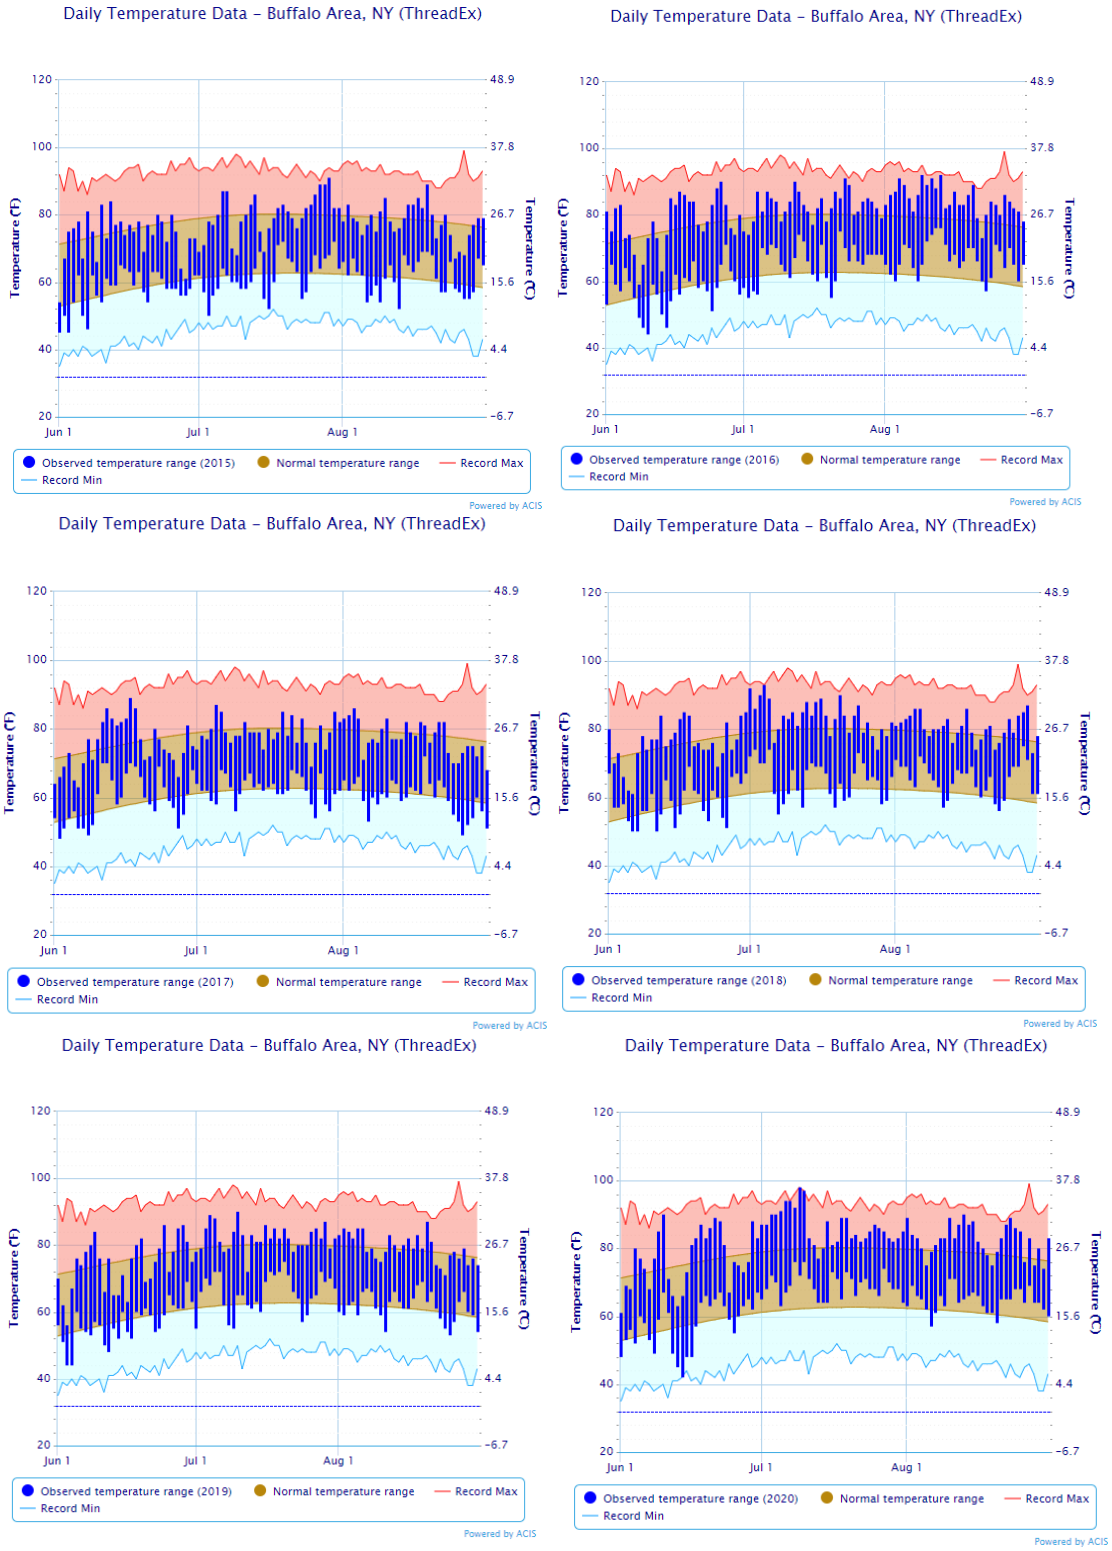
Source: NOAA NCEI 2020; FEMA 2020

Note: With temperature documentation for New York State and Erie County being so extensive, not all sources have been identified or researched. Therefore, Table 5.4.4-4 may not include all events that have occurred in the County.

Figure 5.4.5-7 shows daily temperatures for the summer months from 2015 to 2020. The record highs and record lows are shown by the far top and bottom red and blue lines.

Attachment: 15-Section-5.4.5-Extreme-Temperature-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard

Figure 5.4.5-7. Daily Temperatures for Summer Months from 2015 to 2020



Source: National Weather Service 2021

Attachment: 15-Section-5.4.5-Extreme-Temperature-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard

Probability of Future Occurrences

It is estimated that Erie County will continue to experience extreme temperatures annually that may induce secondary hazards and associated impacts such as snow, hail, ice or wind storms, thunderstorms, drought, utility failure and transportation accidents. Some of these secondary hazards could affect human health.

According to the NOAA-NCEI database, Erie County experienced five extreme temperature events between 1950 and 2020. Table 5.4.5-5 summarizes the annual average number of events and the percent chance of these individual extreme temperature events occurring in Erie County in future years (NOAA NCEI 2021).

Table 5.4.5-5. Probability of Occurrences of Extreme Temperature Events

Hazard Type	Number of Occurrences Between 1950 and 2020	Recurrence Interval (in years) (# Years/Number of Events)	Percent (%) chance of occurrence in any given year
Cold/Wind Chill	0	0.00	0.00
Excessive Heat	0	0.00	0.00
Extreme Cold/Wind Chill	4	17.50	5.71
Heat	1	70.00	1.43
Total	**5**	**14.00**	**7.14**

Source: NOAA NCEI 2020
Note: Probability was calculated using the available data provided in the NOAA-NCEI storm events database.

Based on historical records and input from the Planning Committee, the probability of occurrence for extreme temperatures in Erie County is considered "rare."

Climate Change Impacts

Temperatures in New York State are warming, with an average rate of warming over the past century of 0.25° F per decade. Average annual temperatures are projected to increase across New York State by 2° F to 3.4° F by the 2020s, 4.1° F to 6.8° F by the 2050s, and 5.3° F to 10.1° F by the 2080s. By the end of the century, the greatest warming is projected to be in the northern section of the state (NYSERDA 2014). The total number of hot days in New York State is expected to increase as this century progresses. The frequency and duration of heat waves, defined as three or more consecutive days with maximum temperatures at or above 90 ˚F, are also expected to increase (Table 5.4.5-6). In contrast, extreme cold events, defined both as the number of days per year with minimum temperature at or below 32 ˚F and those at or below 0 ˚F, are expected to decrease as average temperatures rise (NYSERDA 2011).

Each region in New York State, as defined by ClimAID, has attributes that will be uniquely affected by climate change. Erie County is part of Region 1. In Region 1, it is estimated that temperatures will increase by 3.0ºF to 5.5ºF by the 2050s and 4.5ºF to 8.5ºF by the 2080s (middle range estimate, baseline of 48ºF).

The frequency of heat waves is projected to increase while cold events are projected to fall in Region 1. With the increase in temperatures, heat waves will become more frequent and intense, increasing heat-related illness and death and posing new challenges to the energy system, air quality and agriculture (NYSERDA 2014). Table 5.4.5-6 displays the projected changes in extreme events and includes the minimum, central range, and maximum days per year.

Attachment: 15-Section-5.4.5-Extreme-Temperature-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard

Table 5.4.5-6. Changes in Extreme Events in Region 1 – Heat Waves and Intense Precipitation

Event Type	# Days Per Year	Baseline	2020s	2050s	2080s
Heat Waves	**Number of Days per year with maximum temperature exceeding minimum, (central range), and maximum**				
	90°F	8	8 (10 to 17) 23	12 (17 to 30) 44	16 (22 to 52) 68
	Number of heat waves per year	0.8	0.9 (1 to 2) 3	2 (2 to 4) 6	2 (3 to 7) 8
	Average duration	4	4 (4 to 4) 5	4 (4 to 5) 5	4 (4 to 5) 7
Extreme Cold	**Number of days per year: minimum, (central range), and maximum**				
	Below 32°F	133	99 (104 to 116) 124	76 (90 to 103) 108	55 (75 to 97) 106

Note: Based upon the middle range (25th to 75th percentile estimate)

Vulnerability Assessment

To understand risk, a community must evaluate what assets are exposed and vulnerable to the identified hazard. The following discusses Erie County's vulnerability, in a qualitative nature, to the extreme temperature hazard.

Impact on Life, Health and Safety

The entire population of Erie County is exposed to extreme temperature events (population of 917,296 people, according to the 2015-2019 ACS population estimates). Extreme temperature events may cause potential health impacts, including injury or possibly death. According to the CDC, populations most at risk to extreme cold and heat events include the following: 1) the elderly, who are less able to withstand temperatures extremes because of their age, health conditions, and limited mobility to access shelters; 2) infants and children up to 4 years of age; 3) individuals with chronic medical conditions (e.g., heart disease, high blood pressure); 4) low-income persons that cannot afford proper heating and cooling; and 5) the general public who may overexert during work or exercise during extreme heat events or experience hypothermia during extreme cold events (CDC 2016).

According to the 2019 ACS 5-Year population estimate, persons over the age of 65 are more vulnerable to extreme temperature events, which accounts for approximately 17.6-percent of Erie County's total population (161,498 persons). Furthermore, the homeless and residents below the poverty level might not have access to housing or their housing could be less able to withstand extreme temperatures (e.g., homes with poor insulation and heating supply). As of 2019, a total of 126,041 persons were living in poverty in the County (ACS 2019).

The CDC 2016 Social Vulnerability Index (SVI) ranks U.S. Census tracts on socioeconomic status, household composition and disability, minority status and language, and housing and transportation. Erie County's overall score is 0.3986, indicating that its communities have low vulnerability (CDC 2016). This map shows that areas likely to be more vulnerable to extreme temperature events are fairly distributed throughout the County but are generally concentrated in the interior and southern coastal municipalities.

Risk of structural fire in the winter months is elevated with approximately 30 percent of all deaths caused by fire occurring in the winter months. Cooking and heat sources too close to combustible materials are leading factors in winter home fires (U.S. Fire Administration 2018). Often times, power outages occur during extreme cold events. Individuals powering their homes with generators are subjected to carbon monoxide poisoning if proper ventilation procedures are not followed (NYC 2019). Improperly connected portable generators are capable of 'back feeding' power lines, which may cause injury or death to utility workers attempting to restore power and may damage house wiring and/or generators.

Meteorologists can accurately forecast extreme heat and cold event development and the severity of the associated conditions with several days of lead time. These forecasts provide an opportunity for public health

Attachment: 15-Section-5.4.5-Extreme-Temperature-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard

and other officials to notify vulnerable populations, implement short-term emergency response actions, and focus on surveillance and relief efforts on those at greatest risk. Adhering to extreme temperature warnings can significantly reduce the risk of temperature-related deaths.

Impact on General Building Stock

All buildings are exposed to the extreme temperature hazard. Extreme heat generally does not impact buildings; however, elevated summer temperatures increase the energy demand for cooling. Losses can be associated with the overheating of heating, ventilation, and air conditioning (HVAC) systems. Extreme cold temperature events can damage buildings through freezing/bursting pipes and freeze/thaw cycles, as well as increasing vulnerability to home fires. Additionally, manufactured homes (mobile homes) and antiquated or poorly constructed facilities can have inadequate capabilities to withstand extreme temperatures.

Older buildings constructed under less stringent building codes are more vulnerable to extreme cold events because of cracks and leaks in the walls. Roof damage can also occur after excessive snow fall and extreme temperature change. Extreme heat may also be damaging to older structures. Further, structures with glass exposed to sunlight and structures exposed to heat on all four sides are more susceptible to damage, including interior damage from overheating (NYC 2019).

Impact on Critical Facilities and Lifelines

All critical facilities and lifelines in the County are exposed to the extreme temperature hazard. Impacts to critical building facilities will experience similar issues as described for the general building stock. It is essential that critical facilities remain operational during natural hazard events. Extreme heat events can sometimes cause short periods of utility failures, commonly referred to as *brown-outs*, because of increased usage from air conditioners and other energy-intensive appliances. Similarly, heavy snowfall and ice storms, associated with extreme cold temperature events, can cause power interruption. Backup power is recommended for critical facilities and infrastructure.

Transportation infrastructure may experience damage from extreme temperature events. This is particularly the case with ground transportation systems at risk of cracking, buckling, or sagging during periods of high temperatures (NYC 2019). This can cause disruptions to essential services that travel along these routes.

Impact on Economy

Extreme temperature events also impact the economy, including loss of business function and damage to and loss of inventory. Business owners can be faced with increased financial burdens from unexpected repairs needed to the building (e.g., pipes bursting), higher than normal utility bills, or business interruption due to power failure (i.e., loss of electricity, telecommunications). Disruptions in public transportation service will also impact the economy for both commuters and customers alike.

Impact on the Environment

Extreme temperature events can also impact the environment. For example, freezing and warming weather patterns create changes in natural processes. An excess amount of snowfall and earlier warming periods may affect natural processes, such as flow within water resources (USGS n.d.). Likewise, rain-on-snow events also exacerbate runoff rates with warming winter weather.

Extreme heat events can have particularly negative impacts on coastal marine aquatic systems, contributing to fish kills, aquatic plant die offs, and increased likelihood of harmful algal blooms.

Attachment: 15-Section-5.4.5-Extreme-Temperature-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard

Cascading Impacts to Other Hazards

Extreme heat events can increase the potential risk of wildfires. Refer to Section 5.4.13 for more information about the impacts of wildfires.

Future Changes that May Impact Vulnerability

Understanding future changes that may impact County vulnerability can assist in planning for future development and ensuring that appropriate mitigation, planning, and preparedness measures are in place. The County considered the following factors that may affect hazard vulnerability:

- Potential or projected development.
- Projected changes in population.
- Other identified conditions as relevant and appropriate, including the impacts of climate change.

Projected Development

As discussed in Section 4, areas targeted for future growth and development have been identified across Erie County. The ability of new development to withstand extreme temperature impacts lies in sound land use practices, building design considerations (e.g. Leadership in Energy and Environmental Design [LEED]), and consistent enforcement of codes and regulations for new construction. New development will change the landscape where buildings, roads, and other infrastructure potentially replace open land and vegetation. Surfaces that were once permeable and moist are now impermeable and dry. These changes cause urban areas to become warmer than the surrounding areas forming heat islands (as described above). Specific areas of recent and new development are indicated in tabular form and/or on the hazard maps included in the jurisdictional annexes in Volume II, Section 9 (Jurisdictional Annexes) of this plan.

Projected Changes in Population

According to the U.S. Census Bureau, the population in Erie County has remained stable between 2010 and 2019 (917,173 persons in 2010 and 917,296 persons in 2019). Estimated population projections provided by the 2017 Cornell Program on Applied Demographics indicates that the County's population will decrease into 2040, decreasing the total population to approximately 769,396 persons (Cornell Program on Applied Demographics 2017). While vulnerable populations (i.e., persons over 65) are decreasing, a number of people are still at great risk of impacts from extreme temperature events, which will increase.

Climate Change

As discussed above, most studies project that the State of New York will see an increase in average annual temperatures (NYC 2019). As the climate warms, extreme cold events might decrease in frequency, while extreme heat events might increase in frequency; the shift in temperatures could also result in hotter extreme heat events. With increased temperatures, susceptible populations could face increased vulnerability to extreme heat and its associated illnesses, such as heatstroke and cardiovascular and kidney disease. Additionally, as temperatures rise, more buildings, facilities, and infrastructure systems may exceed their ability to cope with the heat.

Change of Vulnerability Since the 2015 HMP

The 2015 HMP included a quantitative assessment of the County's population and number of events. Extreme temperature events (heat and cold) were included in Erie County's 2015 HMP. As existing development and infrastructure continue to age, utility and transportation systems will be at increased risk to fail if they are not properly maintained and do not adapt to the changing environment.

Attachment: 15-Section-5.4.5-Extreme-Temperature-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard

Attachment: 16-Section-5.4.6-Flood-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

5.4.6 Flood

The following section provides the hazard profile and vulnerability assessment of the flood hazard for Erie County Hazard Mitigation Plan (HMP).

5.4.6.1 Hazard Profile

This section provides information regarding the description, extent, location, previous occurrences and losses, climate change projections, and the probability of future occurrences for the flood hazard.

Hazard Description

Many floods fall into three categories: riverine, coastal, and shallow (FEMA 2007). Other types of floods may include ice-jam floods, alluvial fan floods, dam failure floods, and floods associated with local drainage or high groundwater.

Floods are one of the most common natural hazards in the United States. They can develop slowly over a period of days or develop quickly, with disastrous effects that can be local (impacting a neighborhood or community) or regional (affecting entire river basins, coastlines, and multiple counties or states) (Federal Emergency Management Agency [FEMA] 2007). As defined in the New York State (NYS) HMP (NYS Division of Homeland Security and Emergency Services [DHSES] 2014), flooding is a general and temporary condition of partial or complete inundation of water on normally dry land caused by the following:

- Riverine overbank flooding
- Flash floods
- Alluvial fan floods
- Mudflows or debris floods
- Dam- and levee-break floods
- Local draining or high groundwater levels
- Fluctuating lake levels
- Ice jams
- Coastal flooding

For the purpose of this HMP and as deemed appropriate by the Erie County Steering Committee, riverine, shallow flooding, flash flooding, ice jam, and dam and levee failure flooding are the main flood types of flooding that are of concern to the county. These types of floods are further discussed below.

Flooding can occur in Erie County during any season of the year, but it most likely occurs in the late winter – early spring months when melting snow may combine with intense rainfall to produce increased runoff. Ice jams and debris have often increased flood heights by impeding water flow at bridges and culverts. Floods can result from precipitation within falling within the watershed, from sharp rises in temperature in the spring that melt the snow cover of the basin and are followed by rains, and from localized thunderstorms.

Riverine (Inland) and Flash Flooding

Erie County is subject to both riverine and flash flooding. Riverine floods are the most common flood type. They occur along a channel and include overbank and flash flooding. Channels are defined as ground features that carry water through and out of a watershed, as defined as rivers, creeks, streams, or ditches. When a channel receives too much water, the excess water flows over its banks and inundates low-lying areas (Illinois Association for Floodplain and Stormwater Management 2006). Many areas of Erie County are also susceptible to urban (stormwater) flooding. Erie County communities bordering Lake Erie (the Cities of Buffalo and

Lackawanna, and the Towns of Hamburg, Brant, and Evans) are also potentially susceptible to coastal flooding from Lake Erie as a result of storm-induced rises and seiches.

Flash floods are defined by the National Weather Service (NWS) as, "a flood caused by heavy or excessive rainfall in a short period of time, generally less than 6 hours. Flash floods are usually characterized by raging torrents after heavy rains that rip through riverbeds, urban streets, or mountain canyons sweeping everything before them. They can occur within minutes or a few hours of excessive rainfall. They can also occur even if no rain has fallen; for instance, after a levee or dam has failed, or after a sudden release of water by a debris or ice jam" (NWS 2009).

Shallow Flooding

Shallow flooding includes stormwater flooding, which is caused by local drainage issues and high groundwater levels. Locally, heavy precipitation may produce flooding in areas other than delineated floodplains or along recognizable channels. If local conditions cannot accommodate intense precipitation through a combination of infiltration and surface runoff, water may accumulate and cause flooding problems. During winter and spring, frozen ground and snow accumulations may contribute to inadequate drainage and localized ponding. Flooding issues of this nature generally occur in areas with flat gradients and generally increase with urbanization, which speeds the accumulation of floodwaters because of impervious areas. Shallow street flooding can occur unless channels have been improved to account for increased flows (FEMA 1997).

High groundwater levels can be a concern and cause problems even where there is no surface flooding. Basements are susceptible to high groundwater levels. Seasonally high groundwater is common in many areas, while elsewhere, high groundwater occurs only after a long period of above-average precipitation (FEMA 1997).

Urban drainage flooding is caused by increased water runoff due to urban development and drainage systems. Drainage systems are designed to remove surface water from developed areas as quickly as possible to prevent localized flooding on streets and other urban areas. They make use of a closed conveyance system that channels water away from an urban area to surrounding streams. This bypasses the natural processes of water filtration through the ground, containment, and evaporation of excess water. Because drainage systems reduce the amount of time the surface water takes to reach surrounding streams, flooding in those streams can occur more quickly and reach greater depths than prior to development in that area (FEMA 2007).

Ice Jam Flooding

An ice jam occurs when pieces of floating ice are carried with a stream's current and accumulate behind any obstruction to the stream flow. Obstructions may include river bends, mouths of tributaries, points where the river slope decreases as well as dams and bridges. The water held back by this obstruction can cause flooding upstream, and if the obstruction suddenly breaks, flash flooding can occur as well (National Oceanic and Atmospheric Administration [NOAA] 2013). The formation of ice jams depends on the weather and physical condition of the river and stream channels. They are most likely to occur where the channel slope naturally decreases, in culverts, and along shallows where channels may freeze solid. Ice jams and resulting floods can occur during different times of the year: fall freeze-up from the formation of frazil ice; mid-winter periods when stream channels freeze solid, forming anchor ice; and spring breakup when rising water levels from snowmelt or rainfall break existing ice cover into pieces that accumulate at bridges or other types of obstructions (NYS DHSES 2014).

Ice Jams

- ✓ **Freeze-up jams occur when floating ice may slow or stop due to a change in water slope as it reaches an obstruction to movement.**
- ✓ **Breakup jams occur during periods of thaw, generally in late winter and early spring.**

(NYS DHSES 2014).

Attachment: 16-Section-5.4.6-Flood-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Dam and Levee Failure Flooding

A dam or a levee is an artificial barrier that can impound water, wastewater, or any liquid-borne material for the purpose of storage or control of water (FEMA 2007). Dams are man-made structures built across a stream or river that impound water and reduce the flow downstream (FEMA 2003). They are built for the purpose of power production, agriculture, water supply, recreation, and flood protection. Dam failure is any malfunction or abnormality outside of the design that adversely affects a dam's primary function of impounding water (FEMA 2007). Levees typically are earthen embankments constructed from a variety of materials ranging from cohesive to cohesion-less soils (U.S. Bureau of Reclamation 2012).

Dams and levees can fail for one or a combination of the following reasons:

- Overtopping caused by floods that exceed the capacity of the dam (inadequate spillway capacity)
- Prolonged periods of rainfall and flooding
- Deliberate acts of sabotage (terrorism)
- Structural failure of materials used in dam construction
- Movement and/or failure of the foundation supporting the dam
- Settlement and cracking of concrete or embankment dams
- Piping and internal erosion of soil in embankment dams
- Inadequate or negligent operation, maintenance, and upkeep
- Failure of upstream dams on the same waterway
- Earthquake (liquefaction/landslides) (FEMA 2018a)

The Springville dam is county-owned and is designated a High Hazard Dam. The county assumed ownership of the former power dam from the Village of Springville and converted the parcel into a park. The county regularly reports to New York State Department of Environmental Conservation (NYSDEC) that the dam is serviceable, and an inundation map has been completed. The U.S. Army Corps of Engineers (USACE) plans to install a fish passage on the dam that will aid in fish migration in the 70 miles of Cattaraugus Creek above the dam. This project is on hold due to resource constraints imposed by the COVID-19 emergency. The creek bed has been tested for possible radiation contamination from the West Valley Nuclear materials storage site.

Flood Control Measures

Nine levee systems exist in the county that provide the community with some degree of protection against flooding. According to the USACE National Levee Database, Erie County is home to nine levee systems, made up of 111 structures encompassing 15 miles. Levees protect portions of the Scajaquada, Ellicott, Cayuga, and Blasdell creeks (USACE 2019).

Extent

In the case of riverine flood hazard, once a river reaches flood stage, the flood extent or severity categories used by the NWS include minor flooding, moderate flooding, and major flooding. Each category has a definition based on property damage and public threat:

- Minor Flooding - minimal or no property damage, but possibly some public threat or inconvenience.
- Moderate Flooding - some inundation of structures and roads near streams. Some evacuations of people and/or transfer of property to higher elevations are necessary.
- Major Flooding - extensive inundation of structures and roads. Significant evacuations of people and/or transfer of property to higher elevations (NWS 2011).

Attachment: 16-Section-5.4.6-Flood-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

The severity of a flood depends not only on the amount of water that accumulates in a period, but also on the land's ability to manage this water. The size of rivers and streams in an area and infiltration rates are significant factors. When it rains, soil acts as a sponge. When the land is saturated or frozen, infiltration rates decrease, and any more water that accumulates must flow as runoff (Harris 2008).

According to the NYSDEC Division of Water Bureau of Flood Protection and Dam Safety, the hazard classification of a dam is assigned according to the potential impacts of a dam failure pursuant to 6 NYCRR Part 673.3 (NYSDEC 2009). Dams are classified in terms of potential for downstream damage if the dam were to fail. These hazard classifications are identified and defined below:

- *Low Hazard (Class A)* is a dam located in an area where failure will damage nothing more than isolated buildings, undeveloped lands, or township or county roads and/or will cause no significant economic loss or serious environmental damage. Failure or mis-operation would result in no probable loss of human life. Losses are principally limited to the owner's property.
- *Intermediate Hazard (Class B)* is a dam located in an area where failure may damage isolated homes, main highways, minor railroads, interrupt the use of relatively important public utilities, and/or will cause significant economic loss or serious environmental damage. Failure or mis-operation would result in no probable loss of human life, but can cause economic loss, environment damage, disruption of lifeline facilities, or impact other concerns. Significant hazard potential classification dams are often located in predominantly rural or agricultural areas but could be in areas with population and significant infrastructure.
- *High Hazard (Class C)* is a dam located in an area where failure may cause loss of human life, serious damage to homes, industrial or commercial buildings, important public utilities, main highways, or railroads and/or will cause extensive economic loss. This is a downstream hazard classification for dams in which excessive economic loss (urban area including extensive community, industry, agriculture, or outstanding natural resources) would occur as a direct result of dam failure.
- *Negligible or No Hazard (Class D)* is a dam that has been breached or removed, or has failed or otherwise no longer materially impounds waters, or a dam that was planned but never constructed. Class "D" dams are defunct dams posing negligible or no hazard. The department may retain pertinent records regarding such dams.

Location

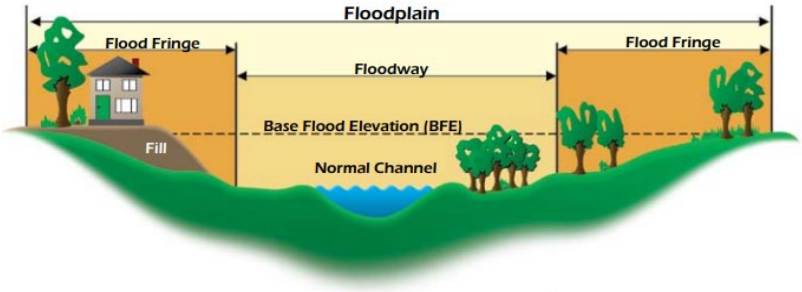
Nearly all areas in Erie County could experience a flash flooding event. This depends on the intensity and duration of rainfall, the steepness of the watershed, the number of impervious surfaces within the watershed and vegetation. Flooding potential is influenced by climatology, meteorology, and topography (elevations, latitude, and water bodies and waterways). Flooding potential for each type of flooding that affects Erie County is described in the subsections below.

Floodplains

A floodplain is defined as the land adjoining the channel of a river, stream, ocean, lake, or other watercourse or water body that becomes inundated with water during a flood. In Erie County, floodplains line the rivers and streams as well as the Laker Erie shore. The boundaries of the floodplains are altered as a result of changes in land use, the amount of impervious surface, placement of obstructing structures in floodways, changes in precipitation and runoff patterns, improvements in technology for measuring topographic features, and utilization of different hydrologic modeling techniques. Figure 5.4.6-1 depicts the flood hazard area, the flood fringe, and the floodway areas of a floodplain.

Attachment: 16-Section-5.4.6-Flood-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Figure 5.4.6-1. Characteristics of a Floodplain



Most often floodplains are referred to as 100-year floodplains. A 100-year floodplain is not a flood that will occur once every 100 years; the designation indicates a flood that has a 1 percent chance of being equaled or exceeded each year. Thus, the 100-year flood could occur more than once in a relatively short period of time. Due to this misleading term, FEMA has properly defined it as the 1 percent annual chance flood. Similarly, the 500-year floodplain will not occur every 500 years but is an event with a 0.2 percent chance of being equaled or exceeded each year. The "1 percent annual chance flood" is now the standard term used by most federal and state agencies and by the National Flood Insurance Program (NFIP) (FEMA 2003). The 1 percent annual chance floodplain establishes the area that has flood insurance and floodplain management requirements and is also referenced as the regulatory floodplain.

Locations of flood zones in Erie County as depicted from the FEMA Q3 data are illustrated in Figure 5.4.6-2 and the total land area in the floodplain, inclusive of waterbodies, is summarized in Table 5.4.6-1. Section 9 (Jurisdictional Annexes) includes a map of each jurisdiction depicting the floodplains. As depicted in Figure 5.4.6-2, flood hazard zones are present in differing amounts in communities throughout the county. Large areas of floodplain are found in the northern portions of Amherst, Clarence, Newstead, Lancaster, and Cheektowaga. Notable floodplain extents are also found along the Eighteenmile and Buffalo creek valleys.

The Digital Flood Insurance Rate Map (DFIRM) data provided by FEMA for Erie County show the following flood hazard areas:

- 1 Percent Annual Chance Flood Hazard: Areas subject to inundation by the 1 percent-annual-chance flood event. This includes both effective and preliminary, as well as AE and VE Zones. Mandatory flood insurance requirements and floodplain management standards apply.
- 0.2 Percent Annual Chance Flood Hazard: Area of minimal flood hazard, usually depicted on FIRMs as the 500-year flood level or Shaded X Zone.

Table 5.4.6-1. Number of Acres Erie County Is Exposed to 1 Percent and 0.2 Percent Annual Chance Flood

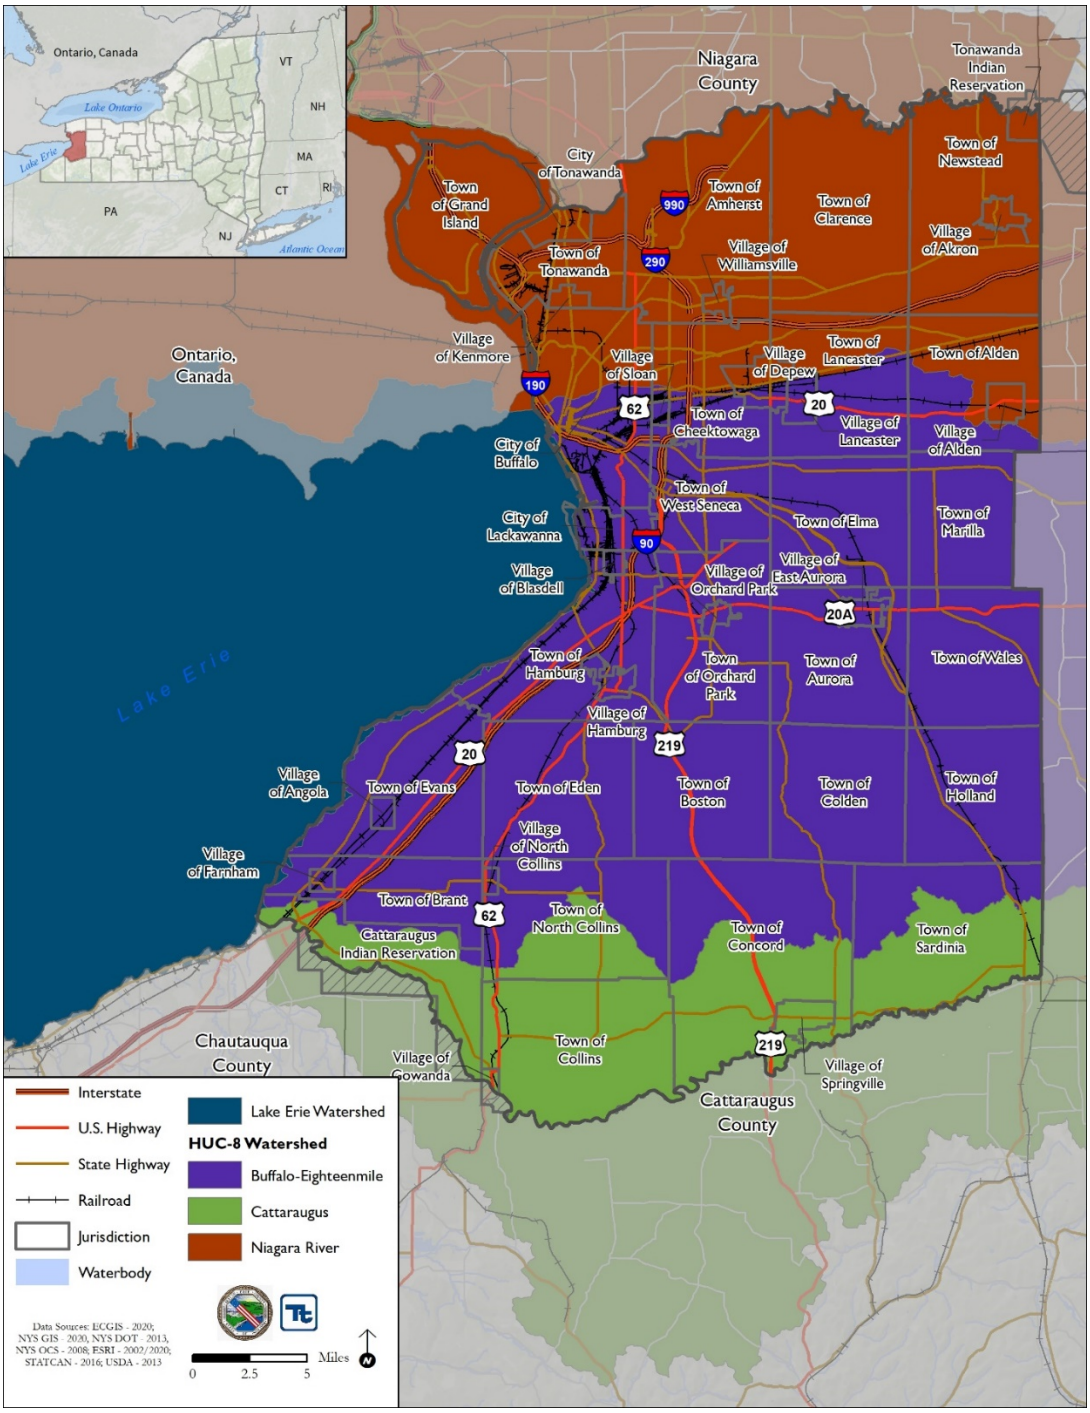
Riverine/Flash Flooding/Stormwater Flooding

Erie County includes parts of three major watershed that drain into the Great Lakes Basin and the Allegheny River Basin. The Niagara River watershed drains the county's northern tier. The Buffalo-Eighteenmile creek watershed is the county's largest and drains its central and a large portion of southern territory. The Cattaraugus Creek watershed drains the county's southernmost areas from Lake Erie to its eastern boundary (Erie County 2015).

Figure 5.4.6-3. Erie County Watersheds



Attachment: 16-Section-5.4.6-Flood-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Ice Jam Flooding

An ice jam occurs when pieces of floating ice are carried with a stream's current and accumulate behind any obstruction to stream flow. Obstructions may occur at river bends, mouths of tributaries, points where the river slope decreases, as well as dams and bridges. Water held back by this obstruction can cause flooding upstream, and if the obstruction suddenly breaks, flash flooding can occur as well (NOAA 2011). Formation of ice jams depends on weather and physical condition of river and stream channels. Ice jams are most likely to occur where channel slope naturally decreases, in culverts, and along shallows where channels may freeze solid. Ice jams and resulting floods can occur at different times of the year: fall freeze-up from formation of frazil ice; mid-winter periods when stream channels freeze solid, forming anchor ice; and spring breakup when rising water levels from snowmelt or rainfall break existing ice cover into pieces that accumulate at bridges or other types of obstructions (NYS DHSES 2014).

The two main types of ice jams are freeze-up and breakup. Freeze-up jams occur when floating ice slows or stops due to a change in water slope as it reaches an obstruction to movement. Breakup jams occur during periods of thaw, generally in late winter and early spring. Ice cover breakup is usually associated with rapid increase in runoff and corresponding river discharge due to a heavy rainfall, snowmelt, or warmer temperatures (NWS 2011; NYS DHSES 2014).

Ice jams can occur along many of Erie County's rivers and streams. According to the Ice Jam Database maintained by the Ice Engineering Group at the USACE Cold Regions Research and Engineering Laboratory (CRREL), Erie County experienced 43 ice jam events between 1780 and 2020. These ice jam events have occurred within many jurisdictions within the county.

Dam Failure

According to USACE, the level of impact that a dam failure would have can be predicted based upon the hazard potential classification (USACE 2020). Table 5.4.6-2 outlines the recommended hazard classifications.

Table 5.4.6-2. U.S. Army Corps of Engineers Hazard Potential Classification for Dams

Urgency of Action	Actions for Dams in This Class	Characteristics of This Class
Very High (1)	Take immediate action to avoid failure. Communicate findings to sponsor, local, state, Federal, Tribal officials, and the public. Implement interim risk reduction measures, including operational restrictions. Ensure the emergency action plan is current and functionally tested for initiating event. Conduct heightened monitoring and evaluation. Expedite investigations to support remediation using all resources and funding necessary. Initiate intensive management and situation reports.	Critically near failure: Dam is almost certain to fail under normal operations within a few years without intervention. OR Extremely high incremental risk: Combination of life or economic consequences with likelihood of failure is very high. USACE considered this level of life-risk to be unacceptable except in extraordinary circumstances.
High (2)	Communicate findings to sponsor, local, state, Federal, Tribal officials, and the public. Implement interim risk reduction measures, including operational restrictions as warranted. Ensure the emergency action plan is current and functionally tested for initiating event. Conduct heightened monitoring and evaluation. Expedite confirmation of classification. Give very high priority for investigations to support the need for remediation.	Failure initiation foreseen: For confirmed and unconfirmed dam safety issues, failure could begin during normal operations or be initiated as the consequence of an event. The likelihood of failure from one of these occurrences, prior to remediation, is too high to ensure public safety. OR Very high incremental risk: The combination of life or economic consequences with likelihood of failure

Attachment: 16-Section-5.4.6-Flood-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Urgency of Action	Actions for Dams in This Class	Characteristics of This Class
		is high. USACE considered this level of life-risk to be unacceptable except in extraordinary circumstances.
Moderate (3)	Communicate findings to sponsor, local, state, Federal, Tribal officials, and the public. Implement interim risk reduction measures, including operational restrictions as warranted. Ensure the emergency action plan is current and functionally tested for initiating event. Conduct heightened monitoring and evaluation. Prioritize investigations to support the need for remediation informed by consequences and other factors.	Moderate to high incremental risk: For confirmed and unconfirmed dam safety issues, the combination of life, economic, or environmental consequences with likelihood of failure is moderate. USACE considers this level of life-risk to be unacceptable except in unusual circumstances.
Low (4)	Communicate findings to sponsor, local, state, Federal, Tribal officials, and the public. Conduct elevated monitoring and evaluation. Give normal priority to investigations to validate classification but do not plan for risk reduction measures currently.	Low incremental risk: For confirmed and unconfirmed dam safety issues, the combination of life, economic, or environmental consequences with likelihood of failure is low to very low, and the dam may not meet all essential USACE guidelines. USACE considers this level of life-risk to be in the range of tolerability, but the dam does not meet all essential USACE guidelines.
Normal (5)	Continue routine dam safety activities and normal operations, maintenance, monitoring, and evaluation.	Very low incremental risk: The combination of life, economic, or environmental consequences with likelihood of failure is low to very low and the dam meets all essential USACE guidelines. USACE considers this level of life-safety risk to be tolerable.

Source: USACE 2020

New York State uses four classifications to identify hazardous dams. These classifications - negligible, low, intermediate, and high - build upon each other, adding the consequences of the lower levels on the higher levels. According to the New York Inventory of Dams, Erie has 248 dams (Figure 5.4.6-4). These are classified as 164 low hazard, 6 intermediate hazard, 3 high hazard, 63 negligible hazard, and 12 with no classification code. This differs from the National Inventory of Dams, which identifies 25 dams: 16 low hazard, 6 significant hazard, and 3 high hazard.

Table 5.4.6-3. NYSDEC Dam Classifications

Code	Classification	Description
A	Low Hazard	A dam failure is unlikely to result in damage to anything more than isolated or unoccupied buildings, undeveloped lands, minor roads such as town or county roads; is unlikely to result in the interruption of important utilities, including water supply, sewage treatment, fuel, power, cable, or telephone infrastructure; and/or is otherwise unlikely to pose the threat of personal injury, substantial economic loss, or substantial environmental damage.
B	Intermediate Hazard	A dam failure is unlikely to result in damage to anything more than isolated or unoccupied buildings, undeveloped lands, minor roads such as town or county roads; is unlikely to result in the interruption of important utilities, including water supply, sewage treatment, fuel, power, cable, or telephone infrastructure; and/or is otherwise unlikely to pose the threat of personal injury, substantial economic loss, or substantial environmental damage.
C	High Hazard	A dam failure may result in widespread or serious damage to home(s); damage to main highways, industrial or commercial buildings, railroads, and/or important utilities, including water supply, sewage treatment, fuel, power, cable, or telephone infrastructure; or substantial environmental damage; such that the loss of human life or widespread substantial economic loss is likely.
D	Negligible or No Hazard	A dam that has been breached or removed, or has failed or otherwise no longer materially impounds waters, or a dam that was planned but never constructed. Class "D" dams are considered to be defunct dams posing negligible or no hazard. The department may retain pertinent records regarding such dams.
0	Hazard Code has not been assigned	NA

Levee Failure

Nine accredited levee systems are present within Erie County. These were constructed by USACE and area operated and maintained by the New York State Department of Environmental Conservation. The locations of these levee systems are displayed in Figure 5.4.6-5.

- The Blasdell Creek Left Bank levee system protects a population of 192 people, 82 structures, and an estimated property value of $30,310,075.74.
- The Cayuga Creek-Cheektowaga levee system is located on the right bank of Cayuga Creek in the Town of Cheektowaga, NY. It extends from the Union Road Bridge to 1,600 feet upstream of the bridge. The total levee length is 0.28 miles, with an average height of 6 feet and a protected Leveed Area of 35.2 acres. The levee system, including channel, has prevented greater than an estimated $7,153,000 of flood damages since completion.
- The Cayuga Creek-Lancaster-Left Bank levee system is located on the left bank of Cayuga Creek in the Village of Lancaster, NY. It extends from Lake Ave. to Penora St. in the Village of Depew, NY. The levee system total length is 1 mile, average height is 8 feet, and the leveed area is 64 acres. A flood in the area behind the levee could impact approximately 447 people and 207 commercial and residential structures and could cause an estimated $ $75,987,510.00 in flood-related damage (USACE, 2020).
- Cayuga Creek - Lancaster - Right Bank - Legion Field. The levee system is located on the right bank (looking downstream) of Cayuga Creek in the Village of Lancaster, NY. It extends from Park Blvd. to the Broadway bridge in the Village of Lancaster. The levee system is 0.37 miles long, with an average height of 8 feet and a leveed area of 23.7 acres. A flood in the area behind the level could impact approximately 184 people, 88 commercial and residential structures, and could cause an estimated $ $25,310,670.00 in flood-related damage (USACE, 2020).
- Cayuga Creek - Lancaster - Right Bank - St. Mary's. The levee system is located on the right bank (looking downstream) of Cayuga Creek in the Village of Lancaster, NY. It extends from St. Mary's St. at the water tower to St. Mary's St. west of the cemetery. The levee system is 0.42 miles long, with an average height of 6 feet and a leveed area of 30 acres. A flood in the area behind the level could impact approximately 56 people, 24 commercial and residential structures, and could cause an estimated $6,689,480.00 in flood-related damage (USACE, 2020).
- Ellicott Creek-Amherst levee system. The levee system is located on the right bank (looking downstream) of Ellicott Creek in the Town of Amherst, NY. It extends from the Hidden Creek Ct. residential community to the Maple Rd. bridge. The levee system is 0.21 miles in length, with an average of 3 feet height and a leveed area of 11.5 acres. A flood in the area behind the level could impact approximately 55 people, 14 commercial and residential structures, and could cause an estimated $4,579,550.00 in flood-related damage (USACE, 2020).
- Scajaquada Creek - Cheektowaga - Main Stem. The levee system is located on the left bank of Scajaquada Creek in the Town of Cheektowaga, NY. It extends from downstream of Central Blvd. to upstream of Harlem Rd. The levee system is 0.44 miles long, with an average height of 3.5 feet and a leveed area of 70.4 acres. A flood in the area behind the level could impact approximately 427 people, 202 commercial and residential structures, and could cause an estimated $58,203,900.00 in flood-related damage (USACE, 2020).
- Scajaquada Creek - Cheektowaga - Tributary T-3. The levee system is located on the right bank (looking downstream) of Tributary T-3 in the Town of Cheektowaga, NY. It is extending from the downstream limit of Tributary T-2A to George Urban Blvd. The levee system total length is 0.36 miles, with an average height of 3.5 feet and a leveed area of 26.9 acres. A flood in the area behind the level could impact approximately 380 people, 132 commercial and residential structures, and could cause an estimated $12,940,760.00 in flood-related damage (USACE, 2020).
- Scajaquada Creek - Cheektowaga - Tributary T-3B. The levee system is located on the right bank of Tributary T-3B in the Town of Cheektowaga, NY. It extends between Dick Rd. and Union Rd. The levee system is 0.18 miles long, with an average height of 2.5 feet and a leveed area of 22.4 acres. A flood in the area behind the level could impact approximately 122 people, 52 commercial and

Attachment: 16-Section-5.4.6-Flood-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

residential structures, and could cause an estimated $13,348,750.00 in flood-related damage (USACE, 2020).

The United States Geological Survey (USGS) National Water Information System (NWIS) collects surface water data from more than 850,000 stations across the country. The time-series data describe stream levels, streamflow (discharge), reservoir and lake levels, surface water quality, and rainfall. The data are collected by automatic recorders and manual field measurements at the gage locations. USGS collects data in Erie County via 10 stream gages, as indicated in Table 5.4.6-4 and Figure 5.4.6-6.

Water Level Data

A hydrograph shows how a water level changes over time at a specific location to enable a review of historic water levels which are useful in floodplain management planning. In Erie County, of the ten deployed USGS stream gages, five are continuously monitored and have associated hydrographs. These forecast hydrographs are useful to reference when flooding is expected or to determine the observed water level for the past few days:

- Action Stage - the stage which, when reached by a rising stream, lake, or reservoir, represents the level where the NWS or a partner/user needs to take some type of mitigation action in preparation for possible significant hydrologic activity.
- Minor Flooding - minimal or no property damage, but possibly some public threat.
- Moderate Flooding - some inundation of structures and roads near stream. Some evacuations of people and/or transfer of property to higher elevations.
- Major Flooding - extensive inundation of structures and roads. Significant evacuations of people and/or transfer of property to higher elevations.
- Record Flooding - flooding which equals or exceeds the highest stage or discharge at a given site during the period of record keeping.
- Stage - level of the water surface in a river measured with reference to some datum.
- Flow - volume of water passing a given point per unit of time.
- kcfs - measurement of water flow equivalent to 1000 cubic feet of water passing a given point for an entire second (NWS 2020) *(https://water.weather.gov/ahps2/pdf/hydrograph_terminology.pdf)*.

Previous Occurrences and Losses

Table 5.4.6-5 documents historical flood events from 1950 to August 2020 in Erie County based on data collected from NOAA's National Centers for Environmental Information (NCEI), National Performance of Dams Program (NPDP), and CRREL databases.

Table 5.4.6-5. Flood Events 1954-2020

Hazard Type	Number of Occurrences Between 1950 and 2020	Total Fatalities	Total Injuries	Total Property Damage ($)	Total Crop Damage ($)

FEMA Disaster Declarations

According to the New York State HMP, between 1954 and 2020, FEMA included New York State in 51 flood-related major disaster (DR) or emergency (EM) declarations (NYS DHSES 2020). Generally, these disasters cover a wide region of the state; therefore, they may have impacted many counties. Erie County was included in seven of these flood-related declarations (Table 5.4.6-6).

Table 5.4.6-6. FEMA DR and EM Declarations for Flood Events in Erie County, 1954 to 2020

FEMA Declaration Number	Date(s) Of Event	Event Type	Details
494	March 19, 1976	Severe Ice Storm	Ice Storm, Severe Storms & Flooding
1233	June 25, 1998 - July 10, 1998	Severe Storm(s)	Severe Storms and Flooding
1335	May 3, 2000 - August 12, 2000	Severe Storm(s)	Severe Storms and Flooding

Attachment: 16-Section-5.4.6-Flood-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

U.S. Department of Agriculture Agricultural Disaster Declarations

The Secretary of Agriculture from the U.S. Department of Agriculture (USDA) is authorized to designate counties as disaster areas to make emergency loans available to producers suffering losses in those counties and in counties that are contiguous to a designated county. Erie County has experienced the following 10 USDA-designated agricultural disasters since 2013 that included or may have included losses due to flooding:

- S3593 - 2013 Excessive Rain and Related Flooding, High Winds, and Hail
- S3747 - 2014 Excessive Rain, Flash Flooding, Flooding, High Winds, and Hail
- S3777 - 2014 Excessive Snow, Flooding, Freeze, and High Wind
- S3885 - 2015 Excessive Rain, High Winds, Hail, Lightning, and Tornado
- S4274 - 2017 Excessive Rain and Related Flooding
- S4265 - 2017 Excessive Rain and Related Flooding, High Winds, and Hail
- S4479 - 2018 Excessive Rain

The USDA crop loss data provide another indicator of the severity of previous events. Additionally, crop losses can have a significant impact on the economy by reducing produce sales and purchases. Such impacts may have long-term consequences, particularly if crop yields are low the following years as well. USDA records indicate that Erie County has experienced crop losses from flood events. Table 5.4.6-7 provides details regarding crop losses in Erie County according to USDA records.

Table 5.4.6-7. USDA Crop Losses from Excess Moisture/Precipitation/Rain and/or Flooding in Erie County (2014-2019)

Year	Crop Type	Cause of Loss	Losses
2014	Wheat, corn, oats, beans, soybeans, all cover crops	Excess Moisture/Precipitation/Rain	$2 million
2015	Wheat, corn, oats, beans, soybeans	Excess Moisture/Precipitation/Rain	$1.6 million
2016	Wheat, corn, oats, beans, soybeans, oats	Excess Moisture/Precipitation/Rain	$1.2 million
2017	Wheat, corn, oats, beans, soybeans, grapes	Excess Moisture/Precipitation/Rain	$1.6 million
2018	Wheat, corn, oats, beans, soybeans	Excess Moisture/Precipitation/Rain	$1.1 million
2019	Wheat, corn, oats, beans, soybeans, oats	Excess Moisture/Precipitation/Rain	$2.1 million

Previous Events

For this update, flood events were summarized from 2013 to 2020. Known flood events that have impacted Erie County between 2015 and 2020, including FEMA disaster declarations, are identified in Table 5.4.6-8. Section 9 includes detailed information regarding flood impacts to each municipality.

Attachment: 16-Section-5.4.6-Flood-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Table 5.4.6-8. Flood Events in Erie County, 2015 to 2020

Dates of Event	Event Type	FEMA Declaration Number (if applicable)	County Designated?	Event Details
3/14/2015 & 3/15/2015	Flash Flood	-	-	Near record winter snowpack and ice on area creeks underwent a slow melt during the first half of the month. A rapid warm-up followed and resulted in ice jams on Cazenovia and Buffalo Creeks. Damages estimated at $20,000.
8/11/2015	Flash Flood	-	-	Showers and thunderstorms developed along the leading edge of a well-defined shortwave moving from Southern Ontario into Western New York. The storms mod across southern Erie county and rapidly intensified. Instantaneous rainfall rates of 4 to 6 inches per hour were observed on radar. Damages from the event are estimated at $100,000.
8/15/2015	Flash Flood	-	-	Thunderstorms developed and tracked along a stalled frontal boundary across Niagara and northern Erie counties. The slow-moving thunderstorms produced intense rainfall with reports of 5 to 8 inches in just a couple of hours. Damages from the event are estimated at $105,000.
4/20/2017	Flood	-	-	Several rounds of thunderstorms brought 1 to 3 inches of rain to the area in just a couple of hours. This resulted in ponding of water on area roadways. Several roads were closed by flood waters. Several basements were reported flooded in Alden. Damages from the event are estimated at $80,000.
4/21/2017	Flood	-	-	Several rounds of thunderstorms brought 1 to 3 inches of rain to the area in just a couple of hours. This resulted in ponding of water on area roadways. Several roads were closed by flood waters. Damages from the event are estimated at $10,000.
5/1/2017	Flood	-	-	A strong cold front moved across the region during the afternoon and evening hours. A line of thunderstorms just ahead of the front produced damaging winds that downed trees and wires across western New York through the Finger Lakes Region as well as areas east of Lake Ontario. A few falling trees caused minor structural damage. Damages from the event are estimated at $10,000.
7/13/2017	Flash Flood	-	-	A convective complex moved across Western New York late in the morning. This produced a quick 2 to 4 inches of rain which covered a significant portion of the region and resulted in flash flooding that impacted the Buffalo metro area, the Boston/Wyoming hills, and parts of the northern Finger Lakes Region. Flood Stage is 8 feet. It was the fifth highest crest on record and the highest warm season crest. Rises were quick on

Dates of Event	Event Type	FEMA Declaration Number (if applicable)	County Designated?	Event Details
				the creeks due to the brief period the rain fell. Damages from the event are estimated at $15,000.
11/5/2017	Flood	-	-	After a warm front brought soaking rains to the region, a cold front brought additional rain. The heavy precipitation fell on already saturated ground resulting in both area and river flooding. crested at 6.32 feet at 6:00 PM on the 7th (Flood Stage is 6 feet). Damages from the event are estimated at $30,000.
10/6/2018	Flash Flood	-	-	A weakening surface low tracked northeast across Lake Huron during the afternoon hours with its corresponding warm front extending to the east across Lake Ontario, then snaking south ahead of the higher terrain east of Syracuse. Damages from the event are estimated at $20,000.
2/4/2019	Flood	-	-	Rapid temperature warmups occurred across the area coming out of below zero cold that ended January. Record high temperatures occurred on February 4, resulting in almost total snow melt off and ice break up on local rivers. Ice jam flooding occurred on the Cazenovia Creek and Big Sister Creeks in Erie County. Damages from the event are estimated at $13,000.
2/24/2019	Flash Flood	-	-	Low pressure over the central Plains rapidly deepened as it moved into the central Great Lakes, ending up as a 970 mb low over western Quebec. A strong cold front trailing the low sliced through western New York trailing it and ushering in very gusty winds. The track of the strong surface low was a classic high wind track for our region. Damages from the event are estimated at $5,000.
8/21/2019	Flash Flood	-	-	Well ahead of an approaching cold front and more tied to convective enhanced shortwave, strong thunderstorms developed in clusters early morning. Warm rain processes dominated with precipitable water values closing in on 1.8 inches. Congealing storms dropped very heavy rain over north Buffalo to the Tonawandas. Damages from the event are estimated at $15,000.
10/31/2019	Lakeshore Flood/High Wind	EM 4472	-	A deepening area of consolidated low pressure tracked from the north shoreline of Lake Erie to Toronto, and then along the northern shoreline of Lake Ontario Thursday evening, October 31. Heavy rain also brought flooding concerns. All three climate stations broke their daily October 31 records with 1 to 3 inches of rain falling. High winds and lakeshore flooding continued into November 1.
6/2/2020	Flash Flood	-	-	A low-level boundary pushed southeast ahead of a mesoscale convective system late in the afternoon. This boundary followed

Attachment: 16-Section-5.4.6-Flood-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie

Dates of Event	Event Type	FEMA Declaration Number (if applicable)	County Designated?	Event Details
				the passage of a warm front with effective shear values jumping to 50-60 knots as the low-level boundary made its way across southern Ontario and into western New York. The evening Buffalo sounding strongly suggested that any convection would be elevated. There were no reported damages from this event.
7/11/2020	Flood	-	-	A sharp shortwave trough embedded within a broad upper level trough over the northeastern U.S. supported a wave of convection that moved across the entire area. There were no reported damages from this event. There were no reported damages from this event. There were no reported damages from this event.
7/16/2020	Flood	-	-	A mesoscale convective vortex pulled a pair of fronts across the area during the afternoon and evening near the time of peak heating. There were no reported damages from this event.
8/15/2020	Flash Flood	-	-	A diffuse and weak mid-level trough drifted across the eastern Great Lakes during the afternoon and evening, with a weak inverted trough at the surface extending from the Middle Atlantic states into western New York. Daytime heating resulted in moderate instability, although mid-level lapse rates were poor. Very weak flow through the low and mid-levels provided little to no shear. Damages from the event are estimated at $142,000.

Climate Change Projections

Climate change is beginning to affect both people and resources of Erie County, and the impacts of climate change will continue. Impacts related to increasing temperatures are already being felt in the county. ClimAID: the Integrated Assessment for Effective Climate Change in New York State (ClimAID) was undertaken to provide decision-makers with information on the state's vulnerability to climate change and to facilitate the development of adaptation strategies informed by both local experience and scientific knowledge (New York Each region in New York State, as defined by ClimAID, contains attributes that will be affected by climate change. Erie County is part of Region 1, Western New York, Great Lakes Plain. In Region 1, it is estimated that temperatures will increase by 3.0 ºF to 5.5 ºF by the 2050s and 4.5 ºF to 8.5 ºF by the 2080s (baseline of 48.0 ºF, mid-range projection). Precipitation totals will increase between 0 and 10% by the 2050s and 0 to 15% by the 2080s (baseline of 37.0 inches, mid-range projection). Table 5.4.6-9 displays the projected seasonal precipitation change for ClimAID Region 1 (NYSERDA 2014).

Table 5.4.6-9. Projected Seasonal Precipitation Change in Region 1, 2050s (% change)

Winter	Spring	Summer	Fall
+5 to +15	0 to +10	-5 to +10	-5 to +10

Source: NYSERDA 2014

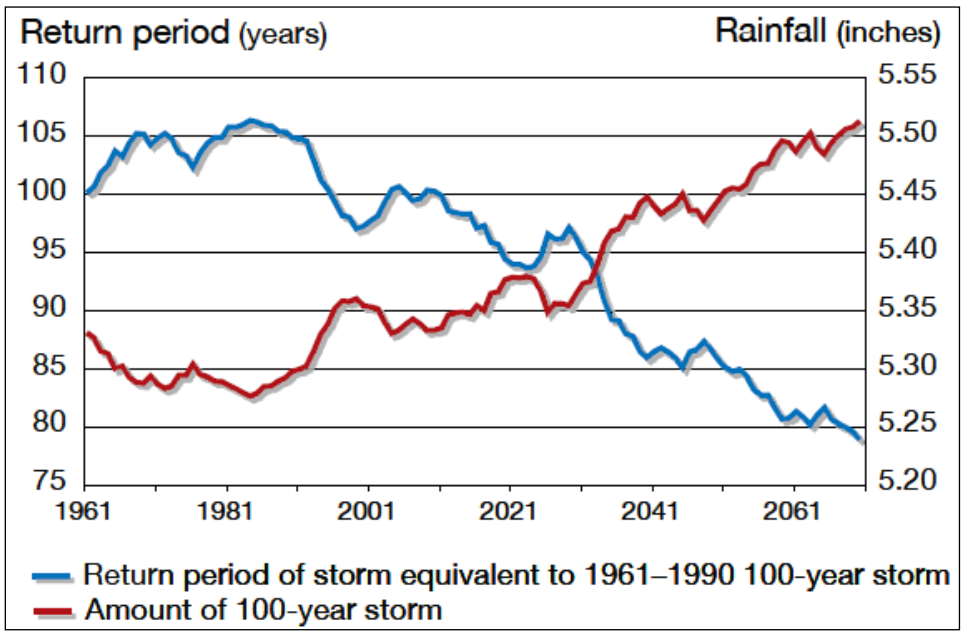
By the end of the century, the greatest increases in precipitation are projected to be in the northern parts of the state. Although seasonal projections are less certain than annual results, much of this additional precipitation is projected to occur during the winter months. During the late summer and early fall, in contrast, total precipitation is slightly reduced in many climate models. The projected increase in precipitation is expected to fall in heavy downpours and less in light rains. The increase in heavy downpours has the potential to affect drinking water; heighten the risk of riverine flooding; flood key rail lines, roadways, and transportation hubs; and increase delays and hazards related to extreme weather events (NYSERDA 2018).

Average annual temperatures are projected to increase across New York State by 2.0–3.4 ˚F by the 2020s, 4.1–6.8 ˚F by the 2050s, and 5.3–10.1 ˚F by the 2080s. By the end of the century, the greatest warming is projected to be in the northern parts of the state. The state's growing season could lengthen by about a month, with summers becoming more intense and winters milder (NYSERDA 2018).

Increasing air temperatures intensify the water cycle by increasing evaporation and precipitation. This can cause an increase in rain totals during events with longer dry periods in between those events. These changes can have a variety of effects on the state's water resources (NYSERDA 2011). Figure 5.4.6-7 displays the project rainfall and frequency of extreme storms in New York State. The amount of rainfall in a 100-year event is projected to increase, while the number of years between such storms (return period) is projected to decrease. Rainstorms will become more severe and more frequent (NYSERDA 2011).

Attachment: 16-Section-5.4.6-Flood-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Figure 5.4.6-7. Projected Rainfall and Frequency of Extreme Storms



Source: NYSERDA 2011

Dams are designed partly based on assumptions about a river's flow behavior, expressed as hydrographs. Changes in weather patterns can significantly affect the hydrograph used for the design of a dam. If the hygrograph changes, the dam conceivably could lose some or all of its designed margin of safety, also known as freeboard. Loss of designed margin of safety increases the possibility that floodwaters would overtop the dam or create unintended loads, which could lead to a dam failure.

Probability of Future Occurrences

Based on the historic and more recent flood events in Erie County, the county has a high probability of flooding for the future. The fact that the elements required for flooding exist and that major flooding has occurred throughout the county in the past suggests that many people and properties are at risk from the flood hazard in the future. It is estimated that Erie County will continue to experience direct and indirect impacts of flooding events annually that may induce secondary hazards such as infrastructure deterioration or failure, utility failures, power outages, water quality and supply concerns, and transportation delays, accidents, and inconveniences.

As defined by FEMA, geographic areas within the 1 percent annual chance flood area in Erie County are estimated to have a 1 percent chance of flooding in any given year. A structure located within a 1 percent annual chance flood area has a 26 percent chance of suffering flood damage during the term of a 30-year mortgage. Geographic areas in Erie County located within the 0.2 percent annual chance flood area boundary are estimated to have a 0.2 percent chance of being flooded in any given year (FEMA 2007).

According to the NOAA-NCEI and the CRREL database, Erie County experienced 94 flood events between 1950 and 2020, including 40 floods and 54 flash floods. Table 5.4.6-10 shows these statistics, as well as the annual average number of events and the percent chance of these individual flood hazards occurring in Erie County in future years based on the historic record (NOAA-NCEI 2020).

Attachment: 16-Section-5.4.6-Flood-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Table 5.4.6-10. Probability of Future Occurrence of Flooding Events

Hazard Type	Number of Occurrences Between 1950 and 2020	Percent (%) chance of occurrence in any given year
Flash Flood	54	76.06
Flood	40	56.34
Lakeshore Flood	10	14.08
Total	**104**	**100.0**

Source: NOAA-National Climatic Data Center (NCDC) 2021; CRREL 2018; NPDP 2018

Climate change is expected to increase the severity and frequency of heavy rain events in Erie County. This is likely to lead to an increase in flooding events and dam and levee failure events.

In Section 5.3, the identified hazards of concern for Erie County were ranked. The probability of occurrence, or likelihood of the event, is one parameter used for hazard rankings. Based on historical records and input from the Planning Committee, the probability of occurrence for flood in the county is considered *occasional*, having between 10 and 100 percent annual probability of the hazard occurring, as presented in Table 5.3-1 in Section 5.3, Hazard Ranking.

5.4.6.2 Vulnerability Assessment

To assess Erie County's risk to the flood hazard, a spatial analysis was conducted using the FEMA Risk Map effective and preliminary products dated June 2019 and February 2019, respectively. The 1 and 0.2 percent annual chance flood events were examined to determine the assets located in the hazard areas and to estimate potential loss using the FEMA Hazus riverine flood model. These results are summarized below.

Impact on Life, Health, and Safety

The impact of flooding on life, health, and safety is dependent upon several factors, including the severity of the event and whether or not adequate warning time is provided to residents. Exposure represents the population living in or near floodplain areas that could be impacted should a flood event occur. Additionally, exposure should not be limited to only those who reside in a defined hazard zone, but everyone who may be affected by the effects of a hazard event (e.g., people are at risk while traveling in flooded areas, or their access to emergency services is compromised during an event). The degree of that impact will vary and is not strictly measurable.

To estimate population exposure to the 1 percent and 0.2 percent annual chance flood events, the DFIRM flood boundaries were used. Based on the spatial analysis, there are an estimated 9,633 residents living in the A Zones of the 1 percent annual chance floodplain or 1.1 percent of the County's total population. There are an estimated 14 residents living in the V Zones of the 1 percent annual chance floodplain, which is less than 0.1 percent of the County's total population. There are an estimated 48,397 residents living in the 0.2 percent annual chance floodplain, or 5.3 percent of the County's total population. The Town of Amherst has the greatest number of residents living in the floodplain, with approximately 2,818 residents living in the Special Flood Hazard Area (SFHA) and 24,611 people living in the 0.2 percent annual chance floodplain. Table 5.4.6-11. summarizes the population exposed to the flood hazard by jurisdiction.

Attachment: 16-Section-5.4.6-Flood-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Research has shown that some populations, while they may not have more hazard exposure, may experience exacerbated impacts and prolonged recovery if/when impacted. This is due to many factors, including their physical and financial ability to react or respond during a hazard. Of the population exposed, the most vulnerable include the economically disadvantaged and the population over age 65. Economically disadvantaged populations may be more vulnerable because they are likely to evaluate their risk and make decisions to evacuate based on net economic impacts on their families. The population over age 65 is also more vulnerable because they are more likely to seek or need medical attention that may not be available due to isolation during a flood event, and they may have more difficulty evacuating. Within Erie County, there are approximately 161,744 people over the age of 65 and 126,806 people below the poverty level (American Community Survey 2019).

The Centers for Disease Control and Prevention (CDC) 2016 Social Vulnerability Index (SVI) ranks U.S. Census tracts on socioeconomic status, household composition and disability, minority status and language, and housing and transportation. Erie County's overall score is 0.3986, indicating that its communities have low to moderate social vulnerability (CDC 2016). This score indicates that some county residents may not have enough resources to respond to flood events.

Using 2010 U.S. Census data, Hazus estimates the potential sheltering needs as a result of a 1 percent annual chance flood event. For the 1 percent flood event, Hazus estimates 21,383 households will be displaced, and 985 people will seek short-term sheltering. These statistics, by jurisdiction and by flood zone, are presented in Table 5.4.6-12.

Table 5.4.6-12. Estimated Population Displaced or Seeking Short-Term Shelter from the 1 Percent Annual Chance Flood Event Hazard Area

The total number of injuries and casualties resulting from flooding is generally limited based on advance weather forecasting, blockades, and warnings. More likely, persons could become displaced from their homes or may seek shelter due to the impacts of a flood event. Therefore, injuries and deaths generally are not anticipated if proper warning and precautions are in place. Ongoing mitigation efforts should help to avoid the most likely cause of injury, which results from persons trying to cross flooded roadways or channels during a flood. Dam failure can cause, in the most extreme case, loss of life and extensive property damage, or in the least extreme case, no loss of life or significant property damage. Dam failure can cause persons to become displaced if flooding of structures occurs. Dam failure may mimic flood events, depending on the size of the dam reservoir and breach. Dam failure inundation modeling estimates the potential impacts of a failure; however, this data is considered sensitive information and is not displayed or discussed further in the HMP.

Cascading impacts of flooding and dam failure inundation may also include exposure to pathogens such as mold. After flood events, excess moisture and standing water contribute to the growth of mold in buildings. Mold may present a health risk to building occupants, especially those with already compromised immune systems such as infants, children, the elderly, and pregnant women. The degree of impact will vary and is not strictly measurable. Mold spores can grow in as short a period as 24–48 hours in wet and damaged areas of buildings that have not been properly cleaned. Very small mold spores can easily be inhaled, creating the potential for allergic reactions,

Attachment: 16-Section-5.4.6-Flood-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

asthma episodes, and other respiratory problems. Buildings should be properly cleaned and dried out to safely prevent mold growth (CDC 2020).

Molds and mildews are not the only public health risk associated with flooding. Floodwaters can be contaminated by pollutants such as sewage, human and animal feces, pesticides, fertilizers, oil, asbestos, and rusting building materials. Common public health risks associated with flood events also include:

- Unsafe food
- Contaminated drinking and washing water and poor sanitation
- Mosquitos and animals
- Carbon monoxide poisoning
- Secondary hazards associated with re-entering/cleaning flooded structures
- Mental stress and fatigue

Current loss estimation models such as Hazus are not equipped to measure public health impacts. The best level of mitigation for these impacts is to be aware that they can occur, educate the public on prevention, and be prepared to deal with these vulnerabilities in responding to flood events.

Impact on General Building Stock

Exposure to the flood hazard includes those buildings located in the flood zone or those that are built downstream in other flood inundation areas such as dam failure inundation areas. Potential damage is the modeled loss that could occur to the exposed inventory measured by the structural and content replacement cost value. There are an estimated 3,923 and 17,522 buildings located in the 1 percent and 0.2 percent annual chance flood event hazard area, respectively. This represents approximately 1.1 percent and 4.9 percent of the county's total general building stock inventory replacement cost value, respectively (approximately $222.5 billion). The Town of Amherst has the greatest number of its buildings located in the 1 percent annual chance floodplain (927 buildings or 2.4 percent of its total building stock). The Town of Amherst also has the greatest number of its buildings located in the 0.2 percent annual chance floodplain (7,800 buildings or 20.2 percent of its total building stock). Refer to Table 5.4.6-13. for the estimated exposure of 1 percent and 0.2 percent flood events by jurisdiction. Refer to Table 5.4.6-14 through Table 5.4.6-17. for the Hazus estimated losses by jurisdiction, for residential, commercial, and other occupancy structures, respectively.

NFIP Statistics

FEMA Region 2 provided a list of NFIP policies, past claims, and repetitive loss properties (RL) in Erie County. According to FEMA, a RL property is a NFIP-insured structure that has had at least two paid flood losses of more than $1,000 in any 10-year period since 1978. A SRL property is a NFIP-insured structure that has had four or more separate claim payments made under a standard flood insurance policy, with the amount of each claim exceeding $5,000 and with the cumulative amount of such claims payments exceeding $20,000 or at least two separate claims payments made under a standard flood insurance policy with the cumulative amount of such claim payments exceed the fair market value of the insured building on the day before each loss (FEMA 2018).

Table 5.4.6-18. summarizes the NFIP policies, claims, and repetitive loss statistics for Erie County. Note that specific locations of repetitive loss properties were not made available for this plan.

Erie County Total	**Data Not Provided by FEMA**	**2,074**	**2,526**	**$12,430,926**

Source: FEMA Region 2, 2020

Note: NFIP = National Flood Insurance Program, V = Village, T = Town, C = City
The Village of Gowanda is partially in both Erie and Cattaraugus Counties. Totals may be inflated as they are for the entire Village, not just Erie County.

Impact on Land Uses

An exposure analysis was completed to determine the acres of developed residential land and developed non-residential land use types located in the 1 percent and 0.2 percent flood hazard areas. To estimate exposure for developed residential and nonresidential land use types to the 1 percent flood hazard area, the floodplain boundary was overlaid upon land use data. Across Erie County, natural land has the highest percentage in flood areas. Approximately 7.9 percent and 9.8 percent of natural land use area is in the 1 percent (A and V Zones combined) and 0.2% annual chance flood zone, respectively. Non-residential land the greatest area in flood areas. Approximately 34,426 acres of non-residential land area are in the 1 percent annual chance flood zone, and 44,479 acres of non-residential land area are in the 0.2 percent annual chance flood zone. Refer to Table 5.4.6-19 for a complete summary of this analysis.

Table 5.4.6-19. Developed Residential and Non-Residential Land Use Exposed to 1 Percent and 0.2 Percent Annual Chance Flood Event Hazard Areas

Land Use Type	Total Acres for County	1 percent Annual Chance Flood Event - A Zones		1 percent Annual Chance Flood Event - V Zones		0.2 percent Annual Chance Flood Event	
		Acres	Percent of Total	Acres	Percent of Total	Acres	Percent of Total
Residential Land	103,575	2,825	2.7%	73	0.1%	7,419	7.2%
Non-Residential Land	544,586	34,318	6.3%	107	<0.1%	44,479	8.2%
Natural Land	304,039	24,098	7.9%	19	<0.1%	29,826	9.8%
Erie County Total	**652,056**	**38,814**	**6.0%**	**383**	**0.1%**	**53,849**	**8.3%**

C = City; T = Town; V = Village

Notes: Cattaraugus Tribal Territory and Tonawanda Tribal Territory were not included in the above totals, as the two tribes did not participate in this HMP update.
The area presented includes the area of inland waterways.

Impact on Critical Facilities

It is important to determine the critical facilities and infrastructure within the county that may be at risk to flooding (riverine, dam failure, flash/stormwater flooding) and who may be impacted should damage occur. Critical services during and after a flood event may not be available if critical facilities are directly damaged or transportation routes to access these critical facilities are impacted. Roads that are blocked or damaged can isolate residents and can prevent access throughout the planning area to many service providers needing to get to vulnerable populations or to make repairs. Utilities such as overhead power, cable, and phone lines could also be vulnerable due to utility poles damaged by standing water or the surge of water from a dam failure event. Loss of these utilities could create additional isolation issues for the inundation zones.

Major roadways that may be impacted by the 1 percent annual chance flood event include Interstates I-90, I-990, I-190, State Roads NY-266, NY-277, NY-270, NY-324, NY-33, NY-354, NY-384, NY-39, NY-391, NY-425, NY-5, NY-75, NY-78, NY-93, and NY-93, US Routes 20, 20A, 219, and 62 and various county roads.

Attachment: 16-Section-5.4.6-Flood-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Approximately 2.7 percent (both A and V Zones) and 6.3 percent of all roadways are located in the 1 percent and 0.2 percent annual chance flood event, respectively. Table 5.4.6-20 summarizes the total number of miles of exposed roadways. There are several issues associated with transportation routes flooding, including isolation caused by bridges being washed out or blocked by floods or debris, health problems caused by water and sewer systems that are flooded or backed up, drinking water contamination caused by floodwaters carrying pollutants in water supplies, and localized urban flooding caused by culverts blocked with debris.

Table 5.4.6-20. Road Miles Located in the 1 percent Annual Chance Flood Hazard Area

Road Type	Total Miles for County	1 Percent Annual Chance Flood Event - A Zones		1 Percent Annual Chance Flood Event - V Zones		0.2 Percent Annual Chance Flood Event	
		Miles	Percent of Total	Miles	Percent of Total	Miles	Percent of Total

Source: FEMA 2019; NYS DOT 2013

Critical facility exposure to the 1 percent and 0.2 percent annual chance flood hazard event boundary was examined. In addition, Hazus was used to estimate the flood loss potential to critical facilities located in the FEMA mapped floodplains. Table 5.4.6-21. separated by A and V Zones and Table 5.4.6-22. summarize the number of critical facilities exposed to the 1 percent and 0.2 percent flood inundation areas by jurisdiction. Of the 496 critical facilities located in the 1 percent annual chance flood event boundary, 468 are considered lifelines for the county out of the 585 critical facilities located in the 0.2 percent annual chance flood event boundary, 554 are considered lifelines for the county. Table 5.4.6-23.and Table 5.4.6-24. the distribution of critical facilities in the 1 percent and 0.2 percent annual chance flood event boundary. Refer to Section 4 (County Profile) for more information about the critical facilities and lifelines in Erie County.

In cases where short-term functionality is impacted by a hazard, other facilities of neighboring municipalities may need to increase support response functions during a disaster event. Mitigation planning should consider means to reduce impact to critical facilities and ensure enough emergency and school services remain when a significant event occurs. Actions addressing shared services agreements are included in Section 9, Mitigation Strategies, of this plan.

Impact on the Economy

Flood events can significantly impact the local and regional economy. This includes but is not limited to general building stock damages and associated tax loss, impacts to utilities and infrastructure, business interruption, and impacts on tourism. In areas that are directly flooded, renovations of commercial and industrial buildings may be necessary, disrupting associated services. Subsection of Section 5.4.6.2, Impact on General Building Stock, discusses direct impacts to buildings in Erie County.

Debris management may also be a large expense after a flood event. HAZUS estimates the amount of structural debris generated during a flood event. The model breaks down debris into three categories: (1) finishes (dry wall, insulation, etc.); (2) structural (wood, brick, etc.); and (3) foundations (concrete slab and block, rebar, etc.). These distinctions are necessary because of the different types of equipment needed to handle debris. Table 5.4.6-25. summarizes the Hazus v4.2 countywide debris estimates for the 1 percent annual chance flood event. This table only estimates structural debris generated by flooding and does not include non-structural debris or additional potential damage and debris possibly generated by wind that may be associated with a flood event or storm that causes flooding. Overall, Hazus estimates that there will be 40,750 tons of debris generated during the 1 percent annual chance flood event in Erie County.

Impact on the Environment

As Erie County and its jurisdictions evolve with changes in population and density, flood events may increase in frequency and/or severity as land use changes, more structures are built, and impervious surfaces expand. Furthermore, flood extents for the 1 percent annual chance flood event will continue to evolve alongside natural occurrences such as climate change and/or severe weather events. These flood events will inevitably impact Erie County's natural and local environment.

Furthermore, the environmental impacts of a dam failure can include significant water quality and debris-disposal issues. Flood waters can back up sanitary sewer systems and inundate wastewater treatment plants, causing raw sewage to contaminate residential and commercial buildings and the flooded waterway. The contents of unsecured containers of oil, fertilizers, pesticides, and other chemicals get added to flood waters. Hazardous materials may be released and distributed widely across the floodplain. Water supply and wastewater treatment facilities could be offline for weeks. After the flood waters subside, contaminated and flood-damaged building materials and contents must be properly disposed of. Contaminated sediment must be removed from buildings, yards, and properties. In addition, severe erosion is likely; such erosion can negatively impact local ecosystems.

The acreage of natural land makes up 46.6 percent of the county's total land area (NLCD 2016). Natural land areas from the 2016 land use type dataset includes areas of forested land and wetlands. Severe flooding will not only influence the habitat of these natural land areas, it can be disruptive to species that reside in these natural habitats. Overall, 7.9 percent and 9.8 percent of the natural land area in the county is exposed to the 1 percent and 0.2 percent annual chance flood events, respectively.

Cascading Impacts on Other Hazards

Flood events can exacerbate the impacts of land sliding and utility failure. The New York City (NYC) 2019 Hazard Mitigation Plan suggests that flooding may cause a loss of stabilizing plant material caused by inundation and erosion (NYC 2019). Flooding of contaminated waters and flood water containing debris may also cause failure of utilities, particularly if the utilities are disrupted by debris clogging treatment systems or flood waters inundating power sources. More information about these hazards of concern can be found in Sections 5.4.8 and 5.4.12.

Future Changes That May Impact Vulnerability

Understanding future changes that impact vulnerability in the county can assist in planning for future development and ensuring that appropriate mitigation, planning, and preparedness measures are in place. The county considered the following factors to examine potential conditions that may affect hazard vulnerability:

- Potential or projected development
- Projected changes in population
- Other identified conditions as relevant and appropriate, including the impacts of climate change

Projected Development

As discussed in Section 4, areas targeted for future growth and development have been identified across the county. Any areas of growth located in the flood inundation areas could be potentially impacted by flooding. It is recommended that the county and municipal partners implement design strategies that mitigate against the risk of flooding. The maps in the jurisdictional annexes in Section 9 illustrate the new development locations throughout the county and their proximity to the 1 percent annual chance flood hazard event boundary.

Attachment: 16-Section-5.4.6-Flood-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Projected Changes in Population

According to the U.S. Census Bureau, the population in Erie County has increased by a negligible amount between 2010 and 2019 (American Community Survey 2019). Estimated population projections provided by the Cornell Program on Applied Demographics indicate that the county's population will increase into 2040, bringing total population to approximately 945,891 persons (Cornell Program on Applied Demographics 2018). As population increases, new residents may move into locations that are more susceptible than others to flooding. This includes areas that are directly impacted by flood events and those that are indirectly impacted (i.e., isolated neighborhoods, flood-prone roadways, etc.). Section 4, County Profile, includes additional discussion on population trends.

Climate Change

As discussed earlier, annual precipitation amounts in the region are projected to increase, primarily in the form of heavy rainfalls, which have the potential to increase the risk to flash flooding and riverine flooding, and flood critical transportation corridors and infrastructure (NYSERDA 2014). Increases in precipitation may alter and expand the floodplain boundaries and runoff patterns, resulting in the exposure of populations, buildings, and critical facilities and infrastructure that were previously outside the floodplain. This increase in exposure would result in an increased risk to life and health, an increase in structural losses, a diversion of additional resources to response and recovery efforts, and an increase in business closures affected by future flooding events due to loss of service or access.

Existing dams may not be able to retain and manage increases in water flow from more frequent, heavy rainfall events. Heavy rainfalls may result in more frequent overtopping of these dams and flooding of the county's assets in adjacent inundation areas. However, the probable maximum flood used to design each dam may be able to accommodate changes in climate.

Change of Vulnerability Since 2015 HMP

Since the 2015 HMP analysis, population statistics have been updated using the 5-Year 2015–2019 American Community Survey Population Estimates (American Community Survey 2019). The general building stock was also established using RS Means 2020 building valuations that estimated replacement cost value for each building in the inventory. Additionally, a critical facility dataset was provided from the county. A Hazus riverine flood analysis of Erie County was based on the most current and best available data, including building and critical facility inventories and 2012 FEMA effective DFIRM.

Overall, this vulnerability assessment uses a more accurate and updated building inventory than that used in the 2015 HMP. This information provides more accurate exposure and potential loss estimates for Erie County.

Attachment: 16-Section-5.4.6-Flood-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Attachment: 17-Section-5.4.7-Haz-Mat-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

5.4.7 Hazardous Materials

This section provides a hazard profile and vulnerability assessment of the hazardous materials (hazmat) hazard for the Erie County Hazard Mitigation Plan (HMP).

5.4.7.1 Hazard Profile

This section provides information regarding the description, location, extent, previous occurrences and losses, probability of future occurrences, and climate change projections for the hazardous materials hazard.

Hazard Description

Hazardous substances include materials and wastes that are considered severely harmful to human health and the environment, as defined by the U.S. Environmental Protection Agency (EPA) Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) (also known as Superfund). Many hazardous materials are commonly-used substances, which are harmless in their normal uses, but are quite dangerous if released. EPA designates more than 800 substances as hazardous and identifies many more as potentially hazardous due to their characteristics and the circumstances of their release (EPA 2020).

Superfund's definition of a hazardous substance includes the following:

- Any element, compound, mixture, solution, or substance designated as hazardous under Section 102 of CERCLA.
- Any hazardous substance designated under Section 311(b)(2)(a) of the Clean Water Act (CWA), or any toxic pollutant listed under Section 307(a) of the CWA. More than 400 substances are designated as either hazardous or toxic under the CWA.
- Any hazardous waste having the characteristics identified or listed under section 3001 of the Resource Conservation and Recovery Act (RCRA).
- Any hazardous air pollutant listed under Section 112 of the Clean Air Act (CAA), as amended. More than 200 substances are listed as hazardous air pollutants under the CAA.
- Any imminently hazardous chemical substance or mixture that the EPA Administrator has "taken action" under Section 7 of the Toxic Substances Control Act (TSCA) (EPA 2020).

If released or misused, hazardous substances can cause death, serious injury, long-lasting health effects, and damage to structures and other properties, as well as the environment. Many products containing hazardous substances are used and stored in homes and these products are shipped daily on highways, railroads, waterways, and pipelines. For the purpose of this HMP update, hazardous substance incidents occurring at fixed sites and those that occur during transport will be discussed in this profile.

Hazardous Materials at Fixed Sites

A fixed-site hazardous substance (materials and waste) incident is the uncontrolled release of materials from a fixed site, capable of posing a risk to health, safety, and property as determined by RCRA. It is possible to identify and prepare for a fixed-site incident because federal and state laws require those facilities to notify state and local authorities about the materials being used or produced at the site. Hazardous materials at fixed sites are regulated by EPA.

EPA chooses to specifically list substances as hazardous and extremely hazardous, rather than providing objective definitions. Hazardous substances (as listed) are generally materials that, if released into the

environment, tend to persist for long periods and pose long-term health hazards for living organisms. Extremely hazardous substances, while also generally toxic materials, represent acute health hazards that, when released, are immediately dangerous to the lives of humans and animals and cause serious damage to the environment. When facilities contain these materials in quantities at or above the threshold planning quantity (TPQ), they must submit "Tier II" information to appropriate state and/or local agencies to facilitate emergency planning.

Nuclear power-generating stations, research reactors, or other stationary sources of radioactivity present the threat of release of radiological material. This type of event could threaten a large, multi-jurisdictional area, and result in property damage, contamination of farm and water supplies, and economic damage. This could be a concern to Erie County because Erie County is within 50 miles of the AES Somerset LLC Nuclear Power Plant. Erie County is well outside the emergency planning zones of the rest of the New York nuclear power-generating stations (U.S. Nuclear Regulatory Commission [NRC] 2020).

Hazardous Materials in Transit

As defined in regulations by the U.S. Department of Transportation (DOT) Materials Transport, a hazardous materials transportation incident is any event resulting in an uncontrolled release of materials during transport that can pose a risk to health, safety, and property. Transportation incidents are difficult to prepare for because there is little, if any, notice about the types of materials involved should an accident happen.

Hazardous materials transportation incidents can occur anywhere within the United States. Transportation of hazardous materials on highways involves tanker trucks or trailers, and these are responsible for the greatest number of hazardous substance release incidents. Potential also exists for hazardous substance releases to occur along rail lines, as collisions and derailments of train cars can result in large spills. Hazardous materials in transit are regulated by DOT.

DOT regulations define hazardous materials as a substance or material that the Secretary of Transportation has determined is capable of posing an unreasonable risk to health, safety, and property when transported in commerce, and has been designated as hazardous under Section 5103 of Federal Hazardous Materials Transportation Law (49 U.S.C. 5103). The term includes hazardous substances, hazardous wastes, marine pollutants, elevated temperature materials, materials designated as hazardous in the Hazardous Materials Table (Title 49 of the *Code of Federal Regulations* [CFR] 172.101), and materials that meet the defining criteria for hazard classes and divisions. When a substance meets DOT's definition of a hazardous material, it must be transported in accordance with safety regulations, which provide guidelines for appropriate packaging, communication of hazards, and proper shipping controls.

Approximately 5,818 miles of roads are present through Erie County (New York State Department of Transportation [NYSDOT] 2020). These roads cross rivers and streams; hazardous substance spills on roads could pollute watersheds that serve as domestic water supplies for areas within Erie County and other parts of the state. Hazardous substance releases also could occur along rail lines, as collisions and derailments of train cars can result in large spills.

Location

Hazardous materials are widely stored and transported throughout Erie County. An event involving hazardous materials can occur anywhere; however, they usually occur at facilities that store and/or use hazardous materials (fixed site) or along major highways and railways (in transit).

Hazardous Materials at Fixed Sites

Erie County has 399 fixed facilities that store or use hazardous materials and that fall under Superfund Amendments and Reauthorization Act (SARA) Title III Tier II reporting requirements. For security purposes,

Attachment: 17-Section-5.4.7-Haz-Mat-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

fixed facilities are not mapped in this profile. However, SARA site potential release vulnerability areas are presented in Figure 5.4.7-1.

EPA also requires these facilities to be registered with their Facility Registry Service (FRS). FRS is a national database organized by facility industrial classification and geographic location. Erie County reports 142 facilities to the FRS (EPA 2020).

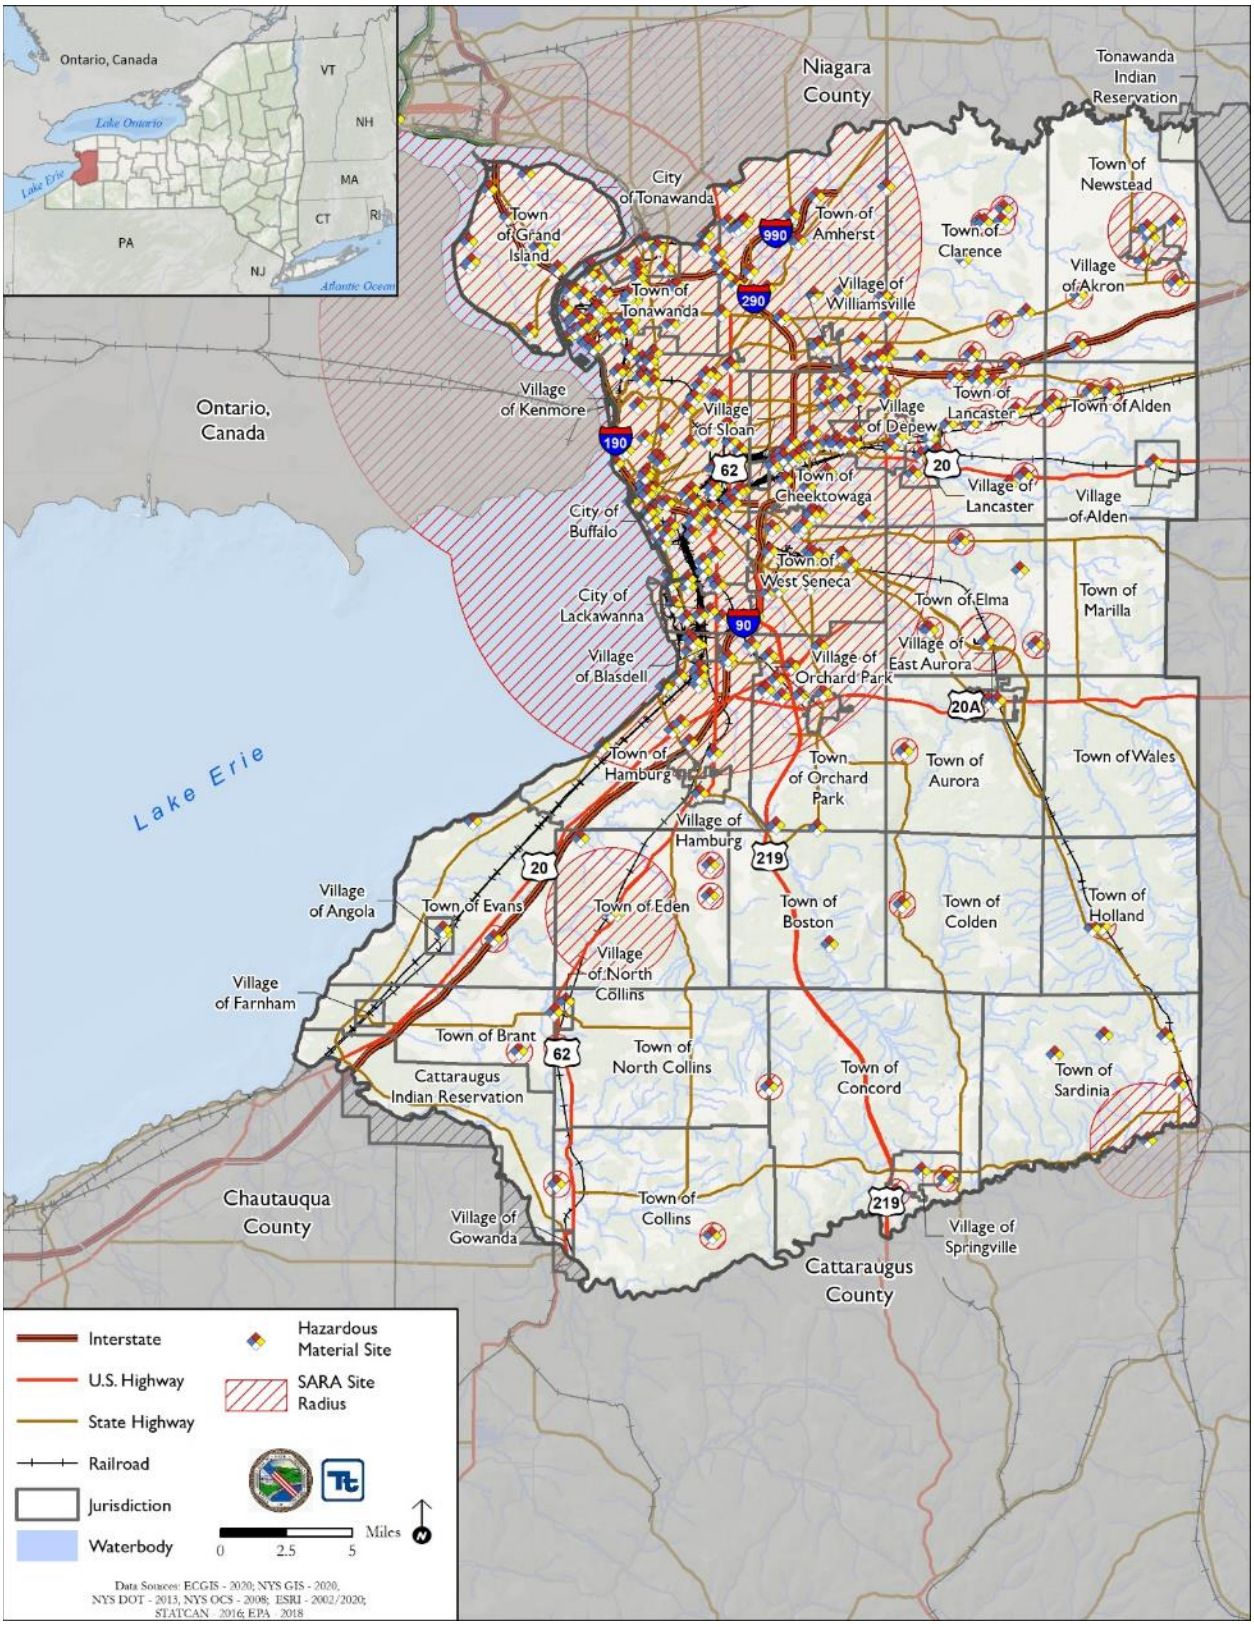
Additionally, EPA identifies 60 Erie County facilities under the Toxic Release Inventory (TRI). These facilities are required to annually report how much of each chemical is recycled, combusted for energy recovery, treated for destruction, and disposed of or otherwise released on and off site. In 2019 (most recent data available), the TRI facilities in Erie County reported a total of 1,094,432 pounds (lbs.) of hazardous waste designated for on-site and off-site disposal or other releases, with the following breakdown:

- Total On-Site: 653,100 lbs.
    - Air: 643,831 lbs.
    - Water: 2,839 lbs.
    - Land: 6,430 lbs.
- Total Off-Site: 441,332 lbs.

The majority of chemicals released into the air in Erie County (as recorded in 2019) includes carbon disulfide (29.2 percent), zinc and zinc compounds (19.8 percent), and nitrate compounds (16.9 percent) (EPA 2019).

Attachment: 17-Section-5.4.7-Haz-Mat-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Figure 5.4.7-1. SARA Site Potential Release Areas in Erie County



Attachment: 17-Section-5.4.7-Haz-Mat-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Hazardous Materials In Transit

Incidents involving hazardous materials in transit can occur anywhere in Erie County. Transportation corridors within Erie County that carry hazardous materials include highways, railroads, air/flight paths, pipelines, and navigable waterways. Major highways are more likely to be settings for this type of hazard because of interstate and local commercial transport of hazardous materials. Transport vehicles do not typically travel through residential areas unless they are en route to gasoline service stations or storage facilities.

Hazardous substance releases in navigable waterways are not a significant concern for Erie County; per U.S. Coast Guard (USCG) determinations, there are no navigable waterways within the county (USCG 2017).

Major transportation routes through Erie County include a framework of Interstate (I) and US highways including I-990, 290, 190, and 90, and US Highways 20, 20A, 62, and 219. The potential for a spill also exists on routes used for industrial and business purposes. Section 4 of this HMP discusses roadways in the county. Figure 5.4.7-2 shows the major transportation routes and railways in Erie County.

Hazardous material incidents may also occur along railways in Erie County. Rail lines that may carry hazardous materials include the CSX Corporation, Norfolk Southern, and two short lines: New York & Lake Erie Railroad and Buffalo Southern Railroad Inc.

NYSDOT has a vital interest in preserving and improving the rail freight part of its transportation network. Rail shipments allow cost-effective movement of goods and thus decrease stress on the state's highway system. Major commodities shipped by rail include petrochemicals (including plastic pellets), construction materials, food products, raw materials, and finished goods for manufacturers. An accident involving a rail car carrying hazardous materials could pose a public safety hazard to the community. Figure 5.4.7-2 shows railways that run throughout Erie County. Figure 5.4.7-3 illustrates the transportation routes and railways with a 0.5-mile buffer.

Hazardous materials can also be transported via underground petroleum and gas (natural and propane) pipelines across the state. New York State has an extensive network of natural gas and petroleum pipelines, some of which pass through Erie County. Figure 5.4.7-4 shows the extent and location of gas and hazardous liquid pipelines in the county (National Pipeline Mapping System [NPMS] 2020). Figure 5.4.7-5 illustrates the pipelines with a 0.5-mile buffer zone.

Extent

The extent of a hazardous substance release depends on (1) whether the substance is released from a fixed or mobile source, (2) the size of the impacted area, (3) the toxicity and properties of the substance, (4) the duration of the release, and (5) environmental conditions (for example, wind and precipitation, terrain, etc.).

Hazardous substance releases can contaminate air, water, and soils, possibly resulting in death or injuries. Dispersion can occur rapidly when the hazardous substance is transported by water and wind. While often accidental, releases can occur as a result of human carelessness, intentional acts, or natural hazards. Hazardous releases caused by natural hazards are known as secondary events. Hazardous materials can include toxic chemicals, radioactive substances, infectious substances, and hazardous wastes. Such releases can affect nearby populations and contaminate critical or sensitive environmental areas.

The severity or impact of a hazardous substance release, whether accidental or intentional, depends on several potentially mitigating or exacerbating circumstances. Mitigation involves precautionary measures taken in advance to reduce the impact of a release on the surrounding environment. For example, primary and secondary containment, or shielding by sheltering in place, protects people and property from the harmful effects of a hazardous substance release. Exacerbating conditions—characteristics that can enhance or magnify the effects of a hazardous substance release—include the following:

- Weather conditions, which affect the ways in which the hazard occurs and develops
- Micro-meteorological effects of buildings and terrain, which alter dispersion of hazardous materials
- Maintenance failures (such as fire protection and containment features), which can substantially increase damage to a facility and to surrounding buildings

The severity of an incident depends not only on the circumstances described above, but also on the type of substance released and the distance from the incident and related response time of emergency response teams. Areas closest to a release are generally at greatest risk; however, depending on the substance, a release can travel great distances or remain present in the environment for a long period of time (for example, centuries to millennia).

The occurrence of a hazardous materials incident can be sudden and without any warning, such an explosion, or may slowly develop, as in the case of a leaking container for example. Facilities that store extremely hazardous substances are required to notify local officials when an incident occurs. Local emergency responders and emergency management officials would determine whether they need to evacuate the public or to advise to shelter in place. Similar to on-site hazardous substances incidents, the amount of warning time for incidents associated with hazardous substances in transit varies based on the nature and scope of the incident. If an explosion did not occur immediately following an accident, officials may have time to warn adjacent neighborhoods and facilitate appropriate protective actions.

Previous Occurrences and Losses

Hazardous materials incidents, both on site or in transit, occur frequently across the state and in Erie County. These incidents are typically small, localized events. FEMA disaster declarations and other previous events in the county are discussed in the sections below.

FEMA Disaster Declarations

Between 1954 and 2019, New York State was included in two FEMA emergency declarations (EM) related to a hazardous substance incident. On August 7, 1978, and May 21, 1980, emergency declarations (EM-3066 and

Attachment: 17-Section-5.4.7-Haz-Mat-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

EM-3080) for New York State were issued related to the Love Canal incident. Erie County was not included in this declaration (FEMA 2020).

Previous Events

The Erie County Local Emergency Planning Committee (LEPC) provided an incident report database with information on hazmat incidents throughout the county. According to this database, 228 incidents occurred in Erie County between 2010 and 2020 (Erie County 2021). For this 2022 HMP update, known hazardous substances incidents that have impacted Erie County between 2010 and 2020 are identified in Table 5.4.7-1. It should be noted that not all events that have occurred in Erie County are included in Table 5.4.7-1 because of the extent of documentation, and the fact that not all sources may have been identified or researched.

** One incident occurred on the Cattaraugus Reservation, and is not counted in the municipal totals.*

Erie County categorizes the hazardous materials incidents reflected in Table 5.4.7-1 by the following "call type":

- Overdose/ Ingestion/ Poison – overdoses on medication or narcotics, and/or ingestion of poisons
- Traffic Accidents – Emergency Support Unit (ESU) personnel assisted at the scene of a motor vehicle accident
- EMS Special Operations – hazmat support of EMS units
- CPC Response – Chemical Protective Clothing (CPC) for a City of Buffalo Fire/Hazmat response
- Erie County HMRT – Requests for the Erie County Hazardous Materials Response Team and leaders
- Level I Hazmat – City of Buffalo Fire/Hazmat response
- Spill Response Hazmat – City of Buffalo Fire/Hazmat response to a chemical spill
- Asset Request – any other request of hazmat assets
- Other

Incidents are broken down by response category (call type) in Table 5.4.7-2.

Table 5.4.7-2. Hazardous Materials Incidents by Call Type in Erie County, 2010 to 2020

Probability of Future Occurrences

Predicting future hazardous substance incidents in Erie County is difficult. Hazmat incidents can occur at any time and any location in the county. Incidents can occur suddenly without any warning, or develop slowly. Small spills at both fixed sites and in transit occur throughout the year, and the probability of occurrences of these events is high. Risk of a major incident within a given year is small. The county is expected to continue to undergo direct and indirect impacts of hazardous substance incidents annually that may induce secondary hazards such as infrastructure deterioration or failure; potential decreases in water quality and supply; and transportation delays, accidents, and inconveniences.

For the 2022 HMP update, the most up-to-date data were collected to calculate the probability of future occurrence of both in-transit and fixed-site hazardous material incidents for Erie County. Information from the New York State Department of Environmental Conservation (NYS DEC), Pipeline and Hazardous Materials Safety Administration (PHMSA), FEMA and the Federal Railroad Administration (FRA) was used to identify the number of events that occurred between 1975 and 2020. Table 5.4.7-3 below provides statistics based on specific county records. Based on these statistics, Erie County has a 100-percent chance of a hazardous material incident occurring in any given year.

Table 5.4.7-3. Probability of Future Occurrence of Hazardous Material Incidents in Erie County

Hazard Type	Number of Occurrences Between 2010 and 2020	Percent chance of occurrence in any given year
Hazardous Materials Incident	230	100%

Sources: NYS DEC 2020; PHMSA 2018; FRA 2020; FEMA 2020; Erie County 2020

The identified hazards of concern within Erie County were ranked in Section 5.3 of this HMP. The probability of occurrence, or likelihood of an event, is one parameter used for hazard rankings. Based on historical records and input from the Planning Partnership, the probability of occurrence of hazardous materials spills within the county is considered *frequent* (100-percent annual probability, occurring multiple times a year), as presented in Table 5.3-1.

Climate Change Impacts

Non-natural incidents such as hazardous substance incidents are not typically considered vulnerable to climate change; however, climate change may have some impact. Climate change and its impact on hazardous materials sites, particularly waste sites, is a growing concern. According to the National Oceanic and Atmospheric Administration (NOAA) National Centers for Environmental Information (NCEI) State Climate Summaries for New York State, the mean annual temperature has increased approximately 2 ºF. This temperature change is likely to indirectly affect the county's vulnerability to hazmat incidents.

ClimAID: the Integrated Assessment for Effective Climate Change in New York State (ClimAID) was undertaken to provide decision-makers with information on the state's vulnerability to climate change and to facilitate the development of adaptation strategies informed by both local experience and scientific knowledge (New York State Energy Research and Development Authority [NYSERDA] 2011). Each region in New York State, as defined by ClimAID, has attributes that will be affected by climate change. Erie County is part of Region 1, Western New York and the Great Lakes Plain. In Region 1, temperatures are estimated to increase by 4.3 to 6.3 ºF by the 2050s, and 5.7 to 9.6 ºF by the 2080s (baseline of 47.7 ºF, middle range projection). Precipitation totals will increase between 4 and 10 percent by the 2050s and 6 to 13 percent by the 2080s (baseline of 34.0 inches, middle-range projection).

Attachment: 17-Section-5.4.7-Haz-Mat-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

As temperatures change, excessive heat on aging structures and/or infrastructure may be adversely affected. Excessive heat on structures or containers containing hazardous materials may alter the material properties.

In addition, hazardous substances stored at fixed locations in the floodplain may experience an increase in flood events due to the projected changes in increased precipitation events, specifically related to magnitude and frequency. Hazardous waste sites near rivers are tentatively at highest risk because extreme storms and higher water levels could release pollution into the environment. Many of these sites were built in locations believed to be removed from potential contamination or exposure-increasing factors. However, development, floodplain boundary change, and an increase in extreme events from climate change are increasing the possibility that water may reach hazardous material and waste sites.

5.4.7.2 Vulnerability Assessment

To understand risk, a community must evaluate the assets that are exposed or vulnerable within the identified hazard area. For the purposes of the assessment, an asset (population, structures, critical facilities, and lifelines) is considered exposed and potentially vulnerable to the hazardous materials hazard if it is located within the hazmat buffer areas. The analysis looked at four different hazardous material buffer areas:

1. 0.5 mile from a major highway
2. 0.5 mile from a rail line
3. 0.5 mile from a pipeline
4. Unique radius for each SARA Title III facility

This section discusses the potential impact of the hazardous materials hazard on the county. Specifically, this section addresses:

- Impacts on (1) life, health, and safety of residents; (2) general building stock; (3) critical facilities; (4) economy; and (5) the environment
- Future changes that may impact vulnerability
- Change in vulnerability as compared to information presented in the 2015 Erie County HMP

Impact on Life, Health, and Safety

Depending on the type and quantity of chemicals released and the weather conditions, an incident can affect larger areas that cross jurisdictional boundaries. When hazardous substances are released in the air, water, or on land, they may contaminate the environment and pose greater danger to human health. Exposure may be either acute or chronic, depending on the nature of the substance and extent of release and contamination.

Potential losses from hazardous substances incidences include human health and life and property resources. These types of incidents can lead to injury, illnesses, and/or death from both the involved persons and those living in the impacted areas. Human safety and welfare can become compromised from negative health effects of poisoning or exposure to toxic substances, fires, or explosions.

An exposure analysis of Erie County estimates that 674,447 persons, 268,216 persons, and 753,056 persons reside within 0.5 mile of roads, 0.5 mile of railways, and within unique buffer areas of SARA sites, respectively (Table 5.4.7-4). Additionally, 166,772 persons, 78,711 persons, 274,963 persons reside within 0.5 mile of crude oil, petroleum, and natural gas pipelines, respectively (Table 5.4.7-5).

Impact on General Building Stock

Potential losses to the general building stock caused by a hazardous substance releases, whether in transit or at fixed sites, is difficult to quantify. The degree of damage depends on the scale of the incident. Potential losses may include inaccessibility, loss of service, contamination, and/or potential structural and content losses if an explosion occurs. The closure of waterways, railroads, airports, and highways as a result of a hazardous substance incident has the potential to impact the ability to deliver goods and services efficiently. Potential impacts may be local, regional, or statewide depending on the magnitude of the event and level of service disruptions.

An exposure analysis estimates the county contains 104,423 buildings (worth approximately $79.6 billion), 260,912 buildings (worth approximately $171.1 billion), and 280,200 buildings (worth approximately $181.1 billion) within 0.5 mile of railways, 0.5 mile of major roadways, and within unique buffer areas of SARA sites, respectively (Table 5.4.7-6 through Table 5.4.7-11).

Attachment: 17-Section-5.4.7-Haz-Mat-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

To estimate the buildings exposed to a pipeline event, the 0.5-mile buffer areas were overlaid upon the building level. The replacement cost value of the structures with centers in the buffer areas were totaled (Table 5.4.7-9 through Table 5.4.7-11). The City of Buffalo has the greatest number of buildings and the greatest replacement cost values that would be impacted by a pipeline event. However, if a pipeline release were to occur, the incident would not be located along all pipelines in the county, but instead only a section of the total pipeline exposure area. Therefore, the total exposure does not represent a complete vulnerability, should a hazard event occur.

Table 5.4.7-6. Estimated Number of Buildings and Replacement Cost Value Within 0.5 Mile of Rail Lines

Attachment: 17-Section-5.4.7-Haz-Mat-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Impact on Critical Facilities

Potential losses to critical facilities caused by a hazardous substances incident is difficult to quantify. Potential losses may include inaccessibility, loss of service, contamination and/or potential structural and content losses if an explosion occurs.

An exposure analysis estimates that 1,553 critical facilities or 1,510 lifelines, 3,149 critical facilities or 3,030 lifelines, and 2,591 critical facilities or 2,547 lifelines are built within 0.5 mile of railways, 0.5 mile of major roadways, and with unique buffer areas of SARA sites, respectively. Table 5.4.7-12 through Table 5.4.7-14 summarizes the number of critical facilities and lifelines built within the hazardous materials hazard areas by jurisdiction.

Furthermore, an exposure analysis was conducted on critical facilities vulnerable to a pipeline release event. Table 5.4.7-15 through Table 5.4.7-17 summarize critical facilities and lifelines located within 0.5 mile of crude oil, petroleum, and natural gas pipelines. The exposure analysis estimates that 507 critical facilities or 493 lifelines, 292 critical facilities or 282 lifelines, and 1,297 critical facilities or 1,195 lifelines are located within 0.5 mile of crude oil, petroleum, and natural gas pipelines, respectively.

Table 5.4.7-18 through Table 5.4.7-23 summarize the distribution of critical facilities by critical facility type exposed to the hazardous material hazard by jurisdiction. The majority of critical facilities exposed to the hazardous materials hazard are bridges, shelters, and schools. Furthermore, critical facilities that provide transportation lifeline services are the most exposed in the hazardous materials hazard areas (Table 5.4.7-24 and Table 5.4.7-25).

In addition to critical facilities and lifelines, an analysis was performed on the number of miles of major transportation routes that are exposed within unique SARA site buffer areas and within 0.5 mile of railways (Table 5.4.7-26). Out of the 5,818 miles of roadway in the county, 3,644.3 miles are exposed to SARA sites and 1,468.4 miles are exposed to a railway release. Additionally, the number of miles of major transportation routes exposed to 0.5 mile of pipelines is summarized in Table 5.4.7-27. A total of 598.6 miles, 425.2 miles, and 1,871.1 miles of roadway are exposed to crude oil pipelines, petroleum pipelines, and natural gas pipelines, respectively.

Impact on Economy

If a significant hazardous substances incident occurred, not only would life, safety, and building stock be at risk, but the economy of Erie County may be impacted as well. A significant incident in an urban area may force businesses to close for an extended period of time because of contamination or direct damage caused by an explosion, if one occurred. The exact impact on the economy is difficult to determine given the uncertain nature of the size and scope of incidents.

Hazardous substance incidents have the potential to lead to major transportation route closures in Erie County. According to the county, roadways that are considered major transit routes for hazardous materials (and are therefore most at risk for closure) include Interstate 90, Interstate 190, US Route 20, US Route 62, and State Route 5. The closure of waterways, railroads, airports, and highways as a result of these incidents has the potential to impact the ability to deliver goods and services efficiently. Potential impacts may be local, regional, or statewide, depending on the magnitude of the event and the level of service disruptions.

The greatest risk associated with pipelines is the possibility of a fire or explosion, which could potentially damage and destroy infrastructure. In 2019, New York State experienced $1.8 million in damages from pipeline incidents (PHMSA 2019).

Attachment: 17-Section-5.4.7-Haz-Mat-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Impact on Environment

Hazardous wastes that are released into the environment can be harmful to species and their habitats (EPA 2020). Wastes that get into waterways will be disruptive and sometimes deadly to aquatic species. Consequentially, wastes that get into waterways can also contaminate drinking water supplies. Hazardous wastes can also leach into soils and travel with wind, which not only impacts the local habitat, but can create issues for surrounding communities. Strict disposal regulations have been defined by organizations like EPA to ensure that the environment and community is protected from these types of events.

In addition, pipeline incidents and explosion incidents can profoundly affect the surrounding environment. Contamination of soil, surface water, and groundwater can result in many direct impacts on surrounding populations and ecosystems. When a large volume of product is released, much of it remains unrecovered as product disperses into the environment (Belvederesi, et al. 2018). This can have an immense and lasting impact on the local flora and fauna.

Future Changes That May Impact Vulnerability

Understanding future changes that impact vulnerability in the county can assist in planning for future development and ensuring that appropriate mitigation, planning, and preparedness measures are in place. The county considered the following factors to examine potential conditions that may affect hazard vulnerability:

- Potential or projected development
- Projected changes in population
- Other identified conditions as relevant and appropriate, including the impacts of climate change

Projected Development

Any areas of growth could be potentially impacted by the hazardous materials hazard. Development near the transit routes for hazardous materials and facilities will increase the county's overall risk. Therefore, the county should take precautions when determining the location of new development to consider the development's proximity to hazardous material facilities and transit routes. The county may also want to consider implementing designs into the new development that enable improved evacuation or protection from residual impacts from the hazardous materials. Section 4, County Profile, includes more information about the county's anticipated and recent new development plans.

Projected Changes in Population

According to the U.S. Census Bureau, the population in Erie County has increased by a negligible amount between 2010 and 2019 (American Community Survey 2019). Estimated population projections provided by the Cornell Program on Applied Demographics indicate that the county's population will increase into 2040, bringing the total population to approximately 945,891 persons (Cornell Program on Applied Demographics 2018). Any changes in the density of population can impact the number of persons living near hazardous materials facilities, transit routes, and pipelines.

Climate Change

As temperatures change, excessive heat on hazardous materials containers may alter the properties of the material. In addition, fixed hazmat storage locations in the floodplain may experience an increase in flood events due to the projected changes in increased precipitation events, such as changes in magnitude and frequency.

Attachment: 17-Section-5.4.7-Haz-Mat-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Change of Vulnerability Since the 2015 HMP

Overall, the county's vulnerability has not changed, and the entire county will continue to be exposed and vulnerable to hazardous substance incidents. For this HMP update, any additional information regarding localized concerns and past impacts have been collected. Unique buffer areas were established surrounding hazardous material sites. Additionally, exposure regarding railways, major roadways, and pipelines were all documented and analyzed.

Attachment: 17-Section-5.4.7-Haz-Mat-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Attachment: 18-Section-5.4.8-Landslide-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

5.4.8 Landslide

This section provides a profile and vulnerability assessment of the landslide hazard for the Erie County Hazard Mitigation Plan (HMP).

5.4.8.1 Hazard Profile

This section provides information regarding the description, extent, location, previous occurrences and losses, and the probability of future occurrences for the landslide hazard.

Description

Landslides are composed of natural rock, soil, artificial fill, or a combination and move along a downward slope. They flow rapidly, striking at avalanche speeds that can travel several miles, growing as they pick up trees, boulders, cars, and other materials (New York State Division of Homeland Security and Emergency Services [NYS DHSES] 2019).

Landslides occur when the slope or soil stability changes from stable to unstable, which may be caused by earthquakes, storms, volcanic eruptions, erosion, fire, or additional human-induced activities. Typically, the steeper the slope, the higher the risk for landslide occurrence. Slopes greater than 10 degrees are more likely to slide, as are slopes where the height from the top of the slope to its toe is greater than 40 feet. Slopes are also more likely to fail if vegetative cover is low and/or soil water content is high. However, landslides can occur with very little slope, sometimes classified as earth slumping or earth flow (NYS DHSES 2019).

Several different types of landslides include:

- *Rock Falls:* Blocks of rock that fall away from a bedrock unit without a rotational component
- *Rock Topples:* Blocks of rock that fall away from a bedrock unit with a rotational component
- *Rotational Slump:* Blocks of fine-grained sediment that rotate and move down slope
- *Transitional Slide:* Sediments that move along a flat surface without a rotational component
- *Earth Flows:* Fine-grained sediments that flow downhill and typically form a fan structure
- *Creep:* A slow-moving landslide often noticed only by presence of crooked trees and disturbed structures
- *Block Slides:* Blocks of rock that slide along a slip plane as a unit down a slope
- *Debris Avalanche:* Predominantly gravel, cobble, boulder, and sediment portions, and trees that move quickly down slope
- *Debris Flows:* Coarse sediments that flow downhill and spread out over relatively flat areas (NYS DHSES 2019)

Extent

Extent of a landslide hazard is determined by identifying affected areas and assessing probability of a landslide occurring within a time period. Natural variables that contribute to overall extent of potential landslide activity in any particular area include soil properties, topographic position and slope, and historical incidence. Predicting a landslide is difficult, even under ideal conditions. As a result, the landslide hazard is often represented by landslide incidence and susceptibility, defined as follows:

- *Landslide incidence:* Categorized by percentage of a given geographic area that has undergone landslides. High incidence means greater than 15 percent of a given area has been involved in

landsliding, medium incidence means that 1.5 to 15 percent of an area has been involved, and low incidence means that less than 1.5 percent of an area has been involved. (Radbruch-Hall et al. 1982).

- *Landslide susceptibility:* Defined as the probable degree of response of geologic formations to natural or artificial cutting, to loading of slopes, or to unusually high precipitation. Assumedly, unusually high precipitation or changes in existing conditions can initiate landslide movement in areas where rocks and soils have been involved with landslides in the past. Landslide susceptibility depends on slope angle and geologic material underlying the slope. Landslide susceptibility applies only to areas potentially affected and does not imply a time frame within which a landslide might occur. High, medium, and low susceptibility are delimited by the same percentages used for classifying incidence of landslides (Radbruch-Hall et al. 1982).

Location

The potential for landslides exists throughout New York State (NYS), including Erie County. Generally, the highest potential for landslides is located along major rivers and lake valleys that were previously glacial lakes resulting in glacial lake deposits (glacial lake clays) and areas associated with steeper slopes.

Landslides in Erie County occur after heavy rains when steep banks wash down into the roadways. Information contained in Erie County's 2015 HMP indicate that the northwestern region of the County is moderately susceptible to landslides. According to New York State Geological Survey's (NYSGS) Landslide Inventory Map of New York, Erie County has had 11 landslide incidences between 1837 to 1989 (NYSGS 1989).

In the 2015 HMP, there are three areas noted as areas of slumping and landslides where individual slides are too numerous to map. Locations included: along Buffalo Creek in East Aurora; Springville/Route 39; Sardinia; Scajaquada Creek in Cheektowaga; and Cayuga Creek in Lancaster.

Figure 5.4.8-1 shows landslide susceptibility based upon areas with slopes greater than 25-percent degrees. Overall, the southern and southeastern portions of the County have the greatest amount of areas with slopes greater than or equal to 25-percent degrees, indicating these areas are more susceptible to landslides than other portions of the County.

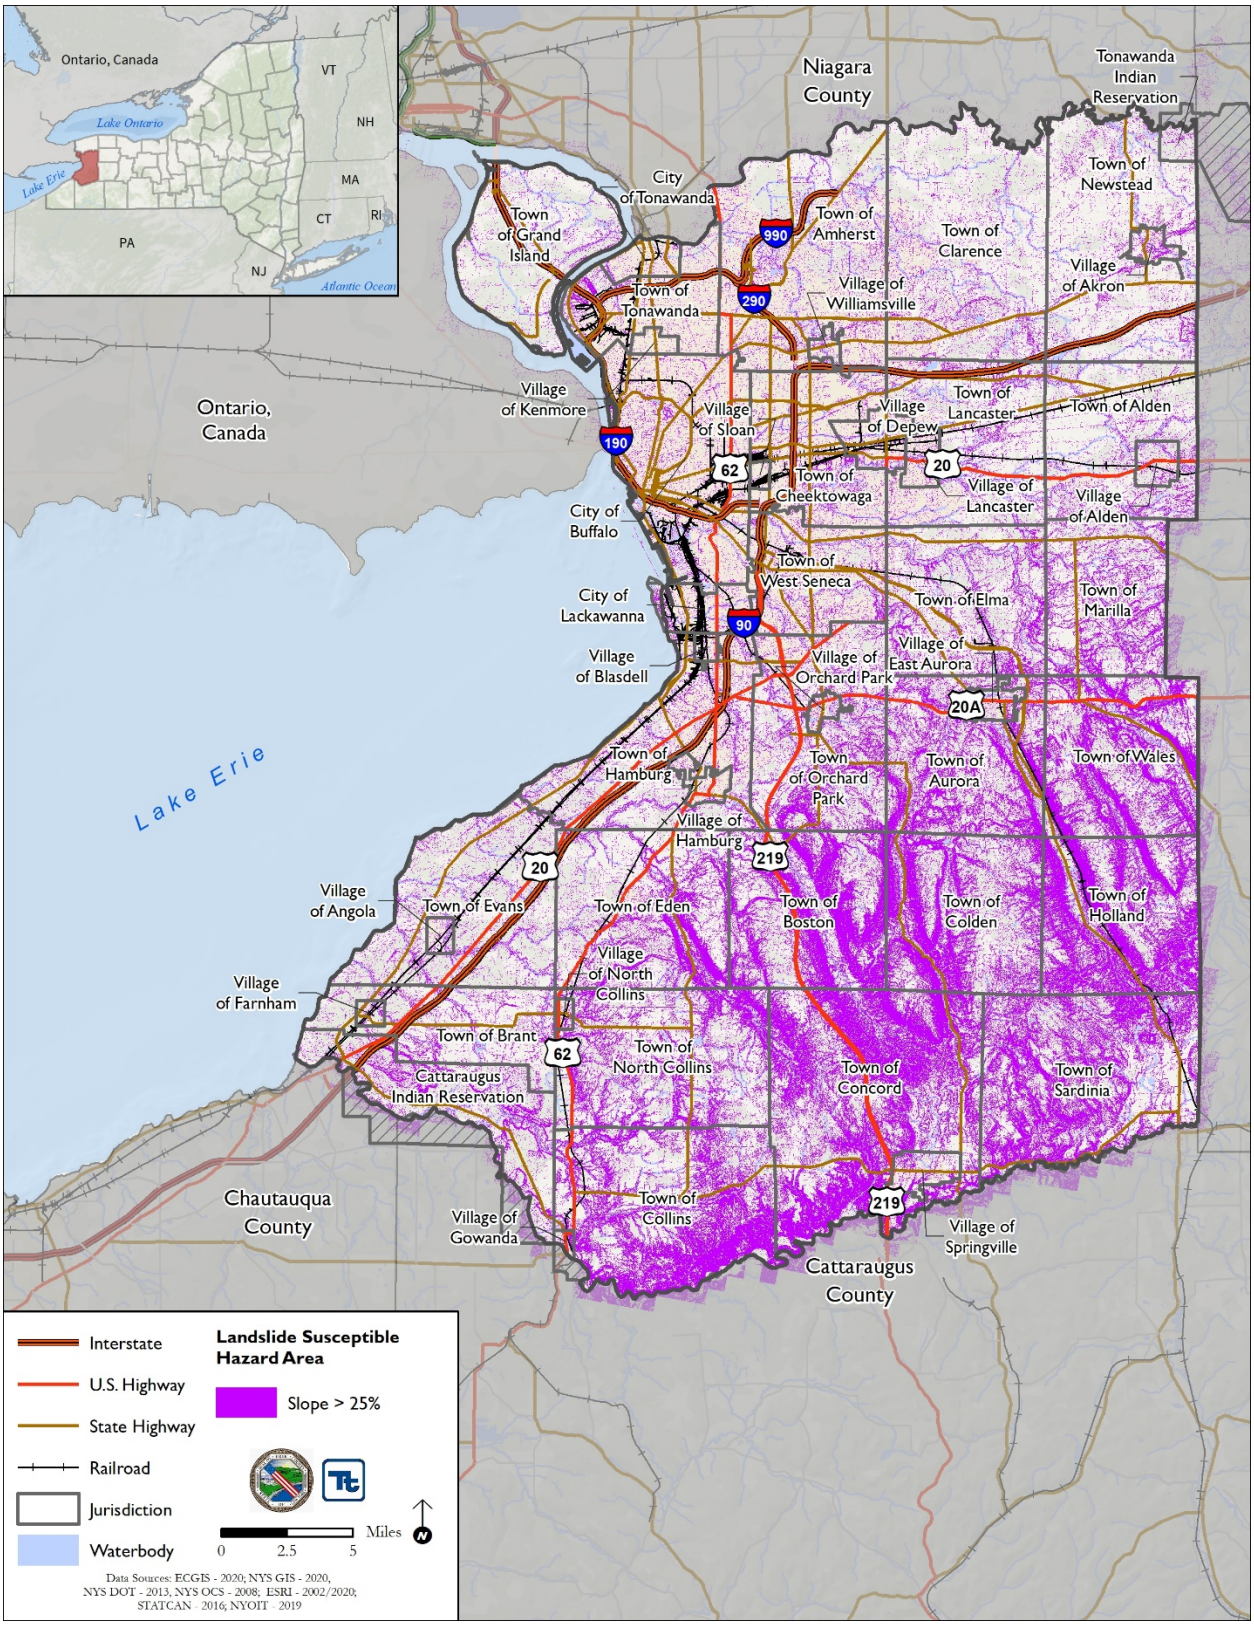
Figure 5.4.8-1. Landslide Susceptibility in Erie County



Attachment: 18-Section-5.4.8-Landslide-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Previous Occurrences and Losses

Descriptive data on historic events are limited. The NYS HMP contained no records of any events from 1996–2017 (NYS DHSES 2019). Between 1837 to 1989, there have been 11 landslides that have occurred within the state (NYSGS 1989). Between 1954 and 2020, the Federal Emergency Management Agency (FEMA) issued one disaster declaration (DR) for landslides in NYS (DR-487), but Erie County was not included in the DR. Annualized loss is negligible for landslide damage.

Probability of Future Occurrences

As indicated in the 2019 NYS HMP, and given the history of landslides in the state, future landslides certainly will occur, but the severity of these landslides cannot be determined. Therefore, probability of future landslides in the state is considered high; however, because documentation on landslides in Erie County is sparse, predicting the extent of future landslides in the County is difficult.

According to the NYSGS Landslide Inventory Study to estimate probability of future landslides (based on documented historical occurrences), NYS can expect on average approximately two major landslides each year, a greater number of smaller but still significant slides, slumps, or flows each year, and at least one landslide causing a fatality once every 12 years.

It is extremely difficult to predict landslide hazards in absolute terms since landslides can occur as a result of many factors within the County, including past landslides and their distribution, bedrock, slope steepness or inclination, hydrologic factor, and human-initiated effects. However, a sufficient understanding of landslide processes within the County exists through various studies and mapping sources to be able to make an estimation of landslide hazard potential. The potential increase in the risk posed by the landslide hazard can be curbed through a continued understanding and mapping of the hazards and improved capabilities to mitigate and respond to the landslide hazard (Spiker and Gori, 2000).

Based on historical records and input from the Planning Partnership, probability of occurrence of landslides in Erie County is considered “rare” (1 to 10 percent annual probability of a hazard event occurring).

Climate Change Impacts

Projecting future climate change within a specific region is challenging. Shorter-term projections are more closely tied to existing trends, rendering longer-term projections even more challenging. The further into the future a prediction extends, the more it is subject to change.

Through the 2020s, average annual temperature is expected to increase by 1.8°F in the region of NYS, where Erie County is located. By the 2050s, this increase will be 3.6 °F, and by 2100, it will be 4.5 °F (New York State Energy Research and Development Authority [NYSERDA] 2014). Future climate change may impact storm patterns, increasing probability of more frequent, intense storms with varying duration. Global temperature increase could affect the snowpack and its ability to hold and store water. Warming temperatures also could increase occurrence and duration of droughts, which could increase probability of wildfire and likely reduce the vegetation that helps support steep slopes. All these factors could increase the probability of landslide occurrence.

5.4.8.2 Vulnerability Assessment

To understand risk, a community must evaluate what assets are exposed and/or vulnerable to the identified hazard. Because of the lack of spatially delineated landslide hazard areas in the County, a spatial analysis referenced areas with slopes greater than 25 percent to delineate the landslide hazard area. Slope degrees greater than 25 percent are categorized as the most at-risk slopes in the study.

Attachment: 18-Section-5.4.8-Landslide-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Impact on Life, Health, and Safety

Generally, a landslide event would be an isolated incidence and impact the populations within the immediate area of the incident. Specifically, the population located downslope of the landslide hazard areas are particularly vulnerable to this hazard. In addition to causing damages to residential buildings and displacing residents, landslide events can block off or damage major roadways and inhibit travel for emergency responders or populations trying to evacuate the area.

Table 5.4.8-1 summarizes the population located in the landslide-susceptible hazard area or areas where slopes have degree angles greater than 25 percent. The City of Buffalo has the greatest number of persons located in the landslide-susceptible hazard area with 3,726 people, or 1.5 percent of its total population. The Town of Holland has the greatest percentage of its population located in the landslide-susceptible hazard area (24.7 percent of its total population).

Socially vulnerable populations (e.g., the elderly and low-income populations) are particularly vulnerable to a landslide event. There are approximately 161,498 persons over 65 and 126,041 persons living below the poverty level in Erie County. The City of Buffalo, which also has the greatest number of people in the steep-slope area, also has the greatest elderly and low-income population (i.e., 31,818 and 74,552 people, respectively).

Impact on General Building Stock

In general, the built environment located in the landslide susceptibility area and the population, structures, and infrastructure located downslope are vulnerable to this hazard. Landslides also have the potential of destabilizing the foundation of structures, which may result in monetary losses to businesses and residents. There are 15,416 buildings with a replacement cost value of $10 billion located in the landslide hazard area countywide. The City of Buffalo has the greatest number of buildings and estimated replacement cost value located in landslide-susceptible hazard area where slopes are greater than 25 percent; there are approximately 1,390 buildings with a total replacement cost value of $2 billion built in the landslide-susceptible hazard area within this city. Table 5.4.8-2 summarizes the exposed building stock located in the landslide susceptibility area throughout the County by jurisdiction.

Table 5.4.8-2. Estimated Number of Buildings in the Landslide Hazard Area

Jurisdiction	Number of Buildings	Total Replacement Cost Value	Estimated Building Stock Located in the Landslide Hazard Area (Over 25-Percent Grade)			
			Number of Buildings Exposed	Percent of Total	Replacement Cost Value Exposed	Percent of Total
Akron (V)	1,275	$866,609,574	170	13.3%	$117,401,954	13.5%

Impact on Critical Facilities and Lifelines

Landslides can also impact the critical facilities in Erie County. There are 567 critical facilities located in the identified landslide susceptibility hazard area, 472 of which are considered lifelines (Table 5.4.8-3). The distribution of critical facilities built within the landslide hazard area are summarized in Table 5.4.8-4. Most of the critical facilities built within the landslide hazard areas are bridges (175 total). Furthermore, Table 5.4.8-5 shows the number of lifelines exposed to the landslide-susceptible hazard area in the County. Of the 472 lifelines in the landslide susceptibility area, a majority fall under the Transportation and Food, Water, and Shelter categories (i.e., 179 for each). Section 4 (County Profile) provides more information about these critical facilities and lifelines.

Attachment: 18-Section-5.4.8-Landslide-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie

In addition to critical facilities, a significant amount of infrastructure can be exposed to mass movements of geological material:

- *Roads*—Access to major roads is crucial to life-safety after a disaster event and to response and recovery operations. Landslides can block egress and ingress on roads, causing isolation for neighborhoods, traffic problems, and delays for public and private transportation. This can result in economic losses for businesses.
- *Bridges*—Landslides can significantly impact road bridges. Mass movements can knock out bridge abutments or significantly weaken the soil supporting them, making them hazardous for use.
- *Power Lines*—Power lines are generally elevated above steep slopes, but the towers supporting them can be subject to landslides. A landslide could trigger failure of the soil underneath a tower, causing it to collapse and ripping down the lines. Power and communication failures due to landslides can create problems for vulnerable populations and businesses.
- *Rail Lines*—Similar to roads, rail lines are important for response and recovery operations after a disaster. Landslides can block travel along the rail lines, which would become especially troublesome because it would not be as easy to detour a rail line as it is on a local road or highway. Many residents rely on public transport to get to work around the County and into Philadelphia and New York City, and a landslide event could prevent travel to and from work.

Impact on the Economy

The impact of a landslide on the economy and estimated dollar losses are difficult to measure. As stated earlier, landslides can exert direct and indirect effects on society. Direct costs include actual damage sustained by buildings, property, and infrastructure and estimated costs to repair or replace damaged buildings. Indirect costs include clean-up costs, business interruption, loss of tax revenues, reduced property values, and loss of productivity. The 2019 NYS HMP shows that Erie County has experienced zero economic damages from landslide events between 1996 and 2017 (NYS HMP 2019). Historic losses discussed earlier in this section also show that Erie County has not experienced any economic losses from landslides besides one event that was reported to have caused $250,000 in damages (1980s dollars). Therefore, the impact landslides have on the economy for Erie County is minimal.

Impact on the Environment

A landslide event alters the landscape. In addition to changes in topography, vegetation and wildlife habitats may be damaged or destroyed. Soil and sediment runoff will accumulate downslope, potentially blocking waterways and roadways and impacting quality of streams and other water bodies. Additional environmental impacts include loss of forest productivity.

Furthermore, soil and sediment runoff can accumulate downslope potentially blocking waterways and roadways and impacting quality of streams and other water bodies. Mudflows that erode into downstream waterways can threaten the life of freshwater species (USGS 2020). The impacts of eroded landscape can travel for miles downstream into adjacent waterways and create issues for surrounding watersheds.

Cascading Impacts on Other Hazards

Landslide events can have cascading impacts on utility failure in Erie County. As discussed in earlier sections, landslides may disrupt the functionality of utilities if the debris falls, topples, or spreads over the utilities providing services to the County. For example, electric utilities may become disconnected if power lines are broken from displaced geologic material. Water utilities may become breached with excess debris and/or

Attachment: 18-Section-5.4.8-Landslide-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

contaminants carried by landslide events. More information about utility interruptions can be found in Section 5.4.12, Utility Failure.

Future Changes that May Impact Vulnerability

Understanding future changes that impact vulnerability in the County can assist in planning for future development and ensuring that appropriate mitigation, planning, and preparedness measures are in place. The County considered the following factors to examine potential conditions that may affect hazard vulnerability:

- Potential or projected development
- Projected changes in population
- Other identified conditions as relevant and appropriate, including the impacts of climate change

Projected Development

As discussed in Section 4, areas targeted for future growth and development have been identified across the County. Any areas of growth located in the landslide-susceptible hazard areas could be potentially impacted by the geologic ground movement caused by landslides. It is recommended that the County and jurisdictional partners implement design strategies that mitigate against the risk of landslides. The maps in the jurisdictional annexes in Section 9 show new development locations throughout the county and their proximity to the landslide-susceptible hazard areas (i.e., where slope degrees are greater than 25 percent).

Projected Changes in Population

According to the U.S. Census Bureau, the population in Erie County has remained stable between 2010 and 2019 (919,040 persons in 2010 and 919,355 persons in 2019). Estimated population projections provided by the 2017 Cornell Program on Applied Demographics indicate that the County's population will decrease into 2040, decreasing the total population to approximately 769,396 persons (Cornell Program on Applied Demographics 2017). While fewer people will reside in the County, those that remain may move into areas that are susceptible to landslide events. Section 4, County Profile, provides additional discussion on population trends.

Climate Change

A direct impact of climate change on landslides is difficult to determine. However, as discussed earlier, multiple secondary effects of climate change have the potential to increase the likelihood of landslides. Warming temperatures resulting in wildfires would reduce vegetative cover along steep slopes and destabilize the soils due to destruction of the root system; increased intensity of rainfall events would increase saturation of soils on steep slopes. Under these future conditions, the County's assets located on or at the base of these steep slopes will have an increased risk to landslides. Roadways and other transportation infrastructure located in these areas will also be at an increased risk of closure, which would impact the County's risk as described above.

Change of Vulnerability Since 2015 HMP

The 2015 HMP included a quantitative assessment of the historical occurrences, areas of slumping, and land sliding areas identified by USGS and NYSGS. For this HMP, slope data was derived from the 2019 New York Office of Information Technology Services (NYOIT) Digital Elevation Model (DEM). Areas within Erie County that have slope degrees greater than 25 percent were selected as areas with landslide susceptibility. Population statistics have also been updated using the 5-Year 2015-2019 American Community Survey Population Estimates. The general building stock was updated using RSMeans 2020 building valuations that estimated replacement cost value for each building in the inventory.

Attachment: 18-Section-5.4.8-Landslide-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Attachment: 19-Section-5.4.9-Pandemic-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

5.4.9 Pandemic

This section provides profile information, including description, location, extent, previous occurrences and losses, probability of future occurrences, and climate change impacts as well as the vulnerability assessment for the epidemic hazard in Erie County.

5.4.9.1 Hazard Profile

Description

An outbreak or an epidemic exists when there are more cases of a particular disease than expected in a given area, or among a specific group of people, over a particular period of time. An aggregation of cases in a given area over a particular period, regardless of the number of cases, is called a cluster. In an outbreak or epidemic, it is presumed that the cases are related to one another or that they have a common cause (Center for Disease Control and Prevention [CDC] 2004). Diseases that impact Erie County include foodborne illness, vaccine-preventable disease, and vector-borne diseases (tick-borne and mosquito-borne). However, for the disease outbreak profile, the county identified influenza, the Ebola virus, and COVID-19 as the diseases that may lead to an epidemic.

Influenza

The risk of a global influenza pandemic has increased over the last several years. This disease is capable of claiming thousands of lives and adversely affecting critical infrastructure and key resources. An influenza pandemic has the ability to reduce the health, safety, and welfare of the essential services workforce; immobilize core infrastructure; and induce fiscal instability.

Pandemic influenza is different from seasonal influenza (or "the flu") because outbreaks of seasonal flu are caused by viruses that are already among people. Pandemic influenza is caused by an influenza virus that is new to people and is likely to affect many more people than seasonal influenza. In addition, seasonal flu occurs every year, usually during the winter season, while the timing of an influenza pandemic is difficult to predict. Pandemic influenza is likely to affect more people than the seasonal flu, including young adults. A severe pandemic changes daily life for some time, including limitations on travel and public gatherings (CDC 2016).

At the national level, the CDC's Influenza Division has a long history of working with the World Health Organization (WHO) and its global network of National Influenza Centers (NIC). With limited resources, most international assistance provided in the early years was through hands-on laboratory training of in-country staff, the annual provision of WHO reagent kits (produced and distributed by CDC), and technical consultations for vaccine strain selections. The Influenza Division also conducts epidemiologic research, including vaccine studies and serologic assays, and provides international outbreak investigation assistance (CDC 2020).

Ebola Virus

Ebola, previously known as Ebola hemorrhagic fever, is a rare and deadly disease caused by infection with one of the Ebola virus strains. According to the CDC, the 2014 Ebola epidemic was the largest in history, affecting multiple countries in West Africa. From 2014–2016, 11 people were treated in the United States, two of whom died (CDC 2019).

COVID-19 Virus

Coronavirus disease (COVID-19) is an infectious disease first identified in 2019. The virus rapidly spread into a global pandemic by spring of 2020. Older people and those with underlying medical problems like

cardiovascular disease, diabetes, chronic respiratory disease, and cancer are more likely to develop serious illness (WHO 2020). With the virus being relatively new, information regarding transmission and symptoms of the virus is still fresh. The COVID-19 virus spreads primarily through droplets of saliva or discharge from the nose when an infected person coughs or sneezes. Illnesses have ranged from mild symptoms to severe illness and death. Reported symptoms include flu-like symptoms, trouble breathing, persistent pain or pressure in the chest, headaches, and loss of taste. Symptoms may appear 2–14 days after exposure to the virus (based on the incubation period of MERS-CoV viruses) (CDC 2020).

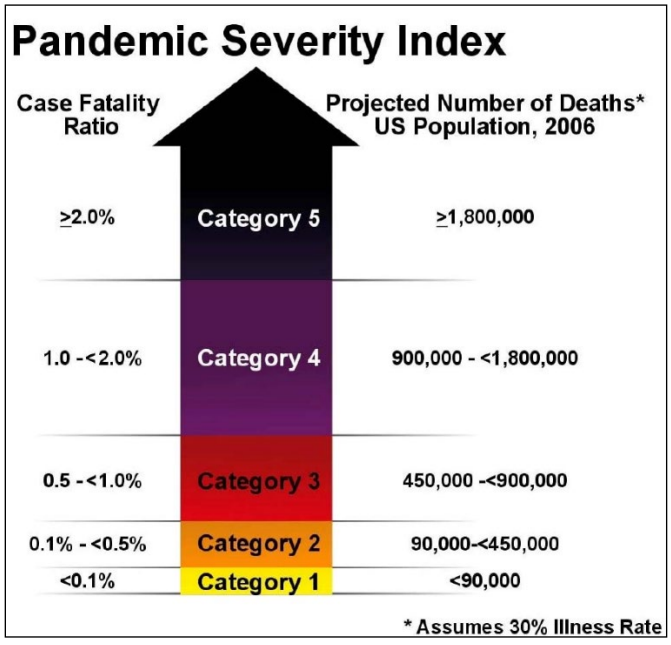
In order to slow the spread of the virus, the federal government and states have urged the public to avoid touching of the face, properly wash hands often, wear a face mask in public areas, and use various social distancing measures. Vaccines and treatments have been developed and are continuing to be refined for COVID-19. Many ongoing clinical trials are evaluating potential treatments (WHO 2020).

Extent

The exact size and extent of an infected population depends on how easily the illness is spread, the mode of transmission, and the amount of contact between infected and uninfected individuals. The transmission rates of pandemic illnesses are often higher in more densely populated areas. The transmission rate of infectious diseases will depend on the mode of transmission of a given illness. The Ebola virus is spread to others through direct contact; it is not spread through the air like influenza or COVID-19.

The CDC and Prevention Community Strategy for Pandemic Influenza Mitigation guidance introduced a Pandemic Severity Index (PSI), which uses the case fatality ratio as the critical driver for categorizing the severity of a pandemic. The index is designed to estimate the severity of a pandemic on a population to allow better forecasting of the impact of a pandemic and to enable recommendations on the use of mitigation interventions that are matched to the severity of influenza pandemic. Pandemics are assigned to one of five discrete categories of increasing severity (Category 1 to Category 5) (CDC 2016). Figure 5.4.9-1 illustrates the five categories of the PSI.

Figure 5.4.9-1. Pandemic Severity Index



Source: CDC 2016

Attachment: 19-Section-5.4.9-Pandemic-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

WHO and CDC identify pandemics according to a number of pandemic classification levels. Additionally, New York State Department of Health (NYSDOH) and State Emergency Operations Center (EOC) have their own activation levels in response to a pandemic event. Multiple waves of a pandemic can be anticipated throughout the life cycle of an event. Refer to https://www.health.ny.gov/diseases/communicable/influenza/pandemic/ for information regarding the various levels in New York State.

Location

Erie County's geographic location and demographic characteristics make it vulnerable to importation and spread of infectious diseases. The county has experienced the effects of a pandemic or diseases outbreak, including influenza and COVID-19. There are some densely populated municipalities in the county, which can lead to the spread of influenza and COVID-19 more quickly than less densely populated communities. See Section 4 (County Profile) for a population density map of Erie County.

Previous Occurrences and Losses

Between 1954 and 2020, New York State was included in two disease outbreak-related emergency (EM) declarations, classified as a virus threat due to both West Nile Virus (EM-3155, May–November 2000) and COVID-19 (EM-3434, January 2020–Ongoing) impacting the State. Generally, epidemic disasters cover a wide region of the State; therefore, they may have impacted many, but not all, counties. Erie County was included in these two declarations (Federal Emergency Management Agency [FEMA] 2020). Table 5.4.9-1 provides details on epidemic episodes that occurred in Erie County between 2015 and 2020.

Table 5.4.9-1. Influenza, Ebola and COVID-19 Epidemics Affecting Erie County, 2015 to 2020

Date(s) of Event	Event Type	FEMA Declaration Number (if applicable)	County Designated?	Event Details
2020 & ongoing	COVID-19	EM-3434	Yes	COVID-19 epidemic. 1,600 deaths in county reported (as of March 5, 2021
2019–(June) 2020 Season	Influenza	N/A	N/A	454 cases of influenza reported
2015–2016 Season	Influenza	N/A	N/A	117 cases of influenza reported
2016–2017 Season	Influenza	N/A	N/A	63 cases of influenza reported
2017–2018 Season	Influenza	N/A	N/A	284 cases of influenza reported
2018–2019 Season	Influenza	N/A	N/A	288 cases of influenza reported
2015–2019	Ebola	N/A	N/A	0 confirmed cases of Ebola

Note: **COVID-19 count as of March 5, 2021*

Probability of Future Events

Predicting the future occurrences of disease outbreaks is difficult; however, based on the history of occurrences in Erie County, it is possible to predict the likelihood of a disease outbreak impacting the County. Additionally, increases in population and population density in the county have the potential to increase exposure and susceptibility of its residents to outbreaks.

Attachment: 19-Section-5.4.9-Pandemic-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

In Section 5.3, the identified hazards of concern for Erie County were ranked. The probability of occurrence, or likelihood of the event, is one parameter used for hazard rankings. Based on historical records and input from the Planning Committee, the probability of occurrence for disease outbreaks in the county is considered "occasional" (likely to occur within 100 years, as presented in Table 5.3-1).

Impacts of Climate Change

Climate change is beginning to affect both people and resources in New York State, and these impacts are projected to continue growing. Impacts related to increasing temperatures and sea-level rise are already being felt in the State. ClimAID: the Integrated Assessment for Effective Climate Change in New York State (ClimAID) was undertaken to provide decision-makers with information on the State's vulnerability to climate change and to facilitate the development of adaptation strategies informed by both local experience and scientific knowledge (New York State Energy Research and Development Authority [NYSERDA] 2011).

Each region in New York State, as defined by ClimAID, has attributes that will be affected by climate change. Erie County is part of geographical Region 1, Western New York and the Great Lakes Plain. Some of the issues in this region affected by climate change include: relatively low seasonal rainfall and increased summer drought risk, high-value crops could need irrigation, and growing conditions will improve for some crops, such as grapes. (NYSERDA 2014). The relationship between climate change and increase in infectious diseases is difficult to predict with certainty; there are scientific linkages between the two. As warm habitats that host insects such as mosquitoes increase, more of the population becomes exposed to potential virus threats (The Washington Post, 2017).

Temperatures and precipitation amounts are expected to increase throughout the State as well as within Region 1. Within Region 1, temperatures are anticipated to increase between 4.3 to 6.3 ºF by the 2050s and 5.7 to 9.6 ºF by the 2080s (baseline of 47.7 ºF, middle-range projection). Precipitation totals will increase between 4 and 10 percent by the 2050s and 6 to 13 percent by the 2080s (baseline of 34.0 inches, middle-range projection).

Annual temperatures have been rising throughout New York State since the start of the 20th century. State average temperatures have increased by approximately 0.6 °F since 1970, with winter warming exceeding 1.1 °F per decade. Extreme heat events are likely to increase throughout New York State, and short-duration warm season droughts will become more common (NYSERDA 2014).

With the increase in temperatures, heat waves will become more frequent and intense, as shown in Table 5.4.9-2 below. Heat waves are defined as three or more consecutive days with maximum temperatures at or above 90 ˚F. Summer droughts are projected to increase under these conditions, affecting water supply, agriculture, ecosystems, and energy projects (NYSERDA 2014).

Table 5.4.9-2. Extreme Event Projections for Region 1

Middle Range (25th to 75th Percentile)	2020s	2050s	2080s
Days over 90 °F (8 days)	14 to 17	22 to 34	27 to 57
# of Heat Waves (0.7 heat waves)	2 to 2	3 to 4	3 to 8
Duration of Heat Waves (4 days)	4 to 4	4 to 5	5 to 6
Days below 32 °F (133 days)	103 to 111	84 to 96	68 to 88
Days over 1" Rainfall (5 days)	5 to 5	5 to 5	5 to 6
Days over 2" Rainfall (0.6 days)	0.6 to 0.7	0.6 to 0.8	0.6 to 0.9

Source: NYSERDA 2014

Warmer temperatures and changing rainfall patterns provide an environment where mosquitoes can remain active longer, greatly increasing the risk for animals and humans. Lyme disease could also expand throughout

Attachment: 19-Section-5.4.9-Pandemic-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

the United States as temperatures warm, allowing ticks to move into new areas of the country. The changes in climate can also allow tropical and subtropical insects to move from regions where diseases thrive into new places (Natural Resources Defense Council 2017).

An increase in temperature and humidity may also lead to a larger number of influenza outbreaks. Studies have shown that warmer winters lead to an increase in influenza cases. During warm winters, fewer people contract influenza, which causes a large number in population to remain vulnerable into the next season. This causes an early and strong occurrence of the virus (Natural Resources Defense Council 2018).

5.4.9.2 Vulnerability Assessment

To understand risk, a community must evaluate what assets are exposed or vulnerable in the identified hazard area. For disease outbreaks, all of Erie County is considered exposed to the hazard. Therefore, all assets in the county, as described in the County Profile (Section 4), are exposed and potentially vulnerable.

Impact on Life, Health, and Safety

The entire population of Erie County is vulnerable to the epidemic hazard. Healthcare providers and first responders have an increased risk of exposure due to their frequent contact with infected populations. As of February 27, 2021, the total confirmed cases of COVID within the county over the past year was 64,838 and the death toll was 1,651.

Most recently with COVID-19, the CDC has indicated that persons over 65 years and older, persons living in a nursing home or long-term care facility, and persons with underlying medical conditions such as cancer, chronic kidney disease, severe obesity, serious heart conditions, immunocompromised, etc. are at a higher risk of getting severely ill (CDC 2020). Population data from the 2019 U.S. Census Population Estimates indicates that 161,806 persons over 65 years old in Erie County would be considered at risk for getting severely ill from the COVID-19 virus. While the statistics of this virus are subject to change during the publication of this Hazard Mitigation Plan (HMP), the New York Department of Health dashboard shows that there is a higher percentage of illnesses within this particular age group.

Impact on General Building Stock, Critical Facilities, and Lifelines

No structures are anticipated to be directly affected by epidemics. An important secondary impact of a pandemic is that health care facilities can become overwhelmed with patient numbers and intensity of care needs.

Impact on Economy

The impact epidemics have on the economy and estimated dollar losses are difficult to measure and quantify. Costs associated with the activities and programs implemented to conduct surveillance and address epidemics have not been quantified in available documentation. Instead, activities and programs implemented by the county to address this hazard are described below, all of which could impact the local economy.

Most recently, the New York State Health Department has played an active role in maintaining and controlling COVID-19 protocols across the state. This activity requires additional costs from the State and Erie County to manage COVID-19 in the communities. Further, there has been secondary economic impact of closing non-essential facilities to reduce the spread of the virus. At the time of this HMP Update, the final costs of this virus are yet to be determined.

Impact on Environment

Disease outbreaks may have an impact on the environment if the outbreaks are caused by invasive species. Invasive species tend to be competitive with native species and their habitat and can be the major transmitters of

Attachment: 19-Section-5.4.9-Pandemic-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

diseases like Zika, dengue, and yellow fever (Placer Mosquito and Vector Control District 2019). Secondary impacts from mitigating disease outbreaks could also have an impact on the environment. Pesticides used to control disease-carrying insects like mosquitoes have been reviewed by the Environmental Protection Agency (EPA) and the New York Department of Environmental Conservation. If these sprays are applied in large concentrations, they could potentially leach into waterways and harm nearby terrestrial species. As a result, pesticides must be registered before they can be sold, distributed, or used in the state (New York Department of Environmental Conservation 2020).

Cascading Impacts on Other Hazards

There are no known cascading impacts that disease outbreaks can cause to other hazards of concern for Erie County.

Future Changes that May Impact Vulnerability

Understanding future changes that effect vulnerability in the county can assist in planning for future development and ensure establishment of appropriate mitigation, planning, and preparedness measures. Changes in the natural environment and built environment and how they interact can also provide insight about ways to plan.

Project Development

As discussed in Section 4, areas targeted for future growth and development have been identified across the county. Any areas of growth could be potentially impacted by the epidemic hazard because the entire planning area is exposed and vulnerable.

Projected Changes in Population

According to the U.S. Census Bureau, the population in Erie County has increased by a negligible amount between 2010 and 2019 (U.S. Census Bureau 2020). Estimated population projections provided by the Cornell Program on Applied Demographics indicate that the county's population will grow overall up to 2040, resulting in a projected population of 945,891 persons. (Cornell Program on Applied Demographics 2017). While fewer people will reside in the county, those who remain are still vulnerable to an epidemic or pandemic event. Section 4, County Profile, presents additional discussion on population trends.

Climate Change

The relationship between climate change and infectious diseases is somewhat controversial. The notion that rising temperatures will increase the number of mosquitoes that can transmit diseases among humans (rather than just shift their range) has been the subject of debate over the past decade. Climate change may affect the spread of disease. However, many researchers point out that climate is not the only force at work in increasing the spread of infectious diseases into the future. Other factors, such as expanded rapid travel and evolution of resistance to medical treatments, are already changing the ways pathogens infect people, plants, and animals. Climate change accelerations may likely work synergistically with many of these factors, especially in populations increasingly subject to massive migration and malnutrition (American Journal of Epidemiology 2019).

Changes in Vulnerability Since the 2015 HMP

An epidemics analysis was not conducted as part of the 2015 HMP risk assessment. Therefore, it is not possible to compare the change in vulnerability to the pandemic hazard.

Attachment: 19-Section-5.4.9-Pandemic-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Attachment: 20-Section-5.4.10-Sev-Storm-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

5.4.10 Severe Storm

This section provides a hazard profile and vulnerability assessment of the severe storm hazard for the Erie County Hazard Mitigation Plan (HMP).

5.4.10.1 Hazard Profile

This section presents information regarding the description, extent, location, previous occurrences and losses, and probability of future occurrences for the severe storm hazard.

Description

For the purpose of this HMP update and as deemed appropriate by Erie County, the severe storm hazard includes thunderstorms, lightning, hailstorms, windstorms, tornadoes, and hurricanes/tropical storms, which are defined in the sections below.

Thunderstorms

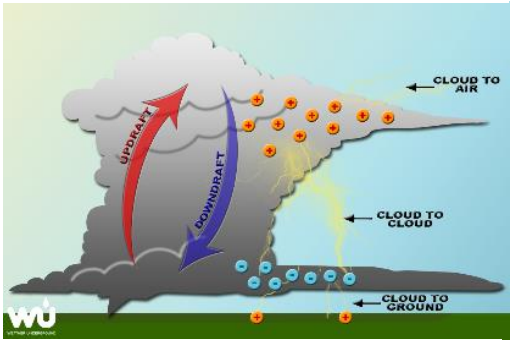
A thunderstorm is a local storm produced by a cumulonimbus cloud and accompanied by lightning and thunder (National Weather Service [NWS] 2009). A thunderstorm forms from a combination of moisture; rapidly rising warm air; and a force capable of lifting air, such as a warm front, cold front, a sea breeze, or a mountain. Thunderstorms form from the equator to as far north as Alaska. Although thunderstorms generally affect a small area when they occur, they have the potential to become dangerous due to their ability to generate tornadoes, hailstorms, strong winds, flash flooding, and lightning.

Thunderstorms can lead to heavy rain-induced flooding, landslides, strong winds, and lightning. Roads may become impassable from flooding, downed trees or power lines, or a landslide. Downed power lines can lead to loss of utility services, such as water, phone, and electricity. Typical thunderstorms are 15 miles in diameter and last an average of 30 minutes. During the summer, thunderstorms are responsible for most of the rainfall.

Lightning

Lighting is a bright flash of electrical energy produced by a thunderstorm. The resulting clap of thunder is the result of a shock wave created by the rapid heating and cooling of the air in the lightning channel. All thunderstorms produce lightning and are very dangerous. Lightning ranks as one of the top weather killers in the United States, killing approximately 50 people and injuring hundreds each year. Lightning can occur anywhere there is a thunderstorm. Lightning can be cloud to air, cloud to cloud, and cloud to ground. Figure 5.4.10-1 illustrates the variety of lightning types.

Figure 5.4.10-1. Types of Lightning



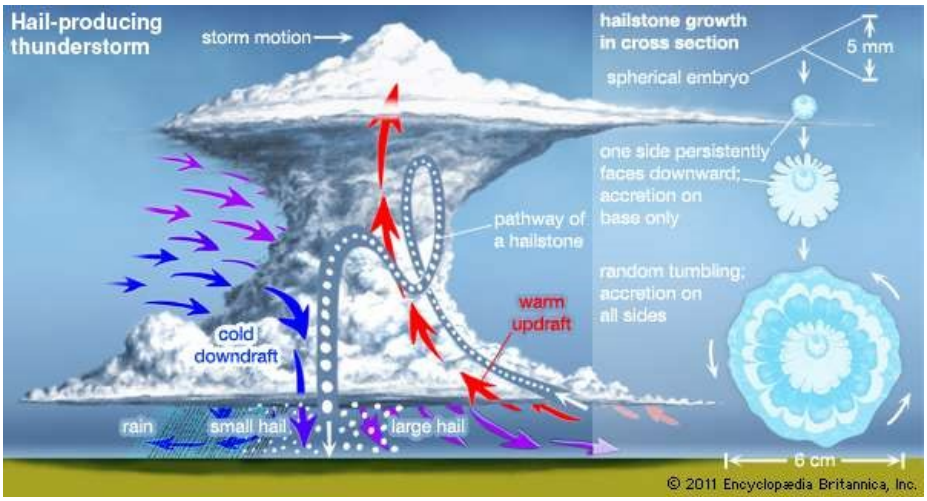
Source: Weather Underground n.d.

Hailstorms

Hail forms inside a thunderstorm or other storms with strong updrafts of warm air and downdrafts of cold water. If a water droplet is picked up by the updrafts, it can be carried well above the freezing level. Water droplets freeze when temperatures reach 32 degrees Fahrenheit (°F) or colder. As the frozen droplet begins to fall, it may thaw as it moves into warmer air toward the bottom of the thunderstorm. However, the droplet may be picked up again by another updraft and carried back into the cold air and re-freeze. With each trip above and below the freezing level, the frozen droplet adds another layer of ice. The frozen droplet, with many layers of ice, falls to

the ground as hail. Most hail is small and typically less than 2 inches in diameter (NWS 2010). Figure 5.4.10-2 shows how hail is formed within thunderstorms.

Figure 5.4.10-2. Hail Formation in Thunderstorms



Source: Encyclopedia Britannica 2011

Windstorms

Wind begins with differences in air pressures and occurs through rough horizontal movement of air caused by uneven heating of the earth's surface. Wind occurs at all scales, from local breezes lasting a few minutes to global winds resulting from solar heating of the earth. High winds are often associated with other severe weather events such as thunderstorms, derechos, tornadoes, nor'easters, hurricanes, and tropical storms (all discussed further in this section).

Tornadoes

A tornado appears as a rotating, funnel-shaped cloud that extends from a thunderstorm to the ground with whirling winds that can reach 250 miles per hour (mph). Damage paths can be greater than 1 mile wide and 50 miles long. Tornadoes typically develop from either a severe thunderstorm or hurricane as cool air rapidly overrides a layer of warm air. Tornadoes typically move at speeds between 30 and 125 mph and can generate combined wind speeds (forward motion and speed of the whirling winds) exceeding 300 mph. The lifespan of a tornado rarely is longer than 30 minutes (Federal Emergency Management Agency [FEMA] 1997). Tornadoes can occur at any time of the year, with peak seasons at different times for different states (National Oceanic and Atmospheric Administration [NOAA] National Severe Storms Laboratory [NSSL] 2013).

Hurricanes and Tropical Storms

Tropical cyclones (hurricanes) are fueled by a different heat mechanism than other cyclonic windstorms such as nor'easters and polar lows. The characteristic that separates a tropical storm from another cyclonic system is that at any height in the atmosphere, the center of a tropical storm will be warmer than its surroundings, a phenomenon called "warm core" storm systems (NOAA 2013). Tropical cyclones strengthen when water evaporated from the ocean is released as the saturated air rises, resulting in condensation of water vapor contained in the moist air. Tropical cyclones begin as disturbed areas of weather, often referred to as tropical waves. As the storm organizes, it is designated as a tropical depression.

Attachment: 20-Section-5.4.10-Sev-Storm-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

A tropical storm system is characterized by a low-pressure center and numerous thunderstorms that produce strong winds of 39 to 73 mph and heavy rain. A hurricane is a tropical storm that attains hurricane status when its wind speed reaches 74 mph or higher. Tropical systems may develop in the Atlantic between the Lesser Antilles and the African coast or may develop in the warm tropical waters of the Caribbean and Gulf of Mexico. These storms may move up the Atlantic coast of the United States and impact the eastern seaboard or move into the United States through the states along the Gulf Coast, bringing wind and rain as far north as New England before moving offshore and heading east.

Despite Erie County's inland location, coastal storms, such as hurricanes and tropical storms, can impact the County (New York State [NYS] Division of Homeland Security and Emergency Services [DHSES] 2014). Hurricanes and tropical storms can impact Erie County from June to November, the official eastern U.S. hurricane season; however, late July to early October is the most likely period for hurricanes and tropical storms to impact the county due to the cooling of the North Atlantic Ocean waters (NYS DHSES 2019). Although one of the most severe impacts associated with hurricanes is storm surge, due to Erie County's location, storm surge is not a concern for the county and has not been detailed in this profile.

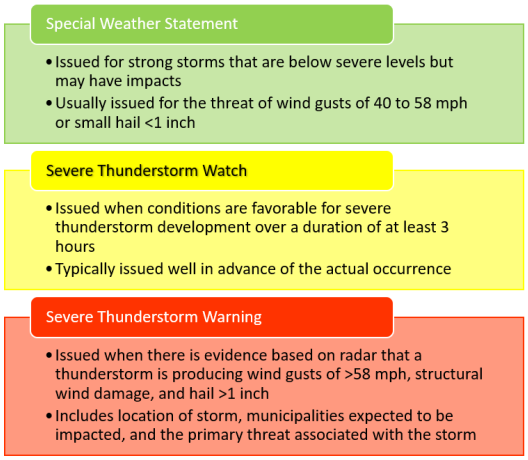
Extent

The extent (severity or magnitude) of a severe storm is largely dependent upon the most damaging aspects of each type of severe weather. This section describes the extent of thunderstorms, lighting, hail, windstorms, tornadoes, and hurricanes and tropical storms in Erie County. Historical data presented in Table 5.4.10-1 show the most powerful severe weather records in Erie County.

Table 5.4.10-1. Severe Storm Extent in Erie County

Extent of Severe Storms in Erie County	
Largest Hailstone on Record	2.0 inches
Highest Wind Speed on Record	75 mph
Strongest Tropical Storm/Hurricane on Record	No events in the county

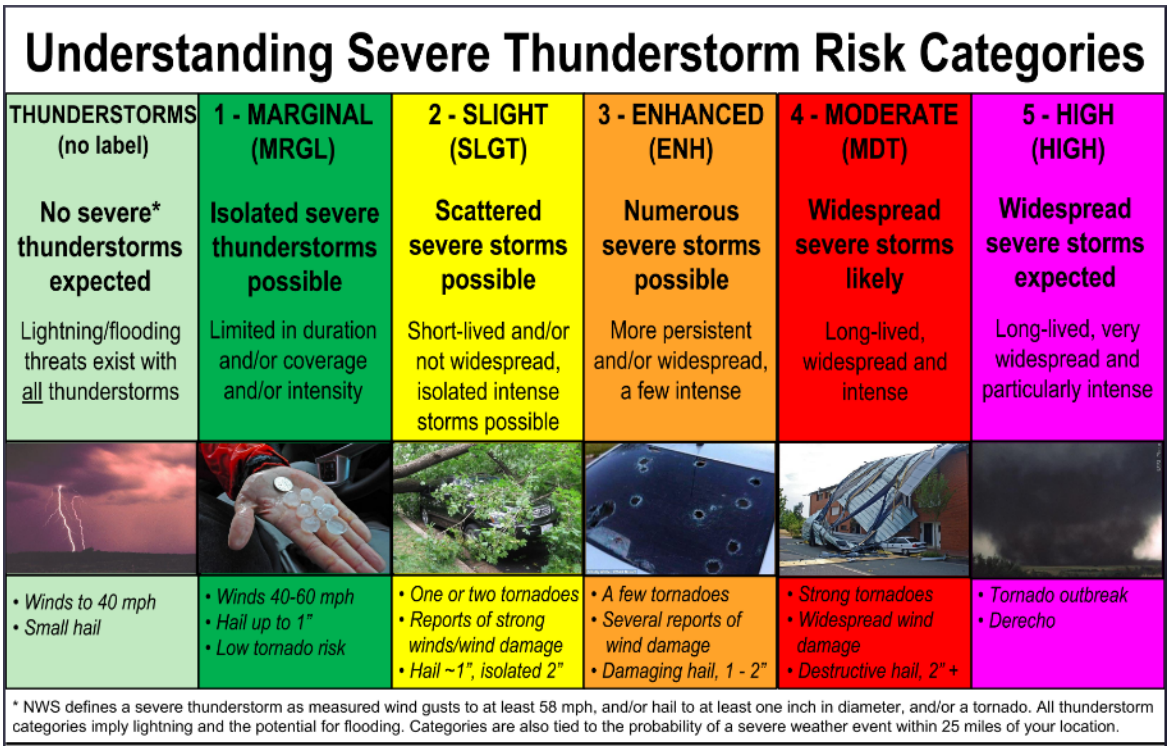
Thunderstorms



NWS considers a thunderstorm severe if it produces damaging wind gusts of 58 mph or higher, hail 1 inch (quarter size) in diameter or larger, or tornadoes (NWS 2010). Severe thunderstorm watches and warnings are issued by the local NWS office and NOAA's Storm Prediction Center (SPC). NWS and SPC will update the watches and warnings and will notify the public when they are no longer in effect. In addition, the SPC issues severe thunderstorm risk maps based on the likelihood of different severities of thunderstorms. Figure 5.4.10-3 shows the SPC's severe thunderstorm risk categories.

Attachment: 20-Section-5.4.10-Sev-Storm-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Figure 5.4.10-3. Severe Thunderstorm Risk Categories



Source: NOAA SPC 2017

Lightning

Lightning is most often associated with moderate to severe thunderstorms. The severity of lightning refers to the frequency of lightning strikes during a storm. The New York City Office of Emergency Management (NYC OEM) notes that lightning strikes occur with moderate frequency in the State of New York, with 3.8 strikes occurring per square mile each year. Multiple devices are available to track and monitor the frequency of lightning.

Hail

The severity of a hailstorm is measured by duration, hail size, and geographic extent. Most hail stones from hailstorms are made up of variety of sizes. Only the very largest hail stones pose serious risk to people, if exposed (NYS DHSES 2014). The size of hail is estimated by comparing it to a known object. Table 5.4.10-2 describes the different sizes of hail as compared to real-world objects and lists approximate measurements.

Table 5.4.10-2. Hail Size

Description	Diameter (in inches)		Description	Diameter (in inches)
Pea	0.25		Golf ball	1.75
Marble or mothball	0.50		Hen's egg	2.00
Penny or dime	0.75		Tennis ball	2.75
Nickel	0.88		Baseball	2.75
Quarter	1.00		Tea cup	3.00
Half dollar	1.25		Grapefruit	4.00

Attachment: 20-Section-5.4.10-Sev-Storm-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Description	Diameter (in inches)		Description	Diameter (in inches)

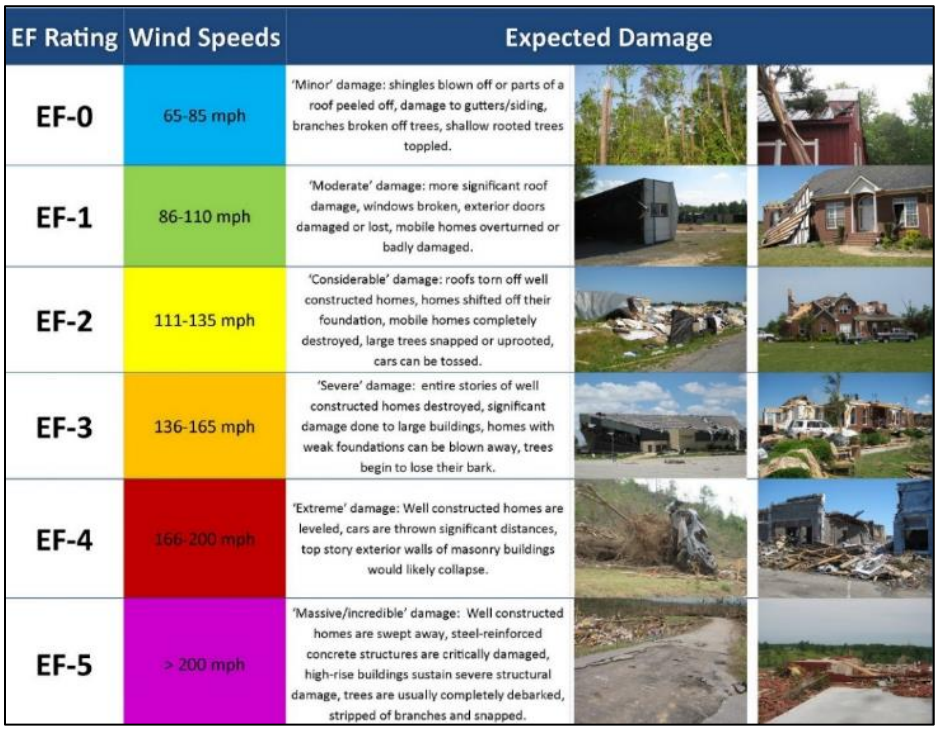
Tornado

The magnitude or severity of a tornado is categorized using the Enhanced Fujita Tornado Intensity Scale (EF Scale). Figure 5.4.10-4 illustrates the relationship between EF Scale ratings, wind speed, and expected tornado damage.

Figure 5.4.10-4. Enhanced Fujita Tornado Intensity Scale Ratings, Wind Speeds, and Expected Damage



Source: NWS 2018

Tornado watches and warning are issued by the local NWS office. A tornado watch is released when tornadoes are possible in an area. A tornado warning means a tornado has been sighted or indicated by weather radar. The current average lead time for tornado warnings is 13 minutes. Occasionally, tornadoes develop so rapidly that little, if any, advance warning is possible (NOAA 2011).

Windstorms

Table 5.4.10-3 provides the NWS descriptions of winds during wind-producing events.

Table 5.4.10-3. NWS Wind Descriptions

Descriptive Term	Sustained Wind Speed (mph)
Strong, dangerous, or damaging	≥40
Very windy	30-40
Windy	20-30
Breezy, brisk, or blustery	15-25

Attachment: 20-Section-5.4.10-Sev-Storm-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Descriptive Term	Sustained Wind Speed (mph)
None	5-15 or 10-20
Light or light and variable wind	0-5

Source: NWS 2015

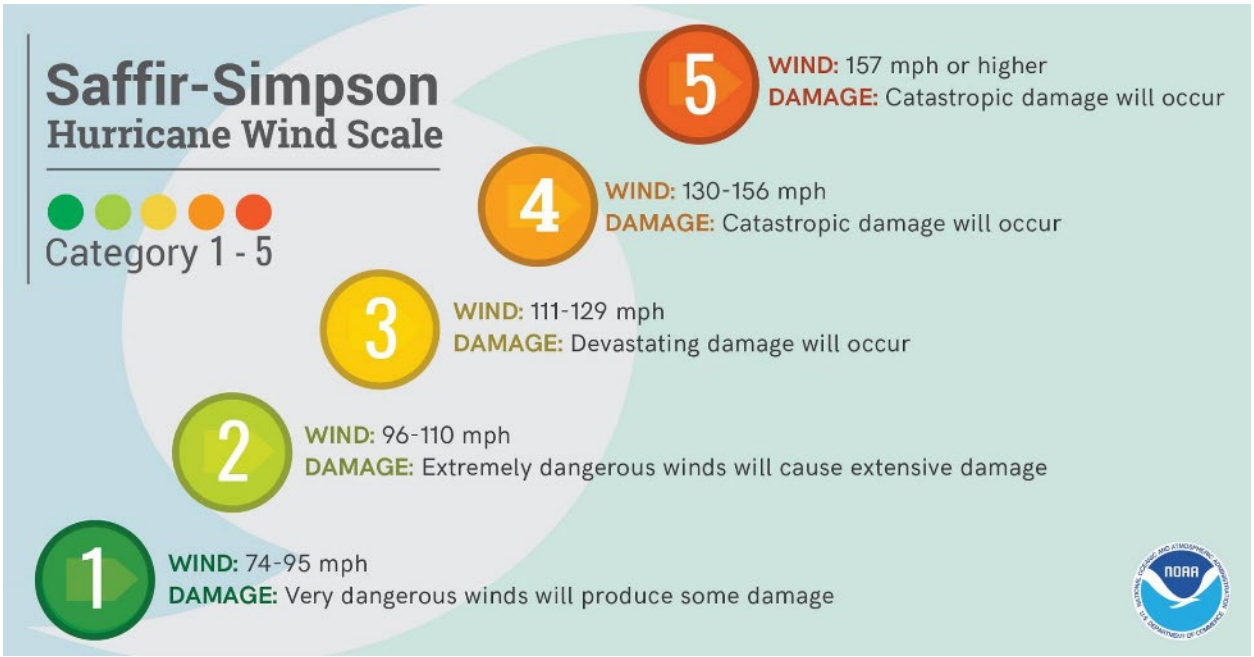
NWS issues advisories and warnings for winds, which are normally site-specific. High wind advisories, watches, and warnings are issued by the NWS when wind speeds may pose a hazard or may be life-threatening. The criterion for each of these varies from state to state. Wind warnings and advisories for New York State are as follows:

- *High Wind Warnings* are issued when sustained winds of 40 mph or greater are forecast for 1 hour or longer, or wind gusts of 58 mph or greater are forecast for any duration.
- *Wind Advisories* are issued when sustained winds of 30 to 39 mph are forecast for one 1 hour or longer, or wind gusts of 46 to 57 mph are forecast for any duration (NWS n.d.).

Hurricanes and Tropical Storms

The extent of a hurricane or tropical storm is commonly categorized in accordance with the Saffir-Simpson Hurricane Wind Scale, which assigns a designation of tropical storm for storms with sustained wind speeds below 74 mph and a hurricane category rating of 1 to 5 based on a hurricane's increasing sustained wind speed. This scale estimates potential property damage. Hurricanes reaching Category 3 and higher are considered major hurricanes because of their potential for significant loss of life and damage. Tropical storms and Category 1 and 2 hurricanes are dangerous and require preventative measures (NOAA 2013). Figure 5.4.10-5 presents this scale, which is used to estimate the potential property damage and flooding expected when a hurricane makes landfall.

Figure 5.4.10-5. The Saffir-Simpson Hurricane Wind Scale



Source: NOAA - Disaster Preparedness Portal 2017

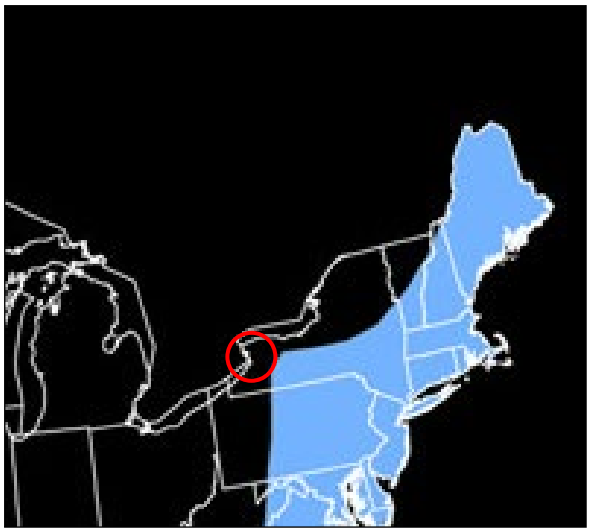
Mean Return Period

In evaluating the potential for hazard events of a given magnitude, a mean return period (MRP) is often used. The MRP provides an estimate of the magnitude of an event that may occur within any given year based on past

Attachment: 20-Section-5.4.10-Sev-Storm-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

recorded events. MRP is the average period, in years, between occurrences of a hazard event, equal to the inverse of the annual frequency of exceedance (Dinicola 2009). Figure 5.4.10-6 shows the number of hurricanes expected for the 100-year MRP in the northeast region. Erie County is on the edge of the area that could expect 20−40 hurricanes in a 100-year period.

Figure 5.4.10-6. Number of Hurricanes for a 100-Year Mean Return Period

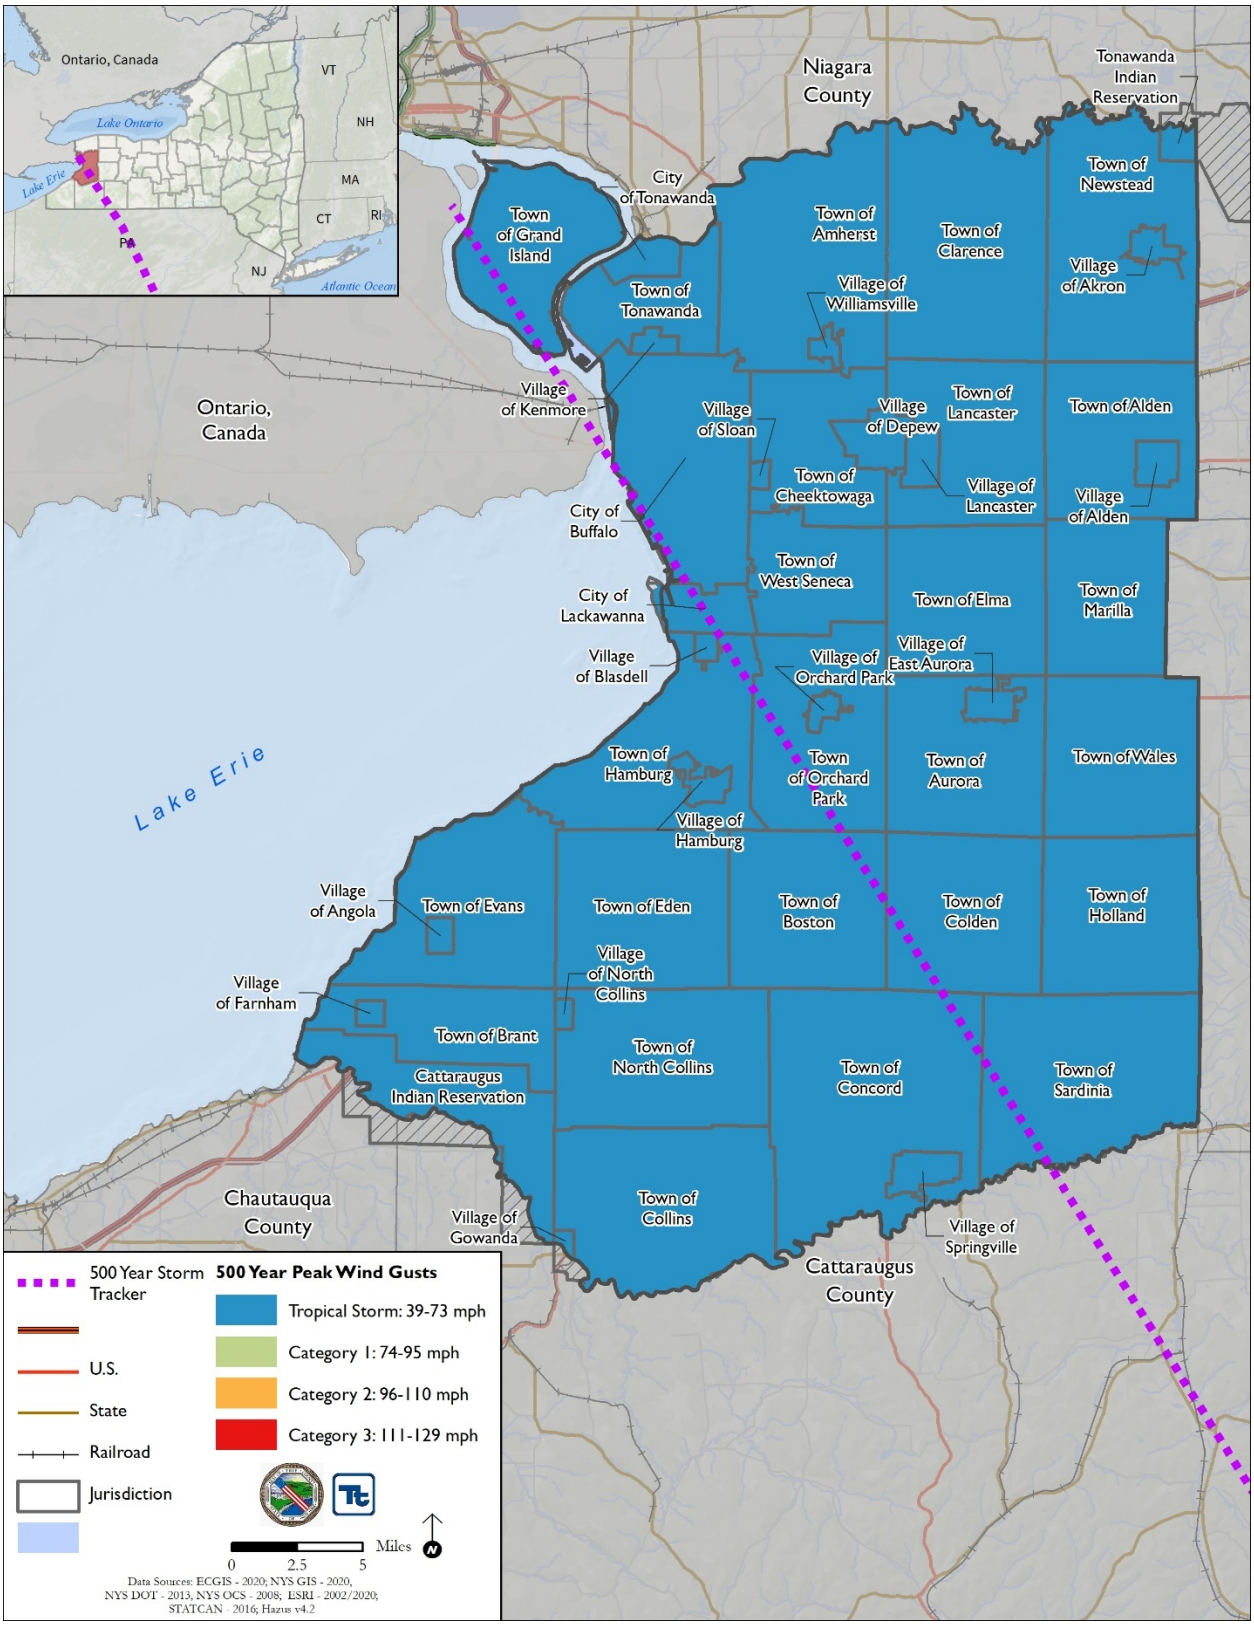


Source: U.S. Geological Survey (USGS) 2005
Notes:
Red circle indicates Erie County's approximate location within the region.
The map shows the number of hurricanes expected to occur during a 100-year MRP based on historical data using the following scale:
Light blue area: 20 to 40 hurricanes expected in a 100-year period.

Figure 5.4.10-7 shows the estimated maximum 3-second gust wind speeds that can be anticipated in the study area associated with the 500-year MRP event. These peak wind speed projections were generated using Hazards U.S. Multi-Hazard (Hazus) model runs. Hazus v 4.2 estimated the maximum 3-second gust wind speeds for Erie County to be below 39 mph for the 100-year MRP event and not strong enough to be considered a tropical storm. The maximum 3-second gust wind speeds for Erie County range from 39−73 mph for the 500-year MRP event, which are wind speeds categorizing this event as a tropical storm. The associated impacts and losses from the 500-year MRP hurricane event modeled event is reported in the Vulnerability Assessment section for this hazard presented below.

Attachment: 20-Section-5.4.10-Sev-Storm-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Figure 5.4.10-7. Wind Speeds for the 500-Year Mean Return Period Event



Attachment: 20-Section-5.4.10-Sev-Storm-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Location

All of Erie County is exposed to hail, lightning, windstorms and high wind, thunderstorms, and hurricanes and tropical storms, and all the county is subject to high winds from severe weather events. Erie County is located in far Western New York State; its entire western border is Lake Erie. As storm fronts reach increased elevations inland, greater amounts of rainfall and winds are experienced.

According to the FEMA Winds Zones of the United States map, Erie County is located within Wind Zone III where wind speeds can reach up to 200 mph. Figure 5.4.10-8 illustrates wind zones across the United States, which indicate the impacts of the strength and frequency of wind activity per region. The information on the figure is based on 40 years of tornado data and 100 years of hurricane data collected by FEMA.

Figure 5.4.10-8. Wind Zones in the United States

Note: *The black oval indicates the approximate location of Erie County.*

Previous Occurrences and Losses

Many sources provided historical information regarding previous occurrences and losses associated with severe storms throughout New York State and Erie County; therefore, the loss and impact information for many events varies depending on the source. The accuracy of monetary figures discussed is based on the available information in cited sources.

Attachment: 20-Section-5.4.10-Sev-Storm-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

FEMA Disaster Declarations

Between 1954 and 2020, Erie County has been included in seven declarations for severe storm-related events classified as one or a combination of the following disaster types: severe storm, straight-line winds, coastal storm, hurricane/tropical storm, and tornado (FEMA 2020). Table 5.4.10-4 lists these events.

Table 5.4.10-4. Severe Storm-Related FEMA Declarations for Erie County, 1954–2020

FEMA Declaration Number	Date(s) Of Event	Event Type	Details
494	March 19, 1976	Severe Ice Storm	Ice Storm, Severe Storms, & Flooding
1233	June 25, 1998 - July 10, 1998	Severe Storm(s)	Severe Storms and Flooding
1335	May 3, 2000 - August 12, 2000	Severe Storm(s)	Severe Storms and Flooding
1534	May 13, 2004 - June 17, 2004	Severe Storm(s)	Severe Storms and Flooding
1665	October 12, 2006 - October 25, 2006	Severe Storm(s)	Severe Storms and Flooding
1857	August 8, 2009 - August 10, 2009	Severe Storm(s)	Severe Storms and Flooding
4472	October 31, 2019 - November 1, 2019	Severe Storm(s)	Severe Storms, Straight-line Winds, and Flooding

Source: FEMA 2021

U.S. Department of Agriculture Agricultural Disaster Declarations

The Secretary of Agriculture from the U.S. Department of Agriculture (USDA) is authorized to designate counties as disaster areas to make emergency loans to producers suffering losses in those counties and in counties that are contiguous to a designated county. There have been two USDA agricultural disasters since 2013 attributed to severe weather:

- S3593 – 2013 Excessive rain and related flooding, high winds, and hail
- S3885 – 2015 Excessive Rain, High Winds, Hail, Lightning, and Tornado

The USDA crop loss data provide another indicator of the severity of previous events. Additionally, crop losses can have a significant impact on the economy by reducing produce sales and purchases. Such impacts may have long-term consequences, particularly if crop yields are low the following years as well. USDA records indicate that Erie County has experienced crop losses from severe storm events. Table 5.4.10-5 provides details regarding crop losses in Erie County according to USDA records.

Table 5.4.10-5. USDA Crop Losses from Severe Storms in Erie County (2014–2019)

Year	Crop Type	Cause of Loss	Losses
2014	Wheat, corn, oats, beans, soybeans, all cover crops	Excess Moisture/Precipitation/Rain	$2 million
2015	Wheat, corn, oats, beans, soybeans	Excess Moisture/Precipitation/Rain	$1.6 million
2016	Wheat, corn, oats, beans, soybeans, oats	Excess Moisture/Precipitation/Rain	$1.2 million
2017	Wheat, corn, oats, beans, soybeans, grapes	Excess Moisture/Precipitation/Rain	$1.6 million
2018	Wheat, corn, oats, beans, soybeans	Excess Moisture/Precipitation/Rain	$1.1 million
2019	Wheat, corn, oats, beans, soybeans, oats	Excess Moisture/Precipitation/Rain	$2.1 million

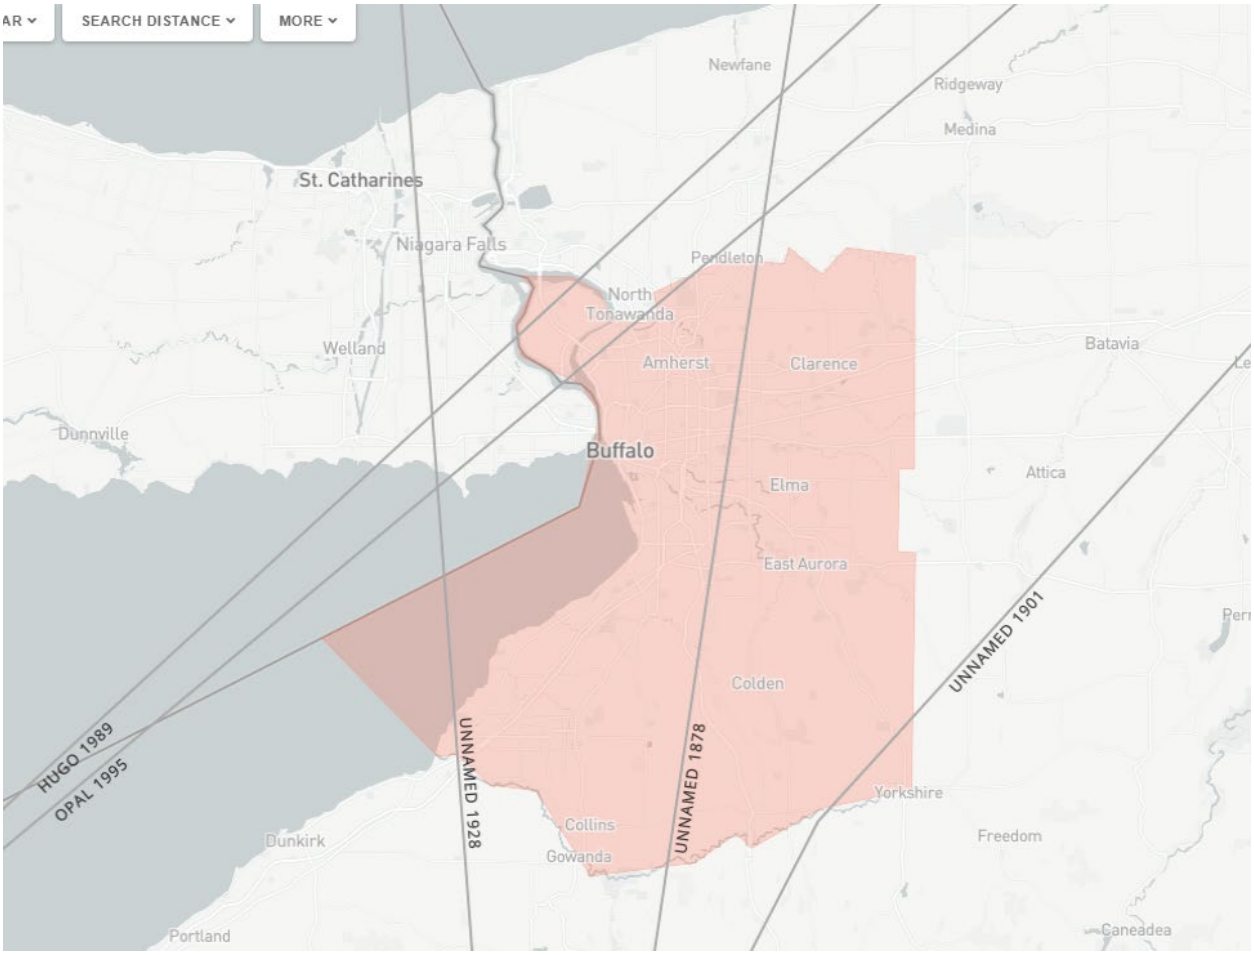
Attachment: 20-Section-5.4.10-Sev-Storm-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Previous Events

Figure 5.4.10-9, from the NOAA Historical Hurricane Tracker, illustrates the tracks of storms between 1842 and 2018 that passed through Erie County. Erie County is not frequently impacted by hurricanes, tropical storms, or tropical depressions but has recently experienced the direct and indirect landward effects associated with hurricanes and tropical storms.

Figure 5.4.10-9. Historical Hurricane Tracks within 65 miles of Erie County, 1842–2018



Source: NOAA Historical Hurricane Tracks 2018
Notes: Category refers to tropical cyclone strength. ET = Extra-tropical Storm; H1 = Category 1 Hurricane; H2 = Category 2 Hurricane; H3 = Category 3 Hurricane; H4 = Category 4 Hurricane; TS = Tropical Storm; TD = Tropical Depression

The NOAA National Centers for Environmental Information (NCEI) Storm Events database records severe storm events. For this 2022 HMP Update, known severe storm events that have impacted Erie County between 2013 and 2020 are identified in Table 5.4.10-6. With severe storm documentation for New York State and Erie County being so extensive, not all sources have been identified or researched. Therefore, Table 5.4.10-6 may not include all events that have occurred in the county.

Attachment: 20-Section-5.4.10-Sev-Storm-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Attachment: 20-Section-5.4.10-Sev-Storm-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie

Table 5.4.10-6. Severe Storm Events in Erie County, 2015–2020

Dates of Event	Event Type	FEMA Declaration Number	County Designated?	Event Details
5/11/15	Thunderstorm Wind	-	-	A line of thunderstorms moved across the Niagara Frontier during the late evening hours. The thunderstorms produced strong wind gusts estimated to near 60 mph. Trees and power lines were downed in East Aurora, Darien, and Pembroke. In Millgrove, five trees fell onto and caused damage to sheds. Damages from the event were estimated at $25,000.
5/11/15	Thunderstorm Wind	-	-	A line of thunderstorms moved across the Niagara Frontier during the late evening hours. The thunderstorms produced strong wind gusts estimated to near 60 mph. Trees and power lines were downed in East Aurora, Darien, and Pembroke. In Millgrove, five trees fell onto and caused damage to sheds.
6/12/15	Thunderstorm Wind	-	-	Two lines of showers and thunderstorms moved across the region during the afternoon and early evening hours. The strong thunderstorms produced damaging winds that downed trees and powers lines across the western southern tier and Finger Lakes Region. Damages from the event were estimated at $30,000.
6/23/15	Thunderstorm Wind	-	-	An area of showers and thunderstorms moved across the lower Great Lakes region during the overnight and very early morning hours. The thunderstorms produced strong winds that downed trees and power lines. Several of the downed trees damaged structures and cars. Some roads were temporarily blocked by debris. Damage from the storm was estimated to be approximately $35,000.
8/11/15	Flash Flood	-	-	Showers and thunderstorms developed along the leading edge of a well-defined shortwave moving from Southern Ontario into Western New York. The storms moved across southern Erie county and rapidly intensified. Instantaneous rainfall rates of four to six inches per hour were observed on radar. Damage from the storm was estimated to be approximately $100,000.
8/15/15	Flash Flood	-	-	Thunderstorms developed and tracked along a stalled frontal boundary across Niagara and northern Erie counties. The slow-moving thunderstorms produced intense rainfall with reports of five to eight inches in just a couple of hours. Damage from the storm was estimated to be approximately $45,000.
06/20/16	Thunderstorm Wind	-	-	Thunderstorms developed ahead of an approaching cold front. The first round of storms developed across Southern Ontario just west of the St. Lawrence River and moved east across Jefferson and northern Lewis counties producing fairly widespread wind damage. Damages from the storm were estimated to be approximately $65,000.
07/14/16	Thunderstorm Wind	-	-	Thunderstorms moved across Southern Ontario and the eastern Great Lakes crossing Western New York during the early morning hours of the 14th. Damage from the storm was estimated to be approximately $35,000.
07/25/16	Thunderstorm Wind	-	-	Several rounds of strong to severe storms developed during the morning and early afternoon hours ahead of an approaching cold front. Storms first developed along a line from the east end of Lake Erie to the west end of Lake Ontario, shifting south and east through the morning then pushing east of the region during the early afternoon. The thunderstorm winds downed trees and power lines throughout the region. Several thousand power outages were reported. Damage from the storm was estimated to be approximately $39,000.
09/10/16	Thunderstorm Wind	-	-	A strong cold front crossed the region during the evening hours. Thunderstorms that accompanied the front produced damaging wind gusts. Damage from the storm was estimated to be approximately $50,000

Dates of Event	Event Type	FEMA Declaration Number	County Designated?	Event Details
4/20/17	Flood	-		Several rounds of thunderstorms brought one to three inches of rain to the area in just a couple of hours. This resulted in ponding of water on area roadways. Several roads were closed by flood waters. Debris flowing in Tonawanda creek jammed near Royalton. Water backed up because of the log jam, and Foote Road between Ditch and Wolcottsville Road was closed. Damage from the storm was estimated to be $55,000.
5/1/17	Thunderstorm Wind	-	-	A strong cold front moved across the region during the afternoon and evening hours. A line of thunderstorms just ahead of the front produced damaging winds that downed trees and wires across Western New York through the Finger Lakes Region as well as areas east of Lake Ontario. Damage from the storm was estimated to be $105,000.
5/28/17	Thunderstorm Wind	-	-	A convective complex moved across Western New York late in the morning. This produced a quick 2 to 4 inches of rain which covered a significant portion of the region and resulted in flash flooding that impacted the Buffalo metro area, the Boston/Wyoming hills, and parts of the northern Finger Lakes Region. Damages from the storm were estimated to be $50,000.
7/13/17	Flash Flood	-	-	A convective complex moved across Western New York late in the morning. This produced a quick 2 to 4 inches of rain which covered a significant portion of the region and resulted in flash flooding that impacted the Buffalo metro area, the Boston/Wyoming hills, and parts of the northern Finger Lakes Region. Damage from the storm was estimated to be $55,000.
7/20/17	Thunderstorm Wind	-	-	This storm was responsible for all four tornadoes across Western NY. |The storms moved onshore from Lake Erie with damage beginning in Hamburg before moving across Orchard Park. Windows of hundreds of car windows were blown out at the Hamburg Fairgrounds, where trees were downed and several buildings including the Grandstand sustained damage. Damage from the storm was estimated to be $138,000.
8/4/17	Thunderstorm Wind	-		Showers and thunderstorms developed along and ahead of an advancing cold front. The thunderstorms produced damaging winds that downed trees and power lines. In Buffalo, the winds partially tore the roof off a building at Utica Street and Massachusetts Avenue. In Weedsport, a trampoline was lifted and landed on a house. The thunderstorms also produced hail up to one inch in diameter near Adams. Damage from the storm was estimated to be $90,000.
9/4/17	Thunderstorm Wind	-		Thunderstorms ahead of an approaching strong cold front produced damaging winds during the late evening and early overnight hours. The thunderstorm winds downed trees and power lines throughout parts of the western southern tier and Finger Lakes Region. Damage from the storm was estimated to be $35,000.
11/5/17	Flood	-	-	After a warm front brought soaking rains to the region, a cold front brought additional rain. Damage from the storm was estimated to be $25,000
6/13/2018	Thunderstorm Wind	-		A strong shortwave passed to the north of the area late afternoon into early evening. Damages from this event were estimated to be approximately $55,000
10/6/2018	Flash Flood	-		A weakening surface low tracked northeast across Lake Huron during the afternoon hours with its corresponding warm front extending to the east across Lake Ontario then snaking south ahead of the higher terrain east of Syracuse. Damage from this event was estimated to be approximately $210,000.
8/21/2019	Flash Flood	-		Well ahead of an approaching cold front and more tied to convective enhanced shortwave, strong thunderstorms developed in clusters early morning. Damage from this event is estimated at $52,000.

Attachment: 20-Section-5.4.10-Sev-Storm-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie

Dates of Event	Event Type	FEMA Declaration Number	County Designated?	Event Details
10/31/2019	Lakeshore Flood/High Wind	4472	Yes	A deepening area of consolidated low pressure tracked from the north shoreline of Lake Erie to Toronto, and then along the northern shoreline of Lake Ontario Thursday evening, October 31st. Heavy rain also brought flooding concerns. All three climate stations broke their daily October 31 records with 1 to 3 inches of rain falling across the CWA. High winds and lakeshore flooding continued into November 1.
3/29/2020	Thunderstorm Wind	-		A strong, nearly vertically stacked low moved into the western Great Lakes. Downstream of the low, a warm front moved northeast across the area during the storm. Damage from this event was estimated to be approximately $70,000
6/2/2020	Thunderstorm Wind	-		A low-level boundary pushed southeast ahead of a mesoscale convective system late in the afternoon. This boundary followed the passage of a warm front with effective shear values jumping to 50-60 knots as the low-level boundary made its way across Southern Ontario and into Western New York. Damage from this event was estimated to be approximately $75,000.
8/15/2020	Flash Flood	-		Scattered thunderstorms developed by midafternoon, with new storm development and subsequent storm motion then driven mainly by outflow boundaries, resulting in slow and chaotic storm motion over the event. A few storms pulsed high enough and long enough to produce severe weather. A few storms also latched onto outflow boundaries and remained nearly stationary or trained for one to two hours, producing isolated flash flooding from northeast Cattaraugus County to the Buffalo Metro area. Damage from this event was estimated to be approximately $140,000.

Sources: FEMA 2020; NOAA-NCEI 2020; SPC 2020
Notes: Due to the large number of events present in the NOAA-NCEI database for thunderstorm wind, only events resulting in $25K in property damage or greater have been included.

** Based on NHC historical storm tracks, fatalities, injuries, property damage, and crop damage unavailable.*

Probability of Future Occurrences

Erie County is expected to continue experiencing direct and indirect impacts of severe storms annually. These storms may induce secondary hazards such as flooding and utility failure. Table 5.4.10-8 summarizes data regarding the probability of occurrences of severe storm events in Erie County. Based on historic occurrences, thunderstorm events are the most common in Erie County, followed by windstorms. The information used to calculate the probability of occurrences is based solely on NOAA-NCEI storm events database results.

Table 5.4.10-8. Probability of Occurrence of Severe Storm Events in Erie County

Hazard Type	Number of Occurrences Between 1950 and 2020	% Chance of Occurring in Any Given Year
Thunderstorm	199	100.00
Lightning	14	20.00
Hailstorms	70	100.00
Windstorms	79	100.00
Tornadoes	22	31.43
Hurricanes/ Tropical Storms	0	0
Total	**384**	**100.00**

Source: *NOAA-NCDC 2021; NHC 2020*
Notes: *Probability was calculated using the available data provided in the NOAA-NCDC storm events database and the NHC Historical Hurricane Tracks database and includes events that occurred within 65 nautical miles of Erie County*
* *Any probability greater than 100 percent was rounded to 100 percent.*

In Section 5.3, the identified hazards of concern for Erie County were ranked. The probability of occurrence, or likelihood of the event, is one parameter used for ranking hazards. Based on historical records and input from the Planning Partnership, the probability of occurrence for severe storms in the county is considered *frequent* (100 percent annual probability, occurring multiple times a year).

Attachment: 20-Section-5.4.10-Sev-Storm-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Climate Change Impacts

Climate change is beginning to affect both people and resources in Erie County, and these impacts are projected to continue growing. The Integrated Assessment for Effective Climate Change in New York State (ClimAID) was undertaken to provide decision-makers with information on the state's vulnerability to climate change and to facilitate the development of adaptation strategies informed by both local experience and scientific knowledge (New York State Energy Research and Development Authority [NYSERDA] 2011).

Each region in New York State, as defined by ClimAID, has attributes that will be affected by climate change. Erie County is part of Region 1, Western New York and Great Lakes Plain. In Region 1, it is estimated that temperatures will increase by 4.3 ºF to 6.3 ºF by the 2050s and 5.7 ºF to 9.6 ºF by the 2080s (baseline of 47.7 ºF, middle-range projection).

Erie County is part of Region 1, Western New York, Great Lakes Plain. In Region 1, it is estimated that temperatures will increase by 3.0 ºF to 5.5 ºF by the 2050s and 4.5 ºF to 8.5 ºF by the 2080s (baseline of 48.0 ºF, mid-range projection). Precipitation totals will increase between 0 and 10% by the 2050s and 0 to 15% by the 2080s (baseline of 37.0 inches, mid-range projection). Table 5.4.10-9 displays the projected seasonal precipitation change for ClimAID Region 1 (NYSERDA 2014).

Table 5.4.10-9. Projected Seasonal Precipitation Change in Region 1, 2050s (% change)

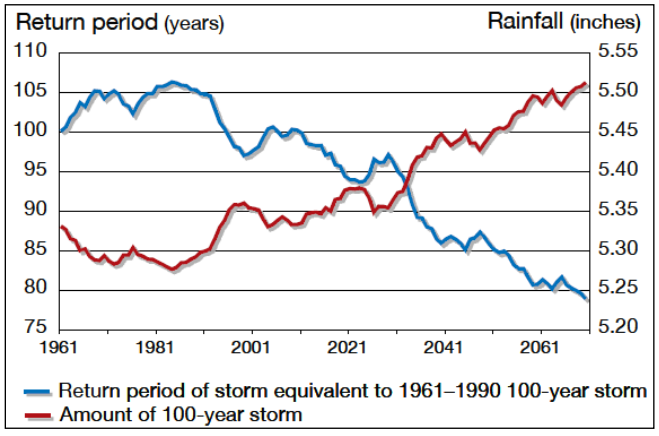
Winter	Spring	Summer	Fall
+5 to +15	0 to +10	-5 to +10	-5 to +10

Source: NYSERDA 2014

The projected increase in precipitation is expected to fall in heavy downpours and less in light rains. Downpours are very likely to increase in frequency and intensity, a change which has the potential to affect drinking water; heighten the risk of riverine flooding; flood key rail lines, roadways, and transportation hubs; and increase delays and hazards related to extreme weather events (NYSERDA 2011). Less frequent rainfall during the summer months may impact the ability of water supply systems. Increasing water temperatures in rivers and streams will affect aquatic health and reduce the capacity of streams to assimilate effluent wastewater treatment plants (NYSERDA 2011).

Figure 5.4.10-10 displays the project rainfall and frequency of extreme storms in New York State. The amount of rainfall in a 100-year event is projected to increase, while the number of years between such storms (return period) is projected to decrease. Rainstorms will become more severe and more frequent (NYSERDA 2011).

Figure 5.4.10-10. Projected Rainfall and Frequency of Extreme Storms



Source: NYSERDA 2011

Attachment: 20-Section-5.4.10-Sev-Storm-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

5.4.10.2 Vulnerability Assessment

A probabilistic assessment was conducted for the 100- year and 500-year MRP hurricane wind event through a Level 2 analysis in Hazus v4.2 to analyze the severe storm hazard and provide a range of loss estimates due to wind impacts. Section 5.1, Methodology includes additional details on the methodology used to assess the severe storm risk.

Impact on Life, Health, and Safety

The impact of a severe weather event and wind on life, health, and safety is dependent upon several factors, including the severity of the event and whether adequate warning time was provided to residents. For the purposes of this HMP, all of Erie County is considered vulnerable to a severe weather event and wind impacts (i.e., 919,355 persons total, American Community Survey 2019). Hazus estimates that zero persons will be displaced from their homes or will seek shelter during a 500-year MRP hurricane wind event. Secondary impacts caused by extreme wind events include downed trees, damaged buildings, and debris carried by high winds, which can lead to injury or loss of life.

Socially vulnerable populations are most susceptible to severe weather events based on several factors, including their physical and financial ability to react or respond during a hazard and the location and construction quality of their housing. Vulnerable populations include homeless persons, elderly (over 65 years old), low income or linguistically isolated populations, people with life-threatening illnesses, and residents living in areas that are isolated from major roads. The population over the age of 65 is also more vulnerable and, physically, they may have more difficulty evacuating. They may require extra time or outside assistance during evacuations and are more likely to seek or need medical attention, which may not be available due to isolation during a storm event. According to the 5-Year 2018 American Community Survey Population Estimates, there are 161,806 persons over 65 and 126,806 persons living in poverty in Erie County (American Community Survey 2019).

Additionally, people located outdoors (i.e., recreational activities and farming) are considered most vulnerable to hailstorms, thunderstorms, and tornadoes. This is because there is little to no warning, and shelter may not be available. Moving to a lower risk location will decrease a person's vulnerability. See Section 4, County Profile for population statistics for each participating jurisdiction.

Impact on General Building Stock

Damage to buildings is dependent upon several factors, including wind speed, storm duration, and path of the storm track. Building construction also plays a major role in the extent of damage resulting from a coastal storm. Due to differences in construction, residential structures are generally more susceptible to wind damage than commercial and industrial structures. Wood and masonry buildings, in general, regardless of their occupancy class, tend to experience more damage than concrete or steel buildings. Furthermore, high-rise buildings are also very vulnerable structures.

Hazus estimates that there will be no damages in the event of a 100-year MRP wind event. There will be $41,265 of replacement cost damages caused by the 500-year MRP hurricane wind event (Table 5.4.10-12). These damages would occur primarily in residential buildings.

To better understand these risks, Hazus was used to estimate the expected wind-related building damages. Table 5.4.10-10 summarizes the definitions of the damage categories. Hazus estimates that there is only one commercial structure that would experience minor damage during a 500-year MRP hurricane wind event (Table 5.4.10-11). Furthermore, Hazus estimated damages are summarized by general occupancy classes in Table 5.4.10-12. Hazus estimates that all the damages caused by severe wind will occur to residential structures in the county for the 500-year MRP wind events, causing approximately $41,265 in damages. These cumulative

Attachment: 20-Section-5.4.10-Sev-Storm-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

damages are minute, which accounts for the difference in number of buildings and cost of damages between occupancy classes.

Table 5.4.10-10. Description of Damage Categories

Qualitative Damage Description	Roof Cover Failure	Window Door Failures	Roof Deck	Missile Impacts on Walls	Roof Structure Failure	Wall Structure Failure
No Damage or Very Minor Damage Little or no visible damage from the outside. No broken windows, or failed roof deck. Minimal loss of roof over, with no or very Limited water penetration.	≤2%	No	No	No	No	No
Minor Damage Maximum of one broken window, door or garage door. Moderate roof cover loss that can be covered to prevent additional water entering the building. Marks or dents on walls requiring painting or patching for repair.	>2% and ≤15%	One window, door, or garage door failure	No	<5 impacts	No	No
Moderate Damage Major roof cover damage, moderate window breakage. Minor roof sheathing failure. Some resulting damage to interior of building from water.	>15% and ≤50%	> one and ≤ the larger of 20% & 3	1 to 3 panels	Typically 5 to 10 impacts	No	No
Severe Damage Major window damage or roof sheathing loss. Major roof cover loss. Extensive damage to interior from water.	>50%	> the larger of 20% & 3 and ≤50%	>3 and ≤25%	Typically 10 to 20 impacts	No	No
Destruction Complete roof failure and/or failure of wall frame. Loss of more than 50% of roof sheathing.	Typically >50%	>50%	>25%	Typically >20 impacts	Yes	Yes

Impact on Critical Facilities

Critical facilities are at risk of being impacted by high winds associated with structural damage or falling tree limbs/flying debris, which can result in the loss of power. Power loss can greatly impact households, business operations, public utilities, and emergency personnel. For example, vulnerable populations in Erie County are at risk if power loss results in interruption of heating and cooling services, stagnated hospital operations, and potable water supplies. Emergency personnel such as police, fire, and emergency medical services (EMS) will not be able to effectively respond in a power loss event to maintain the safety of its citizens.

Hazus estimates the probability that critical facilities (i.e., medical facilities, fire/EMS, police, emergency operation centers [EOC], schools, and user-defined facilities such as shelters and municipal buildings) may sustain damage as a result of the 100-year or 500-year MRP hurricane wind events. Additionally, Hazus estimates the loss of use for each facility in number of days. Overall, Hazus estimates that none of the critical facilities in Erie County are estimated to experience damage or loss of functionality due to a 100-year or a 500-year MRP hurricane wind event.

Impact on Economy

Severe storm events can have short- and long-lasting impacts on the economy. When a business is closed during storm recovery, there is lost economic activity in the form of day-to-day business and wages to employees.

Attachment: 20-Section-5.4.10-Sev-Storm-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Overall, economic impacts include the loss of business function (e.g., tourism, recreation), damage to inventory, relocation costs, wage loss, and rental loss due to the repair/replacement of buildings.

Impacts to transportation lifelines affect both short-term (e.g., evacuation activities) and long-term (e.g., day-to-day commuting and goods transport) transportation needs. Utility infrastructure (power lines, gas lines, electrical systems) could suffer damage and impacts can result in the loss of power, which can impact business operations and can impact heating or cooling provision to the population.

Hazus estimates the total economic loss associated with the 100-year and 500-year MRP hurricane wind events (direct building losses and business interruption losses). Direct building losses are the estimated costs to repair or replace the damage caused to the building. This is reported in the "Impact on General Building Stock" section discussed earlier. Business interruption losses are the losses associated with the inability to operate a business because of the wind damage sustained during the storm or the temporary living expenses for those displaced from their home because of the event. Hazus estimates that there would be $55,020 in building and content losses in the event of a 500-year MRP wind event.

Debris management can be costly and may also impact the local economy. Hazus estimates the amount of building and tree debris that may be produced as a result of the 100-year and 500-year MRP hurricane wind events. Because the estimated debris production does not include flooding, this is likely a conservative estimate and may be higher if multiple impacts occur. According to the Hazus Hurricane User Manual, estimates of weight and volume of eligible tree debris consist of downed trees that would likely be collected and disposed at public expense. Hazus estimates that the 100-year and 500-year MRP hurricane wind event will not cause any debris for Erie County.

Impact on the Environment

The impact of severe weather events on the environment varies, but researchers are finding that the long-term impacts of more severe weather can be destructive to the natural and local environment. National organizations such as USGS and NOAA have been studying and monitoring the impacts of extreme weather phenomena as it impacts long-term climate change, streamflow, river levels, reservoir elevations, rainfall, floods, landslides, erosion, etc. (USGS 2020). For example, severe weather that creates longer periods of rainfall can erode natural banks along waterways and degrade soil stability for terrestrial species. Tornadoes can tear apart habitats, causing fragmentation across ecosystems. Researchers also believe that a greater number of diseases will spread across ecosystems because of impacts that severe weather and climate change will have on water supplies (NOAA 2019). Overall, as the physical environment becomes more altered, species will begin to contract or migrate in response, which may cause additional stressors to the entire ecosystem within Erie County.

Cascading Impacts on Other Hazards

Severe weather events and severe wind events can escalate the impacts of flooding and utility failure. Severe winds can be destructive to the functionality of utilities by breaching power lines and disconnecting the utility systems. Severe weather may carry extreme rainfall that could exacerbate flooding. More information about flooding and utility failure can be found in Section 5.4.6 and Section 5.4.12 of this HMP, respectively.

Future Changes that May Impact Vulnerability

Understanding future changes that effect vulnerability in the county can assist in planning for future development and ensure establishment of appropriate mitigation, planning, and preparedness measures. Changes in the natural environment and built environment and how they interact can also provide insight about ways to plan.

Attachment: 20-Section-5.4.10-Sev-Storm-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Projected Development

Any areas of growth could be potentially impacted by the severe storm hazard because the entire county is exposed and vulnerable to the wind hazard associated with severe storms. However, due to increased standards and codes, new development may be less vulnerable to the severe storm hazard compared to the aging building stock in the county. Please refer to Section 4 and Section 9 for additional information regarding the areas targeted for future growth and development in the county.

Projected Changes in Population

According to the U.S. Census Bureau, the population in Erie County has increased by a negligible amount between 2010 and 2019 (U.S. Census Bureau 2020). Estimated population projections provided by the Cornell Program on Applied Demographics indicates that the county's population will grow overall up to 2040, resulting in a projected population of 945,891 persons. (Cornell Program on Applied Demographics 2017). While fewer people will reside in the county, those who remain are still vulnerable to severe weather and severe wind events. Section 4, County Profile presents additional discussion on population trends.

Climate Change

As displayed in Figure 5.4.10-10, the entire State of New York is projected to experience an increase in the frequency and severity of extreme storms and rainfall. Major clusters of summertime thunderstorms in North America will grow larger, more intense, and more frequent later this century in a changing climate, unleashing far more rain and posing a greater threat of flooding across wide areas (NASA 2013). Section 5.4.6, Flood, includes a discussion related to the impact of climate change due to increases in rainfall. An increase in storms will produce more wind events and may increase tornado activity. Additionally, an increase in temperature will provide more energy to produce storms that generate tornadoes (NASA 2013). With an increased likelihood of strong winds and tornado events, all the county's assets will experience additional risk for losses as a result of extreme wind events.

Changes in Vulnerability Since the 2015 HMP

Since the 2015 HMP analysis, population statistics have been updated using the 5-Year 2015-2019 American Community Survey Population Estimates (American Community Survey 2019). The general building stock was also established using RS Means 2020 building valuations that estimated replacement cost value for each building in the inventory. Additionally, a critical facility dataset was provided from the county. The updated building stock inventory was imported into Hazus v4.2 to complete a hurricane wind analysis for the 100-year and 500-year MRP hurricane wind event.

Overall, this vulnerability assessment uses a more accurate and updated building inventory than that used in the 2015 HMP. This information provides more accurate exposure and potential loss estimates for Erie County.

Attachment: 20-Section-5.4.10-Sev-Storm-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

5.4.11 Severe Winter Storm

The following section provides the hazard profile (hazard description, location, extent, previous occurrences and losses, probability of future occurrences, and impact of climate change) and vulnerability assessment for the severe winter storm hazard for the Erie County Hazard Mitigation Plan (HMP).

5.4.11.1 Hazard Profile

Hazard Description

A winter storm is a weather event in which the main types of precipitation are snow, sleet, or freezing rain. They can be a combination of heavy snow, blowing snow, and dangerous wind chills. According to the National Oceanic and Atmospheric Administration (NOAA) National Severe Storms Laboratory (NSSL), the three basic components needed to make a winter storm include the following:

- Below freezing temperatures (cold air) in the clouds and near the ground to make snow and ice.
- Lift, something to raise the moist air to form clouds and cause precipitation, such as warm air colliding with cold air and being forced to rise over the cold dome or air flowing up a mountainside (oleographic lifting).
- Moisture to form clouds and precipitation, such as air blowing across a large lake or the ocean (NOAA-NSSL n.d.).

In Erie County, winter storms include blizzards, snowstorms, sleet, freezing rain, and ice storms. Extreme cold temperatures and wind chills are associated with winter storms. Important issues associated with a severe winter storm in the planning area include the following:

- Older building stock in Erie County might be more vulnerable to the aftermath of a winter storm event. Heavy snow loads on the roofs of buildings might not be able to withstand the extra weight.
- Ice and freezing temperatures can lead to frost heaving, damaging roads, bridges, buildings, home foundations, and railroad tracks.
- The impacts of drought and invasive species can lead to dead or dying trees. These trees are more susceptible to falling during winter storm events from the weight of snow and ice, causing power outages, closed roadways, and damage to buildings and property.
- Downed power lines from the weight of snow and ice lead to power outages, leaving many homes without a source of heat.
- Loss of economic activity when travel is restricted.

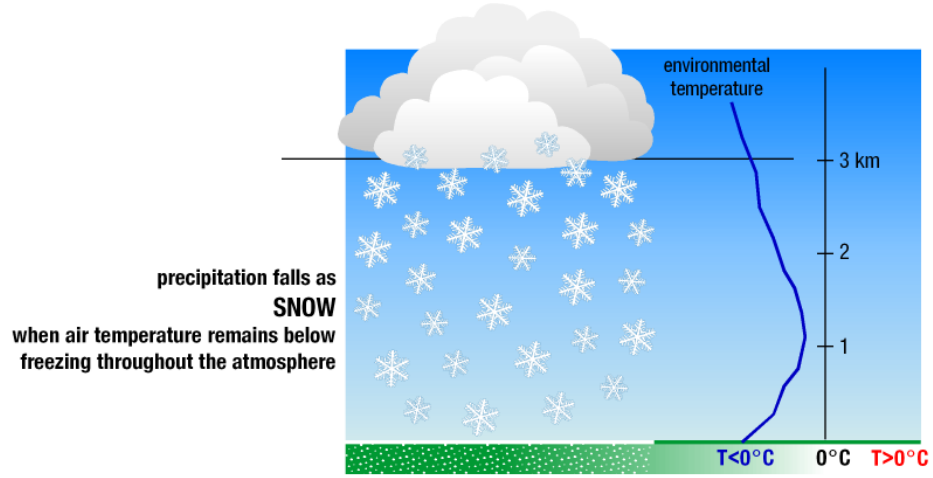
Blizzards

A blizzard is a winter snowstorm with sustained or frequent wind gusts of 35 miles per hour (mph) or more, accompanied by falling or blowing snow reducing visibility to or below 0.25 mile. These conditions must be predominant over a 3-hour period to be considered a blizzard. Extremely cold temperatures are often associated with blizzard conditions but are not a formal part of the definition. The hazard created by the combination of snow, wind, and low visibility significantly increases with temperatures below 20 °F. A severe blizzard is categorized as having temperatures near or below 10 °F, winds exceeding 45 mph, and visibility reduced by snow to near 0 mile. Storm systems powerful enough to cause blizzards usually form when the jet stream dips far to the south, allowing cold air from the north to clash with warm air from the south (The Weather Channel 2012).

Heavy Snow

According to the National Snow and Ice Data Center (NSIDC), snow is precipitation in the form of ice crystals. It originates in clouds when temperatures are below the freezing point (32 °F) and water vapor in the atmosphere condenses directly into ice without going through the liquid stage. Once an ice crystal has formed, it absorbs and freezes additional water vapor from the surrounding air, growing into snow crystals or a snow pellet, which then falls to the earth. Snow falls in different forms: snowflakes, snow pellets, or sleet. Snowflakes are clusters of ice crystals that form from a cloud. Figure 5.4.11-1 depicts snow creation.

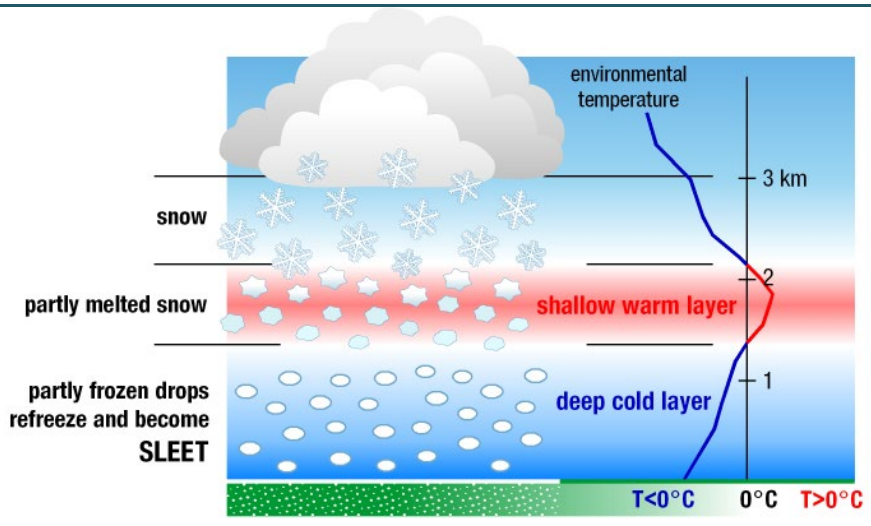
Figure 5.4.11-1. Snow Creation



Source: NOAA-NSSL 2015

Snow pellets are opaque ice particles in the atmosphere. They form as ice crystals fall through super-cooled cloud droplets, which are below freezing but remain a liquid. The cloud droplets then freeze to the crystals. Sleet is made up of drops of rain that freeze into ice as they fall through colder air layers. They are usually smaller than 0.30 inch in diameter (NSIDC 2013). Figure 5.4.11-2 depicts sleet creation.

Figure 5.4.11-2. Sleet Creation



Source: NOAA-NSSL 2015

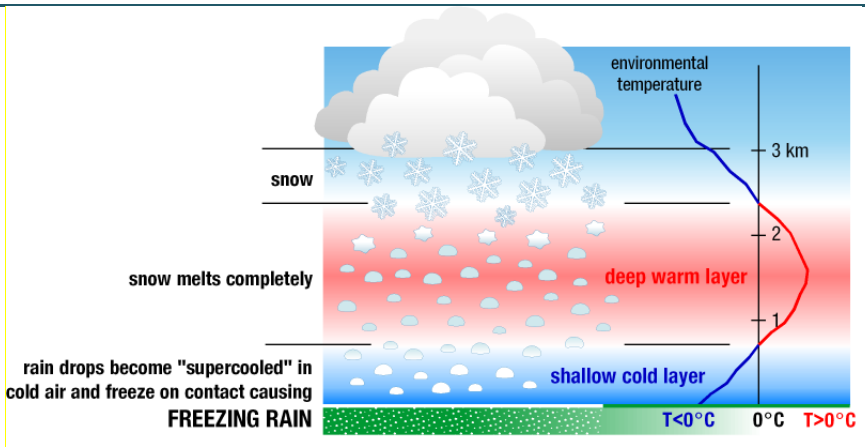
Attachment: 21-Section-5.4.11-Sev-Winter-Storm-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

Attachment: 21-Section-5.4.11-Sev-Winter-Storm-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

Ice Storms

An ice storm describes those events when damaging accumulations of ice are expected during freezing rain situations. Significant ice accumulations typically are accumulations of 0.25 inch or greater (National Weather Service [NWS] 2013). Heavy accumulations of ice can bring down trees, power lines, utility poles, and communication towers. Ice can disrupt communications and power for days. Even small accumulations of ice can be extremely dangerous to motorists and pedestrians (NWS 2008). Figure 5.4.11-3 shows the process of freezing rain creation.

Figure 5.4.11-3. Freezing Rain Creation



Source: NOAA-NSSL 2015

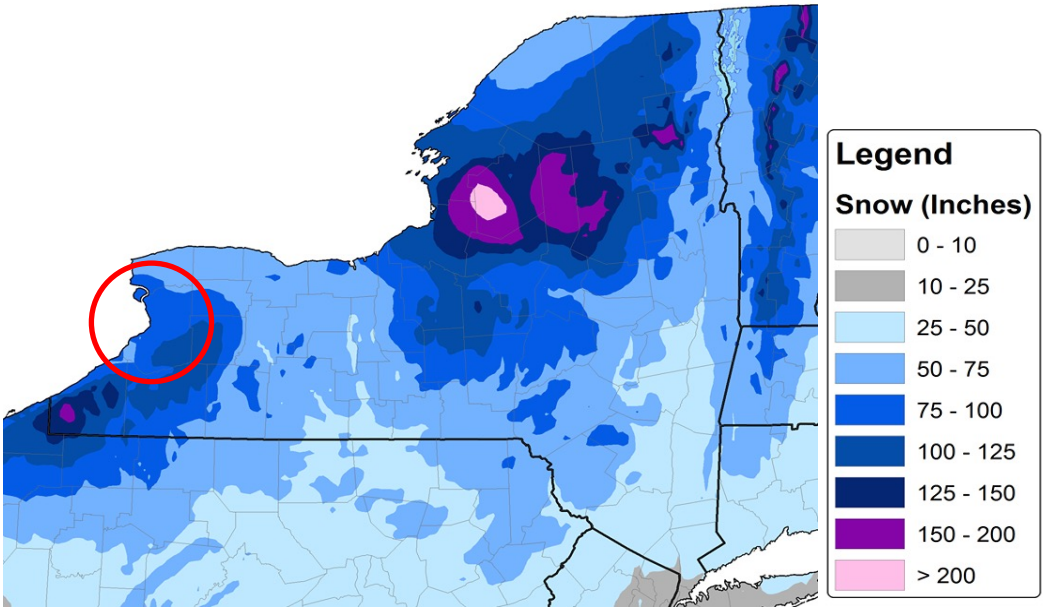
Location

Portions of northern Erie County are located within the snowbelt, a region near the Great Lakes where lake-effect snow is very common. Most of the severe winter storms in Erie County result from lake-effect snow from Lake Erie. Lake-effect snow is produced when cold winds move across Lake Erie (primarily from west–to–east, generally along the main axis of the lake) picking up water vapor and depositing it as snow on the lake's eastern (leeward) shores. This includes the entirety of Erie County. As a lake gradually freezes over, its ability to produce lake-effect precipitation decreases. Lake-effect snow tends to be most common from November to February. Towns and cities at higher elevations can expect even larger amounts of lake-effect snow. The heaviest lake-effect snows rarely occur right at the shoreline. Lake-effect snows extend further inland for events with higher wind speeds, with the most dramatic effects normally extending up to 70 miles inland. Lake-effect snowfalls tend to be most significant for higher fetches across open, unfrozen water.

Figure 5.4.11-4 provides the historical annual average snowfall in New York State through 2012. The figure shows that Erie County's average snowfall ranges from 25 to 125 inches.

Attachment: 21-Section-5.4.11-Sev-Winter-Storm-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

Figure 5.4.11-4. Average Snowfall in New York State, 1960–2012



Source: *Cornell University, NYSkiBlog.com*
Note: *The red circle indicates the location of Erie County.*

Extent

The magnitude or severity of a severe winter storm depends on several factors, including a region's climatological susceptibility to snowstorms, snowfall amounts, snowfall rates, wind speeds, temperatures, visibility, storm duration, topography, time of occurrence during the day and week (e.g., weekday versus weekend), and time of season.

The extent of a severe winter storm can be classified by meteorological measurements and by evaluating its societal impacts. NOAA's National Climatic Data Center (NCDC) is currently producing the Regional Snowfall Index (RSI) for significant snowstorms that impact the eastern two-thirds of the United States. The RSI ranks snowstorm impacts on a scale from 1 to 5 (Table 5.4.11-1) and is based on the spatial extent of the storm, the amount of snowfall, and the interaction of the extent and snowfall totals with population (U.S. Census Bureau 2000). The NCDC has analyzed and assigned RSI values to over 500 storms since 1900 (NOAA 2015).

Table 5.4.11-1. RSI Ranking Categories

Category	Description	RSI Value
1	Notable	1–3
2	Significant	3–6
3	Major	6–10
4	Crippling	10–18
5	Extreme	18.0+

Source: *NOAA-NCEI 2021*
Note: RSI = Regional Snowfall Index

The NWS operates a widespread network of observation systems, such as geostationary satellites, Doppler radars, and automated surface observing systems that feed into the current state-of-the-art numerical computer

models to provide a look into future weather, ranging from hours to days. The models are then analyzed by NWS meteorologists, who then write and disseminate forecasts (NWS 2013). According to NWS, the magnitude of a severe winter storm can be qualified into five main categories by event type, as listed in Figure 5.4.11-5 (NWS 2018).

Figure 5.4.11-5. Winter Storm Category Thresholds

Heavy Snowstorm	Accumulations of 4 inches or more of snow in a 6-hour period, or 6 inches of snow in a 12-hour period.
Sleet Storm	Significant accumulations of solid pellets that form from the freezing of raindrops or partially melted snowflakes causing slippery surfaces, posing a hazard to pedestrians and motorists.
Ice Storm	Significant accumulation of rain or drizzle freezing on objects (trees, power lines, roadways) as it strikes them, causing slippery surfaces and damage from sheer weight of ice accumulations.
Blizzard	Wind velocity of 35 mph or more, temperatures below freezing, considerable blowing snow with visibility frequently below one-quarter mile prevailing over an extended period.
Severe Blizzard	Wind velocity of 45 mph, temperatures of 10 °F or lower, a high density of blowing snow with visibility frequently measured in feet prevailing over an extended period.

Additionally, the NWS uses winter weather watches, warnings, and advisories, as shown in Figure 5.4.11-6, to help people anticipate what to expect in the days and hours prior to an approaching storm.

Figure 5.4.11-6. Winter Storm Warning Thresholds

Previous Occurrences and Losses

Many sources have provided historical information regarding previous occurrences and losses associated with severe winter storm events in Erie County. According to the NOAA National Centers for Environmental Information (NCEI) Storm Events Database, Erie County experienced 253 winter weather events between 1950 and 2020, including 97 heavy snow events and 97 lake-effect snow events (NOAA NCEI 2021). Table 5.4.11-2 shows these statistics.

Table 5.4.11-2. Severe Winter Events 1950–2020

Hazard Type	Number of Occurrences Between 1950 and 2020	Total Fatalities	Total Injuries	Total Property Damage ($)	Total Crop Damage ($)
Blizzard	8	-	-	$219,000	-
Heavy Snow	97	-	1	$33.39 million	-
Ice Storm	4	-	-	$1.59 million	-
Lake-Effect Snow	97	2	1	$158.93 million	-
Winter Storm	47	-	-	$960,000	-
Winter Weather	-	-	-	-	-
TOTAL	**253**	**2**	**2**	**$195.1 million**	**-**

FEMA Disaster Declarations

Between 1954 and 2020, Federal Emergency Management Agency (FEMA) included New York State in 22 winter storm-related major disaster (DR) or emergency (EM) declarations classified as one or a combination of the following disaster types: severe winter storm, snowstorm, snow, ice storm, winter storm, blizzard, and flooding. Generally, these disasters cover a wide region of the State; therefore, they may have impacted many counties. Erie County was included in 10 of these declarations (Table 5.4.11-3).

Table 5.4.11-3. FEMA Major Disasters and Emergency Declarations in Erie County

FEMA Declaration Number	Date(s) Of Event	Declaration Date	Incident Type	Event Title

USDA Disaster Declarations

The Secretary of Agriculture from the U.S. Department of Agriculture (USDA) is authorized to designate counties as disaster areas to make emergency loans to producers suffering losses in those counties and in counties that are contiguous to a designated county. Between 2012 and 2020, Erie County was included in three USDA declarations related to severe winter weather, mainly involving freezes.

- S3886 - 2015 Frost, Freeze, and Excessive Snow
- S3666 - 2014 Freezing
- S3672 - 2014 Freezing

The USDA crop loss data provide another indicator of the severity of previous events. Additionally, crop losses can have a significant impact on the economy by reducing produce sales and purchases. Such impacts may have long-term consequences, particularly if crop yields are low the following years as well. USDA records indicate that Erie County has experienced crop losses from severe winter storm events. Table 5.4.11-4 provides details regarding crop losses in Erie County according to USDA records.

Table 5.4.11-4. USDA Crop Losses from Severe Winter Storms in Erie County (2014–2019)

Year	Crop Type	Cause of Loss	Losses
2014	Wheat, grapes, soybeans	Freeze, cold winter, cold wet weather	$1.8 million
2015	Wheat, grapes, soybeans, corn	Freeze, cold winter, cold wet weather	$927,000
2016	Oats, grapes	Frost, cold wet weather	$447,000
2017	Corn, grapes	Cold wet weather, frost	$190,000

Attachment: 21-Section-5.4.11-Sev-Winter-Storm-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

Year	Crop Type	Cause of Loss	Losses
2018	Grapes	Cold winter, freeze	$1.1 million
2019	Wheat, corn, grapes, soybeans	Cold winter, cold wet weather	$2.1 million

Previous Events

In Erie County, severe winter snow and ice storms are considered normal and expected. Winter storms and ice storms typically occur from late October until mid-April in the planning area; peak months for these events for Erie County and its jurisdictions are generally December through March. Table 5.4.11-5 identifies known severe winter storm events that impacted Erie County between 2014 and 2020 and included events where damages exceeded $25,000. Detailed information on damages and impacts to each municipality are provided in Section 9, Jurisdictional Annexes.

Attachment: 21-Section-5.4.11-Sev-Winter-Storm-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

Attachment: 21-Section-5.4.11-Sev-Winter-Storm-093021 (RES-2022-375 : Authorizing Adoption of the

Table 5.4.11-5. Severe Winter Storm Events in Erie County, 2016–2020

Dates of Event	Event Type	FEMA Declaration Number	County Designated?	Event Details
1/12/2016	Lake-Effect Snow	-	-	This was the 5th lake event that impacted Erie County in 2016. In the City of Buffalo, between 3 and 6 inches fell through January 13th, with a total of 12 inches by the end of the storm. The county had approximately $25,000 in property damage from this event.
11/19/2016	Lake-Effect Snow	-	-	A strong cold front resulted in lake-effect rain mixed with wet snow developing off Lake Erie near Buffalo, changing to all snow across the higher terrain south of the city. Approximately $25,000 in damage was reported from the storm.
1/4/2017	Lake-Effect Snow	-	-	This lake-effect snow event was a long duration, high impact event; one that snarled traffic across the Buffalo Southtowns Thursday evening and ultimately produced 3 to 4 feet of snow east of Lake Erie and Lake Ontario. The county had approximately $28,000 in damages from the event.
3/13/2017	Winter Storm	-	-	Snowfall records were set at Buffalo and Rochester. Many flights in and out of Buffalo and Rochester were cancelled. The state enacted a travel ban on tractor trailers on the major interstates. The National Guard was called on to assist in snow removal in some locations. The county reported $50,000 in damages from the event.
12/11/2017	Lake-Effect Snow	-	-	A general snow across the region was enhanced by the Great Lakes before transitioning to lake-effect snow bands east and southeast of the lakes. The county reported $30,000 in damages from the event.
12/15/2017	Lake-Effect Snow	-	-	Cold air crossing the relatively warm waters of Lakes Erie and Ontario resulted in lake-effect snows. The county reported $30,000 in damages from the event.
12/24/2017	Lake-Effect Snow	-	-	Lake-effect snow developed early Christmas morning and continued continuously for about 72 hours before diminishing late in the day on Wednesday the 27th. ‖Off Lake Erie, the heaviest lake-effect snows with this event were mainly confined to the classic snow belt directly east of Lake Erie due to the predominate westerly flow. The county experienced $45,000 in damages.
12/29/2017	Lake-Effect Snow	-	-	Tea kettle bands of lake-effect snow developed offshore over Lake Erie and Lake Ontario for an extended period of time prior to moving onshore, first on Lake Erie and eventually on Lake Ontario. Off Lake Erie, the tea kettle lake-effect snow moved onshore from Ripley all the way to South Buffalo. The county reported $40,000 in damages from the event.
1/2/2018	Blizzard	-	-	This storm was a rare lake-effect blizzard, producing a period of blizzard conditions northeast of Lakes Erie and Ontario. With wind

Table 5.4.11-5. Severe Winter Storm Events in Erie County, 2016–2020

Dates of Event	Event Type	FEMA Declaration Number	County Designated?	Event Details
				gusts of 40 to 50 mph northeast of Lakes Erie and Ontario. |. The county experienced $100,000 in damages.
1/12/2018	Winter Storm	-	-	A developing winter storm brought first a wintry mix of precipitation during the evening of the 12th and then heavy snow through the morning of the 13th. Once the precipitation changed to snow, the heavy snow fell at 1–2 inches an hour during the overnight hours. The county experienced $25,000 damage in the event.
3/1/2018	Winter Storm	-	-	A weak low pressure strengthened as it moved across Pennsylvania and merged with a low along the eastern coast. The storm brought a blanket of heavy, wet snow across the entire region from late afternoon on the first through the late morning through early afternoon of the second. The county experienced $70,000 in damages from the event.

Sources: *FEMA 2020; NOAA-NCEI 2020; SPC 2021*

- *Because of the large number of reported storms, included here are only those storms that caused more than $25,000 in damage*

Note: *Many sources were consulted to provide an update of previous occurrences and losses; event details and loss/impact information may vary and has been summarized in the above table. Due to the large number of winter storm events in the NOAA-NCEI archive, only winter storm events over $10K in property damages were included.*

Climate Change Projections

Each region in New York State, as defined by ClimAID: The Integrated Assessment for Effective Climate Change in New York State (ClimAID), has attributes that will be affected by climate change. Erie County is part of Region 1 Western New York and Great Lakes Plains. Some of the issues in this region that are affected by climate change include the dairy and agricultural economy, milk and crop production losses projected, increased flooding in major rivers and streams, and given the county's relative location, the county will experience some of the first impacts from invasive species moving north (New York State Energy Research and Development Authority [NYSERDA] 2014).

Per Middle Range predictions, temperatures are expected to increase throughout the state, by 4.3 to 6.3 °F by the 2050s and 5.7 to 9.6 °F by the 2080s. Annual average precipitation is projected to increase from 4 percent to up to 10 percent by the 2050s, and from 4 percent to up to 13 percent by the 2080s. By the end of the century, the greatest increases in precipitation are projected to be in the northern parts of the state. Although seasonal projections are less certain than annual results, this additional precipitation will most likely occur during the winter months. However, with temperatures rising, some of the increased winter precipitation may fall as rain as opposed to snow. In Region 1, the number of days with temperature below 32°F is projected to drop from a current average of 133 days below 32 degrees to as few as 99 such days in the 2080s, reducing the likelihood of precipitation falling as snow.

New York State is already experiencing the effects of climate change during the winter season. Annual ice cover has decreased 71 percent on the Great Lakes since 1973. This decrease may lead to increased lake-effect snow in Erie County in the next two decades through greater moisture availability. By mid-century, however, lake-effect snow will generally decrease as temperatures below freezing become less frequent (NYSERDA 2014). Winter snow cover is decreasing, and spring weather is seen, on average, about one week earlier than a few years ago. Night-time temperatures are measurably warmer, even during the colder months (NYSDEC n.d.). Overall winter temperatures in New York State are almost 5 °F warmer than in 1970 (NYSDEC n.d.). NYS has seen a decrease in the number of cold winter days (below 32 °F) and can expect to see a decrease in snow cover by as much as 25 to 50 percent by the end of the next century. The lack of snow cover may jeopardize winter sport businesses offering skiing, snowmobiling, and other types of winter recreation. Natural ecosystems will be affected by the changing snow cover (Cornell University College of Agriculture and Life Sciences 2011).

Probability of Future Occurrences

Table 5.4.11-6 summarizes data regarding the probability of occurrences of severe winter storm events in Erie County based on the historic record. Heavy snow events are the most common in Erie County, followed by winter storms. The information used to calculate the probability of occurrences is based solely on NOAA-NCEI storm events database results.

Table 5.4.11-6. Probability of Future Occurrence of Severe Winter Weather Events

Hazard Type	Number of Occurrences Between 1950 and 2020	% Chance of Occurrence in Any Given Year
Blizzard	8	11.3%
Heavy Snow	97	100%
Ice Storm	4	5.6%
Lake-Effect Snow	97	100%
Winter Storm	47	66.2%
Winter Weather	0	0%
Total	**253**	**100%**

Source: NOAA-NCEI 2020

Note: Disaster occurrences include federally declared disasters since the 1950 Federal Disaster Relief Act (Public Law 81-875) and selected severe winter storm events since 1996. Due to limitations in data, not all severe winter storm events occurring between 1950 and 1996 are accounted for in the tally of occurrences. As a result, the number of hazard occurrences is underestimated.

Based on historical data from NYSERDA, it is expected that the following will occur at least once per 100 years:

- Up to 4 inches of freezing rain in the ice band near central New York State, of which between 1–2 inches of accumulated ice will occur over a 24-hour period.
- Up to 2 feet of accumulated snow in the snow band in northern and western New York State over a 48-hour period (NYSERDA 2011).

In Section 5.3 of this HMP, the identified hazards of concern for Erie County were ranked. The probability of occurrence, or likelihood of the event, is one parameter used for hazard rankings. Based on historical records and input from the Planning Committee, the probability of occurrence for severe winter storms in the county is considered 'frequent' (event has a 100-percent annual probability and may occur multiple times per year).

5.4.11.2 Vulnerability Assessment

To understand risk, a community must evaluate what assets are exposed or vulnerable in the identified hazard area. For the severe winter storm hazard, all of Erie County has been identified as the hazard area. Therefore, all assets in the county (population, structures, critical facilities, and lifelines), as described in Section 4 (County Profile), are vulnerable to a winter storm event.

Impact on Life, Health, and Safety

The entire population of Erie County (919,355 people) is exposed to severe winter storm events (American Community Survey 2018). The homeless and elderly are considered most susceptible to this hazard. The elderly are considered susceptible to this hazard due to their increased risk of injuries and death from falls and overexertion and/or hypothermia from attempts to clear snow and ice. According to the 2019 American Community Survey (ACS) 5-Year estimate, there are 161,744 persons over 65 years old that reside in the county that are considered vulnerable to severe winter weather. In addition, severe winter storm events can reduce the ability of these populations to access emergency services.

The homeless and residents below the poverty level may not have access to housing, or their housing could be less able to withstand cold temperatures (e.g., homes with poor insulation and heating supply). Residents with low incomes might not have access to housing, or their housing can be less able to withstand cold temperatures (e.g., homes with poor insulation and heating supply). According to the 2019 American Community Survey (ACS) 5-Year estimate, there are 126,806 low-income persons that are considered vulnerable to severe winter weather. The jurisdiction with the highest concentration of population below the poverty level is the City of Buffalo (29.1-percent of total population in the Borough). Refer to Section 4 (County Profile) that displays the densities of low-income populations in Erie County.

According to the NOAA NSSL, every year, winter weather indirectly and deceptively kills hundreds of people in the U.S., primarily from automobile accidents, overexertion, and exposure (NSSL 2020). Winter storms are often accompanied by strong winds creating blizzard conditions with blinding wind-driven snow, drifting snow, extreme cold temperatures, and dangerous wind chill. They are considered deceptive killers because most deaths and other impacts or losses are indirectly related to the storm. People can die in traffic accidents on icy roads, heart attacks while shoveling snow, or of hypothermia from prolonged exposure to cold. Heavy accumulations of ice can bring down trees and power lines, disabling electric power and communications for days or weeks. Heavy snow can immobilize a region and paralyze a city, shutting down all air and rail transportation and disrupting medical and emergency services. Storms near the coast can cause coastal flooding and beach erosion

Attachment: 21-Section-5.4.11-Sev-Winter-Storm-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

as well as sink ships at sea. The economic impact of winter weather each year is huge with costs for snow removal, damage, and loss of business in the millions (NOAA 2017).

Impact on General Building Stock

The entire general building stock inventory is exposed and vulnerable to the severe winter storm hazard. In general, structural impacts include damage to roofs and building frames rather than building content. Current modeling tools are not available to estimate specific losses for this hazard. As an alternate approach, this plan considers percentage damages that could result from severe winter storm conditions. This allows planners and emergency managers to select a range of potential economic impact based on an estimate of the percent of damage to the general building stock. Table 5.4.11-7. below summarizes the estimated loss based on 1, 5, and 10 percent losses. Given professional knowledge and the currently available information, the potential loss for this hazard is many times considered to be overestimated because of varying factors (building structure type, age, load distribution, building codes in place, etc.). Therefore, the following information should be used as estimates only for planning purposes with the knowledge that the associated losses for severe winter storm events vary greatly.

Table 5.4.11-7. General Building Stock Exposure and Estimated Losses from Severe Winter Storm Events

Jurisdiction	Total Replacement Cost Value (RCV)	1 Percent Exposure/Loss	5 Percent Exposure/Loss	10 Percent Exposure/Loss
Akron (V)	$866,609,574	$8,666,096	$43,330,479	$86,660,957

** Note: Cattaraugus Tribal Territory and Tonawanda Tribal Territory were not included in the above totals, as the two tribes did not participate in this HMP update.*

A specific area that is vulnerable to the severe winter storm hazard is the floodplain. Severe winter storms can cause flooding through blockage of streams or through snowmelt. At-risk residential infrastructures are presented in the flood hazard profile (Section 5.4.5). Generally, losses resulting from flooding associated with severe winter storms should be less than that associated with the 1 percent annual chance flood. Please refer to the Severe Storms hazard profile (Section 5.4.10) for losses resulting from wind.

Impact on Critical Facilities

Full functionality of critical facilities such as police, fire, and medical facilities is essential for response during and after a severe winter storm event. These critical facility structures are largely constructed of concrete and masonry; therefore, they should only suffer minimal structural damage from severe winter storm events. Because power interruption can occur, backup power is recommended. Infrastructure at risk for this hazard includes roadways that could be damaged due to the application of salt and intermittent freezing and warming conditions that can damage roads over time. Severe snowfall requires the clearing of roadways and alerting citizens to dangerous conditions; following the winter season, resources for road maintenance and repair are required.

Heavy snow can immobilize a region and paralyze a city, stranding commuters, stopping the flow of supplies, and disrupting emergency and medical services. Heavy accumulations of ice can bring down trees, electrical wires, telephone poles and lines, and communication towers. Communications and power can be disrupted for days while utility companies work to repair the extensive damage. Even small accumulations of ice may cause extreme hazards to motorists and pedestrians. Bridges and overpasses are particularly dangerous because they freeze before other surfaces (NSSL 2020).

Impact on Economy

The cost of snow and ice removal and repair of roads from the freeze/thaw process can drain local financial resources. Impacts on the economy also include commuter difficulties into or out of the area for work or school. The loss of power and closure of roads prevent commuters from traveling within the county. According to Erie County's 2021 Adopted Budget, the Town/Village Snow Contracts are $5.7 million. This is a 1.5 percent increase from the county's 2020 Adopted Budget.

Attachment: 21-Section-5.4.11-Sev-Winter-Storm-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

Impact on the Environment

Severe winter weather can have a major impact on the environment. Not only does winter weather create changes in natural processes, the residual impacts of a community's methods to maintain its infrastructure through winter weather maintenance may also have an impact on the environment. For example, an excess amount of snowfall and earlier warming periods may affect natural processes such as flow within water resources. Rain-on-snow events can also exacerbate runoff rates with warming winter weather. Consequentially, these flow rates and excess volumes of water can erode banks, tear apart habitat along the banks and coastline, and disrupt terrestrial plants and animals.

Furthermore, chemically based winter maintenance practices have their own effect on the natural environment. Melting snow and ice that carry deicing chemicals onto vegetation and into soils can contaminate the local waterways. Elevated salt levels may hinder vegetation from absorbing nutrients, slowing plant growth (UMass Extension 2020).

Future Changes That May Impact Vulnerability

Understanding future changes that impact vulnerability in the county can assist in planning for future development and ensure that appropriate mitigation, planning, and preparedness measures are in place. Erie County considered the following factors to examine potential conditions that can affect hazard vulnerability:

- Potential or projected development
- Projected changes in population
- Other identified conditions as relevant and appropriate, including the impacts of climate change

Projected Development

Areas targeted for future growth and development have been identified across Erie County (refer to Sections 4 and 9). Any areas of growth could be potentially impacted by the severe winter storm hazard because the entire planning area is exposed and vulnerable. However, due to increased standards and codes, new development may be less vulnerable to the severe winter weather hazard compared with the aging building stock in the county.

Projected Changes in Population

According to the U.S. Census Bureau, the population in Erie County has increased by a negligible amount between 2010 and 2019 (American Community Survey 2019). Estimated population projections provided by the Cornell Program on Applied Demographics indicate that the county's population will increase into 2040, bringing total population to approximately 945,891 persons (Cornell Program on Applied Demographics 2018). Any changes in the density of population can create issues for local residents during evacuation of a severe winter storm event. Furthermore, if the density or number of persons over 65 increases in the county, more persons will be vulnerable to severe winter weather events. Refer to Section 4 (County Profile), which includes a discussion on population trends for the County.

Climate Change

Climate is defined not simply as average temperature and precipitation but also by the type, frequency, and intensity of weather events. Both globally and at the local scale, climate change has the potential to alter the prevalence and severity of extreme events such as winter storms. While predicting changes of winter storm events under a changing climate is difficult, understanding vulnerabilities to potential changes is a critical part of estimating future climate change impacts on human health, society, and the environment (U.S. Environmental Protection Agency [EPA], 2020).

Attachment: 21-Section-5.4.11-Sev-Winter-Storm-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

An increase in the frequency and severity of severe winter storms could result in an increase of snow loads on the county's building stock and infrastructure, putting each building at risk to structural damage. More frequent and severe events also will result in increased resources spent to prepare for and clean-up after an event. However, as winter temperatures continue to rise, climate projections indicate the increase in precipitation is likely to occur during the winter months as rain. Increased rain on snowpack or frozen or saturated soils can lead to increased flooding and related impacts on the county's assets.

Vulnerability Change Since the 2016 HMP

Overall, the county's exposure and vulnerability have not changed, and the entire county will continue to be exposed and vulnerable to severe winter storm events.

Identified Issues

Snow storage has been identified as an issue, particularly after very large snow events. The town would like to dedicate certain areas to snow storage instead of relying upon ad hoc storage at town parks.

Attachment: 21-Section-5.4.11-Sev-Winter-Storm-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

Attachment: 22-Section-5.4.12-Util-Failure-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

5.4.12 Utility Failure

The following sections provide the hazard profile (hazard description, extent, location, previous occurrences and losses, probability of future events, and climate change impacts) and vulnerability assessment for the utility failure hazard for the Erie County Hazard Mitigation Plan (HMP).

5.4.12.1 Hazard Profile

Description

Power failure is defined as any interruption or loss of electrical service caused by disruption of power transmission from accident, sabotage, natural hazards, or equipment failure (also referred to as a loss of power or power outage). A significant power failure is defined as any incident of a long duration, which would require the involvement of the local and/or state emergency management organizations to coordinate provision of food, water, heating, cooling, and shelter.

Widespread power outages can occur without warning or as a result of a natural disaster. Generally, warning times will be short in the case of technological failure, such as a fire at a sub-station, traffic accident, human error, or terrorist attack. In cases where a power failure is caused by natural hazards, greater warning time is possible. For example, high wind events (such as tornadoes and hurricanes) often cause widespread power failure, and are often forecasted before they affect a community. Additionally, severe winter weather conditions (such as ice storms, blizzards, and snowstorms) often cause power failure. These types of incidents are often preceded with warnings allowing power response crews to stage resources to prepare for power failure.

Power failures can lead to secondary hazards as well, leading to negative impacts on the health and safety of residents.

- During periods of extreme heat or extreme cold, vulnerable populations, such as the elderly and medically frail, can be affected and are susceptible to hypothermia or heat stroke. Additionally, power failure can lead to food spoilage, which can have negative impacts on public health.
- A secondary hazard from power failure is a loss of communications capability by first responders, which may in turn have negative impacts on public safety. Power outages can also lead to instances of civil disturbance, including looting.
- Power interruptions at chemical handling plants are of particular concern because of the potential for a chemical spill during restart (U.S. Environmental Protection Agency [EPA] 2001). Chemical spills can also have significant health and environmental impacts.
- Wastewater and potable water utility interruption may occur as a result of a power failure. These critical utilities are essential to community continuity and recovery and interruption of water service may have cascading economic and environmental impacts.
- Power failure may also lead to an increase in traffic accidents because of the lack of traffic control devices, such as stoplights and railroad crossing advisory signals. Power outages lasting a long duration will force law enforcement officials to man traffic control points to prevent accidents.

Location

Power failures in Erie County are usually localized and are frequently the result of a natural hazard event involving high winds or ice storms. Power failure is particularly problematic for homes that are heated with electricity. Widespread power outages during the winter months can directly impact vulnerable populations, such as the elderly and medically frail. According to the 2019 American Community Survey, 29,479 homes

Attachment: 22-Section-5.4.12-Util-Failure-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

across Erie County are heated with electricity (American Community Survey 2019). This represents 7 percent of the total homes in the county. Gas and oil are transmitted through the county primarily by National Fuel Gas Distribution Company, Tennessee Gas, and Empire Pipeline Company.

Wastewater treatment for most municipalities is provided by municipal or private treatment facilities. There are 16 municipal wastewater treatment facilities and 187 pump stations in the county. Municipal wastewater treatment services are provided by wastewater treatment plants, wastewater treatment facilities, and sewage treatment plants. Private wastewater treatment within Erie County includes septic systems and sand filters. Where municipal sewage treatment is not available, on-site septic systems are used. Soil quality in the county is variable, resulting in many parts of the county being unsuitable for on-site wastewater treatment. Undersized or unmaintained on-site septic systems can be an issue, particularly in the drinking watersheds, where exposure and runoff can impair water quality. These wastewater facilities and pump stations are displayed in Figure 4-21 in Section 4, County Profile.

Erie County is served by a variety of communications systems, including traditional land line and cellular service provided by multiple companies, Verizon Wireless and AT&T, plus Sprint, T-Mobile and others offering 3G, 4G, and 4G LTE services (Erie County 2017). Wireless Broadband internet service is provided by Transwave and two predominant wire line broadband companies Verizon and Charter Spectrum (Erie County 2017). The Erie County Broadband Feasibility Study has outlined the development of a county broadband committee, community collaboration efforts, creation and adoption of a "dig once" policy, target broadband infrastructure projects for economic development zones or Erie County Industrial Development Agency focused sites, and development of an Open Access Network (Erie County 2017) . In addition to land line, fiber optic and cellular communications systems, Erie County has an extensive radio communications network that is utilized by emergency services agencies, hospitals, law enforcement, public works, transportation, and other supporting organizations.

The most common sources of potable water within Erie County are municipal and private sources. Private sources of water include drilled wells, driven point wells, and springs. Municipal water supplies (provided by towns and cities) include community water systems, noncommunity water systems, non-transient noncommunity water systems, and water systems regulated as a condition of a "Permit to Operate" issued by the Department of Health. The Erie County Water Authority (ECWA) is responsible for ensuring compliance with treatment, reporting, and water quality standards for all public water systems (ECWA 2019). The New York State Department of Environmental Conservation (NYSDEC) Water Well Information database has begun to document potable water wells as of the year 2000, and currently reports 443 new wells drilled in the county since that date (NYSDEC 2021).

Extent

The extent and severity of a power outage depends on the cause, location, duration, and time of year. It can range from a small, localized event to a countywide power outage. Impacts from an outage can be significant to the county and its residents.

Power failures often result from damage to or electrical hazards within an electric power system. System components include power generation plants, substations, circuits, switches, transformers, power lines, and power poles. Because the varied nature of power outages can range from vehicle accidents to severe weather, utility interruptions can happen at any time.

Power failures lead to the inability to use electric-powered equipment, such as: lighting; heating, ventilation, and air conditioning (HVAC) and necessary equipment; communications equipment (telephones, computers, etc.); fire and security systems; small appliances, such as refrigerators, sterilizers, etc.; and medical equipment. These

types of failures can lead to food spoilage, loss of heating and cooling, basement flooding from sump pump failure, and loss of water from well pump failure.

Previous Occurrences and Losses

Many sources provided power outage information regarding previous occurrences and losses associated with events that caused outages throughout Erie County. With so many sources reviewed for the purpose of this HMP, loss and impact information for many events could vary depending on the source. Therefore, the accuracy of monetary figures discussed is based only on the available information identified during research for this HMP.

Between 1954 and 2020, FEMA included the State of New York in one power outage-related disaster (DR) or emergency (EM) declaration. Generally, these disasters cover a wide region of the State; therefore, they may have impacted many counties. Erie County was included in this disaster (EM-3186 Power Outage).

For this 2022 plan update, power outage events were summarized from 2015 to 2020. Table 5.4.12-1 includes power outage events that occurred between 2013 and 2020. With documentation for New York and Erie County being so extensive, not all sources have been identified or researched. Therefore, Table 5.4.12-1 may not include all events that have occurred throughout the county.

Attachment: 22-Section-5.4.12-Util-Failure-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Attachment: 22-Section-5.4.12-Util-Failure-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie

Table 5.4.12-1. Power Failure Events in Erie County, 2015-2020

Date(s) of Event	Event Type	FEMA Declaration Number (if applicable)	Erie County Designated?	Description
January 4, 2015	High Wind	N/A	N/A	Both broadcast media and law enforcement reported incidences. Monetary property damage totaled $40K across the County. A low pressure tracked from western Lake Erie across far southern Ontario to Quebec and dragged a cold front across the region. Strong winds increased to near 60 mph about 2 to 3 hours after the cold front passage. The strong winds downed trees and wires across western New York. Scattered power outages resulted.
November 12, 2015	High Wind	N/A	N/A	Broadcast media reported power lines down in Erie County with $75K in property damage reported. A strong cold front crossed the region followed by a period of strong winds to the lower parts of Lakes Erie and Ontario. Wind gusts were measured to 60 mph. The winds downed trees and power lines with scattered power outages reported. Several roads were blocked by fallen trees.
July 25, 2016	Thunderstorm Wind Lightning	N/A	N/A	Law enforcement, County Emergency Manager, and broadcast media reported power lines down in Erie County with $49,000 in property damage. Storms first developed along a line from the east end of Lake Erie to the west end of Lake Ontario, which shifted south and east through the morning then pushing east of the region during the early afternoon. The thunderstorm winds downed trees and power lines throughout the region. Several thousand power outages were reported.
August 13, 2016	Thunderstorm Wind	N/A	N/A	Local fire departments reported power lines down in Erie County with $15K in property damage. Thunderstorms developed across the region in a moist unstable air mass. Numerous thunderstorms developed on outflow and lake breeze boundaries. Thunderstorms downed trees and wires throughout the region. Power outages were scattered throughout the region.
September 10, 2016	Thunderstorm Wind	N/A	N/A	Social media, trained spotters, and law enforcement reported power lines down in Erie County with $50K in property damage. Thunderstorms that accompanied a severe cold front produced damaging wind gusts. The winds downed trees and power lines across the region with scattered power outages reported. Several streets were reported blocked and closed by downed trees and wires.
January 4, 2017	High Wind	N/A	N/A	Broadcast media reported power lines down in Erie County with $40K in property damage. Deep cold air building across the region brought strong, gusty winds to the eastern end of Lake Erie. Winds gusted to between 50 and 60 mph. A building collapse occurred in in East Pembroke with no one inside. The strong winds downed trees and power lines. Several structures were damaged by falling trees. Power outages were reported by New York State Electric and Gas and National Grid.
April 14, 2018	Ice Storm	N/A	N/A	Law enforcement reported powerlines down in Erie County with $40K in property damage. Two rounds of mixed winter precipitation moved over the area with warm air aloft overriding a deep layer of cold air at the surface. This resulted in sleet initially that transitioned to freezing rain before temperatures eventually increased above freezing. Several areas saw nearly an inch of sleet combined with around one half of an inch of freezing rain. This resulted in thousands of power outages and substantial tree damage.

Date(s) of Event	Event Type	FEMA Declaration Number (if applicable)	Erie County Designated?	Description
October 31 – November 1, 2019	High Wind, Lakeshore Flood	YES DR-4472-NY	Yes	Official NWS Observations and river/stream gauges relayed data. Erie County had a total of $ 18,300,000 in property damage primarily from lakeshore flooding in downtown Buffalo. A deepening area of consolidated low pressure tracked across the region on Thursday evening, October 31. This system brought recorded breaking Halloween rains, damaging wind gusts, a large Lake Erie seiche. Thousands of power outages occurred across the area, and pervasive wind-related damage closed hundreds of roads and did countless tree damage across a vast swath of the area. Enough damage was done across New York to have a Presidential Disaster Declaration. Heavy rain also brought flooding concerns.

Probability of Future Occurrences

While the probability of future power failure incidents in Erie County is difficult to predict, historical records indicate that significant power failures have occurred as a result of high winds, lightning, winter weather, and technological failures. Data were not readily available on the frequency of smaller power outages across the county; however, it is reasonable to assume that power failure events of shorter duration will continue to occur in the future. In addition, future changes in climate may also impact the frequency and probability of future power failure occurrences.

Section 5.3 provides a ranking of the identified hazards of concern for Erie County. The probability of occurrence, or likelihood of the event, is one parameter used for hazard rankings. Based on historical records and input from the Planning Committee, the probability of occurrence for utility failures in the county is considered *frequent* (hazard event has a 100 percent probability of occurring and may occur multiple times a year), and the probability for major utility failures is considered *occasional* (hazard has a 10 to 100 percent annual probability of occurring), as presented in Table 5.3-1.

Climate Change Impacts

Climate change is beginning to affect both people and resources in New York State, and these impacts are projected to continue and become more significant. Impacts related to increasing temperatures and sea level rise are already evident in the state. The Integrated Assessment for Effective Climate Change in New York State (ClimAID) was undertaken to provide decision makers with information on the state's vulnerability to climate change, and to facilitate development of adaptation strategies informed by both local experience and scientific knowledge (New York State Energy Research and Development Authority [NYSERDA] 2011).

Each region in New York State, as defined by ClimAID, has attributes that will be affected by climate change. Erie County is part of Region 1, Great Lakes Plains. Some characteristics of and issues affecting this region associated with climate change include water temperature related to nuclear powerplant cooling, water availability for hydropower, and high availability of wind power (NYSERDA 2011).

Temperatures are expected to increase throughout the state by 2 ºF to 3.4 ºF by the 2020s, 4.1 °F to 6.8 °F by the 2050s, and 5.3 °F to 10.1 °F by the 2080s. The lower ends of these ranges assume lower greenhouse gas emissions scenarios, and the higher ends assume higher greenhouse gas emissions scenarios. Annual average precipitation is projected to increase from 1 to 8 percent by the 2020s, and from 3 to 12 percent by the 2050s, and from 4 to 15 percent by the 2080s. By the end of the century, the greatest increases in precipitation are projected to be in the northern parts of the state. Although seasonal projections are less certain than annual results, this additional precipitation will most likely occur during the winter months, with the possibility of slightly reduced precipitation projected for the late summer and early fall. Table 5.4.12-2 lists projected precipitation changes within the Great Lake Plains ClimAID Region (NYSERDA 2014).

Table 5.4.12-2. Projected Seasonal Precipitation Change in Region 1, 2020-2100 (% change)

Baseline (1971-2000) 37.0 inches	Low Estimate (10th Percentile)	Middle Range (25th to 75th Percentile)	High Estimate (90th Percentile)
2020s	0%	2 – 7%	8%
2050s	2%	4 – 10%	12%
2080s	1%	4 – 13%	17%
2100	-3%	4 – 19%	24%

Source: NYSERDA 2014

Attachment: 22-Section-5.4.12-Util-Failure-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Annual temperatures throughout New York State have been rising since the start of the 20th century. The state's average temperatures have increased by approximately 0.6 °F since 1970, with winter warming exceeding 1.1 °F per decade. Extreme heat events are likely to increase throughout New York State, and short-duration warm season droughts will become more common.

Climatologists predict an increase in the number and intensity of severe weather events. More storms with higher winds will increase the chance that the power infrastructure will be impacted. Extreme temperatures are predicted to increase as well. During the hot summer months, potential for power overload will escalate as demand for power increases. Additionally, climatologists predict an increase in precipitation, which may lead to more winter weather, thus causing additional power failures.

5.4.12.2 Vulnerability Assessment

To understand risk, a community must evaluate the assets that are exposed or vulnerable within the identified hazard area. For the utility failure hazard, all of Erie County has been identified as the hazard area. Therefore, all assets in the county (population, structures, critical facilities, and lifelines), as described in the County Profile, Section 4, are vulnerable to a utility failure. This section discusses the potential impact of the utility failure hazard on the county.

The entire county is vulnerable to the utility failure hazard. Loss of power can exert serious impacts on the health and welfare of residents, continuity of businesses, and ability of public safety agencies to respond to emergencies. Individuals with medical needs are vulnerable to power failures because medical equipment, such as oxygen concentrators, requires electricity to operate. Elderly residents (persons over 65 years old) are also vulnerable to the effects of power failure, as power failure could expose older residents to extreme heat or extreme cold. According to the 2019 American Community Survey 5-year Population Estimates, 169,007 persons are over 65 years old in the county (American Community Survey 2019). Further, households that rely on electricity to power in-home heating and cooling systems will be exposed to significantly colder or hotter indoor temperatures during a utility failure in the winter and summer months, respectively. Households that use utility gas for home heating will be less vulnerable.

Additionally, during power failure events, water purification systems may not function. Further, populations relying on private wells will not have access to potable water. Many power outages are caused by storm events that can lead to flooding. Without electricity, residents would be unable to pump water from their basements, potentially causing structural and content damage to their homes. Section 5.4.6, Flood, includes a more detailed discussion of the county's vulnerability to the flood hazard.

Data were collected from Erie County and the Planning Partnership. Insufficient data were available to model long-term potential impacts of a utility failure on the county. Over time, additional data will be collected to allow better analysis of this hazard. Available information and a preliminary assessment are provided below.

Impacts on Life, Health, and Safety

For the purposes of this HMP, the entire population in Erie County is considered vulnerable to utility failure events. Section 4 of this HMP, County Profile, includes a summary of population statistics for the county. Utility failures pose potential health impacts including injury and death. Other issues pertaining to power outages include food safety from lack of refrigeration and carbon monoxide poisoning from misuse of generators.

Utility failure is particularly problematic for homes that are heated with electricity. Widespread power outages during the winter months can directly impact vulnerable populations, such as the elderly and medically frail. Individuals with medical needs are vulnerable to power failures because medical equipment, such as oxygen concentrators, requires electricity to operate. The elderly population (persons over 65 years old) is also

Attachment: 22-Section-5.4.12-Util-Failure-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

vulnerable to the effects of power failure, as power failure could expose older residents to extreme heat or extreme cold. There are 169,007 persons over 65 years old in Erie County (American Community Survey 2019).

Furthermore, during power failure events, water purification systems may not function. Populations relying on private wells will not have access to potable water. Additionally, many power outage events are caused by storm events that can lead to flooding. Without electricity, residents would be unable to pump water from their basements, potentially causing structural and content damage to their homes.

Individuals powering their homes with generators are subjected to carbon monoxide poisoning if proper ventilation procedures are not followed. Improperly connected portable generators are capable of "back feeding" power lines, which may cause injury or death to utility works attempting to restore power and may damage house wiring and/or generators (Community Health Care Association of New York State 2020).

Impacts on General Building Stock

All building stock in the county is exposed to the utility interruption hazard. Section 4, County Profile, summarizes the building inventory in Erie County. Impacts sustained from utility interruption are likely to be secondary impacts. Should potable water distribution be reduced or not available, then structures could be at increased risk for structural fire since current fire suppression is dependent on accessing water from hydrants.

Impacts on Critical Facilities

All critical facilities in the county are exposed to the utility interruption hazard. It is essential that critical facilities remain operational during natural hazard events. Backup power is recommended for critical facilities and infrastructure. Loss of power can have serious impacts on the health and welfare of residents, continuity of business, and the ability of public safety agencies to respond to emergencies. Interruption of utility gas or water distribution could also reduce the effectiveness of critical facilities to operate at full capacity.

Impact on Economy

A prolonged power failure in Erie County may impact the county's economy. All roadway systems and supporting resources provide services locally, regionally, nationally, and internationally. Disruption in any of these services would mean that many workers, residents, and travelers would not be able to go where needed.

Power interruptions can cause economic impacts stemming from lost income, spoiled food and other goods, costs to the owners/operators of the utility facilities, and costs to government and community service groups. Interruption of utility gas or potable water distribution could also cause significant economic impacts such as additional costs for bringing in water tenders to maintain fire suppression capabilities; opening additional warming centers should electric and utility gas utility be interrupted to residential areas; and distribution of potable water for public consumption. Significant costs could be associated with reimbursing fire departments from other counties within New York to travel, staff, and maintain water tenders within Erie County during the duration of a water outage event.

Potential modeling of economic impacts from utility interruption would be developed by calculating interruption of service costs derived from a standard value per person per day multiplied out by the number of customers served. This would help to provide an estimate of the impact of the interrupted utility service but may not be representative of the complete economic impact of a prolonged utility interruption. For example, FEMA's benefit-cost analysis (BCA) methodology measures the loss of electrical service on a per-person-per-day-of-lost-service basis for the service area affected. The FEMA BCA Toolkit version 6.0 uses the following standard values to estimate cost of utility usage per person per day (FEMA 2020):

- Electric: $174.00
- Potable Water: $114.00

Attachment: 22-Section-5.4.12-Util-Failure-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

- Wastewater: $58.00

Impact on the Environment

At this time, there are no known impacts to the environment caused by utility failures.

Future Changes that May Impact Vulnerability

Understanding future changes that impact vulnerability in the county can assist in planning for future development and ensuring that appropriate mitigation, planning, and preparedness measures are in place. The county considered the following factors to examine potential conditions that may affect hazard vulnerability:

- Potential or projected development
- Projected changes in population
- Other identified conditions as relevant and appropriate, including the impacts of climate change

Projected Development

Any areas of growth could be potentially impacted by utility failures because the entire county is exposed and vulnerable. However, because of increased standards and codes, new development may be less vulnerable to utility failures compared to the aging building stock in the county. Section 4, County Profile, provides more information about the new development plans for Erie County.

Projected Changes in Population

According to the U.S. Census, the population for Erie County has decreased approximately less than 1 percent between 2010 and 2019 (U.S. Census Bureau 2021). Estimated population projections provided by the 2017 Cornell Program on Applied Demographics indicates that the county's total population will increase to approximately 945,891 residents by 2040 (Cornell University 2017). With the projected estimates, more people will reside in the county resulting in a higher reliance on electric power or more will be living/working out of properties that do not meet existing codes and are at risk of experiencing utility failure events. Section 4, County Profile, provides additional discussion on population trends.

Climate Change

Several implications for climate change are related to the power failure hazard. Providing projections of future climate change for a specific region is challenging. Shorter term projections are more closely tied to existing trends making longer term projections even more challenging. The further out a prediction reaches, the more subject to changing dynamics it becomes.

Climatologists predict an increase in the number and intensity of severe weather events. More storms with higher winds will increase the chance that the power infrastructure will be impacted. Extreme temperatures are predicted to increase as well. During the hot summer months, the potential for power overload will increase as demand for power increases. Additionally, climatologists predict an increase in precipitation, which may lead to more winter weather causing additional power failures and utility interruptions.

Changes in Vulnerability Since the 2015 HMP

Utility failures are a new hazard of concern for Erie County. Since the 2015 analysis, population statistics have been updated using the 5-Year 2015-2019 American Community Survey Population Estimates (American Community Survey 2019). Overall, this vulnerability assessment uses a more accurate and updated building inventory than that used in the 2015 HMP. This information provides more accurate exposure and potential loss estimates for Erie County.

Attachment: 22-Section-5.4.12-Util-Failure-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Attachment: 23-Section-5.4.13-Wildfire-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

5.4.13 Wildfire

This section provides a profile and vulnerability assessment of the wildfire hazard for the Erie County Hazard Mitigation Plan (HMP).

5.4.13.1 Hazard Profile

This section provides information regarding the description, extent, location, previous occurrences and losses, and the probability of future occurrences for the wildfire hazard.

Hazard Description

A wildland fire can be defined as any non-structural fire that occurs in the wildland. Three distinct types of wildland fires have been defined and include naturally occurring wildfire, human-caused wildfire, and prescribed fire. They may be highly destructive and become difficult to control. Wildfires result in the disturbance of forest and brush and destruction of real estate and personal property, and have secondary impacts on other hazards, such as flooding, by removing vegetation and disturbing watersheds.

Wildfires are commonly termed forest fires, brush fires, grass fires, wildland-urban interface (WUI) fires, range fires, or ground fires. Wildfires do not include fires naturally or purposely ignited to manage vegetation for one or more benefits (NYS Division of Homeland Security and Emergency Services [DHSES] 2014). Although destructive fires do not occur annually, the state's fire history shows a cycle of outbreaks that have caused death, property loss, forest destruction, and air pollution (NYS DHSES 2019).

Wildfire in New York State is based on the same science and environmental factors as any wildfire in the world. Fuels, weather, and topography are the primary factors that determine the natural spread and destruction caused by every wildfire. New York State, including Erie County, has large tracts of diverse forest lands, many of which are the result of wildfires.

Wildfires are grouped within three classes: surface fires, ground fires, and crown fires. Surface fires, the most common, burn along the forest floor, moving slowly and killing or damaging trees. Ground fires are usually started during excessively dry periods, and burn on or below the forest floor. Crown fires spread rapidly by wind and move quickly by jumping along tops of trees.

The Federal Emergency Management Agency (FEMA) defines the following four categories of wildfires that occur throughout the United States:

- Wildland fires – fueled almost exclusively by natural vegetation. They typically occur in national forests and parks, where federal agencies are responsible for fire management and suppression.
- Interface or intermix fires – urban/wildland fires in which vegetation and the built-environment provide fuel.
- Firestorms – events of such extreme intensity that effective suppression is virtually impossible. Firestorms occur during extreme weather and generally burn until conditions change or the available fuel is exhausted.
- Prescribed fires and prescribed natural burns – fires that are intentionally set or selected natural fires that are allowed to burn for beneficial purposes (FEMA 1997).

Wildfire Behavior and Fire Ecology

Potential for wildfire and its subsequent development (growth) and severity are controlled by the three factors of topography, fuel, and weather. Climate change is also considered a potential source of influence. These four factors are described below:

- Fuel
  - Lighter fuels (such as grasses, leaves, and needles) quickly expel moisture and burn rapidly, while heavier fuels (such as tree branches, logs, and trunks) take more time to warm and ignite.
  - Snags and hazard trees–especially those that are diseased, dying, or dead—are quickly engulfed and allow fires to spread quickly.
- Weather
  - Strong winds within the vicinity of the flames produce extreme fire conditions. Of particular concern are wind events that potentially persist for longer periods of time, or ones with significant wind speeds, which can sustain and quickly promote the spread of fire through movement of embers or exposure within tree crowns.
  - Spring and summer months, which can experience drought-like conditions extending beyond the normal season, also expand the average fire season. Likewise, the passage of a dry, cold front through the region can result in a sudden increase in wind speeds and a change in wind direction affecting fire spread.
  - Thunderstorm activity, which typically begins with wet storms, turns dry with little or no precipitation reaching the ground as the season progresses.
- Terrain
  - Regional and local topography influence the amount and moisture of fuel.
  - Barriers, such as highways and lakes, can affect the spread of fire.
  - Elevation and slope of landforms affect fire spread; flames move more easily uphill than downhill.
- Changes to Environment
  - Without an increase in summer precipitation (greater than any predicted by climate models), areas susceptible to future burning are very likely to increase.
  - Infestation from insects is also of concern as it may impact forest health. Potential insect populations may increase with warmer temperatures with the potential for infested stressed trees to increase the fuel load.
  - The composition of various tree species will change as species respond uniquely to a changing climate.
  - Wildfires cause both short-term and long-term losses. Short-term losses can include destruction of timber, wildlife habitat, scenic vistas, and watersheds. Long-term effects include smaller timber harvests, reduced access to affected recreational areas, and the destruction of cultural and economic resources and community infrastructure.

Extent

The extent (that is, magnitude or severity) of wildfires depends on weather and human activity. Several tools are available to estimate fire potential, extent, danger, and growth, including the following:

Wildland Fire Assessment System (WFAS) is an internet-based information system that provides a national view of weather and fire potential, including national fire danger, weather maps, and satellite-derived "greenness" maps. It was developed by the Fire Behavior unit at the Fire Sciences Laboratory in Missoula,

Attachment: 23-Section-5.4.13-Wildfire-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Montana, and is currently supported and maintained at the National Interagency Fire Center (NIFC) in Boise, Idaho (U.S. Forest Service [USFS] n.d.).

Each day during the fire season, the WFAS produces national maps of selected fire weather and fire danger components of the National Fire Danger Rating System (NFDRS) (USFS n.d.). Fire Danger Rating levels take into account current and antecedent weather, fuel types, and both live and dead fuel moisture. This information is provided by local station managers (USFS n.d.). Table 5.4.13-1 shows the five fire danger ratings and color codes.

Table 5.4.13-1. Description of Fire Danger Ratings in New York State

Fire Danger Rating and Color Code	Description
Low (L) (Dark Green)	Fuels do not ignite readily from small firebrands; although a more intense heat source, such as lightning, may start fires in duff or punky wood. Fires in open cured grasslands may burn freely a few hours after rain, but woods fires spread slowly by creeping or smoldering, and burn in irregular fingers. There is little danger of spotting.
Moderate (M) (Light Green or Blue)	Fires can start from most accidental causes, but with the exception of lightning fires in some areas, the number of starts is generally low. Fires in open cured grasslands will burn briskly and spread rapidly on windy days. Timber fires spread slowly to moderately fast. The average fire is of moderate intensity, although heavy concentrations of fuel, especially draped fuel, may burn hot. Short-distance spotting may occur, but is not persistent. Fires are not likely to become serious and control is relatively easy.
High (H) (Yellow)	All fine dead fuels ignite readily and fires start easily from most causes. Unattended brush and campfires are likely to escape. Fires spread rapidly and short-distance spotting is common. High-intensity burning may develop on slopes or in concentrations of fine fuels. Fires may become serious and their control difficult unless they are attacked successfully while small.
Very High (VH) (Orange)	Fires start easily from all causes and, immediately after ignition, spread rapidly and increase quickly in intensity. Spot fires are a constant danger. Fires burning in light fuels may quickly develop high-intensity characteristics, such as long-distance spotting and fire whirlwinds when they burn into heavier fuels.
Extreme (E) (Red)	Fires start quickly, spread furiously, and burn intensely. All fires are potentially serious. Development into high-intensity burning will usually be faster and occur from smaller fires than in the very high fire danger class. Direct attack is rarely possible and may be dangerous except immediately after ignition. Fires that develop headway in heavy slash (trunks, branches, and tree tops) or in conifer stands may be unmanageable while the extreme burning condition lasts. Under these conditions, the only effective and safe control action is on the flanks until the weather changes or the fuel supply lessens.

Source: USFS n.d.

The ***Fire Potential Index (FPI)*** is derived by combining daily weather and vegetation condition information and can be used to identify the area's most susceptible to fire ignition. The combination of relative greenness and weather information identifies the moisture condition of the live and dead vegetation. The weather information also lists areas of low humidity, high temperature, and no precipitation to identify areas most susceptible to fire ignition. The FPI enables local and regional fire planners to quantitatively measure fire ignition risk (U.S. Geological Survey [USGS] 2005). FPI maps are provided on a daily basis by the USFS. The scale ranges from 0 (low) to 100 (high). The calculations used in the NFDRS are not part of the FPI, except for a 10-hour moisture content (Burgan et al. 2000).

Fuel Moisture (FM) is a tool that is used to understand the fire potential for locations across the United States. It is a measure of the amount of water in a fuel (vegetation) available to a fire, and is expressed as a percent of the dry weight of that specific fuel. When fuel moisture content is high, fires do not ignite readily, or at all, because heat energy has to be used to evaporate and drive water from the plant before it can burn. When the fuel moisture content is low, fires start easily and will spread. When the fuel moisture

Attachment: 23-Section-5.4.13-Wildfire-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

content is less than 30 percent, that fuel is essentially considered to be dead (known as dead fuels). Dead fuels respond solely to current environmental conditions and are critical in determining fire potential (Burgan et al. 2000).

The ***Keetch-Byram Drought Index (KBDI)*** is a drought index designed for fire potential assessment. It is a number representing the net effect of evapotranspiration and precipitation in producing cumulative moisture deficiency in deep duff and upper soil layers (USFS n.d.). The index increases each day without rain and decreases when it rains. The scale ranges from 0 (no moisture deficit) to 800 (maximum drought possible). The range of the index is determined by assuming that 8 inches of moisture are in a saturated soil that is readily available to the vegetation. For different soil types, the depth of soil required to hold 8 inches of moisture varies. A prolonged drought influences fire intensity, largely because more fuel is available for combustion. The drying of organic material in the soil can lead to increased difficulty in fire suppression (USFS 2016).

The ***Haines Index***, also known as the Lower Atmosphere Stability Index, was developed for fire use. It is used to indicate the potential for wildfire growth by measuring the stability and dryness of the air over a fire. It is calculated by combining the stability and moisture content of the lower atmosphere into a number that correlates well with large fire growth. The stability term is determined by the temperature difference between two atmospheric layers; the moisture term is determined by the temperature and dew point difference. This index has been shown to be correlated with large fire growth on initiating and existing fires where surface winds do not dominate fire behavior. The Haines Index can range between 2 and 6. The drier and more unstable the lower atmosphere is, the higher the index:

- Very Low Potential (2) – moist, stable lower atmosphere
- Very Low Potential (3)
- Low Potential (4)
- Moderate Potential (5)
- High Potential (6) – dry, unstable lower atmosphere (USFS 2016)

The ***Buildup Index (BUI)*** is a number that reflects combined cumulative effects of daily drying and precipitation in fuels with a 10-day time lag constant (North Carolina Forest Service 2007).

Location

According to the U.S. Fire Administration (USFA), the fire problems in the country vary from region to region. This often is a result of climate, poverty, education, demographics, and other causal factors (USFA 2013).

In New York State, the NYSDEC's Division of Forest Protection (Forest Ranger Division) is designated as the state's lead agency for wildfire mitigation. The Forest Ranger Division has a statutory requirement to provide a forest fire protection system for 657 of the 932 jurisdictions throughout New York State. It includes cities and villages and cover 23.5 million acres of land, including all state-owned land outside of the jurisdictions. Figure 5.4.13-1 displays the fire protection areas in New York State. This figure indicates that, as of 2018, a portion of Erie County is not part of the wildfire protection area highlighted in the black circle.

Attachment: 23-Section-5.4.13-Wildfire-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Figure 5.4.13-1. Forest Ranger Division Wildfire Protection Areas

Total State of New York	**31,106,771**	932

Source: NYSDEC 2020. The black oval indicates the location of Erie County.

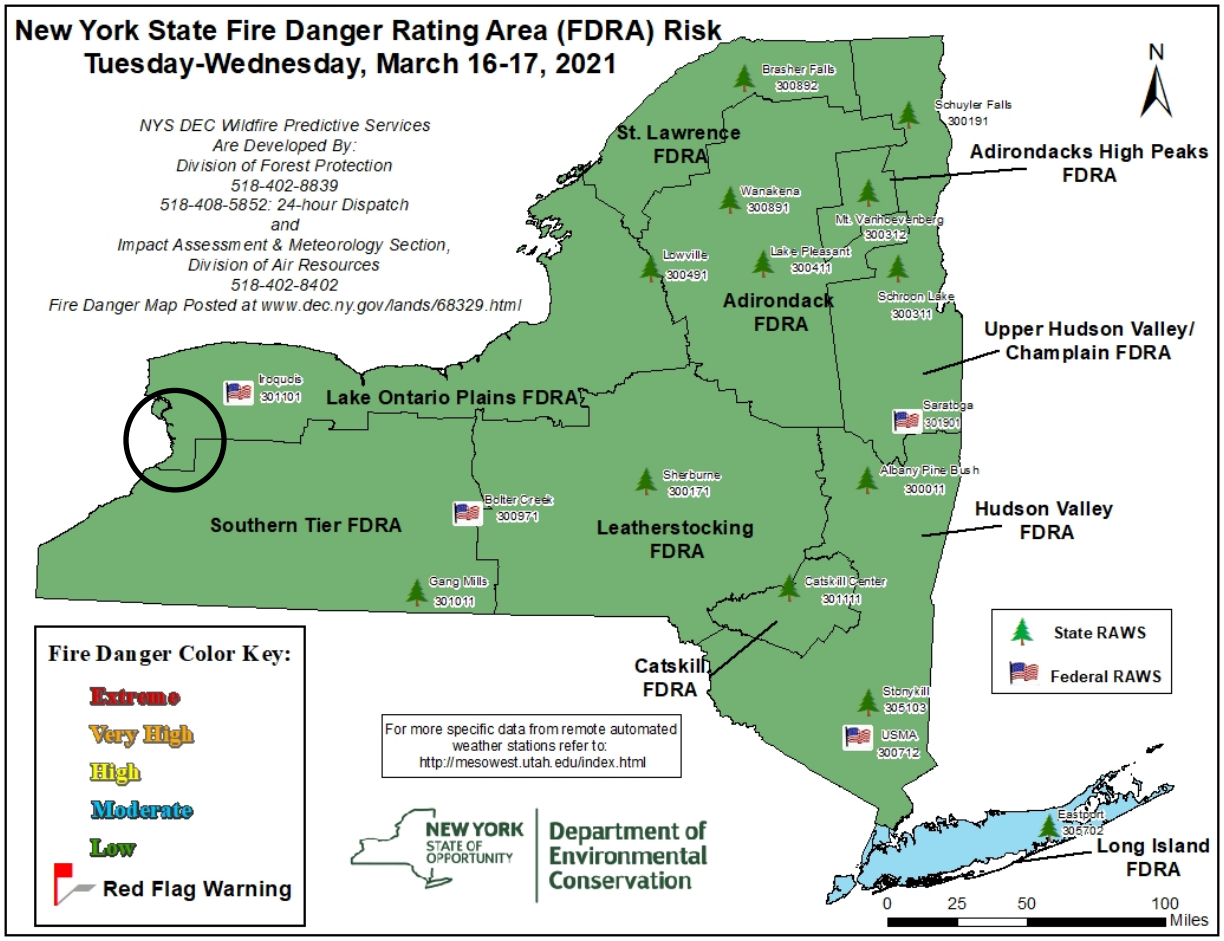
New York State is divided into 10 fire danger rating areas (FDRAs). FDRAs are defined by areas of similar vegetation, climate, and topography in conjunction with agency regional boundaries, National Weather Service (NWS) fire weather hazard areas, political boundaries, fire occurrence history, and other influences. The Forest Ranger Division has fought fires and retained records for more than 125 years. Division records for the years of 1993 to 2017 indicate that rangers suppressed 5,423 wildfires that burned a total of 52,580 acres (NYSDEC 2018). Currently, more than 1,700 fire departments respond to an average of 4,500 wildfires each year. The Forest Ranger Division responds to approximately 3 percent of all wildfires; however, Rangers help contain 33 percent of all wildfire acres (NYSDEC 2018).

Wildfires occur in Erie County. Many areas in the County, particularly those that are heavily forested or contain large tracts of brush and shrubs, are prone to fires (NYSDEC 2018). The Forest Ranger Division/Wildland Fire Protection Area for Erie County is Region 9: Western New York and southern municipalities are specifically identified as fire districts (NYSDEC 2018). The boundaries of the FDRAs do not match the Forest Ranger Division boundaries.

A fire danger rating map is updated daily on the NYSDEC website (http://www.dec.ny.gov/lands/68329.html). The map is developed by information obtained from the Division of Forest Protection and Division of Air Resources (impact assessment and meteorology section). Figure 5.4.13-2 shows the FDRAs in New York State and the current fire danger risk for each area. As indicated by the legend, fire danger can be identified by varying colors and warning areas.

Attachment: 23-Section-5.4.13-Wildfire-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Figure 5.4.13-2. New York State Fire Danger Rating Areas



Source: NYSDEC 2021 Note: The black oval indicates the location of Erie County.

Wildland-Urban Interface in New York State/Erie County

Figure 5.4.13-3 shows the Wildland-Urban Interface divided into two categories: interface and intermix. The WUI Interface hazard area is land that stands between the undeveloped, natural land and developed, urban areas. The WUI Intermix hazard area is an area where human habitation is mixed with areas of flammable wildland vegetation. Intermix areas have more than one house per 40 acres and have more than 50-percent vegetation. Interface areas have more than one house per 40 acres, have less than 50-percent vegetation, and are within 1.5 miles of an area over 1,235 acres that is more than 75-percent vegetated (Stewart et al. 2007). The California Fire Alliance determined that 1.5 miles is the approximate maximum distance that firebrands can be carried from a wildland fire to the roof of a house. Therefore, even structures not within the forest are at risk from wildfire.

Approximately 33.2-percent of the County's land area is within the WUI Intermix hazard area, and 10.6 percent of the land area is within the WUI Interface hazard area.

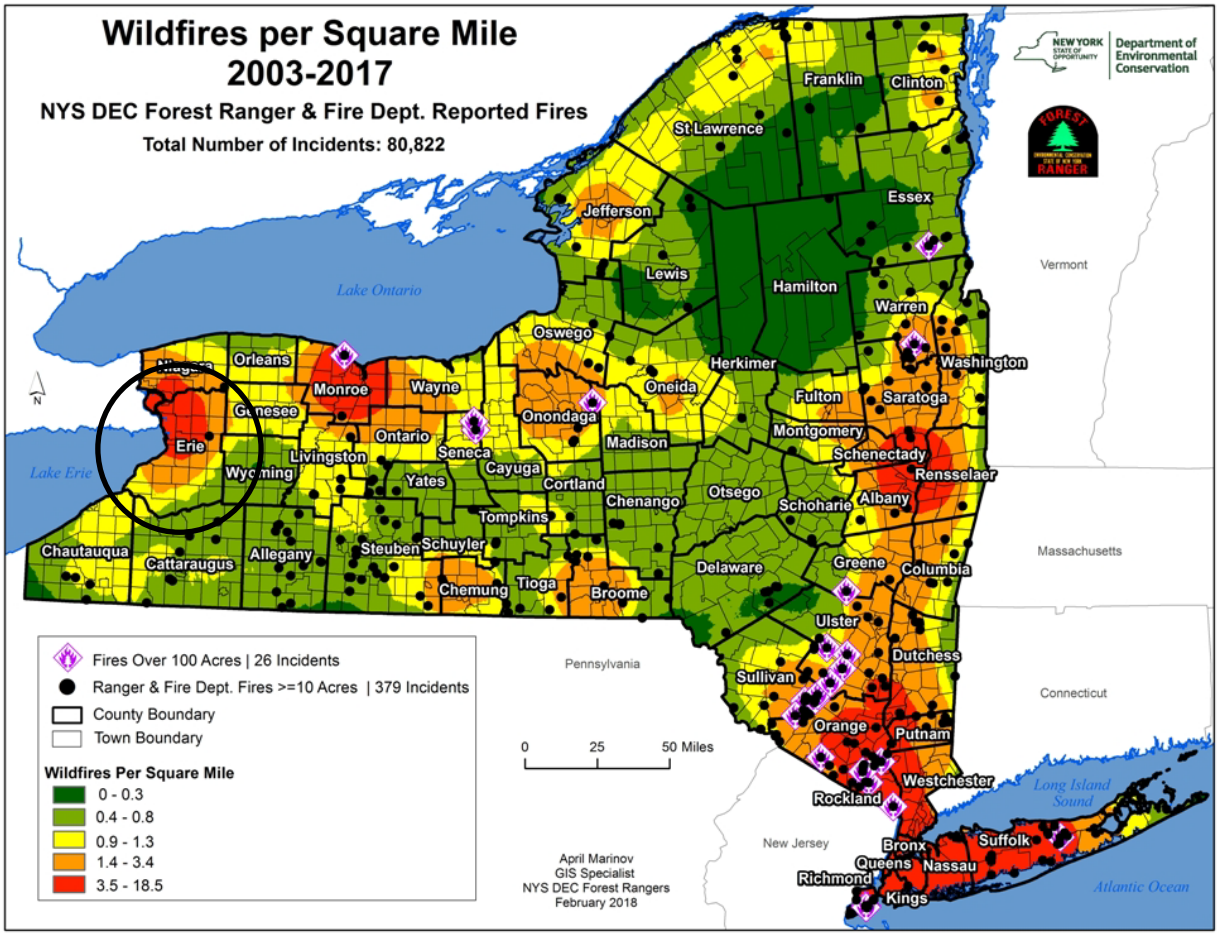
Previous Occurrences and Losses

Only limited historical information was found on previous occurrences and losses associated with wildfires throughout New York State and Erie County. Between 1954 and 2020, NYS was not included in any wildfire-related major disaster (DR) or emergency (EM) declarations (FEMA 2020).

Determinations of wildfire occurrences in New York State are based on two data sources: the New York State Forest Ranger Division and the New York State Office of Fire Prevention and Control (NYS OFP&C). The Forest Ranger Division wildfire occurrence data (1993 through 2017) indicates that 71 percent of wildfires in the state were human caused; the remaining 29 percent resulted from lightning. Regarding human-caused fires, debris burning accounted for 33 percent, incendiary fires accounted for 16 percent, campfires accounted for 16 percent, and smoking accounted for 6 percent (NYSDEC 2018). Figure 5.4.13-4 illustrates occurrences of wildfires in NYS between 2003 and 2017 (the most current data available). This figure reveals occurrences of 0.4 and 18.5 wildfires per square mile from 2003 to 2017 within Erie County municipalities.

Figure 5.4.13-4. Wildfire Occurrences in New York State, 2003-2017



Source: NYSDEC 2018. Note: The black circle indicates the location of Erie County.

Probability of Future Occurrences

The Forest Ranger Division wildfire occurrence data (2003 to 2018) indicates that NYS, including Erie County, is susceptible to wildfires. From March 15 through May 15, 47 percent of all fire department responses to wildfires occurred. Beginning in 2010, NYS enacted revised open burning regulations that ban brush burning

Attachment: 23-Section-5.4.13-Wildfire-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

statewide during this time period. Forest Ranger Division data indicate that this new statewide ban resulted in 74 percent fewer wildfires caused by debris burning in upstate New York from 2010 to 2012. Forest Ranger Division and fire department historical fire occurrence data recorded after the new burn ban regulations were enacted in 2010 will serve as a benchmark for analyses of wildfire occurrence (NYS DHSES 2014).

Nationally, wildfire risk is increasing, and wildfire experts point to the following four reasons:

- The way forests were handled in the past allowed fuel in the form of fallen leaves, branches, and plant growth, to accumulate. This fuel is currently lying around the forest with potential to "feed" a wildfire.
- Increasingly hot, dry weather has occurred and will continue to occur within the United States.
- Weather patterns across the country are changing.
- More homes are built within WUI areas, meaning that homes are built closer to wildland areas where wildfires can occur (NYS DHSES 2014).

Annual wildfires likely will occur throughout Erie County. However, advanced methods of wildfire management and control and better understanding of fire ecosystems should reduce the number of devastating fires in the future (NYS DHSES 2014).

Hazards of concern identified for Erie County were ranked in Section 5.3. Probability of occurrence, or likelihood of the event, is one parameter used for ranking hazards. Based on historical records and input from the Planning Partnership, the probability of occurrence of wildfire within villages, cities, and water authorities are unlikely and could occasionally occur in some towns.

Climate Change Impacts

A gradual change in temperatures will alter the growing environment of many tree species throughout the United States and New York, reducing the growth of some trees and increasing the growth of others. Tree growth and regeneration may be affected more by extreme weather events and climatic conditions than by gradual changes in temperature or precipitation. Warmer temperatures may lead to longer dry seasons and multi-year droughts, creating triggers for wildfires, insects, and invasive species. Increased temperature and change in precipitation will also affect fuel moisture during wildfire season and the length of time wildfires can burn in a given year (U.S. Department of Agriculture [USDA] 2012).

Climate change may also increase the frequency of lightning strikes. A warmer atmosphere holds more moisture, which is one of the key items for triggering a lightning strike. Lightning strikes cause approximately half of the wildfires in the United States. If the frequency of lightning strikes increases, the potential for wildfires from these strikes also increases (Lee 2014). Wildfire incidents are predicted to increase throughout the United States because of climate change, causing at least a doubling of areas burned within the next century (USDA 2012).

Summer temperatures have been increasing across New York State and are expected to continue to rise. New York is currently the eighth fastest warming state in the country, in terms of annual average temperature. By 2050, New York is projected to see a five-fold increase in heat wave days. In the past decade, average summer temperatures have risen by 1 to 2 degrees in most areas of the state. The number of days with maximum temperatures above 95ºF in New York State has been increasing, putting New Yorkers at higher risk of heat-related illness. As a result of climate change, the frequency of extreme temperature events is expected to increase, and such events are associated with increased morbidity and mortality (NYS DHSES 2019).

Temperatures in New York State are warming, with an average rate of warming over the past century of 0.25 °F per decade. Average annual temperatures are projected to increase across New York State by 2 °F to 3.4 °F by the 2020s, 4.1 °F to 6.8 °F by the 2050s, and 5.3 °F to 10.1 °F by the 2080s. By the end of the century, the greatest warming is projected to be in the northern section of the State (NYSERDA 2014). The total number of

Attachment: 23-Section-5.4.13-Wildfire-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

hot days in New York State is expected to increase as this century progresses. The frequency and duration of heat waves, defined as three or more consecutive days with maximum temperatures at or above 90 ˚F, are also expected to increase (Table 5.4.13-2). In contrast, extreme cold events, defined both as the number of days per year with minimum temperature at or below 32 ˚F and those at or below 0 ˚F, are expected to decrease as average temperatures rise (NYSERDA 2011).

Each region within NYS, as defined by the Integrated Assessment for Effective Climate Change in New York State (ClimAID), contains attributes that climate change will affect. Erie County is part of ClimAID Region 1: The Great Lake Plains. In ClimAID Region 1, temperatures are estimated to increase between 3.7 to 7.3 ºF by the 2050s and 4.2 to 12 ºF by the 2080s (baseline of 47.7 ºF) (NYS Energy Research and Development Authority [NYSERDA] 2014). Extreme heat events and heat waves are also projected to increase, as listed in Table 5.4.13-2 below. Prolonged heat waves are likely to generate a greater number of wildfires. Stronger winds from larger storms may lead to more fallen branches for wildfires to consume. Increases in rain and snow events prime forests for fire by supporting growth of more fuel. Drought and warmer temperatures lead to drier forest fuels (NYS DHSES 2014).

Table 5.4.13-2. Extreme Event Projections for ClimAID Region 1

Event Type (2020s)	Low Estimate (10th Percentile)	Middle Range (25th to 75th Percentile)	High Estimate (90th Percentile)
Days over 90 degrees Fahrenheit (°F) - (8 days)	12	14 to 17	19
Number of Heat Waves - (0.7 heat waves)	2	2 to 2	2
Duration of Heat Waves - (4 days)	4	4 to 4	4
Days below 32°F - (133 days)	99	103 to 111	116

Source: NYSERDA 2014

Fire potential depends on climate variability, local topography, and human intervention. Climate change can affect multiple elements of the wildfire system: fire behavior, ignitions, fire management, and vegetation fuels. Hot, dry spells create highest fire risk. With temperatures increasing in New York State, wildfire danger may intensify with warming and drying of vegetation. When climate alters fuel loads and fuel moisture, it changes the susceptibility of forests to wildfires. Climate change also may increase winds that spread fires. Faster fires are harder to contain, and thus are more likely to expand into residential neighborhoods.

Annual temperatures have been rising throughout New York State since the start of the 20th century. The state's average temperatures have increased by approximately 0.6 °F since 1970, with winter warming exceeding 1.1 °F per decade. Extreme heat events are likely to increase throughout New York State and short-duration warm season droughts will become more common.

With the increase in temperatures, heat waves will become more frequent and intense, increasing heat-related illness and death and posing new challenges to the energy system, air quality, and agriculture. Summer droughts are projected to increase, affecting water supply, agriculture, ecosystems, and energy projects (NYSERDA 2011).

As stated above, according to the temperature projections for New York State and Erie County, this area can expect warmer and drier conditions, which may increase the frequency and intensity of wildfires. Higher temperatures are expected to increase the amount of moisture that evaporates from land and water. These changes have the potential to lead to more frequent and severe droughts, which, in turn, will increase the likelihood of wildfires (U.S. EPA 2009).

Attachment: 23-Section-5.4.13-Wildfire-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

5.4.13.2 Vulnerability Assessment

To understand risk, a community must evaluate what assets are exposed and vulnerable in the identified hazard area. A spatial analysis was conducted using the University of Wisconsin 2010 wildland-urban interface/intermix spatial layer. For the purposes of the assessment, an asset (population, structures, critical facilities, and lifelines) is considered exposed and potentially vulnerable to the wildfire hazard if it is located in the wildland-urban interface or wildland-urban intermix hazard areas.

Impact on Life, Health and Safety

Wildfires have the potential to impact human health and life of residents and responders, structures, infrastructure, and natural resources. The most vulnerable populations include emergency responders and those within a short distance of the interface between the built environment and the wildland environment. First responders are exposed to the dangers from the initial incident and after-effects from smoke inhalation and heat stroke. Table 5.4.13-3 summarizes the estimated population exposed to the wildfire hazard by jurisdiction.

Based on the analysis, an estimated 154,141 residents, or approximately 16.8 percent of the County's population, are located in the wildland-urban interface/intermix hazard areas. Overall, the Town of Grand Island has the greatest number of individuals located in the wildfire hazard areas (i.e., 20,697 persons).

Of the population exposed, the most vulnerable include the economically disadvantaged and the population over age 65. Erie County contains approximately 161,498 people over the age of 65 and 126,041 people below the poverty level (American Community Survey 2019). Economically disadvantaged populations are more vulnerable because they are likely to evaluate their risk and make decisions to evacuate based on net economic impacts on their families. The population over age 65 is also more vulnerable because they are more likely to seek or need medical attention that may not be available due to isolation during a wildfire event, and they may have more difficulty evacuating. Smoke and air pollution from wildfires can be a severe health hazard, especially for sensitive populations, including children, the elderly, and those with respiratory and cardiovascular diseases. Smoke generated by wildfire consists of visible and invisible emissions that contain particulate matter (soot, tar, water vapor, and minerals), gases (carbon monoxide, carbon dioxide, and nitrogen oxides), and toxics (formaldehyde and benzene). Emissions from wildfires depend on the type of fuel, the moisture content of the fuel, the efficiency (or temperature) of combustion, and the weather. Public health impacts associated with wildfire include difficulty in breathing, odor, and reduction in visibility.

Impact on General Building Stock

The most vulnerable structures to wildfire events are those within the WUI Interface/Intermix hazard area. Buildings constructed of wood or vinyl siding are generally more likely to be impacted by the fire hazard than buildings constructed of brick or concrete. To estimate the buildings exposed to the wildfire hazard, the wildland-urban interface/intermix hazard areas were overlaid upon the updated building inventory at the structure level. The replacement cost value of the structures with their center in the wildland-urban interface and intermix hazard areas were totaled (refer to Table 5.4.13-4 and Table 5.4.13-5). Overall, 70,429 buildings, with a replacement cost value of $36.7 billion, are located in the wildfire hazard in Erie County.

Impact on Critical Facilities and Lifelines

It is recognized that a number of critical facilities and lifelines are located in the wildfire hazard area and are also vulnerable to the threat of wildfire. The majority of the critical facilities located in the wildland-urban interface/intermix hazard areas are government facilities, and potable water and wastewater facilities. Table 5.4.13-6 and Table 5.4.13-7 summarize the number of critical facilities and lifelines within the WUI Intermix and Interface hazard areas by jurisdiction. Overall, 378 critical facilities (360 of which are considered lifelines) are located in the wildland-urban interface hazard area and 719 critical facilities (627 of which are considered lifelines) are located in the wildland-urban intermix hazard area. The Town of Wales has the greatest number of critical facilities built in the wildland-urban interface (i.e., 32 critical facilities) and the Town of Aurora has the greatest number of critical facilities built in the wildland-urban intermix hazard areas (i.e., 68 critical facilities). Critical facilities are further broken out by type within the WUI Interface and Intermix hazard areas, as summarized in Table 5.4.13-8 and Table 5.4.13-9. Lifeline types located in the wildfire hazard areas are identified in Table 5.4.13-10.

Impact on Economy

Wildfire events can have major economic impacts on a community from the initial loss of structures and the subsequent loss of revenue from destroyed businesses and decreases in tourism. Wildfires can cost thousands of taxpayer dollars to suppress and control and can involve hundreds of operating hours on fire apparatus and thousands of volunteer man hours from the volunteer firefighters. There are also many direct and indirect costs to local businesses that provide employees with time off to volunteer to fight these fires.

Impact on the Environment

According to the USGS, post-fire runoff polluted with debris and contaminants can be extremely harmful to ecosystem and aquatic life (USGS 2018). Studies show that urban fires in particular are more harmful to the environment compared to forest fires (USGS 2018). The age and density of infrastructure within Erie County can exacerbate consequences of fires on the environment because of the increased amount of chemicals and contaminants that would be released from burning infrastructure. These chemicals, such as iron lead, and zinc, may leach into the storm water, contaminate nearby streams, and impair aquatic life.

Cascading Impacts on Other Hazards

Wildfires result in the uncontrolled destruction of forests, brush, field crops, grasslands, real estate, and personal property, and have secondary impacts on other hazards such as flooding, by removing vegetation and destroying watersheds. Additionally, wildfires can increase because of rising temperatures and increased droughts. More information about extreme temperature and flood hazards of concern is provided in Section 5.4.5 and Section 5.4.6, respectively.

Future Changes That May Impact Vulnerability

Understanding future changes that affect vulnerability in the County can assist in planning for future development and ensure establishment of appropriate mitigation, planning, and preparedness measures. Changes in the natural environment and built environment and how they interact can also provide insight about ways to plan for the future.

Projected Development

As discussed in Section 4, areas targeted for future growth and development have been identified across the County. Any areas of growth located in the wildland-urban interface/intermix hazard areas could be at risk.

Attachment: 23-Section-5.4.13-Wildfire-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Figure 5.4.13-3 provides a countywide map of the wildland-urban interface/intermix hazard area and, additionally, the maps in each jurisdictional annex include new development project areas and their proximity to the wildland-urban interface/intermix hazard areas.

Projected Changes in Population

According to the U.S. Census Bureau, the population in Erie County has remained stable between 2010 and 2019 (917,173 persons in 2010 and 917,296 persons in 2019). Estimated population projections provided by the 2017 Cornell Program on Applied Demographics indicates that the County's population will decrease into 2040 to approximately 769,396 persons (Cornell Program on Applied Demographics 2017). The population that remains in the County is vulnerable to wildfires. Refer to Section 4 (County Profile) for additional discussion on population trends.

Climate Change

According to the USDA Forest Service, climate change will likely alter the atmospheric patterns that affect fire weather. Changes in fire patterns will, in turn, impact carbon cycling, forest structure, and species composition (EPA 2020). Climate change associated with warmer temperatures, changes in rainfall, and increased periods of drought may create an atmospheric and fuel environment that is more conductive to large, severe fires (USDA 2013). Under a changing climate, wildfires exceeding 50,000 acres have increased over the past 30 years (USDA 2013). Understanding the climate/fire/vegetation interactions is essential for addressing issues associated with climate change that include:

- Effects on regional circulation and other atmospheric patterns that affect fire weather
- Effects of changing fire regimes on the carbon cycle, forest structure, and species composition, and
- Complications from land use change, invasive species, and an increasing WUI.

As discussed earlier, average temperatures are anticipated to increase in New York; therefore, the suitability of habitats for specific types of trees will potentially change, altering the fire regime and resulting in more frequent fire events and changes in intensity. Prolonged and more frequent heat waves have the potential to increase the likelihood of a wildfire. The increased potential combined with stronger winds may make it harder to contain fires and thus will increase the County's vulnerability to this hazard.

Change of Vulnerability Since the 2015 HMP

For this hazard mitigation plan update, the 2010 Wildland-Urban Interface/Intermix data from the University of Wisconsin was referenced to determine areas within Erie County that are vulnerable to wildfires. Population statistics have been updated using the 5-Year 2015-2019 American Community Survey Population Estimates. The building stock inventory was updated using data from Erie County. Further, the building stock inventory replacement cost values were updated using RS Means 2020 values, providing an overall update to the assets assessed in this risk assessment. Additionally, the critical facility inventory list was updated by Erie County.

Attachment: 23-Section-5.4.13-Wildfire-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

SECTION 6. MITIGATION STRATEGIES

This section presents mitigation strategies for Erie County to reduce potential exposure and losses identified as concerns in the Risk Assessment portion of this plan. The Steering Committee reviewed the Risk Assessment to identify and develop these mitigation actions, which are presented herein.

This section includes:

1. Background and Past Mitigation Accomplishments
2. General Planning Approach
3. Review and Update of Mitigation Goals and Objectives
4. Capability Assessment
5. Mitigation Strategy Development

Hazard mitigation reduces the potential impacts of, and costs associated with, emergency and disaster-related events. Mitigation actions address a range of impacts, including impacts on the population, property, the economy, and the environment.

Mitigation actions can include activities such as revisions to land-use planning, training and education, and structural and nonstructural safety measures.

6.1 BACKGROUND AND PAST MITIGATION ACCOMPLISHMENTS

In accordance with the requirements of the Disaster Mitigation Act of 2000 (refer to Section 1 [Introduction] for more detail on DMA 2000), a discussion regarding past mitigation activities and an overview of past efforts is provided as a foundation for understanding the mitigation goals, objectives, and activities outlined in this plan update. The county, through previous and ongoing hazard mitigation activities, has demonstrated that it is proactive in protecting its physical assets and citizens against losses from natural hazards. Examples of previous and ongoing actions and projects include the following:

- The county facilitated the development of the original Erie County Multi-Jurisdictional Hazard Mitigation Plan. The current planning process represents the regulatory five-year plan update process, which includes participation of 46 jurisdictions in the county, along with key county and regional stakeholders.
- All municipalities participating in this HMP update participate in the National Flood Insurance Program (NFIP), which requires the adoption of FEMA floodplain mapping and certain minimum standards for building within the floodplain.
- Reports, plans, and studies relating to or including information on natural hazards or natural hazard policies affecting Erie County have been reviewed and incorporated into this plan update as appropriate, as discussed in Section 3 (Planning Process) and References.

6.2 GENERAL MITIGATION PLANNING APPROACH

The overall approach used to update the county and local hazard mitigation strategies is based on FEMA and New York State (NYS) regulations and guidance regarding local mitigation plan development, including:

- DMA 2000 regulations, specifically 44 CFR 201.6 (local mitigation planning).
- FEMA *Local Mitigation Planning Handbook*, March 2013.
- FEMA *Local Mitigation Plan Review Guide*, October 1, 2011.
- FEMA *Integrating Hazard Mitigation into Local Planning*, March 1, 2013.
- FEMA *Plan Integration: Linking Local Planning Efforts*, July 2015.
- FEMA *Mitigation Planning How-To Guide #3, Identifying Mitigation Actions and Implementing Strategies* (FEMA 386-3), April 2003.
- FEMA *Mitigation Ideas: A Resource for Reducing Risk to Natural Hazards*, January 2013.

Attachment: 24-Section-6-Mitigation-Strategy-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

- NYS DHSES *New York State Hazard Mitigation Planning Standards*, 2017.
- NYS DHSES *New York State Hazard Mitigation Planning Standards Guide*, 2017.

The mitigation strategy update approach includes the following steps that are further detailed in later subsections of this section:

- Section 6.3 - Review and update mitigation goals and objectives.
- Section 6.4 - Identify mitigation capabilities and evaluate their capacity and effectiveness to mitigate and manage hazard risk.
- Section 6.5 - Prepare an implementation strategy, including:
  - Identification of progress on previous county and local mitigation strategies;
  - Development of updated county and local mitigation strategies; and
  - Prioritization projects and initiatives in the updated mitigation strategy.

6.3 REVIEW AND UPDATE OF MITIGATION GOALS AND OBJECTIVES

This section documents the efforts to develop hazard mitigation goals and objectives established to reduce or avoid long-term vulnerabilities to the identified hazards.

6.3.1 Goals and Objectives

FEMA defines ***Goals*** as general guidelines that explain what should be achieved. Goals are usually broad, long-term, policy statements, and represent a global vision.

FEMA defines ***Objectives*** as strategies or implementation steps to attain mitigation goals. Unlike goals, objectives are specific and measurable, where feasible.

FEMA defines ***Mitigation Actions*** as specific actions that help to achieve the mitigation goals and objectives.

According to CFR 201.6(c)(3)(i): "The hazard mitigation strategy shall include a description of mitigation goals to reduce or avoid long-term vulnerabilities to the identified hazards." The mitigation goals were developed based on the risk assessment results, discussions, research, and input from the committee, existing authorities, policies, programs, resources, stakeholders, and the public. The Steering Committee reviewed the 2015 goals and objectives and made revisions for the 2022 update based on the risk assessment results, discussions, research, and input from among the committee, existing authorities, policies, programs, resources, stakeholders, and the public. For the purposes of this plan, goals and objectives are defined as follows:

Goals are general guidelines that explain what is to be achieved. They are usually broad, long-term, policy-type statements and represent global visions. Goals help define the benefits that the plan is trying to achieve. The success of the plan, once implemented, should be measured by the degree to which its goals have been met (that is, by the actual benefits in terms of hazard mitigation).

Objectives are short-term aims that form a strategy or course of action to meet a goal. Unlike goals, objectives are stand-alone measurements of the effectiveness of a mitigation action. The objectives also are used to help establish priorities.

During the 2022 plan update process, the Steering Committee reviewed the goals and objectives established in the 2015 HMP. These goals and objectives were reviewed in consideration of the hazard events and losses since the 2015 plan, the updated hazard profiles and vulnerability assessment, the goals and objectives established in the New York State 2019 HMP, Erie County, and local risk management plans as well as direct input on how the county and municipalities need to move forward to best manage their hazard risk. Amendments include additions/edits to goals and/or objectives to express the Planning Partnership's interests in integrating this plan

Attachment: 24-Section-6-Mitigation-Strategy-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

with other planning mechanisms/programs and to support mitigation through the protection and preservation of natural systems, including particular reference to certain goals and objectives in the NYS 2019 HMP update, as identified in the table below.

As a result of this review process, the goals and objectives for the 2022 update were updated to those presented in Table 6-1.

Table 6-1. Erie County Hazard Mitigation Plan Goals and Objectives

Goals	Objectives
Goal 1: Protect life, property, and critical infrastructure from hazard impacts.	Objective 1.1: Retrofit critical facilities and community assets to protect against hazard impacts.
	Objective 1.2: Work with residents and business owners to make their structures more hazard resistant.
	Objective 1.3: Enhance stormwater management infrastructure.
	Objective 1.4: Ensure that critical facilities can continue to function during and after hazard impacts.
	Objective 1.5: Acquire, retrofit, or relocate structures from hazard-prone areas.
	Objective 1.6: Encourage residents and business owners to insure their property against hazard impacts, including through flood insurance through the National Flood Insurance Program (NFIP).
Goal 2: Reduce the risk of hazards on life, property, and the environment.	Objective 2.1: Develop and/or update local regulations based on current information and best practices to help prevent hazard impacts.
	Objective 2.2: Maintain natural waterways and drainage systems to reduce the impacts of hazards.
Goal 3: Educate the public, officials, and other stakeholders about the hazards they face and what can be done to mitigate hazard impacts.	Objective 3.1: Ensure that local officials attend current training on regulatory issues, best practices, and resources available to address hazards.
	Objective 3.2: Educate individuals throughout the County on the hazards they face and what property protection measures they can take to lessen the impact of hazards.

6.4 CAPABILITY ASSESSMENT

According to FEMA's *Mitigation Planning How-To Guide #3*, a capability assessment is an inventory of a community's missions, programs, and policies and an analysis of its capacity to carry them out. This assessment is an integral part of the planning process. The assessment process enables identification, review, and analysis of current local and state programs, policies, regulations, funding, and practices that could either facilitate or hinder mitigation.

During the original planning process, the county and participating jurisdictions identified and assessed their capabilities in the areas of existing programs, policies, and technical documents. By completing this assessment, each jurisdiction learned how or whether they would be able to implement certain mitigation actions by determining the following:

- Limitations that may exist on undertaking actions;
- The range of local and/or state administrative, programmatic, regulatory, financial, and technical resources available to assist in implementing their mitigation actions;
- Actions deemed infeasible as they are currently outside the scope of capabilities;
- Types of mitigation actions that may be technically, legally (regulatory), administratively, politically, or fiscally challenging or infeasible;
- Opportunities to enhance local capabilities to support long-term mitigation and risk reduction.

Attachment: 24-Section-6-Mitigation-Strategy-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

During the plan update process, all participating jurisdictions were tasked with developing or updating their capability assessment, paying particular attention to evaluating the effectiveness of these capabilities in supporting hazard mitigation and identifying opportunities to enhance local capabilities.

County and municipal capabilities in the Planning and Regulatory, Administrative and Technical, and Fiscal arenas may be found in the Capability Assessment section of each jurisdictional annex in Section 9 - Annexes. Within each annex, participating jurisdictions identified how they have integrated hazard risk management into their existing planning, regulatory, and operational/administrative framework ("integration capabilities") and how they intend to promote this integration ("integration actions"). A further summary of these continued efforts to develop and promote a comprehensive and holistic approach to hazard risk management and mitigation is presented in Section 7 – Plan Maintenance.

The Erie County Department of Homeland Security and Emergency Services staff provided leadership for the Erie County HMP Update planning effort. In addition, the county staff on the Steering Committee provided continuous support for the implementation of mitigation projects and mitigation educational outreach and serves as a resource to the county and municipalities.

A summary of the various federal, state, county, and local planning and regulatory, administrative and technical, and fiscal programs available to promote and support mitigation and risk reduction in Erie County are presented below.

6.4.1 Planning and Regulatory Capabilities - County and Local

Municipal Land Use Planning and Regulatory Authority

The county and municipalities have various land use planning mechanisms that can be leveraged to mitigate flooding and support natural hazard risk reduction. Specific county and local planning and regulatory capabilities are identified in their jurisdictional annexes in Section 9 – Annexes. These include but are not limited to: comprehensive plans, flood damage prevention ordinances, local codes and regulations, stormwater regulations, and municipal level plans. A list of plans review is provided in Section 3 (Planning Process) and summarized in Appendix I (Plan Review Matrix).

Section 239 of New York State General Municipal Law (GML) requires the referral of certain local planning actions to the Erie County Planning Board for the examination of possible intermunicipal impacts. The Erie County Planning Board operates under New York State General Municipal Law §239 l and m to advise local boards on the potential intermunicipal or countywide impact of local land use decisions. The Planning Board uses the Erie County Comprehensive Plan to direct recommendations on municipal land use referrals and to review proposed county capital improvement projects.

Staff at Erie County's Department of Environment and Planning manage numerous planning programs that improve the quality of life in Erie County. These programs plan for or implement development projects that are consistent with the Framework for Regional Growth, the County's adopted comprehensive plan. These programs include;

- Office of Agriculture
- Arts & Culture
- Capital Improvements Program
- Environmental Review
- Erie County Parks Master Plan
- Erie-Niagara Regional Framework
- Fisheries Advisory Board

Attachment: 24-Section-6-Mitigation-Strategy-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

- Local Government Training
- Local Planning Assistance
- Land Development & Economic Development Planning Studies
  - Agribusiness Park Feasibility Study
  - Buffalo Niagara Convention Center
  - Business Park Report
- Brownfield & Urban Redevelopment
- Municipal Referrals
  - ZR1 form (referral form)
  - Online Submission - BETA phase
- Waterfront Planning

Emergency and Evacuation Plans

The Erie County Department of Homeland Security and Emergency Services is designated to coordinate all emergency management activities in the county, including planning, response, and management. The department works collaboratively with many other agencies and organizations, which enables the county to better protect life and property during disasters and emergencies. This Department maintains the Erie County Comprehensive Emergency Management Plan (CEMP), which is a comprehensive approach to emergency management. The CEMP is an all-hazards plan that outlines how the county will efficiently and effectively manage emergencies and disaster situations. The CEMP includes an evacuation annex that provides guidance for vehicle movements and evacuations throughout the entire county.

Local Waterfront Revitalization Program

The Waterfront Revitalization of Coastal Areas and Inland Waterways Act offers local governments the opportunity to participate in the State's Coastal Management Program (CMP) on a voluntary basis by preparing and adopting a Local Waterfront Revitalization Program (LWRP), providing more detailed implementation of the State's CMP through use of such existing broad powers as zoning and site plan review (New York State Division of Planning 2018).

When an LWRP is approved by the New York State Secretary of State, State agency actions are required to be consistent with the approved LWRP to the maximum extent practicable. When the federal government concurs with the incorporation of an LWRP into the CMP, federal agency actions must be consistent with the approved addition to the CMP. Title 19 of NYCRR Part 600, 601, 602, and 603 provide the rules and regulations that implement each of the provisions of the Waterfront Revitalization of Coastal Areas and Inland Waterways Act, including but not limited to the required content of an LWRP, the processes of review and approval of an LWRP, and LWRP amendments (New York State Division of Planning 2018).

A LWRP consists of a planning document prepared by a community and the program established to implement the plan. An LWRP may be comprehensive and address all issues that affect a community's entire waterfront, or it may address the most critical issues facing a significant portion of its waterfront. An approved LWRP reflects community consensus and provides a clear direction for appropriate future development. It establishes a long-term partnership among local government, community-based organizations, and the State. Also, funding to advance preparation, refinement, or implementation of Local Waterfront Revitalization Programs is available under Title 11 of the New York State Environmental Protection Fund Local Waterfront Revitalization Program (EPF LWRP), among other sources (New York State Division of Planning 2018).

Any village, town, or city located along the State's coast or designated inland waterway can prepare a new or amend an existing Local Waterfront Revitalization Program. Municipalities are encouraged to address local

Attachment: 24-Section-6-Mitigation-Strategy-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

revitalization issues in a broader context, aligned with regional economic development strategies and regional resource protection and management programs (New York State Division of Planning 2018).

Several communities have adopted Local Waterfront Revitalization Plans, including the Town of Brant, Town of Grand Island, Town of Evans, Town of Hamburg, Town and City of Tonawanda, the City of Buffalo and the City of Lackawanna.

Comprehensive Master Plans

Comprehensive planning is a term used in the United States by land use planners to describe a process that determines community goals and aspirations in terms of community development. The outcome of comprehensive planning is the "Comprehensive Plan" or "Master Plan," which dictates public policy in terms of transportation, utilities, land use, recreation, and housing. Towns are authorized to develop and adopt a comprehensive plan by New York State Town Law Section 272-a.; villages can do the same per Section 7-722 of the Village Law. State statutes require that all land use laws in a municipality be consistent with a comprehensive plan.

6.4.2 Planning and Regulatory Capabilities – State and Federal

National Flood Insurance Program (NFIP)

The U.S. Congress established the NFIP with the passage of the National Flood Insurance Act of 1968 (FEMA's 2002 National Flood Insurance Program (NFIP): Program Description). The NFIP is a Federal program enabling property owners in participating communities to purchase insurance as a protection against flood losses in exchange for State and community floodplain management regulations that reduce future flood damages. Please refer to the Flood Hazard Profile in Section 5.4.6 (Flood) for information on legislation related to reforms to the NFIP.

There are three components to the NFIP: flood insurance, floodplain management and flood hazard mapping. Communities participate in the NFIP by adopting and enforcing floodplain management ordinances to reduce future flood damage. In exchange, the NFIP makes federally backed flood insurance available to homeowners, renters, and business owners in these communities. Community participation in the NFIP is voluntary. Flood insurance is designed to provide an alternative to disaster assistance to reduce the escalating costs of repairing damage to buildings and their contents caused by floods. Flood damage in the U.S. is reduced by nearly $1 billion each year through communities implementing sound floodplain management requirements and property owners purchasing flood insurance. Additionally, buildings constructed in compliance with NFIP building standards suffer approximately 80% less damage annually than those not built in compliance (FEMA, 2008).

All municipalities in Erie County actively participate in the NFIP. As of 2020, there were 1,923 NFIP policies in Erie County. There have been 1,597 claims made, totaling over $10 million for damages to structures and contents. There are 400 NFIP Repetitive Loss (RL) properties in the county. Information on specific locations of Repetitive Loss (RL) and Severe Repetitive Loss (SRL) properties was not made available from FEMA for this plan update, so the county is unable to provide a breakdown of the RL properties by occupancy. Further details on the county's flood vulnerability may be found in the flood hazard profile in Section 5.4.6 - Flood.

Municipal compliance with the NFIP is described in each of the jurisdictional annex in Section 9 (Jurisdictional Annexes). The county's municipalities have been compliant with the NFIP. To enhance their flood damage prevention programs and enhance compliance with the NFIP in the future, several municipalities propose actions in their mitigation strategies to ensure that their floodplain administrators complete training on floodplain management and the NFIP. In addition, Erie County's mitigation strategy (see Section 9.1) includes an action

Attachment: 24-Section-6-Mitigation-Strategy-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

to encourage and empower municipalities to participate in FEMA's Community Rating System. Additional information on the NFIP program and its implementation throughout the county may be found in the flood hazard profile (Section 5.4.6 - Flood).

The state and municipalities within it may adopt higher regulatory standards when implementing the provisions of the NFIP. Specifically identified are the following:

Freeboard: By law, NYS requires Base Flood Elevation plus 2 feet (BFE+2) for all construction. When there is a base flood elevation available, the lowest floor, including any basement, must be at or above the base flood elevation (plus two feet beginning in 2007). Elevation may be by means of properly compacted fill, a solid slab foundation, or a "crawl space" foundation, which contains permanent openings to let flood waters in and out. Non-residential structures may be flood-proofed in lieu of elevation. Where a local floodplain administrator has information to estimate a base flood elevation, such as historic flood records or a hydraulic study, that elevation must be used. If the development consists of more than 5 acres or more than 50 lots, the permit applicant must develop a base flood elevation and build accordingly (NYDEC 2018). Communities may go beyond this requirement, providing for additional freeboard. In most New York communities, new structures must have the lowest floor 3 feet or more above the highest adjacent grade.

Cumulative Substantial Improvements/Damages: The NFIP allows improvements valued at up to 50% of the building's pre-improvement value to be permitted without meeting the flood protection requirements. Over the years, a community may issue a succession of permits for different repairs or improvement to the same structures. This can greatly increase the overall flood damage potential for structures within a community. The community may wish to deem "substantial improvement" cumulatively so that once a threshold of improvement within a certain length of time is reached, the structure is considered to be substantially improved and must meet flood protection requirements.

NFIP Community Rating System (CRS)

As an additional component of the NFIP, the CRS is a voluntary incentive program that recognizes and encourages community floodplain management activities that exceed the minimum NFIP requirements. As a result, flood insurance premium rates are discounted to reflect the reduced flood risk resulting from the community actions meeting the three goals of the CRS: (1) reduce flood losses; (2) facilitate accurate insurance rating; and (3) promote the awareness of flood insurance (FEMA, 2012).

As of August 5, 2021, there are two communities within Erie County that participate in the CRS program, the Town of Amherst and the City of Lackawanna.

U.S. Army Corps of Engineers

Under Section 404(e) of the Clean Water Act, the U.S. Army Corps of Engineers (USACE) can issue general permits to authorize activities that have only minimal individual and cumulative adverse environmental effects. A nationwide permit (NWP) is a general permit that authorizes activities across the country unless a district or division commander revokes the nationwide permit in a state or other geographic region. There are 54 nationwide permits, and they authorize a wide variety of activities, including linear transportation projects, bank stabilization activities, residential development, commercial and industrial developments, aids to navigation and certain maintenance activities (USACE 2017). Details on each NWP can be found here: https://usace.contentdm.oclc.org/utils/getfile/collection/p16021coll7/id/6711.

There are three types of USACE permits: standard, nationwide (described above), and regional. Standard permits are individual permits that involve full public interest review of an individual permit application and includes the issuance of a public notice for any project that does not meet the terms and conditions of an NWP or a Letter

Attachment: 24-Section-6-Mitigation-Strategy-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

of Permission (LOP). Regional general permits are for small, specialized projects. In New York State, there are six regional general permit categories (see https://www.lrb.usace.army.mil/Missions/Regulatory/New-York-Permit-Information/) (USACE Buffalo District 2019).

New York State Floodplain Management

There are two departments that have statutory authorities and programs that affect floodplain management at the local jurisdiction level in New York State: the NYSDEC and the Department of State's Division of Code Enforcement and Administration (DCEA).

The NYSDEC is charged with conserving, improving, and protecting the state's natural resources and environment, and preventing, abating, and controlling water, land, and air pollution. Programs that have bearing on floodplain management are managed by the Bureau of Flood Protection and Dam Safety, which cooperates with federal, state, regional, and local partners to protect lives and property from floods, coastal erosion, and dam failures. These objectives are accomplished through floodplain management and both structural and nonstructural means.

The Dam Safety Section is responsible for "reviewing repairs and modifications to dams and assuring [sic] that dam owners operate and maintain dams in a safe condition through inspections, technical reviews, enforcement, and emergency planning." The Flood Control Projects Section is responsible for reducing flood risk to life and property through construction, operation, and maintenance of flood control facilities.

The Floodplain Management Section is responsible for reducing flood risk to life and property through management of activities, such as development in flood hazard areas, and for reviewing and developing revised flood maps. The Section serves as the NFIP State Coordinating Agency and, in this capacity, is the liaison between FEMA and New York communities that elect to participate in the NFIP. The Section provides a wide range of technical assistance.

Stormwater Management Planning

When proper controls are not in place, research studies show a clear link between urbanization and increased flooding and pollutant export. The goal of stormwater management is to ensure that the quantity and quality of stormwater runoff from a site that is undergoing construction or development should not be substantially altered from its pre-development conditions (NYSDEC 2015).

According to the federal law commonly known as Stormwater Phase II, permits are required for stormwater discharges from Municipal Separate Storm Sewer Systems (MS4s) in urbanized areas and those additionally designated by the New York State Department of Environmental Conservation (NYSDEC). Owners or operators of such MS4s must be authorized in accordance with the State Pollutant Discharge Elimination System (SPDES) General Permit for Stormwater Discharges from Municipal Separate Storm Sewer Systems. The permit requires development of a Stormwater Management Program (SWMP).

6.4.3 Administrative and Technical Capabilities - County and Local

This subsection provides a summary of capabilities to support hazard mitigation for local jurisdictions, some of whom sat on the Steering Committee and others who provide a resource for support and information to communities. Specific local capabilities (e.g., police, fire, EMS, highway and public works departments, etc.) are provided in Section 9 (Jurisdictional Annexes).

Attachment: 24-Section-6-Mitigation-Strategy-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

Erie County Department of Homeland Security and Emergency Services

The Erie County Department of Homeland Security and Emergency Services is responsible for all emergency planning, response, and management within the county. The county's Emergency Manager is the Deputy Commissioner of Preparedness and Homeland Security The Department creates and maintains county emergency plans, including the CEMP, and reviews and files municipal emergency plans; additionally, the office leads the county emergency operations and assists all towns, cities, and villages with emergency planning and coordination. The county offers Fire Service Training, Emergency Medical Service Training, and American Heart Association CPR/ AED/ First Aid Training.

The Department of Homeland Security & Emergency Services works closely with the entire emergency services and public safety community in Erie County, serving the public and first responders alike. The Department maintains a countywide radio system consisting of over 3,000 mobile and portable radios, 14 base stations and several radio towers. Fire Safety, Emergency Medical Services, and Homeland Security/Emergency Management/Disaster Preparedness are divisions of the Department of Homeland Security & Emergency Services.

Staff within the Department are trained in the principles of National Incident Management Systems (NIMS) and Incident Command System (ICS), allowing them to serve as the primary support for the Erie County Emergency Operations Center (EOC). Staff also works with NYS DHSES, FEMA, and county agencies such as fire departments and Emergency Medical Services providers.

The Department led and helped to organize the update of this Hazard Mitigation Plan and was also an active participant in the Steering Committee.

Erie County Department of Environment and Planning

Staff at Erie County's Department of Environment and Planning manage numerous planning programs that improve the quality of life in Erie County. These programs plan for or implement development projects that are consistent with the Framework for Regional Growth, the County's adopted comprehensive plan. The Department was an active participant in the Steering Committee and provided important hazard specific input during meetings and via municipal worksheets.

The Department These programs include:

- Office of Agriculture
- Arts & Culture
- Capital Improvements Program
- Environmental Review
- Erie County Parks Master Plan
- Erie-Niagara Regional Framework
- Fisheries Advisory Board
- Local Government Training
- Local Planning Assistance
- Land Development & Economic Development Planning Studies
- Brownfield & Urban Redevelopment
- Municipal Referrals
- Other Reports
- Waterfront Planning

For more information about the County's Planning activities please visit Planning and Development | Environment & Planning (erie.gov)

Attachment: 24-Section-6-Mitigation-Strategy-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

Erie County Department of Health

The Department of Health protects the welfare of the present and future generations of Erie County residents through the conservation of soil, water, air, plant and animal resources by delivery of sound, science-based, locally-directed, technical and educational assistance.

Erie County Soil and Water Conservation District

It is the mission of the Erie County Soil and Water District to protect and promote the health, safety and general welfare of the present and future generations of Erie County residents through the conservation of soil, water, air, plant and animal resources by delivery of sound, science-based, locally-directed, technical and educational assistance. Mark Gaston was an active member of the Steering Committee and provided important information about SWCD's mitigation efforts.

The Erie County Soil and Water Conservation District (ECSWCD) is a subdivision of the local government established under New York State law. The ECSWCD's purpose is to carry out a program for the conservation, use, and development of soil, water, and related resources. The ECSWCD coordinates and implements resource management programs at a local level and facilitates cooperation between local, state, and federal agencies. The ECSWCD works with landowners, land managers, local government agencies, and other local interests to address issues related to soil and water, including:

- Agricultural Environmental Management (AEM)
- Streambank Stabilization
- Education
- Fish Stocking - The District offers an annual sale and distribution of largemouth bass, fathead minnows and trout for the stocking of rural ponds.
- Pond Design - The District offers a pond planning service, for a fee, for Erie County residents that would like to construct a pond for wildlife, recreational and fire protection uses.
- Conservation Products - The District has a variety of conservation-related products for sale, to help promote wildlife habitat enhancement and learning, including:
    - Blue Bird Nest Boxes
    - Bat Houses
    - Wood Duck Houses
    - Field ID Guides
- Stormwater Management
- Technical Assistance and Services
- Agricultural Conservation Assistance
- Conservation Assistance to Municipalities
- Agricultural Assessment Program
- Watershed Planning

Erie County Health Department – Division of Environmental Health

The Erie County Health Department works to protect and improve the health of county residents. Representatives of ECDOH actively participated as a member of the Steering Committee. There are many services provided by the department including:

- Animal & Pet Health
- Vermin Control
- Health Services/Dental

Attachment: 24-Section-6-Mitigation-Strategy-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

- Community Health Fairs
- Community Wellness
- COVID-19 Coronavirus
- Disease Intervention Services
- Early Intervention
- Emergency Medical Services (EMS)
- Environmental Health
- Epidemiology & Disease Control
- Food Safety & Security
- Healthy Neighborhoods Program (HNP)
- Heart Health
- Lead Poisoning Prevention
- Lyme Disease & Ticks
- Maternal and Child Health
- Medical Examiner's Office
- Mental Health
- Rabies, Disease & Vector Control Program
- Rabies Information
- Substance Use
- WNY Stress Reduction Program

Erie County Legislature

The Legislature serves as the governing body of the county. The purpose of the Legislature is to exercise the powers and discharge any duties of local government and the administration of public affairs that can be imposed or conferred upon it by law. It is composed of eight legislative districts and operates under a committee system. The committees include:

- Community Enrichment
- Government Affairs
- Economic Development
- Health and Human Services
- Energy and Environment
- Minority and Women Business
- Finance Management
- Public Safety
- Small Business

Erie County Department of Public Works

The mission of the Department of Public Works is to provide safe, functional roadways and bridges for the traveling public and accurate testing of scales and measuring devices. The department also provides leadership and management in the design, construction, maintenance and management of county-owned facilities. The department is divided into four divisions: Buildings and Grounds, Highways, Weights and Measures, and Fleet. Public Works staff from the Sewer Division and the Highway Division were active participants of the Steering Committee and provided very valuable information that was incorporated into the Hazard Mitigation Update. A list of currently active projects is available here; https://www2.erie.gov/dpw/index.php?q=project-list&order=title&sort=asc

Attachment: 24-Section-6-Mitigation-Strategy-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

Highway Division

The Division of Highways is responsible for the engineering and inspection of over a thousand miles of roadways, making ours the largest transportation design team in Western New York. The Division of Highways is also responsible for snow and ice control of county roads.

6.4.4 Administrative and Technical Capabilities - State and Federal

New York State Division of Homeland Security and Emergency Services (NYS DHSES)

For more than 50 years, NYS DHSES (formerly New York State Office of Emergency Management) and its predecessor agencies have been responsible for coordinating the activities of all State agencies to protect New York's communities, the State's economic well-being, and the environment from natural and man-made disasters and emergencies. NYS DHSES routinely assists local governments, voluntary organizations, and private industry through a variety of emergency management programs, including hazard identification, loss prevention, planning, training, operational response to emergencies, technical support, and disaster recovery assistance.

NYS DHSES administers the FEMA mitigation grant programs in the state and supports local mitigation planning in addition to developing and routinely updating the State Hazard Mitigation Plan. NYS DHSES prepared the current State Hazard Mitigation Plan working with input from other State agencies, authorities, and organizations. It was approved by FEMA in 2018, and it keeps New York eligible for recovery assistance in Public Assistance (Categories A through G) and Hazard Mitigation assistance in each of the Unified Hazard Mitigation Assistance Program's five grant programs. The 2019 New York State HMP was used as guidance in completing the Erie County HMP Update. The State HMP can be found here: https://mitigateny.availabs.org/.

For the purpose of this HMP, representatives from NY DHSES completed stakeholder surveys, provided technical assistance and data, and attended planning partnership meetings. NYS DHSES also presented about state requirements for hazard mitigation plans at the June 2021 Mitigation Action Workshop.

New York State Department of Environmental Conservation (NYSDEC) – Region 9 – Central New York

NYSDEC – Region 9 is located in western New York and includes Allegany, Erie, Chautauqua, Erie, Niagara, and Wyoming counties. The main Department of Environmental Conservation (DEC) office is located in Buffalo with a sub-office in Allegany. DEC staff have two main areas of responsibility: natural resource management and environmental quality protection. As part of natural resource management, staff oversee state fish and wildlife resources as well as state forests (NYSDEC Region 9 2019).

New York State Department of Environmental Conservation (NYSDEC) – Division of Water - Bureau of Flood Protection and Dam Safety

Within the NYSDEC – Division of Water, the Bureau of Flood Protection and Dam Safety (https://www.dec.ny.gov/lands/4991.html) cooperates with federal, state, regional, and local partners to protect lives and property from floods, coastal erosion and dam failures through floodplain management and both structural and nonstructural means; and provides support for information technology needs in the division. The bureau consists of the following sections:

- Coastal Management: Works to reduce coastal erosion and storm damage to protect lives, natural resources, and properties through structural and nonstructural means.

Attachment: 24-Section-6-Mitigation-Strategy-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

- Dam Safety: Is responsible for reviewing repairs and modifications to dams and assuring that dam owners operate and maintain dams in a safe condition through inspections, technical reviews, enforcement, and emergency planning.
- Flood Control Projects: Is responsible for reducing flood risk to life and property through construction, operation, and maintenance of flood control facilities.
- Floodplain Management: Is responsible for reducing flood risk to life and property through proper management of activities including, development in flood hazard areas and review and development of revised flood maps (NYSDEC Bureau of Flood Protection and Dam Safety 2019).

The NYSDEC's Mission is "To conserve, improve and protect New York's natural resources and environment and to prevent, abate and control water, land and air pollution, in order to enhance the health, safety and welfare of the people of the state and their overall economic and social well-being."

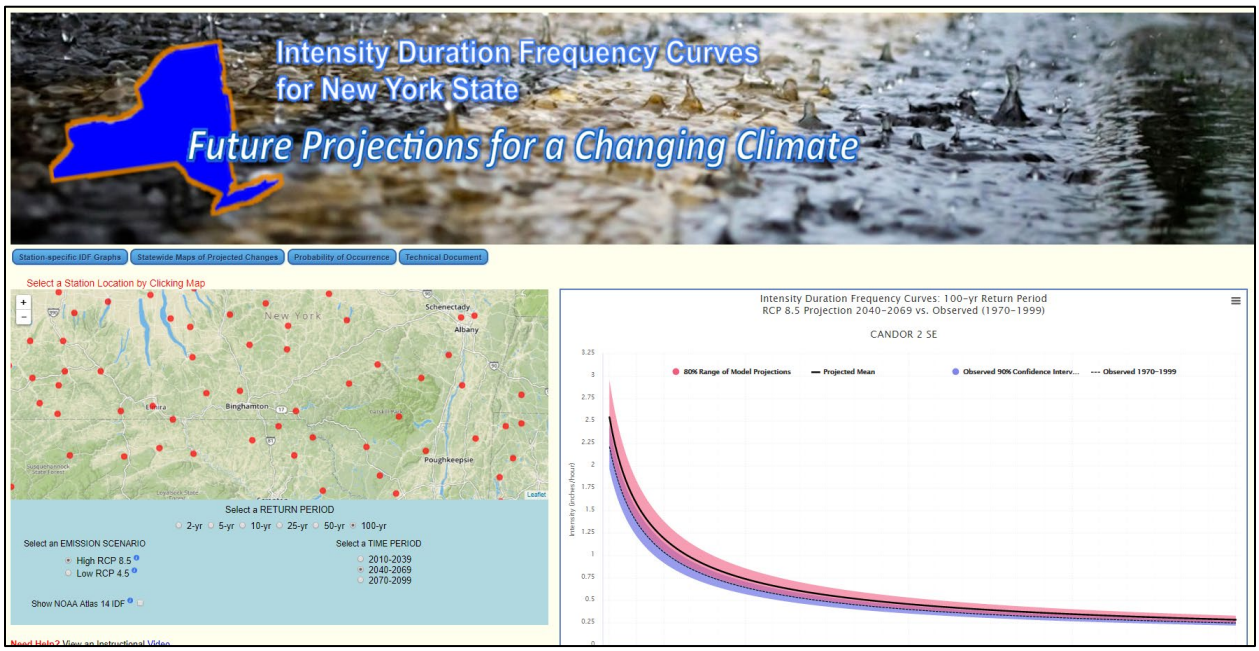
DEC's goal is to achieve this mission through the simultaneous pursuit of environmental quality, public health, economic prosperity and social well-being, including environmental justice and the empowerment of individuals to participate in environmental decisions that affect their lives.

Northeast Regional Climate Center

The Northeast Regional Climate Center (NRCC) partnered with the New York State Energy Research and Development Authority (NYSERDA) to compare various methods of downscaling global climate model (GCM) output and create extreme precipitation projections for New York State. These projections will ultimately be incorporated into climate change adaptation planning. In 2009 alone, 175 total flooding events in New York State led to $32.82 million in property damage. The state is also still recovering from the $42 billion toll of Superstorm Sandy. Climate change is resulting in an increase in the frequency of heavy rainfall events. To help New York State communities plan for effects of climate change, new graphics are now available showing the increased likelihood of heavy precipitation events. These graphs, called Intensity Duration Frequency (IDF) curves, show anticipated increases of storm events from 2- to 100-year intervals and are projected into the future as far as 2099. These products are designed for use by municipal officials, researchers, planners, highway departments, and other decision-makers who need to take storm events into account. These IDF curves display how precipitation events are being affected by New York State's rapidly changing climate (NRCC 2015). Figure 6-1 displays the screenshot of the website.

Attachment: 24-Section-6-Mitigation-Strategy-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

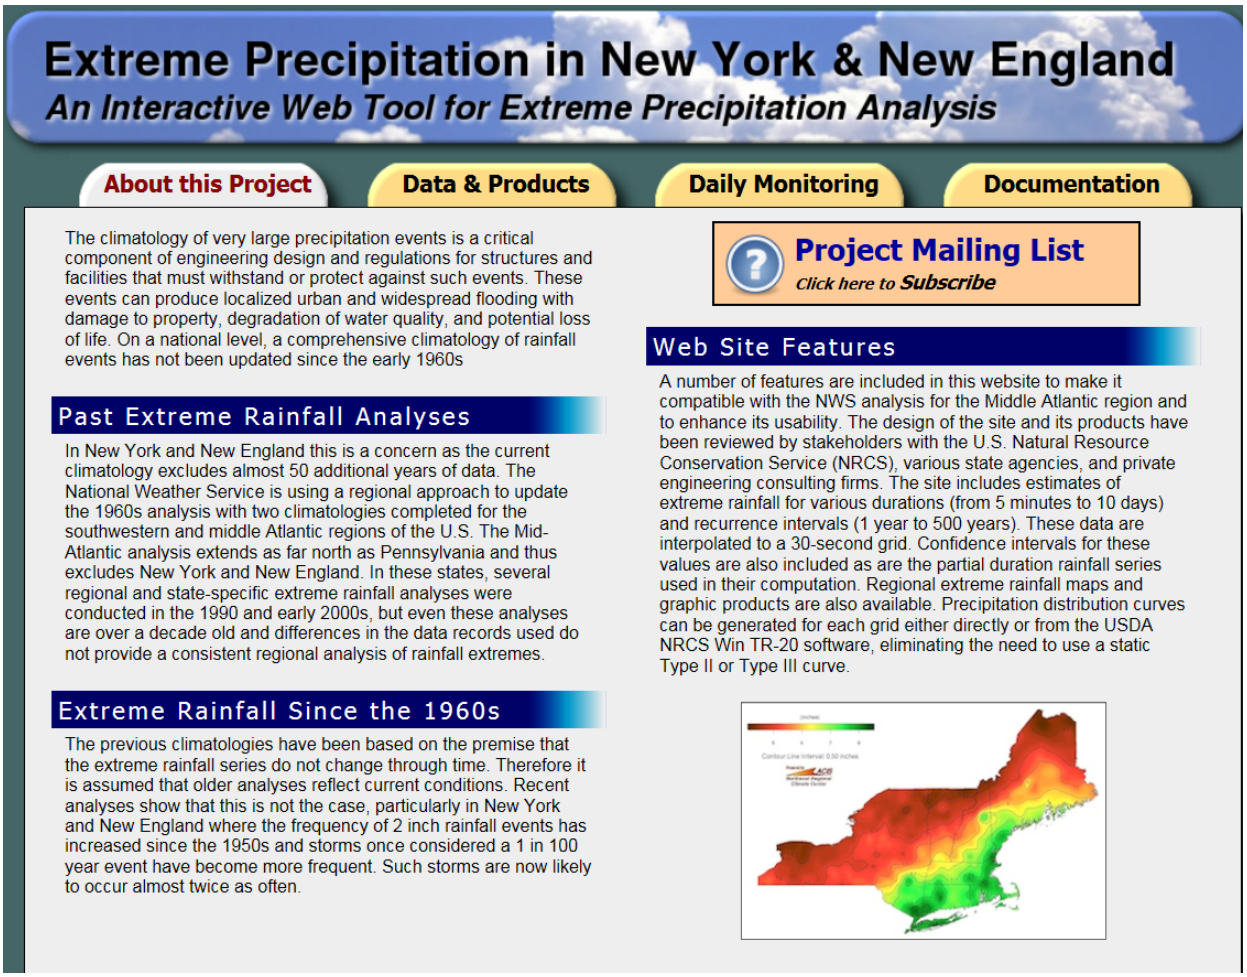
Figure 6-1. Screenshot of the IDF Curves for New York State



NRCC also maintains the Extreme Precipitation in New York & New England website, an interactive tool for extreme precipitation analysis. The site includes estimates of extreme rainfall for various durations (5 minutes to 10 days) and recurrence intervals (1 year to 500 years). These data are interpolated to a 30-second grid. Confidence intervals for these values are included as are the partial duration rainfall series used in their computation. Regional extreme rainfall maps and graphic products are available. Precipitation distribution curves can be generated for each grid either directly or from the USDA NRCS Win TR-20 software, eliminating the need to use a static Type II or Type III curve (NRCC 2018). This tool can be used by municipalities to assist them in the design and feasibility assessment of future projects and allow them to see the future intensity and frequency of rain events. Figure 6-2 shows a screenshot of the website.

Attachment: 24-Section-6-Mitigation-Strategy-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

Figure 6-2. Screenshot of the Extreme Precipitation in New York & New England website



Department of State's Division of Code Enforcement and Administration (DCEA)

Technical Bulletins for the 2010 Codes of New York State

The DCEA publishes technical bulletins for its building codes. TB-1004 came into effect in October 2017 and addressed Flood Venting in Foundations and Enclosures in Flood Areas. The bulletin clarifies definitions and requirements with regard to Residential and Building Construction (19NYCRR 1220 and 1221). Bulletins also address requirements for critical facilities such as fire stations, requirements for fire extinguishers, and other hazards.

Forms and Publications

The DCEA posts several model reporting forms and related publications on its web page. The Building Permit Application requests the applicant to indicate whether the site is or is not in a floodplain and advises checking with town clerks or NYSDEC. The General Residential Code Plan Review form includes a reminder to "add 2' freeboard." Sample Flood Hazard Area Review Forms, including plan review checklists and inspection checklists for Zone A and Zone V, are based on the forms in Reducing Flood Losses through the International Code Series published by International Code Council and FEMA (2008).

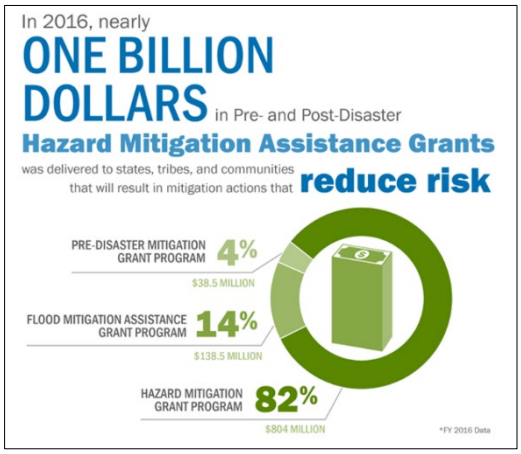
Attachment: 24-Section-6-Mitigation-Strategy-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

6.4.5 Fiscal Capabilities – County and Local

Municipal Fiscal Capabilities

Erie County and individual municipalities are (legally, not necessarily practically) able to fund mitigation projects though existing local budgets, local appropriations (including referendums and bonding), and a variety of federal and state loan and grant programs. Many municipalities noted throughout the planning process that they are faced with increasing fiscal constraints, including decreasing revenues, budget constraints, and tax caps. In an effort to overcome these fiscal challenges, municipalities have continued to leverage the sharing of resources and combining available funding with grants and other sources and note that plans and intermunicipal cooperation are beneficial in obtaining grants.

6.4.6 Fiscal Capabilities – State and Federal



Source: FEMA, 2018

The *NYS Capabilities* section of the 2019 New York State Hazard Mitigation Plan features a section on mitigation-related funding administered by state agencies that eligible jurisdictions can use to find mitigation actions. A list of funding opportunities can be accessed here: https://mitigateny.availabs.org/strategies/funding

As noted on the FEMA hazard mitigation assistance website (https://www.fema.gov/hazard-mitigation-assistance), FEMA administers five programs that provide funding for eligible mitigation planning and projects that reduces disaster losses and protect life and property from future disaster damages. The programs are the Hazard Mitigation Grant Program (HMGP), and the HMGP Post Fire Grant, the Flood Mitigation Assistance (FMA) Program, the Pre-Disaster Mitigation (PDM) Program, and the new Building Resilient Infrastructure & Communities (BRIC) Program.

HMGP assists in implementing long-term hazard mitigation planning and projects following a Presidential major disaster declaration. PDM provides funds for hazard mitigation planning and projects on an annual basis. FMA provides funds for planning and projects to reduce or eliminate risk of flood damage to buildings that are insured under the National Flood Insurance Program (NFIP) on an annual basis. BRIC supports jurisdictions in hazard mitigation projects, reducing the risks they face from disasters and natural hazards. The BRIC program will replace the existing Pre-Disaster Mitigation (PDM) program. The BRIC program guiding principles are supporting communities through capability- and capacity-building; encouraging and enabling innovation; promoting partnerships; enabling large projects; maintaining flexibility; and providing consistency (FEMA 2020).

HMGP funding is generally 15% of the total amount of Federal assistance provided to a State, Territory, or federally-recognized tribe following a major disaster declaration. PDM and FMA funding depends on the amount congress appropriates each year for those programs. BRIC is funded by a 6% ($500 million) set-aside from federal post-disaster grant funding.

Individual homeowners and business owners may not apply directly to FEMA. Eligible local governments may apply on their behalf (FEMA 2020).

Table 6-2 provides an overview of program funding eligibility and cost share.

Attachment: 24-Section-6-Mitigation-Strategy-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

Table 6-2. FEMA HMA Grant Cost Share Requirements

Programs	Cost Share (Percent of Federal / Non-Federal Share)
HMGP	75 / 25
FMA – insured properties and planning grants	75 / 25
FMA – repetitive loss property(2)	90 / 10
FMA – severe repetitive loss property(2)	100 / 0
BRIC	75 / 25
BRIC – subrecipient is small and impoverished community	90 / 10

Source: FEMA HMA Guidance 2015; Regulations.gov; FEMA 2020

(1) Subapplicants should consult their State Hazard Mitigation Officer (SHMO) for the amount of percentage of HMGP subrecipient management cost funding their State has determined to be passed through subrecipients.

(2) To be eligible for an increased federal cost share, a FEMA-approved state or tribal (standard or enhanced) mitigation plan that addressed repetitive loss properties must be in effect at the time of award, and the property is being submitted for consideration must be a repetitive loss property.

Federal Hazard Mitigation Funding Opportunities

Federal mitigation grant funding is available to all communities with a current hazard mitigation plan (this plan); however, most of these grants require a "local share" in the range of 10-25% of the total grant amount. Details about this program and a further description of these opportunities can be found at: https://www.fema.gov/hazard-mitigation-assistance. The FEMA mitigation grant programs are described below.

Hazard Mitigation Grant Program (HMGP)

The HMGP is a post-disaster mitigation program. It is made available to states by FEMA after each Federal disaster declaration. The HMGP can provide up to 75% funding for hazard mitigation measures. The HMGP can be used to fund cost-effective projects that will protect public or private property in an area covered by a federal disaster declaration or that will reduce the likely damage from future disasters. Examples of projects include acquisition and demolition of structures in hazard-prone areas, flood-proofing or elevation to reduce future damage, minor structural improvements and development of state or local standards. Projects must fit into an overall mitigation strategy for the area identified as part of a local planning effort. All applicants must have a FEMA-approved Hazard Mitigation Plan (this plan).

Applicants who are eligible for the HMGP are state and local governments, certain nonprofit organizations or institutions that perform essential government services, and Indian tribes and authorized tribal organizations. Individuals or homeowners cannot apply directly for the HMGP; a local government must apply on their behalf. Applications are submitted to NYS DHSES and placed in rank order for available funding and submitted to FEMA for final approval. Eligible projects not selected for funding are placed in an inactive status and may be considered as additional HMGP funding becomes available. For additional information regarding HMGP, please refer to: https://www.fema.gov/hazard-mitigation-grant-program

Flood Mitigation Assistance (FMA) Program

The FMA program combines the previous Repetitive Flood Claims and Severe Repetitive Loss Grants into one grant program. The FMA provides funding to assist states and communities in implementing measures to reduce or eliminate the long-term risk of flood damage to buildings, manufactured homes, and other structures insurable under the NFIP. The FMA is funded annually; no federal disaster declaration is required. Only NFIP insured homes and businesses are eligible for mitigation in this program. Funding for FMA is very limited and, as with the HMGP, individuals cannot apply directly for the program. Applications must come from local governments

Attachment: 24-Section-6-Mitigation-Strategy-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

Attachment: 24-Section-6-Mitigation-Strategy-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

or other eligible organizations. The federal cost share for an FMA project is at least 75%. At most, 25% of the total eligible costs must be provided by a non-federal source. Of this 25%, no more than half can be provided as in-kind contributions from third parties. At minimum, a FEMA-approved local flood mitigation plan is required before a project can be approved. The FMA funds are distributed from FEMA to the state. The NYS DHSES serves as the grantee and program administrator for the FMA program.

For additional information regarding the FMA program, please refer to: https://www.fema.gov/flood-mitigation-assistance-grant-program

Building Resilient Infrastructure and Communities (BRIC) Program

Building Resilient Infrastructure and Communities (BRIC) will support states, local communities, tribes, and territories as they undertake hazard mitigation projects, reducing the risks they face from disasters and natural hazards. BRIC is a new FEMA pre-disaster hazard mitigation program that replaces the existing Pre-Disaster Mitigation (PDM) program.

The BRIC program guiding principles are supporting communities through capability- and capacity-building; encouraging and enabling innovation; promoting partnerships; enabling large projects; maintaining flexibility; and providing consistency.

For additional information regarding the BRIC program, please refer to:
https://www.fema.gov/grants/mitigation/building-resilient-infrastructure-communities

Rehabilitation of High Hazard Potential Dams (HHPD) Program

The Rehabilitation of High Hazard Potential Dams (HHPD) grant program provides technical, planning, design, and construction assistance for eligible rehabilitation activities that reduce dam risk and increase community preparedness.

The HHPD Grant Program will provide assistance for technical, planning, design and construction activities toward:

- Repair
- Removal
- Structural/nonstructural rehabilitation of eligible high hazard potential dams

For additional information regarding the HHPD program, please refer to: https://www.fema.gov/emergency-managers/risk-management/dam-safety/grants/resources.

Extraordinary Circumstances

For BRIC and FMA project subawards, the (FEMA) Region may apply extraordinary circumstances when justification is provided and with concurrence from FEMA Headquarters (Risk Reduction and Risk Analysis Divisions) prior to granting an exception. If this exception is granted, a local mitigation plan must be approved by FEMA within 12 months of the award of the project subaward to that community.

For HMGP, BRIC, and FMA, extraordinary circumstances exist when a determination is made by the Applicant and FEMA that the proposed project is consistent with the priorities and strategies identified in the State (Standard or Enhanced) Mitigation Plan and that the jurisdiction meets at least one of the criteria below. If the jurisdiction does not meet at least one of these criteria, the Region must coordinate with FEMA Headquarters (Risk Reduction and Risk Analysis Divisions) for HMGP; however, for BRIC and FMA the Region must coordinate and seek concurrence prior to granting an exception:

- The jurisdiction meets the small, impoverished community criteria (see Part VIII, B.2).
- The jurisdiction has been determined to have had insufficient capacity due to lack of available funding, staffing, or other necessary expertise to satisfy the mitigation planning requirement prior to the current disaster or application deadline.
- The jurisdiction has been determined to have been at low risk from hazards because of low frequency of occurrence or minimal damage from previous occurrences as a result of sparse development.
- The jurisdiction experienced significant disruption from a declared disaster or another event that impacts its ability to complete the mitigation planning process prior to award or final approval of a project award.
- The jurisdiction does not have a mitigation plan for reasons beyond the control of the State, federally-recognized tribe, or local community, such as Disaster Relief Fund restrictions that delay FEMA from granting a subaward prior to the expiration of the local or Tribal Mitigation Plan.

For HMGP, BRIC, and FMA, the Applicant must provide written justification that identifies the specific criteria or circumstance listed above, explains why there is no longer an impediment to satisfying the mitigation planning requirement and identifies the specific actions or circumstances that eliminated the deficiency.

When an HMGP project funding is awarded under extraordinary circumstances, the Recipient shall acknowledge in writing to the Regional Administrator that a plan will be completed within 12 months of the subaward. The Recipient must provide a work plan for completing the local or Tribal Mitigation Plan, including milestones and a timetable, to ensure that the jurisdiction will complete the plan in the required time. This requirement shall be incorporated into the award (both the planning and project subaward agreements if a planning subaward is also awarded).

Federal and State Disaster and Recovery Assistance Programs

Following a disaster, various types of assistance may be made available by local, state, and federal governments. The types and levels of disaster assistance depend on the severity of the damage and the declarations that result from the disaster event. Among the general types of assistance that may be provided should the President of the United States declare the event a major disaster includes the following:

Individual Assistance (IA)

IA provides help for homeowners, renters, businesses, and some nonprofit entities after disasters occur. This program is largely funded by the U.S. Small Business Administration. For homeowners and renters, those who suffered uninsured or underinsured losses may be eligible for a Home Disaster Loan to repair or replace damaged real estate or personal property. Renters are eligible for loans to cover personal property losses. Individuals may borrow up to $200,000 to repair or replace real estate, $40,000 to cover losses to personal property, and an additional 20% for mitigation. For businesses, loans may be made to repair or replace disaster damages to property owned by the business, including real estate, machinery and equipment, inventory, and supplies. Businesses of any size are eligible. Nonprofit organizations such as charities, churches, private universities, etc. are also eligible. An Economic Injury Disaster Loan provides necessary working capital until normal operations resume after a physical disaster. These loans are restricted, by law, to small businesses only. For additional information regarding IA, please refer to: https://www.fema.gov/individual-disaster-assistance

Public Assistance (PA)

PA provides cost reimbursement aid to local governments (state, county, local, municipal authorities and school districts) and certain nonprofit agencies that were involved in disaster response and recovery programs or that suffered loss or damage to facilities or property used to deliver government-like services. This program is largely

Attachment: 24-Section-6-Mitigation-Strategy-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

funded by FEMA with both local and state matching contributions required. For additional information regarding PA, please refer to: https://www.fema.gov/public-assistance-local-state-tribal-and-non-profit

Small Business Administration (SBA) Loans

SBA provides low-interest disaster loans to homeowners, renters, business of all sizes, and most private nonprofit organizations. SBA disaster loans can be used to repair or replace the following items damaged or destroyed in a declared disaster: real estate, personal property, machinery and equipment, and inventory and business assets.

Homeowners may apply for up to $200,000 to replace or repair their primary residence. Renters and homeowners may borrow up to $40,000 to replace or repair personal property (such as clothing, furniture, cars, and appliances) damaged or destroyed in a disaster. Physical disaster loans of up to $2 million are available to qualified businesses or most private nonprofit organizations. For additional information regarding SBA loans, please refer to: https://www.sba.gov/managing-business/running-business/emergency-preparedness/disaster-assistance

Social Services Block Grant Program (SSBG)

To address the needs of critical health and human service providers and the populations they serve, the State of New York will receive a total of $235.4 million in federal Superstorm Sandy SSBG funding. The state will distribute $200,034,600 through a public and transparent solicitation for proposals and allocate $35.4 million in State Priority Projects, using the SSBG funding. Sandy SSBG resources are dedicated to covering necessary expenses resulting from Superstorm Sandy, including social, health, and mental health services for individuals, and for repair, renovation, and rebuilding of health care facilities, mental hygiene facilities, child care facilities, and other social services facilities. Additional information regarding the SSBG program is available on the website: https://www.acf.hhs.gov/ocs/programs/ssbg.

Department of Homeland Security Grant Program (HSGP)

The Homeland Security Grant Program (HSGP) plays an important role in the implementation of the National Preparedness System by supporting the building, sustainment, and delivery of core capabilities essential to achieving the National Preparedness Goal of a secure and resilient nation. The program supports efforts to build and sustain core capabilities across the Prevention, Protection, Mitigation, Response, and Recovery mission areas. This includes two priorities: building and sustaining law enforcement terrorism prevention capabilities and maturation and enhancement of state and major urban area fusion centers. HSGP is composed of three interconnected grant programs including the State Homeland Security Program (SHSP), Urban Areas Security Initiative (UASI), and the Operation Stonegarden (OPSG). Together, these grant programs fund a range of preparedness activities, including planning, organization, equipment purchase, training, exercises, and management and administration. For additional information regarding HSGP, please refer to: https://www.fema.gov/grants/preparedness/homeland-security

Community Development Block Grants (CDBG)

CDBG are federal funds intended to provide low and moderate-income households with viable communities, including decent housing, as suitable living environment, and expanded economic opportunities. Eligible activities include community facilities and improvements, roads and infrastructure, housing rehabilitation and preservation, development activities, public services, economic development, planning, and administration. Public improvements may include flood and drainage improvements. In limited instances, and during the times of "urgent need" (e.g., post-disaster) as defined by the CDBG National Objectives, CDBG funding may be used to acquire a property located in a floodplain that was severely damaged by a recent flood, demolish a structure severely damaged by an earthquake, or repair a public facility severely damaged by a hazard event. For additional information regarding CDBG, please refer to: https://www.hudexchange.info/programs/cdbg-entitlement/

Attachment: 24-Section-6-Mitigation-Strategy-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

U.S. Economic Development Administration

The U.S. Economic Development Administration (USEDA) is an agency of the U.S. Department of Commerce that supports regional economic development in communities around the country. It provides funding to support comprehensive planning and makes strategic investments that foster employment creation and attract private investment in economically distressed areas of the United States. Through its Public Works Program, USEDA invests in key public infrastructure, such as in traditional public works projects, including water and sewer systems improvements, expansion of port and harbor facilities, brownfields, multitenant manufacturing and other facilities, business and industrial parks, business incubator facilities, redevelopment technology-based facilities, telecommunications and development facilities. Through its Economic Adjustment Program, USEDA administers its Revolving Loan Fund (RLF) Program, which supplies small businesses and entrepreneurs with the gap financing needed to start or expand their business, in areas that have experienced or are under threat of serious structural damage to the underlying economic base. Please refer to the USEDA website (https://www.eda.gov/) for additional information.

Federal Highway Administration - Emergency Relief (FHWA-ER)

The FHWA- ER is a grant program that may be used for repair or reconstruction of Federal-aid highways and roads on Federal lands which have suffered serious damage as a result of a disaster. NYS is serving as the liaison between local municipalities and FHWA. $30 million in funding was released in October−November of 2012 for emergency repair work conducted in the first 180 days following Hurricane Sandy. Another $220 million in additional funding became available February 2013. For information regarding the FHWA-ER Program, please refer to: https://www.fhwa.dot.gov/programadmin/erelief.cfm

Federal Transit Administration - Emergency Relief (FTA-ER)

The FTA-ER is a grant program that funds capital projects to protect, repair, reconstruct, or replace equipment and facilities of public transportation systems. Administered by the Federal Transit Authority at the U.S. Department of Transportation and directly allocated to metropolitan transit authorities (MTA) and port authorities, this transportation-specific fund was created as an alternative to FEMA PA. Currently, a total of $5.2 billion has been allocated to NYS-related entities. For information regarding the FTA-ER Program, please refer to: https://www.transit.dot.gov/funding/grant-programs/emergency-relief-program/emergency-relief-program

State Hazard Mitigation Funding Opportunities

Empire State Development

Empire State Development offers a wide range of financing, grants and incentives to promote business and employment growth, and real estate development throughout the State. Several programs address infrastructure construction associated with project development, acquisition, and demolition associated with project development and brownfield remediation and redevelopment. For additional information regarding Empire State Development, please refer to: https://esd.ny.gov/

Local Waterfront Revitalization Program

The Waterfront Revitalization of Coastal Areas and Inland Waterways Act offers local governments the opportunity to participate in the State's Coastal Management Program (CMP) (pdf) on a voluntary basis by preparing and adopting a LWRP, providing more detailed implementation of the State's CMP through use of such existing broad powers as zoning and site plan review. When an LWRP is approved by the New York State Secretary of State, State agency actions are required to be consistent with the approved LWRP to the maximum

Attachment: 24-Section-6-Mitigation-Strategy-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

extent practicable. When the federal government concurs with the incorporation of an LWRP into the CMP, federal agency actions must be consistent with the approved addition to the CMP.

An approved LWRP reflects community consensus and provides a clear direction for appropriate future development. It establishes a long-term partnership among local government, community-based organizations, and the State. Also, funding to advance preparation, refinement, or implementation of Local Waterfront Revitalization Programs is available under Title 11 of the New York State EPF LWRP, among other sources.

In addition, State permitting, funding, and direct actions must be consistent, to the maximum extent practicable, with an approved LWRP. Within the federally defined coastal area, federal agency activities are also required to be consistent with an approved LWRP. This "consistency" provision is a strong tool that helps ensure all government levels work in unison to build a stronger economy and a healthier environment.

New York State Department of Transportation (NYSDOT)

Scour Critical/Flood Prone Bridge Program

The Scour Critical/Flood Prone Bridge Program is an initiative developed to harden New York State's at-risk bridges to withstand extreme weather events. In the past three years, the State has suffered nine presidentially declared disasters due to extreme weather, many involving severe flooding (NYSDOT 2015).

For this initiative, 105 scour critical/flood prone bridges (https://www.dot.ny.gov/main/business-center/cbow/repository/CBOW_list_2015.pdf) throughout New York State were identified as most at-risk from repeated flooding and are located in the Capital District, Long Island, Mid-Hudson, Mohawk Valley, North Country, Finger Lakes, Central/Western and Southern Tier regions. The locations encompass 78 communities within 30 counties across the State (NYSDOT 2015).

All of the bridges included in this program were built to the codes and standards of their time and remain safe and open for everyday traffic. However, due to a variety of natural severe weather events and the increasing frequency of major storms and floods, they are vulnerable to scour, and flooding caused by the intensity and velocity of water from extreme natural events. Bridge scour erodes and carries away foundation materials such as sand and rocks from around and beneath bridge abutments, piers, foundations and embankments (NYSDOT 2015).

This program encompasses a variety of bridge improvement work, including upgrading concrete bridge abutments and/or piers by adding steel or concrete pile foundations, increasing the size of waterway openings to meet 100-year flood projections and reducing or eliminating the number of bridge piers in the water to prevent debris and ice jams that can flood surrounding areas. Completion of the program will ensure continual access to critical facilities and essential personnel during emergency events. Adverse impacts to travel throughout the State will be greatly reduced during severe weather events as well (NYSDOT 2015).

Through HMGP, this program aims to increase the State's resiliency and mitigate the risks of loss and damage associated with future disasters. The total cost of the program, including all 105 bridges across the state, is $518 million. It will be paid for with a mix of funding from FEMA and the U.S. Department of Housing and Urban Development. No state funding will be required (NYSDOT 2015).

Emergency Watershed Protection Program

The purpose of the Emergency Watershed Protection Program (EWP) was established by Congress to respond to emergencies created by natural disasters. The EWP Program is designed to help people and conserve natural resources by relieving imminent hazards to life and property caused by floods, fires, drought, windstorms, and other natural occurrences. The U.S. Department of Agriculture's Natural Resources Conservation Service

Attachment: 24-Section-6-Mitigation-Strategy-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

(NRCS) administers the EWP Program; EWP-Recovery, and EWP–Floodplain Easement (FPE). For additional information regarding the EWP, please refer to:
https://www.nrcs.usda.gov/wps/portal/nrcs/main/national/programs/landscape/ewpp/

EWP - Recovery

The EWP Program is a recovery effort program aimed at relieving imminent hazards to life and property caused by floods, fires, windstorms, and other natural occurrences. Public and private landowners are eligible for assistance but must be represented by a project sponsor that must be a legal subdivision of the State, such as a city, county, township or conservation district, and Native American Tribes or Tribal governments. NRCS may pay up to 75 percent of the construction cost of emergency measures. The remaining 25 percent must come from local sources and can be in the form of cash or in-kind services.

EWP work is not limited to any one set of measures. It is designed for installation of recovery measures to safeguard lives and property as a result of a natural disaster. NRCS completes a Damage Survey Report (DSR) which provides a case-by-case investigation of the work necessary to repair or protect a site.

Watershed impairments that the EWP Program addresses are debris-clogged stream channels, undermined and unstable streambanks, jeopardized water control structures and public infrastructures, wind-borne debris removal, and damaged upland sites stripped of protective vegetation by fire or drought.

EWP - Floodplain Easement (FPE)

Privately-owned lands or lands owned by local and state governments may be eligible for participation in EWP-FPE. To be eligible, lands must meet one of the following criteria:

- Lands that have been damaged by flooding at least once within the previous calendar year or have been subject to flood damage at least twice within the previous 10 years
- Other lands within the floodplain are eligible, provided the lands would contribute to the restoration of the flood storage and flow, provide for control of erosion, or that would improve the practical management of the floodplain easement
- Lands that would be inundated or adversely impacted as a result of a dam breach

EWP-FPE easements are restored to the extent practicable to the natural environment and may include both structural and nonstructural practices to restore the flood storage and flow, erosion control, and improve the practical management of the easement.

Structures, including buildings, within the floodplain easement must be demolished and removed or relocated outside the 100-year floodplain or dam breach inundation area.

New York State Department of Environmental Conservation Climate Smart Communities (CSC) Program

The CSC program is jointly sponsored by the following six New York State agencies: DEC; Energy Research and Development Authority; Public Service Commission; Department of State; NYSDOT; and the Department of Health. The program encourages municipalities to minimize the risks of climate change and reduce long-term costs through actions which reduce greenhouse gas emissions and adapt to a changing climate. The program offers free technical support on energy and climate and guidance tailored to New York State communities. As of April 2020, more than 303 communities, representing 8.7 million New Yorkers in every region of the state, have committed to acting on climate through New York State's Climate Smart Communities program.

Attachment: 24-Section-6-Mitigation-Strategy-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

Benefits of participating in the program include saving taxpayer dollars, improving operations and infrastructure, increasing energy independence and security, demonstrating leadership, and positioning for economic growth. Registered Climate Smart Communities receive notification of state and federal assistance that they can leverage to help adopt low-carbon technologies and of programs and support for efficiency improvements and energy conservation. Further, those communities receive an advantage in accessing some state assistance programs, can call on the help of other local governments that already have adopted climate smart practices and policies, and receive statewide recognition for their climate-smart accomplishments. Key elements of the Climate Smart Communities program are described below.

For additional information regarding the CSC program, please refer to: https://climatesmart.ny.gov/

Climate Smart Communities Pledge

Any city, town, village, or county in New York can join the program by adopting the Climate Smart Communities Pledge. To become a registered Climate Smart Community, the municipality's governing body must adopt a resolution that includes all 10 elements of the Pledge and inform DEC of the passage of the resolution. The required 10 elements of the Pledge are as follows:

- Pledge to be a Climate Smart Community.
- Set goals, inventory emissions, plan for climate action.
- Decrease community energy use.
- Increase community use of renewable energy.
- Realize benefits of recycling and other climate smart solid waste management practices.
- Reduce greenhouse gas emissions through use of climate smart land use tools.
- Enhance community resilience and prepare for the effects of climate change.
- Support development of a green innovation economy.
- Inform and inspire the public.
- Commit to an evolving process of climate action.

At the time of this plan update, 8 communities in Erie County have registered to take the Climate Smart Communities Pledge.

Climate Smart Communities Certification (CSC) Program

The Climate Smart Communities Certification (CSC) program enables high-performing registered communities to achieve recognition for their leadership. Designed around the existing ten pledge elements, the certification program recognizes communities achieving any on over 130 total possible actions through a rating system leading to four levels of award: Certified, Bronze, Silver, and Gold. Recertification of completed actions is required every five years. Details of the program and the specific documentation required for each action are described in the CSC Certification Manual at https://climatesmart.ny.gov/actions-certification/actions/

At the time of this plan update, two communities have achieved certification: City of Buffalo and Erie County.

Climate Smart Communities Grant Program

In 2019 DEC announced an expansion of the Environmental Protection Fund to support communities ready to reduce greenhouse gas emissions and prepare for the effects of climate change. Climate Smart Community Implementation grants support mitigation and adaptation projects and range from $100,000 to $2 million. Competitive grants have typically ranged from $25,000 to $100,000 will also provide support for local governments to become certified Climate Smart Communities. All counties, cities, towns, and villages of the

Attachment: 24-Section-6-Mitigation-Strategy-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

State of New York are eligible to receive funding. The CSC Grant Program will provide 50/50 matching grants for eligible projects in the following categories.

Funding is available for implementation projects that advance a variety of climate adaptation and mitigation actions, including the following:

- Construction of natural resiliency measures
- Relocation or retrofit of climate-vulnerable facilities
- Conservation or restoration of riparian areas and tidal marsh migration area
- Reduction of flood risk
- Clean transportation
- Reduction or recycling of food waste

Funding is also available for **certification projects** that advance several specific actions aligned with Climate Smart Communities Certification requirements:

- Right-sizing of government fleets
- Developing natural resource inventories
- Conducting vulnerability assessments
- Developing climate adaptation strategies
- Updating hazard mitigation plans to address changing conditions and reduce climate vulnerability

In scoring grant applications, increasing points are awarded to communities who have already taken the CSC pledge and to those that have achieved certification status. All grant recipients must take the Climate Smart Communities Pledge within the term of their grant contract. For climate mitigation projects, grant recipients must provide a report of estimates of emissions reduction. Certification actions must adhere to the requirements and standards described in the Climate Smart Communities Certification Manual that is available on the website: http://www.dec.ny.gov/energy/96511.html. For implementation projects involving property (construction, improvements, restoration, rehabilitation), grant recipients that do not have ownership of the property must obtain a climate change mitigation easement.

The Climate Smart Communities Toolkit was developed to educate New York communities on recommended practices that will help to reduce greenhouse gas emissions and adapt to the effects of climate change, specifically in the areas of land-use, transportation policy, green buildings, infrastructure investment, green infrastructure, housing policy, adaptation, and resilience. The Climate Smart Communities Guide to Local Action contains overviews of possible community actions, how-to's and case studies to help communities implement the CSC pledge. The Climate Smart Communities Land Use Toolkit allows New York communities to find recommended practices that will help to reduce greenhouse gas emissions in the areas of land use, transportation policy, green building, infrastructure investment, green infrastructure, and housing policy.

New York State Department of Environmental Conservation (NYSDEC)

Water Quality Improvement Project (WQIP) Program

The WQIP program is a competitive reimbursement grant program that funds projects that directly address documented water quality impairments. The competitive, statewide grant program is open to local governments and not-for-profit corporations. Grant recipients may receive up to 75 percent of the project costs for high priority wastewater treatment improvement, non-agricultural nonpoint source abatement and control, land acquisition for source water protection, aquatic habitat restoration, and municipal separate storm sewer system projects; up

Attachment: 24-Section-6-Mitigation-Strategy-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

to 50% for salt storage projects; and up to 40% for general wastewater infrastructure improvement projects. Eligible activities include:

- Wastewater treatment improvement
- Non-agricultural nonpoint source abatement and control
- Land acquisition for source water protection
- Salt storage
- Aquatic habitat restoration
- Municipal separate storm sewer systems (MS4)

Details regarding this program are available here: https://www.dec.ny.gov/pubs/4774.html.

New York State DEC/Environmental Facilities Corporation (EFC) Wastewater Infrastructure Engineering Planning Grant (EPG)

The New York State DEC, in conjunction with the New York State EFC, will offer grants to municipalities to help pay for the initial planning of eligible Clean Water State Revolving Fund (CWSRF) water quality projects.

The Wastewater Infrastructure Engineering Planning Grant will assist municipalities with the engineering and planning costs of CWSRF-eligible water quality projects. Municipalities with a Median Household Income (MHI) of $65,000 or less in Regional Economic Development Council (REDC) regions of Capital District, Southern Tier, North Country, Mohawk Valley, Central NY, Finger Lakes, or Western NY OR with a Median Household Income of $85,000 or less in REDC regions of Long Island, New York City or Mid-Hudson are eligible to apply. Grants with a 20 percent required local match will be provided to finance activities, including engineering and/or consultant fees for engineering and planning services for the production of an engineering report.

The goal of the EPG program is to advance water quality projects to construction, so successful applicants can use the engineering report funded by the grant to seek financing through the CWSRF program, WQIP program, or other funding entities to further pursue the identified solution. Funding priorities go to projects that are:

- Required by an executed Order on Consent; or
- Required by a draft or final SPDES permit; or
- Upgrading or replacing an existing wastewater system; or
- Constructing a wastewater treatment and/or collection system for an area with failing onsite septic systems; or
- Identified in a Total Maximum Daily Load (TMDL) Implementation Plan.

Details regarding this program can be found here: https://www.dec.ny.gov/pubs/81196.html.

New York State Department of Transportations

BRIDGE NY

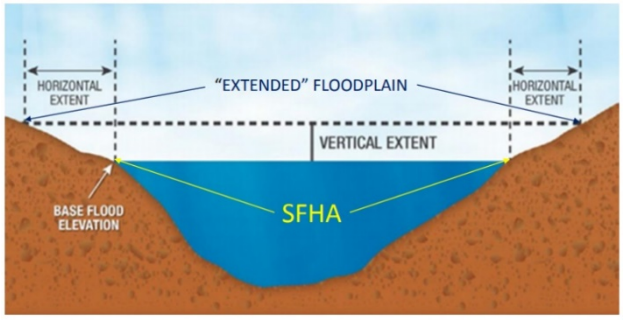
The BRIDGE NY program, administered by the NYSDOT, is open to all municipal owners of bridges and culverts. Projects will be awarded through a competitive process and will support all phases of project development. Projects selected for funding under the BRIDGE NY Initiative will be evaluated based on the resiliency of the structure, including such factors as hydraulic vulnerability and structural resiliency; the significance and importance of the bridge including traffic volumes, detour considerations, number and types of

Attachment: 24-Section-6-Mitigation-Strategy-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

businesses served and impacts on commerce; and the current bridge and culvert structural conditions. Information regarding the program can be found here: https://www.dot.ny.gov/BRIDGENY

Community Risk and Resiliency Act (CRRA)

On September 22, 2015, Governor Andrew Cuomo signed bill A06558/S06617-B, the CRRA. The purpose of the bill is to ensure that certain state monies, facility-siting regulations, and permits include consideration of the effects of climate risk and extreme weather events. The bill's provisions will apply to all applications and permits no later than January 1, 2017. CRRA includes five major provisions:



- Official Sea-Level Rise Projections - CRRA requires the DEC to adopt science-based sea-level rise projections into regulation.
- Consideration of Sea-Level Rise, Storm Surge and Flooding - CRRA requires applicants for permits or funding in a number of specified programs to demonstrate that future physical climate risk due to sea-level rise, storm surge, and flooding have been considered, and that DEC consider incorporating these factors into certain facility-siting regulations.
- Smart-Growth Public Infrastructure Policy Act Criteria - CRRA adds mitigation of risk due to sea-level rise, storm surge, and flooding to the list of smart-growth criteria to be considered by state public infrastructure agencies.
- Guidance on Natural Resiliency Measures - CRRA requires DEC, in consultation with the Department of State (DOS), to develop guidance on the use of natural resources and natural processes to enhance community resiliency.
- Model Local Laws Concerning Climate Risk - CRRA requires DOS, in cooperation with DEC, to develop model local laws that include consideration of future risk due to sea-level rise, storm surge and/or flooding. These model local laws must be based on available data predicting the likelihood of extreme weather events, including hazard risk analysis (NYSDEC 2018).

CRRA requires NYSDEC, in consultation with DOS, to prepare guidance on implementation of the statute. To meet its obligation to develop guidance for the implementation of CRRA, DEC is proposing a new document, State Flood Risk Management Guidance (SFRMG). The SFRMG is intended to inform state agencies as they develop program-specific guidance to require that applicants demonstrate consideration of sea-level rise, storm surge, and flooding, as permitted by program-authorizing statutes and operating regulations. The SFRMG incorporates possible future conditions, including the greater risks of coastal flooding presented by sea-level rise and enhanced storm surge and inland flooding expected to result from increasingly frequent extreme precipitation events (NYSDEC 2018).

For additional details on the CRRA, please refer to: https://www.dec.ny.gov/energy/102559.html

6.4.7 Potential Mitigation Funding Sources

While it is important to recognize the mitigation strategies for each jurisdiction to help achieve the mitigation goals and objectives of the (HMP, it is also important to provide sources for funding to implement these strategies. The table below provides a list of programs, descriptions, and links for those seeking funding sources. This table is not intended to be a comprehensive list, but rather a starting point to help identify potential sources of funding for the identified mitigation strategies.

Attachment: 24-Section-6-Mitigation-Strategy-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

Attachment: 24-Section-6-Mitigation-Strategy-093021 (RES-2022-375 : Authorizing Adoption of the 2022

Table 6-3. Mitigation Funding Sources

Program	Description	Lead Agency	Website
Federal			
Hazard Mitigation Assistance (HMA)	Grants to provide funding for eligible mitigation activities that reduce disaster losses and protect life and property from future disaster damages – includes FMA, HMGP, BRIC.	FEMA	https://www.fema.gov/hazard-mitigation-assistance
Flood Mitigation Assistance (FMA)	Program grants to States and communities for pre-disaster mitigation planning and projects to help reduce or eliminate the long-term risk of flood damage to structures insurable under the National Flood Insurance Program.	FEMA	https://www.fema.gov/flood-mitigation-assistance-grant-program
Hazard Mitigation Grant Program (HMGP)	Grants to States and communities for planning and projects providing long-term hazard mitigation measures following a major disaster declaration.	FEMA	https://www.fema.gov/hazard-mitigation-grant-program
Building Resilient Infrastructure and Communities (BRIC)	Grants to States local communities, tribes, and territories as they undertake hazard mitigation projects, reducing the risks they face from disasters and natural hazards. BRIC is a new FEMA pre-disaster hazard mitigation program that replaces the Pre-Disaster Mitigation (PDM) program.	FEMA	https://www.fema.gov/grants/mitigation/building-resilient-infrastructure-communities
Public Assistance: Hazard Mitigation Funding Under Section 406	Hazard mitigation discretionary funding available under Section 406 of the Robert T. Stafford Disaster Relief and Emergency Assistance Act following a Presidentially declared disaster.	FEMA	https://www.fema.gov/news-release/2017/05/03/4309/fema-hazard-mitigation-grants-404-and-406
Assistance to Firefighters Grant Program	The primary goal of the Assistance to Firefighters Grants (AFG) is to enhance the safety of the public and firefighters with respect to fire-related hazards by providing direct financial assistance to eligible fire departments, nonaffiliated Emergency Medical Services organizations, and State Fire Training Academies. This funding is for critically needed resources to equip and train emergency personnel to recognized standards, enhance operations efficiencies, foster interoperability, and support community resilience.	FEMA	https://www.fema.gov/welcome-assistance-firefighters-grant-program
Disaster Housing Program	Emergency assistance for housing, including minor repair of home to establish livable conditions, mortgage and rental assistance.	HUD	https://www.hud.gov/program_offices/public_indian_housing/publications/dhap
HOME Investment Partnerships Program	Grants to local and state government and consortia for permanent and transitional housing, (including financial support for property acquisition and rehabilitation for low income persons).	HUD	https://www.hud.gov/program_offices/comm_planning/affordablehousing/programs/home/
HUD Disaster Recovery Assistance	Grants to fund gaps in available recovery assistance after disasters (including mitigation).	HUD	https://www.hud.gov/info/disasterresources
Section 108 Loan Guarantee	Enables states and local governments participating in the Community Development Block Grant (CDBG) program to obtain federally guaranteed loans for disaster-distressed areas.	HUD	https://www.hudexchange.info/programs/section-108/

Program	Description	Lead Agency	Website
Smart-Growth Implementation Assistance (SGIA) program	The SGIA program focuses on complex or cutting-edge issues, such as stormwater management, code revision, transit-oriented development, affordable housing, infill development, corridor planning, green building, and climate change. Applicants can submit proposals under 4 categories: community resilience to disasters, job creation, the role of manufactured homes in sustainable neighborhood design or medical and social service facilities siting.	EPA	https://www.epa.gov/smartgrowth
Partners for Fish and Wildlife	Financial and technical assistance to private landowners interested in pursuing restoration projects affecting wetlands and riparian habitats.	U.S. Fish and Wildlife Service	https://www.fws.gov/partners/
FHWA Emergency Relief Program	Fund for the repair or reconstruction of Federal-aid highways that have suffered serious damage as a result of (1) natural disasters or (2) catastrophic failures from an external cause.	U.S. Department of Transportation (DOT)	https://www.fhwa.dot.gov/programadmin/erelief.cfm
Better Utilizing Investments to Leverage Development (BUILD)	Investing in critical road, rail, transit and port projects across the nation	U.S. DOT	https://www.transportation.gov/BUILDgrants/about
Community Facilities Direct Loan & Grant Program	This program provides affordable funding to develop essential community facilities in rural areas. An essential community facility is defined as a facility that provides an essential service to the local community for the orderly development of the community in a primarily rural area, and does not include private, commercial, or business undertakings.	USDA	https://www.rd.usda.gov/programs-services/community-facilities-direct-loan-grant-program
Emergency Loan Program	USDA's Farm Service Agency (FSA) provides emergency loans to help producers recover from production and physical losses due to drought, flooding, other natural disasters or quarantine.	USDA	https://www.fsa.usda.gov/programs-and-services/farm-loan-programs/emergency-farm-loans/index
Emergency Watershed Protection (EWP) Program	Provide assistance to relieve imminent hazards to life and property caused by floods, fires, drought, windstorms, and other natural occurrences.	NRCS	https://www.nrcs.usda.gov/wps/portal/nrcs/main/national/programs/landscape/ewpp/
Financial Assistance	Financial assistance to help plan and implement conservation practices that address natural resource concerns or opportunities to help save energy, improve soil, water, plant, air, animal and related resources on agricultural lands and non-industrial private forest land.	NRCS	https://www.nrcs.usda.gov/wps/portal/nrcs/main/national/programs/financial/
Regional Conservation Partnership Program (RCPP)	The RCPP promotes coordination of NRCS conservation activities with partners that offer value-added contributions to expand our collective ability to address on-farm, watershed, and regional natural resource concerns. Through RCPP, NRCS seeks to co-invest with partners to implement projects that demonstrate innovative solutions to conservation challenges and provide measurable improvements and outcomes tied to the resource concerns they seek to address.	NRCS	https://www.nrcs.usda.gov/wps/portal/nrcs/main/national/programs/financial/rcpp/
Emergency Management Performance Grants (EMPG) Program	Assist local, tribal, territorial, and state governments in enhancing and sustaining all-hazards emergency management capabilities.	U.S. DHS	https://www.fema.gov/emergency-management-performance-grant-program

Attachment: 24-Section-6-Mitigation-Strategy-093021 (RES-2022-375 : Authorizing Adoption of the 2022

Program	Description	Lead Agency	Website
Land & Water Conservation Fund	Matching grants to states and local governments for the acquisition and development of public outdoor recreation areas and facilities (as well as funding for shared federal land acquisition and conservation strategies).	National Park Service	https://www.nps.gov/subjects/lwcf/index.htm
Coastal Watersheds Grant Program	Restore America's Estuaries, in close coordination with and financial support from EPA, administers the National Estuary Program (NEP) Coastal Watersheds Grant Program. This grant program funds projects within the geographic areas shown here and supports the following Congressionally-set priorities: •Loss of key habitats resulting in significant impacts on fisheries and water quality such as seagrass, mangroves, tidal and freshwater wetlands, forested wetlands, kelp beds, shellfish beds, and coral reefs; •Recurring harmful algae blooms; •Unusual or unexplained marine mammal mortalities; •Proliferation or invasion of species that limit recreational uses, threaten wastewater systems, or cause other ecosystem damage; •Flooding and coastal erosion that may be related to sea-level rise, changing precipitation, or salt marsh, seagrass, or wetland degradation or loss; •Impacts of nutrients and warmer water temperatures on aquatic life and coastal ecosystems, including low dissolved oxygen conditions in estuarine waters; and •Contaminants of emerging concern found in coastal and estuarine waters such as pharmaceuticals, personal care products, and microplastics.	National Estuary Program	https://estuaries.org/initiatives/watershedgrants/
Rehabilitation of High Hazard Potential Dams Grant Program	The main objective of the HHPD grant program is to provide technical, planning, design, and construction assistance in the form of grants to non-federal sponsors for rehabilitation of eligible high hazard potential dams.	FEMA	https://www.fema.gov/emergency-managers/risk-management/dam-safety/grants/resources
State			
Local Government Records Management Improvement Fund (LGRMIF) Disaster Recovery Grants	Grants for disaster recovery projects related to damage caused by a sudden, unexpected event involving fire, water, man-made or natural phenomena where a timely response is necessary to prevent the irretrievable loss of vital or archival records, or to ensure reasonable, timely access to vital records.	New York State Archives / New York State Education Department	http://www.archives.nysed.gov/grants/grants_lgrmif.shtml
The New York State Emergency Services Revolving Loan	Repair of firefighting apparatus, ambulances, or rescue vehicles; Renovation, rehabilitation, or repair of facilities that house firefighting equipment, ambulances, rescue vehicles, and related equipment.	NYS DHSES	http://www.dhses.ny.gov/ofpc/services/loan/
Environmental Protection Fund (EPF)	Matching grants for the acquisition, planning, development, and improvement of parks, historic properties.	New York State Parks, Recreation & Historic Preservation (NYSOPRHP)	https://www.dec.ny.gov/about/92815.html

Attachment: 24-Section-6-Mitigation-Strategy-093021 (RES-2022-375 : Authorizing Adoption of the 2022

Program	Description	Lead Agency	Website
Recreational Trails (RTP)	Program Matching grants for the acquisition, development, rehabilitation and maintenance of trails and trail-related projects.	NYSOPRHP	https://parks.ny.gov/grants/recreational-trails/default.aspx
Environmental Protection & Improvement Grants	Competitive grants for environmental protection and improvement; available for municipalities, community organizations, not-for-profit organizations and others.	New York State Department of Environmental Conservation	https://www.dec.ny.gov/about/92815.html
Volunteer Fire Assistance Grants	The grant is a 50/50 matching funds program. Its purpose is to make funds available to rural fire companies for the purchase of wildland firefighting equipment such as portable backpack pumps, Nomex protective clothing, hand tools, hard hats, hose, portable radios and dry hydrants.	NYSDEC	https://www.dec.ny.gov/regulations/2364.html
Clean Water Act Section 604(b) Water Quality Planning Grants	Provide funding to implement regional comprehensive water quality management planning activities as described in Section 604(b) of the federal Clean Water Act. 604(b) funds are to be used for water quality management planning activities, including tasks to determine the nature, extent and causes of point and nonpoint source water pollution problems, and to develop plans to resolve these problems.	NYSDEC	https://www.dec.ny.gov/lands/53122.html
Water Quality Improvement Project (WQIP) Program	The WQIP program is a competitive, reimbursement grant program that funds projects that directly address documented water quality impairments. Applications are typically available each spring through the Consolidated Funding Application.	NYSDEC	https://www.dec.ny.gov/pubs/4774.html
New York State DEC/EFC Wastewater Infrastructure Engineering Planning Grant (EPG)	The New York State Department of Environmental Conservation (DEC), in conjunction with the New York State Environmental Facilities Corporation (EFC), will offer grants to municipalities to help pay for the initial planning of eligible Clean Water State Revolving Fund (CWSRF) water quality projects. The ultimate goal of the EPG program is to advance water quality projects to construction, so successful applicants can use the engineering report funded by the grant to seek financing through the CWSRF program, Water Quality Improvement Project program, or other funding entities to further pursue the identified solution.	NYSDEC	https://www.dec.ny.gov/pubs/81196.html
Climate Smart Communities Grant Program	The CSC Grant program was established in 2016 to provide 50/50 matching grants to cities, towns, villages, and counties (or boroughs of New York City) of the State of New York for eligible climate adaptation and mitigation projects.	NYSDEC	https://www.dec.ny.gov/energy/109181.html
BRIDGE NY	The state is making funding available for local governments to rehabilitate and replace bridges and culverts statewide.	NYS DOT	https://www.dot.ny.gov/BRIDGENY

Attachment: 24-Section-6-Mitigation-Strategy-093021 (RES-2022-375 : Authorizing Adoption of the 2022

6.5 MITIGATION STRATEGY DEVELOPMENT AND UPDATE

6.5.1 Update of Municipal Mitigation Strategies

To evaluate progress on local mitigation actions, each jurisdiction was provided with a Mitigation Action Plan Review Worksheet, pre-populated with those actions identified for their jurisdiction in the prior (2015) plan. For each action, municipalities were asked to indicate the status of each action ("No Progress/Unknown," "In Progress/Not Yet Complete," "Continuous," "Completed," "Discontinued") and provide review comments on each. Municipalities were requested to quantify the extent of progress and provide reasons for the level of progress or why actions were discontinued. Each jurisdictional annex provides a table identifying their prior mitigation strategy, the status of those actions and initiatives, and their disposition within their updated strategy.

Local mitigation actions identified as "Complete" and actions identified as "Discontinued" have been removed from the updated strategies. Those local actions that municipalities identified as "No Progress/Unknown" or "In Progress/Not Yet Complete," as well as certain actions/initiatives identified as "Continuous," have been carried forward in their local updated mitigation strategies. Actions considered ongoing capabilities were marked as "Discontinued" and included in the plan as ongoing capabilities. Municipalities were asked to provide further details on these projects to help better define the projects, identify benefits and costs, and improve implementation.

At the Kick-Off and during subsequent local level planning meetings, all participating municipalities were further surveyed to identify mitigation activities completed, ongoing, and potential/proposed. As new additional potential mitigation actions, projects or initiatives became evident during the plan update process, including as part of the risk assessment update and as identified through the public and stakeholder outreach process (see Section 3 – Planning Process), communities were made aware of these either through direct communication (local meetings, email, phone) or via their draft municipal annexes.

To help support the selection of an appropriate, risk-based mitigation strategy, each annex provided a summary of hazard vulnerabilities identified during the plan update process, either directly by municipal representatives or through review of available county and local plans and reports, and through the hazard profiling and vulnerability assessment process.

Beginning in November 2020, members of the Steering Committee and contract consultants worked directly with each jurisdiction (phone, email, local support meetings) to assist with the development and update of their annex and include mitigation strategies, focusing on identifying well-defined, implementable projects with a careful consideration of benefits (risk reduction, losses avoided), costs, and possible funding sources (including mitigation grant programs).

Concerted efforts were made to ensure that municipalities develop updated mitigation strategies that included activities and initiatives covering the range of mitigation action types described in recent FEMA planning guidance (FEMA "Local Mitigation Planning Handbook" March 2013), specifically:

- Local Plans and Regulations – These actions include government authorities, policies or codes that influence the way land and buildings are being developed and built.
- Structure and Infrastructure Project – These actions involve modifying existing structures and infrastructure to protect them from a hazard or remove them from a hazard area. This could apply to public or private structures as well as critical facilities and infrastructure. This type of action also involves projects to construct man-made structures to reduce the impact of hazards.

Attachment: 24-Section-6-Mitigation-Strategy-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

- Natural Systems Protection – These are actions that minimize damage and losses, and also preserve or restore the functions of natural systems.

- Education and Awareness Programs – These are actions to inform and educate citizens, elected officials, and property owners about hazards and potential ways to mitigate them. These actions may also include participation in national programs, such as the National Flood Insurance Program and Community Rating System, StormReady (NOAA), and Firewise (NFPA) Communities.

A series of mitigation strategy workshops were conducted the week of June 9, 2021, for all participating jurisdictions to support the development of focused problem statements based on the impacts of natural hazards in the county and their communities. These problem statements are intended to provide a detailed description of the problem area, including its impacts to the municipality/jurisdiction; past damages; loss of service; etc. An effort was made to include the street address of the property/project location, adjacent streets, water bodies, and well-known structures as well as a brief description of existing conditions (topography, terrain, hydrology) of the site. These problem statements form a bridge between the hazard risk assessment, which quantifies impacts to each community with the development of actionable mitigation strategies. In total, two workshops were held for Erie County's municipalities.

A strong effort has been made to better focus local mitigation strategies to clearly defined, readily implementable projects and initiatives that meet the definition or characteristics of mitigation. Broadly defined mitigation objectives have been eliminated from the updated strategy unless accompanied by discrete actions, projects or initiatives.

Certain continuous or ongoing strategies that represent programs that are, or since prior and existing plans have become, fully integrated into the normal operational and administrative framework of the community have been identified within the Capabilities section of each annex and removed from the updated mitigation strategy.

At least two mitigation projects per jurisdiction have been documented with an Action Worksheet, as per the New York State Hazard Mitigation Planning Standards Guide.

As discussed within the hazard profiles in Section 5.4 (Risk Assessment), the long-term effects of climate change are anticipated to exacerbate the impacts of weather-related hazards, including flood, severe storm, severe winter storm, and wildfire. By way of addressing these climate change-sensitive hazards within their local mitigation strategies and integration actions, communities are working to evaluate and recognize these long-term implications and potential impacts, and to incorporate in planning and capital improvement updates.

Municipalities included mitigation actions to address vulnerable critical facilities. These actions have been proposed in consideration of protection against 500-year events or worst-case scenarios. It is recognized, however, that in the case of projects being funded through Federal mitigation programs, the level of protection may be influenced by cost-effectiveness as determined through a formal benefit-cost analysis. In the case of "self-funded" projects, municipal discretion must be recognized. Further, it must be recognized that the county and municipalities have limited authority over privately-owned critical facility owners with regard to mitigation at any level of protection.

6.5.2 Update of County Mitigation Strategy

The update of the County-level mitigation strategies included a review of progress on the actions/initiatives identified in the 2015 HMP using a process similar to that used to review municipal mitigation strategy progress. The County, through their various department representatives, was provided with a Mitigation Action Plan Review Worksheet identifying all county-level actions and initiatives from the 2015 plan. The County reviewed

Attachment: 24-Section-6-Mitigation-Strategy-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

each action and provided progress. For each action, relevant county representatives were asked to indicate the status of each action (*No Progress/Unknown*, *In Progress/Not Yet Complete*, *Ongoing*, *Completed*, or *Discontinued*), and provide review comments on each.

Projects/initiatives identified as "*Complete*", as well as those actions identified as *Discontinued*, have been removed from this plan update. Those actions the County has identified as *No Progress/Unknown*, *In Progress/Not Yet Complete,* or *Ongoing* have been carried forward in the County's updated mitigation strategy. Actions considered ongoing capabilities were marked as *Discontinued* and included in the plan as ongoing capabilities.

Throughout the course of the plan update process, additional regional and county-level mitigation actions were identified by the following processes:

- Review of the results and findings of the updated risk assessment.
- Review of available regional and county plans reports and studies.;
- Direct input from county departments and other county and regional agencies, including:
    - Erie County Department of Environment and Planning
    - Erie County Department of Homeland Security and Emergency Services
    - Erie County Department of Health
    - Erie County Soil and Water Conservation District
    - Erie County Department of Public Works
    - Erie County Water Authority
- Input received through the public and stakeholder outreach process.

As discussed within the hazard profiles in Section 5.4 (Risk Assessment), the long-term effects of climate change are anticipated to exacerbate the impacts of weather-related hazards including drought, flood, severe storm, and severe winter storm. The County has included mitigation actions and initiatives, including continuing and long-term planning and emergency management support, to address these long-term implications and potential impacts.

Various county departments and agencies included mitigation actions to address vulnerable critical facilities. These actions were proposed in consideration of protection against 0.2% annual chance (500-year) events, or worst-case scenarios.

It is recognized, however, that in the case of projects being funded through federal mitigation programs, the level of protection can be influenced by cost-effectiveness, as determined through a formal benefit-cost analysis. In the case of "self-funded" projects, local government authority can affect the ability to implement. Further, the County has limited authority over privately-owned critical facility owners regarding mitigation at any level of protection.

6.5.3 Mitigation Best Practices

Catalogs of hazard mitigation best practices were developed that present a broad range of alternatives to be considered for use in Erie County, in compliance with 44 CFR Section 201.6(c)(3)(ii). One catalog was developed for each hazard of concern evaluated in this plan. The catalogs present alternatives that are categorized in two ways:

- By whom would have responsibility for implementation:
    - Individuals – personal scale
    - Businesses – corporate scale

Attachment: 24-Section-6-Mitigation-Strategy-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

  - Government – government scale
- By what the alternatives would do:
  - Manipulate the hazard
  - Reduce exposure to the hazard
  - Reduce vulnerability to the hazard
  - Build local capacity to respond to or be prepared for the hazard

The alternatives presented include actions that will mitigate current risk from hazards and actions that will help reduce risk from changes in the impacts of these hazards resulting from climate change. Hazard mitigation actions recommended in this plan were selected from among the alternatives presented in the catalogs. The catalogs provide a baseline of mitigation alternatives that are backed by a planning process, are consistent with the established goals and objectives, and are within the capabilities of the planning partners to implement. Some of these actions may not be feasible based on the selection criteria identified for this plan. The purpose of the catalogs was to provide a list of what could be considered to reduce risk from natural hazards within the planning area. Actions in the catalog that are not included for the partnership's action plan were not selected for one or more of the following reasons:

- The action is not feasible
- The action is already being implemented
- There is an apparently more cost-effective alternative
- The action does not have public or political support.

6.5.4 Mitigation Strategy Evaluation and Prioritization

Section 201.c.3.iii of 44 CFR requires how the identified mitigation strategies will be prioritized, implemented, and administered by the local jurisdictions. For this plan update, each mitigation strategy was prioritized using a modified STAPLEE (Social, Technical, Administrative, Political, Legal, Economic, and Environmental) mitigation action evaluation methodology based on a set of evaluation criteria suited to the purposes of hazard mitigation strategy evaluation. This method provides a systematic approach that considers the opportunities and constraints of implementing a particular mitigation action.

The Steering Committee applied an action evaluation and prioritization methodology, which includes an expanded set of 14 criteria to include the consideration of cost-effectiveness, availability of funding, anticipated timeline, and if the action addresses multiple hazards. The 14 evaluation/prioritization criteria used in the 2022 update process are:

1. Life Safety – How effective will the action be at protecting lives and preventing injuries?
2. Property Protection – How significant will the action be at eliminating or reducing damage to structures and infrastructure?
3. Cost-Effectiveness – Are the costs to implement the project or initiative commensurate with the benefits achieved?
4. Technical – Is the mitigation action technically feasible? Is it a long-term solution? Eliminate actions that, from a technical standpoint, will not meet the goals.
5. Political – Is there overall public support for the mitigation action? Is there the political will to support it?
6. Legal – Does the municipality have the authority to implement the action?
7. Fiscal – Can the project be funded under existing program budgets (i.e., is this initiative currently budgeted for)? Or would it require a new budget authorization or funding from another source such as grants?

Attachment: 24-Section-6-Mitigation-Strategy-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

8. Environmental – What are the potential environmental impacts of the action? Will it comply with environmental regulations?
9. Social – Will the proposed action adversely affect one segment of the population? Will the action disrupt established neighborhoods, break up voting districts, or cause the relocation of lower income people?
10. Administrative – Does the jurisdiction have the personnel and administrative capabilities to implement the action and maintain it or will outside help be necessary?
11. Multi-hazard – Does the action reduce the risk to multiple hazards?
12. Timeline – Can the action be completed in less than 5 years (within our planning horizon)?
13. Local Champion – Is there a strong advocate for the action or project among the jurisdiction's staff, governing body, or committees that will support the action's implementation?
14. Other Local Objectives – Does the action advance other local objectives, such as capital improvements, economic development, environmental quality, or open space preservation? Does it support the policies of other plans and programs?

Participating jurisdictions were asked to use these criteria to assist them in evaluating and prioritizing mitigation actions identified in the 2022 update. Specifically, for each mitigation action, the jurisdictions were asked to assign a numeric rank (-1, 0, or 1) for each of the 14 evaluation criteria, defined as follows:

- 1 = Highly effective or feasible
- 0 = Neutral
- -1 = Ineffective or not feasible

Further, jurisdictions were asked to provide a brief summary of the rationale behind the numeric rankings assigned, as applicable. The numerical results were totaled and then used by each jurisdiction to help prioritize the action or strategy as *low*, *medium*, or *high*. Actions that had a numerical value between 1 and 5 were categorized as *low*; actions with numerical values between 6 and 9 were categorized as *medium*; and actions with numerical values between 10 and 14 were categorized as *high*. While this provided a consistent, systematic methodology to support the evaluation and prioritization of mitigation actions, jurisdictions may have additional considerations that could influence their overall prioritization of mitigation actions.

It is noted that jurisdictions may be carrying forward mitigation actions and initiatives from prior mitigation strategies that were prioritized using a different, but not inherently contrary, approach. Mitigation actions in the prior (2015) Erie County HMP were "qualitatively evaluated against the mitigation goals and objectives and other evaluation criteria. They were then prioritized into three categories: high, medium, and low." At their discretion, jurisdictions carrying forward prior initiatives were encouraged to re-evaluate their priority, particularly if conditions that would affect the prioritization criteria had changed.

For the plan update there has been an effort to develop more clearly defined and action-oriented mitigation strategies. These local strategies include projects and initiatives that are seen by the community as the most effective approaches to advance their local mitigation goals and objectives within their capabilities. In addition, each municipality was asked to develop problem statements. With active support from NYS DHSES planning staff, municipalities were able to develop action-oriented and achievable mitigation strategies.

As such, many of the initiatives in the updated mitigation strategy were ranked as *high* or *medium* priority, as reflective of the community's clear intent to implement them, available resources not-withstanding. In general, initiatives that would have had *low* priority rankings were appropriately screened out during the local action evaluation process.

Attachment: 24-Section-6-Mitigation-Strategy-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

6.5.5 Benefit/Cost Review

Section 201.6.c.3iii of 44CFR requires the prioritization of the action plan to emphasize the extent to which benefits are maximized according to a cost/benefit review of the proposed projects and their associated costs. Stated otherwise, cost-effectiveness is one of the criteria that must be applied during the evaluation and prioritization of all actions comprising the overall mitigation strategy.

The benefit/cost review applied for the evaluation and prioritization of projects and initiatives in this plan update process was qualitative; that is, it does not include the level of detail required by FEMA for project grant eligibility under the Hazard Mitigation Assistance (HMA) grant programs. For all actions identified in the local strategies, jurisdictions have identified both the costs and benefits associated with project, action, or initiative.

Costs presented include the total project estimation. This can include administrative, construction (engineering, design, and permitting), and maintenance costs.

Benefits are the savings from losses avoided attributed to project implementation. These can include life safety, structure and infrastructure damages, loss of service or function, and economic and environmental damage and losses.

When possible, jurisdictions were asked to identify the actual or estimated dollar costs and associated benefits. Often numerical costs and/or benefits were not identified and may be impossible to quantify. In this case, jurisdictions were asked to evaluate project cost-effectiveness using *high*, *medium*, and *low* ratings. Where estimates of costs and benefits were available, the ratings were defined as the following:

Low < = $10,000 Medium = $10,000 to $100,000 High > = $100,000

Where quantitative estimates of costs and/or benefits were not available, qualitative ratings using the following definitions were used:

Table 6-4 Qualitative Cost and Benefit Ratings

Costs	
High	Existing funding levels are not adequate to cover the costs of the proposed project, and implementation would require an increase in revenue through an alternative source (e.g., bonds, grants, and fee increases).
Medium	The project could be implemented with existing funding but would require a re-apportionment of the budget or a budget amendment, or the cost of the project would have to be spread over multiple years.
Low	The project could be funded under the existing budget. The project is part of or can be part of an existing, ongoing program.
Benefits	
High	Project will have an immediate impact on the reduction of risk exposure to life and property.
Medium	Project will have a long-term impact on the reduction of risk exposure to life and property or will provide an immediate reduction in the risk exposure to property.
Low	Long-term benefits of the project are difficult to quantify in the short-term.

Using this approach, projects with positive benefit versus cost ratios (such as high over high, high over medium, medium over low, etc.) are considered cost-effective.

For some of the Erie County initiatives identified, the Planning Partnership may seek financial assistance under FEMA's HMA programs. These programs require detailed benefit/cost analysis as part of the application process. These analyses will be performed when funding applications are prepared, using the FEMA BCA model process. The Planning Partnership is committed to implementing mitigation strategies with benefits that exceed costs. For projects not seeking financial assistance from grant programs that require this sort of analysis, the

Attachment: 24-Section-6-Mitigation-Strategy-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

Planning Partnership reserves the right to define benefits according to parameters that meet its needs and the goals and objectives of this plan.

Attachment: 24-Section-6-Mitigation-Strategy-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

SECTION 7. PLAN MAINTENANCE PROCEDURES

This section details the formal process that will ensure that the Hazard Mitigation Plan (HMP) remains an active and relevant document and that the Planning Partnership maintains its eligibility for applicable funding sources. The plan maintenance process includes a schedule for monitoring and evaluating the plan annually and producing an updated plan every 5 years. In addition, this section describes how public participation will be integrated throughout the plan maintenance and implementation process. It explains how the mitigation strategies outlined in this plan update will be incorporated into existing planning mechanisms and programs, such as comprehensive land use planning processes, capital improvement planning, and building code enforcement and implementation. The plan's format allows sections to be reviewed and updated when new data become available, resulting in a plan that will remain current and relevant.

The plan maintenance matrix shown in Table 7-1 provides a synopsis of responsibilities for plan monitoring, integration, evaluation, and update, which are discussed in further detail in the sections below.

Table 7-1. Plan Maintenance Matrix

Task	Approach	Timeline	Lead Responsibility	Support Responsibility
Monitoring	Outreach to planning partners to recommend update of mitigation strategies and progress toward implementation of project and identification of new projects and to provide updated information on funding opportunities.	Each June or after the occurrence of a presidentially declared disaster	Jurisdictional points of contact identified in Section 8 (Planning Partnership) and Section 9 (Jurisdictional Annexes)	Jurisdictional implementation lead identified in Section 8 (Planning Partnership) and Section 9 (Jurisdictional Annexes)
Integration	In order for integration of mitigation principles action to become an organic part of the ongoing county and municipal activities, the county will incorporate the distribution of the safe growth worksheet (see 7.1.2 below) for annual review and update by all participating jurisdictions.	June each year with interim email reminders to address integration in county and municipal activities	HMP Coordinator and jurisdictional points of contact identified in Section 8 (Planning Partnership) and Section 9 (Jurisdictional Annexes)	HMP Coordinator
Evaluation	Review the status of previous actions, as submitted by the monitoring task lead, and assess the effectiveness of the plan; compile and finalize update of mitigation strategy.	Updated progress report completed by September 30 of each year	Jurisdictional points of contact identified in Section 8 (Planning Partnership) and Section 9 (Jurisdictional Annexes)	Alternate jurisdictional points of contact
Update	Reconvene the planning partners, at a minimum, every 5 years to guide a comprehensive update to review and revise the plan.	Every 5 years or upon major update to Comprehensive Plan or after the occurrence of a major disaster	Erie County HMP Coordinator	Jurisdictional points of contacts identified in Section 8 (Planning Partnership) and Section 9 (Jurisdictional Annexes)

Attachment: 25-Section-7-Plan-Maintenance-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

7.1 MONITORING, EVALUATING, AND UPDATING THE PLAN

The procedures for monitoring, evaluating, and updating the plan are provided below.

The HMP Coordinator is assigned to manage the maintenance and update of the plan during its performance period. The HMP Coordinator will convene the Planning Partnership and be the prime point of contact for questions regarding the plan and its implementation and will also coordinate the incorporation of additional information into the plan.

The HMP Coordinator will manage the monitoring, evaluation, and updating responsibilities identified in this section. As of the date of this plan, primary and secondary mitigation planning representatives (points of contact) are identified in each jurisdictional annex in Section 9 (Jurisdictional Annexes).

It will be the responsibility of each jurisdiction and its representatives to inform the HMP Coordinator of any changes in representation.

Currently, the Erie County HMP Coordinator is designated as:

Gregory Butcher, Deputy Commissioner
Erie County Department of Homeland Security and Emergency Services
45 Elm Street
Buffalo, NY 14203
716-858-6578
Email: gregory.butcher@erie.gov

7.1.1 Monitoring

The Planning Partnership will be responsible for monitoring progress on and evaluating the effectiveness of the plan and documenting annual progress. Each year, beginning one year after plan development, Erie County and local Planning Partnership representatives will collect and process information from the departments, agencies, and organizations involved in implementing mitigation projects or activities identified in their jurisdictional annexes (Section 9) of this plan, by contacting persons responsible for initiating and/or overseeing the mitigation projects.

In the first year of the performance period, this will be accomplished by utilizing an online performance progress reporting system (the BATool^{SM}), which will enable municipal and county representatives to directly access mitigation initiatives to easily update the status of each project, document successes or obstacles to implementation, and add or delete projects to maintain mitigation project implementation. It is anticipated that all participating partners will be prompted by the tool to update progress on a quarterly basis, providing an incentive for participants to refresh their mitigation strategies and to continue implementation of projects. It is expected that this reporting system will support the submittal of an increased number of project grant fund applications due to the functionality of the system, which facilitates the sorting and prioritization of projects.

In addition to progress on the implementation of mitigation actions, including efforts to obtain outside funding and obstacles or impediments to implementation of actions, the information that Planning Partnership representatives shall be expected to document, as needed and appropriate, includes:

- Any grant applications filed on behalf of any of the participating jurisdictions
- Hazard events and losses occurring in their jurisdiction
- Additional mitigation actions believed to be appropriate and feasible
- Public and stakeholder input.

Attachment: 25-Section-7-Plan-Maintenance-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Plan monitoring for years 2 through 4 of the plan performance period will be similarly addressed via the BATool[SM] or manually.

7.1.2 Integration of the HMP into Municipal Planning Mechanisms

Hazard mitigation is sustained action taken to reduce or eliminate the long-term risk to human life and property from natural hazards. Integrating hazard mitigation into a community's existing plans, policies, codes, and programs leads to development patterns that reduce risk from known hazards or to redevelopment that reduces risk from known hazards. The Erie County Planning Partnership was tasked with identifying how hazard mitigation is integrated into existing planning mechanisms. Section 9 (Jurisdictional Annexes) describes how this is done for each participating municipality. During this process, many municipalities recognized the importance and benefits of incorporating hazard mitigation into future municipal planning and regulatory processes.

The Planning Partnership representatives will incorporate mitigation planning as an integral component of daily government operations. Planning Partnership representatives will work with local government officials to integrate the newly adopted hazard mitigation goals and actions into the general operations of government and partner organizations. Further, the sample adoption resolution (Section 2 – Plan Adoption) includes a resolution item stating the intent of the local governing body to incorporate mitigation planning as an integral component of government and partner operations. By doing so, the Planning Partnership anticipates that:

1. Hazard mitigation planning will be formally recognized as an integral part of overall planning and emergency management efforts.
2. The HMP, Comprehensive Plans, Emergency Management Plans, and other relevant planning mechanisms will become mutually supportive documents that work in concert to meet the goals and needs of county residents.

During the HMP annual review process, each participating municipality will be asked to document how they are utilizing and incorporating the Erie County HMP into their day-to-day operations and planning and regulatory processes. Each municipality will also identify additional policies, programs, practices, and procedures that could be modified to accommodate hazard mitigation actions and include these findings and recommendations in the Annual HMP Progress Report. The following checklist was adapted from FEMA's Local Mitigation Handbook (2013), Appendix A, Worksheet 4.2. This checklist will help a community analyze how hazard mitigation is integrated into local plans, ordinances, regulations, ordinances, and policies. By completing the checklist, it will help municipalities identify areas that currently integrate hazard mitigation and where to make improvements and reduce vulnerability to future development.

Table 7-2. Safe Growth Check List

Planning Mechanisms	Do You Do This? Yes	No	Notes: How is it being done or how will this be utilized in the future?
Operating, Municipal, and Capital Improvement Program Budgets			
• When constructing upcoming budgets, hazard mitigation actions will be funded as budget allows. Construction projects will be evaluated to see if they meet the hazard mitigation goals.			
• Annually, during adoption process, the municipality will review mitigation actions when allocating funding.			
• Do budgets limit expenditures on projects that would encourage development in areas vulnerable to natural hazards?			

Attachment: 25-Section-7-Plan-Maintenance-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Planning Mechanisms	Do You Do This? Yes	No	Notes: How is it being done or how will this be utilized in the future?
• Do infrastructure policies limit extension of existing facilities and services that would encourage development in areas vulnerable to natural hazards?			
• Do budgets provide funding for hazard mitigation projects identified in the HMP?			
Human Resource Manual			
• Do any job descriptions specifically include identifying and/or implementing mitigation projects/actions or other efforts to reduce natural hazard risk?			
Building and Zoning Ordinances			
• Prior to zoning changes or development permitting, the municipality will review the HMP and other hazard analyses to ensure consistent and compatible land use.			
• Does the zoning ordinance discourage development or redevelopment within natural areas, including wetlands, floodways, and floodplains?			
• Does the ordinance contain natural overlay zones that set conditions			
• Does the ordinance require developers to take additional actions to mitigate natural hazard risk?			
• Do rezoning procedures recognize natural hazard areas as limits on zoning changes that allow greater intensity or density of use?			
• Does the ordinance prohibit development within or filling of wetlands, floodways, and floodplains?			
Subdivision Regulations			
• Do the subdivision regulations restrict the subdivision of land within or adjacent to natural hazard areas?			
• Do the regulations provide for conservation subdivisions or cluster subdivisions in order to conserve environmental resources?			
• Do the regulations allow density transfers where hazard areas exist?			
Comprehensive Plan			
• Are the goals and policies of the plan related to those of the HMP?			
• Does the future land use map clearly identify natural hazard areas?			
• Do the land use policies discourage development or redevelopment with natural hazard areas?			
• Does the plan provide adequate space for expected future growth in areas located outside natural hazard areas?			
Land Use			
• Does the future land use map clearly identify natural hazard areas?			
• Do the land use policies discourage development or redevelopment with natural hazard areas?			
• Does the plan provide adequate space for expected future growth in areas located outside natural hazard areas?			

Attachment: 25-Section-7-Plan-Maintenance-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Planning Mechanisms	Do You Do This? Yes	No	Notes: How is it being done or how will this be utilized in the future?
Transportation Plan			
• Does the transportation plan limit access to hazard areas?			
• Is transportation policy used to guide growth to safe locations?			
• Are transportation systems designed to function under disaster conditions (e.g., evacuation)?			
Environmental Management			
• Are environmental systems that protect development from hazards identified and mapped?			
• Do environmental policies maintain and restore protective ecosystems?			
• Do environmental policies provide incentives to development located outside protective ecosystems?			
Grant Applications			
• Data and maps will be used as supporting documentation in grant applications.			
Municipal Ordinances			
• When updating municipal ordinances, hazard mitigation will be a priority			
Economic Development			
• Local economic development group will take into account information regarding identified hazard areas when assisting new businesses in finding a location.			
Public Education and Outreach			
• Does the municipality have any public outreach mechanisms/ programs in place to inform citizens on natural hazards, risk, and ways to protect themselves during such events?			

7.1.3 Evaluating

Evaluation of the mitigation plan is an assessment of whether the planning process and actions have been effective, if the HMP goals are being achieved, and whether changes are needed. The HMP Coordinator will consult with the Planning Partnership members to evaluate the effectiveness of the plan implementation and to reflect changes that could affect mitigation priorities or available funding.

The status of the HMP will be discussed and documented at an annual plan review meeting of the Planning Partnership to be held either in person or via teleconference approximately 1 year from the date of local adoption of this update and successively thereafter. At least 2 weeks before the annual plan review meeting, the Erie County HMP Coordinator will advise Planning Partnership members of the meeting date, agenda, and expectations of the members.

The Erie County HMP Coordinator will be responsible for calling participants and coordinating the annual plan review meeting and soliciting input regarding progress toward meeting plan goals and objectives. These evaluations will assess whether:

- Goals and objectives address current and expected conditions
- The nature or magnitude of the risks has changed
- Current resources are appropriate for implementing the HMP and if different or additional resources are now available

Attachment: 25-Section-7-Plan-Maintenance-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

- Actions were cost effective
- Schedules and budgets are feasible
- Implementation problems are present, such as technical, political, legal, or coordination issues with other agencies
- Outcomes have occurred as expected
- Changes in county, city, town, or village resources impacted plan implementation (e.g., funding, personnel, and equipment)
- New agencies/departments/staff are included, involving other local governments as defined under 44 CFR 201.6.

Specifically, the Planning Partnership will review the mitigation goals, objectives, and activities using performance-based indicators, including:

- New agencies/departments
- Project completion
- Underspending/overspending
- Achievement of the goals and objectives
- Resource allocation
- Timeframes
- Budgets
- Lead/support agency commitment
- Resources
- Feasibility

Finally, the Planning Partnership will evaluate how other programs and policies have conflicted or augmented planned or implemented measures and will identify policies, programs, practices, and procedures that could be modified to accommodate hazard mitigation actions ("Implementation of Mitigation Plan through Existing Programs" subsection later in this section discusses this process). Other programs and policies can include those that address:

- Economic development
- Environmental preservation
- Historic preservation
- Redevelopment
- Health and/or safety
- Recreation
- Land use/zoning
- Public education and outreach
- Transportation

The Planning Partnership should refer to the evaluation forms, Worksheets #2 and #4 in the FEMA 386-4 guidance document, to assist in the evaluation process (see Appendix G – Plan Review Tools). Further, the Planning Partnership should refer to any process and plan review deliverables developed by the county or participating jurisdictions as a part of the plan review processes established for prior or existing local HMPs within the county.

The Erie County HMP Coordinator will be responsible for preparing an Annual HMP Progress Report for each year of the performance period, based on the information provided by the Planning Partnership and municipal

Attachment: 25-Section-7-Plan-Maintenance-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

points of contact, and other information as appropriate and relevant. These annual reports will provide data for the 5-year update of this HMP and will assist in pinpointing any implementation challenges. By monitoring the implementation of the HMP, the Planning Partnership will be able to assess which projects are completed, which are no longer feasible, and which projects should require additional funding.

Following any major disasters, the HMP will be evaluated and revised to determine if the recommended actions remain relevant and appropriate. The risk assessment will also be revisited to see if any changes are necessary based on the pattern of disaster damage or if data listed in the Section 5.4 (Hazard Profiles) of this plan has been collected to facilitate the risk assessment. This is an opportunity to increase the community's disaster resistance and build a better and stronger community.

7.1.4 Updating

44 CFR 201.6.d.3 requires that local hazard mitigation plans be reviewed, revised as appropriate, and resubmitted for approval to remain eligible for benefits awarded under DMA 2000. It is the intent of the Erie County HMP Planning Partnership to update this plan on a 5-year cycle from the date of initial plan adoption.

To facilitate the update process, the Erie County HMP Coordinator, with support of the Planning Partnership, will use the second annual Planning Partnership meeting to develop and commence the implementation of a detailed plan update program. Prior to the 5-year update, the Erie County HMP Coordinator will invite representatives from the New York State Division of Homeland Security and Emergency Services (NYS DHSES) to provide guidance on plan update procedures. At a minimum, this will establish who will be responsible for managing and completing the plan update effort, items that need to be included in the updated plan, and a detailed timeline with milestones to ensure that the update is completed according to regulatory requirements.

At this meeting, the project team will determine what resources will be needed to complete the update and seek to secure these resources.

Following each 5-year update of the HMP, the updated plan will be distributed for public comment. After all comments are addressed, the HMP will be revised and distributed to all planning partners.

7.1.5 Grant Monitoring and Coordination

Erie County intends to be a resource to the Planning Partnership in the support of project grant writing and development. The degree of this support will depend on the level of assistance requested by the partnership during openings for grant applications. As part of grant monitoring and coordination, Erie County intends to provide the following:

- Notification to planning partners about impending grant opportunities
- A current list of eligible, jurisdiction-specific projects for funding pursuit consideration
- Notification about mitigation priorities for the fiscal year to assist the planning partners in the selection of appropriate projects.

7.2 IMPLEMENTATION OF MITIGATION PLAN THROUGH EXISTING PROGRAMS

Effective mitigation is achieved when hazard awareness and risk management approaches and strategies become an integral part of public activities and decision-making. Within the county, there are many existing plans and programs that support hazard risk management, and thus it is critical that this HMP integrate and coordinate with and complement those existing plans and programs.

Attachment: 25-Section-7-Plan-Maintenance-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

The Capability Assessment section of Section 6 (Mitigation Strategy) provides a summary and description of the existing plans, programs, and regulatory mechanisms at all levels of government (federal, state, county, and local) that support hazard mitigation within the county. Within each jurisdictional annex in Section 9 (Jurisdictional Annexes), the county and each participating jurisdiction identified how they have integrated hazard risk management into their existing planning, regulatory, and operational/administrative framework ("existing integration") and how they intend to promote this integration ("opportunities for future integration").

It is the intention of Planning Partnership representatives to incorporate mitigation planning as an integral component of daily government operations. Planning Partnership representatives will work with local government officials to integrate the newly adopted hazard mitigation goals and actions into the general operations of government and partner organizations. Further, the sample adoption resolution (Section 2 – Plan Adoption) includes a resolution item stating the intent of the local governing body to incorporate mitigation planning as an integral component of government and partner operations. By doing so, the Planning Partnership anticipates that:

1) Hazard mitigation planning will be formally recognized as an integral part of overall emergency management efforts.
2) The HMP, Comprehensive Plans, Emergency Management Plans and other relevant planning mechanisms will become mutually supportive documents that work in concert to meet the goals and needs of county residents.

Other planning processes and programs to be coordinated with the recommendations of the HMP include the following:

- Emergency response plans
- Training and exercise of emergency response plans
- Debris management plans
- Recovery plans
- Capital improvement programs
- Municipal codes
- Community design guidelines
- Water-efficient landscape design guidelines
- Stormwater management programs
- Water system vulnerability assessments
- Community wildfire protection plans
- Comprehensive flood hazard management plans
- Resiliency plans
- Community Development Block Grant-Disaster Recovery action plans
- Public information/improved public participation
- Educational programs
- Continued interagency coordination

During the annual plan evaluation process, the HMP Coordinator and Planning Partnership will strive to identify additional policies, programs, practices, and procedures that could be modified to accommodate hazard mitigation actions and include these findings and recommendations in the Annual HMP Progress Reporting.

Attachment: 25-Section-7-Plan-Maintenance-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

7.3 CONTINUED PUBLIC INVOLVEMENT

Erie County and participating jurisdictions are committed to the continued involvement of the public in the hazard mitigation process. This HMP update will continue to be posted on line at the following link: https://www2.erie.gov/disaster/index.php?q=multi-hazard-mitigation-plan In addition, public outreach and dissemination of the HMP will include:

- Links to the plan on municipal websites of each jurisdiction with capability
- Continued utilization of existing social media outlets (Facebook, Twitter) to inform the public of natural hazard events, such as floods and severe storms; the public can be educated via the jurisdictional websites on how these applications can be used in an emergency situation
- Promotion of articles or workshops on hazards to educate the public and keep them aware of the dangers of hazards

The Erie County HMP Coordinator will be responsible for receiving, tracking, and filing public comments regarding this HMP. The public will have an opportunity to comment on the plan via the hazard mitigation website at any time. The Erie County HMP Coordinator will ensure that:

- Public and stakeholder comments and input on the plan, and hazard mitigation in general, are collected, recorded, and addressed as appropriate.
- The Erie County HMP website is maintained and updated as appropriate.
- Copies of the latest approved plan are available for review at appropriate county facilities, along with instructions to facilitate public input and comment on the plan.
- Public notices, including media releases, are made (as appropriate) to inform the public of the availability of the plan, particularly during plan update cycles.

GLOSSARY

This resource defines terms that are used in or support the hazard mitigation plan. These definitions were based on terms defined in documents included in the references section, with modifications as appropriate to address the Erie County specific definitions and requirements.

1% flood (100-year flood) – A flood that has a 1-percent chance of being equaled or exceeded in any given year. This flood event is also referred to as the base flood. The term "100-year flood" can be misleading; it is not the flood that will occur once every 100 years. Rather, it is the flood elevation that has a 1- percent chance of being equaled or exceeded each year. Therefore, the 100-year flood could occur more than once in a relatively short period of time. The 100-year flood, which is the standard used by most federal and state agencies, is used by the National Flood Insurance Program (NFIP) as the standard for floodplain management to determine the need for flood insurance.

0.2 % flood (500-year flood) – A flood that has a 0.2-percent chance of being equaled or exceeded in any one year.

Aggregate Data – Data gathered together across an area or region (for example, census tract or census block data).

Annualized Loss – The estimated long-term value of losses from potential future hazard occurrences of a particular type in any given single year in a specified geographic area. In other words, the average annual loss that is likely to be incurred each year based on frequency of occurrence and loss estimates. Note that the loss in any given year can be substantially higher or lower than the estimated annualized loss.

Annualized Loss Ratio – Represents the annualized loss estimate as a fraction of the replacement value of the local building inventory. This ratio is calculated using the following formula: Annualized Loss Ratio = Annualized Losses / Exposure at Risk. The annualized loss ratio gauges the relationship between average annualized loss and building value at risk. This ratio can be used as a measure of relative risk between hazards as well as across different geographic units

Asset – Any man-made or natural feature that has value, including but not limited to people, buildings, infrastructure (such as bridges, roads, and sewer and water systems), and lifelines (such as electricity and communication resources or environmental, cultural, or recreational features like parks, dunes, wetlands, or landmarks).

At-Risk – Exposure values that include the entire building inventory value in census blocks that lie within or border the inundation areas or any area potentially exposed to a hazard based on location.

Base Flood – Flood that has a 1 percent probability of being equaled or exceeded in any given year. It is also known as the 100-year flood.

Base Flood Elevation (BFE) – Elevation of the base flood in relation to a specified datum, such as the National Geodetic Vertical Datum of 1929. The BFE is used as the standard for the National Flood Insurance Program.

Benefit – Net project outcomes, usually defined in monetary terms. Benefits may include direct and indirect effects. For the purposes of conducting a benefit-cost analysis of proposed mitigation measures, benefits are limited to specific, measurable, risk reduction factors, including a reduction in expected property losses (building, content, and function) and protection of human life.

Attachment: 28-Glossary-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Benefit-cost analysis (BCA) – Benefit-cost analysis is a systematic, quantitative method of comparing the projected benefits to projected costs of a project or policy. It is used as a measure of cost effectiveness.

Blizzard – Characterized by low temperatures, wind gusts of 35 mph or more and falling and/or blowing snow that reduces visibility to 0.25 miles or less for an extended period of time (three or more hours).

Building – A structure that is walled and roofed, principally aboveground and permanently fixed to a site. The term includes a manufactured home on a permanent foundation on which the wheels and axles carry no weight.

Building Codes – Regulations that set forth standards and requirements for construction, maintenance, operation, occupancy, use, or appearance of buildings, premises, and dwelling units. Building codes can include standards for structures to withstand natural disasters.

Capability Assessment – An assessment that provides a description and analysis of a community or state's current capacity to address the threats associated with hazards. The capability assessment attempts to identify and evaluate existing policies, regulations, programs, and practices that positively or negatively affect the community or state's vulnerability to hazards or specific threats.

Climate – The meteorological elements, including temperature, precipitation, and wind, that characterizes the general conditions of the atmosphere over a period of time (typically 30-years) for a particular region.

Community Rating System (CRS) – CRS is a program that provides incentives for National Flood Insurance Program communities to complete activities that reduce flood hazard risk. When the community completes specific activities, the insurance premiums of these policyholders in communities are reduced.

Comprehensive Plan – A document, also known as a "general plan", covering the entire geographic area of a community and expressing community goals and objectives. The plan lays out the vision, policies, and strategies for the future of the community, including all of the physical elements that will determine the community's future development. This plan can discuss the community's desired physical development, desired rate and quantity of growth, community character, transportation services, location of growth, and siting of public facilities and transportation. In most states, the comprehensive plan has no authority in and of itself, but serves as a guide for community decision-making.

Critical Facility – Facilities that are critical to the health and welfare of the population and that are especially important following a hazard. Critical facilities include essential facilities, transportation systems, lifeline utility systems, high-potential loss facilities, and hazardous material facilities. As defined for the Erie County risk assessment, this category includes police stations, fire and/or EMS stations, major medical care facilities, and emergency communications.

Crop Moisture Index (CMI) – The CMI was developed by Wayne Palmer in 1968, can be used to measure the status of dryness or wetness affecting warm season crops and field activities. It gives the short-term or current status of purely agricultural drought or moisture surplus and can change rapidly from week to week.

Debris – The scattered remains of assets broken or destroyed during the occurrence of a hazard. Debris caused by a wind or water hazard event can cause additional damage to other assets.

Attachment: 28-Glossary-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Digital Elevation Model (DEM) – U.S. Geological Survey (USGS) Digital Elevation Model (DEM) data files that are digital representations of cartographic information in a raster form. DEMs include a sampled array of elevations for a number of ground positions at regularly spaced intervals. These digital cartographic/geographic data files are produced by USGS as part of the National Mapping Program.

Digital Flood Insurance Rate Maps (DFIRMs) – These maps are used to calculate the cost insurance premiums, establish flood risk zones and base flood elevations to mitigate against potential future flood damages to properties.

Displacement Time – After a hazard occurs, the average time (in days) that a building's occupants must operate from a temporary location while repairs are made to the original building due to damages resulting from the hazard.

Disaster Mitigation Act of 2000 (DMA 2000) – Law that requires and rewards local and state pre-disaster planning, promotes sustainability as a strategy for disaster resistance, and is intended to integrate state and local planning with the aim of strengthening state-wide mitigation planning.

Drought - A deficiency of moisture that results in adverse impacts on people, animals, or vegetation over a sizeable area.

Drought Impact Reporter (DIR) – The DIR is an interactive tool developed by the NDMC to collect, quantify, and map reported drought impacts for the U.S.

Duration – The length of time a hazard occurs.

Earthquake – A sudden motion or trembling that is caused by a release of strain accumulated within or along the edge of earth's tectonic plates.

Essential Facility – A facility that is important to ensure a full recovery of a community or state following the occurrence of a hazard. These facilities can include: government facilities, major employers, banks, schools, and certain commercial establishments (such as grocery stores, hardware stores, and gas stations). For the Erie County risk assessment, this category was defined to include schools, colleges, shelters, adult living and adult care facilities, medical facilities and health clinics, hospitals.

Exposure – The number and dollar value of assets that are considered to be at risk during the occurrence of a specific hazard.

Extent – The size of an area affected by a hazard or the occurrence of a hazard.

Extra Tropical Cyclone – A group of cyclones defined as synoptic scale, low pressure, weather systems that occur in the middle latitudes of the Earth. These storms have neither tropical nor polar characteristics and are connected with fronts and horizontal gradients in temperature and dew point otherwise known as "baroclinic zones". These cyclones produce impacts ranging form cloudiness and mild showers to heavy gales and thunderstorms.

Federal Emergency Management Agency (FEMA) – Independent agency (now part of the Department of Homeland Security) created in 1978 to provide a single point of accountability for all federal activities related to disaster mitigation and emergency preparedness, response, and recovery.

Attachment: 28-Glossary-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Flash Flood – A flood occurring with little or no warning where water levels rise at an extremely fast rate.

Flood – A general and temporary condition of partial or complete inundation of normally dry land areas resulting from (1) the overflow of inland or tidal waters, (2) the unusual and rapid accumulation or runoff of surface waters from any source, or (3) mudflows or the sudden collapse of shoreline land.

Flood Depth – Height of the flood water surface above the ground surface.

Flood Elevation – Height of the water surface above an established datum (for example, the National Geodetic Vertical Datum of 1929, North American Vertical Datum of 1988, or mean sea level).

Flood Hazard Area – Area shown to be inundated by a flood of a given magnitude on a map.

Flood Insurance Rate Map (FIRM) – Map of a community, prepared by the FEMA that shows both the special flood hazard areas and the risk premium zones applicable to the community.

Flood Insurance Study (FIS) – A study that provides an examination, evaluation, and determination of flood hazards and, if appropriate, corresponding water surface elevations in a community or communities.

Flood Mitigation Assistance (FMA) Program – A program created as a part of the National Flood Insurance Report Act of 1994. FMA provides funding to assist communities and states in implementing actions that reduce or eliminate the long-term risk of flood damage to buildings, manufactured homes, and other NFIP insurance structures, with a focus on repetitive loss properties.

Floodplain – Any land area, including a watercourse, susceptible to partial or complete inundation by water from any source.

Flood Polygon – A geographic information system vector file outlining the area exposed to the flood hazard. HAZUS-MH generates this polygon at the end of the flood computations in order to analyze the inventory at risk.

Freezing Rain – Rain that falls as a liquid but freezes into glaze upon contact with the ground.

Frequency – A measure of how often events of a particular magnitude are expected to occur. Frequency describes how often a hazard of a specific magnitude, duration, and/or extent typically occurs, on average. Statistically, a hazard with a 100-year recurrence interval is expected to occur once every 100 years on average, and would have a 1 percent chance of happening in any given year. The reliability of this information varies depending on the kind of hazard being considered.

Fujita Scale of Tornado Intensity – Rates tornadoes with numeric values from F0 to F5 based on tornado wind speed and damage sustained. An F0 (wind speed less than 73 mph) indicates minimal damage such as broken tree limbs or signs, while an F5 (wind speeds of 261 to 318 mph) indicated severe damage sustained.

Geology – The scientific study of the earth, including its composition, structure, physical properties, and history.

Goals – General guidelines that explain what you want to achieve. They are usually broad policy-type statements, long term in nature, and represent global visions.

Attachment: 28-Glossary-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Geographic Information Systems (GIS) – A computer software application that relates data regarding physical and other features on the earth to a database to be used for mapping and analysis.

GIS Shape Files – A type of GIS vector file developed by ESRI for their ArcView software. This type of file contains a table and a graphic. The records in the table are linked to corresponding objects in the graphic.

Hailstorm – Storm associated with spherical balls of ice. Hail is a product of thunderstorms or intense showers. It is generally white and translucent, consisting of liquid or snow particles encased with layers of ice. Hail is formed within the higher reaches of a well-developed thunderstorm. When hailstones become too heavy to be caught in an updraft back into the clouds of the thunderstorm (hailstones can be caught in numerous updrafts adding a coating of ice to the original frozen droplet of rain each time), they fall as hail and a hailstorm ensues.

Hazard – A source of potential danger or an adverse condition that can cause harm to people or cause property damage. For this risk assessment, priority hazards were identified and selected for the pilot project effort. A natural hazard is a hazard that occurs naturally (such as flood, wind, and earthquake). A man-made hazard is one that is caused by humans (for example, a terrorist act or a hazardous material spill). Hazards are of concern if they have the potential to harm people or property.

Hazards of Interest – A comprehensive listing of hazards that may affect an area.

Hazards of Concern – Those hazards that have been analytically determined to pose significant risk in an area, and thus the focus of the particular mitigation plan for that area (a subset of the Hazards of Interest).

Hazard Identification – The process of identifying hazards that threaten an area.

Hazardous Material Facilities – Facilities housing industrial and hazardous materials, such as corrosives, explosives, flammable materials, radioactive materials, and toxins.

Hazard Mitigation – Sustained actions taken to reduce or eliminate the long-term risk and effects that can result from the occurrence of a specific hazard. For example, building a retaining wall can protect an area from flooding.

Hazard Mitigation Grant Program (HMGP) – Authorized under Section 404 of the Robert T. Stafford Disaster Relief and Emergency Assistance Act, HMGP is administered by FEMA and provides grants to states, tribes, and local governments to implement hazard mitigation actions after a major disaster declaration. The purpose of the program is to reduce the loss of life and property due to disasters and to enable mitigation activities to be implemented as a community recovers from a disaster.

Hazard Mitigation Plan – A collaborative document in which hazards affecting the community are identified, vulnerability to hazards assessed, and consensus reached on how to minimize or eliminate the effects of these hazards.

Hazard Profile – A description of the physical characteristics of a hazard, including a determination of various descriptors including magnitude, duration, frequency, probability, and extent. In most cases, a community can most easily use these descriptors when they are recorded and displayed as maps.

Hazards U.S. (HAZUS) – A GIS-based nationally standardized earthquake loss estimation tool developed by FEMA. HAZUS was replaced by HAZUS-MH (see below) in 2003.

Attachment: 28-Glossary-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Hazards U.S. – Multi-Hazard (HAZUS-MH) – A GIS-based nationally standardized earthquake, flood, and wind loss estimation tool developed by FEMA. The purpose of this pilot project is to demonstrate and implement the use of HAZUS-MH to support risk assessments

HAZUS-MH Risk Assessment Methodology – This analysis uses the HAZUS-MH modules (earthquake, wind--hurricane and flood) to analyze potential damages and losses. For this pilot project risk assessment, the flood and hurricane hazards were evaluated using this methodology.

HAZUS-MH-Driven Risk Assessment Methodology – This analysis involves using inventory data in HAZUS-MH combined with knowledge such as (1) information about potentially exposed areas, (2) expected impacts, and (3) data regarding likelihood of occurrence for hazards. For this risk assessment, a HAZUS-Driven Risk Assessment Methodology could not be used to estimate losses associated with any hazards because of a lack of adequate data. However, the methodology was used, based on more limited data to estimate exposure for the dam failure, urban fire, fuel pipeline breach, and HazMat release hazards.

Heavy Snow – Snowfall accumulating to 4" or more in depth in 12 hours or less; or snowfall accumulating to 6" or more in depth in 24 hours or less.

High Potential Loss Facilities – Facilities that would have a high loss associated with them, such as nuclear power plants, dams, and military installations.

Hurricane – An intense tropical cyclone, formed in the atmosphere over warm ocean areas, in which wind speeds reach 74 miles-per-hour or more and blow in a large spiral around a relatively calm center or "eye." Hurricanes develop over the North Atlantic Ocean, northeast Pacific Ocean, or the South Pacific Ocean (east of 160°E longitude). Hurricane circulation is counter-clockwise in the Northern Hemisphere and clockwise in the Southern Hemisphere.

Hydraulics – That branch of science, or of engineering, which addresses fluids (especially, water) in motion, its action in rivers and canals, the works and machinery for conducting or raising it, its use as a prime mover, and other fluid-related areas.

Hydrology – The science of dealing with the waters of the earth (for example, a flood discharge estimate is developed through conduct of a hydrologic study).

Infrastructure – The public services of a community that have a direct impact on the quality of life. Infrastructure includes communication technology such as phone lines or Internet access, vital services such as public water supplies and sewer treatment facilities, transportation system (such as airports, heliports; highways, bridges, tunnels, roadbeds, overpasses, railways, bridges, rail yards, depots; and waterways, canals, locks, seaports, ferries, harbors, dry docks, piers and regional dams).

Ice Jam – An accumulation of ice in a river that acts as a natural dam and can flood low-lying areas upstream. They occur when warm temperatures and heavy rains cause rapid snow melt.

Ice Storm – Term used to describe occasions when damaging accumulations of ice are expected during freezing rain situations. Significant accumulations of ice pull down trees and utility lines resulting in loss of power and communication.

Intensity – A measure of the effects of a hazard occurring at a particular place.

Attachment: 28-Glossary-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Inventory – The assets identified in a study region. It includes assets that can be lost when a disaster occurs and community resources are at risk. Assets include people, buildings, transportation, and other valued community resources.

Level 1 Analysis – A HAZUS-MH analysis that yields a rough estimate or preliminary analysis based on the nationwide default database included in HAZUS-MH. A Level 1 analysis is a great way to begin the risk assessment process and prioritize high-risk communities without collecting or using local data.

Level 2 Analysis – A HAZUS-MH analysis that requires the input of additional or refined data and hazard maps that will produce more accurate risk and loss estimates. Assistance from local emergency management personnel, city planners, GIS professionals, and others may be necessary for this level of analysis.

Level 3 Analysis – A HAZUS-MH analysis that yields the most accurate estimate of loss and typically requires the involvement of technical experts such as structural and geotechnical engineers who can modify loss parameters based on the specific conditions of a community. This level analysis will allow users to supply their own techniques to study special conditions such as dam breaks and tsunamis. Engineering and other expertise is needed at this level.

Lifelines – Critical facilities that include utility systems (potable water, wastewater, oil, natural gas, electric power facilities and communication systems) and transportation systems (airways, bridges, roads, tunnels and waterways).

Lightning – A visible electrical discharge produced by a thunderstorm. The discharge may occur within or between clouds or between a rain cloud and the ground.

Loss Estimation – The process of assigning hazard-related damage and loss estimates to inventory, infrastructure, lifelines, and population data. HAZUS-MH can estimate the economic and social loss for specific hazard occurrences. Loss estimation is essential to decision making at all levels of government and provides a basis for developing mitigation plans and policies. It also supports planning for emergency preparedness, response, and recovery.

Lowest Floor – Under the NFIP, the lowest floor of the lowest enclosed area (including basement) of a structure. For the HAZUS-MH flood model, this information can be used to assist in assessing the damage to buildings.

Magnitude – A measure of the strength of a hazard occurrence. The magnitude (also referred to as severity) of a given hazard occurrence is usually determined using technical measures specific to the hazard. For example, ranges of wind speeds are used to categorize tornados.

Major Disaster Declarations – Post-disaster status requested by a state's governor when local and state resources are not sufficient to meet disaster needs. It is based on the damage assessment, and an agreement to commit state funds and resources to the long-term recovery. The event must be clearly more than the state or local government can handle alone.

Mean Return Period (MRP) – The average period of time, in years, between occurrences of a particular hazard (equal to the inverse of the annual frequency of exceedance).

Mitigation Actions – Specific actions that help you achieve your goals and objectives.

Attachment: 28-Glossary-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Mitigation Goals – General guidelines that explain what you want to achieve. They are usually broad policy-type statements, long term, and represent global visions.

Mitigation Objectives – Strategies or implementation steps to attain the identified goals. Unlike goals, objectives are specific and measurable.

Mitigation Plan – A plan that documents the process used for a systematic evaluation of the nature and extent of vulnerability to the effects of natural hazards typically present in a state or community. The plan includes a description of actions to minimize future vulnerability to hazards. This plan should be developed with local experts and significant community involvement.

National Drought Mitigation Center (NDMC) – The NDMC helps develop and implement measures to reduce societal vulnerability to drought, stressing preparedness and risk management rather than crisis management. Most of the NDMC's services are directed to state, federal, regional, and tribal governments that are involved in drought and water supply planning. The NDMC produces a daily drought monitor map that identifies drought areas and ranks droughts by intensity. U.S. Drought Monitor summary maps are available from May 1999 through the present and identify general drought areas and classification droughts by intensity ranging from D1 (moderate drought) to D4 (exceptional drought). Category D0, drought watch areas, are either drying out and possibly heading for drought, or are recovering from drought but not yet back to normal, suffering long-term impacts such as low reservoir levels.

National Flood Insurance Program (NFIP) – Federal program created by Congress in 1968 that makes flood insurance available in communities that enact minimum floodplain management regulations in 44 Code of Federal Regulations (CFR) §60.3.

New York State Division of Homeland Security & Emergency Services (NYS DHSES) – NYS DHSES and its predecessor agencies have been responsible for coordinating the activities of all State agencies to protect New York's communities, the State's economic well-being, and the environment from natural and man-made disasters and emergencies. NYS DHSES routinely assists local governments, voluntary organizations, and private industry through a variety of emergency management programs including hazard identification, loss prevention, planning, training, operational response to emergencies, technical support, and disaster recovery assistance.

Nor'Easter – Named for the strong northeasterly winds blowing in ahead of the storm, are also referred to as a type of extra-tropical cyclones (mid-latitude storms, or Great Lake storms). A Nor'Easter is a macro-scale extra-tropical storm whose winds come from the northeast, especially in the coastal areas of the Northeastern U.S. and Atlantic Canada.

North America Drought Monitor (NA-DM) – The NA-DM is a cooperative effort between drought experts in Canada, Mexico and the U.S. to monitor drought across the continent on an ongoing basis. The Drought Monitor concept was developed as a process that synthesizes multiple indices, outlooks and local impacts, into an assessment that best represents current drought conditions. The final outcome of each Drought Monitor is a consensus of federal, state and academic scientists. Maps of U.S. droughts are available from this source from 2003 to the present.

Objectives – Objectives define strategies or implementation steps to attain the identified goals. Unlike goals, objectives are specific and measurable.

Occupancy Classes – Categories of buildings used by HAZUS-MH (for example, commercial, residential, industrial, government, and "other").

Attachment: 28-Glossary-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Ordinance – A term for a law or regulation adopted by local government.

Palmer Drought Severity Index (PDSI) – The PDSI was developed in 1965, and indicates the prolonged and abnormal moisture deficiency or excess. The PDSI is an important climatological tool for evaluating the scope, severity, and frequency of prolonged periods of abnormally dry or wet weather. It can be used to help delineate disaster areas and indicate the availability of irrigation water supplies, reservoir levels, range conditions, amount of stock water, and potential intensity of forest fires.

Planning – The act or process of making or carrying out plans; the establishment of goals, policies and procedures for a social or economic unit.

Post-disaster mitigation – Mitigation actions taken after a disaster has occurred, usually during recovery and reconstruction.

Presidential Disaster Declaration – A post-disaster status that puts into motion long-term federal recovery programs, some of which are matched by state programs, and designed to help disaster victims, businesses, and public entities in the areas of human services, public assistance (infrastructure support), and hazard mitigation. If declared, funding comes from the President's Disaster Relief Fund and disaster aid programs of other participating federal agencies.

Preparedness – Actions that strengthen the capability of government, citizens, and communities to respond to disasters.

Priority Hazards – Hazards considered most likely to impact a community based on frequency, severity, or other factors such as public perception. These are identified using available data and local knowledge.

Provided Data – The databases included in the HAZUS-MH software that allow users to run a preliminary analysis without collecting or using local data.

Probability – A statistical measure of the likelihood that a hazard event will occur.

Public Education and Outreach Programs – Any campaign to make the public more aware of hazard mitigation and mitigation programs, including hazard information centers, mailings, public meetings, etc.

Recovery – The actions taken by an individual or community after a catastrophic event to restore order and lifelines in the community.

Regulation – Most states have granted local jurisdictions broad regulatory powers to enable the enactment and enforcement of ordinances that deal with public health, safety, and welfare. These include building codes, building inspections, zoning, floodplain and subdivision ordinances, and growth management initiatives.

Recurrence Interval – The average time between the occurrences of hazardous events of similar size in a given location. This interval is based on the probability that the given event will be equaled or exceeded in any given year.

Repetitive Loss Property – A property that is currently insured for which two or more National Flood Insurance Program losses (occurring more than ten days apart) of at least $1,000 each have been paid within any 10-year period since 1978.

Attachment: 28-Glossary-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Replacement Value – The cost of rebuilding a structure. This cost is usually expressed in terms of cost per square foot and reflects the present-day cost of labor and materials to construct a building of a particular size, type and quality.

Resolutions – Expressions of a governing body's opinion, will, or intention that can be executive or administrative in nature. Most planning documents must undergo a council resolution, which must be supported in an official vote by a majority of representatives to be adopted. Other methods of making a statement or announcement about a particular issue or topic include proclamations or declarations.

Resources – Resources include the people, materials, technologies, money, etc., required to implement strategies or processes. The costs of these resources are often included in a budget.

Risk – The estimated impact that a hazard would have on people, services, facilities, and structures in a community; the likelihood of a hazard occurring and resulting in an adverse condition that causes injury or damage. Risk is often expressed in relative terms such as a high, moderate or low likelihood of sustaining damage above a particular threshold due to occurrence of a specific type of hazard. Risk also can be expressed in terms of potential monetary losses associated with the intensity of the hazard.

Risk Assessment – A methodology used to assess potential exposure and estimated losses associated with priority hazards. The risk assessment process includes four steps: (1) identifying hazards, (2) profiling hazards, (3) conducting an inventory of assets, and (4) estimating losses.

Risk Factors – Characteristics of a hazard that contribute to the severity of potential losses.

Riverine – Of or produced by a river (for example, a riverine flood is one that is caused by a river overflowing its banks).

Saffir-Simpson Scale – This scale categorizes or rates hurricanes from 1 (Minimal) to 5 (Catastrophic) based on their intensity. It is used to give an estimate of the potential property damage and flooding expected along the coast from a hurricane landfall. Wind speed is the determining factor in the shape of the coastline, in the landfill region.

Scale – A proportion used in determining a dimensional relationship; the ratio of the distance between two points on a map and the actual distance between the two points on the earth's surface.

Scour – Removal of soil or fill material by the flow of floodwaters. This term is frequently used to describe storm-induced, localized, conical erosion around pilings and other foundation supports where the obstruction of flow increases turbulence.

Severe Repetitive Loss Property – A structure that is currently insured for which four or more National Flood Insurance Program losses (including building and contents) of at least $5,000 each, and with the cumulative amount of claim payments exceeding $20,000; or for which two separate claim payments (building only) have been made with the cumulative amount of claim payments exceeding the market value of the structure.

Special Flood Hazard Area (SFHA) – An area within a floodplain having a 1-percent or greater chance of flood occurrence in any given year (that is, the 100-year or base flood zone); represented on FIRMs as darkly shaded areas with zone designations that include the letter "A" or "V."

Stafford Act – The Robert T. Stafford Disaster Relief and Emergency Assistance Act, Public Law (PL) 100-107 was signed into law on November 23, 1988. This law amended the Disaster Relief Act of 1974,

Attachment: 28-Glossary-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

PL 93-288. The Stafford Act is the statutory authority for most Federal disaster response activities, especially as they pertain to FEMA and its programs.

Stakeholder – Stakeholders are individuals or groups, including businesses, private organizations, and citizens, that will be affected in any way by an action or policy.

Standardized Precipitation Index (SPI) – The SPI is a probability index that considers only precipitation. It is based on the probability of recording a given amount of precipitation, and the probabilities are standardized so that an index of zero indicates the median precipitation amount (half of the historical precipitation amounts are below the median, and half are above the median). The index is negative for drought, and positive for wet conditions.

State Hazard Mitigation Officer (SHMO) – The representative of state government who is the primary point of contact with FEMA, other state and Federal agencies, and local units of government in the planning and implementation of pre- and post-disaster mitigation activities.

Structure – Something constructed (for example, a residential or commercial building).

Study Area – The geographic unit for which data are collected and analyzed. A study area can be any combination of states, counties, cities, census tracts, or census blocks. The study area definition depends on the purpose of the loss study and in many cases will follow political boundaries or jurisdictions such as city limits.

Substantial Damage – Damage of any origin sustained by a structure in a SFHA, for which the cost of restoring the structure to its pre-hazard event condition would equal or exceed 50 percent of its pre-hazard event market value.

Thunderstorm – A local storm produced by a cumulonimbus cloud and accompanied by lightning and thunder. It forms from a combination of moisture, rapidly rising warm air and a force capable of lifting air, such as a warm and cold front, a sea breeze, or a mountain.

Topographic – Map that shows natural features and indicate the physical shape of the land using contour lines based on land elevation. These maps also can include man-made features.

Tornado – A violently rotating column of air extending from a thunderstorm to the ground.

Transportation Systems – One of the lifeline system categories. This category includes: airways (airports, heliports, highways), bridges, tunnels, roadbeds, overpasses, transfer centers; railways (tracks, tunnels, bridges, rail yards, depots), and waterways (canals, locks, seaports, ferries, harbors, dry docks, piers).

Tropical Cyclone – A generic term for a cyclonic, low-pressure system over tropical or sub-tropical waters containing a warm core of low barometric pressure which typically produces heavy rainfall, powerful winds and storm surge.

Tropical Depression – An organized system of clouds and thunderstorms with a defined surface circulation and maximum sustained winds of less than 38 mph. It has no “eye”(the calm area in the center of the storm) and does not typically have the organization or the spiral shape of more powerful storms.

Tropical Storm – An organized system of strong thunderstorms with a defined surface circulation and maximum sustained wind between 39 to 73 mph.

Attachment: 28-Glossary-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Utility Systems – One of the lifeline systems categories. This category includes potable water, wastewater, oil, natural gas, electric power facilities and communication systems.

Vulnerability – Description of how exposed or susceptible an asset is to damage. This value depends on an asset's construction, contents, and the economic value of its functions. Like indirect damages, the vulnerability of one element of the community is often related to the vulnerability of another. For example, many businesses depend on uninterrupted electrical power. If an electric substation is flooded, it will affect not only the substation itself, but a number of businesses as well. Often, indirect affects can be much more widespread and damaging than direct affects.

Vulnerability Assessment – Evaluation of the extent of injury and damage that may result from a hazard event of a given intensity in a given area. The vulnerability assessment should address impacts of hazard occurrences on the existing and future built environment.

Watershed – Area of land that drains down gradient (from areas of higher land to areas of lower land) to the lowest point; a common drainage basin. The water moves through a network of drainage pathways, both underground and on the surface. Generally, these pathways converge into streams and rivers, which become progressively larger as the water moves downstream, eventually reaching an estuary, lake, or ocean.

Zone – A geographical area shown on a National FIRM that reflects the severity or type of flooding in the area.

Zoning Ordinance – Designation of allowable land use and intensities for a local jurisdiction. Zoning ordinances consist of two components: a zoning text and a zoning map.

APPENDIX A. ADOPTION RESOLUTIONS

The Erie County and municipal adoption resolutions will be included in this appendix upon receipt of the Federal Emergency Management Agency (FEMA) Approval Pending Adoption (APA) status. Please refer to Section 8 (Planning Partnership) for additional information on plan adoption procedures.

This appendix also includes an example resolution to be submitted by Erie County and participating jurisdictions authorizing adoption of the Erie County Hazard Mitigation Plan.

Attachment: 29-Appendix-A-Adoption-Resolution-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

RESOLUTION NO. XXXX-XX

A RESOLUTION OF THE Governing Body OF THE Jurisdiction Name

AUTHORIZING THE ADOPTION OF THE

2022 ERIE COUNTY, NY HAZARD MITIGATION PLAN

WHEREAS, all jurisdictions within Erie County have exposure to hazards that increase the risk to life, property, environment, and the County and local economy; and

WHEREAS; pro-active mitigation of known hazards before a disaster event can reduce or eliminate long-term risk to life and property; and

WHEREAS, The Disaster Mitigation Act of 2000 (Public Law 106-390) established new requirements for pre- and post-disaster hazard mitigation programs; and

WHEREAS; a coalition of Erie County municipalities with like planning objectives has been formed to pool resources and create consistent mitigation strategies within Erie County; and

WHEREAS, the coalition has completed a planning process that engages the public, assesses the risk and vulnerability to the impacts of hazards, develops a mitigation strategy consistent with a set of uniform goals and objectives, and creates a plan for implementing, evaluating and revising this strategy;

NOW, THEREFORE, BE IT RESOLVED that the [**jurisdiction name**]:

1) Adopts in its entirety, the 2022 Erie County Hazard Mitigation Plan (the "Plan") as the jurisdiction's Hazard Mitigation Plan, and resolves to execute the actions identified in the Plan that pertain to this jurisdiction.
2) Will use the adopted and approved portions of the Plan to guide pre- and post-disaster mitigation of the hazards identified.
3) Will coordinate the strategies identified in the Plan with other planning programs and mechanisms under its jurisdictional authority.
4) Will continue its support of the Planning Partnership as described within the Plan.
5) Will help to promote and support the mitigation successes of all participants in this Plan.
6) Will incorporate mitigation planning as an integral component of government and partner operations.
7) Will provide an update of the Plan in conjunction with the County no less than every five years.

Attachment: 29-Appendix-A-Adoption-Resolution-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation

PASSED AND ADOPTED on this X[st], X[nd], X[rd], X[th] day of MONTH, YEAR, by the following vote:

AYES:

NOES:

ABSENT:

ABSTAIN:

_____

Mayor, City/Town/Village of _____

ATTEST: _____

Clerk, City/Town /Village of _____

MEETING NOTES

Meeting	Erie County Hazard Mitigation Plan (HMP) Update Steering Committee Kickoff Meeting		
Date	November 2, 2020	**Time**	9:30 – 11:15 a.m.
Location	Webinar		
Attendees	Daniel Neaverth, Commissioner, Erie County Department of Homeland Security and Emergency Services (DHSES)		
	Gregory J. Butcher, Deputy Commissioner, Erie County DHSES		
	Melissa Calhoun, Public Safety Officer - Special Assistant Erie County, Erie County DHSES		
	Ryan Sheedy, Senior MERS Coordinator, Erie County DHSES		
	Daniel Castle, Deputy Commissioner, Planning & Economic Development, Erie County Department of Environment and Planning		
	Josh Wilson, Coordinator - Pollution Prevention Program, Erie County Department of Environment and Planning		
	Matthew W. Barrett, Security Officer, Erie County Water Authority		
	Don Poleto, Senior Operations Engineer, City of Buffalo		
	R.J. Nieman, Emergency Manager, Village of Depew		
	Sean Crotty, Emergency Manager, Town of Hamburg; Chair, Erie County Emergency Managers Association		
	Jane Rice, Principal, Director of Planning, Environmental Design & Research, Landscape Architecture, Engineering & Environmental Services, D.P.C. (EDR)		
	Erica Tauzer, Planner, EDR		
	Matthew Butwin, Planner, Prospect Hill Consulting		
	Michael Kane, Planner, Prospect Hill Consulting		
	Brian Kehoe, Planner, Tetra Tech, Inc. (Tetra Tech)		
	Tony Subbio, Project Manager, Tetra Tech, Inc. (Tetra Tech)		

Discussion Points

This section summarizes each discussion point addressed during the Steering Committee Kickoff Meeting.

Introductions

Mr. Subbio welcomed the group. Attendees introduced themselves. Mr. Wilson stated that the county is undergoing a climate assessment that may be relevant for the HMP. Mr. Crotty is particularly interested in mitigation along the shore of Lake Erie.

Overview of Hazard Mitigation

Mr. Subbio provided a brief overview of hazard mitigation and the funding available from the Federal Emergency Management Agency (FEMA). He described the requirements of the Disaster

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

MEETING NOTES

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Mitigation Act of 2000 (DMA 2000) and the New York State Division of Homeland Security and Emergency Services (NYS DHSES) for HMPs.

Project Scope Review

This section summarizes each phase of the project discussed at the meeting.

Phase 1 – Planning Process

Mr. Subbio discussed the nature of the Steering Committee as providing strategic oversight of the planning process, and the series of Steering Committee meetings that will be conducted over the course of the planning process. He then described the formation of the Planning Partnership (the Partnership), which consists of the group of representatives from jurisdictions and stakeholder agencies involved with the HMP update process. Mr. Butcher reported that Jim Zymanek from the Town of Amherst will be part of the Steering Committee.

The Planning Partnership Kickoff Meeting will be held to introduce the members to the planning process and explain the data-gathering worksheets to be completed by each jurisdiction. The following organizations were discussed and will be invited to participate in the planning process:

- County departments
- All municipalities
- Soil and Water Conservation District
- The Erie County Water Authority
- Schools and higher education facilities
- The first response community, consisting of police, fire, and ambulance companies
- New York State (NYS) Agencies
- The business community and chambers of commerce
- Neighboring counties
    - Planning departments
    - Offices of emergency management
- The general public

Mr. Castle recommended including personnel from the Department of Sewage Management, as they operate six or seven sewage treatment plants in the county. He also recommended including representatives from the Office of Geographic Information Systems (GIS).

Phase 2 – Update the Risk Assessment

The group discussed the hazards that were profiled in the 2015 version of the HMP and what will be profiled in the updated plan. Reliability of the electrical grid was discussed. The need to examine areas that have had major transportation accidents was also discussed, as was vector-borne diseases. Mr. Subbio identified other hazards that had been examined in other counties, including epidemic/pandemic, agricultural product spills, harmful algal blooms, and dam failures. Ms. Calhoun

MEETING NOTES

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

shared the list of high-priority hazards from the County Emergency Preparedness Assessment (CEPA).

The following hazards will be profiled in the updated HMP:

- Coastal Erosion
- Cyber Attack
- Earthquake
- Expansive Soils
- Extreme Temperatures
- Flood
- Hazardous Materials
- Landslide
- Pandemic
- Severe Storm
- Severe Winter Storm
- Utility Failure
- Wildfire

Mr. Subbio described the vulnerability analysis that will be conducted for each of the hazards.

Upon completion of the hazard profiles, Tetra Tech will review the risk assessment with the Partnership and the public.

Phase 3 – Public Involvement Strategy

Municipalities will complete a Letter of Intent to Participate (LOI) to acknowledge that they will be plan participants and to confirm their understanding of their roles and responsibilities in the planning process. Mr. Butcher reported that he has received 27 LOIs so far. Mr. Butcher confirmed that, since the county already met with the municipalities and has been collecting LOIs, the proposed set of municipal introductory meetings was not necessary.

Tetra Tech will conduct a series of information-gathering meetings with participating jurisdictions after the Planning Partnership Kickoff Meeting. These information-gathering meetings will be held to answer questions and gather information to feed the planning process. They will be conducted via webinar, with possible in-person follow up.

Mr. Subbio briefly introduced the set of information-gathering worksheets that Tetra Tech will use to collect information from the municipalities. The worksheets will be discussed in greater detail at the Planning Partnership Kickoff Meeting.

Mr. Subbio then described the project website that will be developed to provide information on the planning process. Additionally, a set of SurveyMonkey surveys will be deployed to get feedback from members of the general public and stakeholder organizations (e.g., emergency responders, healthcare facilities, schools, and higher education, etc.). Tetra Tech will also develop a simple online survey tool for individuals to identify problem areas caused by different hazards in the county.

Mr. Subbio then stated that there will be two public information meetings at the beginning of the planning process to provide information to the general public. There will be two Partnership meetings open to the general public as well- one to review the results of the risk assessment, and the other to review the completed draft HMP.

Phase 4 – Mitigation Strategy

The Steering Committee will set the goals and objectives for the HMP and will share them with the Partnership. Tetra Tech will use the information reported by the municipalities regarding their

MEETING NOTES

capabilities and will also review the status of the mitigation actions identified in the 2015 version of the HMP to identify and prioritize new and existing mitigation actions for inclusion in the updated HMP.

Tetra Tech and NYS DHSES will conduct a Mitigation Strategy Workshop to assist in developing new mitigation actions for inclusion in the plan.

Tetra Tech will compile the information from the worksheets, risk assessment, capability assessment, and mitigation actions into a jurisdictional annex for the county and each of its municipalities. The annexes detail the analysis and information of the HMP for the respective jurisdictions to make the document easier to use for local officials. The Erie County Water Authority will participate as a separate jurisdiction, and will have its own annex in the plan.

Phase 5 – Plan Maintenance

Tetra Tech will work with the Steering Committee to develop procedures for maintaining the HMP over the next 5 years. These procedures will be documented in the Plan Maintenance section of the HMP. This section will also describe the ways in which the HMP will be integrated with other planning mechanisms, such as comprehensive and master plans, local regulations, etc.

Mitigation actions will be loaded into Tetra Tech's plan review tool to allow for ongoing plan maintenance.

Phase 6 – Plan Update and Deliverables

Throughout the planning process, Tetra Tech will develop the HMP document. The main body will profile the county, explain the planning process, include the risk assessment and mitigation strategy, and discuss maintenance of the plan. Each jurisdiction will have its own annex in the HMP, which will provide information specific to that jurisdiction.

The draft plan will be shared with the Steering Committee for review and comment throughout the planning process.

Phase 7 – Plan Review and Adoption

After making any required changes, Tetra Tech will post the HMP for public review. The public review period will be advertised and will last for 30 days. Tetra Tech will then conduct a public meeting with the Planning Partnership to gather feedback on the draft plan and make any required changes.

Tetra Tech will then submit the draft for the State's formal review. NYS DHSES will review the draft. If changes are required, Tetra Tech will make the changes and resubmit the document to the State. After the State is satisfied with the draft, the State will forward it to Federal Emergency Management Agency (FEMA) Region II for review. FEMA Region II will review the draft within 45 days, and Tetra Tech will make any required changes upon receipt of FEMA review comments. When FEMA is satisfied with the HMP, FEMA will grant the HMP "approvable pending adoption" status to indicate that it meets all requirements.

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

MEETING NOTES

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

The county and participating jurisdictions will formally adopt the HMP by resolution. After adoption, each jurisdiction will receive a letter from FEMA stating that the HMP is formally approved.

Project Team

Mr. Subbio discussed how the three firms on Tetra Tech's project team will integrate to carry out the project. Tetra Tech's planners will lead the plan update, work with municipal officials, conduct analysis, and develop the document. EDR will perform the capabilities assessment and the plan and regulatory review, and will discuss capabilities with local officials. Prospect Hill will lead municipal engagement, work with municipalities, help gain participation, and provide local support as needed.

All three firms will participate in the planning meetings and municipal information gathering sessions.

Project Schedule Review

Mr. Subbio reviewed the project schedule. The Planning Partnership Kickoff Meetings have been scheduled for November 18 and 19, 2020. The Municipal Information Gathering Sessions and Public Information Meetings will be conducted in mid-December 2020. The jurisdictional annexes will be complete by April 9, 2021, and the rest of the plan will be complete by the following week. This allows for the public review, NYS DHSES review, and federal review to occur to receive "approvable pending adoption" (APA) status by November 2021, and for the plan to be adopted and approved in December 2021. The timeline depends heavily on how quickly Tetra Tech can obtain GIS data from the county and how quickly the project team receives all required information from the municipalities.

Next Steps

- The county will execute the project contract as soon as possible.
- Steering Committee members will send any relevant plans, studies, or documents to Mr. Subbio.
- County officials will complete the GIS Wishlist and send it to Mr. Butcher and Mr. Subbio.
- Tetra Tech will develop the project website and stakeholder surveys.
- The Planning Partnership Kickoff Meetings will be conducted on November 18 and 19, 2020.
- Tetra Tech and the county will schedule the municipal information gathering sessions and public information meetings in the coming weeks.
- Tetra Tech will continue to update the risk assessment.
- Ms. Calhoun will provide the blank status tracker from NYS DHSES to Mr. Subbio.

Mr. Butcher confirmed that Tetra Tech may reach out directly to Steering Committee members to address issues, with copies of any emails to Mr. Butcher and Ms. Calhoun.

The meeting adjourned at 11:15 a.m.

Overview of Hazard Mitigation

7

7

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard

What is hazard mitigation?

Any sustained action taken to reduce or eliminate long-term risk to life and property from a hazard event

"provides the blueprint for reducing the potential losses identified in the risk assessment, based on existing authorities, policies, programs and resources, and local ability…" (CFR).

8

8

Mitigation Works!

- The nation saves **$6** for every **$1** spent through mitigation grants funded via select federal agencies.

National Benefit-Cost Ratio (BCR) Per Peril *BCR numbers in this study have been rounded	Beyond Code Requirements	Federally Funded
Overall Hazard Benefit-Cost Ratio	$4:1	$6:1
Riverine Flood	$5:1	$7:1
Hurricane Surge	$7:1	Too few grants
Wind	$5:1	$5:1
Earthquake	$4:1	$3:1
Wildland-Urban Interface Fire	$4:1	$3:1

9

9

Federal Requirements

- Disaster Mitigation Act of 2000
  - Risk assessment
  - Public outreach and participation
  - Process for update
  - Formal state and FEMA review
  - Documentation of acceptance by the community

10

New York State Requirements

- Develop jurisdictional teams
- Assess critical facilities
- Plan for displaced residents
- Plan for evacuation needs and sheltering
- Document past mitigation accomplishments
- Include jurisdictional annexes
- Develop mitigation actions
- Identify funding sources
- Plan for climate change

Date	November 18, 2020	**Time**	6:00 – 7:10 p.m.
Location	Webinar		
Attendees	Dan Castle, Deputy Commissioner, Erie County Department of Environment and Planning		
	Greg Butcher, Deputy Commissioner, Erie County Department of Homeland Security and Emergency Services		
	Melissa Calhoun, Public Safety Officer - Special Assistant Erie County, Erie County Department of Homeland Security and Emergency Services		
	Daniel Neaverth, Commissioner, Erie County Department of Homeland Security and Emergency Services		
	Ryan Sheedy, Senior MERS Coordinator, Erie County Department of Homeland Security and Emergency Services		
	Brian Rose, Senior Project Manager, Erie County Department of Public Works Division of Highways		
	Adam Kneis, Senior Safety Analyst; Health, Safety Risk Management, Erie 1 Board of Cooperative Extension Services		
	Sean Crotty, Emergency Manager, Chair Erie County Emergency Managers Association		
	Christine Ljungberg, School Business Administrator, Holland Central School District		
	Karis Manning, Professional Engineer 2 (Environmental), Division of Water; Chief, Western Flood Protection and Dam Safety Hub Section, New York State Department of Environmental Conservation		
	Albert Cheverie, Hospital Emergency Preparedness Representative, Western Region, New York State Department of Health; Office of Health Emergency Preparedness		
	Chris Renschler, Professor - Department of Geography, State University at Buffalo/Erie County Local Emergency Planning Association		
	Daniel Kowalik, Emergency Manager, Chair Village of Akron & Town of Newstead		
	Joe Fox, Emergency Manager, Chair Village of Blasdell		
	Dave Baumler, Deputy Coordinator of Emergency Management, Town of Clarence		
	Dave Bissonette, Emergency Manager, Chair Town of Clarence		
	Kenneth Martin, Supervisor, Town of Collins		
	Brian Burgstahler, Emergency Manager, Chair Town of Eden		
	Robert Stickney, Emergency Manager, Chair Town of Eden		
	Rick Davis, Mayor, City of Tonawanda		
	Eric Conley, OEM, Town of West Seneca		
	Erica Tauzer, Planner, Consultant - EDR		
	Jane Rice, Principal, Director of Planning, Consultant - EDR		
	Kyle Hatch, Planner, Consultant - EDR

MEETING NOTES

	Matthew Butwin, Planner, Consultant - Prospect Hill Consulting
	Michael Kane, Planner, Consultant - Prospect Hill Consulting
	Brian Kehoe, Planner, Consultant - Tetra Tech
	Tony Subbio, Project Manager, Consultant - Tetra Tech

Discussion Points

This section summarizes each discussion point addressed during Planning Partnership Kickoff Meeting #1. This was the first of two identical sessions conducted to kick off the planning process.

Introductions

Mr. Subbio opened the meeting. As attendees entered the virtual meeting, they were prompted to provide their name and affiliation either verbally or via the webinar chat function. Mr. Neaverth and Mr. Butcher then welcomed all attendees and emphasized the importance of active participation from municipal representatives.

Mr. Subbio noted that the meeting will be recorded. He asked if there were any specific issues in the county that attendees would like to address during the planning process. The following issues were noted:

- Mr. Crotty noted that Grand Island has experienced flooding. He stated that any municipality along Lake Erie can experience damage from high water levels and storm surge and these events have occurred recently. Mr. Crotty is interested in tapping into any available mitigation grants.
- Mr. Cheverie identified (1) infectious disease and (2) the public health impacts of the water level of Lake Ontario as concerns for the Health Department.

Overview of Hazard Mitigation

Mr. Subbio introduced hazard mitigation planning. He encouraged each municipal representative at the meeting to work with a team of officials within their municipality to provide information for the HMP update. Mr. Subbio defined types of mitigation activities and described the Federal Emergency Management Agency (FEMA) Hazard Mitigation Assistance (HMA) grant program. In addition, Mr. Subbio provided a brief overview of federal and New York State (NYS) planning requirements for HMPs. For the plan to be finalized, review and approval are required by the NYS Division of Homeland Security and Emergency Services (DHSES) as well as FEMA. In order to be eligible for certain types of funding, the participation of a municipality must be documented in the HMP.

Project Scope Review

Mr. Subbio reviewed the planning process and the ways in which each phase meets a state and/or FEMA requirement.

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

MEETING NOTES

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Phase 1 – Planning Process

Mr. Subbio discussed the formation of the Steering Committee and the Planning Partnership, and their respective roles in forwarding and completing the HMP. Each partnership member has shown their commitment to the HMP process by attending this meeting. Members are further encouraged to work with stakeholders to provide information about community-specific hazards. Members are asked to recommend actions that can be taken to mitigate the impact of the identified hazards of concern.

Phase 2 – Update the Risk Assessment

The following hazards of concern will be profiled in the updated HMP. This list reflects input from the HMP Steering Committee:

- Coastal Erosion
- Cyber Attack
- Earthquake
- Epidemic/Pandemic
- Expansive Soils
- Extreme Temperatures
- Flood (including ice jams)
- Hazardous Materials
- Landslide
- Severe Storm
- Severe Winter Storm
- Utility Failure
- Wildfire

The 500-year earthquake, the 1-percent and 0.2-percent annual chance floods, and the 100-year and 500-year wind events will be examined using FEMA's Hazards-U.S. (HAZUS) software. Quantitative analysis will be conducted for geographic hazards; qualitative analysis will be completed for other hazards. Upon completion of the hazard profiles, Tetra Tech will review the risk assessment with the Planning Partnership and the public.

Phase 3 – Public Involvement Strategy

Municipalities have been requested to complete a Letter of Intent to Participate (LOI) to acknowledge that they will actively participate in the HMP update process. The LOI confirms that the municipality understands its roles and responsibilities throughout the planning process. The template LOI has been provided by the Erie County Department of Homeland Security and Emergency Services.

Tetra Tech will conduct six information-gathering meetings with participating jurisdictions in early 2021. Specific dates are to be determined. These meetings provide a targeted venue to gather information crucial to creating a high-quality HMP and to address any questions from municipalities. Mr. Subbio stated that information will be gathered from participating municipalities via a set of jurisdictional worksheets, and he provided an overview of each.

Mr. Subbio described the multi-faceted stakeholder outreach efforts that are an important part of the HMP planning process. Tetra Tech will create and maintain a project-specific website to lessen data upload requirements on county staff and to provide information quickly. This website will be launched very soon. Tetra Tech has developed an innovative yet simple online mapping tool that

MEETING NOTES

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

can be used by all stakeholders. The graphic and geographically-referenced tool guides respondents through a process of identifying specific hazards that concern them. These digital platforms will be promoted through social media.

Tetra Tech will prepare a distinct online survey targeted to elicit meaningful hazard-related data from residents, members of academia, business members, and other stakeholders. A pair of Public Information Meetings will be held to introduce people to the planning process, at dates to be determined. The public is also welcome to participate in the Risk Assessment Review Meeting and the Plan Draft Review Meeting.

Mr. Butcher noted that he invited stakeholders interested in water quality and watershed management to participate in the HMP process via a contact list maintained by the Erie County Department of Environment and Planning. Mr. Butcher has reached out to the Local Emergency Planning Committee to draw in local expertise about hazardous materials. Mr. Castle offered to reach out with invitations to municipal planning officials, planning boards, zoning boards of appeal, code enforcement officers, and highway superintendents. Mr. Castle offered to make available a mailing list maintained by the Association of Erie County Governments. Outreach could potentially be facilitated via the One Region Forward distribution partner (http://www.oneregionforward.org/).

Mr. Subbio reviewed HMP information-gathering worksheets with the attendees. He recommended that each attendee work with a team of local officials to complete these worksheets. It is not expected that any one official will have the knowledge to complete all six of the worksheets. The targeted deadline for completion of the worksheets is December 15, 2020. The project consultant team will follow up with municipalities to facilitate worksheet completion, and upcoming meetings will provide additional opportunities to refine municipal-specific input. The six jurisdictional worksheets are:

- Evaluation of Identified Hazards and Risk
- Capability Assessment and Integration
- NFIP Floodplain Administrator Questionnaire
- Mitigation Action Review
- New Development and Building Permits
- Shelters, Evacuation Routes, Temporary Housing, and Long-Term Housing

Phase 4 – Mitigation Strategy

Tetra Tech has designed a robust program that guides municipalities in determining strategic actions going forward that address hazard threats. Tetra Tech will work with the Steering Committee to set the goals and objectives for the HMP, and will share them with the Planning Partnership. Municipalities will be asked to confirm the status of mitigation actions from the most-recent version (2015) of the Erie County HMP. Municipalities will then be guided to plan the next round of mitigation actions to be included in the updated HMP.

Municipal capability is an important element of hazard mitigation planning. The consultant project team will catalogue municipal capabilities for implementing hazard mitigation. Tetra Tech and NYS

MEETING NOTES

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

DHSES will also conduct a Mitigation Strategy Workshop to assist municipalities with developing strategic mitigation actions to include in the final HMP.

Information gathered from participating jurisdictions about their capabilities will be used to develop implementable mitigation actions. As part of this process, the consultant project team will examine the ways in which regulations work together, as well as how other programs, such as capital improvement plans, can be leveraged to implement hazard mitigation. Problems and capabilities will be discussed at a Mitigation Strategy Workshop to assist in developing strategic mitigation actions for inclusion in the final HMP.

Phase 5 – Plan Maintenance

Tetra Tech and the Steering Committee will develop procedures for maintaining the HMP over the next 5 years. These procedures will be documented in the Plan Maintenance section of the HMP. This section will also describe integration of the HMP with other planning mechanisms, such as comprehensive and master planning, local regulations, etc. Mitigation actions will be loaded into Tetra Tech's plan review tool to streamline ongoing plan maintenance.

Phase 6 – Plan Update and Deliverables

Throughout the planning process, Tetra Tech will compile and refine the HMP document. Tetra Tech has already begun developing the HMP. The draft plan will be shared with the Steering Committee and Planning Partnership for review and comment throughout the planning process.

Phase 7 – Plan Review and Adoption

Tetra Tech will also provide the draft HMP through various digital platforms to encourage public review and comment. The public review period will be advertised and will last for 30 days. In addition, Tetra Tech and the Planning Partnership will conduct a public meeting to gather feedback on the draft plan and to make required changes.

After the HMP draft is reviewed and updated, Tetra Tech will oversee submission of the formal draft to NYS DHSES for agency review. In the event that NYS DHSES identifies needed changes, Tetra Tech will make these changes and subsequently resubmit the document for final NYS review. After determining that requirements have been satisfied, NYS DHSES will forward the HMP to FEMA Region II for review. FEMA is required to review a submitted HMP within 45 days of receipt. If FEMA indicates that any changes are needed, Tetra Tech will make these changes and resubmit to FEMA. At this point, the HMP will be granted "approvable pending adoption" status to indicate that it meets all requirements.

The county and participating jurisdictions will formally adopt the HMP by resolution. After such adoption, each jurisdiction will receive a letter from FEMA stating that the HMP is formally approved.

Project Team

The consultant project team is led by Tetra Tech. The project is also supported by team members from EDR and from Prospect Hill Consulting. Several consultant team members participated in this

MEETING NOTES

meeting and briefly reviewed how and when they would engage with partnership members to elicit and refine municipal input. Planners from Tetra Tech and Prospect Hill will directly support municipalities in completing worksheets. EDR will coordinate the data received from municipalities and prepare the municipal capability assessments. The team aims to facilitate an efficient and productive planning process that provides value to municipalities.

Project Schedule Review

Mr. Subbio reviewed the project schedule. If all municipalities complete required worksheets expeditiously, the draft HMP should be ready for public review by the April 2021. The Steering Committee and Tetra Tech will strive to complete the HMP according to this project schedule.

Next Steps

The following next steps were discussed at the meeting:

- The consultant project team requested that the county and municipalities complete information-gathering worksheets by December 15, 2020. Partnership members will receive digital versions of the worksheets to be distributed via e-mail.
- Partnership members are requested to provide copies of local plans, regulations, or studies that may be relevant to hazard mitigation in their municipality. These documents can be emailed to Mr. Subbio.
- The information-gathering sessions will soon be scheduled; the date has not yet been determined.
- A pair of public information meetings will be soon be scheduled; the date has not yet been determined.
- Tetra Tech will continue updating the risk assessment.

Mr. Subbio and then Mr. Butcher ended the meeting by thanking participants for their attendance and forthcoming active engagement.

The meeting adjourned at 7:10 p.m.

MEETING NOTES

Meeting	Erie County Hazard Mitigation Plan (HMP) Update Planning Partnership Kickoff Meeting #2		
Date	November 19, 2020	**Time**	10:00 – 11:15 a.m.
Location	Webinar		
Attendees	Amy Alduino, Recycling Coordinator, Erie County Department of Environment and Planning		
	Mike Gangemi, Senior Planner - GIS, Erie County Department of Environment and Planning		
	John Hood, Chief Environmental Compliance Specialist, Erie County Department of Environment and Planning		
	Bonnie Lawrence, Deputy Commissioner, Erie County Department of Environment and Planning		
	Joanna Panasiewicz, Watershed Coordinator, Erie County Department of Environment and Planning		
	Lisa Matthies-Wiza, Director, Erie County Office of Geographic Information Services		
	Greg Butcher, Deputy Commissioner, Erie County Department of Homeland Security and Emergency Services		
	Melissa Calhoun, Public Safety Officer - Special Assistant, Erie County Department of Homeland Security and Emergency Services		
	Tracy Falco Chalmers, Erie County Department of Public Health		
	Jonathan DePlanche, Senior Civil Engineer, Erie County Department of Public Works Division of Highways		
	Matthew W. Barrett, Security Officer, Erie County Water Authority		
	Terry Wachowiak, Village Administrator/Treasurer, Village Alden		
	Jim Zymanek, Director, Emergency Services, Town of Amherst, Village of Williamsville		
	Jason Keding, Supervisor, Town of Boston		
	Mike Mazarowski, Emergency Manager, Town of Cheektowaga		
	Lynn Rybak, Assistant to the Supervisor, Town of Cheektowaga		
	Clyde Drake, Supervisor, Town of Concord		
	John Whitney, Supervisor, Town of Grand Island		
	Sean Crotty, Emergency Manager, Town of Hamburg		
	Geoffrey Hack, Emergency Manager, Town of Holland		
	Ronald Rozler, Disaster Coordinator, Town of Lancaster		
	David L. Cummings, Supervisor, Town of Newstead		
	Robert Lutz, Emergency Services Coordinator, Town of Tonawanda		
	RJ Nieman, Emergency Manager, Village of Depew		
	Tony Fischione, Code Enforcement Officer, Village of Depew		

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

MEETING NOTES

	Scott Kuhlmey, Director of Emergency Management, Village of Lancaster
	Vincent George, Mayor, Village of North Collins
	Richard Mrugalski, Emergency Manager, Town & Village of Orchard Park
	Debra Smith, Clerk/Treasurer, Village of Sloan
	Liz Melock, Village Administrator, Village of Spring Valley
	Bill Krebs, Mayor, Village of Springville
	Greg Stowell, Emergency Manager, Village of Springville
	Mark Banks, Deputy Director, OEM, City of Tonawanda
	Charles Stuart, Fire Chief, City of Tonawanda
	Chief Dan Denz, Police Department, West Seneca Police Department
	James Unger, Patrol Captain / Public Information Officer, West Seneca Police Department
	Walter Rachel, Emergency Manager, Town of Wales
	Christina Norman, Administrator, Buffalo Ambulatory Surgery Center
	Dave DeLorenzo, Vice President, Security/Emergency Management, Catholic Health
	Cindy Shelton, Environmental Health & Safety Manager , Chemical Distributors, Incorporated
	Daniel McCartan, Emergency Manager, Erie County Medical Center
	David McKnight, Emergency Manager, Kaleida Health
	Laura Dewey, Health, Safety & Environment Manager, Mount St. Mary's Hospital
	John Waszak, Supervisory Chemical Security Inspector, Region 2, Cybersecurity and Infrastructure Security Agency
	Jason Tolsma, Emergency Response Manager, National Fuel Gas
	Michael Fries, Warning Coordination Meteorologist, National Weather Service
	Mary McIntosh, Regional Spill Geologist, New York State Department of Environmental Conservation
	Theodore Myers, Regional Flood Control Engineer, Region 9, NYS Department of Environmental Conservation
	Lynn Sigeti, Regional Emergency Preparedness Coordinator, Western New York Healthcare Association
	Jillian Brown, Health, Safety & Environment Manager, Sisters of Charity Hospital, Main St. & St. Joseph Campus
	Kyle Hatch, Planner, Consultant - EDR
	Jane Rice, Planning Director, Consultant - EDR
	Erica Tauzer, Project Manager, Consultant - EDR
	Christine Gunn, Planner, Consultant - Prospect Hill

	Subbio, Tony, Project Manager, Consultant - Tetra Tech

Discussion Points

This section summarizes each discussion point addressed during the Planning Partnership Kickoff Meeting #2. This was the second of two identical sessions conducted to kick off the planning process.

Introductions

Mr. Subbio opened the meeting. As attendees entered the virtual meeting, they were prompted to provide their name and affiliation either verbally or via the webinar chat function. Mr. Butcher then welcomed all attendees and emphasized the importance of active participation from municipal representatives.

Mr. Subbio noted that the meeting will be recorded. He asked if there were any specific issues in the county that attendees would like to address during the planning process. The following issues were noted:

- Ms. Alduino (*Erie County Recycling Coordinator*) indicated that she was specifically concerned or wanted to bring up debris clean-up and disposal – especially for woody debris.
- Mr. Zymanek (*Town of Amherst*) also wanted to see if and how flood management projects are being incorporated into the HMP and wanted to make sure they were evaluated and included.
- Mr. Myers (*NYS DEC*) brought up two items:
    - Would like to make sure flood protection program projects being done with NYSDEC and local jurisdictions, in conjunction with the USACE, would be included – especially as it relates to operations and management.
    - Would like dam safety included in the HMP.
- Ms. Panasiewicz (*Lake Erie Watershed Protection Alliance*) would like to be sure water quality and quantity are both included. In addition, watershed management plans are being developed and overlap with this planning and should be coordinated, as well as some Resilient New York projects. Also inquired about current status and reliability of FIRMs.
- Mr. DePlanche (*Erie County DPW – Highways*) would like both roads and bridges to be included in the HMP, as they pursued some FEMA funding recently and were not eligible because the projects were not in the previous HMP. They have an informal list or collection of roads and bridges and could pull something together.

Overview of Hazard Mitigation

Mr. Subbio provided an introduction to hazard mitigation planning. He encouraged each municipal representative at the meeting to work with a team of officials within their municipality to provide

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

MEETING NOTES

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

information for the HMP update. Mr. Subbio defined types of mitigation activities and described the Federal Emergency Management Agency (FEMA) Hazard Mitigation Assistance (HMA) grant program. In addition, Mr. Subbio provided a brief overview of federal and New York State (NYS) planning requirements for HMPs. For the plan to finalized, review and approval are required by NYS Division of Homeland Security and Emergency Services (DHSES) as well as FEMA. In order to be eligible for certain types of funding, the participation of a municipality must be documented in the HMP.

Project Scope Review

Mr. Subbio reviewed the planning process and the ways in which each phase meets a state and/or FEMA requirement.

Phase 1 – Planning Process

Mr. Subbio discussed the formation of the Steering Committee and the Planning Partnership, and their respective roles in forwarding and completing the HMP. Each partnership member has shown their commitment to the HMP process by attending this meeting. Members are further encouraged to work with stakeholders to provide information about community-specific hazards. Members are asked to recommend actions that can be taken to mitigate the impact of the identified hazards of concern.

Phase 2 – Update the Risk Assessment

The following hazards of concern will be profiled in the updated HMP. This list reflects input from the HMP Steering Committee:

- Coastal Erosion
- Cyber Attack
- Earthquake
- Epidemic/Pandemic
- Expansive Soils
- Extreme Temperatures
- Flood (including ice jams)
- Hazardous Materials
- Landslide
- Severe Storm
- Severe Winter Storm
- Utility Failure
- Wildfire

The 500-year earthquake, the 1-percent and 0.2-percent annual chance floods, and the 100-year and 500-year wind events will be examined using FEMA's Hazards-U.S. (HAZUS) software. Quantitative analysis will be conducted for geographic hazards; qualitative analysis will be completed for other hazards. Upon completion of the hazard profiles, Tetra Tech will review the risk assessment with the Planning Partnership and the public. Attendee comments included the following:

- Mr. Whitney *(Grand Island)* indicated leaving storm surge as a hazard is essential, as it is a problem facing many communities along the lake and river.

MEETING NOTES

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Phase 3 – Public Involvement Strategy

Municipalities have been requested to complete a Letter of Intent to Participate (LOI) to acknowledge that they will actively participate in the HMP update process. The LOI confirms that the municipality understands its roles and responsibilities throughout the planning process. The template LOI has been provided by the Erie County Department of Homeland Security and Emergency Services.

Tetra Tech will conduct six information-gathering meetings with participating jurisdictions in early 2021. Specific dates are to be determined. These meetings provide a targeted venue to gather information crucial to creating a high-quality HMP and to address any questions from municipalities. Mr. Subbio stated that information will be gathered from participating municipalities via a set of jurisdictional worksheets.

Mr. Subbio described the multi-faceted stakeholder outreach efforts that are an important part of the HMP planning process. Information and outreach will be shared throughout the course of the project via Erie County's website. In addition, Tetra Tech will create and maintain a project-specific website to lessen data upload requirements on county staff, and to provide information quickly. This website will be launched very soon. Tetra Tech has developed an innovative yet simple online mapping tool that can be used by all stakeholders. The graphic and geographically referenced tool guides respondents through a process of identifying specific hazards that concern them. These digital platforms will be promoted through social media.

Tetra Tech will prepare a distinct online survey targeted to elicit meaningful hazard related data from residents, members of academia, business members and other stakeholders. A pair of Public Information Meetings will be held to introduce people to the planning process, at dates to be determined. The public is also welcome to participate in the Risk Assessment Review Meeting and the Plan Draft Review Meeting.

Mr. Subbio reviewed HMP information gathering worksheets with the attendees. He recommended that each attendee work with a team of local officials to complete these worksheets. It is not expected that any one official will have the knowledge to complete all six of the worksheets. The targeted deadline for completion of the worksheets is December 15, 2020. The project consultant team will follow up with municipalities to facilitate worksheet completion, and upcoming meetings will provide additional opportunities to refine municipal-specific input. The six jurisdictional worksheets are:

- Evaluation of Identified Hazards and Risk
- Capability Assessment and Integration
- NFIP Floodplain Administrator Questionnaire
- Mitigation Action Review
- New Development and Building Permits
- Shelters, Evacuation Routes, Temporary Housing and Long-Term Housing

MEETING NOTES

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Phase 4 – Mitigation Strategy

Tetra Tech has designed a robust program that guides municipalities in determining strategic actions going forward that address natural hazard threats. Tetra Tech will work with the Steering Committee to set the goals and objectives for the HMP with input from the Planning Partnership. Municipalities will be asked to confirm the status of mitigation actions from the most recent version (2015) of the Erie County HMP. Municipalities will then be guided to plan the next round of mitigation actions to be included in the updated HMP.

Municipal capability is an important element of hazard mitigation planning. The consultant project team will catalogue municipal capabilities for implementing hazard mitigation. Tetra Tech and NYS DHSES will also conduct a Mitigation Strategy Workshop to assist municipalities with developing strategic mitigation actions to include in the final HMP.

Crucial information from jurisdictional worksheets, risk assessment, capability assessment, and mitigation actions will be compiled into a jurisdictional annex for each municipality and the county. These annexes are a detailed compendium of municipality-specific data with analyses specific to the hazards of concern. The annexes facilitate access by local officials.

Phase 5 – Plan Maintenance

Tetra Tech and the Steering Committee will develop procedures for maintaining the HMP over the next 5 years (to 2025). These procedures will be documented in the Plan Maintenance section of the HMP. This section will also describe integration of the HMP with other planning mechanisms, such as comprehensive and master planning, local regulations, etc. Mitigation actions will be loaded into Tetra Tech's plan review tool to streamline ongoing plan maintenance.

Phase 6 – Plan Update and Deliverables

Throughout the planning process, Tetra Tech will compile and refine the HMP document. The main body of the HMP will profile the county, explain the planning process, describe the risk assessment and mitigation strategy, and discuss maintenance of the plan. Jurisdictional annexes and additional information provide context and depth to a final HMP. Draft versions of the plan will be shared with the Steering Committee and Planning Partnership for review and comment throughout the planning process.

Phase 7 – Plan Review and Adoption

Tetra Tech will also provide the draft HMP through various digital platforms to encourage public review and comment. The public review period will be advertised and will last for 30 days. In addition, Tetra Tech and the Planning Partnership will conduct a public meeting to gather feedback on the draft plan and to make required changes.

After the HMP draft is reviewed and updated, Tetra Tech will oversee submission of the formal draft to NYS DHSES for agency review. In the event that NYS DHSES identifies needed changes, Tetra Tech will make these changes and subsequently resubmit the document for final NYS review. After determining that requirements have been satisfied, NYS DHSES will forward the HMP to FEMA

MEETING NOTES

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Region II for review. FEMA is required to review a submitted HMP within 45 days of receipt. If FEMA indicates that any changes are needed, Tetra Tech will make these changes and resubmit to FEMA. At this point, the plan will be granted "approvable pending adoption" status to indicate that it meets all requirements.

The county and participating jurisdictions will formally adopt the HMP by resolution. After such adoption, each jurisdiction will receive a letter from FEMA stating that the HMP is formally approved.

Project Team

The consultant project team is led by Tetra Tech. The project is also supported by team members from EDR and from Prospect Hill Consulting. Several consultant team members participated in this meeting and briefly reviewed how and when they would engage with partnership members to elicit and refine municipal input. Planners from Tetra Tech and Prospect Hill will directly support municipalities in completing worksheets. EDR will coordinate the data received from municipalities and prepare the municipal capability assessments. The team aims to facilitate an efficient and productive planning process that provides value to municipalities.

Project Schedule Review

Mr. Subbio reviewed the project schedule. If all municipalities complete required worksheets expeditiously, then the draft HMP should be ready for public review by the April 2021. The Steering Committee and Tetra Tech will strive to complete the Plan according to this project schedule.

Next Steps

The following next steps were discussed at the meeting:

- The consultant project team requested that the county and municipalities complete information-gathering worksheets by December 15, 2020. Partnership members will receive digital versions of the worksheets to be distributed via e-mail.
- Partnership members are requested to provide copies of local plans, regulations, or studies that may be relevant to hazard mitigation in their municipality. These documents can be emailed to Mr. Subbio.
- The information-gathering sessions will soon be scheduled; the date has not yet been determined.
- A public information meeting will soon be scheduled; the date has not yet been determined.
- Tetra Tech will continue developing hazard profiles, risk assessment, and other plan sections for the hazards of concern analyzed in the HMP.

Mr. Subbio and then Mr. Butcher ended the meeting by thanking participants for their attendance and forthcoming active engagement.

The meeting adjourned at 11:15 a.m.

Overview of Hazard Mitigation

5

What is hazard mitigation?

Any sustained action taken to reduce or eliminate long-term risk to life and property from a hazard event

"…provides the blueprint for reducing the potential losses identified in the risk assessment, based on existing authorities, policies, programs, and resources, and local ability…" (CFR).

6

Mitigation Works!

- The nation saves **$6** for every **$1** spent through mitigation grants, funded through select federal agencies.

National Benefit-Cost Ratio (BCR) Per Peril *BCR numbers in this study have been rounded	Beyond Code Requirements	Federally Funded
Overall Hazard Benefit-Cost Ratio	$4:1	$6:1
Riverine Flood	$5:1	$7:1
Hurricane Surge	$7:1	Too few grants
Wind	$5:1	$5:1
Earthquake	$4:1	$3:1
Wildland-Urban Interface Fire	$4:1	$3:1

Project Scope Review (Continued)

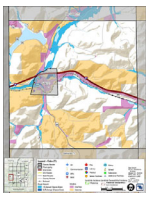
- Phase 2 – Update the Risk Assessment (Continued)
  - HAZUS-MH Analysis
    - Earthquake: 500-year MRP event
    - Flood: 1-percent and 0.2-percent annual chance floodplains
    - Wind: 100-year and 500-year MRP events
  - Quantitative Analysis for Geographic Hazards
  - Review Risk Assessment with Planning Partnership (open to the public)



13

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard

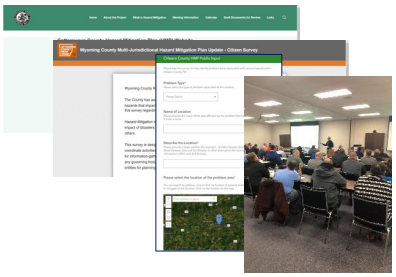
Project Scope Review (Continued)

- Phase 3 – Public Involvement Strategy
  - Letter of Intent to Participate
  - Six Information Gathering Meetings – Webinars
  - Jurisdictional Worksheets
    - Evaluation of Identified Hazards and Risk
    - Capability Assessment and Integration
    - NFIP Floodplain Administrator Questionnaire
    - Mitigation Action Review
    - New Development and Building Permits
    - Shelters, Evacuation Routes, Temporary Housing, and Long-Term Housing

14

Project Scope Review (Continued)

- Phase 3 – Public Involvement Strategy (Continued)



15

Project Scope Review (Continued)

- Phase 4 – Mitigation Strategy
  - Develop Goals and Objectives
  - Assess Capabilities
  - Conduct Mitigation Strategy Workshop
  - Develop Annexes

16

Project Scope Review (Continued)

- Phase 5 – Plan Maintenance
- Phase 6 – Plan Update and Deliverables
  - Develop the Document
    - Develop and finalize main body
    - Finalize jurisdictional annexes
  - Draft Plan Reviewed throughout the Process

17

Project Scope Review (Continued)

- Phase 7 – Plan Review and Adoption
  - Public Review
  - Draft Plan Review Meeting (open to the public)
  - Submittal to the New York State Division of Homeland Security and Emergency Services (NYS DHSES) and FEMA
  - Update As Necessary
  - "Approvable Pending Adoption"

AGENDA

ERIE COUNTY HAZARD MITIGATION PLAN UPDATE
Planning Partnership Kickoff Meeting #1

Wednesday, November 18, 2020 | 6:00 – 8:00 p.m.

1. **Introductions**
2. **Overview of Hazard Mitigation**
3. **Project Scope Review**
   a. Phase 1 – Planning Process
   b. Phase 2 – Update the Risk Assessment
   c. Phase 3 – Public Involvement Strategy
   d. Phase 4 – Mitigation Strategy
   e. Phase 5 – Plan Maintenance
   f. Phase 6 – Plan Update and Deliverables
   g. Phase 7 – Plan Review and Adoption
4. **Project Team**
5. **Project Schedule Review**
6. **Next Steps**
   a. Complete worksheets
   b. Provide reports and plans
   c. Schedule Public Informational Meetings
   d. Schedule Municipal Information Gathering Meetings
   e. Risk Assessment Update
7. **Questions**

   e. Risk Assessment Update
7. **Questions**

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard

Project Schedule

Subject to Change

Task	Timeframe
Phase 1 – Planning Process	► Conduct a Steering Committee Kickoff Meeting on November 2, 2020 ► Conduct Planning Partnership Kickoff Meetings on November 18 and 19, 2020 ► Conduct Steering Committee Meetings in conjunction with other planning meetings through submittal of the HMP to NYS DHSES
Phase 2 - Update the Risk Assessment	► Perform a thorough risk assessment of each hazard by the middle of February 2021 ► Conduct a Risk Assessment Review and Strengths, Weaknesses, Obstacles, and Opportunities (SWOO) Meeting on or about February 15, 2021
Phase 3 - Public Involvement Strategy	► Implement public outreach throughout the planning process ► Conduct two Public Information Meetings during the week of December 7-11, 2020 ► Conduct municipal information gathering sessions during the week of December 14-18, 2020
Phase 4 - Mitigation Strategy	► Assess local capabilities by the middle of February 2021 ► Conduct the SWOO discussion during the Risk Assessment Review and SWOO Meeting on or about February 15, 2021 ► Identify goals and objectives by the beginning of March 2021 ► Conduct a Mitigation Strategy Workshop on or about March 18, 2021 ► Complete the jurisdictional annexes by April 9, 2021
Phase 5 - Plan Maintenance	► Develop plan maintenance procedures by the end of November 2020 ► Populate the BATool[SM] Plan Review Tool upon receiving APA status
Phase 6 - Plan Update and Deliverables	► Begin plan development at the start of the project ► Complete the draft HMP by April 13, 2021 ► Allow public review from April 14-May 14, 2021 ► Conduct the draft review meeting on or about May 17, 2021 ► Finalize the draft HMP by May 20, 2021
Phase 7 - Plan Review and Adoption	► Submit the draft HMP to NYS DHSES for review by May 21, 2021 ► Revise and finalize the HMP to ensure compliance with state and federal requirements through mid-November 2021 ► Receive APA status in late November 2021 (estimated) ► Facilitate adoption of the updated HMP in December 2021
Phase 8 - Project Management	► Develop monthly status reports and invoices ► Conduct project close-out in January 2022

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard

MEETING NOTES

Meeting	Erie County Hazard Mitigation Plan (HMP) Update Municipal Support Meeting #1		
Date	January 21, 2021	**Time**	2:00–3:30 p.m.
Location	Webinar		
Attendees	Jonathan DePlanche, Senior Civil Engineer, Erie County Highways		
	Greg Butcher, Deputy Commissioner, Erie County Department of Homeland Security and Emergency Services		
	Melissa Calhoun, Public Safety Officer, Erie County Department of Homeland Security and Emergency Services		
	Michael Tuberdyke, Special Operations Division Chief, Buffalo Fire Department		
	Mike Mazurowski, Emergency Services Coordinator, Town of Cheektowaga		
	Lynn Rybak, Supervisor's Office, Town of Cheektowaga		
	Dawn Izydorczak, Clerk, Town of Newstead		
	Vincent George, Mayor, Village of North Collins		
	Jan Hutchinson, Clerk/Treasurer, Village of North Collins		
	Jerry Whittington, Emergency Manager, Town of Sardinia		
	Mark Banks, Deputy Director Emergency Management, City of Tonawanda		
	Captain Fredric Foels, Captain of Patrol Operations, City of Tonawanda		
	Erik Lindhurst, Building Inspector and Flood Plain Administrator, City of Tonawanda		
	Chuck Stuart, Fire Chief, City of Tonawanda		
	Robert Lutz, Emergency Services Coordinator, Town of Tonawanda		
	Tony Subbio, Project Manager, Tetra Tech		
	Brian Kehoe, Planner, Tetra Tech		
	Matt Butwin, Principal, Prospect Hill Consulting		
	Mike Kane, Principal, Prospect Hill Consulting		
	Kyle Hatch, Planner, EDR		
	Erica Tauzer, Project Manager, EDR		

Discussion Points

This section summarizes each discussion point addressed during the meeting.

Hazard Mitigation Planning

Mr. Subbio provided an overview of hazard mitigation planning, the Disaster Mitigation Act of 2000 (DMA 2000) and the Federal Emergency Management Agency's (FEMA) suite of Hazard Mitigation Assistance (HMA) funding streams. The Building Resilient Infrastructure and Communities (BRIC) grant program was created in 2020 to replace and expand the existing Pre-Disaster Mitigation grant.

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard

MEETING NOTES

The Hazard Mitigation Grant Program (HMGP) provides funding to reduce long-term risk from disasters, and each state receives funding from allocations for Presidential Disaster Declarations. In order for a community to access these HMA funds, a community should list needed mitigation projects in this HMP update. Projects located on private or public property are eligible.

Mr. Subbio then reviewed the four Hazard Mitigation project types: (1) Local Plans and Regulations, (2) Education and Awareness Programs, (3) Natural Systems Protection, and (4) Structure and Infrastructure Projects.

Project Overview

Mr. Subbio then described the Erie County HMP and the process by which it is being updated, incorporating input and efforts from county staff and municipal representatives.

Problems and Problem Areas

Erie County Highway Department – There is not a significant issue with regular flooding of culverts; the Highway Department aims to address issues quickly. Flooding and erosion are impacting roads and bridges, but repairs to these facilities are expensive, and funds are short. The department will provide a list of county-owned critical facilities that need backup power for inclusion in HMP update.

Buffalo Fire Department – Flooding caused by ice jams is common each year along Cazenovia Creek. The city has a routine for addressing flood events, including citizen evacuations. Recent storms caused erosion and damaged break walls along the lakeshore. The Old First Ward contains a 4–5 block area that floods, during which emergency responders are on standby until floodwaters recede. Most homes are slab construction (no basement), typically residents do not evacuate, and residents do not want to leave their homes anyway. Typically, flooding and sometimes snow fall are the events that trigger emergency response and rescues.

Town of Cheektowaga – Snow storage is an issue each year, particularly after very large snow events. The town would like to dedicate certain areas to snow storage instead of relying upon ad hoc storage at town parks. The town wants the county and state to mitigate their roadways so that their respective roadways do not close during high waters. The HMP can include mitigation actions encouraging coordination between the town, county, and state highway agencies.

Village of North Collins – Each year, an area between Route 249, Park Terrace, and the railroad tracks floods. Mitigation of this area should be included as an action item in the HMP update.

City of Tonawanda – The City Department of Public Works (DPW) facility lacks backup power. A private facility, Tonawanda Towers, is a low-income/high-rise housing that lacks adequate backup power. Firefighters have had to carry residents down 11 flights of stairs in the past. Flooding is not an issue in the city.

Town of Tonawanda – The Police Department/Emergency Operation Center has an older diesel generator, and a new one is needed. The municipal building is also in need of backup power. The town is determining the scale of generator needed. There is little open space in the town, and many properties are historic. The floodplain in the town is open land that does not contain any buildings.

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard

MEETING NOTES

Mitigation Projects Completed

Erie County Highway Department – The county has completed many mitigation projects. These projects were not listed in the 2015 mitigation actions list. Staff will compile mitigation projects completed back to 2015 and will provide this data to Melissa Calhoun or to Tony Subbio at Tetra Tech.

Town of Cheektowaga – Town staff walk the creek beds with New York State Department of Environmental Conservation (NYS DEC) annually to identify obstacles to water flow. Scajaquada Creek and Cazenovia Creek are large creeks.

Village of North Collins – The village is implementing mitigation projects; however, after one project is finished, another soon pops up. The village's location among hills means that water flows overland in many directions. Flooding occurred recently on Eagle Drive near North Collins High School, and on High Street, which divides the village. A recently installed turf field at the high school was installed improperly, and water overflows onto side streets, including Harrison Avenue. Drainage is now improved, and water is diverted along Eagle Drive into Eighteen Mile Creek. A new culvert is needed in this area. Storm drain upgrades are being constructed with installation of a new water line. The village is replacing the bridge over Big Sister Creek in Spring 2021, working with New York State Department of Transportation (NYSDOT). The village will try to compile a list of projects.

City of Tonawanda – Shore hardening along Niagara River has been a successful mitigation project and has virtually eliminated flooding in the city. The park floods, but this does not present a hazard since it is a passive recreation area.

Town of Tonawanda – Similar to the City of Tonawanda, the town has only small amounts of flood prone areas, and these are open space.

Information Provided

Mr. Subbio reviewed the information required from each jurisdiction that has not yet been submitted.

Next Steps

The following next steps were discussed at the end of the meeting:

- Municipal officials will complete and submit any missing information-gathering worksheets still owed to the county.
- Attendees will discuss problems and problem areas caused by hazards with their colleagues at their respective municipalities.
- Attendees will discuss solutions to those problems with their colleagues and Tetra Tech's assigned planners.
- Tetra Tech will finish the risk assessment update and will conduct a public meeting to review the results of the risk assessment in the coming weeks.

The webinar adjourned at 3:30 p.m.

Meeting	Erie County Hazard Mitigation Plan (HMP) Update Municipal Support Meeting #3		
Date	January 22, 2021	**Time**	9:00–10:20 a.m.
Location	Webinar		
Attendees	Joanna Panasiewicz, Planner, Erie County – Department of Environment and Planning, LEWPA		
	Melissa Calhoun, Public Safety Officer, Erie County Department of Homeland Security and Emergency Services		
	Matt Barrett, Security, Erie County Water Authority		
	Martha Librock, Clerk, Town of Aurora		
	Joseph Fox, Fire/Police Department, Village of Blasdell		
	Jason Keding, Supervisor, Town of Boston		
	Don Poleto, Engineer, City of Buffalo Department of Public Works		
	Clyde Drake, Supervisor, Town of Concord		
	Cathie Thomas, Administrator, Village of East Aurora		
	Brian Kehoe, Planner, Tetra Tech		
	Matt Butwin, Principal, Prospect Hill Consulting		
	Mike Kane, Principal, Prospect Hill Consulting		
	Samantha Morrone, Planner, EDR		
	Erica Tauzer, Project Manager, EDR		

Discussion Points

This section summarizes each discussion point addressed during the meeting.

Hazard Mitigation Planning

Mr. Kehoe welcomed participants and invited them to introduce themselves. Mr. Kehoe provided an overview of hazard mitigation planning, the Disaster Mitigation Act of 2000 (DMA 2000), and the Federal Emergency Management Agency's (FEMA) suite of Hazard Mitigation Assistance (HMA) funding programs. The Building Resilient Infrastructure and Communities (BRIC) grant program was created in 2020 to replace and expand the existing Pre-Disaster Mitigation grant. The Hazard Mitigation Grant Program (HMGP) provides funding to reduce long-term risk from disasters, and each state receives funding from allocations for Presidential Disaster Declarations. In order for a community to access these HMA funds, a community should list needed mitigation projects in this HMP update. Projects located on private or public property are eligible.

Mr. Kehoe then reviewed the four Hazard Mitigation project types: (1) Local Plans and Regulations,

MEETING NOTES

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard

(2) Education and Awareness Programs, (3) Natural Systems Protection, and (4) Structure and Infrastructure Projects.

Project Overview

Mr. Kehoe then described the Erie County HMP and the process by which it is being updated, incorporating input and efforts from county staff and municipal representatives.

Problems and Problem Areas

Erie County Planning/watersheds – Lake Erie Watershed Protection – The Lake Erie beach in Evans was heavily damaged by the October 2019 storm, including washing out bio-gardens. Storms this past November washed debris along the lakeshore, notably in the Town of Evans.

Erie County Water Authority (ECWA) – The ECWA plants (one draws from Lake Erie and one from the Niagara River) are not heavily impacted by flooding. Similarly, there is only minimal concern about flooding around pump stations. The Williams pump station (South Penora Street in the Town of Lancaster) is located in a high water table, which can be an issue when heavy snowmelt combines with rainfall. High winds affect Sturgeon Point because it is thickly wooded. Winds damage fencing at this ECWA facility, which is repaired immediately because security is a highest priority due to the facility's critical nature.

Town of Aurora – The east branch of Cazenovia Creek often jams with trees and changes the course of the creek. This is also true along Olean Creek, which is low-lying. 103S7244There have not been any big floods recently. The severity of windstorms is increasing, with more gusts above 50 mph. New York State Electric and Gas (NYSEG) is responsible for clearing limbs.

City of Buffalo Department of Public Works – The biggest cause of flooding is during the spring thaw, which causes ice jams. On Cazenovia Creek and the Buffalo River, pieces break off and cause significant and regular flooding in certain areas. Certain creek bends are problematic. Cazenovia Creek has sloped walls that were installed as part of a flood control project that started construction in the 1920s. The final section was installed in the late 1990s. The city is seeking funds to extend these sloped walls further. Scajaquada Creek does not experience heavy ice jamming, but floods occur during Lake Erie seiche events. This creek backs up into the Niagara River, then the Black Rock Canal. Delaware Park and pump stations get overwhelmed during heavy rains, which results in road closings. The Buffalo River is dredged to 22–25 feet. Storm surge from the lake is common; homes and streets flood, and evacuations are necessary.

The New York State Department of Transportation (NYSDOT) Stevenson Bridge was reconstructed in the 1990s because abutments stuck out into the river, and ice jams resulted. The bridge now allows greater water flow underneath, and the deck was raised. The city's current project priority is the Bailey Avenue Bridge between McKinley Parkway and Elk Street – the "Y" where the Buffalo River and Cazenovia Creek split. The cost of the project is estimated at $20 million. The South Ogden Bridge on West Seneca and South Buffalo border is being repaired.

The 2019 Halloween storm overtopped the Erie Basin Marina, damaged the roadway, and dislodged part of the Rhode Island pier. The city is working with FEMA to acquire funds to repair those

MEETING NOTES

locations. The City Fire Department will be asked for information about hazardous materials transport along rail lines. This information will be passed along to Melissa Calhoun.

National Grid is responsible for keeping power lines clear, but the city addresses this issue on an emergency basis.

Town of Concord – Nuclear waste moves along regional roads (West Valley nuclear site, which is only 5 miles from the town in Cattaraugus County)

Village of East Aurora – Tannery Brook runs through the entire village. Two significant, recent projects were performed by the county and have mitigated some related flooding problems. The town Highway Department replaced two bridges where the brook runs under North Grove, and Whaley Roads and the stream bank was stabilized.

This year, a culvert failed and created a parking lot sinkhole at Mikey D's Cafe. An emergency repair was completed, but a full repair will be done this year. An engineering firm has been selected, and the project will soon go out to bid. The village contains old infrastructure in areas like Oakwood, which requires road drainage and waterline upgrades.

The May 2020 train derailment was a frightening event that luckily did not cause much negative impact. It could have been a disaster since the train was carrying oil tankers. Starting the following day, cleanup of the contained diesel spill commenced. Despite being caused by human error, this event should be documented in the HMP update under the hazardous materials consideration.

Mitigation Projects Completed

Erie County Planning/Lake Erie Watershed Planning Association – Asked how participation in the Community Rating System (CRS) relates to this HMP update. Amherst is an active CRS community, and the Town of Evans is considering participating also. LEWPA is planning on creating a brochure for lakeshore landowners outlining coastal erosion processes and technical assistance. LEWPA provides educational information to the public through distribution at public libraries.

ECWA – The ECWA distributes information via email, through its website, and via alerts.

Town of Aurora – In 2019, the town updated its Flood Damage Prevention Ordinance. Public information, mostly FEMA materials and storm data, is distributed via the town website.

Village of Blasdell – Flooding is not a big problem in this landlocked village. Sometimes flooding occurs on a small creek as it passes under the railroad. Flooding occurs along Rush Creek along Jeffrey Boulevard near the Milestrip Expressway. One village-owned storage facility experiences occasional and minor flooding. National Grid is responsible for tree trimming.

Town of Boston – The town coordinates with Erie County and NYS agencies. Eighteen Mile Creek runs through the town, which is a Municipal Separate Storm Sewer Systems (MS4) community. The town is creating a digital town-wide drainage plan, which will assist with creating grant applications for mitigation project funding. The town takes a proactive approach to hazard mitigation.

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard

MEETING NOTES

City of Buffalo – DPW – The Baily Avenue bridge project is the largest mitigation project in several years; this is a two span to one span conversion.

Information Provided

Mr. Kehoe reviewed the information required from each jurisdiction that has not yet been submitted.

Next Steps

The following next steps were discussed at the end of the meeting:

- Municipal officials will complete and submit any missing information-gathering worksheets still owed to the county.
- Attendees will discuss problems and problem areas caused by hazards with their colleagues at their respective municipalities.
- Attendees will discuss solutions to those problems with their colleagues and Tetra Tech's assigned planners.
- Tetra Tech will finish the risk assessment update and will conduct a public meeting to review the results of the risk assessment in the coming weeks.

The webinar adjourned at 10:20 a.m.

Discussion Points

This section summarizes each discussion point addressed during the meeting.

Hazard Mitigation Planning

Mr. Kehoe welcomed the participants and invited each to introduce themselves. Mr. Kehoe provided an overview of hazard mitigation planning, the Disaster Mitigation Act of 2000 (DMA 2000), and the Federal Emergency Management Agency's (FEMA) suite of Hazard Mitigation Assistance (HMA) funding programs. The Building Resilient Infrastructure and Communities (BRIC) grant program was created in 2020 to replace and expand the existing Pre-Disaster Mitigation grant. The Hazard Mitigation Grant Program (HMGP) provides funding to reduce long-term risk from disasters, and each state receives funding from allocations for Presidential Disaster Declarations. In order for a

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard

MEETING NOTES

community to access these HMA funds, a community should list needed mitigation projects in this HMP update. Projects located on private or public property are eligible.

Mr. Kehoe then reviewed the four Hazard Mitigation project types: (1) Local Plans and Regulations, (2) Education and Awareness Programs, (3) Natural Systems Protection, and (4) Structure and Infrastructure Projects.

Project Overview

Mr. Kehoe described the Erie County HMP and the process by which it is being updated, incorporating input and efforts from county staff and municipal representatives.

Problems and Problem Areas

Erie County – There are many county roads that parallel streams. High water flows cause erosion. Brian Rose will provide a list of roads that erode.

Town of Amherst – Debris issues occur in Ellicott Creek. The U.S. Army Corps of Engineers (USACE) made some recent changes to move water through the town to Tonawanda Creek and not impact their tributaries. Most recent flooding is an inconvenience, not requiring evacuation. Most soil and foundation issues have been remedied.

Town of Aurora – Route 400 comes through town, and there is concern about potential hazmat spills with tractor trailers. Speeds on that roadway should be reduced. Trimming of trees is needed in many rights-of-way.

Village of East Aurora – Village was lucky to escape serious damage from a recent train derailment; most cars were empty. There were propane tanks involved, but not damaged. Locomotive spilled some diesel fuel, but this was contained before it seeped into Tannery Brook. The railroad paid for the cleanup.

Town of Evans – The town is a coastal community with many tributaries and a heavily developed shoreline community. Stormwater drainage systems upgrade needed in Fern Brook and Muddy Creek portions of town. Coastal flooding due to high water levels and wave runup into tributaries. The town's lower elevations are in the southwest—the Point Breeze and Grandview Bay area. Ice jams and flooding occur on Big Sister Creek and have led to evacuations. The county is undertaking water quality improvements. The October 2019 storm caused much damage to waterfront parks and riprap and retaining walls, breakwater damage, stream bank erosion. Extensive documentation is needed with respect to downed trees and debris removal. The Emerald Ash borer infestation is an issue causing dead trees to fall on electric lines.

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard

MEETING NOTES

Village of Farnham – Hazardous materials on trains is a serious concern. Train traffic has increased. The village is considering moving its emergency operations away from the tracks.

Town of Lancaster – Both the Town and Village of Lancaster have two very active rail lines (CSX & Norfolk Southern), and hazardous materials transit is an issue.

Village of Springville – The village has not experienced much stormwater damage. The wastewater treatment plant only has a small generator to run the digester plant. The village aims to upgrade backup power at the Mill St. facility. Springville has municipal electric. The village would like National Grid to consistently trim trees in order to avoid power outages. Greg Butcher mentioned municipalities should voice their concerns to the NYS Public Service Commission.

Mitigation Projects Completed

Town of Amherst – The town has upgraded the building code to raise standards for foundations. Several bridges and culverts were replaced, and floodplain restoration projects were completed. Public outreach is routine.

Village of East Aurora – Two culverts were replaced, and the creek bed was worked on. The village aims to complete a culvert project at Willow and Oakwood Avenue at Cazenovia Creek.

Town of Evans – The town is working with New York State Department of Environmental Conservation (NYS DEC) on shoreline restoration. Numerous FEMA claims are in process (Sturgeon Point Marina, breakwater reconstruction, and repairs to Lake Erie Beach Park). The town foreclosed on a residential property along Muddy Creek area.

Village of Farnham – The village installed generator backup at municipal buildings, including the designated emergency shelter.

Information Provided

Mr. Kehoe reviewed the information required from each jurisdiction that has not yet been submitted.

Next Steps

The following next steps were discussed at the end of the meeting:

- Municipal officials will complete and submit any missing information-gathering worksheets still owed to the county.
- Attendees will discuss problems and problem areas caused by hazards with their colleagues at their respective municipalities.
- Attendees will discuss solutions to those problems with their colleagues and Tetra Tech's assigned planners.

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard

MEETING NOTES

- Tetra Tech will finish the risk assessment update and will conduct a public meeting to review the results of the risk assessment in the coming weeks.

The webinar adjourned at 3:15 p.m.

Hazard Mitigation Planning

Mr. Kehoe welcomed the participants and invited them to introduce themselves. Mr. Kehoe provided an overview of hazard mitigation planning, the Disaster Mitigation Act of 2000 (DMA 2000), and the Federal Emergency Management Agency's (FEMA) suite of Hazard Mitigation Assistance (HMA) funding programs. The Building Resilient Infrastructure and Communities (BRIC) grant program was created in 2020 to replace and expand the existing Pre-Disaster Mitigation grant. The Hazard Mitigation Grant Program (HMGP) provides funding to reduce long-term risk from disasters, and each state receives funding from allocations for Presidential Disaster Declarations. In order for a community to access these HMA funds, a community should list needed mitigation projects in this HMP update. Projects located on private or public property are eligible.

Mr. Kehoe then reviewed the four Hazard Mitigation project types: (1) Local Plans and Regulations, (2) Education and Awareness Programs, (3) Natural Systems Protection, and (4) Structure and Infrastructure Projects.

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard

MEETING NOTES

Project Overview

Mr. Kehoe then described the Erie County HMP and the process by which it is being updated, incorporating input and efforts from county staff and municipal representatives.

Problems and Problem Areas

Erie County Department of Environment & Planning – The Springville Dam is county-owned and has structural issues. This is a safety concern, and the U.S. Army Corps of Engineers (USACE) is involved with repairing the dam. The Buffalo Bills stadium is on county-owned property and is adjacent to Smoke Creek. The stadium's stormwater system is old and can manage only a 2–5-year frequency storm. Larger rain events fill up the parking lot with water. The Bills football organization and the county have developed embankment and energy dissipation measures to prevent erosion. Upgrading of the storm system and a larger distribution box are planned.

The county building at 25 Delaware Street was built defectively and pieces fall into the street. During wind events, the Erie Community College (ECC) downtown campus loses shingles. Overhead scaffolding has been installed as a short-term fix. The county owns 240 buildings, all of which require some maintenance.

Town of Collins – The town, including the Village of Gowanda, experiences significant flooding. Cattaraugus Creek is the largest waterway, but the smaller streams feeding into Cattaraugus Creek typically cause flooding. FEMA and USACE are working on a plan to cut a ditch through the village to divert water.

Town of North Collins – A specific dam upstream has the potential to flood a portion of the town were it to fail. Clear Lake Dam is owned and maintained by the New York State Department of Environmental Conservation (NYS DEC) as part of the Clear Lake Wildlife Management Area.

Mitigation Projects Completed

Erie County – The county is updating or replacing many of its aged buildings to address updated building codes, etc. The Fire Training Academy in Cheektowaga, which also serves as the Emergency Operations Center, is being upgraded. The county has been replacing generators in various buildings at Erie Community College campuses that have not been updated since the 1960s.

Town of Collins – The town manages three water districts and two pump houses, one of which flooded in 1998. The berm surrounding this pumphouse was raised to 10 feet high in 2010.

Town of Eden – The town highway department has upgraded culverts and regularly clears ditches in floodprone areas. More highway projects are planned.

Information Provided

Mr. Kehoe reviewed the information required from each jurisdiction that has not yet been submitted.

Next Steps

The following next steps were discussed at the end of the meeting:

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard

MEETING NOTES

- Municipal officials will complete and submit any missing information-gathering worksheets still owed to the county.
- Attendees will discuss problems and problem areas caused by hazards with their colleagues at their respective municipalities.
- Attendees will discuss solutions to those problems with their colleagues and Tetra Tech's assigned planners.
- Tetra Tech will finish the risk assessment update and will conduct a public meeting to review the results of the risk assessment in the coming weeks.

The webinar adjourned at 8:15 p.m.

MEETING NOTES

Meeting	Erie County Hazard Mitigation Plan (HMP) Update Municipal Support Meeting #6		
Date	January 27, 2021	**Time**	9:00–10:15 a.m.
Location	Webinar		
Attendees	Greg Butcher, Deputy Commissioner, Erie County Department of Homeland Security and Emergency Services		
	Melissa Calhoun, Public Safety Officer, Erie County Department of Homeland Security and Emergency Services		
	Ryan Sheedy, Senior MERS Coordinator, Erie County Department of Homeland Security and Emergency Services		
	Mark Pruitt, OEM Coordinator, Village of Alden		
	Jim Brecker, Code Officer, Town of Brant		
	Mark DeCarlo, Supervisor, Town of Brant		
	Jeffrey Grier, Town of Brant		
	James DePasquale, Town Supervisor, Town of Colden		
	Patty Zurbrick, Councilwoman, Town of Colden		
	Tony Fischione, Building Inspector, Village of Depew		
	RJ Nieman, Emergency Manager, Village of Depew		
	Sean Crotty, Emergency Manager, Town of Hamburg		
	William Cansdale, Superintendent Public Works, Village of Lancaster		
	John Gullo, Building Inspector, Village of Orchard Park		
	Richard Mrugalski, Emergency Manager, Town and Village of Orchard Park		
	Debra Smith, Clerk, Treasurer, Village of Sloan		
	James Unger, Police Department, Town of West Seneca		
	Brian Kehoe, Planner, Tetra Tech		
	Mike Kane, Principal, Prospect Hill Consulting		
	Laura Evans, Planner, Prospect Hill Consulting		
	Samantha Morrone, Planner, EDR		

Discussion Points

This section summarizes each discussion point addressed during the meeting.

Hazard Mitigation Planning

Mr. Kehoe welcomed the participants and invited each to introduce themselves. Mr. Kehoe provided an overview of hazard mitigation planning, the Disaster Mitigation Act of 2000 (DMA 2000) and the Federal Emergency Management Agency's (FEMA) suite of Hazard Mitigation Assistance (HMA) funding programs. The Building Resilient Infrastructure and Communities (BRIC) grant program was

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard

MEETING NOTES

created in 2020 to replace and expand the existing Pre-Disaster Mitigation grant. The Hazard Mitigation Grant Program (HMGP) provides funding to reduce long-term risk from disasters and each state receives funding from allocations for Presidential Disaster Declarations. In order for a community to access these HMA funds, a community should list needed mitigation projects in this HMP update. Projects located on private or public property are eligible.

Mr. Kehoe then reviewed the four Hazard Mitigation project types: (1) Local Plans and Regulations, (2) Education and Awareness Programs, (3) Natural Systems Protection, and (4) Structure and Infrastructure Projects.

Project Overview

Mr. Kehoe then described the Erie County HMP and the process by which it is being updated, incorporating input and efforts from county staff and municipal representatives.

Problems and Problem Areas

Town of Brant – When Cattaraugus Creek floods, it pushes debris around. During the large 2009 flood, a mobile home was pushed out into Lake Erie and then landed on Brant Beach. FEMA assisted with cleanup after this 2009 event. Snow is a hazard each year. Raw sewage outfalls are an issue in some of the town's creeks, and the Erie County Health Department is assisting with that problem. The beach in Brant collects a great amount of trash during heavy storms.

Town of Colden – Cazenovia Creek is eroding banks adjacent to residences on Route 240, south of Town Hall. The town is working with Erie County Soil and Water to address erosion issues. The town has obtained a perpetual permit from New York State Department of Environmental Conservation (NYS DEC) to access the creek bed and remove obstacles. Tree removal involves coordination with Erie County. The town has acquired funds to address erosion around the railroad tracks.

Village of Depew – Depew works to keep Scajaquada Creek flowing free by removing branches from the creek bed. The village has to encourage property owners to remove these branches because the village does not have easement access to the creek bed.

Town of Hamburg – Sean Crotty talked about aging infrastructure, which is being addressed by the Engineering/Highway Departments. The town wants to address seven problem areas where tributaries run into Lake Erie; water is backing up and storm sewers are clogging with debris. Sean Crotty will send a list of these locations to Tetra Tech.

Debris from Eighteen Mile Creek washes up on Woodlawn Beach, a New York State (NYS) park. There are erosion issues along the shoreline, and the town has been trying to get assistance from the U.S. Army Corps of Engineers (USACE). Hoover Beach floods every time the lake seiches. Residential areas on the stretch of Hamburg's Lake Erie shoreline are losing lands daily. Hoover Road, a town road, is only 18 feet from the edge of the lake.

The town would like to seek BRIC grant funding for repair of a clock tower damaged by storms. The Town of Hamburg Park boat launch gets dredged twice each year. The boat launch gets filled with debris.

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard

MEETING NOTES

Town of Orchard Park – The town asked if the BRIC program can fund installation of backup power, tree trimming costs, dredging creeks or ponds, or bank stabilization. The utility companies are responsible for tree trimming, but sometimes the town has to remove trees and limbs as needed. The majority of flooding occurs in people's backyards. Most creeks flow unimpeded. The town has dredging and bank stabilization needs on Freeman Pond and Smoke Creek.

Town of West Seneca – Ice jams occur each year along the Buffalo and Cazenovia Creeks, and the town coordinates with the City of Buffalo to do ice breakups. Some small sections of berms have been constructed, but the town has not been proactive in dealing with flooding. Buffalo Creek flooding resulted in evacuations on that street two years ago.

Mitigation Projects Completed

Village of Alden – Mark Pruitt was on the line but did not have a microphone. He will send us a list of projects completed in the village.

Town of Brant – Some roads have been upgraded and some overpasses rebuilt.

Village of Depew – Road and bridge repairs are a regular part of the capital program.

Town of Hamburg – The town has had a somewhat reactive approach to hazards. On NYS Route 5, the USACE just put up a break wall that will head off some erosion.

Town of Orchard Park – Town has upgraded some roads, just completed dredging Green Lake, and has rehabilitated that dam with a new spillway.

Information Provided

Mr. Kehoe reviewed the information required from each jurisdiction that has not yet been submitted.

Next Steps

The following next steps were discussed at the end of the meeting:

- Municipal officials will complete and submit any missing information-gathering worksheets still owed to the county.
- Attendees will discuss problems and problem areas caused by hazards with their colleagues at their respective municipalities.
- Attendees will discuss solutions to those problems with their colleagues and Tetra Tech's assigned planners.
- Tetra Tech will finish the risk assessment update and will conduct a public meeting to review the results of the risk assessment in the coming weeks.

The webinar adjourned at 10:15 a.m.

Hazard Mitigation Planning

Mr. Kehoe welcomed the participants and invited each to introduce themselves. Mr. Kehoe provided an overview of hazard mitigation planning, the Disaster Mitigation Act of 2000 (DMA 2000) and the Federal Emergency Management Agency's (FEMA) suite of Hazard Mitigation Assistance (HMA) funding programs. The Building Resilient Infrastructure and Communities (BRIC) grant program was created in 2020 to replace and expand the existing Pre-Disaster Mitigation grant. The Hazard Mitigation Grant Program (HMGP) provides funding to reduce long-term risk from disasters, and each state receives funding from allocations for Presidential Disaster Declarations. In order for a community to access these HMA funds, a community should list needed mitigation projects in this HMP update. Projects located on private or public property are eligible.

Mr. Kehoe then reviewed the four Hazard Mitigation project types: (1) Local Plans and Regulations, (2) Education and Awareness Programs, (3) Natural Systems Protection, and (4) Structure and Infrastructure Projects.

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard

MEETING NOTES

Project Overview

Mr. Kehoe then described the Erie County HMP and the process by which it is being updated, incorporating input and efforts from county staff and municipal representatives.

Problems and Problem Areas

Village of Angola – Storms have an impact in the village. The storm this past November was damaging. Freight trains run through village. There was a question on how residents would evacuate if there were a hazmat spill.

Town of Grand Island – The town is not typically impacted by flooding, though sometimes flooding impacts the shoreline dues to winds off the Niagara River. The island depends upon safe and dependable bridge connections. Grand Island operates its own water and wastewater treatment capacity, and both facilities have backup generators. The level of the Niagara River is controlled by the power authority.

Village of Gowanda – The village has had a large amount of flooding during its recorded history. The brooks running through the village back up and cause flooding. Since about the 2013 flood, the village has emphasized flood mitigation. A $6.5 million diversion channel through the village was completed. This has increased safety in the village and retained businesses and residents. The stability of the village reservoir is a concern due to past storm damage. The reservoir is the village's main water source.

City of Lackawanna – There are many rail lines throughout the city. It is not known if critical facilities have backup power.

Mitigation Projects Completed

Village of Gowanda – Persistence has paid off when pursuing funding from FEMA. It is necessary to wait a long time for the funding to come through, and there is extensive paperwork, but the funding has allowed the village to complete important mitigation projects.

Information Provided

Mr. Kehoe reviewed the information required from each jurisdiction that has not yet been submitted.

Next Steps

The following next steps were discussed at the end of the meeting:

- Municipal officials will complete and submit any missing information-gathering worksheets still owed to the county.
- Attendees will discuss problems and problem areas caused by hazards with their colleagues at their respective municipalities.
- Attendees will discuss solutions to those problems with their colleagues and Tetra Tech's assigned planners.

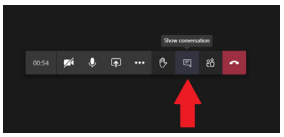
Welcome

- If you are attending the webinar on your computer, please add your name, title, and organization(s) to the Chat.
  - Bring your mouse to the lower part of the screen until a set of buttons appears.
  - Click "Show Conversation."



2

Agenda

- Welcome and Introductions
- Hazard Mitigation Planning
- Project Overview
- Problems and Problem Areas
- Mitigation Projects Completed
- Information Provided
- Next Steps

Please ask questions at any time.

3

3

Hazard Mitigation Planning

*Hazard Mitigation is any action taken to reduce or eliminate **long-term risk** to people and property from disasters.*

- Disaster Mitigation Act of 2000
- Hazard Mitigation Assistance

- Building Resilient Infrastructure & Communities (BRIC)

4

4

Hazard Mitigation Planning

Local Plans and Regulations	• Updating building codes • Integrating risk into Master Plans
Education and Awareness Programs	• Flood insurance information • Know Your Risk! campaign
Natural Systems Protection	• Preserving natural floodplain functions • Protecting well recharge areas
Structure and Infrastructure Projects	• Constructing a levee • Elevating a house above the base flood level

5

5

Project Overview

- Update Erie County's HMP (2015)
- Organize resources and build the Planning Team
- Develop hazard risk assessments
- Assess local mitigation capabilities
- Develop mitigation strategies
- Determine plan maintenance process
- Approval of HMP by NYS DHSES and FEMA
- Local municipal adoption of the approved HMP

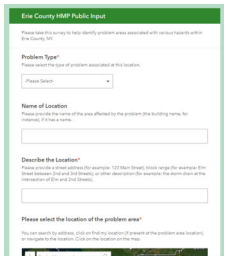
6

6

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard

Problems and Problem Areas

- Flooding, stormwater drainage
- Lake Erie shoreline
- Hazardous materials releases
- Lack of backup power
- Trees/branches on wires
- Take the survey at:
  https://arcg.is/9bzzr



7

7

Mitigation Projects Completed

- Regulations updated?
- Plans updated?
- Culverts or bridges upgraded?
- Property buyouts?
- Floodplain restoration?
- Public outreach conducted?

MEETING NOTES

Meeting	Erie County Hazard Mitigation Plan (HMP) Update Public Information Meeting #1		
Date	January 25, 2021	**Time**	6:00 – 7:30 p.m.
Location	Webinar		
Attendees	Melissa Calhoun, Public Safety Officer, Erie County Department of Homeland Security and Emergency Services		
	Dan Castle, Deputy Commissioner, Erie County Department of Environment and Planning		
	John Hood, Planner, Erie County Department of Environment and Planning		
	Mike Desmond, Reporter, WBFO		
	Kevin Clapp, Planning Manager, NYS Division of Homeland Security and Emergency Services		
	Brian Kehoe, Planner, Tetra Tech		
	Matt Butwin, Principal, Prospect Hill Consulting		
	Mike Kane, Principal, Prospect Hill Consulting		

Discussion Points

This section summarizes each discussion point addressed during the meeting.

Hazard Mitigation Planning

Mr. Kehoe welcomed all attendees and invited each to introduce themselves. Mr. Kehoe provided an overview of hazard mitigation planning, the Disaster Mitigation Act of 2000 (DMA 2000), and the Federal Emergency Management Agency's (FEMA) suite of Hazard Mitigation Assistance (HMA) funding streams. The Building Resilient Infrastructure and Communities (BRIC) grant program was created in 2020 to replace and expand the existing Pre-Disaster Mitigation grant. The Hazard Mitigation Grant Program (HMGP) provides funding to reduce long-term risk from disasters, and each state receives funding from allocations for Presidential Disaster Declarations. In order for a community to access these HMA funds, a community should list needed mitigation projects in this HMP update. Projects located on private or public property are eligible. Mr. Kehoe also shared the benefit-cost ratio for investments by FEMA into specified natural hazards around the country.

Mr. Kehoe then reviewed the four Hazard Mitigation project types: 1) Local Plans and Regulations, 2) Education and Awareness Programs, 3) Natural Systems Protection, and 4) Structure and Infrastructure Projects.

Public Participation

Mr. Kehoe prompted the participants to share what hazard problems are occurring in their community. The following issues were discussed.

Limbs/tree branches cause power outages when they fall on power lines. National Grid/NYSEG is responsible for tree trimming around power lines and rights-of-way (ROW). Emerald Ash Borer has

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard

MEETING NOTES

resulted in many dead or dying ash trees, which is becoming an issue as these trees and branches fall on power lines.

Communications infrastructure is vulnerable to disruption during storms or other hazard events. Cell phone service and the internet are very important. Mr. Kehoe indicated this topic would be considered in the HMP update. Several large communications companies are part of the county's Disaster Team, and they meet regularly and have plans in place.

The Town of Hamburg recently installed rip rap near St. Francis High School.

Next Steps

The HMP project team has been conducting ongoing meetings with municipal contacts. To date, the team has met have with 23 municipalities to gather useful information. All of the input from tonight's meeting will be considered as the plan is assembled. Participants were requested to complete the Public Survey; the link is displayed in the PowerPoint and is hosted on the project website. Participants were encouraged to review the project website regularly.

There will be two more public events as this project progresses; both dates TBD. The first will be the Risk Assessment Review meeting and later will be the Draft Plan Review meeting.

The webinar adjourned at 7:30 p.m.

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard

each state receives funding from allocations for Presidential Disaster Declarations. In order for a community to access these HMA funds, a community should list needed mitigation projects in this HMP update. Projects located on private or public property are eligible. Mr. Kehoe also discussed the benefit-cost ratio for investments by FEMA into specified natural hazards around the country.

Mr. Kehoe reviewed the four hazard mitigation project types: 1) Local Plans and Regulations, 2) Education and Awareness Programs, 3) Natural Systems Protection, and 4) Structure and Infrastructure Projects.

Public Participation

Mr. Kehoe prompted the participants to share what hazard problems are occurring in their community.

Mr. Michalec is on the Town of Evans agriculture and conservation committee and sits on the Erie County Climate Change Task Force. There is a concern about roadside ditches and keeping them free for flow of stormwater. The town has many town roads, state roads, and county roads and is hoping for consistent ditch practices throughout the town.

The town has pursued New York State Department of Environmental Conservation (NYSDEC) funds for tree management. There are three county parks in Evans, and the Emerald Ash Borer is causing many dead tree hazards. He asked if the county can proactively remove dead trees.

The town looks to set aside properties in the flood plain to remain as open space. The town has retained ownership of some parcels after tax foreclosure to further this goal. This policy mitigates stormwater flows and provides fishing access too. He asked if the county can also work to preserve additional floodplain open space.

Greg Butcher stated that the County Parks Recreation and Forestry Department and the Department of Public Works address the above issues.

Matthew Fischione stated that the Town of Lancaster CEO noted the importance of removing encroachments within waterways. The Stony Road Bridge (Pleasant View Dr. and Stony Rd.) was repaired, and debris removed from the creek. Public outreach is effective and better received by the public than is code enforcement. Aim to update the floodplain code and require compensatory storage. Ellicott Creek needs a clean-out of the waterway.

Debbie Smith works for the Village of Sloan and stated that 25% of Sloan's area is railyard. Mr. Kehoe stated that the HMP will address transit of hazardous materials over rail lines.

Chris Renschler stated that rail accidents occur at crossings and junctions. He can provide data to support this.

Amy Alduino asked if the HMP will examine how the freeze/thaw cycle is changing due to climate change and its impact on road and bridge structures. The HMP should look at the impacts of extreme heat and how to mitigate. The impact of invasive species is destroying certain tree species and creating large amounts of dead biomass.

MEETING NOTES

Next Steps

The HMP Project Team has been conducting ongoing meetings with municipal contacts. To date, the team has met with 23 municipalities to gather useful information. All of the input from tonight's meeting will be considered as the plan is assembled. Participants were requested to complete the Public Survey; the link is displayed in the PowerPoint and will be hosted on the project website. Participants were encouraged to review the project website regularly.

The webinar adjourned at 7:30 p.m.

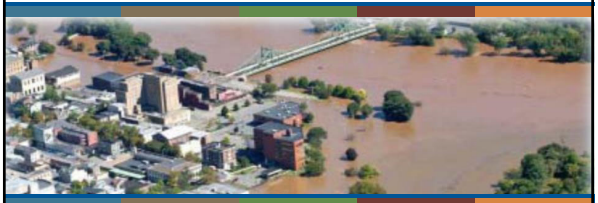
Erie County
Hazard Mitigation Plan Update
Public Information Meeting



1

Agenda

- Welcome
- Hazard Mitigation – The Basics
- Project Overview
- Public Participation
- For More Information…

Please ask questions at any time.

2

2

Hazard Mitigation – The Basics

*Hazard Mitigation is any action taken to reduce or eliminate **long-term risk** to people and property from disasters.*

Local Plans and Regulations	• Updating building codes • Integrating risk into Master Plans
Education and Awareness Programs	• Flood insurance information • Know your risk! campaign
Natural Systems Protection	• Preserving natural floodplain functions • Protecting well recharge areas
Structure and Infrastructure Projects	• Constructing a levee • Elevating a house above the base flood level

3

3

Hazard Mitigation – The Basics

Per FEMA's 2017 National Institute of Building Sciences Report, mitigation saves $$$!

National Benefit-Cost Ratio Per Peril *BCR numbers in this study have been rounded	Federally Funded
Overall Hazard Benefit-Cost Ratio	6:1
Riverine Flood	7:1
Hurricane Surge	Too few grants
Wind	5:1
Earthquake	3:1
Wildland-Urban Interface Fire	3:1

4

4

Hazard Mitigation – The Basics

- Disaster Mitigation Act of 2000
- Hazard Mitigation Assistance

HMGP HAZARD MITIGATION GRANT PROGRAM
PDM PRE-DISASTER MITIGATION
FMA FLOOD MITIGATION ASSISTANCE

- Building Resilient Infrastructure & Communities (BRIC)

FEMA

5

5

Project Overview

- Organize resources and build the planning team
- Update the risk assessment
- Assess local mitigation capabilities
- Develop mitigation strategies
- Determine plan maintenance process
- Approval of the HMP by NYS DHSES and FEMA
- Local municipal adoption of the approved plan

Implementation!

6

6

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard

Public Participation

- Why doesn't our city/town/village fix _____?
- Why didn't anyone tell me that _____ (hazard) could impact me?
- Where do you see water on the roadway after heavy rains? What storm drains or bridges back up with water?
- Has Lake Erie flooding affected your community?
- How are the effects of severe winter storms mitigated in my community?

7

7

Public Participation

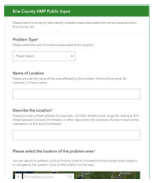
- Public Survey
  - https://www.surveymonkey.com/r/ErieCountyHMP
  - Takes less than 15 minutes to complete.
  - Gathers information from throughout Erie County to help coordinate activities and reduce the risk of injury or property damage.
  - Information will be used for planning purposes only.
  - You will be asked if you live in a floodplain - check FEMA for your property location: https://msc.fema.gov/portal/home
  - Please share survey link via social media.

8

8

Public Participation

- Problem Area Survey – where do hazards impact?
  - https://arcg.is/9bzzr



- Public Meetings
  - Risk Assessment Review Meeting – date TBD
  - Draft Review Meeting – at the end of the process

9

9

MEETING NOTES

Meeting	Erie County Hazard Mitigation Plan (HMP) Update Risk Assessment Review Meeting		
Date	May 19, 2021	**Time**	6:00 – 7:15 p.m.
Location	Webinar		
Attendees	Dan Castle, Deputy Commissioner, Erie County Department of Environment and Planning		
	Josh Wilson, Director of Sustainability, Erie County Department of Environment and Planning		
	Greg Butcher, Deputy Commissioner, Erie County Department of Homeland Security and Emergency Services		
	Melissa Calhoun, Public Safety Officer - Special Assistant Erie County, Erie County Department of Homeland Security and Emergency Services		
	Matthew Barrett, Security Officer, Erie County Water Authority		
	RJ Nieman, Emergency Manager, Village of Depew		
	Cathie Thomas, Village of East Aurora, Administrator		
	Daniel Kowalik, Emergency Manager, Chair Village of Akron & Town of Newstead		
	Jordan Kellerman, Engineer, Town of Orchard Park		
	Richard Mrugalski, Town and Village of Orchard Park, Emergency Manager		
	Todd Catalano, Village of Springville, Disaster Coordinator		
	Liz Melock, Village of Springville, Administrator		
	Mark Banks, City of Tonawanda, Office of Emergency Management		
	James Chatham, Office of Emergency Management, Town of Tonawanda		
	Joanna Panasiewicz, Lake Erie Watershed Protection Alliance		
	Jason Tolma, Manager, National Fuel Gas		
	Judith Levan, Administrator, National Weather Service Buffalo		
	William Major, Niagara Frontier Transportation Authority		
	Kevin Clapp, Planning Manager, NYS Department of Homeland Security and Emergency Services		
	Brian Kehoe, Planner, Consultant - Tetra Tech		
	Chris Huch, Planner, Consultant - Tetra Tech		

Discussion Points

This section summarizes each discussion point addressed during the Risk Assessment Review Meeting.

Introductions

Mr. Kehoe opened the meeting. As attendees entered the virtual meeting, they were prompted to provide their name and affiliation either verbally or via the webinar chat function. Mr. Butcher then welcomed and thanked attendees.

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

MEETING NOTES

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Mr. Huch noted that the meeting will be recorded for participants who could not attend.

Risk Assessment Review

Mr. Kehoe reviewed the results of the risk assessment for the following hazards of concern, discussing past events, frequency, and impacts to life, property, and the economy.

- Coastal Erosion
- Cyber Attack
- Earthquake
- Epidemic/Pandemic
- Expansive Soils
- Extreme Temperatures
- Flood (including ice jams)
- Hazardous Materials
- Landslide
- Severe Storm
- Severe Winter Storm
- Utility Failure
- Wildfire

Comments

During the meeting, the following comments were received from participants:

- Ms. Thomas noted that East Aurora is concerned with flooding from Tannery Brook. The village had a recent sinkhole event and is working to replace a culvert.
- Mr. Chatham noted that the Town of Tonawanda has pipeline and rail concerns.
- Mr. Wilson noted that Erie County Department of Environmental Protection is completing a climate vulnerability assessment.
- Mr. Mrugalski noted that Orchard Park likely has need for backup generators at some critical facilities.
- Ms. Panasiewicz asked if hazardous material spill mapping could be overlayed with waterways in order to illustrate risk from spills.
- Mr. Barrett noted that risk to the drinking water supply from hazardous materials is low due to the volume of water flow in the Niagara River.
- Mr. Major noted that the Niagara Frontier Transportation Authority NFTA) would be looking for funding support to protect from hazardous material spills. Mr. Clapp responded that the Hazard Mitigation Grant Program (HMGP) typically funds mitigations that address non-natural hazard events. Follow-up was recommended to discuss further and identify a strategy to protect NFTA assets.

Next Steps

The following next steps were discussed at the meeting:

- Complete Worksheets (as needed)
- Mitigation Strategy Workshops – June 9, 2021
- Develop Mitigation Actions
- Complete Jurisdictional Annexes
- Complete the HMP

MEETING NOTES

The meeting wrapped up with several questions and comments from participants. Mr. Kehoe and Mr. Butcher thanked the participants.

The meeting adjourned at 7:15 p.m.

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

Erie County Hazard Mitigation Plan

2021 Update

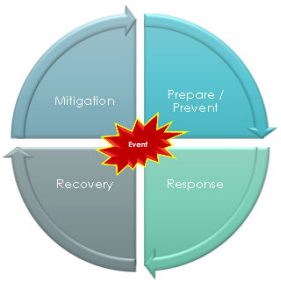
Risk Assessment Review Meeting

May 19, 2021
6:00 – 8:00 p.m.

1

Agenda

- Welcome/Introductions
- Project Status Update
- Risk Assessment
- Risk Ranking Summary
- SWOO
- Next Steps



2

Welcome/Introductions

- Name
- Agency
- Mitigation Experience
- Focus and Concerns

3

Project Schedule Status Update

✓	November 2020	Steering Committee & Planning Partnership initial meetings
✓	November 2020 - April 2021	Data collection
✓	January - May 2021	Update hazard profiles
✓	May 19, 2021	Risk Assessment Presentation
❑	January - June 2021	Develop problem statements with municipalities and County
❑	June 9, 2021	Mitigation Strategy Workshops
❑	Early July 2021	Complete draft plan
❑	Mid-August 2021	Submit plan to NYS DHSES

4

5

Risk Assessment

Hazards of Concern:

- Coastal Erosion
- Cyber Security
- Earthquake
- Expansive Soils
- Extreme Temperature
- Flood
- Hazardous Materials
- Landslide
- Pandemic
- Severe Storm
- Severe Winter Storm
- Utility Failure
- Wildfire

6

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard

Risk Assessment (Continued)

What is Risk?

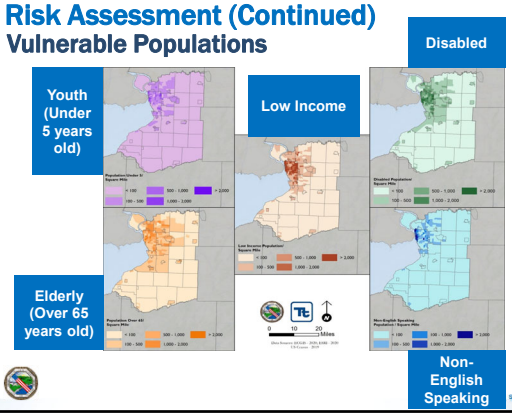
Risk is a function of:

- ✓ Hazard - source of potential danger or adverse condition
- ✓ Exposure - manmade features exposed to the hazard
- ✓ Vulnerability - damage susceptibility exposed features
- ✓ Adaptive Capacity
  - Plans/policies
  - Response/recovery
  - Financial resources

7

Risk Assessment (Continued)

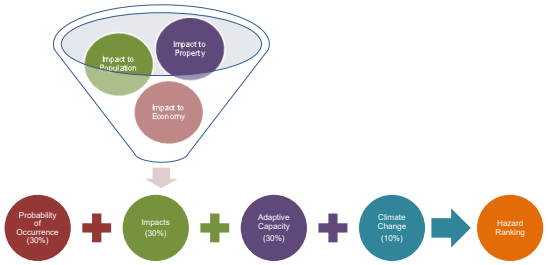
Vulnerable Populations



8

Risk Assessment (Continued)

Hazard Ranking Formula



9

Risk Assessment (Continued)

Coastal Erosion

- Recent event history:
  - Associated w/ strong storms
  - 7 recorded coastal erosion events 2000-2020
  - All located along Lake Erie
- Erosion is caused by natural and human activity.
- Town of Hamburg has the most people/buildings in designated coastal risk hazard area.
- Associated w/ strong storms
- Probability = Rare

Risk Ranking Value = Low

10

Risk Assessment (Continued)

Cyber Security

- Theft and modification of information
- Organized cyber-crime, state-sponsored hackers, and cyber espionage
- People/buildings throughout the county are exposed
- Probability = Frequent

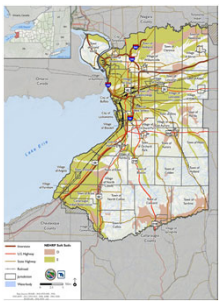
Risk Ranking Value = Medium

11

Risk Assessment (Continued)

Earthquake

- History
  - 8 smaller earthquakes epi-centered in the county since 1950
  - 1 significant seismic event in the vicinity of Erie County
- Exposure to NEHRP Soils
  - 66% countywide
  - 100% in Villages of Angola, Blasdell, Gowanda, N. Collins, and Sloan
  - 1,000s of critical facilities
- Probability - Rare



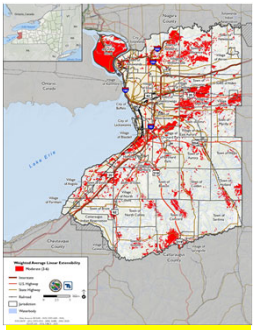
Risk Ranking Value = High

12

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard

Risk Assessment (Continued)
Expansive Soils

- History
  - Town of Amherst (1987 and 2005), 3-4% of all residential structures
  - Fewer problems with new development.
  - Town of Amherst: 24,000 residents exposed; highest concentration of damage
  - >20% population exposed: V. Alden, T. Clarence, T. Grand Island, T. Hamburg, T. Lancaster, T. Orchard Park, T. West Seneca
- Probability - Rare



Risk Ranking Value = Low

13

Risk Assessment (Continued)
Extreme Temperature

- Extreme heat >10 degrees above the average high temperature that lasts for several weeks
  - A leading weather-related cause of death in USA
- Extreme cold temperatures < 0 degrees
- History
  - 5 recorded events 1999-2020
- Exposure
  - Entire county population exposed
  - Probability - Occasional

Risk Ranking Value = Medium

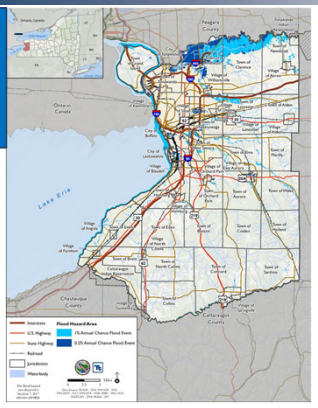
14

Risk Assessment (Continued)
Flood

- Impacts
  - $24 million in reported property damage since 1954
  - $10 million in reported crop damage
- Exposure 1-Percent Annual Chance Floodplain
  - $10.7 billion building stock replacement value
  - 496 critical facilities (most are bridges)
  - 40,750 tons of debris

15

FEMA Flood Hazard Areas



>1% buildings exposed – 1% annual chance flood

1. T Amherst
2. T Clarence
3. T E. Aurora
4. V Gowanda
5. T Grand Island
6. V Gowanda
7. T/V Lancaster
8. T Newstead
9. T Marilla
10. T Williamsville

16

Risk Assessment (Continued)
Flood

Residents exposed to 1-percent annual chance flood area: 9,633

1.1% of total population

Flood History

94 events (1950-2020)
7 FEMA flood-related declarations (1954-2019)

NFIP countywide

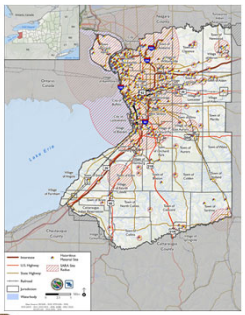
2,074 Policies
2,526 Claims
$12,430,926 Payments

NATIONAL FLOOD INSURANCE PROGRAM

Hazard Risk Rank = Low

17

Risk Assessment (Continued)
Hazardous Materials



18

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard

Risk Assessment (Continued)
Hazardous Materials

Hazardous spill events 1974-2020: 1494

Listed on EPA Toxic Release Inventory: 60

Probability of annual occurrence: 100%

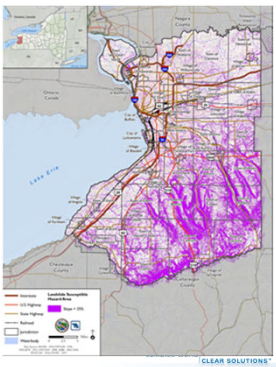
Hazard Risk Rank = Low

19

19

Risk Assessment (Continued)
Landslide

- History
  - 11 recorded landslide incidents (1837-1989)
  - None since 1996
- Frequent slumping along
  - Buffalo Creek (E. Aurora)
  - Springville/Route 39 (Sardinia)
  - Scajaquada Creek (Cheektowaga)
  - Cayuga Creek (Lancaster)



20

Risk Assessment (Continued)
Landslide

- Landslide hazard areas countywide
  - 33,525 people exposed (3.7% county total)
  - 15,416 buildings
  - $10 billion building replacement value
  - 567 critical facilities (175 bridges)
- Town of Holland – 25% of population in the landslide-susceptible hazard area

Hazard Risk Rank = Low

21

Risk Assessment (Continued)
Pandemic

- Past outbreaks in USA
  - Influenza (annual)
  - Asian Flu (1957-1958)
  - West Nile Virus (2000)
  - Swine Flu (2009-2010)
  - Ebola (2014)
- Predicting future occurrences is difficult
- Climate changes - Warmer temperatures and changing rainfall patterns will affect outbreaks
- Exposure
  - Entire County is vulnerable
  - Highest vulnerability = dense populations

22

Risk Assessment (Continued)
Pandemic - COVID-19

Week Ending	New Cases in the Past 7 Days	Total New Cases in the Past 7 Days per 100,000 Persons
4/10/2021	3,397	369.6
4/17/2021	3,300	359.1
4/24/2021	2,279	248.0
5/1/2021	1,686	183.5
5/8/2021	1,079	117.4
5/15/2021	738	80.3

Risk Ranking Value = Medium

23

23

Risk Assessment (Continued)
Severe Storms

- Include thunderstorm, lightning, hailstorm, windstorm, tornado, hurricanes/tropical storms
- Climate change likely to cause more severe and more frequent severe storms.

24 Severe Storm Events where damage >$25,000 (2015-2020)

Federally Declared Severe Storm Events (1954-2019): 7

$10 Million Crop Damages (2015-2020)

Risk Ranking Value= High

Probability of annual occurrence: 100%

24

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard

Risk Assessment (Continued)
Severe Winter Storms

- Include blizzards, ice storms, snowstorms, sleet, freezing rain
- Entire county is vulnerable
  - Traffic accidents
  - Overexertion
  - Hypothermia
  - Access for emergency vehicles

25

Risk Assessment (Continued)
Severe Winter Storms

11
Winter Storms where damage > $25,000 (2015-2020)

$11 billion
Estimated Potential Loss

9
FEMA Declarations (1954 – 2020)

100%
Probability of annual occurrence

Risk Ranking Value= High

26

Risk Assessment (Continued)
Utility Failure

- History
  - Primarily caused by other hazards
  - 1 Presidential Disaster Declaration – Halloween 2019
  - 8 power failure events since 2015.
- Impacts
  - HVAC failure
  - Communications failure
  - Food spoilage
  - Basement flooding
  - Carbon monoxide exposure from generators
  - Individuals dependent on medical equipment
  - Access to potable water

27

Risk Assessment (Continued)
Utility Failure

- High cost to government and community services
- Probability = Frequent minor failures,
  Occasional Major failure

Risk Ranking Value= High

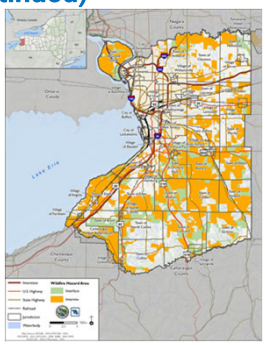
28

Risk Assessment (Continued)
Wildfire

11%
Wildfire Urban intermix

$36.7 Billion
Building Replacement value

33%
Wildfire Interface



29

Risk Assessment (Continued)
Wildfire

- Exposure to the Wildland-Urban Interface (WUI)
  - 154,141 persons (16.8% of county)
  - 70,429 buildings
  - 16.5% of total building value
- 378 critical facilities in the WUI
- Town of Wales has the most (32) critical facilities in the WUI

Risk Ranking Value= Medium

30

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard

Risk Ranking Summary - countywide

Hazard of Concern	Probability x 30%	Total Impact x 30%	Adaptive Capacity x 30%	Changing Future Conditions x 10%	Total Risk Ranking Value
Coastal Erosion	0	3	2	1	Low
Cyber Attack	0.9	3	2	3	Medium
Earthquake	0.3	9	6	1	High
Expansive Soils	0.3	3	2	2	Low
Extreme Temperature	0.3	9	2	1	Medium
Flood	0.9	3	2	1	Low
Hazardous Materials	0.9	3	2	2	Low
Landslide	0	3	2	1	Low
Pandemic	0	9	2	3	Medium

31

Strengths, Weaknesses, Obstacles, and Opportunities (SWOO)

- **Strengths** – what mitigation actions does our town/village/city already do?
- **Weaknesses** – what could we do better?
- **Obstacles** – what impedes us from taking mitigation action? What is a challenge to overcome?
- **Opportunities** – used to develop mitigation strategies

32

SWOO

Hazard	
Strengths	Weaknesses
What does the county and its communities do well in terms of: ➢ Plans and Regulations • Codes, Ordinances, Planning Studies, Comprehensive Plans, Adaptation and Resiliency Plans ➢ Structure and Infrastructure Projects ➢ Natural Systems Protection ➢ Education and Awareness Programs ➢ Preparedness ➢ Others?	What can the county and its communities do better or what are the gaps in terms of: ➢ Plans and Regulations • Codes, Ordinances, Planning Studies, Comprehensive Plans, Adaptation and Resiliency Plans ➢ Structure and Infrastructure Projects ➢ Natural Systems Protection ➢ Education and Awareness Programs ➢ Preparedness ➢ Others?

33

SWOO

Hazard	
Obstacles	Opportunities
What is preventing the county and its communities to implement: ➢ Plans and Regulations ➢ Codes, Ordinances, Planning Studies, Comprehensive Plans, Adaptation and Resiliency Plans ➢ Structure and Infrastructure Projects ➢ Natural Systems Protection ➢ Education and Awareness Programs ➢ Preparedness ➢ Others?	What can the county and its communities implement in terms of: ➢ Plans and Regulations ➢ Codes, Ordinances, Planning Studies, Comprehensive Plans, Adaptation and Resiliency Plans ➢ Structure and Infrastructure Projects ➢ Natural Systems Protection ➢ Education and Awareness Programs ➢ Preparedness ➢ Others?

34

SWOO

Hazard: Flood	
S	Minimal exposure to flood risk
W	Silt and debris buildup in streams can lead to localized flooding
Ob	Funding for culvert and catch basin maintenance
Opps	Installing stream gages

Hazard: Severe Storms	
S	Tree trimming programs are in place
W	Aging infrastructure; lack of underground utilities
Ob	Cost to retrofit existing utility infrastructure
Opps	Underground utilities; enhance public outreach program

Hazard: Severe Winter Storm	
S	Municipalities have the resources and experience to deal with winter weather
W	Aging equipment
Ob	Funding; limited staff for prolonged events
Opps	Shared services

35

Next Steps

1. Complete Worksheets (as needed)
2. Mitigation Strategy Workshops – June 9, 2021
3. Develop Mitigation Actions
4. Complete Jurisdictional Annexes
5. Complete the Hazard Mitigation Plan

36

AGENDA

ERIE COUNTY HAZARD MITIGATION PLAN UPDATE
Risk Assessment Review Meeting

Wednesday, May 19, 2021 | 6:00 – 8:00 p.m.

1. **Welcome/Introductions**
2. **Project Schedule Status Update**
3. **Risk Assessment**
   a. Coastal Erosion
   b. Cyber Security
   c. Earthquake
   d. Expansive Soils
   e. Extreme Temperature
   f. Flood
   g. Hazardous Materials
   h. Landslide
   i. Pandemic
   j. Severe Storms
   k. Severe Winter Storms
   l. Utility Failure
   m. Wildfire
4. **Risk Ranking Summary**
5. **Strengths, Weaknesses, Obstacles, and Opportunities (SWOO)**
6. **Next Steps**
   a. Complete Worksheets (as needed)
   b. Mitigation Strategy Workshops – June 9, 2021
   c. Develop Mitigation Actions
   d. Complete Jurisdictional Annexes

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard

Risk Ranking Score – Countywide

Hazard of Concern	Prob.	Pop.	Built Env.	Econ.	Adapt Cap.	Future Cond.	Risk Ranking Value
Coastal Erosion	0	1	1	1	1	2	**Low**
Cyber Attack	3	1	1	1	2	1	**Medium**
Earthquake	1	3	3	1	1	1	**High**
Expansive Soils	1	3	1	1	1	3	**Low**
Extreme Temperature	1	1	1	2	1	1	**Medium**
Flood	3	1	1	1	2	3	**Low**
Hazardous Materials	3	1	1	2	1	1	**Low**
Landslide	0	1	1	1	1	1	**Low**
Pandemic	0	3	1	3	1	2	**Medium**
Severe Storms	3	3	1	1	1	2	**High**
Severe Winter Storms	3	3	1	1	1	2	**High**
Utility Failure	3	2	2	2	1	2	**High**
Wildfire	2	2	3	2	1	3	**Medium**

Notes:

Prob. = Probability

Pop. = Impact on the population (Higher numbers reflect a higher percentage of the population at risk.)

Built Env. = Impact on the built environment (Higher numbers reflect a higher percentage of the property value in the county at risk.)

Econ. = Impact on the economy (Higher numbers reflect higher loss estimates.)

Adapt. Cap. = Adaptive capacity (Higher numbers reflect less capability to address hazard impacts.)

Future Cond. = Impact of future conditions on the hazard (Higher numbers indicate higher future risk from the hazard.)

Attachment: 31-Appendix-C-Meeting-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard

To update the actions and initiatives for your mitigation strategy, please consider the questions below. Suggested actions will be developed based on Erie County's needs and capabilities, or will be carried over from the previous hazard mitigation plan (HMP) update based on the responses given in Worksheet 4. Some questions may not apply to your municipality.

1. Which properties in your jurisdiction are most vulnerable to flood events and would have the greatest need for retrofitting or other flood hazard mitigation measures? Specific property addresses do not need to be listed (to ensure residential privacy), but names of streets or neighborhoods can be included.

2. What public outreach and education actions would you be most interested in implementing? Circle all that apply.
   A. Provide general hazard risk preparedness and mitigation and related National Flood Insurance Program (NFIP) information in regular newsletters and mailings.
   B. Provide hazard risk and risk-reduction information through social media channels and e-mail blast systems.
   C. Post flyers and other readily available NFIP informational materials at the municipal hall or distribute at regular civic meetings.
   D. Develop and maintain a hazard risk management webpage on the municipal website where information and mapping can be posted.
   E. Encourage private business owners and managers of infrastructure that provide critical services in post-disaster situations to develop Continuity of Operations Plans or Business Continuity Plans.
   F. Enhance public outreach to residents in NFIP floodplain areas, which may include distributing periodic articles and including handouts in the annual newsletter, to inform residents of annual grant opportunities.
   G. Other:

3. Which critical facilities still need or would benefit from a backup generator or redundant power supply?

4. Which critical facilities have been damaged by flood events and require floodproofing or relocation?

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard

5. Which roads would benefit from mitigation or structural projects to reduce vulnerability to flood or stormwater incidents? Also, please specify the types of projects that would most help a high-risk road (for example, new/expanded culvert, road elevation, repaving, etc.), if this information is available.

6. What areas in the municipality are still in need of stormwater rehabilitation and upgrades?

7. Where do trees or vegetation need to be trimmed away from power or communications wires?

8. Which properties in your jurisdiction are most vulnerable to landslide events and would have the greatest need for retrofitting or other landslide hazard mitigation measures? Specific property addresses do not need to be listed (to ensure residential privacy), but names of streets or neighborhoods can be included.

9. Has internet connectivity in your community been adequate to support people working and learning from home during the COVID-19 pandemic?

10. Which properties in your jurisdiction are most vulnerable to wildfire events and would have the greatest need for hazard mitigation measures? Specific property addresses do not need to be listed (to ensure residential privacy), but names of streets or neighborhoods can be included.

11. What other mitigation projects are you interested in? Also, list current projects your municipality is targeting for completion during the next 5 years. Please provide as much detail as possible.

MEETING NOTES

Meeting	Erie County Hazard Mitigation Plan (HMP) Mitigation Strategy Workshop #1		
Date	June 9, 2021	**Time**	9:00 – 10:15 a.m.
Location	Webinar		
Attendees	Dan Castle, Deputy Commissioner, Erie County Department of Environment and Planning		
	Greg Butcher, Deputy Commissioner, Erie County Department of Homeland Security and Emergency Services		
	Melissa Calhoun, Public Safety Officer - Special Assistant Erie County, Erie County Department of Homeland Security and Emergency Services		
	Amy Alduino, Recycling Coordinator, Erie County Department of Environment and Planning		
	Joanna Panasiewicz, Watershed Coordinator, Erie County Department of Environment and Planning		
	Jonathan DePlanche, Senior Civil Engineer, Erie County Department of Public Works Division of Highways		
	Matthew W. Barrett, Security Officer, Erie County Water Authority		
	Elizabeth Cassidy, Code Enforcement, Town of Aurora		
	Michael Borth, Code Enforcement Officer, Village of Akron		
	Jayne DeTine, Clerk, Village of Akron		
	Jim Zymanek, Director, Emergency Services, Town of Amherst, Village of Williamsville		
	Mike Mazurowski, Emergency Manager, Town of Cheektowaga		
	Clyde Drake, Supervisor, Town of Concord		
	Cathie Thomas, Village Administrator, Village of East Aurora		
	Nicholas Pikul, Deputy Emergency Manager, Town of Hamburg		
	Geoffrey Hack, Emergency Manager, Town of Holland		
	Ronald Rozler, Disaster Coordinator, Town of Lancaster		
	Dave Cummings, Supervisor, Town of Newstead		
	Dawn Izydorczak, Clerk, Town of Newstead		
	Jordan Kellerman, Assistant Emergency Manager, Town of Orchard Park		
	Todd Catalano, Emergency Manager, Village of Springville		
	Bill Krebs, Mayor, Village of Springville		
	Liz Melock, Village Administrator, Village of Springville		
	Mark Banks, Director, OEM, City of Tonawanda		
	Chuck Stuart, Fire Chief, City of Tonawanda		
	James Chatham, Emergency Services Coordinator, Town of Tonawanda		
	Robert Lutz, Emergency Services Coordinator, Town of Tonawanda		
	James Unger, Patrol Captain/Public Information Officer, West Seneca Police Department		

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

MEETING NOTES

	Kevin Clapp, Planning Manager, Mitigation Programs, NYS Division of Homeland Security & Emergency Services
	Brian Kehoe, Planner, Tetra Tech
	Tony Subbio, Project Manager, Tetra Tech
	Chris Huch, Planner, Tetra Tech

Purpose

The purpose of the Mitigation Strategy Workshop was to work with the jurisdictional participants of the Erie County HMP to identify problems and potential mitigation actions to include in their jurisdictional annexes.

Discussion Points

This section summarizes each discussion point addressed during the meeting.

Welcome and Opening Remarks

Mr. Butcher thanked participants for attending the meeting and participating in the planning process. Mr. Subbio and Mr. Huch welcomed attendees. Mr. Huch described the purpose of the meeting, which was to review the hazard mitigation planning process and develop mitigation strategies.

Hazard Mitigation Review

Mr. Huch provided a brief review of the concepts of hazard mitigation.

Developing Mitigation Strategies

Mr. Huch reviewed the hazards of concern and discussed different methods of risk reduction. Mr. Huch then reviewed the NYS requirements for updating the mitigation strategy. Each jurisdiction will need to meet the following requirements:

- Each jurisdiction must develop at least two Mitigation Action Development worksheets.
- Repetitive and Severe Repetitive Loss Properties need an action with specific details (street or neighborhood names).
- Critical facilities need to be protected to the 500-year flood event (0.2% annual chance) or worst-case scenario.
- Evacuation routes and shelters must be made viable.
- Temporary and permanent housing locations must be identified.
- Proposed actions must have specific information when discussing the problem and solution and identify information such as:
    - Project lead
    - Estimated cost
    - Timeline
    - Whether the action involves a critical facility

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

MEETING NOTES

Mr. Huch explained that mitigation actions must have a clear connection to the risk and capability assessments. Mr. Huch reviewed the types of mitigation actions that should be considered:

- Structure and Infrastructure Projects
- Local Plans and Regulations
- Natural Systems Protection Projects
- Education and Awareness Programs

Mr. Huch explained to participants that carryover actions must be updated to be made more specific. Mr. Huch provided examples on how to update carryover actions to meet the current standards of the HMP planning process.

Fill Out and Return the Mitigation Action Development Worksheet

Mr. Huch explained how participants should fill out the Mitigation Action Development Worksheet. The worksheet is designed to gather as much information as possible from municipal participants so Tetra Tech planners can develop mitigation actions for municipal review and input. The worksheet is to be filled out and returned to the county and Tetra Tech after the municipality completes it.

Mr. Huch reviewed the proposed action table and action worksheet and detailed the information necessary to complete each. Mr. Huch reviewed how municipal representatives should make use of problem statements emailed to them by their Tetra Tech planners, identify additional problem areas, and brainstorm potential mitigation actions.

Mr. Clapp described the value of developing viable, fundable mitigation actions/strategies and generating a “wish list” of projects to protect the community. Each community should watch for funding announcements on the NYS DHSES website. Applications for FEMA’s Hazard Mitigation Grant Program are available through NYS DHSES until June 11. It is also expected that funding will be announced in August 2021 for the Building Resilient Infrastructure and Communities grant.

Mr. Lutz asked if the proposed action table would be sent out to attendees. Mr. Huch replied that it could, but that all relevant information is captured in the Action Worksheet.

Next Steps

The following next steps were discussed at the meetings:

- Participants were asked to return their Mitigation Action Development Worksheets to Mr. Subbio by June 16, 2021.
- Municipalities will work with their assigned Tetra Tech planners to complete development of their annexes and mitigation actions.
- All actions and annexes are required to be completed by June 23, 2021.

The meeting adjourned at 10:15 a.m.

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard Mitigation Plan)

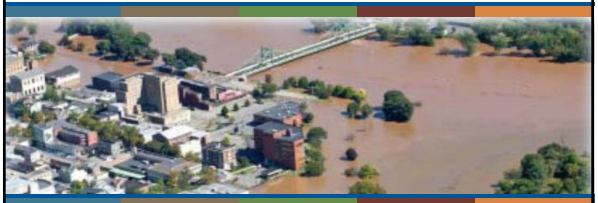
Hazard Mitigation Plan Update
Mitigation Strategy Workshop

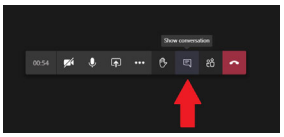
June 9, 2021 9:00 – 11:00 a.m. & 6:00 – 8:00 p.m.



1

Welcome

- If you are attending the webinar on your computer, please add your name, title, and organization(s) to the chat window.
  - Bring your mouse to the lower part of the screen until a set of buttons appears.
  - Click **Show conversation**.



2

Today's Topics

- Introductions
- Hazard Mitigation Explained
- Develop Mitigation Strategies
- Develop Actions and Action Worksheets
- Integrate Mitigation Activities
- Next Steps

3

3

What Is Hazard Mitigation?

Sustained action taken to reduce or eliminate long-term risk to life and property from a hazard event

"…provides the blueprint for reducing the potential losses identified in the risk assessment, based on existing authorities, policies, programs and resources, and local ability…" (CFR).

4

4

Mitigation Works!

The nation saves **$6** for every **$1** spent through mitigation grants funded via select federal agencies.

National Benefit-Cost Ratio (BCR) Per Peril *BCR numbers in this study have been rounded	Beyond Code Requirements	Federally Funded
Overall Hazard Benefit-Cost Ratio	$4:1	$6:1
Riverine Flood	$5:1	$7:1
Hurricane Surge	$7:1	Too few grants
Wind	$5:1	$5:1
Earthquake	$4:1	$3:1
Wildland-Urban Interface Fire	$4:1	$3:1

2021 HMP Hazards of Concern

Coastal Erosion
Cyber Security
Earthquake
Expansive Soils
Extreme Temperature
Flood
Hazardous Materials
Landslide
Pandemic
Severe Storm
Severe Winter Storm
Utility Failure
Wildfire

8

8

Risk Reduction

To reduce risk:

- ***Manipulate the hazard***:
  - Structural flood control
- ***Reduce/eliminate exposure***:
  - Property acquisition
- ***Reduce vulnerability***:
  - Retrofit
- ***Increase capability***:
  - funding, preparation, technical assistance, planning, enforcement

9

9

NYS & FEMA Requirements for Mitigation Strategy Update

- Develop *at least two Action Worksheets*.
- *Address Repetitive and Severe Repetitive Loss Properties* - need an action with specific details (street or neighborhood names).
- Identify critical facilities, assess vulnerabilities and ensure protection to the 500-year flood event or worst-case scenario.
  - If already protected, we must note how.
  - *If not protected, a mitigation action must be developed.*
- Plan for climate change and propose actions to address.

10

10

NYS Requirements: Mitigation Strategy

- MUST identify evacuation routes and shelters in the plan.
  - Identify actions to make evacuation routes and shelters viable, if not already.
- MUST identify temporary housing and permanent housing locations in the plan.
  - Identify actions to develop these locations, even if outside of jurisdictional boundaries.

11

11

NYS Requirements: Mitigation Strategy

- Proposed actions MUST have specific information identified, including:
  - Project lead
  - Estimated cost
  - Timeline
  - Whether the action involves a critical facility
  - Etc.
- All of these required items are identified within the proposed action table. Each cell of the table MUST be filled out!

12

12

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard

Connection to the Mitigation Strategy

- Need a clear connection between vulnerability and proposed mitigation actions.
- Capability assessment provides insight into challenges/opportunities for the mitigation strategy as well.
- Provides the factual basis for activities proposed in the mitigation strategy.

Risk and Capability Assessments → Mitigation Strategy

13

13

Connection to the Mitigation Strategy

- More specific actions:
  - Specific projects, in specific locations, in a specific timeframe
- Diverse actions:
  - Focus on highest ranked hazards but also look to address other hazards
  - Include a variety in the types of actions

14

14

FEMA Mitigation Action Types

Plans and regulations include government authorities, policies, or codes that encourage risk reduction, such as building codes and state planning regulations. This may also include planning studies.

Structure and infrastructure projects involve modifying existing structures and infrastructure or constructing new structures to reduce the impact of hazards.

Natural systems protection projects minimize losses while also preserving or restoring the function of natural systems.

Education and awareness programs include long-term, sustained programs to inform and educate citizens and stakeholders about hazards and mitigation options. This category could also include training.

15

15

Update the Mitigation Strategy

- Review your Goals and Objectives.
- Start with Problems (many identified in your Problem Statements/worksheets):
  - Areas that have been impacted
  - Recurring issues
  - Critical/lifeline facilities in the floodplain
  - RL/SRL properties need mitigating
  - Lack of identified locations for temporary housing and permanent housing (outside of the floodplain)

16

16

Update the Mitigation Strategy

- Identify new mitigation actions/projects.
- Modify carry-over projects from the 2015 HMP.
  - Be more specific or address different aspect of original problem.

17

TETRA TECH

Make Previous Actions More Specific

18

18

Attachment: 31-Appendix-C-Meeting-Documentation-093021 (RES-2022-375 : Authorizing Adoption of the 2022 Erie County, NY Hazard

Previous Problem/Action (2015 HMP)

- Problem: Critical facilities require backup power.
- Solution: Acquire backup power for critical facilities.

19

19

Improved Problem and Action

- Problem: Town Hall lacks a backup power source. The Town Hall houses the Emergency Operations Center and can also serve as a backup shelter. Lack of power results in a breakdown of continuity of operations and prevents the Town Hall from providing critical services during a hazard event.
- Solution: The Town Engineer will work with the Office of Emergency Management to research and purchase the appropriately sized backup generator for the Town Hall. The DPW will install the backup generator and necessary electrical components and will be responsible for testing and upkeep of the generator after installation.

20

20

EVEN MORE Improved Problem and Action

- Problem: Town Hall lacks a backup power source. The Town Hall houses the Emergency Operations Center and also can serve as a backup shelter for approximately 100 people. Lack of power results in a breakdown of continuity of operations and prevents the Town Hall from providing critical services during a hazard event.
- Solution: The Town Engineer will work with the Office of Emergency Management to research and purchase a 75 kW generator for the Town Hall. The DPW will install the backup generator on the roof of the Town Hall, install necessary electrical components, and be responsible for testing and upkeep of the generator after installation.

21

21

Previous Problem and Action

- Problem: Falling trees result in power outages.
- Solution: Complete tree trimming.

22

22

Improved Problem and Action

- Problem: High-hazard trees pose a risk for falling on private property and utilities during storm events. The town does not have a program in place to monitor and inspect trees and identify trees that need to be trimmed or removed.
- Solution: The town will develop a vegetation management program. This program will include routine inspections of trees in the municipal rights-of-way, identify trees that are in need of trimming or removal, and conduct the trimming and removal. This will help reduce tree damage, road closures, and power outages during severe weather events. A majority of the tree work will be conducted by the Highway Department; however, outside contractors might be used if removal is beyond the Highway Department's capability.

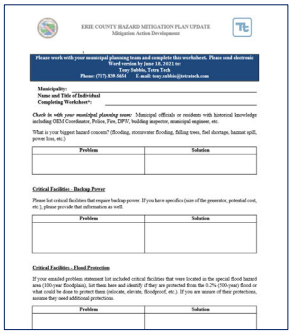
Tetra Tech emailed *Problem Statements* to help fill out your *Mitigation Development Worksheet & Action Worksheets*



ERIE COUNTY HAZARD MITIGATION PLAN UPDATE
Mitigation Action Development

Please work with your municipal planning team and complete this worksheet. Please send electronic Word version by June 10, 2022 to:
Tony Dobbin, Tetra Tech
Phone: (717) 430-2651 E-mail: tony.dobbin@tetratech.com

Municipality:
Name and Title of Individual Completing Worksheet*:

*Check in with your municipal planning team: Municipal officials or residents with historical knowledge including OEM Coordinator, Police, Fire, DPW, building inspector, municipal engineer, etc.

What is your biggest hazard concern? (flooding, stormwater flooding, falling trees, fuel shortage, hazmat spill, power loss, etc.)

Problem	Solution

Critical Facilities - Backup Power
